

Press release

dataTec exhibits measuring technology solutions at Embedded World 2024

Dedicated sections grouped by topics showcase solutions compatible across manufacturers/application-based advice at the trade fair stand

Reutlingen, 18 March 2024 – Between 11 and 14 April 2024, dataTec will be showcasing its products and services at Embedded World as a competent partner for all aspects of measuring and testing technology. "Embedded World in Nuremberg is an important platform for us to present application-based solutions and chat to trade fair visitors," says Frank Heller, Business Development Manager at dataTec.

At the dataTec AG stand, topics will be grouped together in dedicated sections to provide answers to questions relating to serial bus analysis, energy efficiency and network stability as well as current converters and wideband-gap semiconductors, but also about modular NI hardware and software solutions. Trade visitors will be able to discuss their measuring activities with dataTec experts and obtain advice across all manufacturers. "As a specialist distributor operating across all brands, we offer our customers objective and customised solutions that meet their individual requirements. Our experienced team will be supporting trade fair visitors to discuss their projects and provide them with valuable insights into the world of measuring and testing technology," Heller adds.

Visitors can also look forward to various new products, such as the optically isolated FireFly high-voltage probe from PMK, enabling the recording of differential signals with a high bandwidth of up to 1.5 GHz at high common-mode voltages. The unit is also compatible with many oscilloscopes. Oscilloscopes from Rohde & Schwarz, Tektronix and Keysight will therefore be on display at dataTec. dataTec experts are looking
