
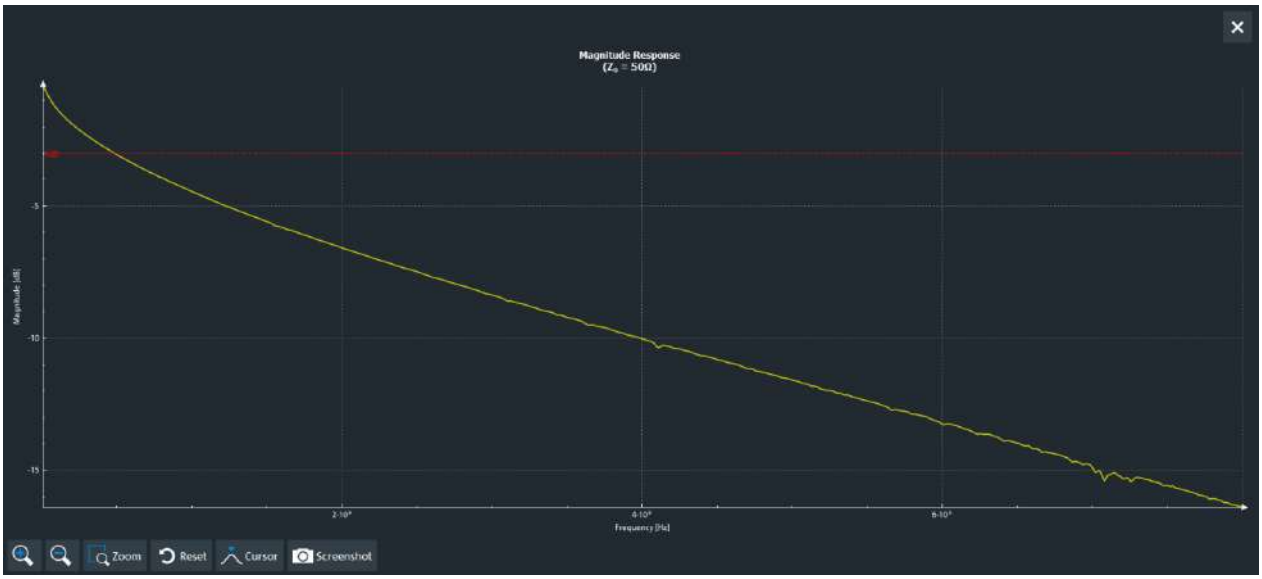

Figure 22-8: Full view of the magnitude response

On the "Response" tab, you see some parameters of the uncorrected measurement setup including the DUT. All parameters are related to a frequency range from DC to the configured effective bandwidth.

Att_{max}
Maximum attenuation of the measurement setup before deembedding, with reference to a frequency response normalized at DC to 0 dB. The deembedding filter must amplify the amplitude response by the "Att_{max}" value, and thus also increases the noise by this value. The value also helps to decide whether deembedding is useful for the defined effective bandwidth.

Att_{DC}, $Gain_{DC}$
Maximum attenuation or gain of the measurement setup before deembedding at DC. This value is the expected basic attenuation or gain, which is corrected by deembedding.

$Gain_{max}$
Maximum gain of the measurement setup before deembedding, with reference to a frequency response normalized at DC to 0 dB. The deembedding filter must attenuate the amplitude response by this value. The value also helps to avoid an overload of the ADC.

22.4 Proven probe, proven cable

The R&S RTO6 can measure probes and cables and determine their S-parameters. These components are called proven probe or proven cable, and their characteristics are saved in `*.rs2p` files. The measurements require the hardware option R&S RTO6-B7. For a proven probe, also the R&S RT-ZF30 probe test fixture is needed.

22.4.1 Characterization of proven probes and cables

To get the S-parameters of proven probes and cable, several measurements are needed. A wizard guides you through the process, and graphics show how to connect the setup. You can also save the result of each step and speed up further measurements by saved step results.

The wizard steps are the following:

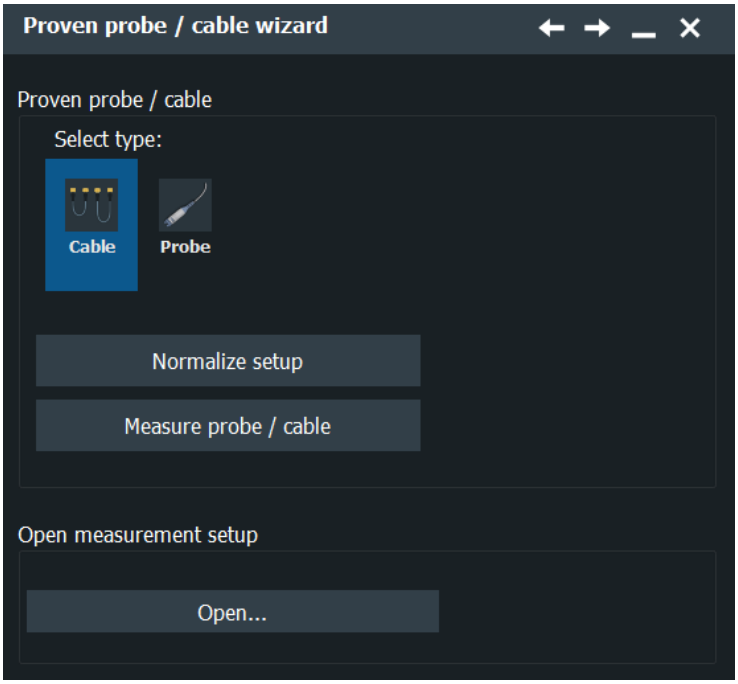
- Proven probe / cable setup 1335
- Normalization 1336
- Measurement 1338
- Response 1339

22.4.1.1 Proven probe / cable setup

Access: [App Cockpit] > "Analysis" > "Deembedding" > "Setup" tab: include component "Proven Probe" or "Proven Cable" > "Configure" > "Start wizard"

Depending on the steps that you have done before, you can:

- Start the complete characterization procedure.
- Start the probe or cable measurement in a normalized setup.
- Load measurement results.



Select type
Select the DUT to be characterized: probe or cable

Normalize setup
Starts the wizard for the complete normalization and measurement procedure.

Measure probe / cable
Starts the measurement of the probe or cable directly. If the measurement setup has been normalized just before, the "Measurement" dialog box opens. Otherwise, you are asked to open a normalization file, or to start with normalization.

Open measurement setup
Opens a file with previously saved measurement results. The "Response" dialog box opens, and you can check the response plots, and save or apply the S-parameters to the deembedding setup.

22.4.1.2 Normalization

Open [App Cockpit]> "Analysis" tab > "Proven Probe / Cable" > "Normalize setup"

1. Connect the cables to the pulse source R&S RTO6-B7 and to the input channels.
   The probe or cable to be measured is *not* connected.
   Use only high-quality double-shielded RF cables. Two suitable cables are delivered with the pulse source option R&S RTO6-B7.

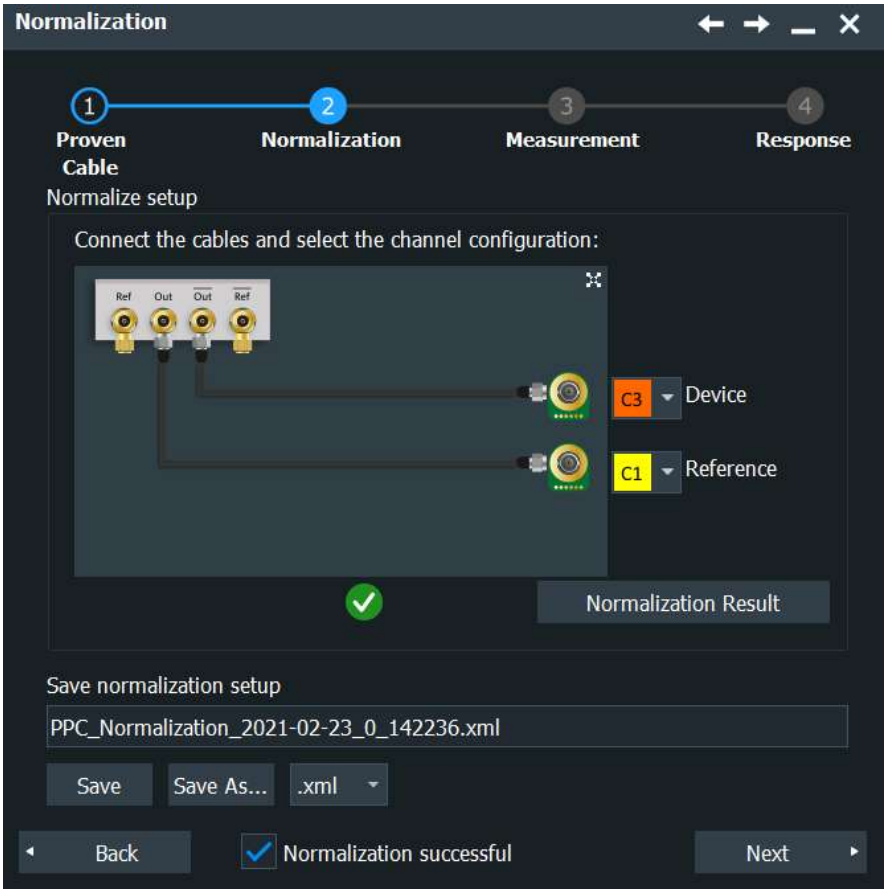


Figure 22-9: Normalization settings

2. Start measurements with "Normalize".

   The basic setup is characterized.

Device
Selects the input channel that is connected to the $\overline{\text{Out}}$ connector of the pulse source R&S RTO6-B7 during normalization, and to the measured probe or cable during measurements.

Reference
Selects the input channel that is connected to the Out connector of the pulse source.

Normalize
Starts the normalization of the setup without the probe or cable to be measured. The frequency correction and deskew are determined and applied in the next measurement step.

If normalization was successful, it is indicated by an icon, and you can display the "Normalization Result" - the normalized magnitude response.

Save normalization setup
Saves the results of the normalization step to an XML file.

22.4.1.3 Measurement

Open [App Cockpit]> "Analysis" tab > "Proven Probe / Cable" > "Normalize setup"> "Next"

1. To characterize a cable, connect it to the cable coming from the Out connector of the pulse source and the "Device" input channel. Use an adapter if necessary.

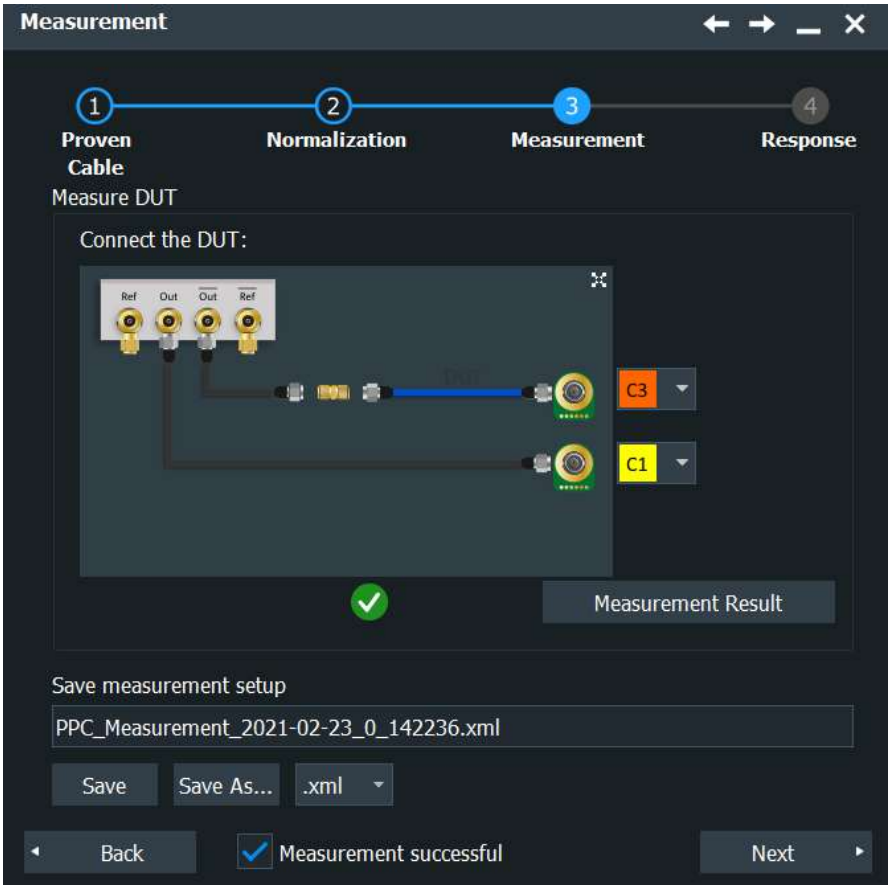

Figure 22-10: Cable measurement

2. To characterize a probe, you need the R&S RT-ZF30 probe test fixture.
   a) Connect the fixture to the cable coming from the Out connector of the pulse source.
   b) Connect the probe to the fixture.
      For details, see the "R&S RT-ZF30 Probe Test Fixture Manual".
   c) Connect the probe to the "Device" input channel.
3. Select "Measure".

Measure
Starts the measurement of the probe or cable to be characterized.

If the measurement was successful, it is indicated by an icon, and you can display the "Measurement Result" - the magnitude response of the proved probe or cable.

Save measurement setup
Saves the measurement results of the proven probe or cable to an XML file.

22.4.1.4 Response

Open [App Cockpit]> "Analysis" tab > "Proven Probe / Cable" > > "Normalize setup" > "Next" > "Measure" > "Next"

In the last step, you see the response curves, the characteristics of a deembedded proven probe or cable. The characteristics are the same as on the "Deembedding Response" tab. For more information, see Section 22.3.2, "Responses of the measurement setup", on page 1333.

Apply result
Includes the proven probe or proven cable component in the deembedding setup, and opens the "Deemebedding Components" tab for configuration.

Save result
Saves the S-parameters of the proven probe or cable to a rs2p or rs4p file. Using this file, you can include and configure this proven probe or cable as a component in a deembedded measurement setup.

22.4.2 Deembedding with proven probe or proven cable

If a probe or cable is characterized as described in Section 22.4.1, "Characterization of proven probes and cables", on page 1335, and its S-parameters are saved, you can use this probe or cable in any deembedding measurement setup.

1. In the deembedding measurements setup, add the component "Proven Probe" or "Proven Cable".
2. Select "Configure" on the new component.
3. Load the S-parameters file (`*.rs2p`).
   If no file is available, you can start the characterization wizard here.

See also: Section 22.1, "Configuring the measurement setup for deembedding", on page 1315.

23 Embedding and equalization (option R&S RTO6-K126)

With the R&S RTO6 and option R&S RTO6-K126 you can perform embedding and equalization of your signals.

To achieve a reliable data transmission, techniques such as emphasis (at the transmitter side) and equalization (at the receiver side) are used to compensate for transmission losses and to “reopen” the data eye.

On the transmitter side, FFE (Feed-Forward-Equalization) filters can be applied. On the receiver side, CTLE (Continuous-Time-Linear-Equalization), FFE, and DFE (Decision-Feedback-Equalization) filters can be used.

In addition to the emulation of the transmitter and receiver equalization functions, you can emulate additional signal traces (e.g.: longer cables) “Embedding”.

23.1 Equalization basics

Equalization is an operation that is applied to a pulse-amplitude modulated (PAM) signal (such as a USB or Ethernet signal) that has been distorted by a channel (such as a cable). The equalizer compensates for some of the distortions introduced by the channel and recovers the transmitted PAM symbols.

23.1.1 CTLE

A continuous-time linear equalizer (CTLE) is a continuous-time filter whose zeros and poles lie in the negative real axis of the Laplace domain.

A pole is a value of s (complex frequency) at which the transfer function of the CTLE goes to infinity. Poles have a significant impact on the system's stability and the frequency response's shape. In the time domain, poles are related to the system's natural response and can influence the equalizer's transient and steady-state behavior. In the frequency domain, poles contribute to the roll-off rate of the frequency response and can enhance the low-frequency gain.

A zero is a value of s at which the transfer function becomes zero. Zeros in the transfer function influence the frequency response by creating points where the gain is minimized. They are used to shape the frequency response in a way that compensates for the undesired channel effects, like attenuating certain frequencies or enhancing others.

In a CTLE, the placement of poles and zeros is strategically chosen to achieve a desired frequency response. Typically, the goal is to boost the high-frequency components of the signal more than the low-frequency ones to counteract the channel's high-frequency loss. This is often accomplished by placing zeros at higher frequencies and poles at lower frequencies. The exact placement of these poles and zeros defines

the CTLE's ability to equalize the signal effectively, balancing the trade-off between signal enhancement and noise amplification.

It is usually specified by a list of M zero frequencies $f_{zero,m}$, a list of N pole frequencies $f_{pole,n}$ and a DC gain A_{DC}. The actual zeros and poles are at $-2\pi f_{zero,m}$ and $-2\pi f_{pole,n}$.

23.1.2 Feed-forward equalizer (FFE)

A Feed Forward Equalizer (FFE) is a type of digital filter used primarily in communication systems to mitigate the effects of inter-symbol interference (ISI). ISI is a common problem in high-speed data transmission where signals from different symbols interfere with each other, causing distortion and potential errors in the received data.

The FFE works by applying a set of weighted coefficients to the incoming signal, adjusting it to counteract the distortion caused by the channel.

The FFE has multiple "taps," each representing a delayed version of the input signal. Each tap has a corresponding coefficient (weight) that is adjusted during the equalization process. The weighted signals from all the taps are summed together to produce the output signal.

The coefficients are continuously adjusted using an algorithm to minimize the error between the equalized output signal and the desired signal.

23.1.3 Decision feedback equalizer (DFE)

A decision-feedback equalizer has a feedback loop that uses decisions on previous symbols to equalize the current symbol. "Decision” means to find the closest constellation point to each equalized symbol. The advantage of a DFE over an FFE is that the DFE is better at compensating zeros or large dips in the frequency response of the channel without enhancing the noise. For standard cables with a gradually falling frequency response, the advantage of a DFE is small.

Similar to an FFE, the DFE has a feed forward section that processes the incoming signal with a set of weighted coefficients to produce an initial estimate of the current symbol. This section aims to reduce the ISI from future symbols (pre-cursor ISI). The unique feature of the DFE is its feedback section. This part of the equalizer uses the decisions made about previous symbols to cancel out their interference on the current symbol. The previously detected symbols are fed back through a set of taps with their own coefficients, and the resulting signal is subtracted from the output of the feed forward section.

The combined output from the feed forward and feedback sections is then passed through a decision device, which determines the most likely transmitted symbol based on the processed signal. This decision is then fed back into the feedback section for use in subsequent symbol decisions.

The coefficients in both the feed forward and feedback sections are typically adjusted using adaptive algorithms to continually optimize the equalizer's performance based on the channel conditions.

23.1.4 Taps

Taps are the coefficients used in digital signal processing, specifically in an equalizer filter, to adjust the frequency response of a system. These taps are essentially weights applied to different delayed versions of the signal to interfere with certain frequencies, thereby compensating for distortions or attenuations introduced by the communication channel or system.

Taps are used to correct the signal distortion caused by channel impairments, such as multipath fading, which results in intersymbol interference (ISI). An equalizer with a certain number of taps (each corresponding to a particular delay) can be designed to adjust the amplitude and phase of different frequency components of the signal to counteract the channel's effects, thereby improving the quality of the received signal.

The design and optimization of these taps are crucial for achieving the desired equalization effect, which is typically aimed at restoring the original signal or minimizing the error rate in data transmission. The number of taps in an equalizer determines its complexity and the degree of equalization that it can achieve, with more taps generally providing better equalization at the cost of increased computational complexity.

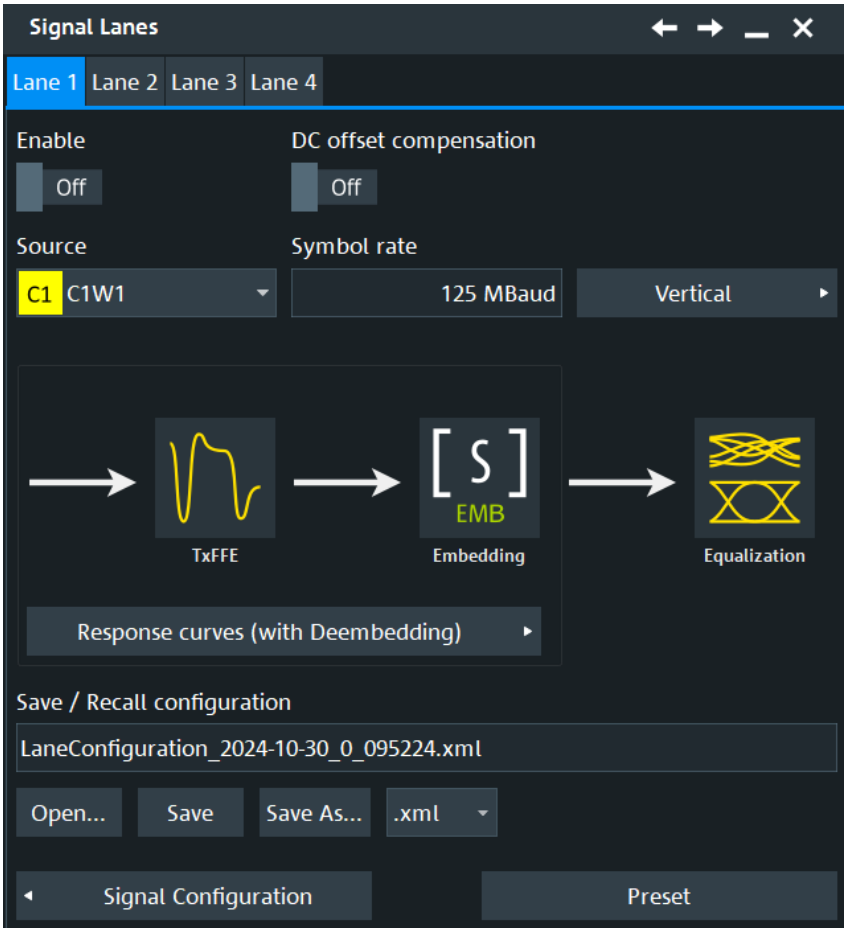
23.2 Signal lanes settings

You can define up to four different signal lanes. Each waveform is defined in a separate tab in the "Signal Lanes" dialog box ("Lane 1" to "Lane 4").

23.2.1 General settings

Access: "Menu" >"Apps" > "Embedding / Equalization" > "Signal Lanes" tab.

In this dialog you can select the input sources and configure the nominal bit rate. You can also access



Lane n
Selects the lane for the signal configuration. Make sure that the tab of the correct lane is selected.

Enable
Activates the signal.

Remote command:
`LANE<m>:STATe` on page 3035

DC offset compensation
Enables the DC offset compensation. If enabled, the application estimates the DC offset of the input signal and removes it prior to training and/or applying equalizers to it. This may improve results, but it is only accurate if the input symbol sequence is balanced (similar number of ones and zeros in NRZ, or symmetric distribution of PAM levels in PAM-N).

If the signal is not balanced, set DC compensation to "Off".

Remote command:
`LANE<m>:CMPO` on page 3036

Source
Displays the currently selected source for the equalization.

You can set this up in the "Menu" > "Apps" > "Analysis" > "Embedding / Equalization" > "Signal Lanes" dialog.

Remote command:
`LANE<m>:SOURce` on page 3035

Nominal bit rate
Sets a nominal bit rate for the signal.

Remote command:
`LANE<m>:SYMRate` on page 3035

Vertical
Opens a dialog to see the vertical settings for embedding and equalization, see Section 23.2.3, "Vertical settings", on page 1347.

Signal flow
The signal flow displays the different stages of the signal definition:

- "Response curves (with Deembedding)": you can define a transmitter feed forward equalization (TxFFE) (see Transmitter feed forward equalization (TxFFE)) or add embedding (see Embedding).
- "Equalization": In this dialog you can configure the equalization settings and select yout filter, see Equalization settings.

Save / recall settings
Saves the complete signal lane configuration, or loads a saved configuration. The file format is XML.

To save the signal lane configuration, enter a filename and tap "Save". Alternatively, tap "Save as" to open the file selection dialog box, see Section 12.6, "File selection dialog", on page 507.

To load a signal lane configuration, tap "Open" and select the required file.

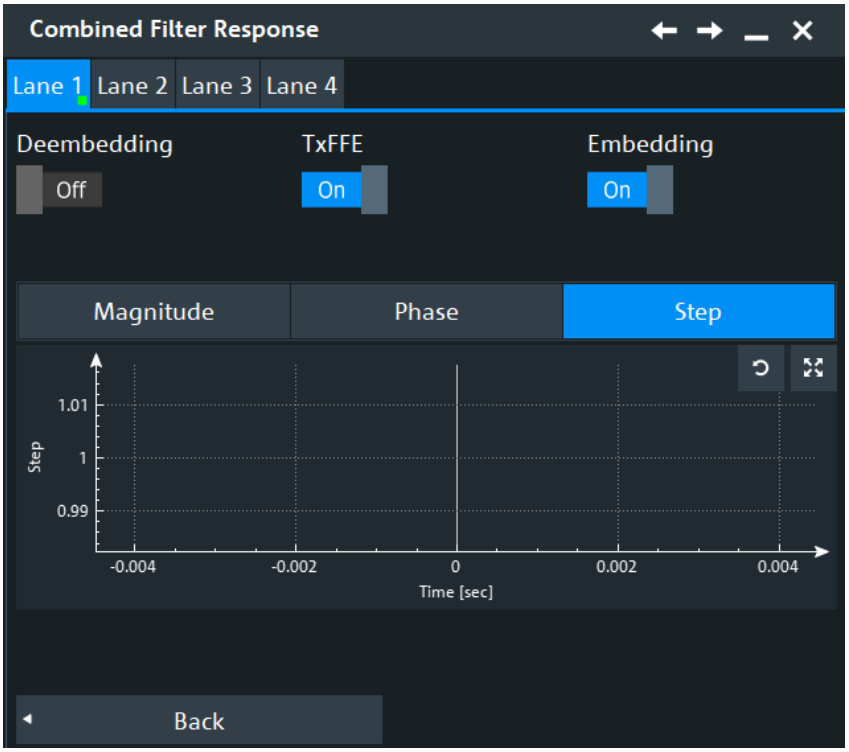
Remote command:
`LANE<m>:NAME` on page 3034
`LANE<m>:OPEN` on page 3034
`LANE<m>:SAVE` on page 3035

Preset
Presets the equalization settings.

Remote command:
`LANE<m>:PRESet` on page 3034

23.2.2 Combined filter response curves

In this dialog you can select the filters that are applied to the signal.



Deembedding
Includes deembedding, see Section 22, "Deembedding (option R&S RTO6-K121)", on page 1315.

Remote command:
`LANE<m>:COMFilter:INCLude:DEEMbedding` on page 3036

TxFFE
Includes the transmitter feed-forward equalization, see Section 23.3, "Transmitter feed forward equalization (TxFFE)", on page 1348.

Remote command:
`LANE<m>:COMFilter:INCLude:TFFE` on page 3037

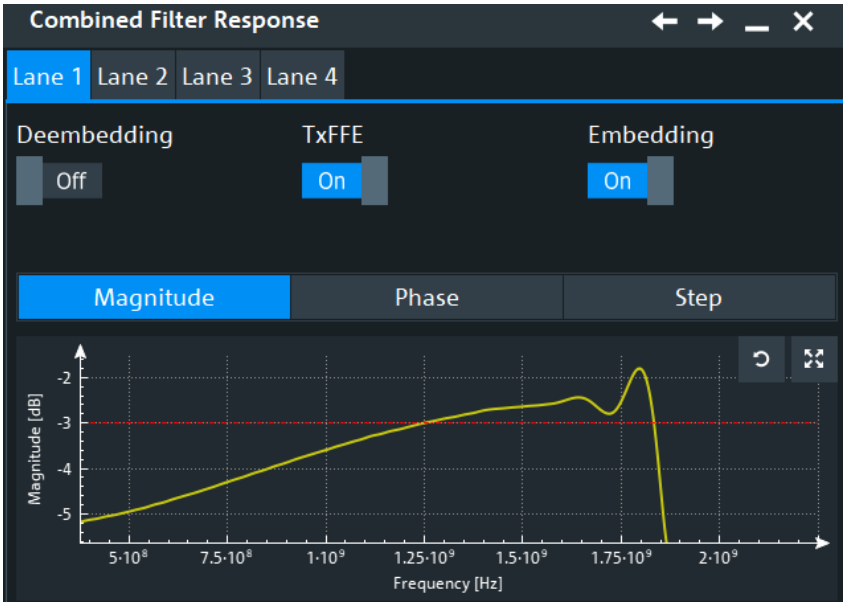
Embedding
Includes embedding, see Section 23.4, "Embedding", on page 1353.

Remote command:
`LANE<m>:COMFilter:INCLude:EMBedding` on page 3037

Plot
Displays plots for the selected configuration. Using these plots, you can assess the correction of the signal.

You can see the following characteristics:

- "Magnitude"



Combined Filter Response
Lane 1
Lane 2
Lane 3
Lane 4

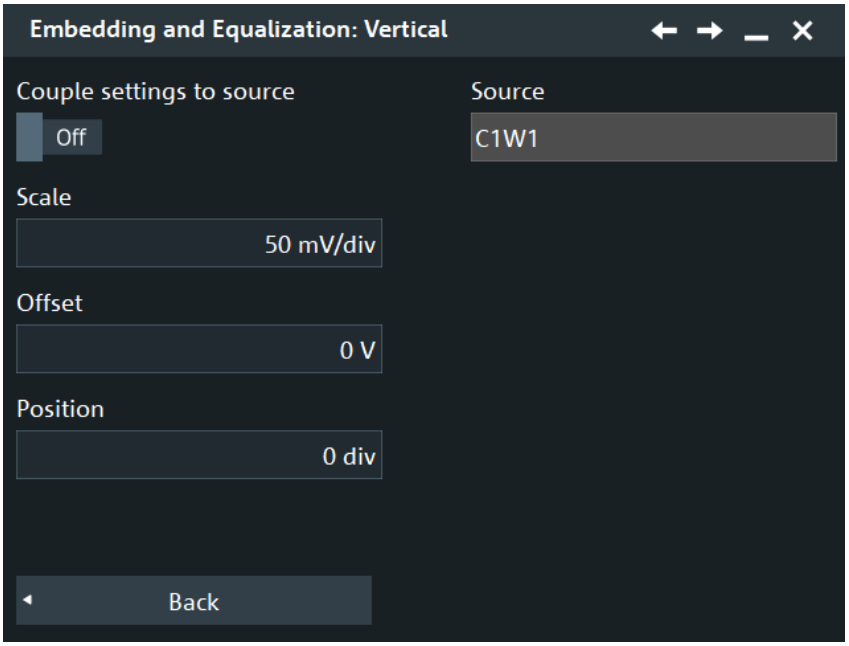
Remote command:
`LANE<m>:TFFE:PSELection` on page 3040

23.2.3 Vertical settings

Access: "Embedding / Equalization" > "Signal Lanes" > "Vertical".



Couple settings to source
Determines how the vertical settings are defined.

If enabled, the vertical settings are coupled to the settings of the respective source. You can then adjust the vertical source settings in the "Vertical" > "Setup" dialog, see Section 5.5.1, "Setup settings", on page 138.

If disabled, the vertical settings for embedding and equalization are set in this dialog.

Remote command:
LANE<m>:VERTical:COUPle on page 3039

Scale
Sets the vertical scale for embedding and equalization.

Remote command:
LANE<m>:VERTical:SCALe on page 3040

Offset
Sets the offset for embedding and equalization.

Remote command:
LANE<m>:VERTical:OFFSet on page 3039

Position
Sets the vertical position for embedding and equalization.

Remote command:
LANE<m>:VERTical:POSition on page 3039

23.3 Transmitter feed forward equalization (TxFFE)

The transmitter feed forward equalization (TxFFE) applies a pre-defined set of filters (taps) to the outgoing signal to compensate for the anticipated channel-induced distortion. It is a specific type of FFE filter, which is applied at the transmitter to improve the quality of the signal by reducing ISI before the signal traverses the channel.

Enable
Enables the transmitter feed forward equalization.

Remote command:
`LANE<m>:TFFE:STATe` on page 3041

Serial standard
Displays the currently selected serial standard.

You can set this up in the "Menu" > "Apps" > "Analysis" > "Signal Configuration" dialog.

Standard configuration
Selects a preset standard from the list. The available values are dependent on the selected "Serial standard".

Each standard defines its own set of presets.The preset includes the number of filter taps to be used and the taps themselves.

Remote command:
`LANE<m>:TFFE:SCONfig:LIST?` on page 3041
`LANE<m>:TFFE:SCONfig[:SELect]` on page 3041

Taps
Seletcs the number of taps for the TxFFE. Depending on the selected "Serial standard", there are some predifined presets you can use.

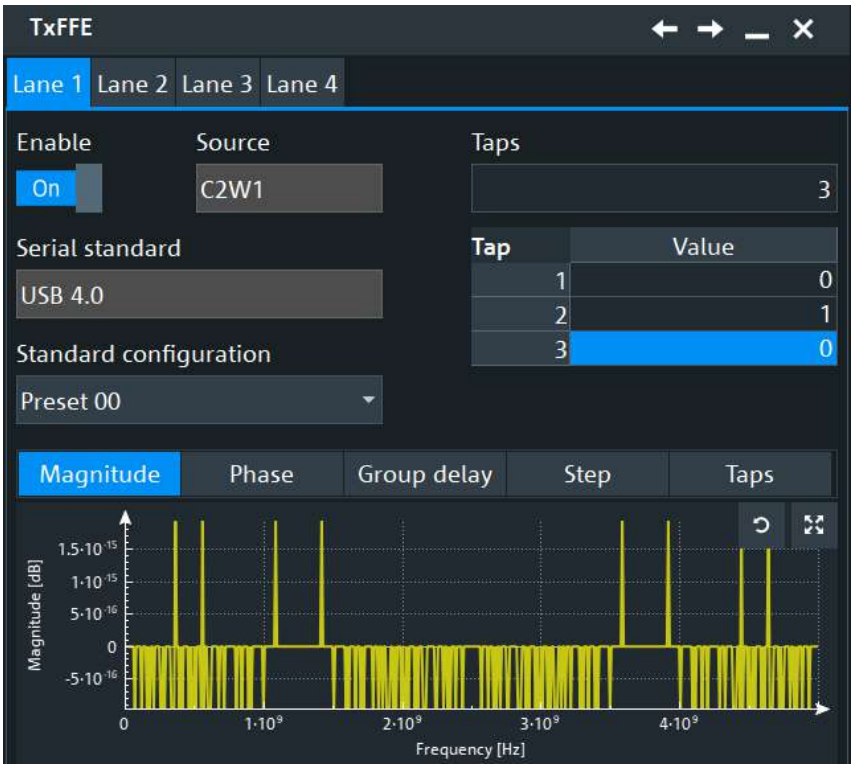
You can also enter your custom number of taps and define a "Value" for each of them. You can enable up to 4 taps.

Remote command:
`LANE<m>:TFFE:TAPS:COUNt` on page 3041
`LANE<m>:TFFE:TAPS:TAP<n>` on page 3042

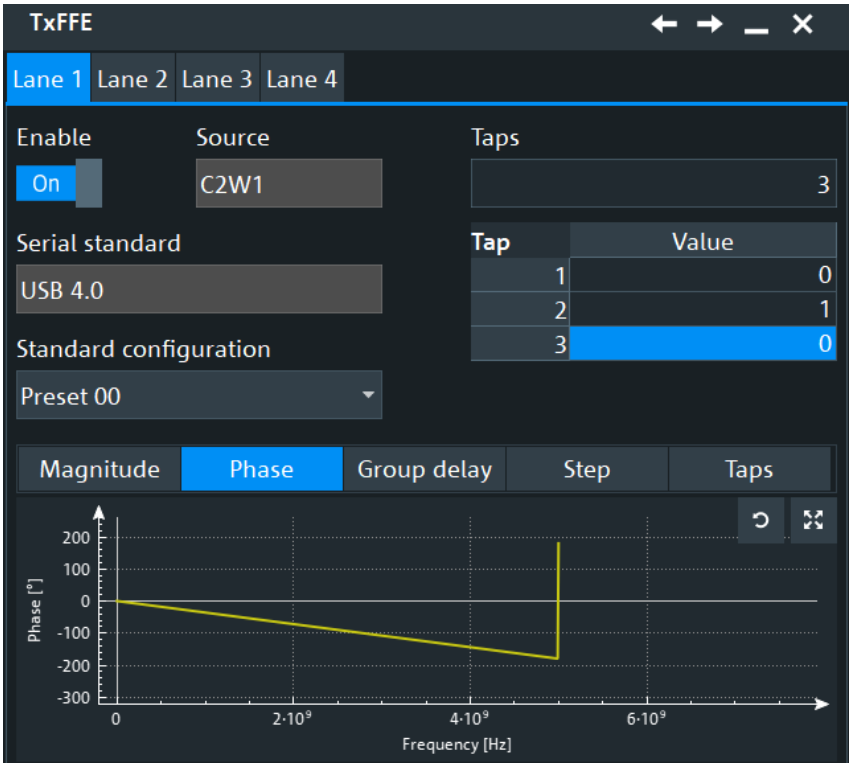
Plots
Displays plots for the selected TxFFE configuration. Using these plots, you can assess the correction of the signal.

You can see the following characteristics:

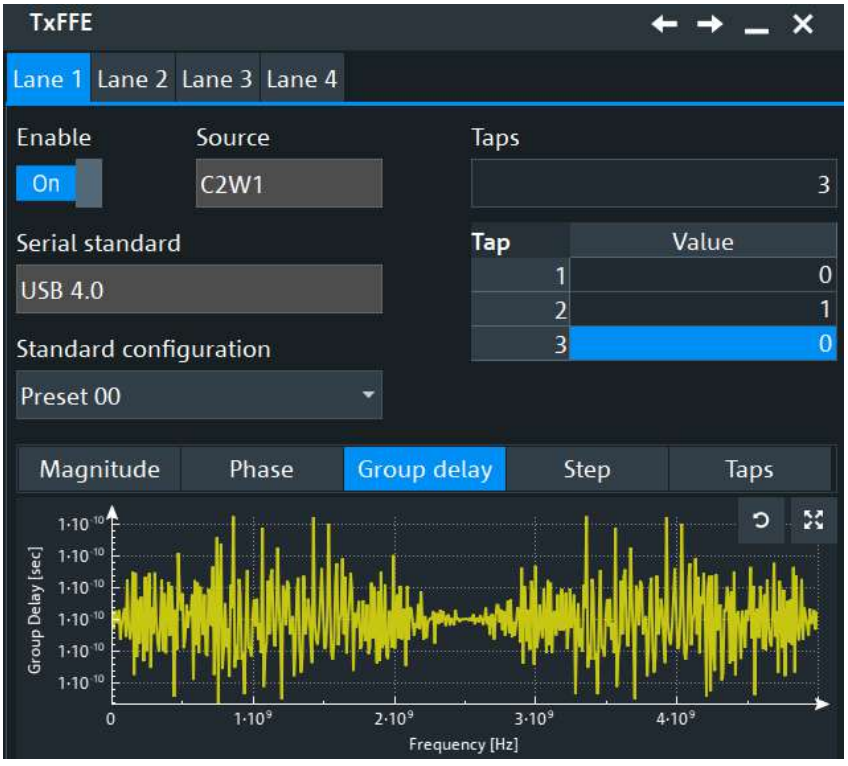
- "Magnitude"



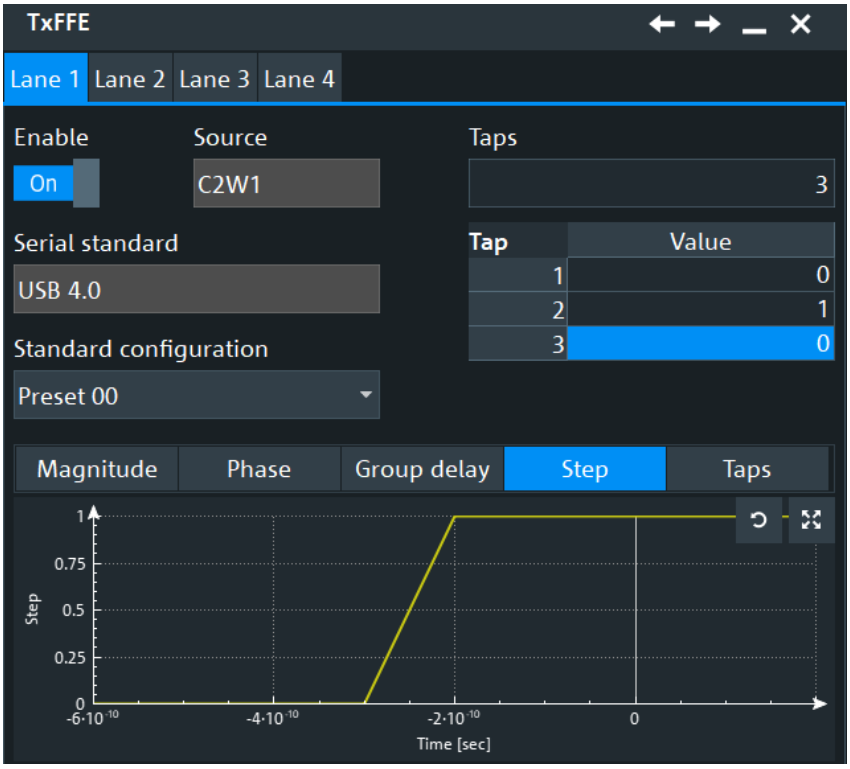
- "Phase"



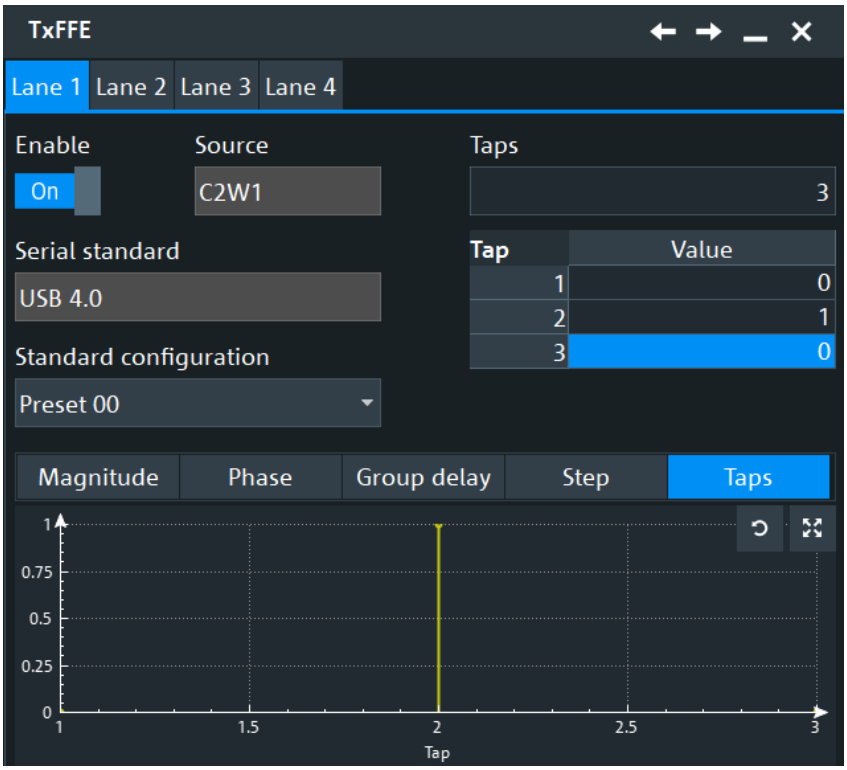
- "Group delay"



- "Step"



- "Taps"



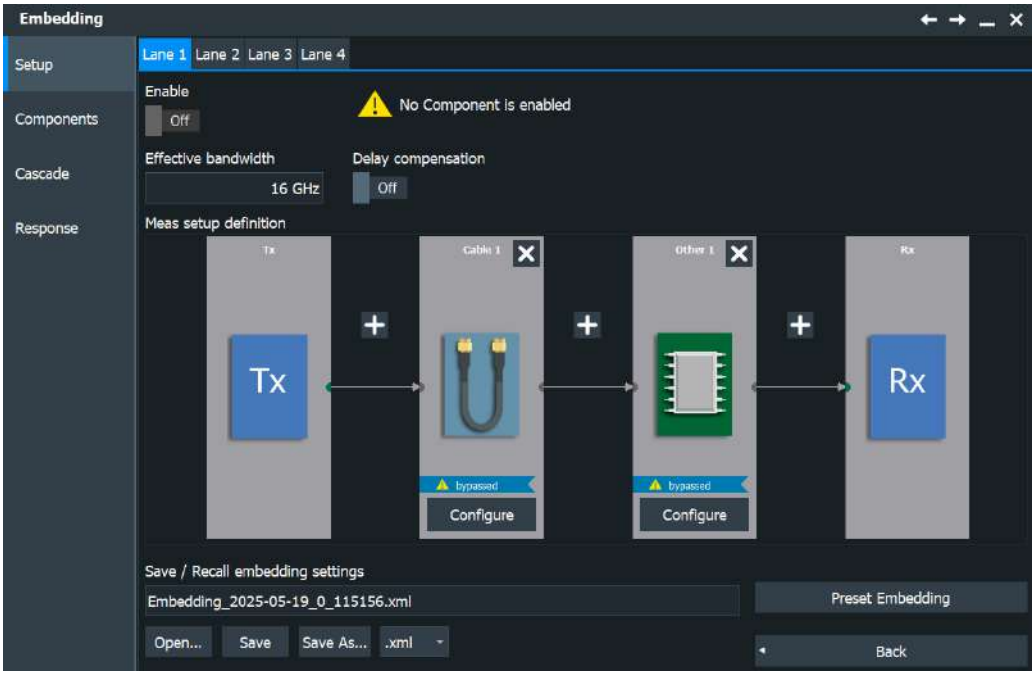
Remote command:
LANE<m>:TFFE:PSELection on page 3040

23.4 Embedding

Embedding simulates a channel behavior, for example a transmission line. You can choose between different standard channels or set your own embedding filter.

23.4.1 Measurement setup

In the "Embedding" > "Setup" tab, you add all components of the measurement setup and define all settings that are related to the complete path. The "Tx" and "Rx" components are predefined and non-configurable.



Enable
Activates the embedding - the correction of parasitic effects of the measurement setup on the measured signal.

Remote command:
`LANE<m>:EMBedding:STATe` on page 3043

Effective bandwidth
Sets the maximum bandwidth until which the signal is corrected.

Remote command:
`LANE<m>:EMBedding:BANDwidth` on page 3044

Delay compensation
Enables the delay compensation.

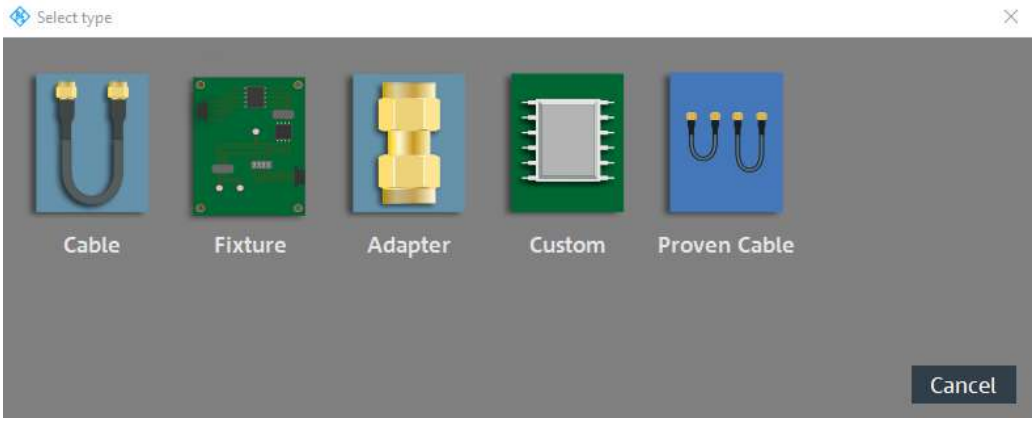
Remote command:
`LANE<m>:EMBedding:CMPDelay` on page 3045

Differential mode
Enables the differential mode for math or reference curve sources.

Remote command:
LANE<m>:EMBedding:DIFFerential on page 3044

Meas setup definition
Simulates the complete measurement setup with all components.

To add a component, tap the **+** icon and select the component type: cable, fixture, adapter, proven cable or others ("Custom").



The remark bypassed indicates that the component is disabled and not considered in the embedding calculation as long as it is not configured correctly.

Remote command:
LANE<m>:EMBedding:ADD on page 3043
LANE<m>:EMBedding:REMove on page 3050
LANE<m>:EMBedding:CCOunt? on page 3045

Save / recall embedding settings
Saves the complete embedding configuration, or loads a saved embedding configuration. The file format is XML.

To save the embedding configuration, enter a filename and tap "Save". Alternatively, tap "Save as" to open the file selection dialog box, see Section 12.6, "File selection dialog", on page 507.

To load an embedding configuration, tap "Open" and select the required file.

Remote command:
LANE<m>:EMBedding:NAME on page 3049
LANE<m>:EMBedding:SAVE on page 3050
LANE<m>:EMBedding:OPEN on page 3050

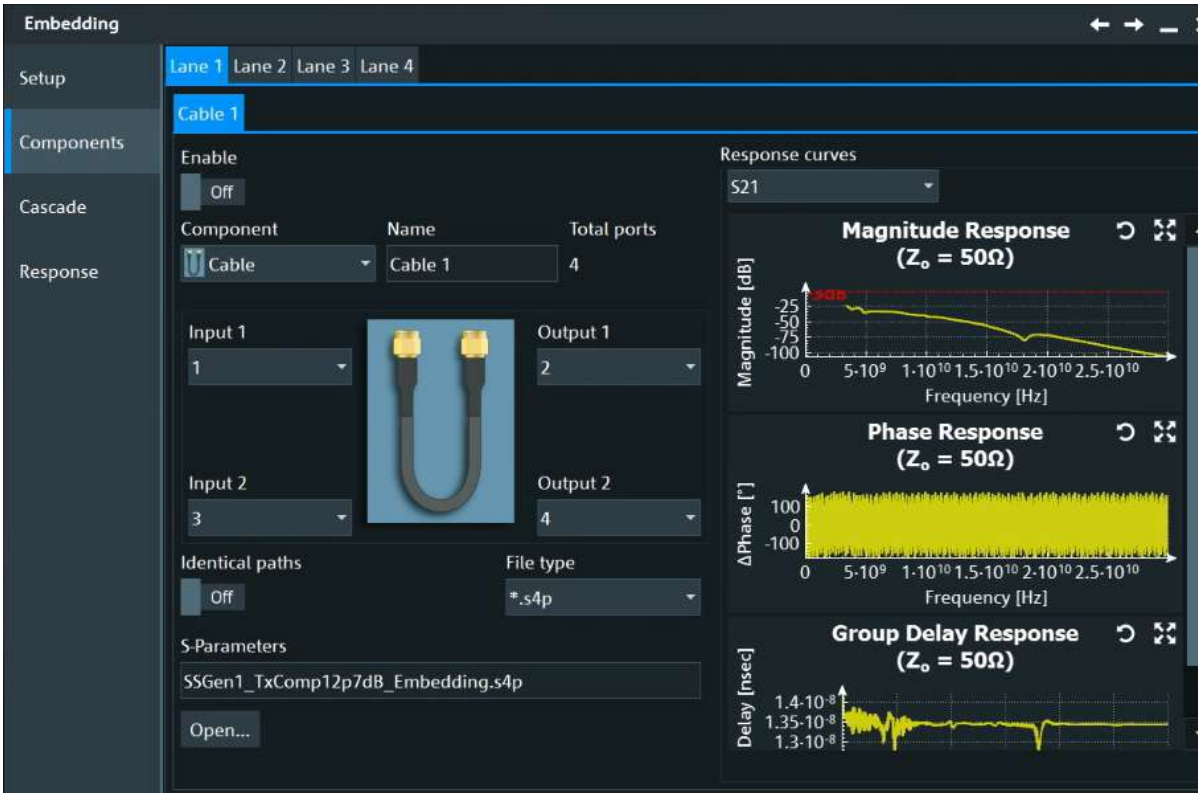
Preset Embedding
Sets the complete embedding configuration to the default values.

Remote command:
LANE<m>:EMBedding:PRESet on page 3050

23.4.2 Components

The "Components" tab has several subtabs to configure each component of the measurement setup that was defined on the "Setup" tab.

Settings that are available on all subtabs are described in this chapter. Other settings are component-specific and explained in the following chapters.



Enable
Enables the component for deembedding. As long as the configuration is incomplete or conflicting, the message "Invalid configuration" is shown, and enabling is not possible.

Remote command:
`LANE<m>:EMBedding:COMPonent<n>[:STATe]` on page 3049

Component
Selects the component type.

Remote command:
`LANE<m>:EMBedding:COMPonent<n>:TYPE` on page 3048

Name
Enter a name for the component that helps you identifying it.

Remote command:
`LANE<m>:EMBedding:COMPonent<n>:NAME` on page 3046

Total ports
Shows the number of all ports of the selected component (input ports and output ports).

Remote command:
LANE<m>:EMBedding:COMPonent<n>:PCOunt? on page 3046

Input 1, Input 2, Output 1, Output 2
Assign the ports to the input and output of the component according to the data in the Touchstone file. This information is not directly written in the file. You need background information how the S-parameters were determined, i.e. which port was input and which port was output. If in doubt, the response curves help assigning the ports correctly.

Remote command:
LANE<m>:EMBedding:COMPonent<n>:IPONe on page 3046
LANE<m>:EMBedding:COMPonent<n>:IPTWo on page 3046
LANE<m>:EMBedding:COMPonent<n>:OPONe on page 3046
LANE<m>:EMBedding:COMPonent<n>:OPTWo on page 3046

Identical paths
The setting is relevant if the measurement setup is a 4-port, and the component is a 2- port. Usually, these components are cables and adapters, which are described by *.s2p files. In case of a 4-port setup, 2 cables or 2 adapters are used. If they are identical, for example, when a matched-pair cable is used, they can be described by the same file. In this case, enable "Identical paths".

Remote command:
LANE<m>:EMBedding:COMPonent<n>:IDENtical on page 3045

S-Parameters, Filetype
Loads the Touchstone file that contains the S-parameters of the component.

If the measurement setup is a 2-port, the filetype is always `*.s2p`.

If the measurement setup is a 4-port, the selection depends on the component. Fixtures and custom blocks are usually 4-ports, and they are described by `*.s4p` S-parameter files.

Cables and adapters are usually 2-ports, and they are described by `*.s2p` S-parameter files. If there is a 4-port setup, 2 cables or 2 adapters are used.

Remote command:
LANE<m>:EMBedding:COMPonent<n>:SPONe on page 3048
LANE<m>:EMBedding:COMPonent<n>:SPTWo on page 3048

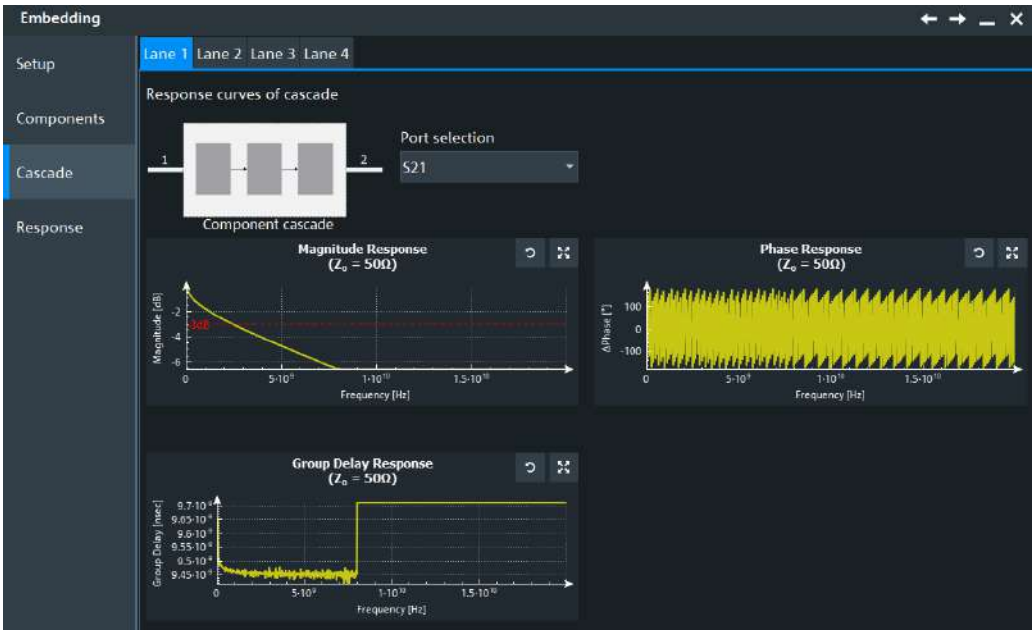
23.4.3 Responses

23.4.3.1 Responses of the component cascade

The "Embedding" > "Cascade" tab combines the S-parameters of all included components and shows the response curves of the measurement setup for each S-parameter:

- Magnitude response
- Phase response
- Group delay response

While the response curves on the component tabs show the S-parameter characteristics of a single component, the cascade shows the combined characteristics for all components including the mismatch between the components.



Port selection
Selects the S-parameter. The response curves (magnitude, phase, and group delay response) of the setup cascade for the selected parameter are shown. You can refresh each graphic ( ), and display it on full screen ( ) to analyze it further: zoom in and out, use the cursor.

23.4.3.2 Responses of the measurement setup

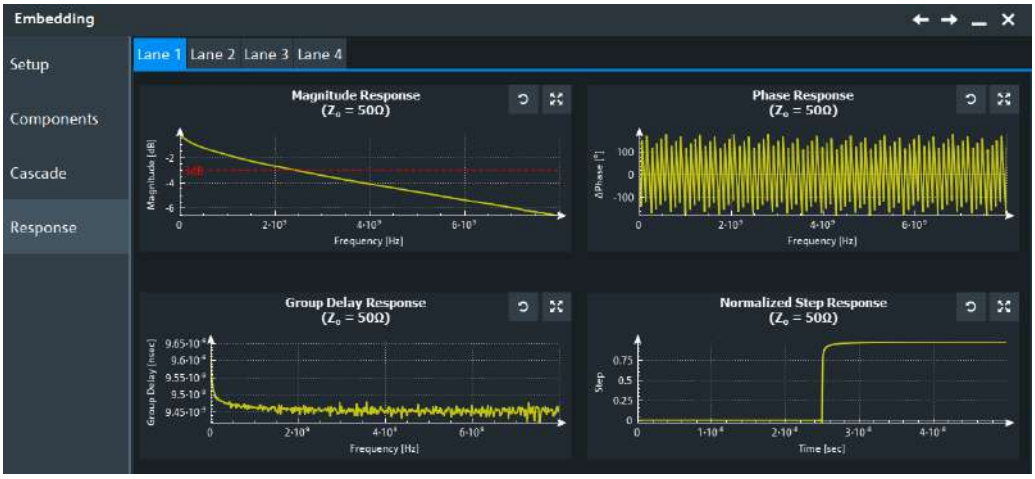
On the "Embedding" > "Response" tab, you see the resulting transfer function characteristics of the embedded measurement setup.

You can see the following characteristics:

- Magnitude response

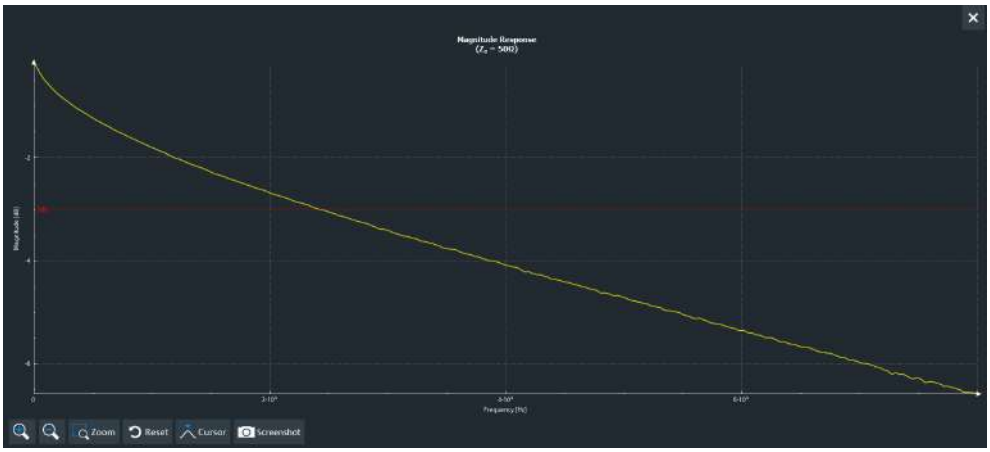
- Phase response
- Group delay response
- Normalized step response

Using these response curves, you can assess the correction of the signal by embedding.



► To see more details in a response graphic, tap the upper right button in the graphic .

The graphic opens in full view, where you can analyze the response function: zoom in and out, use the cursor.
Additionally you can save a "Screenshot" of the magnified plot. The screenshots is saved automatically in the `C:\Users\Public\Public Documents\Rohde-Schwarz\RTx\Plots` directory.

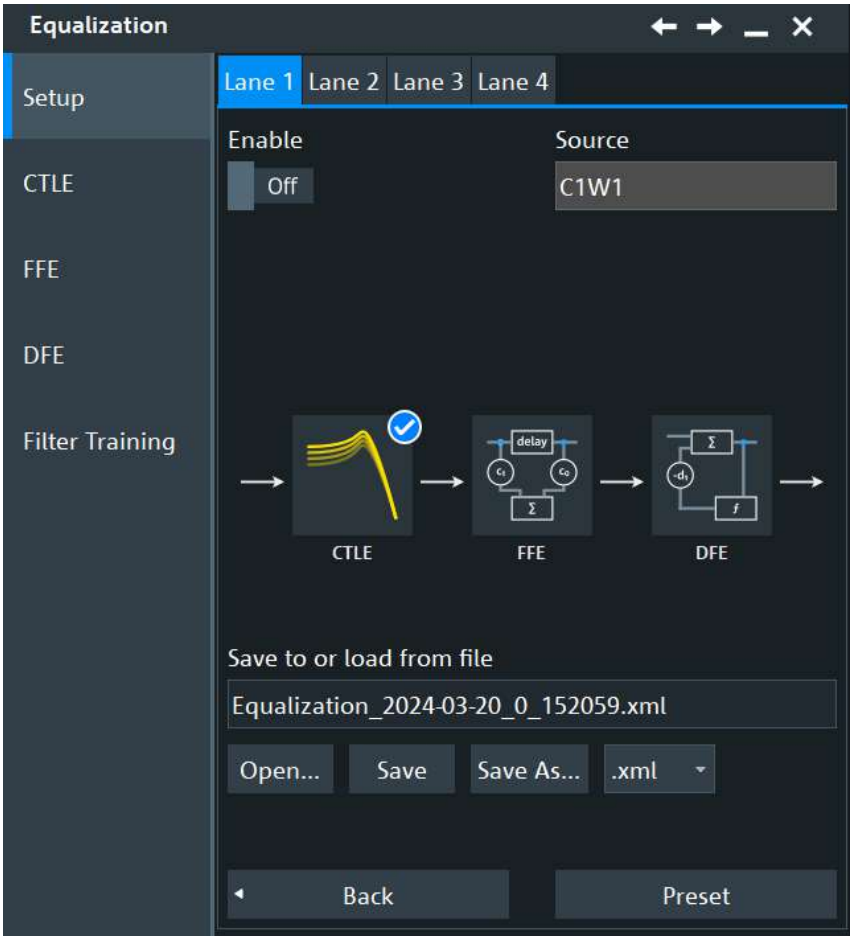


23.5 Equalization settings

Equalization is an operation that is applied to a PAM signal (such as a USB or Ethernet signal) that has been distorted by a channel (such as a cable). The equalizer compensates for some of the distortions introduced by the channel and recovers the transmitted PAM symbols.

23.5.1 Setup

Access: "Menu" >"Apps" > "Embedding / Equalization" > "Signal Lanes" > "Equalization" > "Setup" tab.



Enable
Enables equalization.

Remote command:
`LANE<m>:EQUalization:STATe` on page 3038

Source
Displays the currently selected source for the equalization.

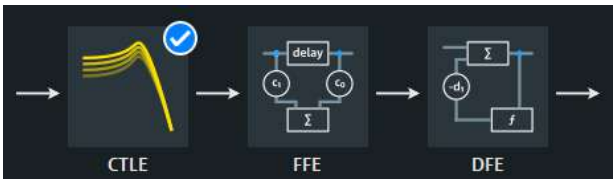
You can set this up in the "Menu" > "Apps" > "Analysis" > "Embedding / Equalization" > "Signal Lanes" dialog.

Remote command:
LANE<m>:SOURce on page 3035

Filter
The diagram displays which filters are enabled. You can enable each filter in the corresponding tab of the "Equalization" dialog.

If a filter is enabled, a blue circle with a tick appears in the right corner of its icon.

The figure below shows a setup where the CTLE filter is enabled and the FFE and DFE filters are disabled.



Preset
Presets the equalization settings to their default values.

Note: A preset disables all filters.

Remote command:
LANE<m>:EQUalization:PRESet on page 3038

Save / open equalization settings
Saves the complete equalization configuration, or loads a saved equalization configuration. The file format is XML.

To save the equalization configuration, enter a filename and tap "Save". Alternatively, tap "Save as" to open the file selection dialog box, see Section 12.6, "File selection dialog", on page 507.

To load an equalization configuration, tap "Open" and select the required file.

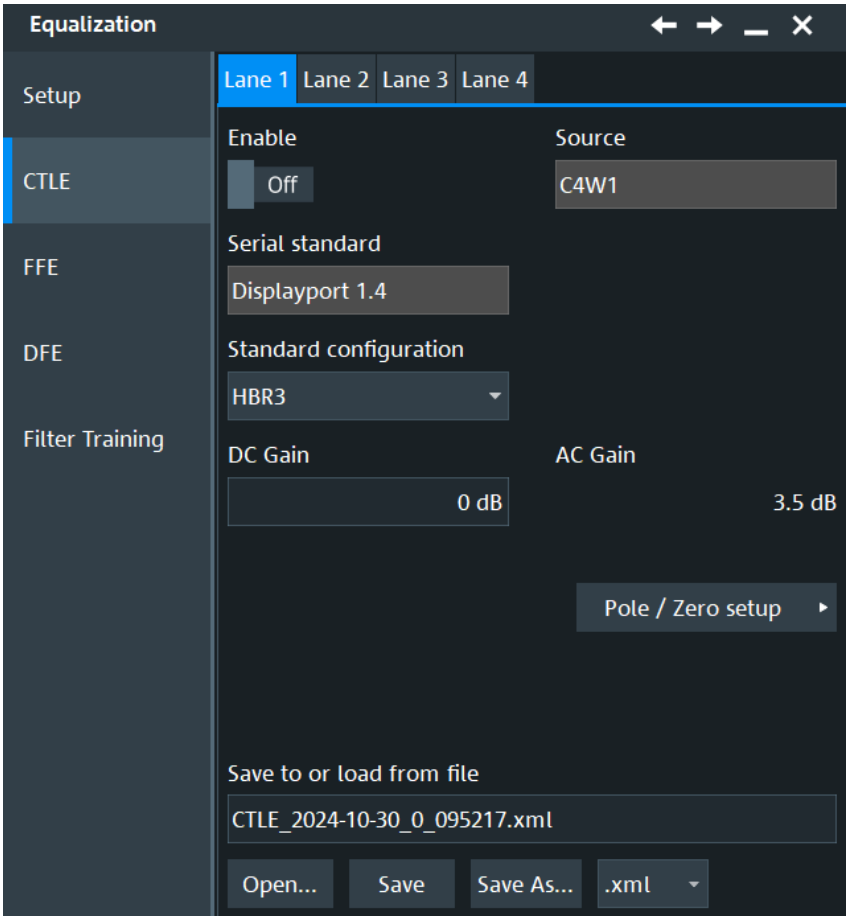
Remote command:
LANE<m>:EQUalization:OPEN on page 3038
LANE<m>:EQUalization:SAVE on page 3038
LANE<m>:EQUalization:NAME on page 3037

23.5.2 CTLE

Access: "Menu" >"Apps" > "Embedding / Equalization" > "Signal Lanes" > "Equalization" > "CTLE" tab.

In this dialog, you can define the settings for the continuous time linear equalizer.

For more information, see Section 23.1.1, "CTLE", on page 1340.



Enable
Enables the continuous time linear equalizer (CTLE).

Remote command:
`LANE<m>:EQUalization:CTLE:STATe` on page 3054

DC Gain
Sets a DC gain for the CTLE filter. The DC gain determines the level of signal amplification at the low frequency end, thus ensuring that low frequency components are amplified to an adequate level to maintain signal integrity.

Remote command:
`LANE<m>:EQUalization:CTLE:DCGain` on page 3052

AC Gain
For HDMI serial standard, an AC gain for the CTLE filter can be set. For other standards with defined fixed AC gain, the AC gain value is displayed.

Remote command:
`LANE<m>:EQUalization:CTLE:ACGain` on page 3051

Serial standard
Displays the currently selected serial standard.

You can set this up in the "Menu" > "Apps" > "Analysis" > "Signal Configuration" dialog.

Standard configuration
Depending on the selected "Serial standard", you can select further standard specific settings.

Remote command:
`LANE<m>:EQUalization:CTLE:SCONfig[:SELect]` on page 3054
`LANE<m>:EQUalization:CTLE:SCONfig:LIST?` on page 3054

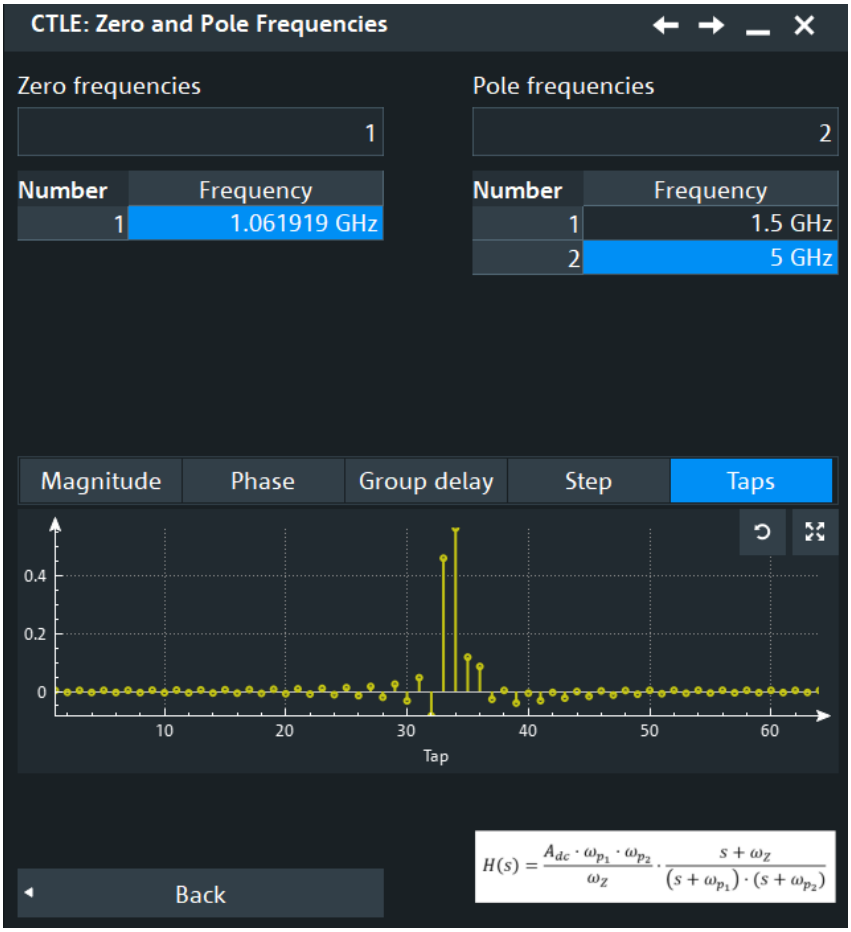
Save / recall CTLE settings
Saves the complete CTLE configuration, or loads a saved CTLE configuration. The file format is XML.

To save the CTLE configuration, enter a filename and tap "Save". Alternatively, tap "Save as" to open the file selection dialog box, see Section 12.6, "File selection dialog", on page 507.

To load a CTLE configuration, tap "Open" and select the required file.

Remote command:
`LANE<m>:EQUalization:CTLE:NAME` on page 3052
`LANE<m>:EQUalization:CTLE:OPEN` on page 3052
`LANE<m>:EQUalization:CTLE:SAVE` on page 3053

Pole/ Zero setup
In this dialog you can set up the zero and pole frequencies for the CTLE filter. Depending on the selected Serial standard, standard predefined values are displayed. They can be changed according to your requirements.



Zero frequencies ← Pole/ Zero setup
Selects the number of zero frequencies for CTLE. Depending on the selected "Serial standard", there are some predefined presets you can use.

You can also enter your custom number of taps and define a "Value" for each of them. You can enter up to 6 zero frequencies.

Remote command:
`LANE<m>:EQUalization:CTLE:ZERO:COUNt` on page 3055
`LANE<m>:EQUalization:CTLE:ZERO:FREQuency<n>` on page 3055

Pole frequencies ← Pole/ Zero setup
Selects the number of pole frequencies for CTLE. Depending on the selected Serial standard, there are some predefined presets you can use.

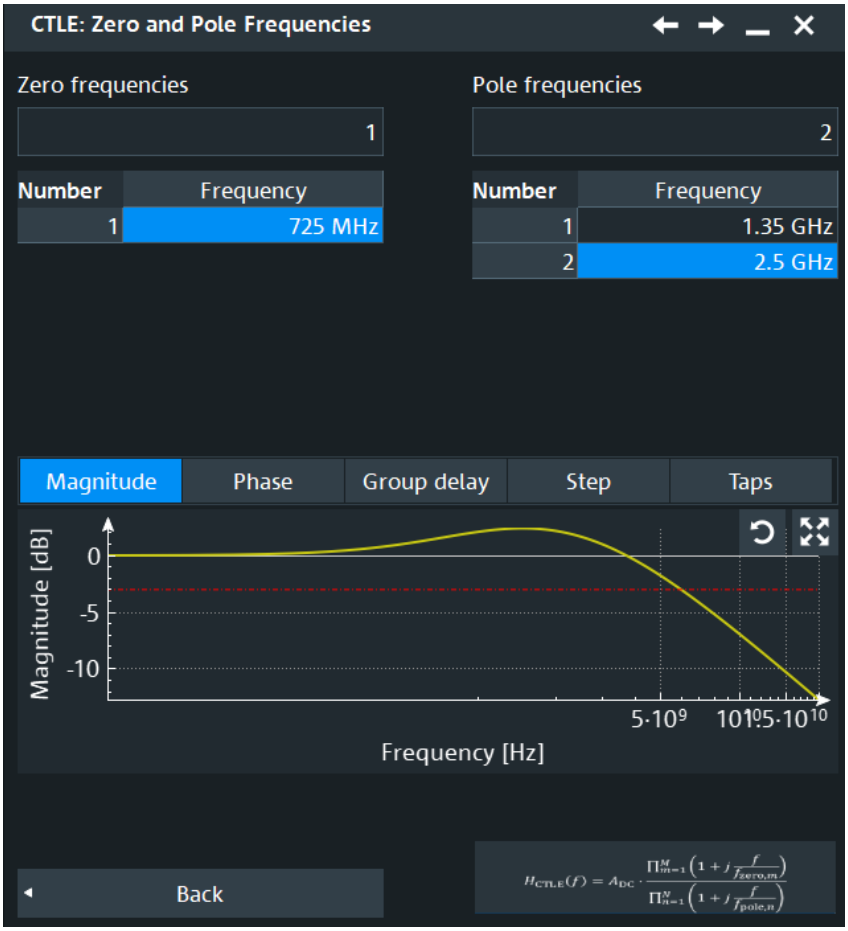
You can also enter your custom number of taps and define a "Value" for each of them. You can enter up to 6 pole frequencies.

Remote command:
`LANE<m>:EQUalization:CTLE:POLE:COUNt` on page 3052
`LANE<m>:EQUalization:CTLE:POLE:FREQuency<n>` on page 3053

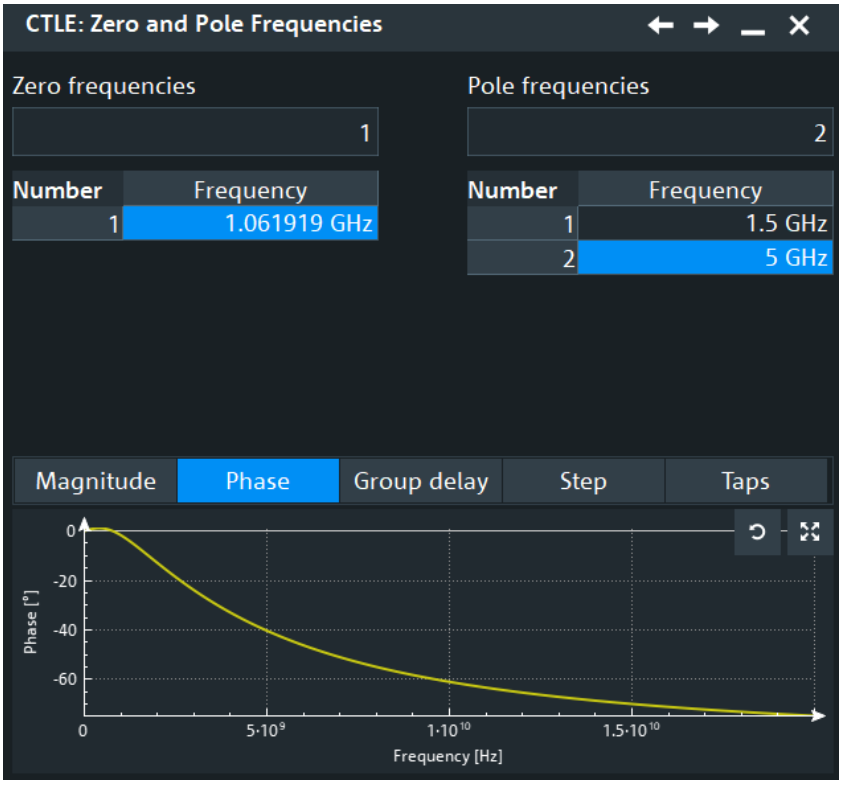
Plot selection ← Pole/ Zero setup
Displays plots for the selected CTLE configurations. Using these plots, you can assess the correction of the signal by CTLE.

You can see the following characteristics:

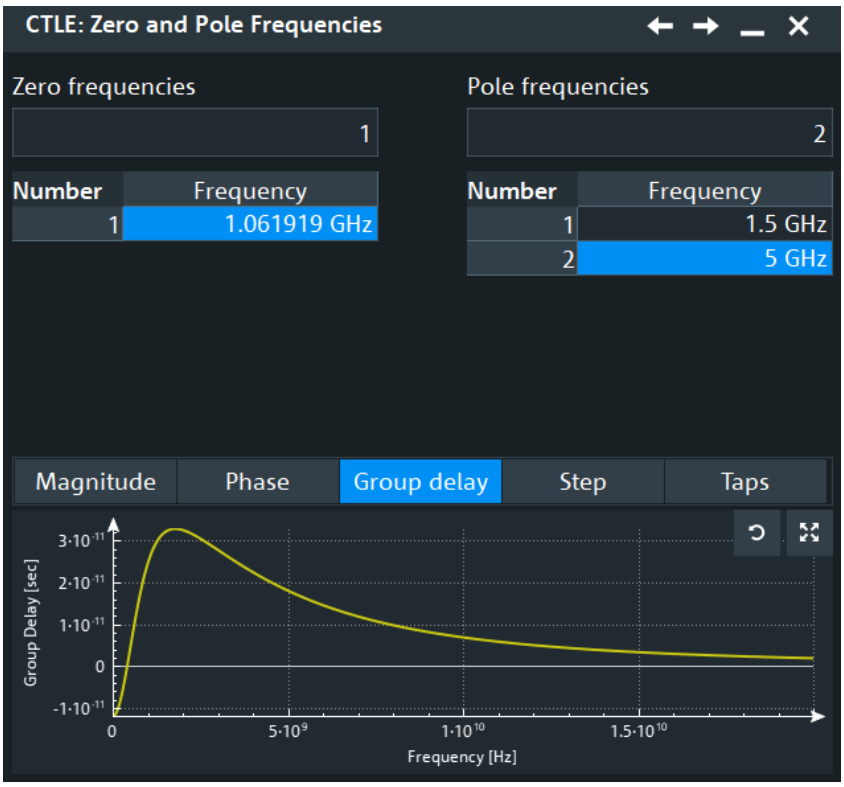
- "Magnitude"
  The plot is displayed with logarithmic X scale.



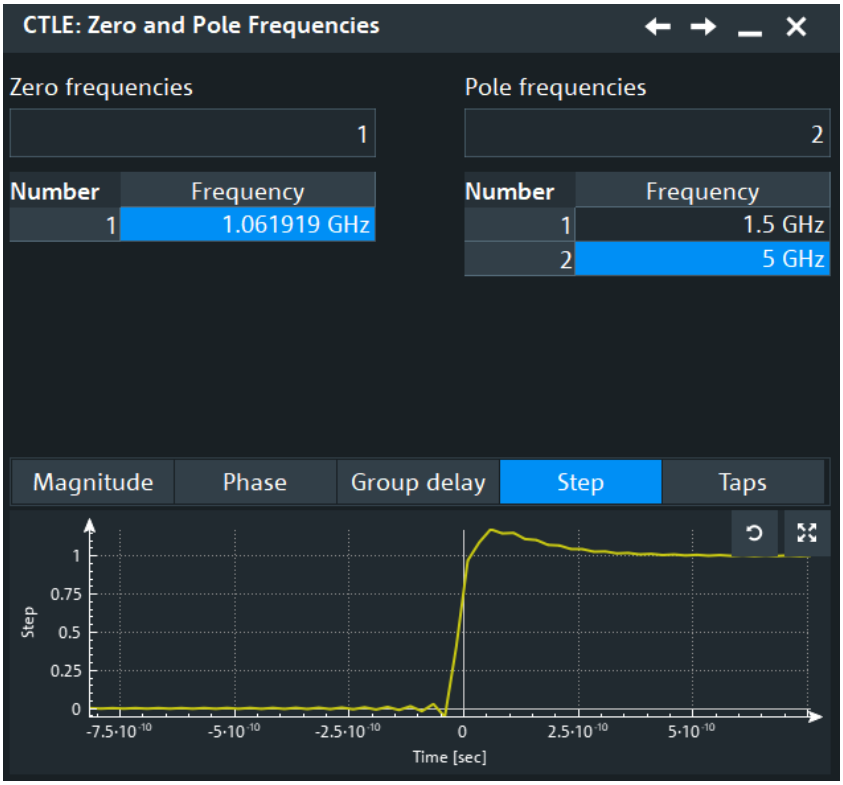
- "Phase"



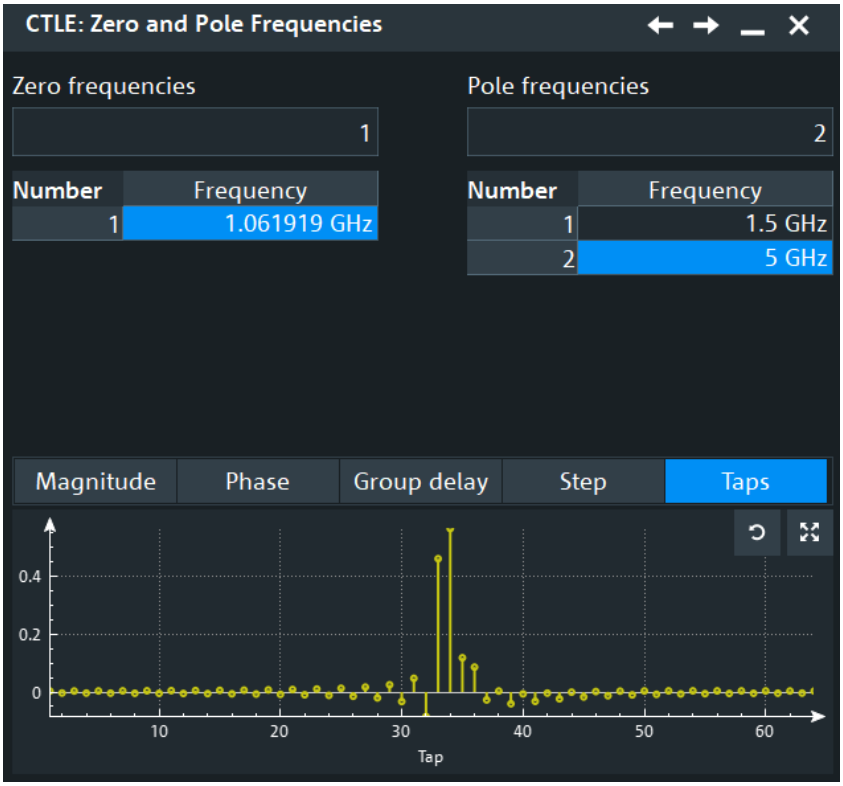
- "Group delay"



- "Step"



- "Taps"



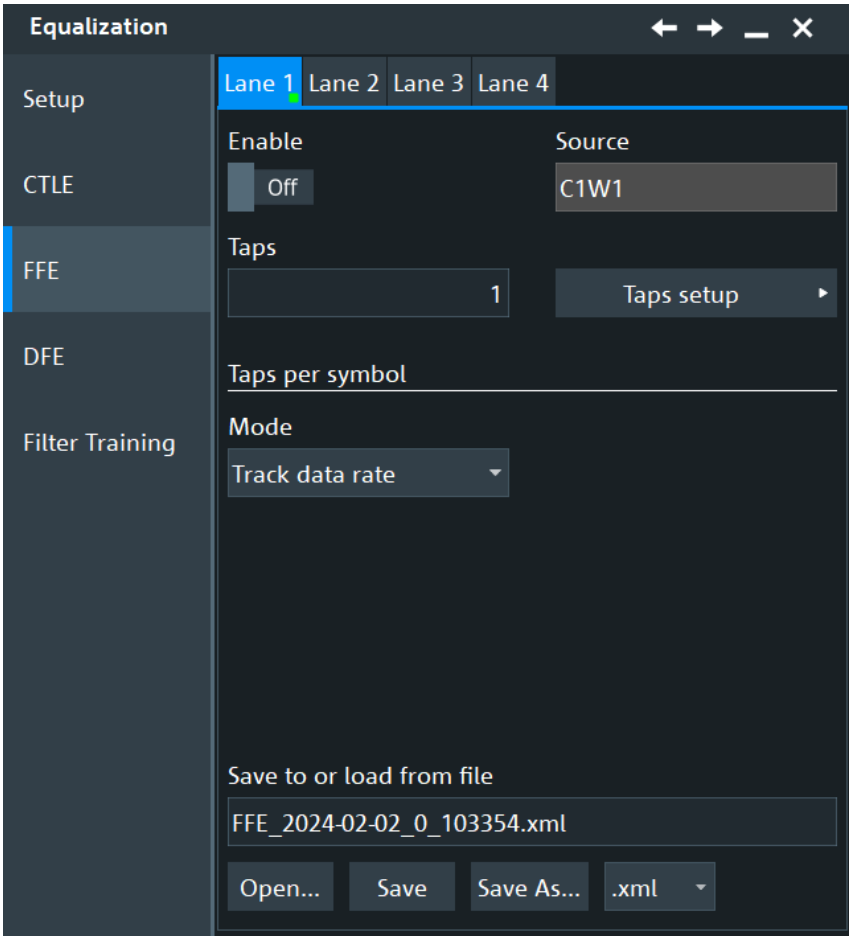
Remote command:
`LANE<m>:EQUalization:CTLE:PSELection` on page 3053

23.5.3 FFE

Access: "Menu" >"Apps" > "Embedding / Equalization" > "Signal Lanes" > "Equalization" > "FFE" tab.

In this dialog, you can define the settings for the feed-forward equalizer.

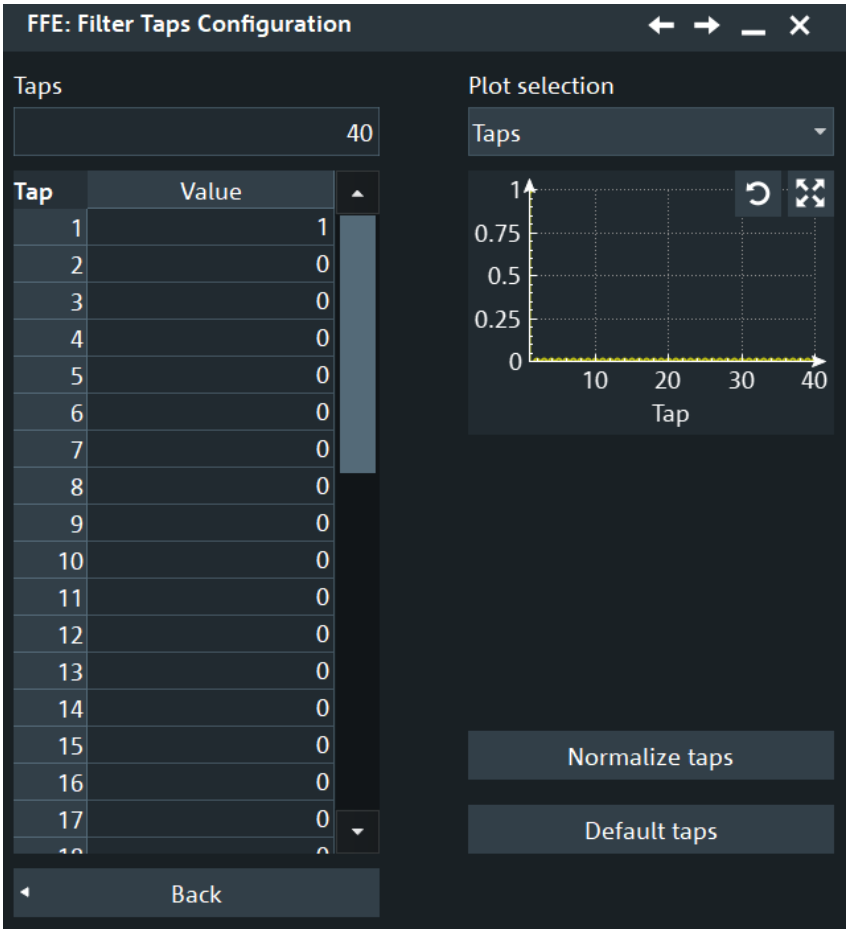
For more information, see Section 23.1.2, "Feed-forward equalizer (FFE)", on page 1341.



Enable
Enables the feed-forward equalizer (FFE).

Remote command:
`LANE<m>:EQUalization:FFE:STATe` on page 3057

Taps setup



Taps ← Taps setup
Sets the number of taps.You can also define a "Value" for each tap.

Remote command:
`LANE<m>:EQUalization:FFE:TAPS:COUNt` on page 3057
`LANE<m>:EQUalization:FFE:TAPS:TAP<n>` on page 3058

Plot selection ← Taps setup
Displays plots for the selected FFE configurations. Using these plots, you can assess the correction of the signal by FFE.

You can see the following characteristics:

- "Magnitude"
- "Phase"
- "Group delay"
- "Step"
- "Taps"

Remote command:
`LANE<m>:EQUalization:FFE:PSELection` on page 3056

Normalize taps ← Taps setup
Normalizes the taps so that their sum is 1.0.

Remote command:
LANE<m>:EQUalization:FFE:TAPS:NORMalize on page 3057

Default taps ← Taps setup
Sets default taps, e.g. 1,0,0,0.

Remote command:
LANE<m>:EQUalization:FFE:TAPS:PRESet on page 3058

Taps per symbol
Selects how the taps per symbol are determined.

The equalizer can use more than one tap per symbol by sampling at a higher rate than the symbol rate. For example, if the symbol period is T, the equalizer can sample at intervals of T/2 and apply one tap to each sample. Such an equalizer would have two taps per symbol. This can improve results if the clock recovery is not accurate, but requires double the number of taps to be able to compensate the same distortions in frequency.

"Track data rate"	The number of taps tracks the data rate which corresponds to one tap per symbol.
"Manual"	If manual is selected, multiple taps per bit are used for the equalization. You can enter the number in the "Value" field.

Remote command:
LANE<m>:EQUalization:FFE:TAPS:SYMMode on page 3058
LANE<m>:EQUalization:FFE:TAPS:SYMValue on page 3058

Save / recall FFE settings
Saves the complete FFE configuration, or loads a saved FFE configuration. The file format is XML.

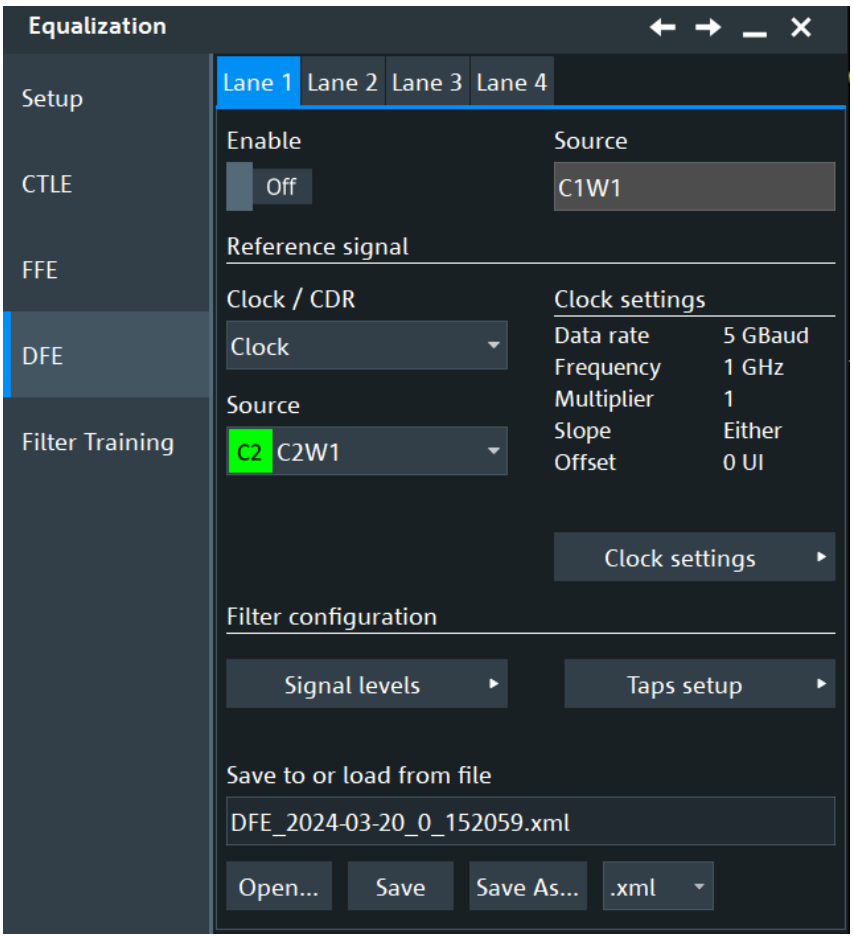
To save the FFE configuration, enter a filename and tap "Save". Alternatively, tap "Save as" to open the file selection dialog box, see Section 12.6, "File selection dialog", on page 507.

To load an FFE configuration, tap "Open" and select the required file.

Remote command:
LANE<m>:EQUalization:FFE:NAME on page 3056
LANE<m>:EQUalization:FFE:OPEN on page 3056
LANE<m>:EQUalization:FFE:SAVE on page 3056

23.5.4 DFE

Access: "Menu" >"Apps" > "Embedding / Equalization" > "Signal Lanes" > "Equalization" > "DFE" tab.



Enable
Enables the decision feedback equalization.

Remote command:
`LANE<m>:EQUalization:DFE:STATe` on page 3060

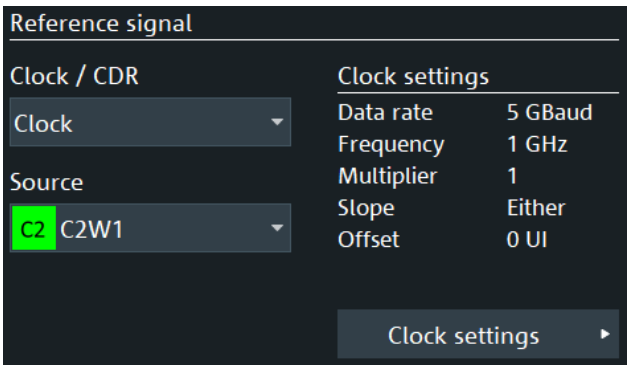
Reference signal
In this section you can define the reference signal used for DFE.

Clock / CDR ← Reference signal
Selects the type of waveform that is used to obtain the timing information required to slice the data source waveform.

Remote command:
`LANE<m>:EQUalization:DFE:TIMReference:SOURce` on page 3066

Clock ← Reference signal
If a clock signal is available, the instrument can use it directly to set the segmentation timestamps. The signal has to be provided on an additional channel.

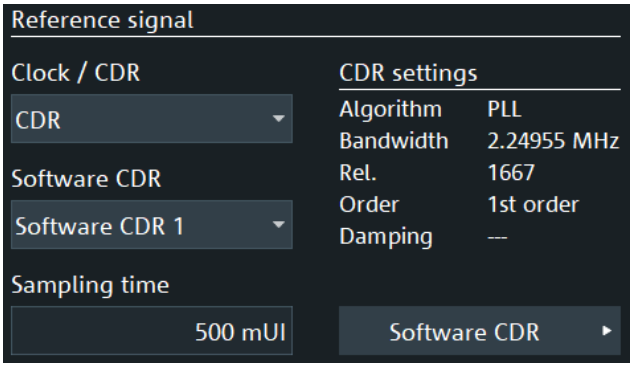
With "Source" you can select the source of the clock signal. For the clock settings, see



Remote command:
LANE<m>:EQUalization:DFE:TIMReference:SOURce on page 3066

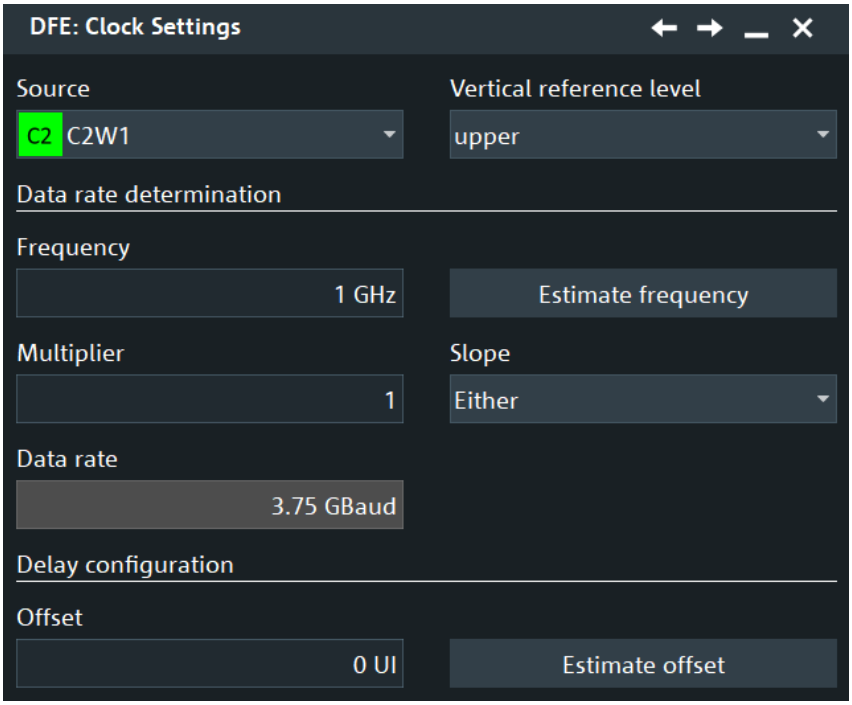
CDR ← Reference signal
Uses a software clock data recovery.

You can also load a reference waveform that contains CDR information in the "Menu" > "Save/Recall" > "Recall" > "Waveform" dialog.



Remote command:
LANE<m>:EQUalization:DFE:TIMReference:CDR[:SELect] on page 3062
LANE<m>:EQUalization:DFE:TIMReference:CDR:SOFTware on page 3062
LANE<m>:EQUalization:DFE:TIMReference:CDR:SOFTware:SAMTime on page 3063

Clock
Opens a dialog to define the setting of the DFE clock.



Source ← Clock
Selects the source for the DFE clock.

Remote command:
LANE<m>:EQUalization:DFE:TIMReference:CLOCk:SOURce on page 3065

Vertical reference level ← Clock
Sets the reference level to define the timestamps for slicing the data waveform. A timestamp is set each time when the selected slope of the timing waveform crosses the selected reference level.

Remote command:
LANE<m>:EQUalization:DFE:TIMReference:CLOCk:LEVel on page 3064

Frequency ← Clock
Sets the clock frequency of the explicit clock signal. If this value is unknown, you can use "Estimate frequency", to calculate an estimate value.

Remote command:
LANE<m>:EQUalization:DFE:TIMReference:CLOCk:FREQuency on page 3064
LANE<m>:EQUalization:DFE:TIMReference:CLOCk:FREStimation on page 3064

Multiplier ← Clock
Sets a value for the clock multiplier, the ratio of an internal clock rate to the externally supplied clock.

Remote command:
LANE<m>:EQUalization:DFE:TIMReference:CLOCk:FACTor on page 3063

Slope ← Clock
The clock slope sets the point in time when the state of the data signal is checked:

"Positive" Rising edge, a positive voltage change.

"Negative" Falling edge, a negative voltage change.

"Either" Both the rising and the falling edge.

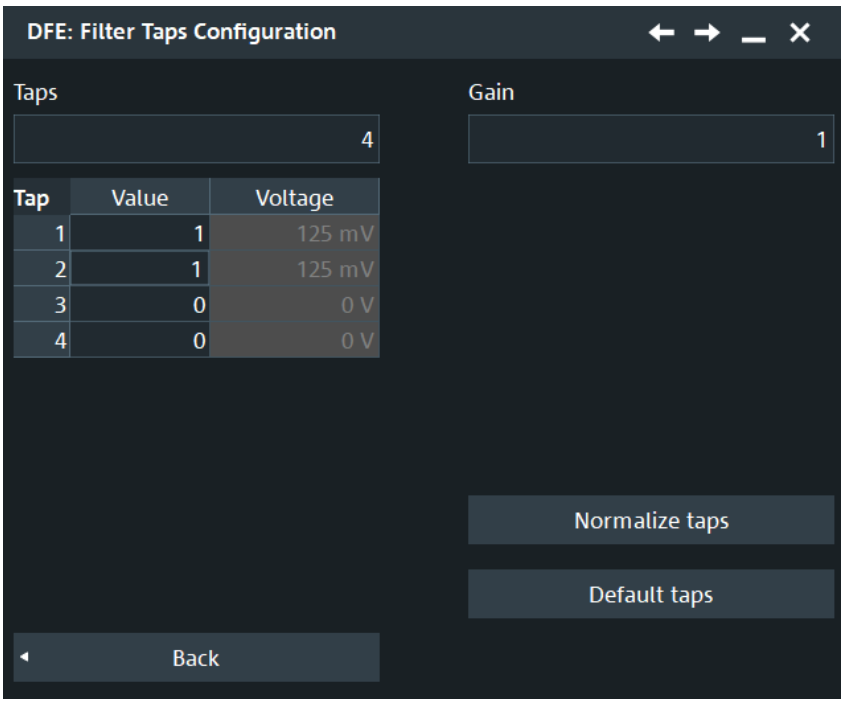
Remote command:
`LANE<m>:EQUalization:DFE:TIMReference:CLOCk:EDGE` on page 3063

Data rate ← Clock
Displays the data rate.

Offset, Estimate offset ← Clock
Sets a clock offset. If this value is unknown, you can use "Estimate offset" to calculate an estimate value for the clock offset.

Remote command:
`LANE<m>:EQUalization:DFE:TIMReference:CLOCk:OFFSet` on page 3065
`LANE<m>:EQUalization:DFE:TIMReference:CLOCk:OFEStimation` on page 3065

Filter Taps Configuration



Taps ← Filter Taps Configuration
Selects the number of taps for DFE. You can also define a "Value" for each tap.

Additionally for NRZ signals, the corresponding voltage value is displayed.

Remote command:
`LANE<m>:EQUalization:DFE:TAPS:COUNt` on page 3061
`LANE<m>:EQUalization:DFE:TAPS:TAP<n>` on page 3062

Gain ← Filter Taps Configuration
Sets the gain for the DFE filter.

Remote command:
LANE<m>:EQUalization:DFE:GAIN on page 3059

Normalize taps
Normalizes the taps.

Remote command:
LANE<m>:EQUalization:DFE:TAPS:NORMalize on page 3061
LANE<m>:EQUalization:DFE:TAPS:TAP<n> on page 3062

Default taps
Sets default taps.

Remote command:
LANE<m>:EQUalization:DFE:TAPS:PRESet on page 3061

Save / recall DFE settings
Saves the complete DFE configuration, or loads a saved DFE configuration. The file format is XML.

To save the DFE configuration, enter a filename and tap "Save". Alternatively, tap "Save as" to open the file selection dialog box, see Section 12.6, "File selection dialog", on page 507.

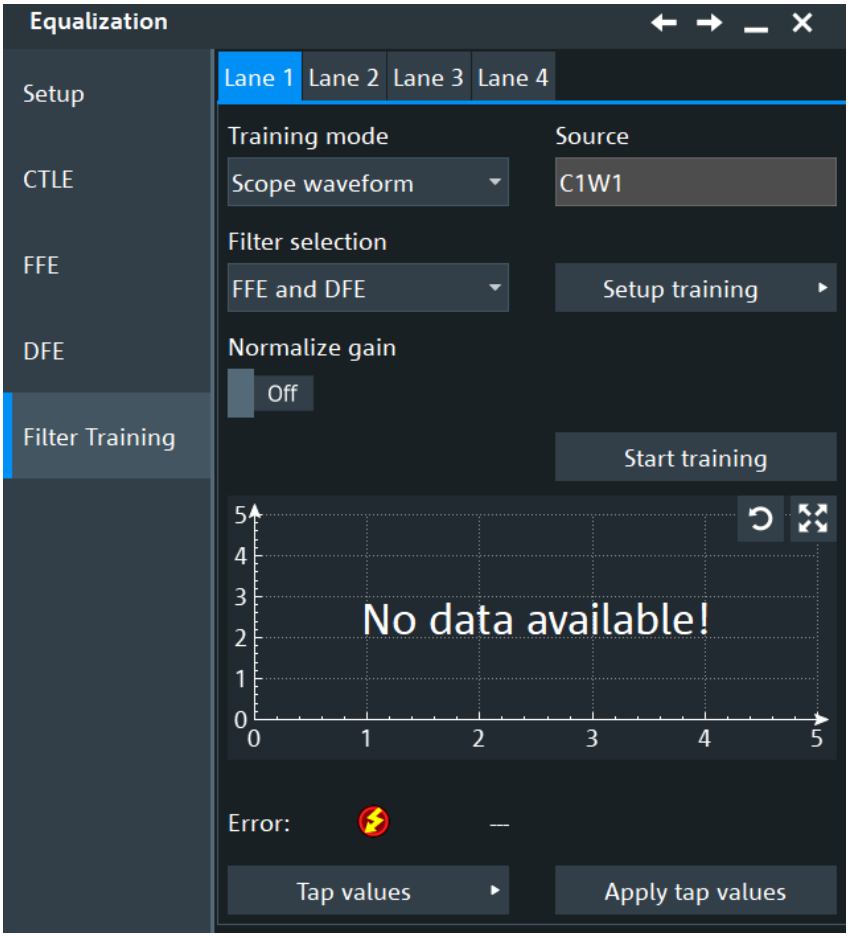
To load a DFE configuration, tap "Open" and select the required file.

Remote command:
LANE<m>:EQUalization:DFE:NAME on page 3060
LANE<m>:EQUalization:DFE:OPEN on page 3060
LANE<m>:EQUalization:DFE:SAVE on page 3060

23.5.5 Filter training

Filter training for equalization is the process of adapting the coefficients of an equalizer filter to optimize its performance in reducing inter-symbol interference (ISI) and other distortions in a communication channel. The goal is to adjust the filter so that the output closely matches the desired signal.

Access: "Menu" >"Apps" > "Embedding / Equalization" > "Signal Lanes" > "Equalization" > "Filter Training" tab.



Training mode
Selects the waveform to be trained. You can select a "Scope waveform" or load a "Reference waveform".

Remote command:
`LANE<m>:EQUalization:TRAining:MODE` on page 3071

Filter selection
Selects the filter for the filter training. You can select between an FFE filter and a combination of FFE and DFE filter.

Remote command:
`LANE<m>:EQUalization:TRAining:FSELection` on page 3070

Normalize gain
Sets ths state of the normalize gain for FFE. The gain of a trained DFE is always 1.

If enabled, the gain of the FFE is normalized to 1, such that the signal has a similar amplitude at the input and output of the equalizer.

If disabled, the equalizer is trained such that the output PAM levels are separated by 1 V (e.g., +/- 0.5 V for NRZ).

Remote command:
`LANE<m>:EQUalization:TRAining:NORGain` on page 3071

Start training
Starts the filter training.

Remote command:
LANE<m>:EQUalization:TRAining:STARt on page 3072

Plot
Displays the plots for the selected training configuration.

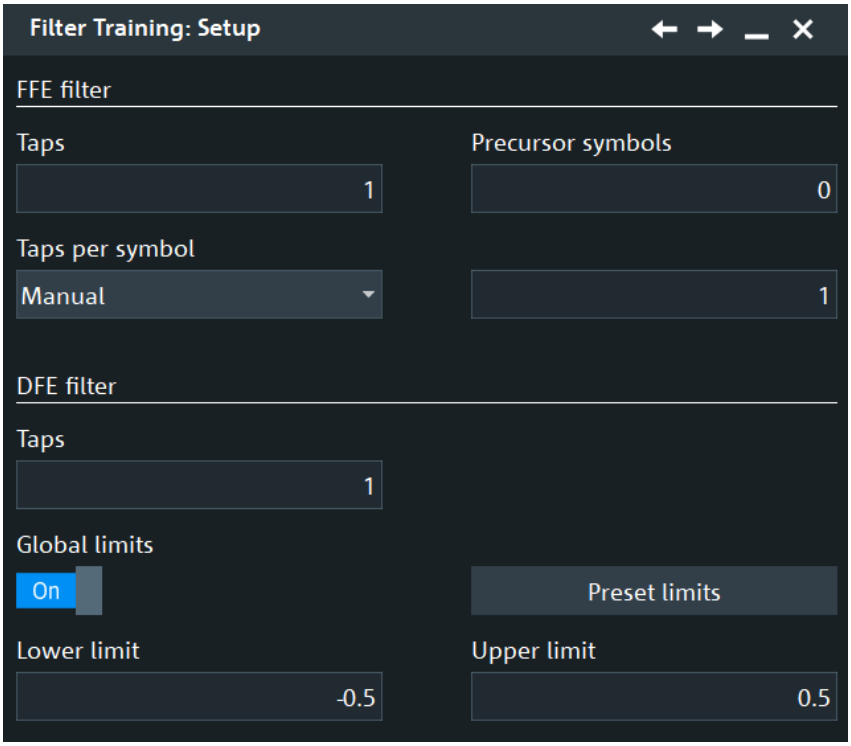
Error
Shows, if there is an error during the filter training.

Remote command:
LANE<m>:EQUalization:TRAining:ERRor? on page 3072

Apply tap values
Applies the tap values.

Remote command:
LANE<m>:EQUalization:TRAining:APPLy on page 3066

Filter Training Setup : FFE



Taps ← Filter Training Setup : FFE
Sets the number of taps used for the training of the FFE. You can select up to 40 taps.

Remote command:
LANE<m>:EQUalization:TRAining:FFE:TAPS:COUNt on page 3069

Precursor symbols ← Filter Training Setup : FFE
Sets a value for the number of the precursor symbols that are used.

FFE uses a linear combination of some past, present and future symbols to estimate the current symbol. The precursor taps determine the number of future symbols that are used to estimate the current symbol. This is also the zero-based index of the strongest tap, and approximately equivalent to the group delay of the equalizer, measured in symbol periods.

Default value is 0.4 * (Number of taps). This usually gives good results.

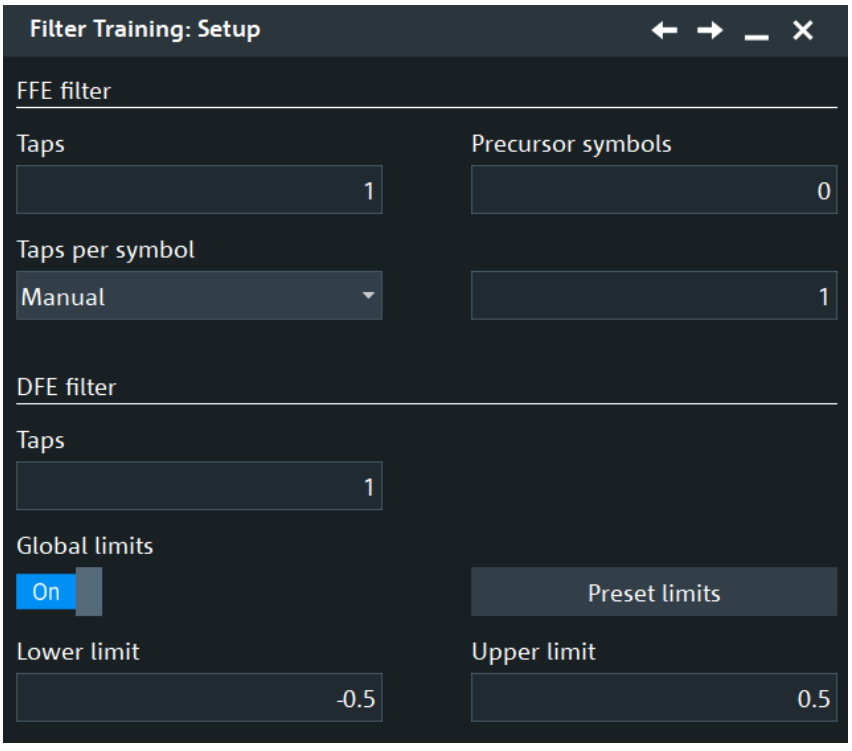
Remote command:
`LANE<m>:EQUalization:TRAining:FFE:TAPS:PRECursor` on page 3069

Taps per symbol ← Filter Training Setup : FFE
Selects how the taps per symbol are determined.

"Track data rate"	The number of taps tracks the data rate which corresponds to one tap per symbol.
"Manual"	If manual is selected, multiple taps per bit are used for the equalization. You can enter the number in the "Value" field.

Remote command:
`LANE<m>:EQUalization:TRAining:FFE:TAPS:SYMMode` on page 3070
`LANE<m>:EQUalization:TRAining:FFE:TAPS:SYMValue` on page 3070

Filter Training Setup : DFE



In this dialog you can define the settings of the FFE and DFE filter.

Taps ← Filter Training Setup : DFE
Sets the number of taps used for the training of the DFE. You can select up to 5 taps.

Remote command:
LANE<m>:EQUalization:TRAining:DFE:TAPS:COUNt on page 3068

Global limits ← Filter Training Setup : DFE
If enabled, you can define the same "Lower limit" and "Upper limit" limits for all taps. Else, you can define separate values for each tap.

Remote command:
LANE<m>:EQUalization:TRAining:DFE:TAPS:UGLLimit on page 3068

Lower limit, Upper limit ← Filter Training Setup : DFE
Sets the lower/upper limit for the DFE filter. The trained/generated filter tap values are within these given limits. The values are constrained between -1 and 1.

Remote command:
LANE<m>:EQUalization:TRAining:DFE:LIMits:TAP<n>:LLIMit
on page 3067
LANE<m>:EQUalization:TRAining:DFE:LIMits:TAP<n>:ULIMit
on page 3067
LANE<m>:EQUalization:TRAining:DFE:TAPS:LLIMit<n> on page 3068
LANE<m>:EQUalization:TRAining:DFE:TAPS:ULIMit<n> on page 3069

Preset limits ← Filter Training Setup : DFE
Sets the DFE taps limits to their default values.

Remote command:
LANE<m>:EQUalization:TRAining:DFE:LIMits:PRESet on page 3067

24 Compliance tests and measurement functions

Thanks to the high measurement accuracy of the R&S RTO6, the oscilloscope can be used for reliable compliance testing on the physical layer of high-speed bus interfaces. For fast and easy compliance testing, you need the free-of-charge R&S ScopeSuite. The software guides you step-by-step through the test sequences, configures the oscilloscope, automatically performs measurements and compiles the results in a measurement report. Detailed, image-based instructions make it easy to connect the oscilloscope and the probes to the test fixture set and the device under test.

The R&S ScopeSuite can be installed on a test computer or directly on the R&S RTO6. If the R&S ScopeSuite is installed on the oscilloscope, you can start it directly in the firmware menu.

For best operation results, we recommend that the installed firmware versions of the R&S ScopeSuite and the oscilloscope are the same.

Access: [App Cockpit] > "Compliance" tab

24.1 USB compliance test

The R&S RTO6-K21 option enables the automatic testing of USB 2.0 compliance (high-speed) as well as USB 1.1 (full-speed) and USB 1.0 (low-speed).

As an example, the test setup for USB device tests is shown below.

The test fixture and the USB compliance test procedures are described in separate manuals:

- "R&S®RTO-K21, R&S®RTP-K21/-101 R&S®USB 2.0/3.2 Compliance Test, User Manual"
- "R&S®RT-ZF1 USB 2.0 Compliance Test Fixture Set, Manual"

24.1.1 Test equipment

For USB 2.0 compliance tests, the following test equipment is recommended:

- R&S RTO6 oscilloscope with 4 channels and at least 2 GHz bandwidth.
  For full speed and low speed compliance tests, a 4-channel R&S RTO with less than 2 GHz bandwidth is sufficient.
- R&S RT-ZF1 USB 2.0 compliance test fixture set, which consists of the load board and the signal quality board.
- Probes:
  - 2x single-ended active probes with at least 2 GHz bandwidth
  - 1x differential active probe with at least 2 GHz bandwidth

- R&S RTO-B6/R&S RTP-B6/Tabor WX2182B/Tabor WX2182C arbitrary waveform generator for automatic receiver sensitivity tests.
  For manual receiver sensitivity tests, any AWG can be used.
- R&S ScopeSuite software, which can be installed on a computer or directly on the R&S RTO6.
- R&S RTO6-K21 USB 2.0 compliance test option (required option, installed on the oscilloscope)
- Make sure that you use the latest version of the USBHSET tool. To find downloads, search for *USBHSET* on the following websites:
  – USB 3.0 host: www.usb.org/developers/tools/
  – USB 2.0 host: www.usb.org/developers/tools/usb20_tools/

  Regularly check the USB-IF website compliance.usb.org/index.asp?UpdateFile=Electrical&Format=Standard for USB-IF compliance updates.

24.2 Ethernet compliance tests (options R&S RTO6-K22/K23/K24/K87/K88/K89)

The Ethernet compliance test options enable the automatic testing of various Ethernet standards:

- 10/100/1000BASE-T (R&S RTO6-K22)
- 2.5/5/10GBASE-T (R&S RTO6-K23)
- 100BASE-T1: (R&S RTO6-K24)
- 1000BASE-T1: (R&S RTO6-K87)
- 1000BASE-T1: (R&S RTO6-K88
- 10BASE-T1: (R&S RTO6-K89)

The test fixture and the Ethernet compliance test procedures are described in the separate manuals:

- R&S®RTO, R&S®RTP Ethernet Compliance Test, User Manual"
- "R&S®RT-ZF2 Ethernet Compliance Test Fixture Set Manual"
- "R&S®RT-ZF3 Frequency Converter Manual
- "R&S®RT-ZF4 10BASE-Te Fixture Manual
- R&S®RT-ZF5 Ethernet Probing Fixture Manual
- R&S®RT-ZF6 Frequency Converter Manual

24.2.1 Test equipment

For Ethernet compliance tests, the following test equipment is needed:

- The free-of-charge R&S ScopeSuite software, which can be installed on a computer or directly on the oscilloscope.
- **10/100/1000BASE-T Ethernet compliance tests:**

  - R&S RTO/R&S RTP oscilloscope with at least 600 MHz bandwidth
  - Differential probe with at least 1 GHz bandwidth
  - R&S RTO/R&S RTP-K22 10/100/1000BASE-T Ethernet compliance test option (required option, installed on the oscilloscope)
  - R&S RT-ZF2 Ethernet test fixture set
  - For energy-efficient Ethernet tests, in addition:
    R&S RT-ZF5 Ethernet test fixture set for 100/1000BASE-T EEE tests
    R&S RT-ZF4 test fixture for 10BASE-Te tests
- **2.5GBASE-T Ethernet compliance tests:**
  - R&S RTO/R&S RTP oscilloscope with at least 600 MHz bandwidth
    For precise power spectral density and power level measurements up to 1 GHz, it is recommended to use an oscilloscope and a differential probe with 1 GHz bandwidth each.
  - Differential probe with at least 1GHz bandwidth
  - R&S RTO/R&S RTP-K23 GBASE-T Ethernet compliance test option (required option, installed on the R&S RTO6)
  - R&S RT-ZF2 Ethernet test fixture set
- **5GBASE-T Ethernet compliance tests:**
  - R&S RTO/R&S RTP oscilloscope with at least 1 GHz bandwidth
    For precise power spectral density and power level measurements up to 1.5 GHz, it is recommended to use an oscilloscope and a differential probe with 1.5 GHz bandwidth each.
  - Differential probe with at least 1.5 GHz bandwidth
  - R&S RTO/R&S RTP-K23 GBASE-T Ethernet compliance test option (required option, installed on the R&S RTO6)
  - R&S RT-ZF2 Ethernet test fixture set
- **10GBASE-T Ethernet compliance tests:**
  - R&S RTO/R&S RTP oscilloscope with at least 2 GHz bandwidth
    For precise power spectral density and power level measurements up to 3 GHz, it is recommended to use an oscilloscope and a differential probe with 3 GHz bandwidth each.
  - Differential probe with at least 3 GHz bandwidth
  - R&S RTO/R&S RTP-K23 GBASE-T Ethernet compliance test option (required option, installed on the R&S RTO6)
  - R&S RT-ZF2 Ethernet test fixture set
- **100BASE-T1 compliance tests:**
  - R&S RTO/R&S RTP oscilloscope with at least 600 MHz bandwidth
  - Differential probe with 1 GHz bandwidth
  - R&S RTO/R&S RTP-K24 100BASE-T1 compliance test option (required option, installed on the R&S RTO6)
  - R&S RT-ZF2 Ethernet test fixture set
  - R&S RT-ZF3 frequency converter for transmitter distortion tests
- **1000BASE-T1 compliance tests:**

  - R&S RTO/R&S RTP oscilloscope with at least 2 GHz bandwidth
  - Differential probe with 2 GHz bandwidth
  - R&S RTO/R&S RTP-K87 1000BASE-T1 compliance test option (required option, installed on the R&S RTO6)
  - R&S RT-ZF2 Ethernet test fixture set
  - R&S RT-ZF6 frequency converter for transmitter distortion tests
- **MGBASE-T1 compliance tests:**
  - R&S RTO / R&S RTO6 /R&S RTP oscilloscope, with a bandwidth of:
    - for 2.5 GBASE-T1 tests: at least 3.5 GHz
    - for 5 GBASE-T1 tests: at least 7 GHz
    - for 10 GBASE-T1 tests: at least 13 GHz
  - 2 BNC/SMA cables
  - R&S RTO/R&S RTP-K88 MGBASE-T1 compliance test option (required option, installed on the R&S RTO6)
- **10BASE-T1 compliance tests:**
  - R&S RTO/R&S RTP oscilloscope
  - Optional Differential probe with 1 GHz bandwidth
  - R&S RTO/R&S RTP-K89 10BASE-T1 compliance test option (required option, installed on the R&S RTO6)
- R&S RTO-B6/R&S RTP-B6/Tabor WX2182B/Tabor WX2182C arbitrary waveform generator for automatic disturber tests. For some disturber tests, also HMF2550 can be used.
- R&S ZNB/ZNC/ZND/ZVL vector network analyzer for automatic return loss measurements. For manual measurements, also other AWGs and VNAs can be used.

24.3 D-PHY compliance tests (option R&S RTO6-K26)

The option R&S RTO6-K26 enables the automatic processing of D-PHY compliance tests.

The D-PHY compliance test procedures are described in a separate manual:

- R&S®RTO-K26, R&S®RTP-K26, D-PHY Compliance Test, User Manual"

24.3.1 Test equipment

For D-PHY compliance tests, the following test equipment is needed:

- R&S RTO6 oscilloscope with 4 channels and at least 4 GHz bandwidth
- For measuring the clock signal (+ and -): either 1 differential probe or 2 single-ended probes with at least 4 GHz bandwidth. However, note that D-PHY Group 2 and Group 4 tests require 2 probes for the clock signal.
- For measuring the data signal (+ and -): 2 probes with at least 4 GHz bandwidth Available probes: R&S RT-ZD40 or R&S RT-ZM with a different probe tip selection.

- R&S RTO6-K26 D-PHY compliance test option (required option, installed on the oscilloscope)
- R&S RTO6-K27 D-PHY compliance test option (required option, installed on the oscilloscope)
- For Eye Tests, the following options are needed:

  For R&S RTO/ R&S RTO6:

  – R&S RTO/R&S RTO6-K91 (DDR3) or R&S RTO/R&S RTO6-K93 (DDR4)
- Recommended test fixture for LP-TX tests: MIPI D-PHY Capacitive Load (C_{LOAD}) fixture from The University of New Hampshire InterOperability Laboratory (UNH-IOL)
- Recommended termination board for HS-TX tests: MIPI D-PHY Reference Termination Board (RTB) from The University of New Hampshire InterOperability Laboratory (UNH-IOL)
- The free-of-charge R&S ScopeSuite software, which can be installed on a computer or directly on the oscilloscope.

24.4 eMMC compliance tests (option R&S RTO6-K92)

The option R&S RTO6-K92 enables the automatic processing of eMMC compliance tests.

The eMMC compliance test procedures are described in a separate manual:

- eMMC Compliance Tests, Test Procedures Manual"

24.4.1 Test equipment

For eMMC compliance tests, the following test equipment is needed:

- R&S RTO6 oscilloscope with at least 1 GHz bandwidth
- A probe with at least 1.5 GHz bandwidth
- R&S RTO6-K92 eMMC compliance test option (required option, installed on the R&S RTO6)
- The free-of-charge R&S ScopeSuite software, which can be installed on a computer or directly on the R&S RTO6.

24.5 PCIe compliance tests (option R&S RTO6-K81)

The option R&S RTO6-K81 enables the automatic processing of PCIe 1.1 / PCIe 2.0 compliance tests.

The PCIe compliance test procedures are described in a separate manual:

- R&S®RTO-K81, R&S®RTP-K81/-K83, PCIe Compliance Test, User Manual"

24.5.1 Test equipment

PCIe 1.1 / PCIe 2.0 Test Equipment

For PCIe compliance tests, the following test equipment is needed:

- R&S RTO6 oscilloscope with at least 6 GHz bandwidth, 2 channels and 20 GS/s available
- Probes/cables:
  - Two SMP to SMA cables or
  - Two single-ended probes with at least 6GHz bandwidth bandwidth or
  - One differential probe with at least 6GHz bandwidth bandwidth
- R&S RTO6-K81 PCIe compliance test option (required option, installed on the oscilloscope)
- Recommended test fixture:
  - For Add-In card testing: PCI Express Compliance Base Board (CBB2.0) from PCI-SIG
  - For System Board testing: PCI Express Compliance Load Board (CLB2.0) from PCI-SIG
- The free-of-charge R&S ScopeSuite software, which can be installed on a computer or directly on the oscilloscope.

24.6 DDR3 compliance tests (option R&S RTO6-K91)

The option R&S RTO6-K91 enables the automatic processing of DDR3 compliance tests.

The DDR3 compliance test procedures are described in a separate manual:

- R&S®RTO-K91, R&S®RTP-K91 DDR3 Compliance Test, User Manual"

24.6.1 Test equipment

For DDR3 compliance tests, the following test equipment is needed:

- R&S RTP with 4 channels and minimum 8 GHz bandwidth, or
  R&S RTO2000 with 4 channels and minimum 4 GHz bandwidth
  R&S RTO6 with 4 channels and minimum 4 GHz bandwidth
- R&S RTO6-K91 DDR3 compliance test option (required option, installed on the R&S RTO6)
- 4 modular probes, R&S ZM90 with 9 GHz bandwidth. See also Section 24.6.1.1, "Soldering guide for modular probes", on page 1385.
- 4 modular probe tips R&S RT-ZMA10 or R&S RT-ZMA14
- The free-of-charge R&S ScopeSuite software, which can be installed on a computer or directly on the R&S RTO6.

24.6.1.1 Soldering guide for modular probes

All single-ended signals such as ADD, CMD, DQ, DM, CS, CKE should be soldered in such a way that the signal is connected to the + part on the probe tip. The ground of the signal is connected to the - part on the same probe tip.

All differential signals such as CK, DQS should be soldered differentially:

- The + signal is connected to the + part on the probe tip.
- The - signal is connected to the - part on the same probe tip.
- The ground of the signal is connected to the ground of the same probe tip.

25 Network operation and remote control

The operating system is the basis of the instrument's firmware, it provides basic functions such as logon, password protection, virus protection, and connection to a network.

In addition to working with the R&S RTO6 directly, using the touchscreen and the keys, you can also operate the instrument from a remote PC. Various methods of remote control are supported:

- Using the web interface in a LAN network
- Using Remote Desktop Connection in a LAN network
- Remote control with SCPI commands

- Operating system 1386
- Setting up a network (LAN) connection 1391
- Web interface 1396
- Remote Desktop connection 1401
- Remote control 1403

25.1 Operating system

The R&S RTO6 has a Windows operating system (Windows 10 or Windows 11).

The operating system has been configured according to the instrument's features and needs. To ensure that the instrument software functions properly, certain rules must be observed when using the operating system.

NOTICE

Risk of rendering instrument unusable

The instrument is equipped with the Windows operating system. You can install additional software on the instrument, however, additional software can impair instrument function. Thus, run only programs that Rohde & Schwarz has tested for compatibility with the instrument software.

The drivers and programs used on the instrument under Windows are adapted to the instrument. Only install update software released by Rohde & Schwarz to modify existing instrument software.

Changes in the system setup are only required if the network configuration does not comply with the default settings (see Section 25.2.1, "Connecting the instrument to the network", on page 1391).

25.1.1 Logon

Windows requires that users identify themselves by entering a user name and password in a logon window.

If the instrument is connected to the network, you are automatically logged on to the network when you log on to the operating system. As a prerequisite, the user name and the password must be identical under Windows and on the network. The instrument provides an auto-logon function that can be configured for standard user and administrator access. The configuration requires the user name and password.

See also: "Log on as" on page 72.

The R&S RTO6 provides two user accounts:

- "Instrument": an administrator account with unrestricted access to the computer/ domain (default user)
- "NormalUser": a standard user account with limited access

For both users, the initial password is "894129". It is recommended that you change the password for both users after initial logon. You can change the password in the Windows configuration:

"Start" menu > "Settings" > "Accounts" > "Sign-in options".

Make sure to change the password also in the auto-logon of the R&S RTO6, see below.

By default, the instrument logs on with an administrator account and standard password. To restrict the access to system functions, you can change the autologon to "NormalUser".

The following tasks require administrator rights:

- Configuration of a LAN settings, network connection, and firewall settings
- Date and time setup
- Printer installation
- Firmware update
- BIOS update
- Using the web browser
- Touchscreen calibration
- Installation of options
- Moving portable licenses

To configure the auto-logon for a standard user

Default situation: the auto-logon is configured for the administrator ("Instrument").

1. Open "Menu" > "Settings" > "System" > "Users"
2. Set "Logon as" to "User autologon".
3. Enter the "User name": *NormalUser*.
4. Enter the password of the standard user.

5. Restart the instrument.

To configure the auto-logon for administrator

Starting situation: the auto-logon is configured for a standard user ("NormalUser").

1. Open "Menu" > "Settings" > "System" > "Users"
2. Set "Logon as" to "None".
3. Exit the firmware.
4. Sign out from the operating system.
5. Log on as administrator ("Instrument").
6. Set the "Logon as" to "Admin autologon". Enter the "User name": *Instrument* and the administrator's password.
7. Restart the instrument.

25.1.2 Service packs and updates

Microsoft regularly creates security updates and other patches to protect Windows-based operating systems. These are released through the Microsoft Update website and associated update server. Instruments using Windows, especially those that connect to a network, should be updated regularly.

For details and recommendations, see the following Rohde & Schwarz white paper:

- 1EF96: Malware Protection Windows 10

25.1.3 Virus protection

Take appropriate steps to protect your instruments from infection. Use strong firewall settings and scan any removable storage device used with a Rohde & Schwarz instrument regularly. It is also recommended that you install anti-virus software on the instrument. Rohde & Schwarz does NOT recommend running anti-virus software in the background ("on-access" mode) on Windows-based instruments, due to potentially degrading instrument performance. However, Rohde & Schwarz does recommend running it during non-critical hours.

For details and recommendations, see the following Rohde & Schwarz white paper:

- 1EF96: Malware Protection Windows 10

25.1.4 Backup and recovery

The R&S RTO6 has a backup partition with an application for backup and restore the firmware. The backup of the factory default state is always available. You can save additional backups, for example, before a firmware update or to provide different system configurations for different environments.

The backup saves the current instrument installation and its configuration. Data are not saved in the backup.

To save a system backup

1. Before starting the backup, unplug the LAN cable and USB storage devices to minimize the risk of computer virus attacks.
2. Restart the R&S RTO6.

   The boot screen is displayed for about 2 seconds.
3. When the boot screen is displayed, immediately select "Backup", and press [ENTER].
4. Select "Create Backup".
5. Enter a name for the backup and the date. If necessary, you can add information to the description. By default, the description contains the current version of the firmware.
6. Select "Start Backup".

   A progress information dialog is displayed. You can terminate at any time with "Cancel". After the process has been finished, the dialog is closed automatically, and the main dialog is displayed again.
7. In the main dialog, select "Exit and Reboot".

   The backup and restore application is closed, and the R&S RTO6 is restarted.

To restore a backup version

When restoring a backup, the Windows operating system and installed anti-malware software are probably outdated. To minimize the risk of malware threats after restoring a backup, verify and adjust the "Windows Update" settings. Follow the recommendations from Rohde & Schwarz applicable to your instrument. Also, install all Windows security updates that have been published in the meanwhile.

1. Before starting the recovery, unplug the LAN cable and USB storage devices to minimize the risk of computer virus attacks.
2. Restart the R&S RTO6.

   The boot screen is displayed for about 2 seconds.
3. When the boot screen is displayed, immediately select "Backup", and press [ENTER].
4. Select the backup that you want to restore.
5. Select "Restore Selected".
6. Confirm with "Yes".

A progress information dialog is displayed. You can terminate at any time with "Cancel".

During the restore process, the system partition is deleted, formatted and written newly. The data partition is not affected. After the process has been finished, the application is closed automatically, and the R&S RTO6 is restarted.

To delete a backup version

To provide space for new backups, you can remove older backups. The factory default cannot be deleted.

1. Restart the R&S RTO6.
2. When the boot screen is displayed, immediately select "Backup", and press [ENTER].
3. Select the backup that you want to delete.
4. Select "Delete Selected".
5. Confirm with "Yes".
6. In the main dialog, select "Exit and Reboot", or continue with "To save a system backup" on page 1389.

25.1.5 Accessing windows functionality

All required Windows settings can be changed using the touchscreen and the on-screen keyboard that is part of the Windows system. However, modification is easier if you connect a mouse and/or keyboard to the instrument.

To access Windows

► Open "Menu" > 🖳.

The application is minimized to the taskbar and the "Start" menu becomes available.

To access Windows using an external keyboard

1. To open the "Start" menu, press the Windows key or the CTRL + ESC key combination on your keyboard.
2. To access the desktop, press the Windows key + D on your keyboard.

25.2 Setting up a network (LAN) connection

Network environment

Before connecting the product to a LAN, consider the following:

- Install the latest firmware to reduce security risks.
- For internet or remote access, use secured connections if applicable.
- Ensure that the network settings comply with the security policies of your company. Contact your local system administrator or IT department before connecting your product to your company LAN.
- When connected to the LAN, the product may potentially be accessed from the internet, which may be a security risk. For example, attackers might misuse or damage the product.

Applications of LAN

The LAN connection settings can be configured directly in the Windows operating system. Provided the network administrator has assigned you the appropriate rights and adapted the Windows firewall configuration, you can use the interface, for example:

- To transfer data between a controlling device and the test device, e.g. to run a remote control program.
- To access or control the measurement from a remote computer using the "Remote Desktop" application (or a similar tool)
- To transfer data from a remote computer and back, e.g. using network folders

This section describes how to configure the LAN interface. It includes the following topics:

- Section 25.2.1, "Connecting the instrument to the network", on page 1391
- Section 25.2.2, "Assigning the IP address", on page 1392

Note that only user accounts with administrator rights can configure LAN networks.

25.2.1 Connecting the instrument to the network

There are two methods to establish a LAN connection to the instrument:

- A non-dedicated network (Ethernet) connection from the instrument to an existing network.
- A dedicated network connection (Point-to-point connection) between the instrument and a single computer.

► To establish a non-dedicated network connection, connect a commercial RJ-45 cable to one of the LAN ports.
To establish a dedicated connection, connect a (crossover) RJ-45 cable between the instrument and a single PC.

If the instrument is connected to the LAN, Windows automatically detects the network connection and activates the required drivers.

The network card can be operated with a 10/100/1000 Mbps Ethernet IEEE 802.3u interface.

25.2.2 Assigning the IP address

Depending on the network capacities, the TCP/IP address information for the instrument can be obtained in different ways.

- If the network supports dynamic TCP/IP configuration using the Dynamic Host Configuration Protocol (DHCP), all address information can be assigned automatically.
- If the network does not support DHCP, or if the instrument is set to use alternate TCP/IP configuration, the addresses must be set manually.

By default, the instrument is configured to use dynamic TCP/IP configuration and obtain all address information automatically. This means that it is safe to establish a physical connection to the LAN without any previous instrument configuration.

NOTICE

Risk of network errors

Connection errors can affect the entire network. If your network does not support DHCP, or if you choose to disable dynamic TCP/IP configuration, you must assign valid address information before connecting the instrument to the LAN. Contact your network administrator to obtain a valid IP address.

Assigning the IP address on the instrument

1. Open "Menu" > "Settings".
2. Select the "System" tab.
3. In the "Network" tab, select "Advanced".
4. Select "Ethernet".
5. Select "Properties".
6. On the "Networking" tab, select "Internet Protocol Version 4 (TCP/IPv4)", and then select "Properties".
7. Select "Use the following IP address".
8. Enter the address information as obtained from the network administrator.

25.2.3 Using computer names

In a LAN that uses a DNS server (Domain Name System server), each computer and instrument in the LAN can be accessed via an unambiguous host name (or computer name) instead of the IP address. The DNS server translates the host name to the IP address. Host names are useful when a DHCP server is used, as a new IP address can be assigned each time the instrument is restarted.

Each instrument is delivered with an assigned computer name, but this name can be changed.

The default instrument name is a non-case-sensitive string with the following syntax:

<Type><variant>-<serial_number>

The serial number can be found on the rear panel of the instrument. It is the third part of the device ID printed on the bar code sticker:

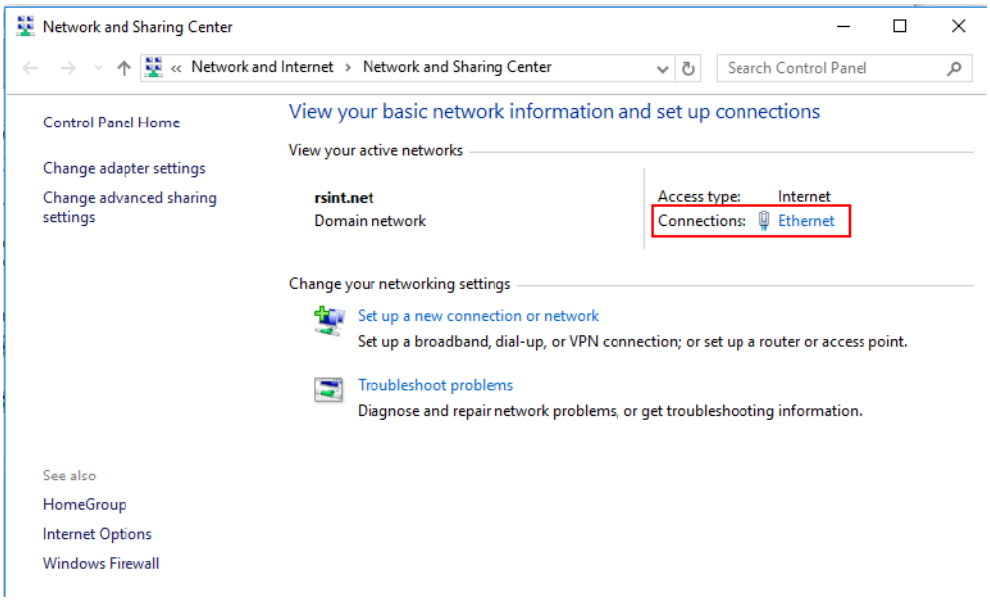
To change the device name

1. Open the "Menu" > "Settings" dialog.
2. Open the "System" dialog.
3. Select the "Network" tab.
4. Enter the new "Device name" and confirm the entry.

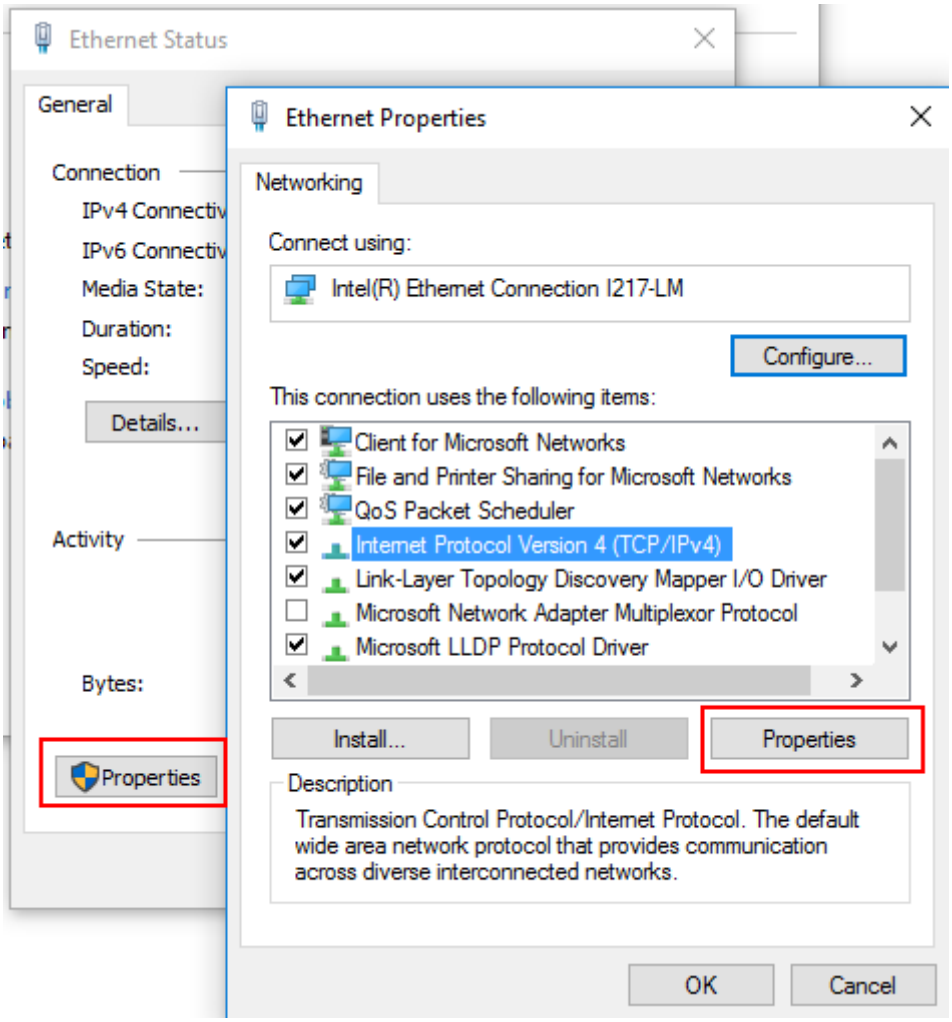
Using a DNS server to determine the IP address

If a DNS server is configured on the R&S RTO6, the server can determine the current IP address for the connection using the permanent computer name.

1. Obtain the name of your DNS domain and the IP addresses of the DNS and WINS servers on your network.
2. Open the "Menu" > "Settings" dialog.
3. Select the "System" tab.
4. Tap "Network".
5. Select "Ethernet".



6. On the "Networking" tab, select "Internet Protocol Version 4 (TCP/IPv4)", and then select "Properties".



7. On the "General" tab, select "Use the following DNS server addresses" and enter your own DNS addresses.

   For more information, refer to the Windows operating system help.

25.2.4 Changing the windows firewall settings

A firewall protects an instrument by preventing unauthorized users from gaining access to it through a network. Rohde & Schwarz highly recommends the use of the firewall on your instrument. Rohde & Schwarz instruments are shipped with the Windows firewall enabled and preconfigured in such a way that all ports and connections for remote control are enabled.

For more details on firewall configuration, see the following Rohde & Schwarz White Paper:

- 1EF96: Malware Protection Windows 10

Note that changing firewall settings requires administrator rights.

25.3 Web interface

If the R&S RTO6 is connected to a computer via LAN, you can operate the instrument from a computer. No additional tools are required, you need only a web browser.

25.3.1 Settings on the R&S RTO6

Access: "Menu" > "Settings" > "System" > "Network"

The LAN status icon on the toolbar of the R&S RTO6 indicates the status of the LAN connection. A green icon indicates that the instrument is connected to the LAN; a red symbol indicates an error - mostly the LAN cable is not connected.

The "Network" tab of the "System" dialog box provides network information. See Section 4.1.2, "Network settings", on page 69.

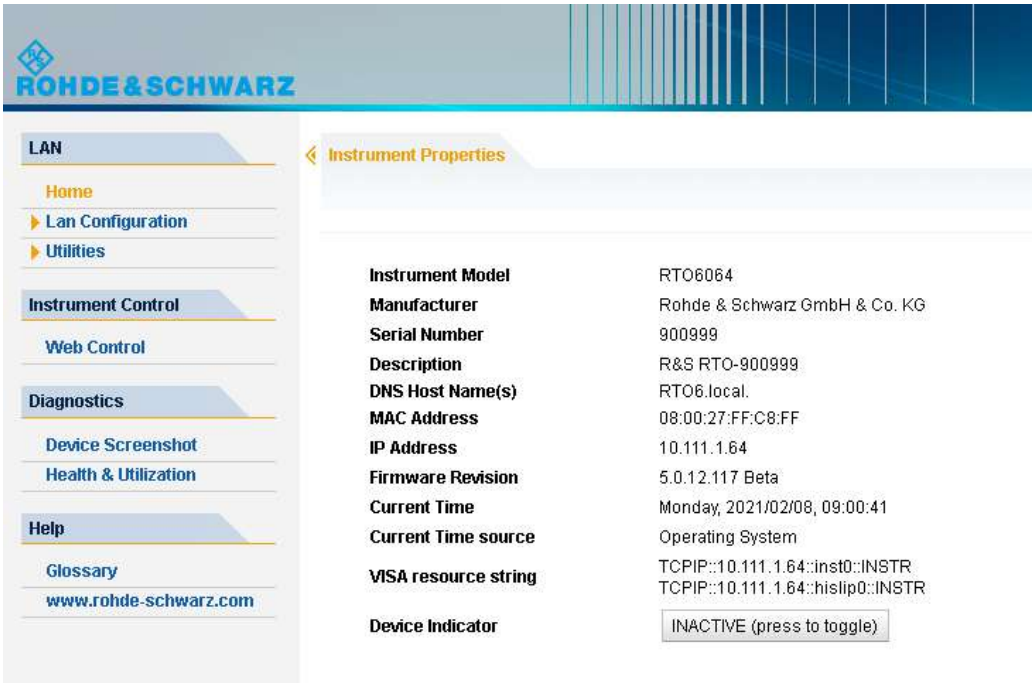
Only users with administrator rights can change LAN settings.

25.3.2 Web browser

The instrument's web interface works with all W3C compliant browsers. Only users with administrator rights on the instrument can use the web interface.

1. Open a web browser on the computer.
2. Type the instrument's host name or IP address in the address field of the browser on your PC, e.g. "http://10.113.10.203".

   The instrument home page opens.



The instrument home page displays the device information required by the LAN standard including the VISA resource string in read-only format.

► To update the "Host Name", press the "Device Indicator" button. The "Device Indicator" is not password-protected.

The most important items in the navigation menu of the browser interface are the following:

- "LAN Configuration" opens the menu with configuration pages. See Section 25.3.2.1, "LAN configuration", on page 1398.
- "Utilities > Logging" shows log messages and provides buttons to download or clear the logfile.
- "Web Control" shows a live image of the instrument, and you can operate the instrument remotely. See Section 25.3.2.2, "Web control", on page 1399.
- "Device Screenshot": creates a screenshot of the display. See Section 25.3.2.3, "Device screenshot", on page 1400.
- "Health & Utilization": not supported
- "Health & Utilization": shows information of the R&S Health and Utilization Monitoring Service (HUMS). See Section 25.3.2.4, "Health & Utilization (option R&S RTO6K980)", on page 1401.
- "Help" provides a glossary of terms related to the standard, and a link to the Rohde & Schwarz Internet site.
- "Status" (at the bottom of the page) shows information about the status of the instrument, and connection errors.

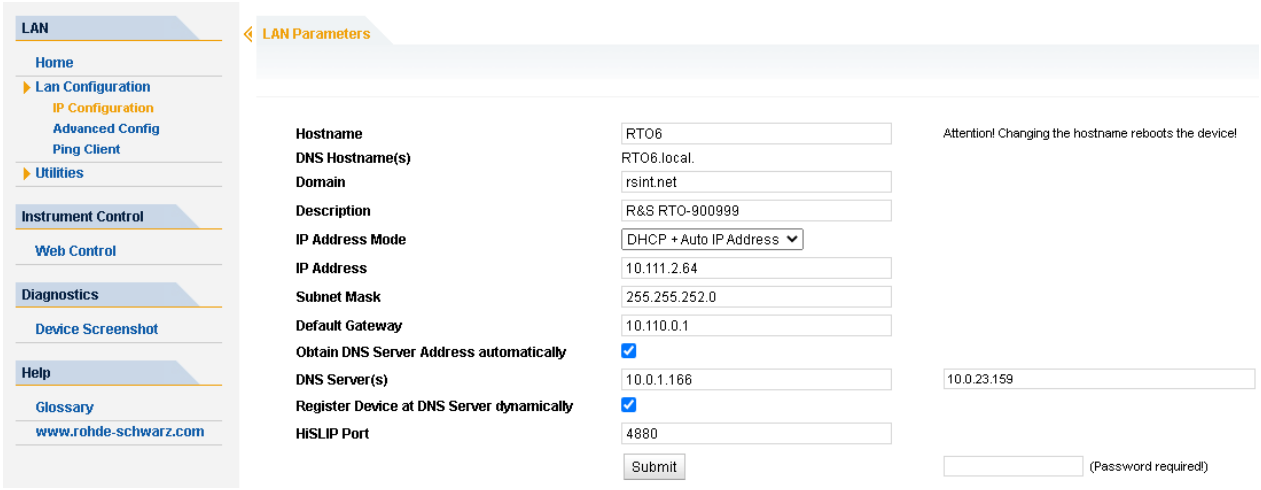
25.3.2.1 LAN configuration

The LAN configuration consists of three parts:

- "IP configuration" provides all mandatory LAN parameters.
- "Advanced LAN Configuration" provides LAN settings that are not declared mandatory by the standard.
- "Ping Client" provides the ping utility to verify the connection between the instrument and other devices.

IP configuration

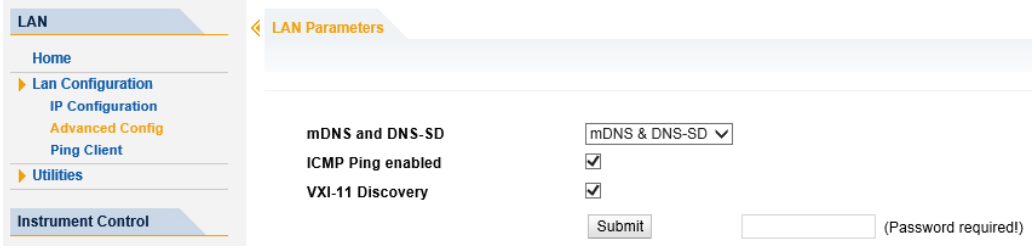
The "LAN Configuration > IP configuration" web page displays all mandatory LAN parameters and allows their modification.



The "TCP/IP Mode" configuration field controls how the IP address for the instrument gets assigned (see also Section 25.2.2, "Assigning the IP address", on page 1392). For the manual configuration mode, the static IP address, subnet mask, and default gateway are used to configure the LAN. The automatic configuration mode uses DHCP server or Dynamic Link Local Addressing (automatic IP) to obtain the instrument IP address.

Changing the LAN configuration is password protected. The password is *LxiWebIfc* (notice upper and lower case characters). This password cannot be changed in the current firmware version.

Advanced config



The "LAN Configuration > Advanced Config" parameters are used as follows:

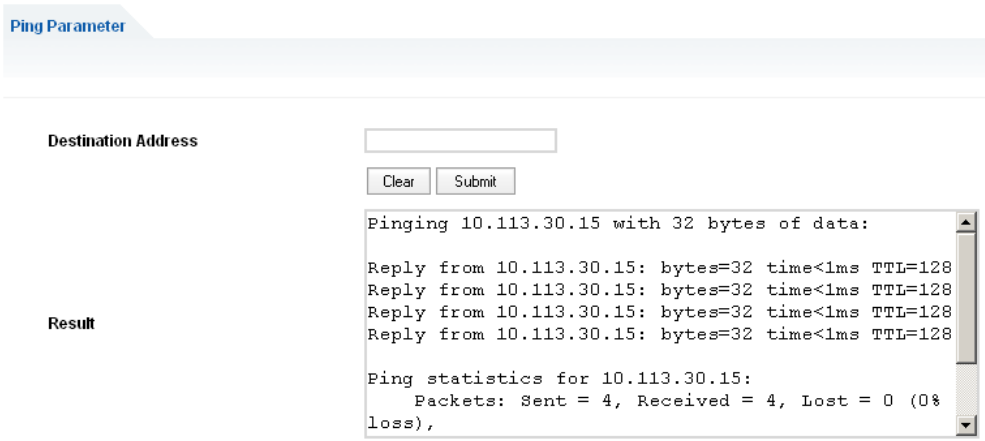
- mDNS and DNS-SD are two additional protocols: Multicast DNS and DNS Service Discovery. They are used for device communication in zero configuration networks working without DNS and DHCP
- "ICMP Ping" must be enabled to use the ping utility.
- "VXI-11" is the protocol that is used to detect the instrument in the LAN.

Ping client

Ping is a utility that verifies the connection between the instrument and another device. The ping command uses the `ICMP` echo request and echo reply packets to determine whether the LAN connection is functional. Ping is useful for diagnosing IP network or router failures. The ping utility is not password-protected.

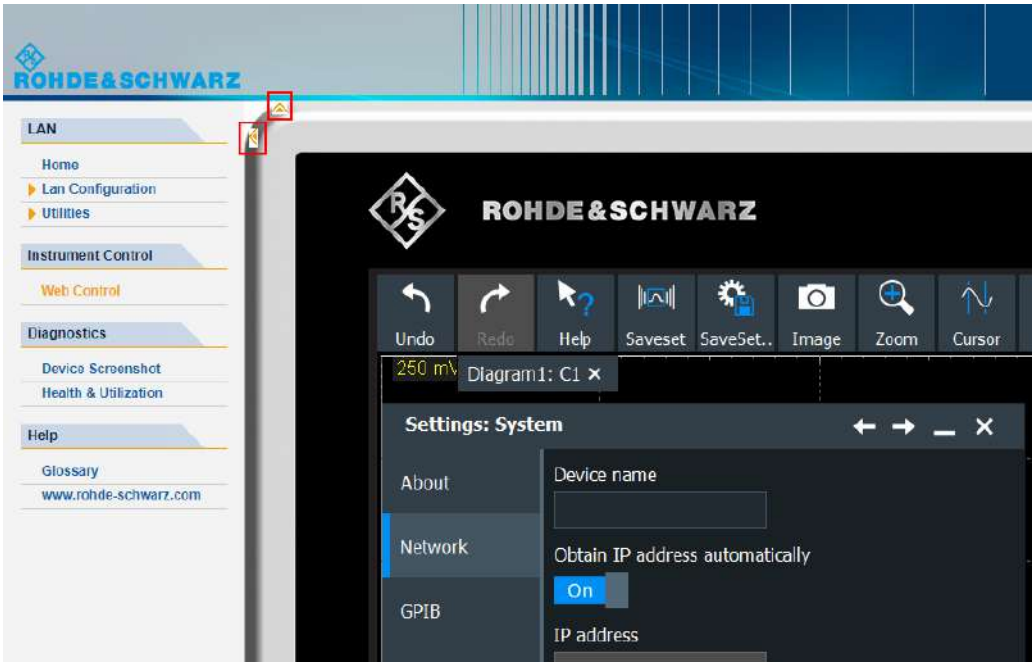
To initiate a ping between the compliant instrument and a second connected device:

1. Enable "ICMP Ping" on the "Advanced Config" page (enabled by default).
2. On the "Ping Client" page, enter the IP address of the second device **without the ping command and without any further parameters** into the "Destination Address" field (e.g. *10.113.10.203*).
3. Click "Submit".



25.3.2.2 Web control

"Web Control" emulates the front panel and shows the instrument display. You see a live image of the instrument, and you can operate the instrument remotely. You can use the keys, the knobs and the menus in the same way as directly on the instrument. The Web control replaces VNC as control tool for remote operation.

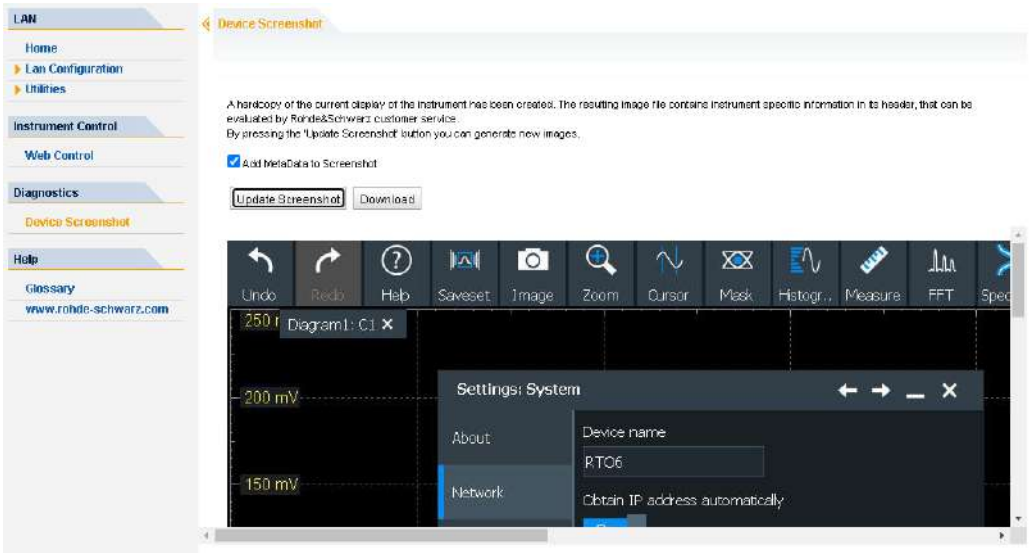


In the upper left corner of the emulated display, you see two arrows:

- The up/down arrow hides or shows the front panel.
- The left/right arrow hides or shows the menu.

25.3.2.3 Device screenshot

If you click "Device Screenshot", a screenshot of the current instrument display is shown on the computer.



Add MetaData to Screenshot
Adds the instrument information to PNG and JPG files. Meta information is saved as EXIF information and can be read, for example, using the ExifTool, see "Meta information in screenshots" on page 500.

Update Screenshot
Updates the display.

Download
Saves the screenshot to the download directory of the computer. By default, JPG format is saved.

To save the screenshot in PNG format, select "Save as", select "All files" as type, and enter the filename with extension *.png*.

25.3.2.4 Health & Utilization (option R&S RTO6K980)

The "Health & Utilization" page shows information of the Rohde & Schwarz Health and Utilization Monitoring Service (HUMS), which runs in the background. The aim of HUMS is to increase the overall utilization, to avoid downtime and to increase the overall security level of a fleet of instruments.

HUMS provides information about:

- Instrument identification, hardware components, software packages, licenses
- Usage of remote control, usage via keyboard / mouse, usage of test applications
- Hardware utilization and status
- User-defined static information, for example, an inventory code

For details, see the R&S®HUMS User Manual.

25.4 Remote Desktop connection

Remote Desktop is a Windows application, which can be used to access and control the instrument from a remote computer through a LAN connection. While the instrument is in operation, the contents of the instrument screen are displayed on the remote computer. Remote Desktop provides access to all applications, files, and network resources of the instrument. Thus, remote operation of the instrument is possible.

NOTICE

Risk of unauthorized access

If you enable the Windows Remote Desktop application on the instrument, anyone using the network who knows the computer name and login data can access it. To prevent unauthorized access, make sure that the Remote Desktop application on the instrument is disabled: "Start" > "Settings" > "Control Panel" > " System"

To set up a Remote Desktop connection

1. Enable remote desktop control on the instrument. See "Enabling remote desktop control on the instrument" on page 1402 for details.
2. Connect the instrument and the remote computer to a LAN. See Section 25.2.1, "Connecting the instrument to the network", on page 1391 for details.
3. Set up the Remote Desktop connection between the remote computer and the instrument.

Remote Desktop Connection is part of the operating system and can be accessed via "Start > Windows Accessories > Remote Desktop Connection.".

Enabling remote desktop control on the instrument

1. Press the [Setup] key and select the "System" tab.
2. Tap "System".
3. Select "Remote settings".

   The "Remote" tab of the "System Properties" is shown.
4. Under "Remote Desktop", activate "Allow remote connections to this computer".

   Note: Remote Desktop access and firewall settings.
   When you enable or disable the Windows Remote Desktop option (in the "System Properties"), the associated firewall settings are adapted automatically.
5. If necessary, click "Select Users" and select users who are allowed to access the R&S RTO6 via Remote Desktop.

   The user account under which configuration is carried out is automatically enabled for Remote Desktop.

Setting up the Remote Desktop connection on the remote computer

1. On the remote computer, select "Start > Windows Accessories > Remote Desktop Connection".
2. Enter the instrument's name or IP address in the dialog box.
   See also Section 25.2.2, "Assigning the IP address", on page 1392.
3. Enter the user ID and password for the instrument. See Section 25.1, "Operating system", on page 1386 for details.
4. Click "Connect".

   When the connection has been set up, the instrument's screen appears on the remote computer.

For detailed information about Remote Desktop and the connection, refer to the Windows Help.

Helpful settings for Remote Desktop

The following settings for the Remote Desktop connection can make working on the remote PC more convenient.

1. When setting up the connection to the instrument, you can configure the connection settings in the "Remote Desktop Connection" dialog box.
   Click the "Show Options".

   The dialog box is expanded to display the configuration data.

2. Customize the settings:

   a) On the "Experience" tab, select the appropriate connection to optimize the connection speed.
   b) On the "Local Resources" tab:

      - To use printers connected to the remote PC while accessing them from the instrument, activate "Printers" under "Local devices and resources".
      - If you want access drives of the remote PC from the instrument, e.g. to store settings or to copy files from the PC to the instrument:
        – Select "More" under "Local devices and resources".
        – Select the "Drives" that are needed.
        Windows maps the selected drives of the remote PC to corresponding network drives. When a connection is established, a warning on the PC indicates that the drives are enabled for access from the instrument.

   c) On the "Display" tab:

      - Use the slider to set the size of the R&S RTO6 window on the remote PC desktop.
      - Activate "Display the connection bar when in full screen mode".
        A bar with the network address of the instrument is displayed on the screen, which you can use to reduce, minimize or close the window.

   d) On the "General" tab, you can save the connection settings for later use: click "Save As".

Terminating Remote Desktop Control

A Remote Desktop connection can be terminated either on the R&S RTO6 or on the remote PC. The connection can be established again any time as long as remote control is enabled on the instrument. Consider the notice "Risk of unauthorized access" on page 1401.

► To terminate the connection on the remote PC, close the "Remote Desktop" window, or select "Start > Disconnect".

25.5 Remote control

Remote control automates the operation of the instrument using SCPI commands, scripts and programs.

For general information on remote control of Rohde & Schwarz products via SCPI, refer to www.rohde-schwarz.com/rc-via-scpi.

The following sections describe the instrument-specific basics of remote control. SCPI commands are listed described in chapter "Remote Control Commands".

- Remote control interfaces and protocols....1404
- Remote settings....1407
- Starting and stopping remote control....1409
- Remote control - status reporting system....1410

25.5.1 Remote control interfaces and protocols

The R&S RTO6 supports the following interfaces for remote control:

- LAN interface with HiSLIP protocol, VXI-11 protocol or raw socket.
  See Section 25.5.1.1, "LAN interface", on page 1404.
- USB TMC interface (USB Test & Measurement Class), allows test instruments to be connected to and controlled by a computer via a standard USB cable. A VISA installation is required.
  See Section 25.5.1.2, "USB interface", on page 1406.
- GPIB interface (IEC/IEEE bus interface) according to standard IEC 625.1/IEEE 488.1
  The GPIB bus interface requires option R&S RTO6-B10.
  See Section 25.5.1.3, "GPIB interface (IEC/IEEE bus interface)", on page 1407.

25.5.1.1 LAN interface

To be integrated in a LAN, the instrument is equipped with a LAN interface, consisting of a connector, a network interface card and protocols. The interface details are given in the specifications.

For remote control via a network, the PC and the instrument must be connected via the LAN interface to a common network with TCP/IP network protocol. They are connected using a commercial RJ45 cable (shielded or unshielded twisted pair category 5). The TCP/IP network protocol and the associated network services are preconfigured on the instrument. Software for instrument control and the VISA program library must be installed on the controller.

The R&S RTO6 supports the following ways of LAN communication:

- HiSLIP protocol (high-speed LAN interface protocol): recommended protocol for remote control via LAN, successor of VXI-11.
- VXI-11 protocol: first LAN-based protocol, developed for test and measurement instruments communication as a replacement for the expensive GPIB equipment.
- Raw socket: universal I/O protocol, usually over the port 5025. No need for VISA installation. Communication without control channel, hence there is no support for events like Service Request (SRQ) or Device Clear (DCL).

HiSLIP protocol

The high-speed LAN instrument protocol (HiSLIP) was defined by the IVI Foundation and adopted by the LXI Consortium as the recommended LAN protocol.

The HiSLIP protocol uses two TCP sockets for a single connection - one for fast data transfer, the other for non-sequential control commands (e.g. `Device Clear` or `SRQ`).

HiSLIP has the following characteristics:

- High performance as with raw socket network connections.
- Compatible IEEE 488.2 support for message exchange protocol, device clear, serial poll, remote/local, trigger, and service request.
- It uses a single IANA-registered port (4880), which simplifies the configuration of firewalls.
- It supports simultaneous access of multiple users by providing versatile locking mechanisms.
- Usable for IPv6 or IPv4 networks.

Note that HiSLIP data is sent to the device using the "fire and forget" method with immediate return. A successful return of a VISA operation such as `viWrite()` does not ensure that the instrument has finished or started the requested command. It only indicates that the command has been delivered to the TCP/IP buffers.

VXI-11 protocol

The VXI-11 standard is based on the open network computing remote procedure call (ONC RPC) protocol, which in turn relies on TCP/IP at the network/transport layer. The TCP/IP network protocol and the associated network services are preconfigured.

TCP/IP ensures connection-oriented communication, where the order of the exchanged messages is adhered to and interrupted links are identified. With this protocol, messages cannot be lost.

Raw socket mode

With raw socket communication, the instrument communicates directly with the TCP transport layer. A VISA library is not required, but VISA offers an option to open a raw socket session. Service requests and status byte polling are not supported in the raw socket mode.

TCP/IP raw socket connections for SCPI commands use port 5025. Terminate all commands with a line feed (LF).

IP address (VISA resource string) for LAN connections

Only the IP address or a valid DNS host name is required to set up the connection. The host address is part of the "VISA resource string" used by programs to identify and control the instrument. The VISA resource string has the form:

- **HiSLIP protocol**
  `TCPIP::<host address>::hislip0[,<port>][::INSTR]`
  Examples:
  IP address is *192.1.2.3*, resource string: `TCPIP::192.1.2.3::hislip0`

Instrument name is *RSRT1*, resource string: `TCPIP::RSRT1::hislip0`.
DNS host name is *RTO6-123456*, resource string:
`TCPIP::RTO6-123456::hislip0`.

- **VXI-11 protocol**
  `TCPIP::<host address>[::inst0][::INSTR]`
  Examples
  IP address is *192.1.2.3*, resource string: `TCPIP::192.1.2.3`
  Instrument name is *RSRT1*, resource string: `TCPIP::RSRT1`.
  DNS host name is *RTO6-123456*, resource string: `TCPIP::RTO6-123456`.
- **Raw socket communication**
  `TCPIP::<host address>::<port>::SOCKET`
  Example
  TCPIP::192.1.2.3::5025::SOCKET

Where:

- `host address` identifies the R&S RTO6 in the network, usually the IP address. If the LAN is supported by a DNS server, the host name can be used instead of the IP address. The DNS server (Domain Name System server) translates the host name to the IP address.
- `hislip0` indicates the HiSLIP protocol.
- `inst0` is the default LAN device name. VISA supports several devices running on the instrument. On R&S RTO6, only one device is configured, so the LAN device name can be omitted.
- `INSTR` specifies a VISA resource of the type INSTR. By default, the VISA resource name control is set to the INSTR class.
- `port` is the port number, for raw socket communication, port 5025 is used.

See also:

- Find IP address: "Menu" > "Settings" > "System" tab, see "IP Address" on page 70
- Section 25.2.2, "Assigning the IP address", on page 1392

25.5.1.2 USB interface

For remote control using USB TMC, the controller PC and the instrument are connected over the USB type B interface.

A VISA installation is required, because it contains the necessary USB drivers to be able to connect and communicate with the instrument.

USB resource string

`USB::<vendor ID>::<product ID>::<serial number>[::INSTR]`

- <vendor ID> is the manufacturer ID for Rohde & Schwarz.
- <product ID> is the product identification of the instrument.
- <serial number> is the individual serial number of the instrument.
- [::INSTR] indicates the instrument resource class (optional).

25.5.1.3 GPIB interface (IEC/IEEE bus interface)

A GPIB interface is provided with option R&S RTO6-B10.

To control the instrument remotely via GPIB, the instrument and the controlle must be connected by a GPIB bus cable. The total cable length is restricted to a maximum of 15 m; the cable length between two instruments should not exceed 2m.

GPIB instrument address

The GPIB address is set on the instrument, see Section 25.5.2.1, "GPIB settings", on page 1407.

25.5.2 Remote settings

The settings on this tab are required for remote control of the instrument via a connected computer.

25.5.2.1 GPIB settings

Access: "Menu" > "Settings" > "System" > "Remote"

Displays the GPIB settings of the instrument.

It requires an optional GPIB bus card, option R&S RTO6-B10.

Address
Indicates the GPIB address of the instrument if an optional GPIB bus card is installed.

The remote control address is factory-set to 20, but it can be changed if it does not fit in the network environment. For remote control, addresses 0 through 30 are allowed. The GPIB address is maintained after a reset of the instrument settings. Be aware that changing the address has major effects on the communication to the remote computer.

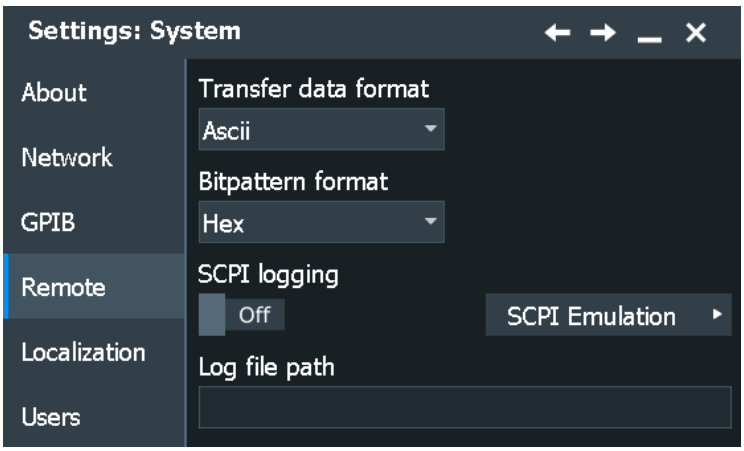
Remote command:
`GPIB:ADDRess` on page 1462

Terminator
Specifies the symbol that is used as a terminator in GPIB communication.

Remote command:
`GPIB:TERMinator` on page 1462

25.5.2.2 Remote settings

Access: "Menu" > "Settings" > "System" > "Remote"



The following settings are required for remote control of the instrument via a connected computer.

Transfer data format
Selects the data format that is used for transmission of waveform data from the instrument to the controlling computer.

Waveform data can be retrieved using the following commands:
- `CHANnel<ch>[:WAVeform<wf>]:DATA[:VALues]?`
- `CALCulate:MATH<m>:DATA[:VALues]?`
- `REFCurve<rc>:DATA[:VALues]?`
- `DIGital<m>:DATA[:VALues]?`

The content of the data stream can be defined with "Menu" > "Save/Recall" > "Save > Waveforms > Interleaved X/Y" (or `EXPort:WAVeform:INCXvalues`).

"Ascii"	Data values are returned in ASCII format as a list of comma separated values in floating point format.
"FLOAT"	Binary format. The data is stored as binary data (Definite Length Block Data according to IEEE 488.2).
"INT8"	Signed integer data with length 8 bit.
"INT16"	Signed integer data with length 16 bit. The Byte order can be set using . For details on the formats, refer to the description of the remote command.

Remote command:
`FORMat[:DATA]` on page 1459

Byte order
Sets the endianess for INT16 data:
- LSB first: little endian, least significant byte first
- MSB first: big endian, most significant byte first

Remote command:
`FORMat:BORDer` on page 1461

Bit pattern format
Sets the format for all bit pattern queries.

Remote command:
`FORMat:BPATtern` on page 1461

SCPI logging
If enabled, all received remote commands are written into a text file. Enter the path and filename with extension (log, txt, or csv) in "Log file path".

SCPI emulation
Not available for R&S RTO6

25.5.3 Starting and stopping remote control

25.5.3.1 Starting a remote control session

When you switch on the instrument, it is always in manual operation state ("local" state). It can be operated via the front panel, the touch screen and external keyboard and/or mouse.

► To start remote control:

- Send a command from the controller.
- VXI-11 protocol (LAN or USB interface): Use `&GTR` interface message.

While remote control is active, the instrument settings are optimized for maximum measurement speed; the display is switched off. Operation via the front panel is disabled.

On the touch screen, two buttons appear in the upper left corner: "Local" and "View".

25.5.3.2 Using the display during remote control

You can observe the screen while a remote control script is executed. This is helpful for program test purposes but tends to slow down the measurement. Therefore it is recommended that you switch off the display in real measurement applications where a tested program script is to be executed repeatedly.

► To switch on the display, do one of the following:

- Tap the "View" button in the upper left corner of the touch screen.
- Use the `SYSTem:DISPlay:UPDate ON` command.

► To switch off the display, do one of the following:

- Tap the "View" button again.
- Use the `SYSTem:DISPlay:UPDate OFF` command.

25.5.3.3 Returning to manual operation

The instrument switches back to manual operation when the remote connection is closed. Besides, you can return to manual operation manually or via remote control.

► To return to manual operation:

- Tap the "Local" button in the upper left corner of the touch screen.
- VXI-11 protocol: Use `&GTL` interface message.

25.5.4 Remote control - status reporting system

The status reporting system stores all information on the current operating state of the instrument, and on errors which have occurred. This information is stored in the status registers and in the error queue. Both can be queried via `STATus...` commands.

25.5.4.1 Hierarchy of status registers

As shown in the following figure, the status information is of hierarchical structure.

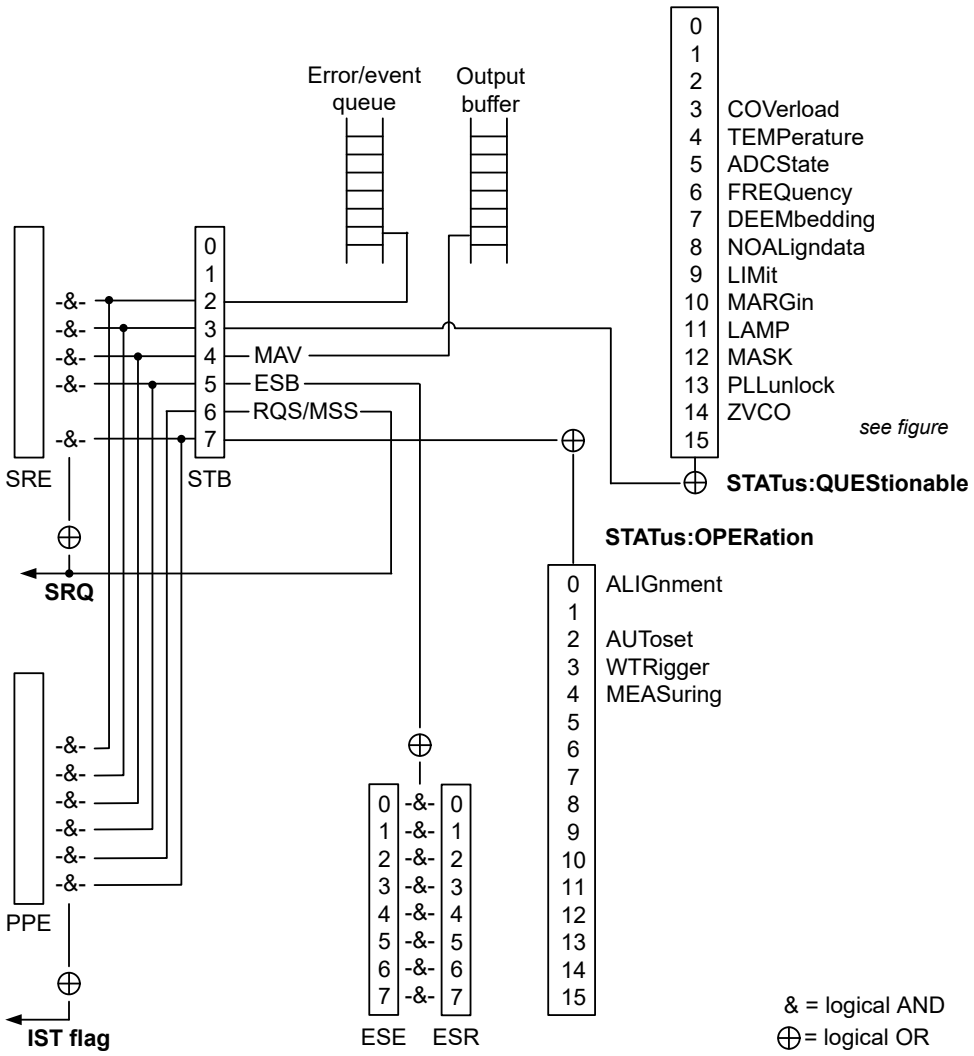


Figure 25-1: Overview of the status registers hierarchy

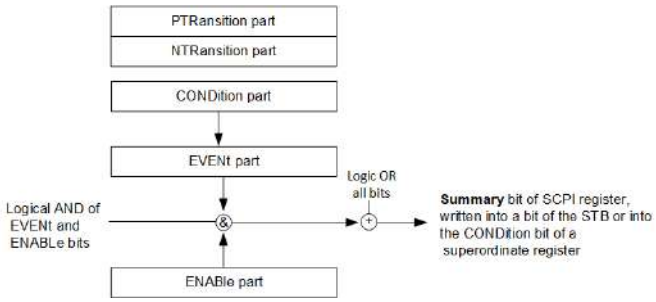
All status registers have the same internal structure.

25.5.4.2 Structure of a SCPI status register

The `STATus:OPERation` and the `STATus:QUEStionable` SCPI status registers consists of five parts.

The individual bits are independent of each other, i.e. each hardware status is assigned a bit number, which is valid for all five parts. Bit 15 (the most significant bit) is set to zero for all parts. Thus, the contents of the register parts can be processed by the controller as positive integers.

Description of the five status register parts



The five parts of a SCPI status register have different properties and functions:

- **CONDition**
  The `CONDition` part reflects the current instrument status. For summary bits, the `CONDition` bit mirrors the sum of the enabled `EVENt` bits of the next lower register.
  This register part can only be read, but not written into or cleared. Its contents are not affected by reading.
- **PTRansition / NTRansition**
  The two transition register parts define which state transition of the `CONDition` part (none, 0 to 1, 1 to 0 or both) is stored in the `EVENt` part.
  The **Positive-TRansition** part acts as a transition filter. When a bit of the `CONDition` part is changed from 0 to 1, the associated `PTR` bit decides whether the `EVENt` bit is set to 1.
  – PTR bit =1: the `EVENt` bit is set.
  – PTR bit =0: the `EVENt` bit is not set.

  All positive transitions are enabled by default.
  This part can be written into and read as required. Its contents are not affected by reading.
  The **Negative-TRansition** part also acts as a transition filter. When a bit of the `CONDition` part is changed from 1 to 0, the associated `NTR` bit decides whether the `EVENt` bit is set to 1.
  – NTR bit =1: the `EVENt` bit is set.
  – NTR bit =0: the `EVENt` bit is not set.

  All negative transitions are disabled by default.
  This part can be written into and read as required. Its contents are not affected by reading.
- **EVENt**
  The `EVENt` part indicates whether an event has occurred since the last reading. It is the "memory" of the condition part. It allows you to detect the occurrence of events reliably, even if they have changed the state of the `CONDition` bit for a very brief interval. It only indicates events passed on by the transition filters.
  This part can only be read by the user. **Reading the register clears it.**
- **ENABle**
  The `ENABle` part determines whether the associated `EVENt` bit contributes to the summary bit (see below). Each bit of the `EVENt` part is "ANDed" with the

associated ENABle bit (symbol '&'). The results of all logical operations of this part are passed on to the summary bit via an "OR" function (symbol '+').
ENABle bit = 0: the associated EVENt bit does not contribute to the summary bit
ENABle bit = 1: if the associated EVENt bit is "1", the summary bit is set to "1" as well.
This part can be written into and read by the user as required. Its contents are not affected by reading.

25.5.4.3 Contents of the status registers

STATus:OPERation register

In the CONDition part, this register contains information on which actions the instrument is executing. In the EVENt part, it contains information on which actions the instrument has executed since the last reading.

It can be read using the commands STATus:OPERation:CONDition? or STATus:OPERation[:EVENt]?, see also Section 27.29.1, "STATus:OPERation register", on page 3075.

Table 25-1: Bits in the STATus:OPERation register

Bit No.	Meaning
0	ALIGnment This bit is set as long as the instrument is performing a self-alignment.
1	Not used
2	AUToset This bit is set while the instrument is performing an auto setup.
3	WTRIgger The wait for trigger status bit indicates that the instrument is ready to trigger, and the pre-trigger time is expired. The bit is set if the instrument did not trigger for more than 10 ms. The bit is only valid if the instrument is operated in a single acquisition mode and in normal trigger mode but not in auto mode.
4	MEASuring The bit is set as long as an acquisition - sampling and postprocessing - is running. In run continuous mode, the bit is always set.
5 - 15	Not used

STATus:QUEStionable register

This register contains information about indefinite states which can occur if the unit is operated without meeting the specifications. It can be read using the commands STATus:QUEStionable:CONDition? and STATus:QUEStionable[:EVENt]?.

The remote commands for the STATus:QUEStionable register are described in Section 27.29.2, "STATus:QUEStionable registers", on page 3076.

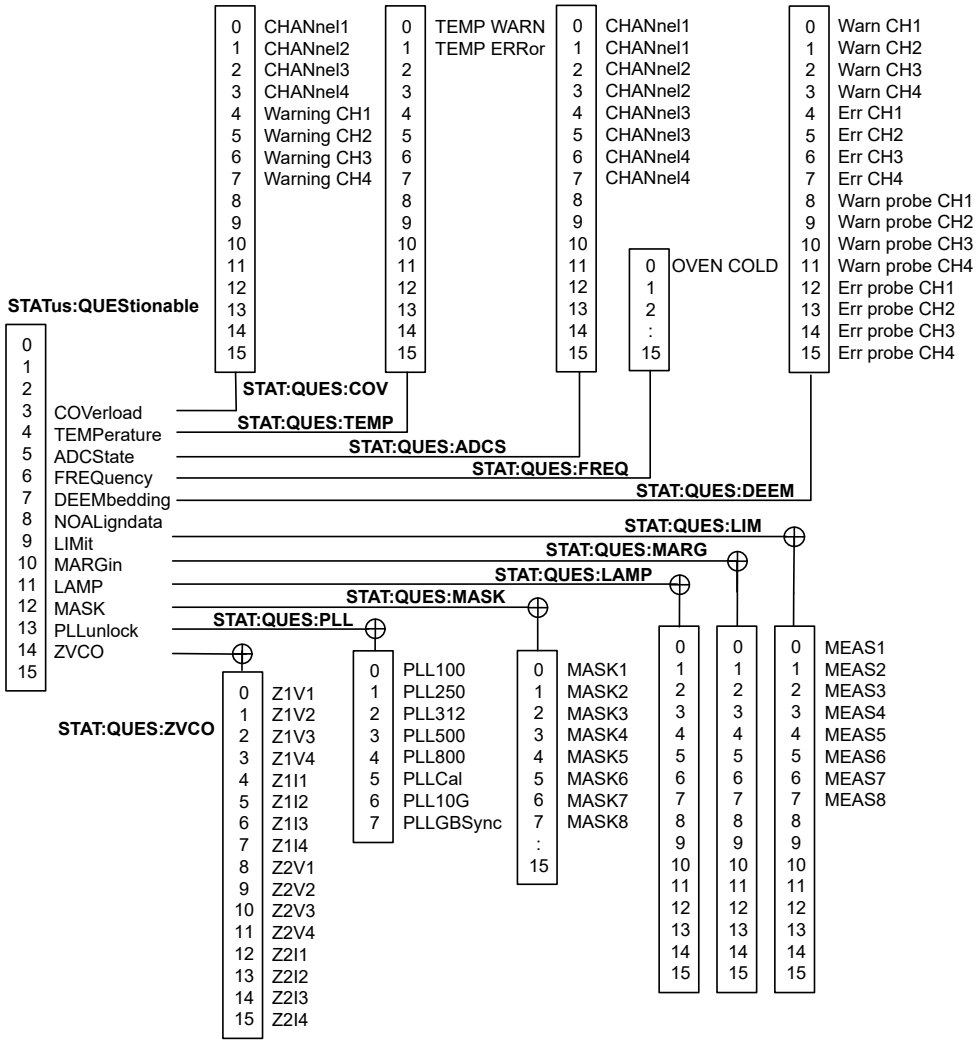


Figure 25-2: Overview of the STATus:QUEStionable register

Table 25-2: Bits in the STATus:QUEStionable register

Bit No.	Meaning
0 to 2	not used
3	`COVerload` This bit is set if a questionable channel overload occurs (see "STATus:QUEStionable:COVerload register" on page 1415).
4	`TEMPerature` This bit is set if a questionable temperature occurs (see "STATus:QUEStionable:TEMPerature register" on page 1416).
5	`ADCState` The bit is set if the signal is clipped on the upper or lower edge of the screen, if an overflow of the ADC occurs (see "STATus:QUEStionable:ADCState register" on page 1416).

Bit No.	Meaning
6	FREQuency This bit is set if there is anything wrong with the frequency of the local oscillator or the reference frequency (see "STATus:QUEStionable:FREQuency register" on page 1416).
7	DEEMbedding The bit is set if a warning or an error occurs during deembedding (see "STATus:QUEStionable:DEEMbedding register" on page 1417).
8	NOALigndata This bit is set if no alignment data is available - the instrument is uncalibrated.
9	LIMit This bit is set if a limit value is violated (see "STATus:QUEStionable:LIMit, STATus:QUEStionable:MARGin registers" on page 1417).
10	MARGin This bit is set if a margin value is violated, and the limit value is not violated (see "STATus:QUEStionable:LIMit, STATus:QUEStionable:MARGin registers" on page 1417).
11	LAMP (Low AMPlitude) This bit is set if the magnitude of the signal is too low to get reliable measurement results. See "STATus:QUEStionable:LAMP register" on page 1418.
12	MASK This bit is set if a mask value is violated (see "STATus:QUEStionable:MASK register" on page 1418
13	PLLunlock See "STATus:QUEStionable:PLLunlock register" on page 1418.
14	ZVCO: This bit is set if a channel overload occurs at one or more input channels of the R&S RT-ZVC multi-channel power probe. See "STATus:QUEStionable:ZVCO register" on page 1419.
15	This bit is always 0.

STATus:QUEStionable:COVerload register

This register contains all information about overload of the channels. The bit is set if the assigned channel is overloaded, or if an overload risk occurred (overload warning).

Table 25-3: Bits in the STATus:QUEStionable:COVerload register

Bit No.	Meaning
0	Overload on CHANnel1
1	Overload on CHANnel2
2	Overload on CHANnel3
3	Overload on CHANnel4
4	Overload warning for CHANnel1
5	Overload warning for CHANnel2
6	Overload warning for CHANnel3
7	Overload warning for CHANnel4

Bit No.	Meaning
8	Overload on external trigger input
9	Overload warning for external trigger input

STATus:QUEStionable:TEMPerature register

This register contains information about the instrument's temperature.

Table 25-4: Bits in the STATus:QUEStionable:TEMPerature register

Bit No.	Meaning
0	`TEMP WARN` This bit is set if a temperature warning on channel 1, 2, 3 or 4 occurred.
1	`TEMP ERRor` This bit is set if a temperature error on channel 1, 2, 3 or 4 occurred.

STATus:QUEStionable:ADCState register

This register contains all information about overflow of the ADC.

The bit is set if the assigned channel signal is clipped on the upper or lower edge of the screen. In this case, the signal does not fit in the range of the ADC and overflow occurs.

Table 25-5: Bits in the STATus:QUEStionable:ADCState register

Bit No.	Meaning
0	`CHANnel1`, clipping on the upper limit
1	`CHANnel1`, clipping on the lower limit
2	`CHANnel2`, clipping on the upper limit
3	`CHANnel2`, clipping on the lower limit
4	`CHANnel3`, clipping on the upper limit
5	`CHANnel3`, clipping on the lower limit
6	`CHANnel4`, clipping on the upper limit
7	`CHANnel4`, clipping on the lower limit

STATus:QUEStionable:FREQuency register

Table 25-6: Bits in the STATus:QUEStionable:FREQuency register

Bit No.	Meaning
0	Oven cold. This bit is set if the reference oscillator has not yet attained its operating temperature.

STATus:QUEStionable:DEEMbedding register

Table 25-7: Bits in the STATus:QUEStionable:DEEMbedding register

Bit No.	Meaning
0 1 2 3	Warning for channel 1, 2, 3, 4 accordingly. The bits are set if there are problems in the deembedding configuration of the assigned channel.
4 5 6 7	Error for channel 1, 2, 3, 4 accordingly. The bits are set if the deembedding configuration of the assigned channel causes an error.
8 9 10 11	Warning for channel 1, 2, 3, 4 accordingly. The bits are set if there are problems in the probe deembedding of the assigned channel.
12 13 14 15	Error for channel 1, 2, 3, 4 accordingly. The bits are set if the probe deembedding of the assigned channel causes an error.

STATus:QUEStionable:LIMit, STATus:QUEStionable:MARGin registers

These registers contain information about the observance of the limits or margins of measurements.

The LIMit bit is set if the limit of the assigned measurement is violated. The MARGin bit is set if the margin of the assigned measurement is violated but not the limit (the limit bit is not set).

The status bits are set if the limits or margins of one or more assigned measurements are violated.

If multiple measurements are active, all measurement results affect the status bits. Statistical results do not change the status bits.

Table 25-8: Bits in the STATus:QUEStionable:LIMit and STATus:QUEStionable.MARGin registers

Bit No.	Meaning
0	MEAS1
1	MEAS2
2	MEAS3
3	MEAS4
4	MEAS5
5	MEAS6

Bit No.	Meaning
6	MEAS7
7	MEAS8

STATus:QUEStionable:LAMP register

The LAMP (Low AMPlitude) bit is set if the magnitude of the signal is too low to get reliable measurement results.

Table 25-9: Bits in the STATus:QUEStionable:LAMP register

Bit No.	Meaning
0	MEAS1
1	MEAS2
2	MEAS3
3	MEAS4
4	MEAS5
5	MEAS6
6	MEAS7
7	MEAS8

STATus:QUEStionable:MASK register

This register contains information about the violation of masks. This bit is set if the assigned mask is violated.

Table 25-10: Bits in the STATus:QUEStionable:MASK register

Bit No.	Meaning
0	MASK1
1	MASK2
2	MASK3
3	MASK4
4	MASK5
5	MASK6
6	MASK7
7	MASK8

STATus:QUEStionable:PLLunlock register

This register contains information on the phase-locked loop process status. An unlocked status sets the bit true.

Table 25-11: Bits in the STATus:QUEStionable:PLLunlock register

Bit No.	Meaning
0	PLL100: indicates if the frequency reference is locked. The frequency reference is usually the OCXO. It can also be an external reference if it is connected and activated.
1	not used
2	PLL312: internal use
3	not used
4	PLL800: internal use
5	PLLCal: internal use
6	PLL10G: internal use
7	PLLGBSync: internal use

STATus:QUEStionable:ZVCO register

This register contains all information about overload of the R&S RT-ZVC input channels. The bit is set if the assigned channel is overloaded.

Table 25-12: Bits in the STATus:QUEStionable:ZVCO register

Bit No.	Meaning
0	Overload on Z1V1
1	Overload on Z1V2
2	Overload on Z1V3
3	Overload on Z1V4
4	Overload on Z1I1
5	Overload on Z1I2
6	Overload on Z1I3
7	Overload on Z1I4
8	Overload on Z2V1
9	Overload on Z2V2
10	Overload on Z2V3
11	Overload on Z2V4
12	Overload on Z2I1
13	Overload on Z2I2
14	Overload on Z2I3
15	Overload on Z2I4

25.5.4.4 Reset values of the status reporting system

The following table contains the different commands and events causing the status reporting system to be reset. None of the commands, except `*RST` and `SYSTem:PRESet`, influence the functional instrument settings. In particular, `DCL` does not change the instrument settings.

`DCL` means Device clear, and `SDC` is Selected device clear. These commands are GPIB interface commands that abort the processing of the commands received and set the command processing software to a defined initial state. `DCL` affects all connected instruments, while `SDC` affects only the addressed device. Both commands do not change the instrument settings. In a VISA implementation, viClear translates to the DCL interface command.

All other commands are explained in the "Remote control commands" section.

Table 25-13: Resets of the status reporting system

Event	**Switching on supply voltage** **Power-On-Status-Clear**		**DCL, SDC** **(Device clear, Selected device clear)**	***RST or SYSTem:PRESet**	**STATus:PRESet**	***CLS**
Effect	**0**	**1**				
Clear STB, ESR	-	yes	-	-	-	yes
Clear SRE, ESE	-	yes	-	-	-	-
Clear PPE	-	yes	-	-	-	-
Clear EVENt parts of the registers	-	yes	-	-	-	yes
Clear ENABle parts of all OPERation and QUEStionable registers; Fill ENABle parts of all other registers with "1".	-	yes	-	-	yes	-
Fill PTRansition parts with "1"; Clear NTRansition parts	-	yes	-	-	yes	-
Clear error queue	yes	yes	-	-	-	yes
Clear output buffer	yes	yes	yes	1)	1)	1)
Clear command processing and input buffer	yes	yes	yes	-	-	-
1) The first command in a command line that immediately follows a <PROGRAM MESSAGE TERMINATOR> clears the output buffer.						

26 Maintenance and support

The instrument does not need periodic maintenance. Only the cleaning of the instrument is essential.

To protect the front panel and to transport the instrument to another workplace safely and easily, various accessories are provided. Refer to the specifications document for available covers and cases and their order numbers.

The adjustment of the OCXO oscillator is described in the service manual.

26.1 Cleaning

How to clean the product is described in "Cleaning the product" on page 16.

Do not use any liquids for cleaning. Cleaning agents, solvents, acids and bases can damage the front panel labeling, plastic parts and display.

26.2 Contacting customer support

Technical support – where and when you need it

For quick, expert help with any Rohde & Schwarz product, contact our customer support center. A team of highly qualified engineers provides support and works with you to find a solution to your query on any aspect of the operation, programming or applications of Rohde & Schwarz products.

Contact information

Contact our customer support center at www.rohde-schwarz.com/support, or follow this QR code:

Figure 26-1: QR code to the Rohde & Schwarz support page

26.3 Information for technical support

If you encounter problems that you cannot solve yourself, contact your Rohde & Schwarz support center, see Contacting customer support.

The support center finds solutions more quickly and efficiently, if you provide them with information on the instrument and an error description. To create, collect and save the required information, you can create a service report.

The service report is a ZIP file with a complete bug report, all relevant setup information, reporting and log files, alignment files, and the instrument configuration.

1. Open the "Settings" > "Maintenance" dialog.
2. Select the "Service" tab.
3. Tap "Service reporter: Start".

   The service reporter creates the report and saves it as ZIP file directly on the Windows desktop.
4. Create a support ticket that describes the problem, and attach the report file.

On the instrument, you can find log files, the device footprint and report files, and other information in the "AppData" folder on the Windows desktop (`C:\ProgramData\Rohde-Schwarz\RTx`). The "Maintenance" dialog box also provides information on your instrument configuration which can be helpful in case you need support.

26.4 Data security

If you have to send the instrument to the service, or if the instrument is used in a secured environment, consider the document "Instrument Security Procedures" that is delivered on the R&S RTO6 webpage.

Instrument configuration data and user data are stored on a removable hard disk only. Thus it is sufficient to remove the hard disk before the instrument leaves a secured environment. Details are given in the document mentioned above.

26.5 Transporting

Lifting and carrying

See: "Lifting and carrying the instrument" on page 12

Packing

Use the original packaging material. It consists of antistatic wrap for electrostatic protection and packing material designed for the product.

If you do not have the original packaging, use similar materials that provide the same level of protection. You can also contact your local Rohde & Schwarz service center for advice.

Securing

When moving the R&S RTO6 in a vehicle or using transporting equipment, make sure that the R&S RTO6 is properly secured. Only use items intended for securing objects.

Transport altitude

Unless otherwise specified in the specifications document, the maximum transport altitude without pressure compensation is 4500 m above sea level.

26.6 Storage

Protect the product against dust. Ensure that the environmental conditions, e.g. temperature range and climatic load, meet the values specified in the specifications document.

26.7 Disposal

Rohde & Schwarz is committed to making careful, ecologically sound use of natural resources and minimizing the environmental footprint of our products. Help us by disposing of waste in a way that causes minimum environmental impact.

Disposing of electrical and electronic equipment

A product that is labeled as follows cannot be disposed of in normal household waste after it has come to the end of its life. Even disposal via the municipal collection points for waste electrical and electronic equipment is not permitted.

Figure 26-2: Labeling in line with EU directive WEEE

Rohde & Schwarz has developed a disposal concept for the eco-friendly disposal or recycling of waste material. As a manufacturer, Rohde & Schwarz completely fulfills its obligation to take back and dispose of electrical and electronic waste. Contact your local service representative to dispose of the product.

27 Remote control commands

This chapter describes all remote commands available for R&S RTO6 and provides examples and information how to use the commands.

For further information on remote control, see Section 25.5, "Remote control", on page 1403.

27.1 Conventions used in remote command description

The following conventions are used in the remote command descriptions:

- *Command usage*
  If not specified otherwise, commands can be used both for setting and for querying parameters.
  If a command can be used for setting or querying only, or if it initiates an event, the usage is stated explicitly.
- *Parameter usage*
  If not specified otherwise, a parameter can be used to set a value, and it is the result of a query.
  Parameters required only for setting are indicated as "Setting parameters".
  Parameters required only to refine a query are indicated as "Query parameters".
  Parameters that are only returned as the result of a query are indicated as "Return values".
- *Conformity*
  Commands that are taken from the SCPI standard are indicated as "SCPI confirmed". All commands used by the R&S RTO6 follow the SCPI syntax rules.
- *Asynchronous commands*
  A command which does not automatically finish executing before the next command starts executing (overlapping command) is indicated as an "Asynchronous command".
- *Reset values (*RST)*
  Default parameter values that are used directly after resetting the instrument (`*RST` command) are indicated as "*RST" values, if available.
- *Default unit*
  The default unit is used for numeric values if no other unit is provided with the parameter.

27.2 Finding the appropriate command

In the following chapters, the commands are sorted according to the menu and dialog structure of the instrument.

A list of all commands in alphabetical order ist given in the "List of Commands" at the end of this documentation.

To find the appropriate command for a setting easily, you can use the context help:

1. Enable the "Help" icon on the toolbar.

2. Tap the parameter for which you need information.

   The tooltip opens.

3. Tap the "Show Help" button in the lower right corner of the tooltip.

   The "Help" window opens and displays the comprehensive description and the corresponding remote command.

4. Tap the remote command link to open the command description.

27.3 Programming examples

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

27.3.1 Display

- Creating diagrams (SmartGrid)....1426
- Creating zoom diagrams....1427

27.3.1.1 Creating diagrams (SmartGrid)

The example creates 3 diagrams at different positions on the screen, and a zoom diagram. It also minimizes a waveform and adds it to another diagram.

Command description in: Section 27.7.2.4, "Smartgrid", on page 1470

In the following example `*OPC` prevents overlapping execution of asynchronous commands.

```
// Turn on display update
:SYSTem:DISPlay:UPDate ON
// Turn on Channel 2
:CHANnel2:STATe 1
// Create new diagram 'MyDiag2' below existing 'Diagram1' with waveform C2W1 in it
:LAYout:ADD 'Diagram1',VERtical,OFF,C2W1,'MyDiag2'
// Turn on Channel 3
:CHANnel3:STATe 1
// Create new diagram 'MyDiag3' right of existing 'MyDiag2'
:LAYout:ADD 'MyDiag2',HORizontal,OFF,C3W1,'MyDiag3'
// Turn on Channel 4
:CHANnel4:STATe 1
// Create new diagram 'MyDiag4' tabbed to existing 'Diagram1'
:LAYout:ADD 'Diagram1',TAB,OFF,C4W1,'MyDiag4'
// Select 'Diagram1'
:LAYout:SHOW 'Diagram1'
```

```
// Create zoom window of 'Diagram1'
:LAYout:ZOOM:ADD 'Diagram1',VERT,OFF,-10e-9,10e-9,-0.05,0.04,'MyZoom1'
// Minimize Channel 2 (Wfm1)
:LAYout:SIGNal:UNAssign C2W1
// Add Channel 2 (Wfm1) to Diagram1
:LAYout:SIGNal:ASSign 'Diagram1', C2W1

*OPC?
```

27.3.1.2 Creating zoom diagrams

The example creates a zoom diagram, sets the relative size of the zoom area, and removes the zoom diagram.

Command description in: Section 27.10.1, "Zoom", on page 1623.

In the following example `*OPC` prevents overlapping execution of asynchronous commands.

```
// Create an new zoom diagram for Diagram1
LAYout:ZOOM:ADD 'Diagram1', VERT, OFF, -10e-9, 20e-9, -0.1, 0.05, 'MyZoom1'
// Query the horizontal zoom mode, return value: ABS
LAYout:ZOOM:HORZ:MODE? 'Diagram1', 'MyZoom1'
<--ABS
// Set horizontal zoom mode to relative
LAYout:ZOOM:HORZ:MODE 'Diagram1', 'MyZoom1', REL
// Set horizontal zoom span in percent
LAYout:ZOOM:HORZ:REL:SPAN 'Diagram1', 'MyZoom1', 10
// Set horizontal zoom position in percent
LAYout:ZOOM:HORZ:REL:POS 'Diagram1', 'MyZoom1', 15
*OPC?
// Remove zoom diagram
LAYout:ZOOM:REM 'Diagram1', 'MyZoom1'
*OPC?
```

27.3.2 Automatic measurements

- Performing amplitude/time measurements 1427
- Setting reference levels 1428
- Waveform histograms 1429
- Long-term measurements 1430
- Measurement limits 1431

27.3.2.1 Performing amplitude/time measurements

Command description is given in Section 27.12.1, "General settings", on page 1677 and Section 27.12.12, "Results", on page 1752.

In the following example *OPC prevents overlapping execution of asynchronous commands.

Simple frequency and amplitude measurement

```
SING;*OPC?
MEAS1:SOUR C1W1        // Configure frequency measurement
MEAS1:MAIN FREQ
MEAS1 ON
*OPC?
MEAS2:SOUR C1W1        // Configure amplitude measurement
MEAS2:MAIN AMPL
MEAS2 ON
*OPC?
MEAS1:RES:ACT?        // Get frequency result
MEAS2:RES:ACT?        // Get amplitude result
*OPC?
```

27.3.2.2 Setting reference levels

Command description in Section 27.17.2, "Signal and reference levels for NRZ signals", on page 1891.

In the following example *OPC prevents overlapping execution of asynchronous commands.

Manual reference level definition using relative values

Reference levels are set to 15%, 50%, and 85% of the high signal level for waveform C2W1 (= suffix 5).

```
REFLevel5:LDETection MANual
REFLevel5:LMODe REL
REFLevel5:RELative:MODE USER
REFLevel5:RELative:LOWer 15
REFLevel5:RELative:MIDDle 50
REFLevel5:RELative:UPPer 85
*OPC?
```

Manual reference level definition using absolute values

Set reference levels manually for waveform C1W1 (= suffix 2), defining high and low signal levels and the distances between signal and reference levels.

```
REFLevel2:LDETection MANual
REFLevel2:LMODe ABS
REFLevel2:ABSolute:HIGH 0.12
REFLevel2:ABSolute:TDIStance 0.03
REFLevel2:ABSolute:Low -0.12
REFLevel2:ABSolute:BDIStance 0.04
*OPC?
```

```
REFLevel2:ABSolute:MLEVel?
<-- 0
```

Set reference levels manually for waveform C1W1 (= suffix 2) by defining upper and lower reference levels and the distances between signal and reference levels.

```
REFLevel2:LDETection MANual
REFLevel2:LMODe ABS
REFLevel2:USRLevel UREF
REFLevel2:ABSolute:LLEVel 0
REFLevel2:ABSolute:BDIStance 0.02
REFLevel2:ABSolute:ULEVel 0.2
REFLevel2:ABSolute:TDIStance 0.03
*OPC?
REFLevel2:ABSolute:MLEVel?
<-- 0.1
```

Automatic level detection, peak probability

Reference levels are set to the signal levels with the highest probability values for waveform C3W1 (= suffix 8).

```
REFLevel8:LDETection Auto
REFLevel8:AUTO:MODE PPRobability
*OPC?
```

27.3.2.3 Waveform histograms

In the following example `*OPC` prevents overlapping execution of asynchronous commands.

- Creating and reading histograms....1429
- Exporting histogram data to file....1430
- Transferring histogram data....1430

Creating and reading histograms

The example creates a histogram, activates two measurements (mean and standard deviation measurements of Histogram1), and queries the results of both measurements.

Command description in:

- Section 27.12.1, "General settings", on page 1677
- Section 27.12.8.1, "Histogram measurement", on page 1733
- Section 27.12.12, "Results", on page 1752

```
LAY:HIST:ADD 'Histogram1', C1W1, -2.5E-007, 2.5E-007, -1.32, 5.35, OFF, VERT *OPC?

MEAS1 ON
MEAS1:HIST:SEL 'Histogram1'
MEAS1:CAT HIST
MEAS1:MAIN HME
```

```
*OPC?

MEAS2 ON
MEAS2:HIST:SEL 'Histogram1'
MEAS2:CAT HIST
MEAS2:MAIN HSTD
*OPC?

MEAS1:RES:ACT?
MEAS2:RES:ACT?
```

Exporting histogram data to file

The example writes the absolute data values of Histogram1 to `C:\Histograms\Hist1.xml` in XML format.

Command description in Section 27.16.5, "Waveform histogram: export to file", on page 1871.

```
EXPort:HISTogram:SELect 'Histogram1'
EXPort:HISTogram:INCidence ABS
EXPort:HISTogram:NAME 'C:\Histograms\Hist1.xml'
EXPort:HISTogram:SAVE
*OPC?
```

Transferring histogram data

The example transfers the absolute values of Histogram1 to a controlling computer in ASCII format.

Command description in Section 27.16.5, "Waveform histogram: export to file", on page 1871.

```
EXP:HIST:SEL 'Histogram1'
EXP:HIST:INC ABS
*OPC?
FORM ASC
EXP:HIST:DATA?
<--0,0,0,0,0,2037,5754804,4683496,3100169,2874565,...
```

27.3.2.4 Long-term measurements

In the following example `*OPC` prevents overlapping execution of asynchronous commands.

- Exporting long-term measurement data to file 1430
- Transferring long-term measurement data 1431

Exporting long-term measurement data to file

The example writes the long-term data of Meas1 to `C:\Measurements\Meas1.csv` in CSV format.

Command description in Section 27.16.7, "Long term measurement results and measurement histogram: export to file", on page 1874.

```
EXPort:MEASurement:SEL MEAS1
EXPort:MEASurement:TYPE LONGTERM
EXPort:MEASurement:NAME 'C:\Measurements\Meas1.csv'
EXPort:MEASurement:SAVE
*OPC?
```

Transferring long-term measurement data

The example transfers the long-term data of Meas1 to a controlling computer in ASCII format.

Command description in Section 27.16.7, "Long term measurement results and measurement histogram: export to file", on page 1874.

```
MEASurement:LTM ON
MEASurement:STAT ON
EXPort:MEASurement:SELect MEAS1
EXPort:MEASurement:TYPE LONGTERM
*OPC?
FORM ASC
EXPort:MEASurement:DATA?
<--50,0.24901185771,0.24731225296,0.24703557312,0.00069270717936,0,50,....
```

27.3.2.5 Measurement limits

The example configures the limit check for measurement group 4. The LCHeck suffix determines the measurement type, here: 7 = MEAN.

Command description in Section 27.12.2, "Amplitude/time measurements", on page 1683.

```
MEASurement4:AMPTime:LCHeck7:LOWer:LIMit <Value>    // Define lower limit
MEASurement4:AMPTime:LCHeck7:UPPer:LIMit <Value>    // Define upper limit
MEASurement4:AMPTime:LCHeck7:VALid ILIMit           // Define valid range for limits
MEASurement4:LCHeck LIMit'                          // Enable limit check
```

27.3.3 Mask testing

- Creating a user mask.....1431

27.3.3.1 Creating a user mask

Creates new user mask "MyMask" with one inner segment, and turns on the mask test.

Command description in: Section 27.14, "Mask testing", on page 1787.

In the following example `*OPC` prevents overlapping execution of asynchronous commands.

```
MTEST:ADD 'MyMask'
MTEST:SEGM:ADD 'MyMask'
MTEST:SEGM:POIN:ADD 'MyMask', 0
MTEST:SEGM:POIN:X 'MyMask', 0, 0, -20e-9
MTEST:SEGM:POIN:Y 'MyMask', 0, 0, -0.1
MTEST:SEGM:POIN:ADD 'MyMask', 0
MTEST:SEGM:POIN:X 'MyMask', 0, 1, -20e-9
MTEST:SEGM:POIN:Y 'MyMask', 0, 1, 0.1
MTEST:SEGM:POIN:ADD 'MyMask', 0
MTEST:SEGM:POIN:X 'MyMask', 0, 2, 20e-9
MTEST:SEGM:POIN:Y 'MyMask', 0, 2, 0.1
MTEST:SEGM:POIN:ADD 'MyMask', 0
MTEST:SEGM:POIN:X 'MyMask', 0, 3, 20e-9
MTEST:SEGM:POIN:Y 'MyMask', 0, 3, -0.1
MTEST:SEGM:REG 'MyMask', 0, INNER
MTEST:STAT 'MyMask', ON
*OPC?
```

27.3.4 Search

- Searching for a pulse of a specified width....1432

27.3.4.1 Searching for a pulse of a specified width

In the following example `*OPC` prevents overlapping execution of asynchronous commands.

Search for positive pulses with pulse width 12 ± 10 µs (2 µs to 22 µs).

Command description in: Section 27.15, "Search", on page 1812.

The usage of asynchronous commands is described in www.rohde-schwarz.com/rc-via-scpi, chapter "Command Sequence and Synchronization".

```
SEAR:ADD 'MySearch'                  // Create a new search
SEAR:TRIG:WIDT:STAT 'MySearch',1     // Configure search type
SEAR:SOUR 'MySearch',M1              // Configure search source - here Math1
SEAR:TRIG:WIDT:RANG 'MySearch',WITH  // Configure search parameters
SEAR:TRIG:WIDT:WIDT 'MySearch',5e-4  // Configure search parameters
SEAR:TRIG:WIDT:DELT 'MySearch',5e-6  // Configure search parameters
SEAR:RES:LIM 'MySearch',1            // Set number of result lines in table to 1
*OPC?
SEAR:ALL 'MySearch';                // Initiate search for all events, asynchr. command
```

27.3.5 Data management

- Saving a screenshot to file....1433
- Exporting waveform data to file....1433
- Exporting measurement results to file....1439

27.3.5.1 Saving a screenshot to file

Saves three display images in png format to the files `Print.png`, `Print_001.png`, and `Print_002.png` in the directory `C:\Temp`. To get a correct screenshot, turn on the display first.

Command description in: Section 27.16.8, "Screenshots", on page 1876.

In the following example `*OPC` prevents overlapping execution of asynchronous commands.

```
SYST:DISP:UPD ON
HCOP:DEST 'MMEM'
HCOP:DEV:LANG PNG
*OPC?
MMEM:NAME 'C:\Temp\Print.png'
HCOP:IMMediate; *OPC?
HCOP:IMM:NEXT; *OPC?
HCOP:IMM:NEXT; *OPC?
```

27.3.5.2 Exporting waveform data to file

Command description in:

- Section 27.16.4, "Waveform data: export to file", on page 1863
- Section 27.16.1, "Instrument settings", on page 1854
- Section 27.10.5, "History", on page 1656

In the following example `*OPC` prevents overlapping execution of asynchronous commands.

- Exporting a single waveform to an XML file....1433
- Exporting raw data of a single waveform to a BIN file....1434
- Exporting raw data of a measurement gate to a BIN file....1434
- Exporting interleaved x/y data of a single waveform to a CSV file....1435
- Exporting interleaved x/y data of a zoom to CSV file....1435
- Exporting multiple running acquisitions of a single waveform to an XML file....1436
- Exporting a single acquisition of the history to a BIN file....1436
- Exporting multiple acquisitions of the history to an XML file....1437
- Exporting and reconstructing multiple raw acquisitions of the history file....1437

Exporting a single waveform to an XML file

Saves a single analog waveform completely to an XML file. Data logging is off.

The usage of asynchronous commands is described in www.rohde-schwarz.com/rc-via-scpi, chapter "Command Sequence and Synchronization".

```
STOP;*OPC?
EXPort:WAVeform:FASTexport ON
CHANnel1:WAVeform1:STATe 1
*OPC?
RUNSingle;*OPC?
```

```
EXPort:WAVeform:SOURce C1W1
EXPort:WAVeform:SCOPe WFM
EXPort:WAVeform:NAME 'C:\Data\DataExportWfm_analog.xml'
EXPort:WAVeform:RAW OFF
EXPort:WAVeform:INCXvalues OFF
EXPort:WAVeform:DLOGging OFF
MMEM:DEL 'C:\Data\DataExportWfm_analog.*'
EXPort:WAVeform:SAVE
*OPC?
MMEM:DATA? 'C:\Data\DataExportWfm_analog.xml'
MMEM:DATA? 'C:\Data\DataExportWfm_analog.wfm.xml'
```

Exporting raw data of a single waveform to a BIN file

Saves the data of a single analog waveform in integer 8-bit format (raw data) to a BIN file. Data logging is off.

Data conversion is described in "Raw (ADC direct)" on page 486.

In the following example `*OPC` prevents overlapping execution of asynchronous commands.

```
STOP;*OPC?
EXPort:WAVeform:FASTexport ON
CHANnel1:WAVeform1:STATe 1
RUNSingle; *OPC?
EXPort:WAVeform:SOURce C1W1
EXPort:WAVeform:SCOPe WFM
EXPort:WAVeform:NAME 'C:\Data\DataExportWfm_analog.bin'
EXPort:WAVeform:RAW ON
EXPort:WAVeform:INCXvalues OFF

EXPort:WAVeform:SAVE
*OPC?
MMEM:DATA? 'C:\Data\DataExportWfm_analog.bin'
MMEM:DATA? 'C:\Data\DataExportWfm_analog.wfm.bin'
```

Exporting interleaved x/y data of a single waveform to a CSV file

Saves the x- and y-values of a single analog waveform to a CSV file. Data logging is off.

In the following example `*OPC` prevents overlapping execution of asynchronous commands.

```
STOP;*OPC?
EXPort:WAVeform:FASTexport ON
CHANnel1:WAVeform1:STATe 1
*OPC?
RUNSingle;*OPC?
EXPort:WAVeform:SOURce C1W1
EXPort:WAVeform:SCOPe WFM
EXPort:WAVeform:NAME 'C:\Data\DataExportWfm_analog.csv'
EXPort:WAVeform:RAW OFF
EXPort:WAVeform:INCXvalues ON
EXPort:WAVeform:DLOGging OFF
MMEM:DEL 'C:\Data\DataExportWfm_analog.*'
EXPort:WAVeform:SAVE
*OPC?
MMEM:DATA? 'C:\Data\DataExportWfm_analog.csv'
MMEM:DATA? 'C:\Data\DataExportWfm_analog.wfm.csv'
```

Exporting interleaved x/y data of a zoom to CSV file

Saves the x- and y-values that are displayed in a zoom diagram to a CSV file. Data logging is off.

In the following example `*OPC` prevents overlapping execution of asynchronous commands.

```
STOP;*OPC?
EXPort:WAVeform:FASTexport ON
CHANnel1:WAVeform1:STATe 1

MMEM:DATA? 'C:\Data\DataExportWfm_analog.wfm.xml'
```

Exporting and reconstructing multiple raw acquisitions of the history file

This example captures and exports 100 waveforms acquired in fast segmentation mode (minimize blind time). The data is transferred in blocks using SCPI commands.

In the following example *OPC prevents overlapping execution of asynchronous commands.

```
// --- Set data format to signed integers, 1 byte
FORMat:DATA INT,8

// --- Create history data (assuming on channel 1) ---
CHANnel1:WAVeform1:STATe 1           //turn on channel 1
ACQuire:COUNt 100                    //acquire 100 waveforms
ACQuire:SEGMented:STATe ON; *OPC?
//turn on fast segmentation, acquisition is started and data is stored in the memory

// --- Set Export variables and export data ---
EXPort:WAVeform:SOURce C1W1         //specify source for data export
EXPort:WAVeform:SCOPe WFM           //specify range: complete acq. time
MMEM:DEL "C:\Users\Public\Documents\Rohde-Schwarz\RTx\Temp\DataExportWfm_analog.*"
        //delete data from previous runs of this script
EXPort:WAVeform:NAME "C:\Users\Public\Documents\Rohde-Schwarz\RTx\Temp\DataExpWfm.bin"
        //store data in this path and filename
EXPort:WAVeform:RAW ON
//export as raw ADC integer values (saves memory) --> data needs to be converted later
EXPort:WAVeform:INCXvalues OFF
//disable time values in data file. Time can be constructed from the header file
CHANnel1:WAV1:HISTory:STATe ON      //switch to history view
EXPort:WAVeform:DLOGging ON         //enable data logging & history
EXPort:WAVeform:TIMestamps ON       //enable relative time stamp for each acq.
CHANnel1:WAV1:HISTory:STARt -99     //oldest waveform of n acq. has index =(-1)*(n-1)
CHANnel1:WAV1:HISTory:STOP 0        //newest waveforms has index 0
CHANnel1:WAV1:HISTory:REPLay OFF
CHANnel1:WAV1:HISTory:PLAY; *OPC?   //exports waveforms to defined file location.
//2 files are created: header file *.bin and waveform data file *.Wfm.bin

// --- Put files into output buffer of scope and collect ---
// The following code lines are mostly Pseudo Code.
//Sorting out the binary waveform data is more complex and require additional coding
binaryFormat = '1 byte'
//Pseudo Code, tell your language how to interpret the binary data,
//e.g. 'int8' for MATLAB
MMEM:DATA? "C:\Users\Public\Documents\Rohde-Schwarz\RTx\Temp\DataExpWfm.bin"
//Put header file into output buffer
header = readSCPIBinary(visaInstrument, binaryFormat);
//Pseudo Code, use appropriate command from your programming language,
//e.g. binblockread in MATLAB
MMEM:DATA? "C:\Users\Public\Documents\Rohde-Schwarz\RTx\Temp\DataExpWfm.Wfm.bin"
//Put data file into output buffer
//(your input buffer of the VISA resource might need to be increased)
wfmRaw = readSCPIBinary(visaInstrument, binaryFormat)
//Pseudo Code, use appropriate command from your programming language,
```

```
//e.g. binblockread in MATLAB.
//Note: Sort different acquisitions into an array separately after file transfer.

// --- Convert raw ADC values into voltage floating point values ---
// header is assumed to be a struct and the members are accessed via "." syntax.
vertOffsetByPosition = header.VerticalScale * header.VerticalPosition
conversionFactor = (1/header.NofQuantisationLevels) *
  header.VerticalScale * header.VerticalDivisionCount
for(i = 0; i<100; i++){
    wfmVolt(i) = wfmRaw(i) * conversionFactor +
      header.VerticalOffset - vertOffsetByPosition
}
// Note: Depending on settings, the waveform can contain more samples than the
//record length. Remove leading and trailing samples from the waveform.
```

27.3.5.3 Exporting measurement results to file

See:

- "Exporting histogram data to file" on page 1430
- "Transferring histogram data" on page 1430
- "Exporting long-term measurement data to file" on page 1430
- "Transferring long-term measurement data" on page 1431

27.3.6 Deembedding

27.3.6.1 Adding cables to the measurement setup

The example adds a cable to each channel and assigns an S-parameter file for each cable. Commands are explained in Section 27.26, "Deembedding (option R&S RTO6-K121)", on page 3019.

```
// Preset de-embedding, because *RST does not affect de-embedding
:DEEMbedding1:PRESet    // Ch1
:DEEMbedding2:PRESet    // Ch2
:DEEMbedding3:PRESet    // Ch3
:DEEMbedding4:PRESet    // Ch4

// Add cables to each channel, cable is added next to DUT at index 2 (DUT = index 1)
:DEEMbedding1:ADD 2,cabl    // Ch1
:DEEMbedding2:ADD 2,cabl    // Ch2
:DEEMbedding3:ADD 2,cabl    // Ch3
:DEEMbedding4:ADD 2,cabl    // Ch4

// Assign corresponding S2P file to channel
:DEEMbedding1:COMPonent2:SPONE 'C:\Rtx\Deembedding\RT-ZA17-1806671-0005-A.s2p'
```

```
:DEEMbedding2:COMPonent2:SPONE 'C:\Rtx\Deembedding\RT-ZA17-1806671-0005-B.s2p'
:DEEMbedding3:COMPonent2:SPONE 'C:\Rtx\Deembedding\RT-ZA17-1806671-0006-A.s2p'
:DEEMbedding4:COMPonent2:SPONE 'C:\Rtx\Deembedding\RT-ZA17-1806671-0006-B.s2p'
```

27.3.7 Protocol analysis

27.3.7.1 RFFE (option R&S RTO6-K550)

Configuring RFFE bus

Example 1: 1.8 V bus

In the following example `*OPC` prevents overlapping execution of asynchronous commands.

```
//Configure source and thresholds for 1.8 V bus
STOP;*OPC?
BUS1:TYPE RFFE
BUS1:LABel "RFFE Test 2"
BUS1:RFFE:CLOCk:SOUR C2W1
BUS1:RFFE:DATA:SOUR C1W1
BUS:RFFE:PRESet V18

//Load a label list and switch on
BUS1:NEWList 'C:\Protocols\RFFE.csv'
BUS1:SYMBols ON

//Initiate single sweep
CHANnel1:STATe ON
CHANnel2:STATe ON
BUS1 ON
RUNSingle;*OPC?
```

Example 2: User-defined thresholds with threshold coupling

```
//Configure source and user-defined thresholds
STOP;*OPC?
BUS1:TYPE RFFE
BUS1:LABel "RFFE Test 1"
BUS1:RFFE:CLOCk:SOUR C2W1
BUS1:RFFE:DATA:SOUR C1W1

BUS1:RFFE:CLOCk:THReshold:HYSTeresis 0.2
BUS1:RFFE:CLOCk:THReshold:HIGH 0.72
BUS1:RFFE:CLOCk:THReshold:LOW  0.48
```

Triggering on RFFE bus

Trigger on sequence start of sequences that have the slave address 0010, 0011, or 0100.

```
//Set trigger source to serial bus
TRIGger1:SOURce SBUS
TRIGger:MODE NORMal

//Trigger on sequence start of all sequences with slave address range
TRIGger1:RFFE:TYPE STARt
TRIG1:RFFE:SADD:CONDition INR
TRIG1:RFFE:SADD:MIN #H2  //SAD = 0010
TRIG1:RFFE:SADD:MAX #H4  //SAD = 0100
```

Searching RFFE data

Search for sequence ends of sequences if the last bit of slave address is 1.

```
STOP;*OPC?
SEARch:ADD 'RFFESearch1'

27.3.8 Power analysis (option R&S RTO6-K31)

27.3.8.1 Auto deskew

Configures the voltage and current probes for power measurements and executes the auto deskew.

Command description in Section 27.25.1, "General", on page 2976 and Section 27.25.2, "Deskew", on page 2977.

If the instrument refuses to accept `POWer` commands, activate the power mode with `:POWer:ENABle`.

In the following example `*OPC` prevents overlapping execution of asynchronous commands.

```
*RST; *OPC?
STOP;*OPC?
```

```
//Activate two channels
:CHANnel1:STATe 1
:CHANnel2:STATe 1

//Activate power
:POWer:ENABle

//Select current and voltage sources
:POWer:SOURce:VOLTage1 CHANnel1
:POWer:SOURce:CURRent1 CHANnel2
*OPC?

//Configure voltage probe on CH1 manually
//Not necessary if you use an active R&S voltage probe that is recognized by the instrument
:PROBe1:SETup:ATTenuation:MODE Manual
:PROBe:SETup:ATTenuation:DEFProbe ZD01a100
*OPC?
//selected high voltage differential probe 1:100

//Configure current probe on CH2 manually
//Always required because R&S current probes are not recognized automatically
PROBe2:SETup:ATTenuation:MODE Manual
PROBe2:SETup:ATTenuation:DEFProbe ZC20
*OPC?
//select 20MHz current probe ZC10 also possible

//Start deskew
//Overwrites the skew offset of CH2 (current probe), because :POWer:DESKew:RESet? == 1
//writes a user-defined preset file (UserDefinedPreset_AutoDeskew.dfl) and
//activates the user defined preset, because :POWer:DESKew:UDPReset? == 1
:PoWer:DESKew:EXECute;

//Check result
CHANnel2:SKEW:MAN?
CHANnel2:SKEW:TIMe?
POWer:DESKew:TIMe?
*OPC?
```

Effect of *RST and loading user-defined preset

Note that `*RST` resets the deskew values.

You can reload the deskew values as follows:

```
*RST;*OPC?
STOP;*OPC?
:POWer:ENABle
//Select voltage and current sources
:POWer:SOURce:VOLTage1 CHANnel1
:POWer:SOURce:CURRent1 CHANnel2
```

```
*OPC?
//Reload deskew values
:POWer:DESKew:CURRent
*OPC?
//Load default saveset after FW restart
MMEM:RCL 'C:\Users\Public\Documents\Rohde-Schwarz\RTx\SaveSets
\UserDefinedPreset_AutoDeskew.dfl'
```

27.3.8.2 Transient response measurement

Configures and executes a transient response measurement.

Command description in Section 27.25.15, "Transient response", on page 3014.

Make sure to configure and deskew the probes before the measurement, see Section 27.3.8.1, "Auto deskew", on page 1443.

```
//Activate power
*RST; *OPC?
:POWer:ENABle

//Expected smps frequency
:POW:TRANsient:FREQ         12500000

:POWer:TRANsient:AUToscale AUTO

:POWer:TRANsient:SIGHigh 0.1
:POWer:TRANsient:SIGLow    0.025
:POWer:TRANsient:HYSTeresis 20

//Trigger channel
:POWer:TRANsient:TRGC CHAN2

//Edge trigger slope
:POWer:TRANsient:TRGS POS

//Trigger level
:POWer:TRANsient:TRGL 0.08

//Run measurement
:POWer:TRANsient:EXECute;*OPC?

//Query results
:POWer:TRANsient:RESult? SETTling
:POWer:TRANsient:RESult? PEAKtime
:POWer:TRANsient:RESult? DELay
:POWer:TRANsient:RESult? RTIMe
:POWer:TRANsient:RESult? OVERshoot
```

```
//Add to report
:Power:TRANsient:REPort:Add
```

27.4 Frequently used parameters and suffixes

This chapter describes in general those parameters and suffixes that are used in several subsystems.

27.4.1 Waveform suffix

The numeric waveform suffix is used in some commands, for example, to indicate the source waveform number from which the reference level is taken, and to assign color tables to waveforms.

Depending on the command, not all suffix values are supported. For example, in REFLevel commands, only suffixes 2 to 21 are allowed. The range of supported suffix numbers is indicated in the description of the individual commands.

NOTICE

Suffix 1

Suffix 1 means that no waveform is assigned. The first waveform C1W1 corresponds to suffix number 2.

Waveform number	Description
1	None
2	C1W1 (channel 1, waveform 1)
3	C1W2 (channel 1, waveform 2)
4	C1W3 (channel 1, waveform 3)
5	C2W1 (channel 2, waveform 1)
6	C2W2 (channel 2, waveform 2)
7	C2W3 (channel 2, waveform 3)
8	C3W1 (channel 3, waveform 1)
9	C3W2 (channel 3, waveform 2)
10	C3W3 (channel 3, waveform 3)
11	C4W1 (channel 4, waveform 1)
12	C4W2 (channel 4, waveform 2)
13	C4W3 (channel 4, waveform 3)

Waveform number	Description
14 to 17	Math waveforms: M1, M2, M3, M4 M5 to M8: suffixes 119 to 122
18 to 21	Reference waveforms: R1, R2, R3, R4
22 to 25	XY-waveforms: XY1, XY2, XY3, XY4
26 to 33	Measurement results: MRESult1, MRESult2, MRESult3, MRESult4, MRESult5, MRESult6, MRESult7, MRESult8 MRESult1 are the results of measurement group 1 and so on.
34 to 35	not used
36 to 39	Serial buses: SBUS1, SBUS2, SBUS3, SBUS4
40 to 55	Digital channels: D0 to D15 (option R&S RTO6-B1)
56 to 59	Digital buses: MSO1, MSO2, MSO3, MSO4 (option R&S RTO6-B1)
60	not used
61 to 68	Track waveforms: TRK1, TRK2, TRK3, TRK4, TRK5, TRK6, TRK7, TRK8
69 to 71	not used
72 to 75	Spectrograms: SG1, SG2, SG3, SG4. Available for option R&S RTO6-K37. SG5 to SG8: suffixes 119 to 122 . Available for option R&S RTO6-K133.
76 to 83	Timeline spectrums: SG1TL1, SG1TL2, SG2TL1, SG2TL2, SG3TL1, SG3TL2, SG4TL1, SG4TL2. Available for option R&S RTO6-K37 TL1 is timeline 1, TL2 is timeline 2 SG5TL1 to SG8TL2: suffixes 123 to 130. Available for option R&S RTO6-K133.
84 to 87	Eye diagrams: EYE1, EYE2, EYE3, EYE4 Available for eye diagram analysis with option R&S RTO6-K91
88 to 91	Voltage input channels of multi-channel probe R&S RT-ZVC (probe 1) R&S RT-ZVC04: Z1V1 | Z1V2 | Z1V3 | Z1V4 R&S RT-ZVC02: Z1V1 | Z1V2. Suffixes 90 to 91 are not available.
92 to 95	Current input channels of multi-channel probe R&S RT-ZVC (probe 1) R&S RT-ZVC04: Z1I1 | Z1I2 | Z1I3 | Z1I4 R&S RT-ZVC02: Z1I1 | Z1I2. Suffixes 94 to 95 are not available.
96 to 99	Voltage input channels of multi-channel probe R&S RT-ZVC (probe 2) R&S RT-ZVC04: Z2V1 | Z2V2 | Z2V3 | Z2V4 R&S RT-ZVC02: Z2V1 | Z2V2. Suffixes 98 to 99 are not available.
100 to 103	Current input channels of multi-channel probe R&S RT-ZVC (probe 2) R&S RT-ZVC04: Z2I1 | Z2I2 | Z2I3 | Z2I4 R&S RT-ZVC02: Z2I1 | Z2I2. Suffixes 102 to 103 are not available.
104 to 107	not used
108 to 111	Resulting waveforms of differential deembedding: DIFF1 | DIFF2 | COMMON1 | COMMON2

Waveform number	Description
112 to 114	Resulting waveforms of TDR/TDT analysis (option R&S RTO6-K130): TDRZ | TDRH | TDRR
115 to 118	Math waveforms: M5, M6, M7, M8 M1 to M4: suffixes 14 to 17
119 to 122	Spectrograms: SG5, SG6, SG7, SG8. Available for option R&S RTO6-K133. SG1 to SG4: suffixes 72 to 75. Available for option R&S RTO6-K37.
123 to 130	Timeline spectrums: SG5TL1, SG5TL2, SG6TL1, SG6TL2, SG7TL1, SG7TL2, SG8TL1, SG8TL2. Available for option R&S RTO6-K133. TL1 is timeline 1, TL2 is timeline 2 SG1TL1 to SG4TL2: suffixes 76 to 83. Available for option R&S RTO6-K37.
131 to 140	HP1 | HP2 | HP3 | HP4 | HP5 | HP6 | HP7 | HP8 | HP9 | HP10 Available for option R&S RTO6-K133.
141	not used
142 to 144	BATHtub1 | BMEas1 | SRESponse1 Bathtub diagram, bathtub measurement, and step response of 1st advanced jitter measurement, option R&S RTO6-K133/K134.
145 to 151	SRHist1 | SDHist1 | TJHist1 | DJHist1 | DDJHist1 | PJHist1 | RJOHist1 Histograms of 1st advanced jitter measurement, option R&S RTO6-K133/K134. SR: symbol rate, SD: symbol duration, TJ: total jitter, DDJ: data-dependent jitter, PJ: periodic jitter, RJO: random jitter.
152, 154- 158	SRTRack1 | TJTRack1 | DJTRack1 | DDJTrack1 | PJTRack1 | RJOTRack1 Tracks of 1st advanced jitter measurement, option R&S RTO6-K133/K134.
153	not used
159 to 163	TJSPectrum1 | DDJSpectrum1 | PJOSPectrum1 | RJOSPectrum1 | SEYE1 Spectrograms and synthetic eye diagram of 1st advanced jitter measurement, option R&S RTO6-K133/K134.
164	not used
165 to 167	BATHtub2 | BMEas2 | SRESponse2 Bathtub diagram, bathtub measurement, and step response of 2nd advanced jitter measurement, option R&S RTO6-K133/K134.
168 to 174	SRHist2 | SDHist2 | TJHist2 | DJHist2 | DDJHist2 | PJOHist2 | RJOHist2 Histograms of 2nd advanced jitter measurement, option R&S RTO6-K133/K134.
175-177, 179-181	SRTRack2 | SDTRack2 | TJTRack2 | DDJTrack2 | PJOTrack2 | RJOTrack2 Tracks of 1st advanced jitter measurement, option R&S RTO6-K133/K134.
178	not used
182 to 186	TJSPectrum2 | DDJSpectrum2 | PJOSPectrum2 | RJOSPectrum2 | SEYE2 Spectrograms and synthetic eye diagram of 2nd advanced jitter measurement, option R&S RTO6-K133/K134.

Waveform number	Description
187 to 188	NBAThtub1 | NBMeas1 Noise bathtub diagram and noise bathtub measurement of 1st noise measurement, option R&S RTO6-K134.
189 to 193	TNHist1 | DNHist1 | DDNHist1 | PNHist1 | RNOHist1 | Histograms of 1st noise measurement, option R&S RTO6-K134. TN: total noise, DN: deterministic noise, DDN: data-dependent noise, PJ: periodic noise, RNO: random noise.
194, 196 to 198	TNTRack1 | DDNTrack1 | PNTRack1 | RNOTRack1 Tracks of 1st noise measurement, option R&S RTO6-K134.
195	not used
199 to 202	TNSPectrum1 | DDNSpectrum1 | PNSPectrum1 | RNOSPectrum1 Spectrograms of 1st noise measurement, option R&S RTO6-K134.
203 to 204	NBAThtub2 | NBMeas2 Noise bathtub diagram and noise bathtub measurement of 2nd noise measurement, option R&S RTO6-K134.
205 to 209	TNHist2 | DNHist2 | DDNHist2 | PNHist2 | RNOHist2 Histograms of 2nd noise measurement, option R&S RTO6-K134.
210, 212 to 214	TNTRack2 | DDNTrack2 | PNTRack2 | RNOTRack2 Tracks of 2nd noise measurement, option R&S RTO6-K134.
211	not used
215 to 218	TNSPectrum2 | DDNSpectrum2 | PNSPectrum2 | RNOSpectrum2 Spectrograms eye diagram of 2nd noise measurement, option R&S RTO6-K134.
219 to 221	PJDHist1 | BUJHist1 | RJHist1 Histograms of 1st jitter measurement, option R&S RTO6-K134. BUJ: (Other) bounded uncorrelated jitter.
222	PJDTrack1 Tracks of 1st data dependent and periodic jitter noise measurement, option R&S RTO6-K134.
223	PJDSpectrum1 Spectrograms of 1st data dependent and periodic jitter noise measurement, option R&S RTO6-K134.
224 to 226	PJDHist2 | BUJHist2 | RJHist2 Histograms of 2nd noise measurement, option R&S RTO6-K134.
227	PJDTrack2 Tracks of 2nd data dependent and periodic jitter noise measurement, option R&S RTO6-K134.
228	PJDSpectrum2 Spectrograms of 2nd data dependent and periodic jitter measurement, option R&S RTO6-K134.

Waveform number	Description
229 to 231, 234 to 236	PNDHist1 | BUNHist1 | RNHist1 | PNDHist2 | BUNHist2 | RNHist2 Histograms of noise measurement, option R&S RTO6-K134. BUN: (Other) bounded uncorrelated noise.
232	PNDTrack1 Tracks of 1st data dependent and periodic noise measurement, option R&S RTO6-K134.
233	PNDSpectrum1 Spectrograms of 1st data dependent and periodic noise measurement, option R&S RTO6-K134.
237	PNDTrack2 Tracks of 2nd data dependent and periodic noise measurement, option R&S RTO6-K134.
238	PNDSpectrum2 Spectrograms of 2nd data dependent and periodic noise measurement, option R&S RTO6-K134.
243-250	JHI1_1, JHI1_2,JHI1_3,JHI1_4,JHI1_5,JHI1_6,JHI1_7,JHI1_8, Jitter histograms for PAM-N signals, option R&S RTO6-K133 and option R&S RTO6-K135
250-258	JTR1_1, JTR1_2, JTR1_3, JTR1_4, JTR1_5, JTR1_6, JTR1_7, JTR1_8 Jitter tracks for PAM-N signals, option R&S RTO6-K133 and option R&S RTO6-K135
259-266	NHI1_1, NHI1_2,NHI1_3,NHI1_4,NHI1_5, NHI1_6,NHI1_7,NHI1_8, Noise histograms for PAM-N signals, option R&S RTO6-K134 and option R&S RTO6-K135
267-274	NTR1_1, NTR1_2, NTR1_3, NTR1_4, NTR1_5, NTR1_6, NTR1_7, NTR1_8 Noise tracks for PAM-N signals, option R&S RTO6-K134 and option R&S RTO6-K135
275-282	JHI2_1, JHI2_2, JHI2_3, JHI2_4, JHI2_5, JHI2_6, JHI2_7, JHI2_8 Jitter histograms for PAM-N signals, option R&S RTO6-K133 and option R&S RTO6-K135
283-290	JTR2_1, JTR2_2, JTR2_3, JTR2_4, JTR2_5, JTR2_6, JTR2_7, JTR2_8 Jitter tracks for PAM-N signals, option R&S RTO6-K133 and option R&S RTO6-K135
291-298	NHI2_1, NHI2_2, NHI2_3, NHI2_4, NHI2_5, NHI2_6, NHI2_7, NHI2_8, Noise histograms for PAM-N signals, option R&S RTO6-K134 and option R&S RTO6-K135
299-306	NTR2_1, NTR2_2, NTR2_3, NTR2_4, NTR2_5, NTR2_6, NTR2_7, NTR2_8 Noise tracks for PAM-N signals, option R&S RTO6-K134 and option R&S RTO6-K135
307-308	CDRSW3, CDRSW4
309-312	LPDFE1, LPDFE2, LPDFE3, LPDFE4 Embedding and equalization signal lanes including TxFFE, Embedding, CTLE and FFE(option R&S RTO6-K126)

Waveform number	Description
313-316	LANE1, LANE2, LANE3, LANE4 Embedding and equalization signal lanes including TxFFE, Embedding, CTLE, FFE and DFE (option R&S RTO6-K126)
317	RAS1 Video raster image (option R&S RTO6-K129)

27.4.2 Waveform parameter

Many commands requires one of the waveforms to be specified as source. The following table lists all waveforms. For each command using a waveform parameter, the available waveforms are specified in the command description.

Waveform	Description
C1W1 | C1W2 | C1W3	Channel 1 waveforms
C2W1 | C2W2 | C2W3	Channel 2 waveforms
C3W1 | C3W2 | C3W3	Channel 3 waveforms
C4W1 | C4W2 | C4W3	Channel 4 waveforms
M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8	Math waveforms
R1 | R2 | R3 | R4	Reference waveforms
XY1 | XY2 | XY3 | XY4	XY-waveforms
MRESult1 | MRESult2 | MRESult3 | MRESult4 | MRESult5 | MRESult6 | MRESult7 | MRESult8	Measurement results
SBUS1 | SBUS2 | SBUS3 | SBUS4	Serial buses
D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15	Digital channels (option R&S RTO6-B1)
MSOB1 | MSOB2 | MSOB3 | MSOB4	Digital buses (option R&S RTO6-B1
TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8	Track waveforms
CDRSW1 = CDRSw1, CDRSW2 = CDRSw2, CDRSW3 = CDRSw3, CDRSW4 = CDRSw4 CDRHW = CDRHw	Generated clock signals
SG1 | SG2 | SG3 | SG4	Spectrograms (option R&S RTO6-K37)
SG5 | SG6 | SG7 | SG8	Advanced jitter analysis (option R&S RTO6-K133)
SG1TL1, SG1TL2, SG2TL1, SG2TL2, SG3TL1, SG3TL2, SG4TL1, SG4TL2	Spectrograms (option R&S RTO6-K37)
SG5TL1, SG5TL2, SG6TL1, SG6TL2, SG7TL1, SG7TL2, SG8TL1, SG8TL2	Advanced jitter analysis (option R&S RTO6-K133)
EYE1 | EYE2 | EYE3 | EYE4	Available for eye diagram analysis with option R&S RTO6-K91

Waveform	Description
Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 Z1V1 | Z1V2 | Z1I1 | Z1I2 | Z2V1 | Z2V2 | Z2I1 | Z2I2	Input channels of multi-channel probe R&S RT-ZVC04 Input channels of multi-channel probe R&S RT-ZVC02
DIFF1 | DIFF2 | COMMON1 | COMMON2	Resulting waveforms of differential deembedding
TDRZ | TDRH | TDRR	Resulting waveforms of TDR/TDT analysis (option R&S RTO6-K130)
SEYE1 | SEYE2	Available for synthetic eye diagram analysis with option R&S RTO6-
TJSPectrum1 | TJSPectrum2 | DDJSpectrum1 | DDJSpectrum2 | PJSPectrum1 | PJSPectrum2 | RJOSPectrum | RJOSPectrum1	Spectrograms of the advanced jitter analysis components (option R&S RTO6-K133/K134) TJ: total jitter DDJ: data-dependent jitter PJ: periodic jitter RJO: random jitter
BATHtub1 | BATHtub2	Bathtub diagrams of the advanced jitter analysis components (option R&S RTO6-K133/K134)
BMEas1 | BMEas2	Bathtub measurements of the advanced jitter analysis components (option R&S RTO6-K133/K134)
SRTRack1 | SRTRack2 | SDTRack1 | SDTRack2 | TJTRack1 | TJTRack2 | DJTRack1 | DJTRack2 | DDJTrack1 | DDJTrack2| PJOTRack1 | PJOTRack2 | RJOTRack1| RJOTRack2	Tracks of the advanced jitter analysis components (option R&S RTO6-K133/K134) SR: Symbol rate SD: Symbol duration
SRESponse1 | SRESponse2	Step response of the advanced jitter analysis (option R&S RTO6-K133/K134)
TNSPectrum1 | TNSPectrum2 | DDNSpectrum1 | DDNSpectrum2 | PNSPectrum1 | PNSPectrum2 | RNOSpectrum1 | RNOSpectrum2	Spectrograms of the advanced jitter analysis components (option R&S RTO6-K134) TN: total noise DDN: data-dependent noise PN: periodic noise RNO: random noise
NBAThtub1 | NBAThtub2	Bathtub diagrams of the noise analysis components (option R&S RTO6-K134)
NBMeas1 | NBMeas2	Bathtub measurements of the noise analysis components (option R&S RTO6-K134)
TNTRack1 | TNTRack2 | DNTRack1 | | DNTRack2 | DDNTrack1 | DDNTrack2 | PNTRack1 | PNTRack2 | RNOTRack1 | RNOTRack2	Tracks of the noise analysis components (option R&S RTO6-K134)
LPDFE1 | LPDFE2 | LPDFE3 | LPDFE4	Signal lanes pre-DFE (option R&S RTO6-K126)
LANE1 | LANE2 | LANE3 | LANE4	Signal lanes (option R&S RTO6-K126)

27.4.3 Slope parameter

The slope parameter is used with several trigger and search condition commands.

Slope	Description
POSitive	Rising edge, that is a positive voltage change.
NEGative	Falling edge, that is a negative voltage change
EITHer	rising as well as the falling edge.

27.4.4 Polarity parameter

The polarity parameter is used with several trigger and search condition commands.

Polarity	Description
POSitive	Positive going pulses.
NEGative	Negative going pulses.
EITHer	Both positive and negative going pulses.

27.4.5 Event parameter

The event parameter is used with commands defining an action for mask testing, limit checks and margin checks.

Event	Description
NOACtion	The action is not initiated.
SUCCess	The action is initiated if the operation finished successfully: ● Limits or margins were not exceeded during the entire measurement ● Mask test passed
VIOLation	The action is initiated if the operation finished with error: ● Limits or margins were violated during the measurement ● Mask test failed

27.4.6 Bit pattern parameter

Bit pattern parameter are required with commands triggering on address, identifier, or data pattern.

To set the pattern value, you can use either a numeric parameter as defined in the SCPI standard, or a string parameter.

Bit pattern in numeric parameter

In a numeric parameter, the values are listed byte-by-byte, with bytes separated by commas and MSB first. The default numeral format is decimal, other formats can be

indicated by a format identifier (#B = binary, #H = hexadecimal, #Q = octal). Currently, no format for signed values is available.

Example: Parameter with three bytes, decimal byte values are 10, 20, 30. The examples are given for CAN, the bit pattern in other commands is defined in the same way.

- `TRIGger:CAN:DMIN 10,20,30`
- `TRIGger:CAN:DMIN #B00001010,#B00010100,#B00011110`
- `TRIGger:CAN:DMIN #H0A,#H14,#H1E`
- `TRIGger:CAN:DMIN #Q012,#Q024,#Q036`

Bit pattern in string parameter

In a string, the complete binary pattern is written without separation of bytes, for example:

```
TRIGger:CAN:DMIN '000010100001010000011110'
```

Unlike a numeric parameter, the string parameter accepts wildcards for single bits (X = don't care). Whether wildcards can be used or not depends on the remote command. Usually, address and identifier parameter require unique patterns while data parameters may contain wildcards.

Mostly the length of the bit pattern is defined, for example, by the I²C address type, the CAN identifier type, or the data length code. In theses cases, it is recommended that you enter the complete bit pattern. If you enter a shorter pattern, the instrument fills up the pattern with X bits to the right of the defined pattern.

Example: You want to trigger on an 11 bit CAN address and enter the bit pattern '11100011' (8 bits only). The instrument uses the pattern '11100011XXX' for triggering.

Query for a pattern

The pattern format for the return value of a pattern is defined by the `FORMat:BPATtern` command.

27.5 Common commands

Common commands are described in the IEEE 488.2 (IEC 625-2) standard. These commands have the same effect and are employed in the same way on different devices. The headers of these commands consist of "*" followed by three letters. Many common commands are related to the Status Reporting System.

Available common commands:

*CAL? 1455
*CLS 1455
*ESE 1455
*ESR? 1456
*IDN? 1456
*IST? 1456
*OPC 1456

*OPT?....1456
*PCB....1457
*PRE....1457
*PSC....1457
*RCL....1457
*RST....1458
*SAV....1458
*SRE....1458
*STB?....1458
*TRG....1458
*TST?....1459
*WAI....1459

***CAL?**

Starts a self-alignment of the instrument, and then queries a status response. Return values ≠ 0 indicate an error.

Return values:

<State> 0: no error
1: alignment failed
2: not aligned, e.g. init
3: device needs longer warmup time before selfalignment can start
4: input signal connected during selfalignment

Usage: Query only

Manual operation: See "Start Alignment" on page 101

***CLS**

Clear status

Sets the status byte (STB), the standard event register (ESR) and the `EVENt` part of the `QUEStionable` and the `OPERation` registers to zero. The command does not alter the mask and transition parts of the registers. It clears the output buffer.

Usage: Setting only

***ESE** <Value>

Event status enable

Sets the event status enable register to the specified value. The query returns the contents of the event status enable register in decimal form.

Parameters:

<Value> Range: 0 to 255

***ESR?**

Event status read

Returns the contents of the event status register in decimal form and then sets the register to zero.

Return values:
<Contents> Range: 0 to 255

Usage: Query only

***IDN?**

Identification

Returns the instrument identification.

Return values:
<ID> "Rohde&Schwarz,<device type>,<part number>/<serial number>,<firmware version>"

Example: `Rohde&Schwarz,RTO6,1802.0001k04/200153,5.0.0.2`
Model assignment:

Usage: Query only

***IST?**

Individual status query

Returns the contents of the IST flag in decimal form. The IST flag is the status bit which is sent during a parallel poll.

Return values:
<ISTflag> 0 | 1

Usage: Query only

***OPC**

Operation complete

Sets bit 0 in the event status register when all preceding commands have been executed. This bit can be used to initiate a service request. The query writes a "1" into the output buffer when all preceding commands have been executed, which is useful for command synchronization.

***OPT?**

Option identification query

Queries the options included in the instrument. For a list of all available options and their description, refer to the specifications document.

Return values:
<Options> The query returns a list of options. The options are returned at fixed positions in a comma-separated string. A zero is returned for options that are not installed.

Usage: Query only

***PCB** <Address>

Pass control back

Indicates the controller address to which remote control is returned after termination of the triggered action.

Setting parameters:
<Address> Range: 0 to 30

Usage: Setting only

***PRE** <Value>

Parallel poll register enable

Sets parallel poll enable register to the indicated value. The query returns the contents of the parallel poll enable register in decimal form.

Parameters:
<Value> Range: 0 to 255

***PSC** <Action>

Power on status clear

Determines whether the contents of the `ENABle` registers are preserved or reset when the instrument is switched on. Thus a service request can be triggered when the instrument is switched on, if the status registers ESE and SRE are suitably configured. The query reads out the contents of the "power-on-status-clear" flag.

Parameters:
<Action> 0 | 1

0
The contents of the status registers are preserved.

1
Resets the status registers.

***RCL** <Number>

Recall

Loads the instrument settings from an intermediate memory identified by the specified number. The instrument settings can be stored to this memory using the command `*SAV` with the associated number.

It also activates the instrument settings which are stored in a file and loaded using `MMEMory:LOAD:STATe`.

***RST**

Reset

Sets the instrument to a defined default status. The default settings are indicated in the description of commands.

Usage: Setting only

***SAV** <Number>

Save

Stores the current instrument settings under the specified number in an intermediate memory. The settings can be recalled using the command `*RCL` with the associated number.

To transfer the stored instrument settings in a file, use the command `:MMEM:STOR:STAT`.

***SRE** <Contents>

Service request enable

Sets the service request enable register to the indicated value. This command determines under which conditions a service request is triggered.

Parameters:

<Contents> Contents of the service request enable register in decimal form. Bit 6 (MSS mask bit) is always 0.

Range: 0 to 255

***STB?**

Status byte query

Reads the contents of the status byte in decimal form.

Usage: Query only

***TRG**

Trigger

Triggers all actions waiting for a trigger event. In particular, *TRG generates a manual trigger signal. This common command complements the commands of the `TRIGger` subsystem.

`*TRG` corresponds to the `INITiate:IMMediate` command.

Usage: Event

***TST?**

Self-test query

Initiates self-tests of the instrument and returns an error code.

Return values:

<ErrorCode> **integer > 0 (in decimal format)**
An error occurred.

0
No errors occurred.

Usage: Query only

Manual operation: See "Selftest" on page 103

***WAI**

Wait to continue

Prevents servicing of the subsequent commands until all preceding commands have been executed and all signals have settled (see also command synchronization and `*OPC`).

Usage: Event

27.6 General remote settings

This chapter describes commands that have effect on many other remote commands in different applications of the instrument.

FORMat[:DATA] 1459
FORMat:BORDer 1461
FORMat:BPATtern 1461
SYSTem:DISPlay:UPDate 1462
SYSTem:KLOCk 1462
GPIB:ADDRess 1462
GPIB:TERMinator 1462
SYSTem:DISPlay:MESSage:STATe 1463
SYSTem:DISPlay:MESSage[:TEXT] 1463
SYSTem:LANGuage 1463

FORMat[:DATA] <Format>[,<Length>]

Selects the data type that is used for transmission of data from analog channels, math and reference waveforms, and some measurement results from the instrument to the controlling computer.

The command sets the data format for the following query commands:

- `CHANnel<ch>[:WAVeform<wf>]:DATA[:VALues]?`. Supported formats: ASCii | REAL,32 | INT,8 | INT,16.
- `CALCulate:MATH<m>:DATA[:VALues]?`. Supported formats: ASCii | REAL,32 | INT,8 | INT,16.
- `REFCurve<rc>:DATA[:VALues]?`. Supported formats: ASCii | REAL,32 | INT,8 | INT,16.
- `TDRT:SIGNal<m>:DATA:VALues?`. Supported formats: ASCii | REAL,32 | INT,8 | INT,16.
- `ZVC:Z<m>:I<n>:DATA[:VALues]?`
  `ZVC:Z<m>:V<n>:DATA[:VALues]?`. Supported formats: ASCii | REAL,32 | INT,8 | INT,16.
- `EXPort:HISTogram:DATA?`. Supported formats: ASCii | REAL,64 | INT,8 | INT,16.
- `EXPort:MEASurement:DATA?`. Supported formats: ASCii | REAL,64 | INT,8 | INT,16.
- `MEASurement<mg>:TRACk:DATA[:VALues]?`. Supported formats: ASCii | REAL,64 | INT,8 | INT,16.

If an unsupported format is set, the data query returns ASCII values.

Parameters:

<Format>[,<Length>] ASCii | REAL,32 | REAL,64 | INT,8 | INT,16

ASCii
Data values are returned in ASCII format as a list of comma-separated values in floating point format. The length can be omitted. It is 0, which means that the instrument selects the number of digits to be returned. The query returns both values (`ASC,0`).

REAL,32
The data is stored as binary data (Definite Length Block Data according to IEEE 488.2). Each waveform value is formatted in 32-Bit IEEE 754 Floating Point Format.
The schema of the result string is as follows:
`#41024<value1><value2>…<value n>` with:
`#4` = number of digits (= 4 in the example) of the following number
`1024` = number of following data bytes (= 1024 in the example)
`<value>` = 4-byte floating point values
For large data (≥ 1 GB), the result string starts with "#(data length)". The number inside the parentheses indicates the real data length in bytes.

REAL,64
Double precision, 64 bit floating point format.

INT,8 | INT,16
Signed integer data with length 8 bit or 16 bit. It defines that `CHANnel<m>[:WAVeform<n>]:DATA[:VALues]?` returns the raw sample data of the ADC as integers. If the format of the waveform data differs from the defined export format, the instrument converts the data to the required length.
The result string has the same schema as the REAL format.
For INT,16 you can set the byte order using the `FORMat:BORDer` command.
Data conversion is described in "Raw (ADC direct)" on page 486.
`EXPort:WAVeform:INCXvalues` must be set `OFF`.

*RST: ASCii

Example:
```
FORMat:DATA REAL,32
FORMat:DATA?
REAL,32
```

Usage: SCPI confirmed

Manual operation: See "Transfer data format" on page 1408

FORMat:BORDer <ByteOrder>

Sets the endianess.

The command is only relevant for raw data export in high definition mode (16 bit word length).

Parameters:
<ByteOrder> LSBFirst | MSBFirst

LSB first: little endian, least significant byte first
MSB first: big endian, most significant byte first

*RST: LSBFirst

Usage: Asynchronous command

Manual operation: See "Byte order" on page 1408

FORMat:BPATtern <BitPatternFormat>

Sets the number format for remote bit pattern queries on serial protocols.

Parameters:
<BitPatternFormat> DEC | HEX | OCT | BIN | ASCII | ASCii | STRG

ASCII = ASCii

*RST: HEX

Usage: Asynchronous command

Manual operation: See "Bit pattern format" on page 1409

SYSTem:DISPlay:UPDate <Enable>

Defines whether the display is updated while the instrument is in the remote state. If the display is switched off, the normal GUI is replaced by a static image while the instrument is in the remote state. Switching off the display can speed up the measurement. This is the recommended state.

See also: Section 25.5.3.2, "Using the display during remote control", on page 1409

Parameters:

<Enable> **ON | 1:** Display is shown and updated during remote control
OFF | 0: Display shows static image during remote control

Example: `SYSTem:DISPlay:UPDate 1`
Switch on the display update.

SYSTem:KLOCk <Enable>

Locks or unlocks the local controls of the instrument. This includes the front panel keys, the keyboard, or other local interfaces. except for the "View" button on the display.

Parameters:

<Enable> **ON | 1:** Locks the local keys
OFF | 0: Keys are unlocked

Usage: SCPI confirmed

GPIB:ADDRess <Address>

Sets the GPIB address of the instrument. Changing the address has major effects on the communication to the remote computer.

Parameters:

<Address> Range: 0 to 30
Increment: 1
*RST: 20

Usage: Asynchronous command

Manual operation: See "Address" on page 1407

GPIB:TERMinator <Terminator>

Specifies the symbol that is used as a terminator in GPIB communication.

Parameters:

<Terminator> LFEoi | EOI
*RST: EOI

Usage: Asynchronous command

Manual operation: See "Terminator" on page 1407

SYSTem:DISPlay:MESSage:STATe <DispMessState>

Enables and disables the display of an additonal text in remote control.

To define the text, use `SYSTem:DISPlay:MESSage[:TEXT]`.

Parameters:

<DispMessState> OFF | ON
*RST: OFF

Usage: Asynchronous command

Firmware/software: Version 2.70

SYSTem:DISPlay:MESSage[:TEXT] <DisplayMessage>

Defines an additional text that is displayed during remote control operation.

To enable the text display, use `SYSTem:DISPlay:MESSage:STATe` on page 1463.

Parameters:

<DisplayMessage> String that contains the text.

Usage: Asynchronous command

Firmware/software: Version 2.70

SYSTem:LANGuage <Language>

Defines the remote control behavior of the instrument and sets the remote control command set.

Parameters:

<Language> String value. Available values:
'SCPI': R&S RTO6 remote command set is used.
"DPO7000" or 'TDS540': Compatible remote command set of Tektronix oscilloscopes DPO7000 or TDS540 is used.
If one of these emulation modes is used, you can define alternative responses to the `IDN*?` and `OPT*?` commands on the "Menu" > "Settings" > "System" > "Remote" > "SCPI Emulation" tab.

Usage: Asynchronous command

Options: R&S RTO6--K301

27.7 Instrument setup

27.7.1 System

SYSTem:EXIT 1464
SYSTem:SHUTdown 1464
SYSTem:PRESet 1464
SYSTem:DATE 1464
SYSTem:TIME? 1465
SYSTem:DEVice:ID? 1465
DIAGnostic:SERVice:COMPutername 1465

SYSTem:EXIT

Starts the shutdown of the firmware.

Usage: Event
Asynchronous command

SYSTem:SHUTdown

Starts the shutdown of the instrument (firmware and operating system).

Usage: Event
Asynchronous command

SYSTem:PRESet

Resets the instrument to the factory default settings, to the initial state. Factory settings comprise all instrument settings, including display, intensity and transparency settings. After loading factory defaults, perform a self-alignment to synchronize the signal data.

Usage: Event

SYSTem:DATE <Year>, <Month>, <Day>

Sets the date of the internal calendar.

Parameters:

<Year> Year, to be entered as a four-digit number (including the century and millennium information)

<Month> Month, 1 (January) to 12 (December)

<Day> Day, 1 to the maximum number of days in the specified month
*RST: does not affect the date settings

Example: `SYSTem:DATE?`
Returned value: `2011,09,13`

Usage: SCPI confirmed

Manual operation: See "Time settings" on page 72

SYSTem:TIME? <Hour>, <Minute>, <Second>

Returns the UTC (Universal Time Coordinated) of the internal clock. To define the current local time, use the time zone setting of the operating system

Example: `SYSTem:TIME?`
Returned value: `15,09,20`. UTC is 15:09:20.

Usage: Query only
SCPI confirmed

Manual operation: See "Time settings" on page 72

SYSTem:DEVice:ID?

Returns the instrument ID - that is the part number and the serial number.

Return values:
<ID> String containing the part number and the serial number

Example: `1316.1000K24-001122-jT`

Usage: Query only

DIAGnostic:SERVice:COMPutername <ComputerName>

The query returns the computer name that is currently defined. The computer name is required when configuring a network.

The setting command changes the computer name. The change takes effect after the next reboot of the computer.

Parameters:
<ComputerName> Name string

Usage: Asynchronous command

Manual operation: See "Device name" on page 70

27.7.2 Appearance

27.7.2.1 Colors appearance

DISPlay:COLor:SIGNal<m>:COLor....1466
DISPlay:COLor:SIGNal<m>:ASSign....1466
DISPlay:COLor:SIGNal<m>:USE....1466
DISPlay:COLor:SIGNal<m>:PRESet....1467

DISPlay:COLor:SIGNal<m>:COLor <Color>

Sets the color vaue for the selected waveform.

Suffix:
<m> 1...317
Waveform number, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Color> Decimal value of the ARGB color. Use the color dialog box on the instrument to get the hex value of the color, and convert the hex value to a decimal value.
0 is fully transparent black.
4278190080 (dec) = FF000000 (hex) is opaque black.
4294967295 (dec) = FFFFFFFF (hex) is opaque white.

Range: 0 to 4294967295
Increment: 1
*RST: 4278190080

Manual operation: See "Color" on page 76

DISPlay:COLor:SIGNal<m>:ASSign <ColorTable>

Assigns the color table to the specified signal.

Suffix:
<m> 1...317
Waveform number, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<ColorTable> Color table name to be assigned to the signal.

Manual operation: See "Assigned color table" on page 76

DISPlay:COLor:SIGNal<m>:USE <UseColorTable>

If enabled, the selected waveform is displayed according to its assigned color table.

If this option is disabled, the default color table is used, i.e. the intensity of the specific signal color varies according to the cumulative occurance of the values.

Suffix:
<m> 1...317
Waveform number, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<UseColorTable> OFF | ON

*RST: OFF

Manual operation: See "Use color table" on page 76

DISPlay:COLor:SIGNal<m>:PRESet

Resets the color of the selected waveform to the factory default.

Suffix:
<m> 1...317
Waveform number, see Section 27.4.1, "Waveform suffix", on page 1446.

Usage: Event

Manual operation: See "Set to default color" on page 76

27.7.2.2 Color tables

DISPlay:COLor:PALette:ADD 1467
DISPlay:COLor:PALette:REMove 1467
DISPlay:COLor:PALette:COUNt? 1467
DISPlay:COLor:PALette:POINt:ADD 1468
DISPlay:COLor:PALette:POINt:INSert 1468
DISPlay:COLor:PALette:POINt:REMove 1468
DISPlay:COLor:PALette:POINt[:VALue] 1468
DISPlay:COLor:PALette:POINt:COUNt? 1469

DISPlay:COLor:PALette:ADD <Name>

Adds a new color table with the specified name.

Setting parameters:
<Name> color table

Usage: Setting only

DISPlay:COLor:PALette:REMove <Name>

Removes the specified color table.

Setting parameters:
<Name> color table

Usage: Setting only

DISPlay:COLor:PALette:COUNt?

Queries the number of configured color maps.

Return values:
<Number>

Usage: Query only

DISPlay:COLor:PALette:POINt:ADD <PaletteName>

Appends a new row at the end of the color table.

Setting parameters:

<PaletteName> color table

Usage: Setting only

DISPlay:COLor:PALette:POINt:INSert <PaletteName>,<PointIndex>

Inserts the entry at the specified index in the color table.

Setting parameters:

<PaletteName> color table

<PointIndex> row number in the color table

Usage: Setting only

DISPlay:COLor:PALette:POINt:REMove <PaletteName>,<PointIndex>

Removes the entry with the specified index from the color table.

Setting parameters:

<PaletteName> color table

<PointIndex> row number in the color table

Usage: Setting only

DISPlay:COLor:PALette:POINt[:VALue]
<ColorTableName>,<PointIndex>,<Position>,<Color>
DISPlay:COLor:PALette:POINt[:VALue]? <ColorTableName>,<Index>

Inserts a new entry or queries the specified entry in the specified color table.

Parameters:

<Position> Cumulative occurance value

Range: 0 to 100
Increment: 1
*RST: 50
Default unit: %

<Color> ARGB value of the color to be used for the table entry.
ARGB=<Opacity(alpha) value><red value><green value><blue value>, in hexadecimal or decimal format.

Range: 0 to 4294967295
Increment: 1
*RST: 4294967295

Parameters for setting and query:

<ColorTableName> Color table to be edited

<PointIndex> Index (row number) of the new entry in the color table

Usage: Asynchronous command

DISPlay:COLor:PALette:POINt:COUNt? <PaletteName>

Queries the number of entries in the color table.

Query parameters:
<PaletteName> color table

Return values:
<Number>

Usage: Query only

27.7.2.3 Grid appearance

DISPlay:DIAGram:GRID 1469
DISPlay:DIAGram:LABels 1469
DISPlay:DIAGram:FINegrid 1469
DISPlay:DIAGram:CROSshair 1470
DISPlay:DIAGram:YFIXed 1470
DISPlay:DIAGram:XFIXed 1470

DISPlay:DIAGram:GRID <Show>

If enabled, a grid is displayed in the diagram area.

Parameters:
<Show> OFF | ON

Usage: Asynchronous command

Manual operation: See "Show grid" on page 78

DISPlay:DIAGram:LABels <ShowLabels>

If enabled, labels mark values on the x- and y-axes in specified intervals in the diagram.

Parameters:
<ShowLabels> OFF | ON

Usage: Asynchronous command

Manual operation: See "Show labels" on page 78

DISPlay:DIAGram:FINegrid <ShowFineScale>

If ON, the crosshair is displayed as a ruler with scale markers. If OFF, the crosshair is shown as dashed lines.

Parameters:
<ShowFineScale> OFF | ON

Usage: Asynchronous command

Manual operation: See "Show fine grid scale" on page 79

DISPlay:DIAGram:CROSshair <Crosshair>

If selected, a crosshair is displayed in the diagram area. A crosshair allows you to select a specific data point by its co-ordinates.

Parameters:
<Crosshair> OFF | ON

Usage: Asynchronous command

Manual operation: See "Show crosshair" on page 79

DISPlay:DIAGram:YFIXed <YGridFixed>

If enabled, the horizontal grid lines remain in their position when the position of the curve is changed. Only the values at the grid lines are adapted. This reflects the behavior of traditional oscilloscopes.

Parameters:
<YGridFixed> OFF | ON

Usage: Asynchronous command

Manual operation: See "Keep Y-grid fixed" on page 79

DISPlay:DIAGram:XFIXed <XGridFixed>

If enabled, the vertical grid lines remain in their position when the horizontal position is changed. Only the values at the grid lines are adapted.

Parameters:
<XGridFixed> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Keep X-grid fixed" on page 79

27.7.2.4 Smartgrid

The following `LAYout` commands configure the SmartGrid: add and remove diagrams, and assign signals to the diagrams. In manual operation, you configure the SmartGrid by drag and drop.

LAYout:ADD 1471
LAYout:REMove 1473
LAYout:SHOW 1473
LAYout:SIGNal:ASSign 1473
LAYout:SIGNal:UNASsign 1475

LAYout:ADD
<NodeName>,<ParentType>,<InsertBefore>,<FirstSource>,<DiagramName>

Adds a new diagram with a waveform on the screen, in relation to an existing diagram.

Setting parameters:

<NodeName> String with the name of the existing diagram

<ParentType> HORizontal | VERTical | TAB

Position of the new diagram in relation to the existing one.

HORizontal
Besides the existing diagram

VERTical
Above or below the existing diagram

TAB
In a new tab in the existing diagram

<InsertBefore> OFF | ON

If on, the new diagram is inserted to the left (for HORizontal), above (for VERTical) or in a tab in front the existing diagram.
HOR, ON = left to the existing diagram, defined in <NodeName>
HOR, OFF = right to the existing diagram
VERT, ON = above the existing diagram

VERT, OFF = below the existing diagram

<FirstSource> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | XY1 | XY2 | XY3 | XY4 | MRESult1 | MRESult2 | MRESult3 | MRESult4 | MRESult5 | MRESult6 | MRESult7 | MRESult8 | SBUS1 | SBUS2 | SBUS3 | SBUS4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | MSOB1 | MSOB2 | MSOB3 | MSOB4 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2 | BATHtub1 | BMEas1 | SRESponse1 | SRHist1 | SDHist1 | TJHist1 | DJHist1 | DDJHist1 | PJHist1 | RJOHist1 | SRTRack1 | SDTRack1 | TJTRack1 | DJTRack1 | DDJTrack1 | PJTRack1 | RJOTrack1 | TJSPectrum1 | DDJSpectrum1 | PJSPectrum1 | RJOSpectrum1 | SEYE1 | BATHtub2 | BMEas2 | SRESponse2 | SRHist2 | SDHist2 | TJHist2 | DJHist2 | DDJHist2 | PJHist2 | RJOHist2 | SRTRack2 | SDTRack2 | TJTRack2 | DJTRack2 | DDJTrack2 | PJTRack2 | RJOTrack2 | TJSPectrum2 | DDJSpectrum2 | PJSPectrum2 | RJOSpectrum2 | SEYE2 | NBAThtub1 | NBMeas1 | TNHist1 | DNHist1 | DDNHist1 | PNHist1 | RNOHist1 | TNTRack1 | DNTRack1 | DDNTrack1 | PNTRack1 | RNOTrack1 | TNSPectrum1 | DDNSpectrum1 | PNSPectrum1 | RNOSpectrum1 | NBAThtub2 | NBMeas2 | TNHist2 | DNHist2 | DDNHist2 | PNHist2 | RNOHist2 | TNTRack2 | DNTRack2 | DDNTrack2 | PNTRack2 | RNOTrack2 | TNSPectrum2 | DDNSpectrum2 | PNSPectrum2 | RNOSpectrum2 | PJDHist1 | BUJHist1 | RJOHist1 | PJDTrack1 | PJDSpectrum1 | PJDHist2 | BUJHist2 | RJOHist2 | PJDTrack2 | PJDSpectrum2 | PNDHist1 | BUNHist1 | RNOHist1 | PNDTrack1 | PNDSpectrum1 | PNDHist2 | BUNHist2 | RNOHist2 | PNDTrack2 | PNDSpectrum2 | LANE1 | LANE2 | LANE3 | LANE4

Waveform to be displayed in the new diagram, see Section 27.4.2, "Waveform parameter", on page 1451.
Spectrum analysis, option R&S RTO6-K37: Spectrograms and timeline spectrums are automatically displayed in their own diagrams.
Eye diagram analysis with option R&S RTO6-K91: Eye diagrams are automatically displayed in their own diagrams.
TDR/TDT analysis with option R&S RTO6-K130: Measurement waveforms are automatically displayed in their own diagrams.
Advanced jitter analysis with option R&S RTO6-K133: Jitter analysis waveforms are automatically displayed in their own diagrams.
Advanced noise analysis with option R&S RTO6-K134 : Noise analysis waveforms are automatically displayed in their own diagrams.

<DiagramName> String with the name of the new diagram.

Example: `LAYout:ADD 'Diagram2',TAB,ON,C4W1,'MyDiagram3'`
Creates a new diagram 'MyDiagram3' with waveform C4W1 in a new tab that in front of 'Diagram2'.

Example: See Section 27.3.1.1, "Creating diagrams (SmartGrid)", on page 1426.

Usage: Setting only
Asynchronous command

LAYout:REMove <DiagramName>

Closes the specified diagram. The waveforms are displayed as minimized waveforms in their signal icons on the signal bar.

Setting parameters:
<DiagramName> String with the name of the diagram

Usage: Setting only
Asynchronous command

LAYout:SHOW <DiagramName>

Selects the specified diagram.

Setting parameters:
<DiagramName> String with the name of the diagram

Example: See Section 27.3.1.1, "Creating diagrams (SmartGrid)", on page 1426.

Usage: Setting only
Asynchronous command

LAYout:SIGNal:ASSign <DiagramName>,<Source>

Shows the specified waveform in the selected diagram.

Setting parameters:

<DiagramName> String with the diagram name

<Source> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | XY1 | XY2 | XY3 | XY4 | MRESult1 | MRESult2 | MRESult3 | MRESult4 | MRESult5 | MRESult6 | MRESult7 | MRESult8 | SBUS1 | SBUS2 | SBUS3 | SBUS4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | MSOB1 | MSOB2 | MSOB3 | MSOB4 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2 | BATHtub1 | BMEas1 | SRESponse1 | SRHist1 | SDHist1 | TJHist1 | DJHist1 | DDJHist1 | PJHist1 | RJOHist1 | SRTRack1 | SDTRack1 | TJTRack1 | DJTRack1 | DDJTrack1 | PJTRack1 | RJOTrack1 | TJSPectrum1 | DDJSpectrum1 | PJSPectrum1 | RJOSpectrum1 | BATHtub2 | BMEas2 | SRESponse2 | SRHist2 | SDHist2 | TJHist2 | DJHist2 | DDJHist2 | PJHist2 | RJOHist2 | SRTRack2 | SDTRack2 | TJTRack2 | DJTRack2 | DDJTrack2 | PJTRack2 | RJOTrack2 | TJSPectrum2 | DDJSpectrum2 | PJSPectrum2 | RJOSpectrum2 | NBAThtub1 | NBMeas1 | TNHist1 | DNHist1 | DDNHist1 | PNHist1 | RNOHist1 | TNTRack1 | DNTRack1 | DDNTrack1 | PNTRack1 | RNOTrack1 | TNSPectrum1 | DDNSpectrum1 | PNSPectrum1 | RNOSpectrum1 | NBAThtub2 | NBMeas2 | TNHist2 | DNHist2 | DDNHist2 | PNHist2 | RNOHist2 | TNTRack2 | DNTRack2 | DDNTrack2 | PNTRack2 | RNOTrack2 | TNSPectrum2 | DDNSpectrum2 | PNSPectrum2 | RNOSpectrum2 | PJDHist1 | BUJHist1 | RJHist1 | PJDTrack1 | PJDSpectrum1 | PJDHist2 | BUJHist2 | RJHist2 | PJDTrack2 | PJDSpectrum2 | PNDHist1 | BUNHist1 | RNHist1 | PNDTrack1 | PNDSpectrum1 | PNDHist2 | BUNHist2 | RNHist2 | PNDTrack2 | PNDSpectrum2 | LANE1 | LANE2 | LANE3 | LANE4

Waveform to be assigned, see Section 27.4.2, "Waveform parameter", on page 1451
Spectrum analysis, option R&S RTO6-K37: Spectrograms and timeline spectrums are automatically displayed in their own diagrams.
Eye diagram analysis with option R&S RTO6-K91: Eye diagrams are automatically displayed in their own diagrams.
TDR/TDT analysis with option R&S RTO6-K130: Measurement waveforms are automatically displayed in their own diagrams.
Advanced jitter and noise analysis with option R&S RTO6-K133/K134

Example: See Section 27.3.1.1, "Creating diagrams (SmartGrid)", on page 1426.

Usage: Setting only
Asynchronous command

LAYout:SIGNal:UNASsign <Source>

Minimizes the specified waveform, i.e. removes it from the diagram and shows it in the signal icon.

Setting parameters:

<Source> See `LAYout:SIGNal:ASSign` on page 1473 and Section 27.4.2, "Waveform parameter", on page 1451

Example: See Section 27.3.1.1, "Creating diagrams (SmartGrid)", on page 1426.

Usage: Setting only
Asynchronous command

27.7.2.5 Diagram appearance

DISPlay:DIAGram:REName 1475
DISPlay:DIAGram:TITLe 1475
DISPlay:SIGBar[:STATe] 1476
DISPlay:GATE:TRANsparency 1476
LAYout:ZOOM:ONEDiagram 1476

DISPlay:DIAGram:REName <DiagramName>,<NewName>

Changes the diagram name, which is displayed on the diagram tab.

Setting parameters:

<DiagramName> String with the existing diagram name.

<NewName> String with the new diagram name.

Example:
```
:DISPlay:DIAGram:REName "Diagram1",'Test A'
```

Usage: Setting only

DISPlay:DIAGram:TITLe <DiagTitleSt>

If enabled, the tab titles of all diagrams are displayed: "Diagram1", "Diagram2" ...

If disabled, the tab titles are not shown except for those in a tabbed diagram. In tabbed diagrams, the tab titles are required to change the tabs.

Parameters:

<DiagTitleSt> OFF | ON

Usage: Asynchronous command

Manual operation: See "Show tabs always" on page 80

DISPlay:SIGBar[:STATe] <State>

If enabled, the signal bar is displayed.

Parameters:
<State> OFF | ON

Usage: Asynchronous command

Manual operation: See "Show signal bar" on page 80

DISPlay:GATE:TRANsparency <Transparency>

Sets the transparency of the area that is defined as measurement or search gate.

Parameters:
<Transparency> Range: 0 to 100
Increment: 1
*RST: 43
Default unit: %

Usage: Asynchronous command

Firmware/software: FW 3.20

Manual operation: See "Gate transparency" on page 81

LAYout:ZOOM:ONEDiagram <ShowInOne>

Shows all zooms of a diagram in one zoom window. The zoomed areas are overlaid for better comparison of the zoomed waveforms.

The command takes effect on all zoom diagrams.

Parameters:
<ShowInOne> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Zoom overlay" on page 81

27.7.2.6 Annotations

To create an annotation (or waveform label), use `DISPlay:SIGNal:LABel:ADD`. Using the other `DISP:SIGN:LAB:...` commands, you can query the text and position of a label, and modify the initial settings. The <LabelID> and <Source> parameters identify each label uniquely. You can query the <LabelID> with `DISPlay:SIGNal:LABel:IDSList?`.

DISPlay:SIGNal:LABel:POSMode....1477
DISPlay:SIGNal:LABel:FONTsize....1477
DISPlay:SIGNal:LABel:ADD....1478
DISPlay:SIGNal:LABel:REMove....1480

DISPlay:SIGNal:LABel:IDSList?....1480
DISPlay:SIGNal:LABel:SHOW....1480
DISPlay:SIGNal:LABel:STATe....1481
DISPlay:SIGNal:LABel:TEXT....1482
DISPlay:SIGNal:LABel:HORizontal:ABSolute:POSition....1482
DISPlay:SIGNal:LABel:VERTical:ABSolute:POSition....1482
DISPlay:SIGNal:LABel:HORizontal:RELative:POSition....1483
DISPlay:SIGNal:LABel:VERTical:RELative:POSition....1483

DISPlay:SIGNal:LABel:POSMode <Source>,<PositionMode>
DISPlay:SIGNal:LABel:POSMode? <Source>

Modifies or queries the position mode: either relative to the diagram or with absolute values according to the units of the waveform. The position mode applies to all labels of the selected source. For different sources, different position modes can be selected.

Parameters:

<PositionMode> ABS | REL

ABS
Position in time and voltage values, or in other units depending on the waveform character. Absolute positions move with the waveform display when the scales, the vertical position or offset, or the reference point are changed.
Use `DISPlay:SIGNal:LABel:HORizontal:ABSolute:POSition` and `DISPlay:SIGNal:LABel:HORizontal:RELative:POSition` to set the position.

REL
Fixed label position in percent of the screen counting from the upper left corner.
Use `DISPlay:SIGNal:LABel:HORizontal:RELative:POSition` and `DISPlay:SIGNal:LABel:VERTical:RELative:POSition` to set the position.

Parameters for setting and query:

<Source> All waveforms that can be displayed, see `DISPlay:SIGNal:LABel:ADD`

Usage: Asynchronous command

Manual operation: See "Position mode" on page 82

DISPlay:SIGNal:LABel:FONTsize <Fontsize>

Sets the font size of waveform labels.

Parameters:

<Fontsize>
Range: 7 to 30
Increment: 1
*RST: 15

Usage: Asynchronous command

Manual operation: See "Font size" on page 83

DISPlay:SIGNal:LABel:ADD <LabelID>, <Source>, <LabelText>, <PositionMode>, <XPositon>, <YPositon>

Creates a new waveform label for the specified source waveform.

Setting parameters:

<LabelID> String with the label identifier. The <LabelID> and <Source> parameters identify each label uniquely, so the label ID must be unique for the given waveform. Note the <LabelID> because it is not possible to query it, or to read it on the user interface.

<Source> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | XY1 | XY2 | XY3 | XY4 | MRESult1 | MRESult2 | MRESult3 | MRESult4 | MRESult5 | MRESult6 | MRESult7 | MRESult8 | QUICk | QUICK | SBUS1 | SBUS2 | SBUS3 | SBUS4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | MSOB1 | MSOB2 | MSOB3 | MSOB4 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | SG1 | SG2 | SG3 | SG4 | SG5 | SG6 | SG7 | SG8 | SG1TL1 | SG1TL2 | SG2TL1 | SG2TL2 | SG3TL1 | SG3TL2 | SG4TL1 | SG4TL2 | SG5TL1 | SG5TL2 | SG6TL1 | SG6TL2 | SG7TL1 | SG7TL2 | SG8TL1 | SG8TL2 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2 | BATHtub1 | BMEas1 | SRESponse1 | SRHist1 | SDHist1 | TJHist1 | DJHist1 | DDJHist1 | PJHist1 | RJOHist1 | SRTRack1 | SDTRack1 | TJTRack1 | DJTRack1 | DDJTrack1 | PJTRack1 | RJOTrack1 | TJSPectrum1 | DDJSpectrum1 | PJSPectrum1 | RJOSpectrum1 | SEYE1 | BATHtub2 | BMEas2 | SRESponse2 | SRHist2 | SDHist2 | TJHist2 | DJHist2 | DDJHist2 | PJHist2 | RJOHist2 | SRTRack2 | SDTRack2 | TJTRack2 | DJTRack2 | DDJTrack2 | PJTRack2 | RJOTrack2 | TJSPectrum2 | DDJSpectrum2 | PJSPectrum2 | RJOSpectrum2 | SEYE2 | NBAThtub1 | NBMeas1 | TNHist1 | DNHist1 | DDNHist1 | PNHist1 | RNOHist1 | TNTRack1 | DNTRack1 | DDNTrack1 | PNTRack1 | RNOTrack1 | TNSPectrum1 | DDNSpectrum1 | PNSPectrum1 | RNOSpectrum1 | NBAThtub2 | NBMeas2 | TNHist2 | DNHist2 | DDNHist2 | PNHist2 | RNOHist2 | TNTRack2 | DNTRack2 | DDNTrack2 | PNTRack2 | RNOTrack2 | TNSPectrum2 | DDNSpectrum2 | PNSPectrum2 | RNOSpectrum2 | PJDHist1 | BUJHist1 | RJOHist1 | PJDTrack1 | PJDSpectrum1 | PJDHist2 | BUJHist2 | RJOHist2 | PJDTrack2 | PJDSpectrum2 | PNDHist1 | BUNHist1 | RNOHist1 | PNDTrack1 | PNDSpectrum1 | PNDHist2 | BUNHist2 | RNOHist2 | PNDTrack2 | PNDSpectrum2 | LPDFE1 | LPDFE2 | LPDFE3 | LPDFE4 | LANE1 | LANE2 | LANE3 | LANE4

Waveform to that the label belongs, see Section 27.4.1, "Waveform suffix", on page 1446.

<LabelText> String with the label text that is shown on the display

<PositionMode> ABS | REL

ABS
Position in time and voltage values, or in other units depending on the waveform character. Absolute positions move with the waveform display when the scales, the vertical position or offset, or the reference point are changed.

REL
Fixed label position in percent of the screen counting from the upper left corner.

<XPositon> Horizontal position of the label text. Values, range and unit depend on the position mode, the waveform position and scaling. For relative position mode, the range is 0 to 100 %.

<YPositon> Vertical position of the label text. Values, range and unit depend on the position mode, the waveform position and scaling. For relative position mode, the range is 0 to 100 %.

Usage: Setting only
Asynchronous command

Manual operation: See "Labels" on page 83

DISPlay:SIGNal:LABel:REMove <LabelID>,<Source>

Deletes the specifies waveform label.

Setting parameters:
<LabelID> String with the label identifier.

<Source> All waveforms that can be displayed, see `DISPlay:SIGNal:LABel:ADD`

Example:
```
DISPlay:SIGNal:LABel:REMove 'Label1', C1W1
```

Usage: Setting only
Asynchronous command

Manual operation: See "Labels" on page 83

DISPlay:SIGNal:LABel:IDSList? <Source>

Returns a list of label IDs for the specified source. Labels that are defined in the user interface get an automatic label "DiagramText<No>".

Query parameters:
<Source> See `DISPlay:SIGNal:LABel:ADD`.

Return values:
<List>

Usage: Query only
Asynchronous command

Manual operation: See "Labels" on page 83

DISPlay:SIGNal:LABel:SHOW <Source>,<State>
DISPlay:SIGNal:LABel:SHOW? <Source>

Selects the source for the label display and displays all labels for that source that have state = ON in `DISPlay:SIGNal:LABel:STATe` on page 1481.

Parameters:

<State> OFF | ON

Parameters for setting and query:

<Source> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | XY1 | XY2 | XY3 | XY4 | MRESult1 | MRESult2 | MRESult3 | MRESult4 | MRESult5 | MRESult6 | MRESult7 | MRESult8 | QUICk | QUICK | SBUS1 | SBUS2 | SBUS3 | SBUS4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | MSOB1 | MSOB2 | MSOB3 | MSOB4 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | SG1 | SG2 | SG3 | SG4 | SG5 | SG6 | SG7 | SG8 | SG1TL1 | SG1TL2 | SG2TL1 | SG2TL2 | SG3TL1 | SG3TL2 | SG4TL1 | SG4TL2 | SG5TL1 | SG5TL2 | SG6TL1 | SG6TL2 | SG7TL1 | SG7TL2 | SG8TL1 | SG8TL2 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2 | BATHtub1 | BMEas1 | SRESponse1 | SRHist1 | SDHist1 | TJHist1 | DJHist1 | DDJHist1 | PJHist1 | RJOHist1 | SRTRack1 | SDTRack1 | TJTRack1 | DJTRack1 | DDJTrack1 | PJTRack1 | RJOTrack1 | TJSPectrum1 | DDJSpectrum1 | PJSPectrum1 | RJOSpectrum1 | SEYE1 | BATHtub2 | BMEas2 | SRESponse2 | SRHist2 | SDHist2 | TJHist2 | DJHist2 | DDJHist2 | PJHist2 | RJOHist2 | SRTRack2 | SDTRack2 | TJTRack2 | DJTRack2 | DDJTrack2 | PJTRack2 | RJOTrack2 | TJSPectrum2 | DDJSpectrum2 | PJSPectrum2 | RJOSpectrum2 | SEYE2 | NBAThtub1 | NBMeas1 | TNHist1 | DNHist1 | DDNHist1 | PNHist1 | RNOHist1 | TNTRack1 | DNTRack1 | DDNTrack1 | PNTRack1 | RNOTrack1 | TNSPectrum1 | DDNSpectrum1 | PNSPectrum1 | RNOSpectrum1 | NBAThtub2 | NBMeas2 | TNHist2 | DNHist2 | DDNHist2 | PNHist2 | RNOHist2 | TNTRack2 | DNTRack2 | DDNTrack2 | PNTRack2 | RNOTrack2 | TNSPectrum2 | DDNSpectrum2 | PNSPectrum2 | RNOSpectrum2 | PJDHist1 | BUJHist1 | RJOHist1 | PJDTrack1 | PJDSpectrum1 | PJDHist2 | BUJHist2 | RJOHist2 | PJDTrack2 | PJDSpectrum2 | PNDHist1 | BUNHist1 | RNOHist1 | PNDTrack1 | PNDSpectrum1 | PNDHist2 | BUNHist2 | RNOHist2 | PNDTrack2 | PNDSpectrum2 | LPDFE1 | LPDFE2 | LPDFE3 | LPDFE4 | LANE1 | LANE2 | LANE3 | LANE4

Usage: Asynchronous command

Manual operation: See "Show / Source" on page 82

DISPlay:SIGNal:LABel:STATe <LabelID>,<Source>,<State>
DISPlay:SIGNal:LABel:STATe? <LabelID>,<Source>

Displays or hides a single label that is identified by the signal source and label ID.

Parameters:

<State> OFF | ON

ON: shows the label on the screen.
`DISPlay:SIGNal:LABel:SHOW` must be set to ON for the source.

Parameters for setting and query:

<LabelID> String with the label identifier.

<Source> See `DISPlay:SIGNal:LABel:ADD`.

Usage: Asynchronous command

Manual operation: See "Labels" on page 83

DISPlay:SIGNal:LABel:TEXT <LabelID>,<Source>,<LabelText>
DISPlay:SIGNal:LABel:TEXT? <LabelID>,<Source>

Modifies or queries the text of the specified label.

Parameters:

<LabelText> String with the label text that is shown

Parameters for setting and query:

<LabelID> String with the label identifier.

<Source> All waveforms that can be displayed, see `DISPlay:SIGNal:LABel:ADD`

Usage: Asynchronous command

Manual operation: See "Labels" on page 83

DISPlay:SIGNal:LABel:HORizontal:ABSolute:POSition
<LabelID>,<Source>,<Position>
DISPlay:SIGNal:LABel:HORizontal:ABSolute:POSition? <LabelID>,<Source>
DISPlay:SIGNal:LABel:VERTical:ABSolute:POSition
<LabelID>,<Source>,<Position>
DISPlay:SIGNal:LABel:VERTical:ABSolute:POSition? <LabelID>,<Source>

Modifies or queries the absolute horizontal and vertical positiions of the specified label if `DISPlay:SIGNal:LABel:POSMode` is set to `ABS`.

Parameters:

<Position> Range: Depends on waveform position and scaling
Default unit: s and V, or in other units depending on the waveform character

Parameters for setting and query:

<LabelID> String with the label identifier.

<Source> All waveforms that can be displayed, see `DISPlay:SIGNal:LABel:ADD`

Example:
```
:DISPlay:SIGNal:LABel:POSMode C2W1, ABS
DISPlay:SIGNal:LABel:HORizontal:ABSolute:POSition 'Label1', C2W1, 5e-09
DISPlay:SIGNal:LABel:VERTical:ABSolute:POSition 'Label1', C2W1, -0.1
```
Move the label to 5 ns and -0.1 V.

Manual operation: See "Labels" on page 83

DISPlay:SIGNal:LABel:HORizontal:RELative:POSition
<LabelID>,<Source>,<Position>
DISPlay:SIGNal:LABel:HORizontal:RELative:POSition? <LabelID>,<Source>
DISPlay:SIGNal:LABel:VERTical:RELative:POSition
<LabelID>,<Source>,<Position>
DISPlay:SIGNal:LABel:VERTical:RELative:POSition? <LabelID>,<Source>

Modifies or queries the relative horizontal and vertical positiions of the specified label if `DISPlay:SIGNal:LABel:POSMode` is set to `REL`.

Parameters:
<Position> Position in percent of the screen counting from the upper left corner.
Range: 0 to 100
Default unit: %

Parameters for setting and query:
<LabelID> String with the label identifier.

<Source> All waveforms that can be displayed, see `DISPlay:SIGNal:LABel:ADD`

Example:
```
:DISPlay:SIGNal:LABel:POSMode C2W1, REL
DISPlay:SIGNal:LABel:HORizontal:RELative:POSition 'Label1', C2W1, 30
DISPlay:SIGNal:LABel:VERTical:RELative:POSition 'Label1', C2W1, 70
```
Move the label to new relative position: horizontal at 30 % and vertical at 70 % of the screen.

Manual operation: See "Labels" on page 83

27.7.2.7 Dialog appearance

DISPlay:EXTended:PORDialogs <PopOutResDialogs>

If an external monitor is connected to the instrument, enables the display of result boxes on the external monitor.

Parameters:
<PopOutResDialogs> OFF | ON
*RST: OFF

Manual operation: See "Extended desktop placement" on page 84

DISPlay:EXTended:POSDialogs <PopOutSettDialogs>

If an external monitor is connected to the instrument, enables the display of dialog boxes on the external monitor.

Parameters:
<PopOutSettDialogs> OFF | ON
*RST: OFF

Manual operation: See "Extended desktop placement" on page 84

27.7.2.8 Cursor appearance

CURSor<cu>:STYLe <Style>

Defines how the cursor is displayed in the diagram.

Suffix:
<cu> 1..4
Selects the cursor set.

Parameters:
<Style> LINes | LRHombus | VLRHombus | RHOMbus

LINes
The cursors are displayed as lines.

LRHombus
The cursors are displayed as lines. The intersections of the cursors with the waveforms are displayed by rhombus-shaped points.

VLRHombus
The cursors are displayed only as vertical lines. The intersections of the cursors with the waveforms are displayed by rhombus-shaped points.

RHOMbus
The intersections of the cursors with the waveforms are displayed by rhombus-shaped points.

*RST: LINes

Usage: Asynchronous command

Manual operation: See "Cursor style" on page 85

DISPlay:RESultboxes:CUPosition <Position>

Defines the position of the cursor measurement results on the screen.

Parameters:
<Position> PREV | FLOA | DOCK

PREV
Preview: result icon on the signal bar.

FLOA
Floating result box in front of the diagrams.

DOCK
Docked: fixed tab below the diagrams.

*RST: DOCK

Usage: Asynchronous command

Manual operation: See "Result position" on page 85

27.7.2.9 Measurement appearance

MEASurement<mg>:DISPlay:GROuping <GroupResDialogs>

If ON, all measurement results are shown in one result box. If disabled, the results of each measurement group are shown in a separate result box. The default position is ignored.

Suffix:
<mg> 1..10
The suffix is irrelevant. The setting affects all measurements except for the peak list.

Parameters:
<GroupResDialogs> OFF | ON

*RST: ON

Usage: Asynchronous command

Manual operation: See "Group results" on page 86

MEASurement<mg>:DISPlay:RESults:LFONtsize <Fontsize>

Sets the font size in the result tables.

Suffix:
<mg> 1..10
The suffix is irrelevant. The setting affects all measurements except for the peak list.

Parameters:
<Fontsize> Range: 7 to 30
Increment: 1
*RST: 14

Usage: Asynchronous command

Manual operation: See "Font size" on page 87

DISPlay:RESultboxes:MEPosition <Position>

Defines the position of the measurement results on the display.

Parameters:

<Position> PREV | FLOA | DOCK

PREV
Preview: result icon on the signal bar

FLOA
Floating: floating result box in front of the diagrams

DOCK
Docked: fixed tab below the diagrams

*RST: DOCK

Usage: Asynchronous command

Manual operation: See "Result position" on page 86

27.7.2.10 Peak list appearance

MEASurement<mg>:RESult:LABorder <MeasType>,<FrameType>
MEASurement<mg>:RESult:LABorder? <MeasType>

Defines the layout of the labels.

Suffix:

<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:

<FrameType> NOBorder | UNDERLINE | FULL

NOBorder
Label without border or lines.

UNDERLINE
The label is underlined.

FULL
The label is surrounded by a frame.

Parameters for setting and query:

<MeasType> PLISt

Only for peaklist measurements. For other measurment types, this command returns an error.

Manual operation: See "Frame type" on page 87

MEASurement<mg>:RESult:INVerse <MeasType>,<State>
MEASurement<mg>:RESult:INVerse? <MeasType>

Displays labels with black font on white background using the "Full frame" label type (if `MEASurement<mg>:RESult:LABorder`=`ON`).).

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<State> ON | OFF

Parameters for setting and query:
<MeasType> PLISt
Only for peaklist measurements. For other measurement, this command returns an error.

Example: Display labels.
```
MEAS:RES:SHL PLIS,ON
```
Select inverted labels.
```
MEAS:RES:INV PLIS,ON
```
Query the type of labels for peak lists.
```
MEAS:RES:INV? PLIS
//Result: ON
```

Manual operation: See "Invert" on page 87

27.7.2.11 Mask appearance

MTESt:LABel....1487
MTESt:REName....1488
MTESt:HIGHlight:INFinite....1488
MTESt:HIGHlight:STATe....1488
MTESt:HIGHlight:TIME....1488
MTESt:COLor:UNMatch....1489
MTESt:COLor:MATCh....1489
MTESt:COLor:BORDer....1489
MTESt:COLor:INTerior....1490

MTESt:LABel <LabelState>

Switches the display of the mask test name on or off.

To change the name of the mask test, use `MTESt:REName` on page 1488.

Parameters:
<LabelState> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Show labels" on page 88

MTESt:REName <MaskTestName>,<NewName>

Changes the name of the mask test.

Setting parameters:

<MaskTestName> String with the existing mask test name.

<NewName> String with the new mask test name.

Usage: Setting only

Manual operation: See "Show labels" on page 88

MTESt:HIGHlight:INFinite <State>

If ON, the mask hits are highlighted for an unlimited period of time.

Parameters:

<State> OFF | ON

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Show hits forever" on page 88

MTESt:HIGHlight:STATe <HighlightHits>

If ON, the mask hits are highlighted on the screen. You can define the color and the time of the hit display.

Parameters:

<HighlightHits> OFF | ON

*RST: ON

Usage: Asynchronous command

Manual operation: See "Show hits" on page 88

MTESt:HIGHlight:TIME <HighlightTime>

Sets the time how long the mask hits are highlighted.

Parameters:

<HighlightTime> Range: 0.05 to 50
Increment: 0.1
*RST: 1
Default unit: s

Usage: Asynchronous command

Manual operation: See "Show for" on page 88

MTESt:COLor:UNMatch <ClrUnmatchedMsk>

Sets the color of masks segments that were not hit.

Parameters:

<ClrUnmatchedMsk> Decimal value corresponding to the ARGB hex value that is shown in the "Color" dialog box. ARGB is a 32-bit unsigned integer with alpha, red, green, blue word order. Alpha defines the transparency.
To get the value, covert the hex value from the dialog to decimal value.

Range: 0 (black) to 4294967295 (white)
Increment: 1
*RST: 2578098858

Usage: Asynchronous command

Manual operation: See "Mask without violation" on page 89

MTESt:COLor:MATCh <ClrMatchedPixel>

Sets the color of samples that violated the mask.

Parameters:

<ClrMatchedPixel> Decimal value corresponding to the ARGB hex value that is shown in the "Color" dialog box. ARGB is a 32-bit unsigned integer with alpha, red, green, blue word order. Alpha defines the transparency.
To get the value, covert the hex value from the dialog to decimal value.

Range: 0 (black) to 4294967295 (white)
Increment: 1
*RST: 4294901760

Usage: Asynchronous command

Manual operation: See "Color" on page 89

MTESt:COLor:BORDer <ClrMatchedMskBorder>

Sets the color of masks segments that were touched at the border. In this case, the resolution is not sufficient to detect if the mask was really hit or not. Zoom into the concerned area to see the actual result.

Parameters:

<ClrMatchedMskBorder> Decimal value corresponding to the ARGB hex value that is shown in the "Color" dialog box. ARGB is a 32-bit unsigned integer with alpha, red, green, blue word order. Alpha defines the transparency.
To get the value, covert the hex value from the dialog to decimal value.

Range: 0 (black) to 4294967295 (white)
Increment: 1
*RST: 2580309606

Usage: Asynchronous command

Manual operation: See "Mask with contact" on page 89

MTESt:COLor:INTerior <ClrMatchedMskInterior>

Sets the color of mask segments the signal has entered into.

Parameters:

<ClrMatchedMskInterior> Decimal value corresponding to the ARGB hex value that is shown in the "Color" dialog box. ARGB is a 32-bit unsigned integer with alpha, red, green, blue word order. Alpha defines the transparency.
To get the value, covert the hex value from the dialog to decimal value.

Range: 0 (black) to 4294967295 (white)
Increment: 1
*RST: 2578055168

Usage: Asynchronous command

Manual operation: See "Mask with violation" on page 89

27.7.3 Display

27.7.3.1 Persistence

DISPlay:PERSistence[:STATe] 1490
DISPlay:PERSistence:INFinite 1491
DISPlay:PERSistence:TIME 1491
DISPlay:PERSistence:RESet 1491

DISPlay:PERSistence[:STATe] <State>

If enabled, each new data point in the diagram area remains on the screen for the duration defined using `DISPlay:PERSistence:TIME`, or as long as `DISPlay:PERSistence:INFinite` is enabled.

If disabled, the signal value is only displayed as long as it actually occurs.

Parameters:
<State> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Enable" on page 91

DISPlay:PERSistence:INFinite <State>

If persistence is enabled (`DISPlay:PERSistence[:STATe]`), each new data point in the diagram area remains on the screen infinitely until this command is set to "OFF".

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Infinite persistence" on page 91

DISPlay:PERSistence:TIME <Time>

If persistence is enabled (`DISPlay:PERSistence[:STATe]`), each new data point in the diagram area remains on the screen for the duration defined here.

Parameters:
<Time> Range: 0.05 to 50
Increment: 0.05
*RST: 0.05
Default unit: s

Usage: Asynchronous command

Manual operation: See "Time" on page 91

DISPlay:PERSistence:RESet

Resets the display, removing persistent values.

Usage: Event
Asynchronous command

Manual operation: See "Reset" on page 91

27.7.3.2 Signal

DISPlay:INTensity <Intensity>

This value determines the strength of the waveform line in the diagram. Enter a percentage between 0 (not visible) and 100% (very strong).

The exact mapping of the cumulative value occurences according to the assigned color table is guaranteed only if the intensity is set to 50% (default). All other intensity values falsify the mapping but may improve the visibility of the signal.

Parameters:

<Intensity> Range: 0 to 100
Increment: 1
*RST: 50
Default unit: %

Usage: Asynchronous command

Manual operation: See "Intensity" on page 92

DISPlay:DIAGram:STYLe <Style>

Select the style in which the waveform is displayed.

Parameters:

<Style> VECTors | DOTS

VECTors
The individual data points are connected by a line.

DOTS
Only the individual data points are displayed.

*RST: VECTors

Usage: Asynchronous command

Manual operation: See "Waveform style" on page 92

27.7.3.3 Clear results

DISPlay:CLR

Deletes all measurement results including long term measurement and statistics, all waveforms, and the history.

Usage: Event
Asynchronous command

Manual operation: See "Clear" on page 56

27.7.4 User-defined preset

USRDefined:RST:NAME <Name>

Sets the path and file name of a user-defined preset file.

Parameters:

<Name> String parameter

Manual operation: See "Saveset to be loaded on preset" on page 99

USRDefined:RST:OPEN

opens and loads a user-defined preset file. Name and path of the preset file are defined with `USRDefined:RST:NAME`.

Usage: Setting only

Manual operation: See "Saveset to be loaded on preset" on page 99

USRDefined:RST:SAVE

Saves the current instrument settings to a user-defined preset file. Name and path of the preset file are defined with `USRDefined:RST:NAME`.

Usage: Setting only

Manual operation: See "Saveset to be loaded on preset" on page 99

USRDefined:RST[:ENABle] <Name>

If ON, the settings from a previously defined preset file are restored when the [Preset] key is pressed. The preset file is defined with `USRDefined:RST:NAME`.

If OFF, [Preset] sets the instrument to the factory defaults.

Parameters:

<Name> OFF | ON

*RST: OFF

Manual operation: See "Enable user defined preset" on page 98

27.7.5 Save / recall

See the following chapters:

- Section 27.16.10, "Autonaming", on page 1882
- Section 27.16.11, "CSV export", on page 1884
- Section 27.16.12, "External application", on page 1884

27.7.6 Maintenance

27.7.6.1 Self-alignment

CALibration:DATE? 1494
CALibration:TIME? 1494
CALibration:RESult? 1494

CALibration:DATE?

Returns the date of the last selfalignment.

Return values:
<Date>

Usage: Query only
Asynchronous command

Manual operation: See "Date / Time / Overall alignment state" on page 101

CALibration:TIME?

Returns the time of the last selfalignment.

Return values:
<Time>

Usage: Query only
Asynchronous command

Manual operation: See "Date / Time / Overall alignment state" on page 101

CALibration:RESult?

Returns the result of the last selfalignment and the current alignment status. In remote mode, `*CAL?` provides more detailed information.

Return values:
<ResultState> PASSed | FAILed | NOALigndata
*RST: FAILed

Usage: Query only
Asynchronous command

Manual operation: See "Date / Time / Overall alignment state" on page 101

27.7.6.2 Self-test

DIAGnostic:SERVice:STST:STATe?

Returns the summary result of the selftest.

Return values:
<State> PSSD | FAILed | UNDefined
*RST: UNDefined

Usage: Query only
Asynchronous command

Manual operation: See "State" on page 103

27.7.6.3 Hardware

SYSTem:DFPRint [<Path>]

The device footprint contains the configuration of the instrument, installed modules, installed software and software licenses. This information is written in the device footprint xml file might be useful in case of maintenance or support request.

The query returns the information as block data. The setting command saves the device footprint xml file in the specified path.

It is also possible to access the device footprint xml file via the instrument's web browser. Therefore, the directory containing the xml file must be enabled for sharing.

Setting parameters:
<Path> String parameter, specifying the target path of the footprint file.

Return values:
<DeviceFootprint> Content of the device footprint xml file as block data

Manual operation: See "System Info" on page 103

DIAGnostic:SERVice:FWVersion?

Returns the firmware version that is currently installed on the instrument.

Return values:
<FirmwareVersion> Version string

Usage: Query only
Asynchronous command

DIAGnostic:SERVice:PARTnumber <Number>

Returns the part number (order number) of your instrument. This number is required to order a new option, and in case of service.

Parameters:
<Number> Number string

Usage: Asynchronous command

Manual operation: See "System Info" on page 103

DIAGnostic:SERVice:SERialnumber?

Returns the serial number of your instrument. This number is required to order a new option, and in case of service.

Return values:
<SerialNumber> Number string

Usage: Query only
Asynchronous command

Manual operation: See "System Info" on page 103

DIAGnostic:SERVice:CHANnelcount?

Queries the number of available channels.

Return values:

<ChannelCount>	Range:	0 to 4
	Increment:	1
	*RST:	0

Usage: Query only
Asynchronous command

Firmware/software: V 2.00

27.8 Acquisition and setup

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

- www.rohde-schwarz.com/rc-via-scpi, section "Command sequence and synchronization"
- Section 27.3, "Programming examples", on page 1425

- Starting and stopping acquisition 1497
- Timebase 1497
- Acquisition 1501
- Fast segmentation 1508
- Vertical 1509
- Waveform data 1515
- Probes 1517

- Reference clock 1569

27.8.1 Starting and stopping acquisition

RUNContinous....1497
RUN....1497
RUNSingle....1497
SINGle....1497
STOP....1497

RUNContinous
RUN

Starts the continuous acquisition.

Usage: Event
Asynchronous command

Manual operation: See "[Run Stop]" on page 36

RUNSingle
SINGle

Starts a defined number of acquisition cycles. The number of cycles is set with `ACQuire:COUNt`.

Usage: Event
Asynchronous command

Manual operation: See "[Single]" on page 37

STOP

Stops the running acquistion.

Usage: Event
Asynchronous command

Manual operation: See "[Run Stop]" on page 36

27.8.2 Timebase

AUToscale....1498
TIMebase:SCALe....1498
TIMebase:RANGe....1498
TIMebase:DIVisions?....1498
TIMebase:HORizontal:POSition....1499
TIMebase:REFerence....1499
TIMebase:ROLL:ENABle....1499
TIMebase:ROLL:STATe?....1500
TIMebase:ROLL:MTIMe....1500
TRIGger<t>:OFFSet:LIMited....1500

AUToscale

Performs an autoset process: analyzes the enabled channel signals, and obtains appropriate horizontal, vertical, and trigger settings to display stable waveforms.

Rohde & Schwarz does not recommend using the autoset in remote control. To adjust the oscilloscope remotely, especially for automated testing applications, use the remote commands that adjust the horizontal, vertical and trigger settings."

Usage: Event
Asynchronous command

TIMebase:SCALe <TimeScale>

Sets the horizontal scale - the time per division on the x-axis - for all channel and math waveforms.

The setting accuracy depends on the current resolution (sample rate).

- No interpolation:
  The resolution is an integer multiple of the ADC sample rate.
- With interpolation:
  Any value for the horizontal scale can be set.

Parameters:

<TimeScale>
Range: 25E-12 to 10000 (RTO, RTP) | 5000 (RTE)
Increment: 1E-12
*RST: 10E-9
Default unit: s/div

Usage: Asynchronous command

Manual operation: See "Time scale" on page 120

TIMebase:RANGe <AcqTime>

Defines the time of one acquisition, that is the time across the 10 divisions of the diagram: *TimeScale*10*.

Parameters:

<AcqTime>
Range: 250E-12 to 100E+3 (RTO, RTP) | 50E+3 (RTE)
Increment: 1E-12
*RST: 0.5
Default unit: s

Usage: Asynchronous command

Manual operation: See "Acquisition time" on page 120

TIMebase:DIVisions?

Queries the number of horizontal divisions on the screen. The number cannot be changed.

Return values:

<HorizDivCnt> Range: 4 to 20
Increment: 2
*RST: 10

Usage: Query only
Asynchronous command

TIMebase:HORizontal:POSition <RescalCenterTime>

Defines the time distance between the reference point and the trigger point (the zero point of the diagram). The reference point marks the rescaling center of the time scale.

Parameters:

<RescalCenterTime> Range: -100E+24 to 100E+24
Increment: 1E-12
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "[Position]" on page 37

TIMebase:REFerence <RescaleCtrPos>

Sets the position of the reference point in % of the screen. The reference point marks the rescaling center of the time scale. If you modify the time scale, the reference point remains fixed on the screen, and the scale is stretched or compresses to both sides of the reference point.

Parameters:

<RescaleCtrPos> Range: 0 to 100
Increment: 1
*RST: 50
Default unit: %

Usage: Asynchronous command

Manual operation: See "[Position]" on page 37

TIMebase:ROLL:ENABle <Mode>

Activates the automatic roll mode.

Parameters:

<Mode> AUTO | OFF

AUTO: the instrument activates the roll mode under specific conditions.
See also "Roll mode" on page 121.

*RST: AUTO

Usage: Asynchronous command

Manual operation: See "Roll mode" on page 121

TIMebase:ROLL:STATe?

Returns the status of the roll mode.

Return values:
<State> OFF | ON
*RST: OFF

Usage: Query only
Asynchronous command

Manual operation: See "Roll mode" on page 121

TIMebase:ROLL:MTIMe <MinHorizGain>

The roll mode is enabled automatically if the acquisition time exceeds the given value, and if `TIMebase:ROLL:ENABle` is set to AUTO.

Parameters:
<MinHorizGain> Treshold value for roll mode enabling.
Range: 1 to 600
Increment: 1
*RST: 10
Default unit: s

Usage: Asynchronous command

Manual operation: See "Start roll time" on page 122

TRIGger<t>:OFFSet:LIMited <State>

If ON, the horizontal position cannot be set outside the visible waveform diagram.

See also: `TIMebase:HORizontal:POSition` on page 1499

Suffix:
<t> 1..3
The numeric suffix is irrelevant.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Restrict horizontal position to acquisition range" on page 121

27.8.3 Acquisition

ACQuire:ARESet:IMMediate 1501
ACQuire:ARESet:MODE 1501
ACQuire:ARESet:TIME 1502
ACQuire:ARESet:COUNt 1502
ACQuire:CDTA 1502
ACQuire:COUNt 1503
ACQuire:INTerpolate 1503
ACQuire:MUWaveform 1503
ACQuire:POINts:AUTO 1504
ACQuire:POINts:AADJust 1504
ACQuire:POINts:MAXimum 1504
ACQuire:POINts:ARATe? 1505
ACQuire:POINts[:VALue] 1505
ACQuire:RESolution 1505
ACQuire:SRATe 1505
ACQuire:SRReal 1506
CHANnel<ch>[:WAVeform<wf>][:STATe] 1506
CHANnel<ch>[:WAVeform<wf>]:TYPE 1507
CHANnel<ch>[:WAVeform<wf>]:ARIThmetics 1507

ACQuire:ARESet:IMMediate

Forces the immediate restart of the envelope and average calculation for all waveforms.

Usage: Event
Asynchronous command

Manual operation: See "Reset" on page 131

ACQuire:ARESet:MODE <ArtmRst>

Defines when the envelope and average evaluation restarts.

Parameters:

<ArtmRst> NONE | TIME | WFMS

TIME
Restarts the envelope and average calculation after the time defined with `ACQuire:ARESet:TIME`.

WFMS
Restarts the envelope and average calculation after a number of acquired waveforms defined with `ACQuire:ARESet:COUNt` on page 1502.

*RST: NONE

Usage: Asynchronous command

Manual operation: See "Arithmetic Reset > Mode" on page 131

ACQuire:ARESet:TIME <EnvelopeTimeout>

Defines the time after which the envelope and average evaluation restarts.

The setting is relevant if `ACQuire:ARESet:MODE` is set to `TIME`.

Parameters:

<EnvelopeTimeout>
Range: 0.1 to 10000
Increment: 0.01
*RST: 0.1
Default unit: s

Usage: Asynchronous command

Manual operation: See "Arithmetic Reset > Mode" on page 131

ACQuire:ARESet:COUNt <NofWaveforms>

Defines the number of acquired waveforms after which the envelope and average evaluation restarts.

The setting is relevant if `ACQuire:ARESet:MODE` is set to `WFMS`.

Parameters:

<NofWaveforms>
Range: 2 to 16.7772E+6
Increment: 10
*RST: 1000

Usage: Asynchronous command

Manual operation: See "Arithmetic Reset > Mode" on page 131

ACQuire:CDTA <CoupleAcquSet>

Sets the acquisition mode and the waveform arithmetic of all channels to the last set value.

If the acquisition settings are coupled, `ACQuire:MUWaveform` is not relevant, only one waveform per channel can be used.

Parameters:

<CoupleAcquSet>
OFF | ON
*RST: ON

Usage: Asynchronous command

Firmware/software: FW 3.30
Substitutes `ACQuire:CMODode`

Manual operation: See "Couple channels" on page 130

ACQuire:COUNt <MaxAcqCnt>

The acquisition and average count has a double effect:

- It sets the number of waveforms acquired with `RUNSingle`.
- It defines the number of waveforms used to calculate the average waveform.

Parameters:

<MaxAcqCnt> Range: 1 to 16.7772E+6
Increment: 10
*RST: 1

Usage: Asynchronous command

Manual operation: See "Average count (N-single count)" on page 127

ACQuire:INTerpolate <IntpolMd>

Selects the interpolation method.

See also: "Interpolation" on page 127.

Parameters:

<IntpolMd> LINear | SINX | SMHD

LINear
Linear interpolation between two adjacent sample points

SINX
Interpolation by means of a sin(x)/x curve.

SMHD
Sample/Hold causes a histogram-like interpolation.

*RST: SINX

Usage: Asynchronous command

Manual operation: See "Interpolation" on page 127

ACQuire:MUWaveform <MultiWaveform>

For each channel, up to three waveforms can be shown and analyzed. The decimation mode and the waveform arithmetic are specific for each waveform. So you can analyze several aspects of the signal: For example, waveform1 shows the peaks, and waveform2 shows the average of the signal.

Parameters:

<MultiWaveform> OFF | ON

*RST: OFF

Usage: Asynchronous command

Firmware/software: FW 3.20

Manual operation: See "Multi waveform" on page 130

ACQuire:POINts:AUTO <ReclgthManual>

Selection to keep constant either the resolution or the record length when you adjust the time scale (`TIMebase:SCALe`) or acquisition time (`TIMebase:RANGe`).

Parameters:

<ReclgthManual> RESolution | RECLength

RESolution
Resolution is kept constant. Set the required resolution value with `ACQuire:RESolution`.

RECLength
The record length is kept constant. Set the required record length value with `ACQuire:POINts[:VALue]`.

*RST: RESolution

Usage: Asynchronous command

Manual operation: See "Sample rate mode" on page 128

ACQuire:POINts:AADJust <AutoAdjust>

Prevents undersampling and ensures a sufficient resolution to acquire the correct waveform if the time scale is changed. The setting takes effect if the changed parameter - resolution or record length - reaches a limit. The instrument automatically keeps this parameter constant at its limit, and changes the other parameter regardless of the `ACQuire:POINts:AUTO` setting.

Parameters:

<AutoAdjust> OFF | ON

*RST: ON

Usage: Asynchronous command

Manual operation: See "Auto adjustment" on page 128

ACQuire:POINts:MAXimum <ReclgthLim>

Sets a limit for the record length to prevent very large records. This value only takes effect if a constant resolution is selected with `ACQuire:POINts:AUTO`. If you increase the time scale, the resolution remains constant and the record length increases until the limit is reached. Further increase of the time scale changes the resolution and keeps the record length limit.

Parameters:

<ReclgthLim>
Range: 1000 to 800 MSa. The actual maximum can be lower depending on the installed options, number of active channels, measurements and math waveforms.
Increment: 2
*RST: 10E+6
Default unit: pts

Usage: Asynchronous command

Manual operation: See "Record length limit" on page 128

ACQuire:POINts:ARATe?

Retrieves the sample rate of the ADC, that is the number of points that are sampled by the ADC in one second.

Return values:

<ADCSampleRate> Range: 10 Gsample/s
Default unit: Sa/s

Usage: Query only
Asynchronous command

ACQuire:POINts[:VALue] <RecordLength>

Indicates the record length, the number of recorded waveform points that build the waveform across the acquisition time. `[:VALue]` can be omitted.

Parameters:

<RecordLength> Number of recorded waveform points.

Range: 1000 to 1E+9
Increment: 2
*RST: 1000
Default unit: pts

Usage: Asynchronous command

Manual operation: See "Record length" on page 127

ACQuire:RESolution <Resolution>

Indicates the time between two waveform points in the record.

Parameters:

<Resolution> A fine resolution with low values produces a more precise waveform record.

Range: 1E-15 to 0.5
Increment: 10E-12
*RST: 500E-6
Default unit: s

Usage: Asynchronous command

Manual operation: See "Resolution" on page 127

ACQuire:SRATe <SampleRate>

Defines the sample rate, that is the number of recorded waveform samples per second.

Parameters:

<SampleRate>
Range: 10 Gsample/s
Increment: 1
*RST: 10 Gsample/s
Default unit: Sa/s

Usage: Asynchronous command

ACQuire:SRReal <RealSampleRate>

Sets the number of captured waveform points per second. It considers the samples of the ADC, and the reduction of waveform points by decimation.

If interpolation is not active, the sample rate is the reciprocal value of the resolution and thus also depends on the acquisition time and the record length.

If interpolation is active, the sample rate is limited to the ADC sample rate.

Parameters:

<RealSampleRate>
Range: 10 Gsample/s
Increment: 1
*RST: 10 Gsample/s
Default unit: Sa/s

Usage: Asynchronous command

Firmware/software: FW 3.40

Manual operation: See "Sample rate" on page 126

CHANnel<ch>[:WAVeform<wf>][:STATe] <State>

Activates or deactivates a waveform. `[:STATe]` can be omitted.

Suffix:

<ch>
1..4
Selects the input channel.

<wf>
1..3
Selects the waveform. If [:WAVeform<n>] is omitted, waveform 1 is adressed.

Parameters:

<State>
OFF | ON
*RST: OFF

Example: `CHAN2:WAV2 ON`
Activates waveform 2 of channel 2 (C2W2).

Usage: Asynchronous command

CHANnel<ch>[:WAVeform<wf>]:TYPE <DecimationMode>

Selects the method to reduce the data stream of the ADC to a stream of waveform points with lower sample rate.

See also:"Decimation" on page 129.

Suffix:

<ch> 1..4
Selects the input channel.

<wf> 1..3
Selects the waveform. If [:WAVeform<n>] is omitted, waveform 1 is adressed.

Parameters:

<DecimationMode> SAMPle | PDETect | HRESolution | RMS

SAMPle
One of n samples in a sample interval of the ADC is recorded as waveform point.

PDETect
Peak Detect: the minimum and the maximum of n samples in a sample interval are recorded as waveform points.

HRESolution
High resolution: The average of n sample points is recorded as waveform point.

RMS
The waveform point is the root mean square of n sample values.

*RST: SAMPle

Usage: Asynchronous command

Manual operation: See "Decimation" on page 129

CHANnel<ch>[:WAVeform<wf>]:ARIThmetics <Arithmetics>

Selects the method to build the resulting waveform from several consecutive acquisitions of the signal. To define the number of acquisitions, use `ACQuire:COUNt`.

See also: "Arithmetic" on page 130.

Suffix:

<ch> 1..4
Selects the input channel.

<wf> 1..3
Selects the waveform. If [:WAVeform<n>] is omitted, waveform 1 is adressed.

Parameters:

<Arithmetics> OFF | ENVelope | AVERage

OFF
The data of the current acquisition is recorded according to the decimation settings.

ENVelope
Detects the minimum and maximum values in an sample interval over a number of acquisitions. To define the reset method, use ...

AVERage
Calculates the average from the data of the current acquisition and a number of acquisitions before.

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Arithmetic" on page 130

27.8.4 Fast segmentation

ACQuire:SEGMented:STATe 1508
ACQuire:SEGMented:MAX 1508
ACQuire:SEGMented:AUToreplay 1509

ACQuire:SEGMented:STATe <State>

Switches the fast segmentation mode on and off.

Parameters:
<State> OFF | ON

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Fast segmentation" on page 132

ACQuire:SEGMented:MAX <MaxAcquisitions>

The number of acquisitions in a fast segmentation acquisition series depends on the record length.

Parameters:
<MaxAcquisitions> OFF | ON

ON
Acquires the maximum possible number of acquisitions in a series.

OFF
Acquires the number of acquisitions defined using `ACQuire:COUNt`.

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Number of acquisitions" on page 132

ACQuire:SEGMented:AUToreplay <ReplayAfterAcq>

If enabled, the instrument starts processing and displaying the data as soon as the acquisition series is captured completely. Depending on the number of acquisitions, it may take some time until the acquisition series is displayed. If the setting is disabled, the instrument only captures the data and stores it in the sample memory.

Parameters:
<ReplayAfterAcq> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Enable automatic replay" on page 132

27.8.5 Vertical

CHANnel<ch>:AAFPermanent 1509
CHANnel<ch>:BANDwidth 1510
CHANnel<ch>:COUPling 1510
CHANnel<ch>:CPLing 1511
CHANnel<ch>:FILDesign[:TYPE] 1511
CHANnel<ch>:GND 1511
CHANnel<ch>:IMPedance 1512
CHANnel<ch>:INVert 1512
CHANnel<ch>:OFFSet 1512
CHANnel<ch>:OVERload 1513
CHANnel<ch>:POSition 1513
CHANnel<ch>:RANGe 1514
CHANnel<ch>:SCALe 1514
CHANnel<ch>:STATe 1515
VAUToscale 1515

CHANnel<ch>:AAFPermanent <Antialiasing>

Activates the anti-aliasing filter. The filter removes spurious and undersampled components of the signal and thus provides additional bandwidth limitation.

The command is available for R&S RTO6 oscilloscope with 6 GHz bandwidth. Filter setting is only possible in remote control.

Suffix:
<ch> 1..4

Parameters:
<Antialiasing> DEFault | ON | OFF

DEFault
Automatic usage of the filter in non-interleaved mode.

ON
Filter is active also in interleaved mode.

OFF
Filter is ignored.

*RST: DEFault

Usage: Asynchronous command

CHANnel<ch>:BANDwidth <BandwidthLimit>

Selects the bandwidth limit for the indicated channel.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<BandwidthLimit> FULL | B800 | B200 | B20

FULL
Use full bandwidth.

B200 | B20
Limit to 200 MHz or 20 MHz.

B800
Limit to 800 MHz. Available for 50 Ω coupling on scopes with ≥ 1 GHz instrument bandwith.

*RST: FULL

Usage: Asynchronous command

Manual operation: See "Analog" on page 141

CHANnel<ch>:COUPling <Value>

Selects the connection of the indicated channel signal.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<Value> DC | DCLimit | AC

DC
Direct connection with 50 Ω termination, passes both DC and AC components.

DCLimit
Direct connection with 1 MΩ termination, passes both DC and AC components.

AC
Connection with 1 MΩ termination, removes DC and very low-frequency components.

Manual operation: See "Coupling" on page 140

CHANnel<ch>:CPLing <Channel>,<State>

Sets the vertical settings of the coupled channel to the values of the active channel.

Suffix:
<ch> 1..4
Active channel

Parameters:
<Channel> CHAN1 | C1 | CHAN2 | C2 | CHAN3 | C3 | CHAN4 | C4
CHAN1 = C1, CHAN2 = C2, CHAN3 = C3, CHAN4 = C4
Input channel that takes the vertical settings of CHANnel<ch>.

<State> OFF | ON

Usage: Asynchronous command

Manual operation: See "Coupled to C1 / C2 / C3 / C4" on page 143

CHANnel<ch>:FILDesign[:TYPE] <FilterType>

Selects the filter that is used to reduce the bandwidth.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<FilterType> BRWall | WALL | GAUSsian | BRWall | WALL | GAUSsian
`BRWall | WALL`: Brick wall filter, result is a maximally flat step response.
`GAUSsian`: Gaussian filter, result is step-response optimized.
*RST: BRWall (R&S RTO6) or BRGauss (R&S RTP)

Usage: Asynchronous command

Manual operation: See "Filter characteristic" on page 141

CHANnel<ch>:GND <State>

Connects the signal to the ground.

Suffix:
<ch> 1..4

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "Ground" on page 140

CHANnel<ch>:IMPedance <Impedance>

Sets the impedance of the channel for power calculations and measurements.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<Impedance> Range: 0.1 to 100E+3
Increment: 1
*RST: 50
Default unit: Ω

Usage: Asynchronous command

Manual operation: See "Impedance" on page 142

CHANnel<ch>:INVert <InvertChannel>

Turns the inversion of the signal amplitude on or off. To invert means to reflect the voltage values of all signal components against the ground level. If the inverted channel is the trigger source, the instrument triggers on the inverted signal.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<InvertChannel> OFF | ON
*RST: OFF

Usage: Asynchronous command

Firmware/software: FW 3.30

Manual operation: See "Invert channel" on page 140

CHANnel<ch>:OFFSet <Offset>

The offset voltage is subtracted to correct an offset-affected signal. The offset of a signal is determined and set by the autoset procedure.

See also: "Offset" on page 139.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:

<Offset> Negative values move the waveform up, positive values move it down.

Range: Depends on attenuation factors, input coupling, and the offset compensation range of active probes. The nominal offset range for 1:1 attenuation and probe offset compensation = 0 is specified in the specifications document.
Increment: Depends on vertical and probe settings
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "[Position]" on page 39

CHANnel<ch>:OVERload <Overload>

Retrieves the overload status of the specified channel from the status bit. When the overload problem is solved, the command resets the status bit.

The overload status is returned asynchronously. Therefore, it is not possible to assign an overload to a specific acquisition during continuous acquisition. This assignment is only possible for a single acquisition.

Suffix:

<ch> 1..4
Selects the input channel.

Parameters:

<Overload> OFF | ON

Use OFF to reset the overload status bit.

*RST: OFF

Example:

```
ACQuire:COUNt 1
SINGle
CHANnel2:OVERload?
```

Queries the overload status of channel 2 after a single acquisition.

```
CHANnel2:OVERload OFF
```

Resets the overload status bit.

Usage: Asynchronous command

CHANnel<ch>:POSition <Position>

Sets the vertical position of the indicated channel as a graphical value.

Suffix:

<ch> 1..4
Selects the input channel.

Parameters:

<Position> Positive values move the waveform up, negative values move it down.

Range: -5 to 5
Increment: 0.01
*RST: 0
Default unit: div

Usage: Asynchronous command

Manual operation: See "[Position]" on page 39

CHANnel<ch>:RANGe <Range>

Sets the voltage range across the 10 vertical divisions of the diagram. Use the command alternativly instead of `CHANnel<ch>:SCALe`.

Suffix:

<ch> 1..4
Selects the input channel.

Parameters:

<Range> Voltage range value

Range: Dependencies see below.
Increment: Depends on vertical and probe settings
*RST: 0.5
Default unit: V/div

Usage: Asynchronous command

CHANnel<ch>:SCALe <Scale>

Sets the vertical scale for the indicated channel.

Suffix:

<ch> 1..4
Selects the input channel.

Parameters:

<Scale> Scale value, given in Volts per division.

Range: Depends on attenuation factors, coupling, and instrument model, see below.
Increment: Depends on vertical and probe settings
*RST: 0.05
Default unit: V/div

Usage: Asynchronous command

Manual operation: See "[Scale]" on page 40

CHANnel<ch>:STATe <State>

Switches the channel signal on or off.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "[C<n>]" on page 38

VAUToscale

Performs a vertical autoscaling. Horizontal parameters remain unchanged.

This function is not available in the GUI.

Usage: Event
Asynchronous command

27.8.6 Waveform data

To set the export data format, see `FORMat[:DATA]` on page 1459.

CHANnel<ch>[:WAVeform<wf>]:DATA:HEADer? 1515
CHANnel<ch>[:WAVeform<wf>]:DATA[:VALues]? 1516

CHANnel<ch>[:WAVeform<wf>]:DATA:HEADer?

Returns the header of channel waveform data.

If multichannel export is enabled, the number of returned samples is *Record length * Number of exported waveforms*. See also `EXPort:WAVeform:MULTichannel`.

Suffix:
<ch> 1..4
Selects the input channel.

<wf> 1..3
Selects the waveform. If [:WAVeform<n>] is omitted, waveform 1 is adressed.

Return values:
<Start> 1. header value: time of the first sample in s

<Stop> 2. header value: time of the last sample in s

<RecordLength> 3. header value: record length of the waveform in samples

<ValuesPerSample> 4. header value: number of values per sample. For most waveforms the result is 1, for peak detect and envelope waveforms it is 2. If the number is 2, the number of returned values is twice the number of samples (record length).

Example:
```
CALC:MATH1:DATA:HEAD?
-9.477E-008,9.477E-008,200000,1
```
The start time of the data is -9.477E-008 = - 94,77 ns, and the end time of the data is 9.477E-008 = 94,77 ns. The data stream has 200000 values with one value per sample.

Usage: Query only

CHANnel<ch>[:WAVeform<wf>]:DATA[:VALues]? [<Offset>[,<Length>]]

Returns the data of the channel waveform points for transmission from the instrument to the controlling computer. The data can be used in MATLAB, for example.

Without parameters, the complete waveform is retrieved. Using the offset and length parameters, data can be retrieved in smaller portions, which makes the command faster.

To set the export format, use `FORMat[:DATA]`. Supported formats are: ASCii | REAL,32 | INT,8 | INT,16.

You can retrieve only Y-values (usually voltage values), or X- and Y-values. Use `EXPort:WAVeform:INCXvalues` to define which values are retrieved.

If multichannel export is active (`EXPort:WAVeform:MULTichannel`), the channel suffix is ignored. To select the channels to be exported, use `CHANnel<ch>:EXPortstate`. The Y-values are written in interleaved order, for example, $YCh1_0$; $YCh2_0$; $YCh1_1$; $YCh2_1$... for a 2-channel instrument.

Suffix:

<ch> 1..4
Selects the input channel.

<wf> 1..3
Selects the waveform. If [:WAVeform<n>] is omitted, waveform 1 is adressed.

Query parameters:

[<Offset>] Number of offset waveform samples to be skipped.
Range: 0 to m. Limit: n + m <= record length

[<Length>] Number of waveform points to be retrieved.
Range: 1 to n. Limit: n + m <= record length

Return values:

<Data> List of comma-separated values according to the format and content settings.

Example: Retrieve the complete channel 1 waveform, only Y-values:

```
FORM ASC
EXP:WAV:INCX OFF
CHAN1:WAV1:DATA?
<-- -0.125000,-0.123016,-0.123016,-0.123016,-0.123016,-0.123016,...
```

Example: Retrieve the first 10 values of the waveform:

```
CHANnel:WAVeform:DATA:VALues? 0,10
<-- -0.10079051554203,-0.098814234137535,-0.098814234137535,
    -0.096837945282459,-0.094861663877964,-0.094861663877964,
    -0.092885382473469,-0.090909093618393,-0.090909093618393,
    -0.088932812213898
```

Example: Skip 5 samples and retrieve the next 5 samples:

```
CHANnel:WAVeform:DATA:VALues? 5,5
<-- -0.094861663877964,-0.092885382473469,-0.090909093618393,
    -0.090909093618393,-0.088932812213898
```

Usage: Query only

27.8.7 Probes

`TRPRobe:...` commands are dedicated commands for the external trigger input.

- Micro button and R&S ProbeMeter....1521
- Passive probes....1525
- Active voltage probes....1526
- Modular probes....1529
- Modular probes, deembedding....1534
- Predefined probes....1537
- Current probes....1539
- Optical isolated probes....1540
- Probe attributes....1542
- Probe adapter R&S RT-Z2T....1544

27.8.7.1 Common probe settings

PROBe<ch>:SETup:STATe?....1518
PROBe<ch>:SETup:TYPE?....1518
PROBe<ch>:SETup:NAME?....1518
PROBe<ch>:SETup:BANDwidth?....1518
PROBe<ch>:SETup:ATTenuation[:AUTO]?....1519
PROBe<ch>:SETup:GAIN:AUTO?....1519
PROBe<ch>:SETup:OFFSet:AZERo....1519
PROBe<ch>:SETup:OFFSet:USEautozero....1520
CHANnel<ch>:EATScale....1520
CHANnel<ch>:EATTenuation....1520

PROBe<ch>:SETup:STATe?

Queries if the probe at the specified input channel is active (detected) or not active (not detected). To switch the probe on, use `CHANnel<ch>:STATe`.

Suffix:
<ch> 1..4

Return values:
<State> DETected | NDETected
*RST: NDETected

Usage: Query only
Asynchronous command

PROBe<ch>:SETup:TYPE?

Queries the type of the probe.

Suffix:
<ch> 1..4
Selects the input channel.

Return values:
<Type> String containing one of the following values:
– None (no probe detected)
– Passive Probe
– active single-ended

Usage: Query only
Asynchronous command

Manual operation: See "Type, Name, Bandwidth" on page 146

PROBe<ch>:SETup:NAME?

Queries the name of the probe.

Suffix:
<ch> 1..4
Selects the input channel.

Return values:
<Name> Name string

Usage: Query only
Asynchronous command

Manual operation: See "Type, Name, Bandwidth" on page 146

PROBe<ch>:SETup:BANDwidth?

Queries the bandwidth of the probe.

Suffix:
<ch> 1..4
Selects the input channel.

Return values:
<Bandwidth> Range: 10000 to 20E+9
*RST: 1E+9
Default unit: Hz

Usage: Query only
Asynchronous command

Manual operation: See "Type, Name, Bandwidth" on page 146

PROBe<ch>:SETup:ATTenuation[:AUTO]?

Queries the attenuation of the probe.

Suffix:
<ch> 1..4
Selects the input channel.

Return values:
<PrbAttMdAuto> Range: 1E-3 to 1000
*RST: 1
Default unit: V/V

Usage: Query only
Asynchronous command

Manual operation: See "Probe unit, Auto attenuation" on page 148

PROBe<ch>:SETup:GAIN:AUTO?

Returns the gain of an automatically detected or predefined current probe.

Suffix:
<ch> 1..4
Selects the input channel. The number of channels depends on the instrument.

Return values:
<GainAuto> Range: 1E-3 to 1000
*RST: 1
Default unit: V/A

Usage: Query only
Asynchronous command

PROBe<ch>:SETup:OFFSet:AZERo

Performs an automatic correction of the zero error. If the DUT is ground-referenced, the AutoZero function can improve the measurement results.

See also: "Detect AutoZero, Use AutoZero" on page 146

Suffix:
<ch> 1..4
Selects the input channel.

Usage: Event
Asynchronous command

Manual operation: See "Detect AutoZero, Use AutoZero" on page 146

PROBe<ch>:SETup:OFFSet:USEautozero <UseAutoZero>

Includes the AutoZero offset in measurement results. The auto zero error is detected with `PROBe<ch>:SETup:OFFSet:AZERo`.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<UseAutoZero> OFF | ON
*RST: OFF

Usage: Asynchronous command

Firmware/software: Version 2.70

Manual operation: See "Detect AutoZero, Use AutoZero" on page 146

CHANnel<ch>:EATScale <ExtAttScl>

Sets the attenuation scale for an external divider.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<ExtAttScl> LIN | LOG
*RST: LIN

Usage: Asynchronous command

Manual operation: See "External attenuation: Scale, Attenuation" on page 142

CHANnel<ch>:EATTenuation <ExtAtt>

Sets the attenuation of an external voltage divider that is part of the DUT before the measuring point. The external attenuation is included in the measurement, and the instrument shows the results that would be measured before the divider.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:

<ExtAtt> Values and unit depend on the selected scale (CHANnel<ch>:EATScale).

Range: Linear scale: 0,001 to 1E+6, logarithmic scale: -60 dB to 120 dB
Increment: 0.01
*RST: 1

Usage: Asynchronous command

Manual operation: See "External attenuation: Scale, Attenuation" on page 142

27.8.7.2 Micro button and R&S ProbeMeter

PROBe<ch>:SETup:MODE....1521
PROBe<ch>:SETup:DISPlaydiff....1522
PROBe<ch>:PMETer:VISibility....1523
PROBe<ch>:PMETer:RESults:SINGle?....1523
PROBe<ch>:PMETer:RESults:COMMon?....1523
PROBe<ch>:PMETer:RESults:DIFFerential?....1524
PROBe<ch>:PMETer:RESults:NEGative?....1524
PROBe<ch>:PMETer:RESults:POSitive?....1524

PROBe<ch>:SETup:MODE <Mode>

Select the action that is started when you press the micro button on the probe head.

See also: "Micro button action" on page 148.

Suffix:

<ch> 1..4
Selects the input channel.

Parameters:

<Mode> RCONtinuous | RSINgle | AUToset | AZERo | SEToffsettomean | SITFile | NOACtion | FINDtriglevel | REPort | PROBemode | PRSetup

RCONtinuous
Run continuous: The acquisition is running as long as the probe button is pressed.

RSINgle
Run single: Starts a defined number of acquisitions (same as [Single] key).

AUTOSET
Starts the autoset procedure.

AZero
AutoZero: performs an automatic correction of the zero error.

SEToffsettomean
Set offset to mean: performs an automatic compensation for a DC component of the input signal.

SITFile
Save Image To File:
Directs the display image to a file. The `MMEMory:NAME` command defines the file name. The file format is defined with `HCOPy:DEVice<m>:LANGuage`.

NOACtion
Nothing is started on pressing the micro button.

FINDtriglevel
Sets the trigger level automatically to *0.5 * (MaxPeak – MinPeak)*. The function is not available for an external trigger source.

REPort
Creates and saves a report of the current results.

PROBemode
Only available for R&S RT-ZM probes. Changes the measurement mode of the probe.

PRSetup
Opens the "Probes Setup" dialog box.

*RST: RCONtinuous

Usage: Asynchronous command

Manual operation: See "Micro button action" on page 148

PROBe<ch>:SETup:DISPlaydiff <DisplayDiff>

Selects the input voltages to be measured by the ProbeMeter of an R&S differential active probe.

See also: "Differential active probes" on page 118.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<DisplayDiff> DIFFerential | SINGleended

DIFFerential
Measures differential and common mode voltages

SINGleended
Measures the voltage between the positive/negative signal socket and the ground.

*RST: DIFFerential

Usage: Asynchronous command

Manual operation: See "ProbeMeter results" on page 149

PROBe<ch>:PMETer:VISibility <Visibility>

Activates the integrated R&S ProbeMeter of active R&S probes.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<Visibility> OFF | ON
*RST: OFF

Usage: Asynchronous command

Firmware/software: FW 2.25

Manual operation: See "ProbeMeter" on page 149

PROBe<ch>:PMETer:RESults:SINGle?

Returns the ProbeMeter measurement result of single-ended active R&S probes, the voltage measured between the probe tip and the ground.

Suffix:
<ch> 1..4
Selects the input channel.

Return values:
<SingleEndResult> Range: -100E+24 to 100E+24
Increment: 1E-3
*RST: 0
Default unit: V

Usage: Query only
Asynchronous command

Firmware/software: FW 2.25

Manual operation: See "ProbeMeter results" on page 149

PROBe<ch>:PMETer:RESults:COMMon?

Returns the ProbeMeter measurement result of differential active R&S probes: the common mode voltage, which is the mean voltage between the signal sockets and the ground socket.

Suffix:
<ch> 1..4
Selects the input channel.

Return values:
<CommonModeRes> Range: -100E+24 to 100E+24
Increment: 1E-3
*RST: 0
Default unit: V

Usage: Query only
Asynchronous command

Firmware/software: FW 2.25

Manual operation: See "ProbeMeter results" on page 149

PROBe<ch>:PMETer:RESults:DIFFerential?

Returns the ProbeMeter measurement result of differential active R&S probes, the differential voltage - the voltage between the positive and negative signal sockets.

Suffix:
<ch> 1..4
Selects the input channel.

Return values:
<DiffModeRes> Range: -100E+24 to 100E+24
Increment: 1E-3
*RST: 0
Default unit: V

Usage: Query only
Asynchronous command

Firmware/software: FW 2.25

Manual operation: See "ProbeMeter results" on page 149

PROBe<ch>:PMETer:RESults:NEGative?

Returns the ProbeMeter measurement result of differential active R&S probes, the voltage that is measured between the negative signal socket and the ground.

Suffix:
<ch> 1..4
Selects the input channel.

Return values:
<SingleNegResult> Range: -100E+24 to 100E+24
Increment: 1E-3
*RST: 0
Default unit: V

Usage: Query only
Asynchronous command

Firmware/software: FW 2.25

Manual operation: See "ProbeMeter results" on page 149

PROBe<ch>:PMETer:RESults:POSitive?

Returns the ProbeMeter measurement result of differential active R&S probes, the voltage that is measured between the positive signal socket and the ground.

Suffix:
<ch> 1..4
Selects the input channel.

Return values:
<SinglePosResult> Range: -100E+24 to 100E+24
Increment: 1E-3
*RST: 0
Default unit: V

Usage: Query only
Asynchronous command

Firmware/software: FW 2.25

Manual operation: See "ProbeMeter results" on page 149

27.8.7.3 Passive probes

PROBe<ch>:SETup:ATTenuation:MODE 1525
PROBe<ch>:SETup:ATTenuation:UNIT 1525
PROBe<ch>:SETup:ATTenuation:MANual 1526
PROBe<ch>:SETup:GAIN:MANual 1526

PROBe<ch>:SETup:ATTenuation:MODE <AttenuationMode>

Set the mode to MANual if the instrument does not detect the probe.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<AttenuationMode> AUTO | MANual
*RST: AUTO

Usage: Asynchronous command

Manual operation: See "Mode" on page 151

PROBe<ch>:SETup:ATTenuation:UNIT <AttenuationUnit>

Sets the unit for the connected probe type if `PROBe<ch>:SETup:ATTenuation:MODE` on page 1525 is set to `MANual`.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<AttenuationUnit> V | A | W
Voltage probe (V), current probe (A), power probe (W)
*RST: V

Usage: Asynchronous command

Manual operation: See "Vertical unit, Attenuation, Gain" on page 152

PROBe<ch>:SETup:ATTenuation:MANual <ManualAttenuation>

Sets the attenuation for the connected probe if `PROBe<ch>:SETup:ATTenuation:MODE` on page 1525 is set to `MANual`.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<ManualAttenuation> Range: 100E-6 to 10000
Increment: 0.1
*RST: 1
Default unit: Depends on the selected unit

Usage: Asynchronous command

Manual operation: See "Vertical unit, Attenuation, Gain" on page 152

PROBe<ch>:SETup:GAIN:MANual <GainManual>

Sets the gain of a current probe.

Suffix:
<ch> 1..4
Selects the input channel. The number of channels depends on the instrument.

Parameters:
<GainManual> Range: 100E-6 to 10000
Increment: 100E-6
*RST: 1
Default unit: V/A

Usage: Asynchronous command

Manual operation: See "Vertical unit, Attenuation, Gain" on page 152

27.8.7.4 Active voltage probes

PROBe<ch>:SETup:CMOFfset....1527
PROBe<ch>:SETup:ZAXV....1527
PROBe<ch>:SETup:ACCoupling....1527
PROBe<ch>:SETup:ADVanced:PMToffset....1528
PROBe<ch>:SETup:ADVanced:RANGe....1528
PROBe<ch>:SETup:ADVanced:FILTer....1528
PROBe<ch>:SETup:ADVanced:AUDioverload....1529

PROBe<ch>:SETup:CMOFfset <CMOffset>

Sets the common-mode offset. The setting is only available for differential probes.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<CMOffset> Range: -100E+24 to 100E+24
Increment: 1E-3
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "CM offset" on page 154

PROBe<ch>:SETup:ZAXV <ExtAttRTZA15>

If you use the external attenuator R&S RT-ZA15 together with one of the differential active probes R&S RT-ZD10/20/30, enable it to include the external attenuation in the measurements.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<ExtAttRTZA15> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Probe attenuator RT-ZA15" on page 154

PROBe<ch>:SETup:ACCoupling <ProbeCouplingAC>

Enables AC coupling in the R&S RT-ZPR20 probe, which removes DC and very low-frequency components. The R&S RT-ZPR20 probe requires 50 Ω input termination, for which the channel AC coupling is not available. The probe setting allows AC coupling also at 50 Ω inputs.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<ProbeCouplingAC> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "AC Coupling" on page 156

PROBe<ch>:SETup:ADVanced:PMToffset

Sets the measured R&S ProbeMeter value as offset. Make sure that the R&S ProbeMeter is active before you use this command.

Available for power rail probes R&S RT-ZPR and optical isolated probes R&S RT-ZISO.

Suffix:
<ch> 1..4
Selects the input channel.

Usage: Event
Asynchronous command

Manual operation: See "Copy to offset" on page 156

PROBe<ch>:SETup:ADVanced:RANGe <ProbeRange>

Sets the voltage range of a R&S RT-ZHD probe.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<ProbeRange> AUTO | MHIGh | MLOW

AUTO
The voltage range is set with `CHANnel<ch>:SCALe`.

MHIGh
Sets the higher voltage range of the connected probe. To query the value, use `PROBe<ch>:SETup:ATTenuation[:AUTO]?`.

MLOW
Sets the lower voltage range of the connected probe. To query the value, use `PROBe<ch>:SETup:ATTenuation[:AUTO]?`.

*RST: AUTO

Usage: Asynchronous command

Manual operation: See "Range" on page 157

PROBe<ch>:SETup:ADVanced:FILTer <BwFilterSt>

Enables the lowpass filter in the probe control box.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<BwFilterSt> OFF | ON

*RST: OFF

Usage: Asynchronous command

Manual operation: See "BW limit" on page 157

PROBe<ch>:SETup:ADVanced:AUDioverload <Sound>

Activates the acustic overrange warning in the probe control box.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<Sound> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Buzzer" on page 157

27.8.7.5 Modular probes

The commands of this section are relevant for R&S RT-ZM modular probes. The commands are available in firmware version 3.40 and higher.

The suffix <m> selects the input channel to which the probe is connected.

PROBe<ch>:SETup:ATTenuation:THReshold:MODE....1529
PROBe<ch>:SETup:ATTenuation:THReshold:VALue....1530
PROBe<ch>:SETup:PRMode....1530
PROBe<ch>:SETup:DMOFfset....1531
PROBe<ch>:SETup:CMOFfset....1531
PROBe<ch>:SETup:NOFFset....1531
PROBe<ch>:SETup:POFFset....1532
PROBe<ch>:SETup:TERM:STATe....1532
PROBe<ch>:SETup:TERM:MODE....1532
PROBe<ch>:SETup:TERM:MEASure?....1533
PROBe<ch>:SETup:TERM:ADJust....1533

PROBe<ch>:SETup:ATTenuation:THReshold:MODE <Mode>

The threshold for switching the probe attenuation can be set automatically by the instrument (AUTO), or you can set it yourself (MANual). If set to MANual, define the threshold value with `PROBe<ch>:SETup:ATTenuation:THReshold:VALue`.

Suffix:
<ch> 1..4

Parameters:
<Mode> AUTO | MANual
*RST: AUTO

Usage: Asynchronous command

Manual operation: See "Attenuation threshold" on page 158

PROBe<ch>:SETup:ATTenuation:THReshold:VALue <Threshold>

Sets the threshold value if `PROBe<ch>:SETup:ATTenuation:THReshold:MODE` is set to MANual.

Suffix:
<ch> 1..4

Parameters:
<Threshold> Range: -0.236 to 0.236
Increment: 1E-3
*RST: 0
Default unit: V

Example:
```
PROB2:SET:ATT:THR:MODE MAN
PROB2:SET:ATT:THR:VAL 0.06
```
Sets the attenuation threshold of the modular probe at channel 2 to 60 mV/div.

Usage: Asynchronous command

Manual operation: See "Attenuation threshold" on page 158

PROBe<ch>:SETup:PRMode <MeasMode>

Sets the measurement mode of the modular probe.

Suffix:
<ch> 1..4

Parameters:
<MeasMode> DMODe | CMODe | PMODe | NMODe

DMODe
Differential mode input voltage (V_{dm}), the voltage between the positive and negative input terminal.

CMODe
Common mode input voltage (V_{cm}) , the mean voltage between the positive and negative input terminal vs. ground.

PMODe
Positive single-ended input voltage (V_p). the voltage between the positive input terminal and ground.

NMODe
Negative single-ended input voltage (V_N). the voltage between the negative input terminal and ground.

*RST: DMODe

Usage: Asynchronous command

Manual operation: See "Probe mode" on page 158

PROBe<ch>:SETup:DMOFfset <DMOffset>

Sets the differential offset to compensate a DC voltage applied to the positive and the negative input terminal.

Suffix:
<ch> 1..4

Parameters:
<DMOffset> In "DM" probe mode (`DMODe`), this offset is used as channel offset and considered automatically for correction.

Range: -100E+24 to 100E+24
Increment: 1E-3
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "DM Offset, CM Offset, P Offset, N Offset" on page 159

PROBe<ch>:SETup:CMOFfset <CMOffset>

Sets the common-mode offset. The setting is only available for differential probes.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<CMOffset> Range: -100E+24 to 100E+24
Increment: 1E-3
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "CM offset" on page 154

PROBe<ch>:SETup:NOFFset <NOffset>

Sets the negative offset to compensate a DC voltage applied to the negative input terminal (Vp) referenced to ground.

Suffix:
<ch> 1..4

Parameters:
<NOffset> In "N" probe mode (`NMODe`), this offset is used as channel offset and considered automatically for correction.

Range: -100E+24 to 100E+24
Increment: 1E-3
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "DM Offset, CM Offset, P Offset, N Offset" on page 159

PROBe<ch>:SETup:POFFset <POffset>

Sets the positive offset to compensate a DC voltage applied to the positive input terminal (Vp) referenced to ground.

Suffix:
<ch> 1..4

Parameters:
<POffset> In "P" probe mode (`PMODe`), this offset is used as channel offset and considered automatically for correction.

Range: -100E+24 to 100E+24
Increment: 1E-3
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "DM Offset, CM Offset, P Offset, N Offset" on page 159

PROBe<ch>:SETup:TERM:STATe <VoltageState>

Activates the instrument control of the termination voltage.

Suffix:
<ch> 1..4

Parameters:
<VoltageState> OFF | ON

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 162

PROBe<ch>:SETup:TERM:MODE <Mode>

Setting the termination voltage is relevant if you use the R&S RT-ZMA40 SMA module.

You can set a termination voltage to correct the internal 50 Ω termination of the SMA module by the common mode voltage. To control the termination voltage by the instrument, connect the VT terminal of the R&S RT-ZM probe amplifier to the VT terminal of the SMA module using the red DC lead (see R&S RT-ZM User Manual).

Suffix:
<ch> 1..4

Parameters:
<Mode> AUTO | MANual

AUTO
The instrument uses the measured common mode voltage to control the termination.

MANual
Enter the voltage to be used for termination.

*RST: AUTO

Usage: Asynchronous command

Manual operation: See "Mode" on page 162

PROBe<ch>:SETup:TERM:MEASure?

Returns the measured common mode voltage.

Suffix:
<ch> 1..4

Return values:
<VoltageMeas> Common mode voltage

Range: -100E+24 to 100E+24
Increment: 1E-3
*RST: 0
Default unit: V

Usage: Query only
Asynchronous command

Manual operation: See "Measurement" on page 162

PROBe<ch>:SETup:TERM:ADJust <VoltageAdj>

Sets the voltage to be used for termination correction.

Suffix:
<ch> 1..4

Parameters:
<VoltageAdj> Correction voltage

Range: -100E+24 to 100E+24
Increment: 1E-3
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "Adjustment" on page 162

27.8.7.6 Modular probes, deembedding

The commands of this section are relevant for R&S RT-ZM modular probes when used for measurements on signal frequencies of 4 GHz and higher. The commands are available in firmware version 4.00 and higher.

See also: PROBe<ch>:SETup:PRMode on page 1530

PROBe<ch>:DEEMbedding:PMODe....1534
PROBe<ch>:DEEMbedding:TIPModule[:SELect]....1534
PROBe<ch>:DEEMbedding:TIPModule:CSPFile....1535
PROBe<ch>:DEEMbedding:TIPModule:ZMA<n>:SUBModule....1535
PROBe<ch>:DEEMbedding:BANDwidth....1535
PROBe<ch>:DEEMbedding:MODE....1536
PROBe<ch>:DEEMbedding:REMProbeload....1536
PROBe<ch>:DEEMbedding:LOAD:IMPedance....1537

PROBe<ch>:DEEMbedding:PMODe <MeasMode>

Suffix:
<ch> 1..4

Parameters:
<MeasMode> DMODe | CMODe | PMODe | NMODe

See PROBe<ch>:SETup:PRMode on page 1530.

*RST: DMODe

Usage: Asynchronous command

PROBe<ch>:DEEMbedding:TIPModule[:SELect] <ProbeTipZMA>

Selects the tip module that is used for measurement.

Suffix:
<ch> 1..4
Selects the channel to which the probe is connected.

Parameters:
<ProbeTipZMA> NONE | ZMA10 | ZMA12 | ZMA14 | ZMA15 | ZMA30 | ZMA40 | ZMA50 | CUST

ZMA30 | ZMA40
Define additional settings with PROBe<ch>:DEEMbedding:TIPModule:ZMA<n>:SUBModule.

CUST
Load the deembedding file with

*RST: ZMA10

Usage: Asynchronous command

Manual operation: See "Probe tip module, Pin spacing, Open" on page 160

PROBe<ch>:DEEMbedding:TIPModule:CSPFile <SParamFile>

Sets the file name, file format and path of the S-parameter file, and loads the S-parameters of user-defined tip modules.

Suffix:
<ch> 1..4

Parameters:
<SParamFile> String with path, file name, and extension.

Usage: Asynchronous command

Manual operation: See "Probe tip module, Pin spacing, Open" on page 160

PROBe<ch>:DEEMbedding:TIPModule:ZMA<n>:SUBModule <Value>

Defines additional settings for some tip modules:

For the browser module R&S RT-ZMA30, measure the space between the pins, and select the appropriate value.

If R&S RT-ZMA40 is selected, choose the used submodule: semi-rigid cables or none.

Suffix:
<ch> 1..4
Selects the channel to which the probe is connected.

<n> 30 (R&S RT-ZMA30) or 40 (R&S RT-ZMA40)

Parameters:
<Value> D16 | D25 | D45 | D75 | NONE | SRCS

For R&S RT-ZMA30:
D16 = 1.6 mm
D25 = 2.5 mm
D45 = 4.5 mm
D75 = 7.5 mm
For R&S RT-ZMA40:
NONE = no submodule
SRCS = semi-rigid cables

Usage: Asynchronous command

Manual operation: See "Probe tip module, Pin spacing, Open" on page 160

PROBe<ch>:DEEMbedding:BANDwidth <ProbeBandwidth>

Sets the maximum bandwidth until which the signal is corrected. This maximum value is the minimum bandwidth value of probe, probe tip and oscilloscope bandwidth, and can not be higher than the highest frequency in a used S-parameter file. Consider that most tip modules support the full bandwidth of the probe amplifier, but some tip modules have limited bandwidth.

Suffix:
<ch> 1..4
Selects the channel to which the probe is connected.

Parameters:
<ProbeBandwidth> Range: 10000 to 16E+9
Increment: 10
*RST: 4E+9
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Effective bandwidth" on page 161

PROBe<ch>:DEEMbedding:MODE <Mode>

Sets the probing mode.

Suffix:
<ch> 1..4
Selects the channel to which the probe is connected.

Parameters:
<Mode> PROBing | TERMinating

PROBing
For measurements with a high-ohmic probe and measure on an existing line in parallel to the load.

TERMinating
For measurements if the measuring equipment is the load of the line.

*RST: PROBing

Usage: Asynchronous command

Manual operation: See "Probing, Terminating" on page 160

PROBe<ch>:DEEMbedding:REMProbeload <RemovePrbLoad>

Removes the loading of the probe if `DEEMbedding<de>:COMPonent<n>:MODE` is set to `PROBing`.

If the probe loading is removed, you see the signal that would be at the measurement point if the probe's input impedance is ideal (infinite impedance).

Without removing the loading, you see the real signal at the measurement point, including the probe loading.

Suffix:
<ch> 1..4
Selects the channel to which the probe is connected.

Parameters:
<RemovePrbLoad> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Remove probe load" on page 161

PROBe<ch>:DEEMbedding:LOAD:IMPedance <SrcImp>

Shows the source impedance of the DUT. If an R&S RT-ZM probe is connected, the value depends on the selected probe mode: common mode, differential, or single-ended measurement.

Suffix:
<ch> 1..4
Selects the channel to which the probe is connected.

Parameters:
<SrcImp> Range: 100E-15 to 1E+9
Increment: 1
*RST: 50
Default unit: Ω

Usage: Asynchronous command

Manual operation: See "Source impedance" on page 161

27.8.7.7 Predefined probes

PROBe<ch>:SETup:ATTenuation:DEFProbe....1537
PROBe<ch>:SETup:OFFSet:TOMean....1538
PROBe<ch>:SETup:OPTical:CONGain....1538
PROBe<ch>:SETup:OPTical:WAVLength....1539

PROBe<ch>:SETup:ATTenuation:DEFProbe <PredefinedProbe>

Selects a predefined probe. These are probes that are not recognized automatically but the parameters of the probe are known to the instrument.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<PredefinedProbe> ZC10 | ZC20 | ZC30 | ZD01A100 | ZD01A1000 | ZZ80 | FREE | ZS10L | ZD02 | ZD08 | ZC02100 | ZC021000 | ZC03 | ZD002A10 | ZD002A100 | ZD003A20 | ZD003A200 | ZC3110 | ZC311 | ZC3101 | NP1544B | NP1544B50

ZC10 | ZC20 | ZC30 | ZZ80 | ZS10L | ZD02 | ZD08 | ZC03
Type of the probe

ZD01A100 | ZD01A1000 | ZD002A10 | ZD002A100 | ZD003A20 | ZD003A200
High voltage differential probes R&S RT-ZD0xx, attenuation ratio according to the setting on the probe.
A10 = 10:1
A20 = 20:1
A100 = 100:1
A200 = 200:1
A1000 = 1000:1

ZC02100 | ZC021000
Current probes 100 A or 1000 A according to the setting on the probe.

FREE
Any other probe that is not recognized by the instrument.

*RST: FREE

Usage: Asynchronous command

Manual operation: See "Predefined probe" on page 165

PROBe<ch>:SETup:OFFSet:TOMean

Performs an automatic compensation for a DC component of the specified input signal using the result of a background mean measurement.

Suffix:
<ch> 1..4
Selects the input channel.

Usage: Event
Asynchronous command

Manual operation: See "Offset to mean" on page 166

PROBe<ch>:SETup:OPTical:CONGain <ConversionGain>

Returns or sets the conversion gain, depending on `PROBe<ch>:SETup:OPTical:WAVLength`. The setting is relevant for optic receivers and probes.

Suffix:
<ch> 1..4

Parameters:
<ConversionGain> Range: -1000 to -1
Increment: 1
*RST: -200
Default unit: V/W

Usage: Asynchronous command

Manual operation: See "Conversion gain" on page 166

PROBe<ch>:SETup:OPTical:WAVLength <Wavelength>

Sets the wavelength of the optical signal. The setting is relevant for optic receivers and probes.

Suffix:
<ch> 1..4

Parameters:
<Wavelength> NM800 | NM1300 | NM1550 | CUSTOM

NM800 | NM1300 | NM1550
Predefined wavelength. To query the corresponding conversion gain, use `PROBe<ch>:SETup:OPTical:CONGain?`.

CUSTOM
Set the required conversion gain with `PROBe<ch>:SETup:OPTical:CONGain`.

*RST: NM800

Usage: Asynchronous command

Manual operation: See "Wavelength" on page 166

27.8.7.8 Current probes

To set up R&S RT-ZC10 and R&S RT-ZC20, use `PROBe<ch>:SETup:ATTenuation:DEFProbe`.

PROBe<ch>:SETup:DEGauss....1539
PROBe<ch>:SETup:OFFSet:STPRobe....1539
PROBe<ch>:SETup:OFFSet:ZADJust....1540

PROBe<ch>:SETup:DEGauss

Demagnetizes the core if it has been magnetized by switching the power on and off, or by an excessive input. Always carry out demagnetizing before measurement. The demagnetizing process takes about one second.

Suffix:
<ch> 1..4
Selects the input channel.

Usage: Event
Asynchronous command

Firmware/software: FW 2.50

Manual operation: See "DeGauss" on page 168

PROBe<ch>:SETup:OFFSet:STPRobe

Saves the zero adjust value in the probe box. If you connect the probe to another channel or to another R&S RTx oscilloscope, the value is read out again.

Suffix:
<ch> 1..4
Selects the input channel.

Usage: Event
Asynchronous command

Manual operation: See "Save to probe" on page 169

PROBe<ch>:SETup:OFFSet:ZADJust <ZroAdjVal>

set the waveform to zero position. It corrects the effect of a voltage offset or temperature drift. To set the value by the instrument, use `PROBe<ch>:SETup:OFFSet:AZERo`.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<ZroAdjVal>
Range: -100 to 100
Increment: 0.1
*RST: 0
Default unit: %

Usage: Asynchronous command

Firmware/software: FW 2.50

Manual operation: See "Zero adjust" on page 169

27.8.7.9 Optical isolated probes

The commands of this section are relevant for optical isolated probes. The commands are available in firmware versions 5.40 and higher.

The suffix <ch> selects the input channel to which the probe is connected.

PROBe<ch>:SETup:LASTate? 1540
PROBe<ch>:SETup:UNIT 1541
PROBe<ch>:SETup:ALIGnment:GAIN:EXECute 1541
PROBe<ch>:SETup:ALIGnment:ZERO:EXECute 1541
PROBe<ch>:SETup:ALIGnment:STATe? 1542
PROBe<ch>:SETup:ALIGnment:WRITe 1542
PROBe<ch>:SETup:RDEFaults 1542

PROBe<ch>:SETup:LASTate?

Returns the current status of the laser.

Suffix:
<ch> 1..4

Return values:
<LaserState> GOOD | WARNing | CRITical

GOOD
The laser is working.

WARNing
The laser needs service, but is still working.

CRITical
Defective laser, send to your Rohde & Schwarz service center.

*RST: GOOD

Usage: Query only
Asynchronous command

Manual operation: See "Laser state" on page 171

PROBe<ch>:SETup:UNIT <SelectUnit>

Sets the unit of the R&S RT-ZISO signal.

Suffix:
<ch> 1..4

Parameters:
<SelectUnit> V | A | W

*RST: V

Usage: Asynchronous command

Manual operation: See "Input unit" on page 170

PROBe<ch>:SETup:ALIGnment:GAIN:EXECute

Corrects the zero point error and the gain error of the R&S RT-ZISO probe.

To write the alignment result to the non-volatile flash of the probe, use `PROBe<ch>:SETup:ALIGnment:WRITe`.

Suffix:
<ch> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Alignment Gain/Zero-Error" on page 171

PROBe<ch>:SETup:ALIGnment:ZERO:EXECute

Performs a self-alignment and corrects the zero point error of the R&S RT-ZISO probe.

To write the alignment result to the non-volatile flash of the probe, use `PROBe<ch>:SETup:ALIGnment:WRITe`.

Suffix:
<ch> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Alignment Zero-Error" on page 171

PROBe<ch>:SETup:ALIGnment:STATe?

Returns the result of the probe alignment.

Suffix:
<ch> 1..4

Return values:
<AlignmentState> PASS | FAIL
*RST: FAIL

Usage: Query only
Asynchronous command

Manual operation: See "Alignment Zero-Error" on page 171

PROBe<ch>:SETup:ALIGnment:WRITe

The command writes the alignment result to the non-volatile flash of the probe.

Suffix:
<ch> 1..4

Usage: Event
Asynchronous command

PROBe<ch>:SETup:RDEFaults

Resets the probe settings to default values.

Suffix:
<ch> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Restore default values" on page 172

27.8.7.10 Probe attributes

PROBe<ch>:ID:SWVersion? 1543
PROBe<ch>:ID:PRDate? 1543
PROBe<ch>:ID:PARTnumber? 1543

PROBe<ch>:ID:SRNumber? 1543
PROBe<ch>:SETup:CAPacitance? 1544
PROBe<ch>:SETup:IMPedance? 1544

PROBe<ch>:ID:SWVersion?

Queries the version of the probe firmware.

Suffix:
<ch> 1..4
Selects the input channel.

Return values:
<Softwareversion> Version number in a string.

Usage: Query only
Asynchronous command

PROBe<ch>:ID:PRDate?

Queries the production date of the probe.

Suffix:
<ch> 1..4
Selects the input channel.

Return values:
<ProductionDate> Date in a string.

Usage: Query only
Asynchronous command

PROBe<ch>:ID:PARTnumber?

Queries the R&S part number of the probe.

Suffix:
<ch> 1..4
Selects the input channel.

Return values:
<PartNumber> Part number in a string.

Usage: Query only
Asynchronous command

PROBe<ch>:ID:SRNumber?

Queries the serial number of the probe.

Suffix:
<ch> 1..4
Selects the input channel.

Return values:
<SerialNo> Serial number in a string.

Usage: Query only
Asynchronous command

PROBe<ch>:SETup:CAPacitance?

Queries the input capacitance of the probe.

Suffix:
<ch> 1..4
Selects the input channel.

Return values:
<InputCapacity> Range: 100E-15 to 1E-9
*RST: 10E-12
Default unit: F

Usage: Query only
Asynchronous command

PROBe<ch>:SETup:IMPedance?

Queries the termination of the probe.

Suffix:
<ch> 1..4
Selects the input channel.

Return values:
<InputImpedance> Range: 0 to 1E+9
*RST: 50
Default unit: Ω

Usage: Query only
Asynchronous command

27.8.7.11 Probe adapter R&S RT-Z2T

PROBe<ch>:SETup:ADAPter? 1544
PROBe<ch>:SETup:ATTenuation:TDEFprobe 1545

PROBe<ch>:SETup:ADAPter?

Queries the adapter status, whether the instrument identified the adapter.

Suffix:
<ch> 1..4
Selects the input channel.

Return values:
<Type> NONE | Z2T
*RST: NONE

Usage: Query only
Asynchronous command

PROBe<ch>:SETup:ATTenuation:TDEFprobe <TekPredefProbe>

Selects the Tektronix probe that is connected to the R&S RT-Z2T adapter.

Suffix:
<ch> 1..4

Parameters:
<TekPredefProbe> NONE | P5205A50 | P5205A500 | P5210A100 | P5210A1000 | P6205 | P6241 | P6243 | P6245 | P6246A1 | P6246A10 | P6247A1 | P6247A10 | P6248A1 | P6248A10 | P6249 | P6250A5 | P6250A50 | P6251A5 | P6251A50 | P6701B | P6703B | P6711 | P6713 | TCP202
*RST: NONE

Example:
```
PROBe2:SETup:ADAPter
<-- Z2T
PROBe2:SETup:ATTenuation:TDEFprobe P5205A50
```
Checks the adapter state on channel 2, and selects the probe P5205A50.

Usage: Asynchronous command

27.8.8 R&S RT-ZVC probe

- Probe setup....1545
- Resolution and data....1558

27.8.8.1 Probe setup

In the `ZVC:Z<m>:` commands, the following suffixes are used:

- `<m>` selects the multi-channel probe. The available range is `1..2`
- `<n>` selects the voltage or current channel. The available range depends on the probe characteristics and is `1..2` or `1..4`

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

ZVC:BANDwidth <Bandwidth>

Sets the bandwidth limit of the probe. The bandwidth specifies the maximum frequency at which a purely sinusoidal signal is still transferred at 89 % (0.1 dB) of its amplitude.

Parameters:

<Bandwidth>
Range: 5000 to 1E+6
Increment: 5000
*RST: 1E+6
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Bandwidth" on page 180

ZVC:TYPE <DecimationMode>

Sets the decimation mode for the R&S RT-ZVC probe. Decimation reduces the data stream of the ADC to a stream of waveform points with lower sample rate and a less precise time resolution.

Parameters:

<DecimationMode> SAMPle | PDETect | HRESolution
*RST: SAMPle

Usage: Asynchronous command

Manual operation: See "Decimation mode" on page 179

ZVC:Z<m>:I<n>:BANDwidth?

Queries the bandwidth of the current channel. You can set the probe bandwidth with `ZVC:BANDwidth`.

The bandwidth of some current channels is restricted to 300KHz due to their vertical settings.

Suffix:

<m> 1..2

<n> 1..4

Return values:

<Bandwidth> Range: 5000 to 1E+6
Increment: 5000
*RST: 1E+6
Default unit: Hz

Usage: Query only
Asynchronous command

Manual operation: See "Bandwidth" on page 184

ZVC:Z<m>:I<n>:IMPedance <MeasImp>

Sets the current impedance of the probe channel for power calculations and measurements.

Suffix:

<m> 1..2

<n> 1..4

Parameters:

<MeasImp>
Range: 1 to 100E+3
Increment: 1
*RST: 50
Default unit: Ω

Usage: Asynchronous command

Manual operation: See "Measurement Impedance" on page 181

ZVC:Z<m>:I<n>:OFFSet <VerticalOffset>

Sets the offset current for the current channel.

Suffix:

<m> 1..2

<n> 1..4

Parameters:

<VerticalOffset>
Range: -1 to 1
Increment: 0.01
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "Offset" on page 179

ZVC:RESCoupled <CoupleToAnalog>

Sets the resolution of all R&S RT-ZVC channels.

Parameters:

<CoupleToAnalog> OFF | ON

ON
The resolution of the analog channels is applied to R&S RT-ZVC channels. The signal is automatically interpolated or decimated to get the analog resolution.

OFF
The resolution of R&S RT-ZVC channels is set in a way so that the record length of the waveforms is minimum 1000 samples.

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Couple resolution" on page 180

ZVC:Z<m>:I<n>:OVERload:RSTO <Settings>

Resets the overload indication at the probe.

In internal shunt mode (`ZVC:Z<m>:I<n>:SHUNt:MODE` is set to `INTShunt`), chooses whether to keep the operation range adjusted by the R&S RT-ZVC during overload or to restore the original settings for the given current channel.

In external shunt mode (`ZVC:Z<m>:I<n>:SHUNt:MODE` is set to `EXTShunt`), there is no adjustment of the operation range during overload.

Suffix:
<m> 1..2

<n> 1..4

Setting parameters:
<Settings> ADJusted | ORIGinal

ADJusted
The operation range that is automatically adjusted by the probe during overload is kept.
In internal shunt mode, during an overload at a current channel, the probe switches automatically to the next higher range. If the 10A range is also exceeded, the amperemeter switches to external shunt mode to protect the probe against permanent damage.

ORIGinal
The original operation range is restored as before the overload and the adjustment of the operation range.

Usage: Setting only
Asynchronous command

Manual operation: See "Reset Overload" on page 186

ZVC:Z<m>:I<n>:OVERload:VALue?

Queries if an overload of the current channel was detected.

Suffix:
<m> 1..2

<n> 1..4

Return values:
<Overload> OFF | ON

*RST: OFF

Usage: Query only
Asynchronous command

ZVC:Z<m>:I<n>:POSition <VertPosi>

Sets the vertical position of the indicated current channel as a graphical value.

Suffix:
<m> 1..2

<n> 1..4

Parameters:

<VertPosi>
Range: -5 to 5
Increment: 0.02
*RST: 0
Default unit: div

Usage: Asynchronous command

Manual operation: See "Position" on page 184

ZVC:Z<m>:I<n>:SCALe <VerticalScale>

Sets the vertical scale for the current channel in Volts per division. Increasing the scale compresses the display of the signal.

Suffix:

<m> 1..2

<n> 1..4

Parameters:

<VerticalScale>
Range: 1E-15 to 10E+24
Increment: 10E-6
*RST: 3
Default unit: V/div

Usage: Asynchronous command

Manual operation: See "Scale" on page 178

ZVC:Z<m>:I<n>:SHUNt:EVALue <ExtShuntVal>

Defines the value of the external shunt resistor to calculate the correct current values.

Suffix:

<m> 1..2

<n> 1..4

Parameters:

<ExtShuntVal>
Range: 10E-6 to 10000
Increment: 0.02
*RST: 1
Default unit: Ω

Usage: Asynchronous command

Manual operation: See "Shunt value" on page 186

ZVC:Z<m>:I<n>:SHUNt:MODE <ShuntMode>

Sets the internal or external shunt mode.

Suffix:

<m> 1..2

<n> 1..4

Parameters:
<ShuntMode> INTShunt | EXTShunt
*RST: INTShunt

Usage: Asynchronous command

Manual operation: See "Shunt mode" on page 185

ZVC:Z<m>:I<n>:SHUNt:MAXCurrent <IntShuntMeasRg>

Sets the maximum current and the internal shunt value.

The internal shunt and maximum current parameter pairs are defined as described in the table below.

Parameter	Internal shunt	Maximum current
A100r01	10 A	10 mΩ
A40R01	4.5 A	10 mΩ
A45M10r	45 mA	10 Ω
A4M510r	4.5 mA	10 Ω
A45u10k	45 µA	10 KΩ
A4U510k	4.5 µA	10 KΩ

Suffix:
<m> 1..2

<n> 1..4

Parameters:
<IntShuntMeasRg> A100r01 | A40R01 | A45M10r | A4M510r | A45u10k | A4U510k
*RST: A100r01

Usage: Asynchronous command

Manual operation: See "Max current / shunt" on page 185

ZVC:Z<m>:I<n>:SHUNt:MXCValue?

Queries the maximum current.

Suffix:
<m> 1..2

<n> 1..4

Return values:
<MaxCurrVal> Default unit: A

Usage: Query only
Asynchronous command

Manual operation: See "Max current" on page 186

ZVC:Z<m>:I<n>:SHUNt:MAXVoltage <ExtShuntMeasRg>

Sets the maximum voltage for the external shunt.

Suffix:
<m> 1..2

<n> 1..4

Parameters:
<ExtShuntMeasRg> V450m | V045m

`V450m`: 450 mV
`V045m`: 45 mV

*RST: V450m

Usage: Asynchronous command

Manual operation: See "Max voltage" on page 186

ZVC:Z<m>:I<n>:SKEW <DeskewOffset>

Sets the skew offset value for the current probe channel. This is a delay value, that is known from the circuit specifics but cannot be compensated by the instrument automatically.

Suffix:
<m> 1..2

<n> 1..4

Parameters:
<DeskewOffset> Range: -6E-6 to 6E-6
Increment: 200E-9
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "Skew" on page 185

ZVC:Z<m>:I<n>[:STATe] <State>

Enables the corresponding current channel of the probe.

Suffix:
<m> 1..2

<n> 1..4

Parameters:

<State> OFF | ON

*RST: OFF

Usage: Asynchronous command

Manual operation: See "State" on page 178

ZVC:Z<m>:V<n>:BANDwidth?

Queries the bandwidth of the voltage channel. You can set the probe bandwidth with `ZVC:BANDwidth`.

Suffix:

<m> 1..2

<n> 1..4

Return values:

<Bandwidth> Range: 5000 to 1E+6
Increment: 5000
*RST: 1E+6
Default unit: Hz

Usage: Query only
Asynchronous command

Manual operation: See "Bandwidth" on page 183

ZVC:Z<m>:V<n>:IMPedance <MeasImp>

Sets the voltage impedance of the probe channel for power calculations and measurements.

Suffix:

<m> 1..2

<n> 1..4

Parameters:

<MeasImp> Range: 1 to 100E+3
Increment: 1
*RST: 50
Default unit: Ω

Usage: Asynchronous command

Manual operation: See "Measurement Impedance" on page 181

ZVC:Z<m>:V<n>:OFFSet <VerticalOffset>

Sets the vertical offset for the voltage channel.

Suffix:

<m> 1..2

<n> 1..4

Parameters:

<VerticalOffset> Range: -1 to 1
Increment: 0.01
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "Offset" on page 179

ZVC:Z<m>:V<n>:OVERload:RSTO

Resets the overload indication at the probe.

Suffix:

<m> 1..2

<n> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Reset Overload" on page 183

ZVC:Z<m>:V<n>:OVERload:VALue?

Queries if an overload of the voltage channel was detected.

Suffix:

<m> 1..2

<n> 1..4

Return values:

<Overload> OFF | ON
*RST: OFF

Usage: Query only
Asynchronous command

ZVC:Z<m>:V<n>:POSition <VertPosi>

Sets the vertical position of the indicated voltage channel as a graphical value.

Suffix:

<m> 1..2

<n> 1..4

Parameters:

<VertPosi>
Range: -5 to 5
Increment: 0.02
*RST: 0
Default unit: div

Usage: Asynchronous command

Manual operation: See "Position" on page 182

ZVC:Z<m>:V<n>:SCALe <VerticalScale>

Sets the vertical scale for the voltage channel in Volts per division. Increasing the scale compresses the display of the signal.

Suffix:

<m> 1..2

<n> 1..4

Parameters:

<VerticalScale>
Range: 1E-15 to 10E+24
Increment: 10E-6
*RST: 3
Default unit: V/div

Usage: Asynchronous command

Manual operation: See "Scale" on page 178

ZVC:Z<m>:V<n>:SKEW <DeskewOffset>

Sets the skew offset value for the voltage probe channel. This is a delay value, that is known from the circuit specifics but cannot be compensated by the instrument automatically.

Suffix:

<m> 1..2

<n> 1..4

Parameters:

<DeskewOffset>
Range: -6E-6 to 6E-6
Increment: 200E-9
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "Skew" on page 183

ZVC:Z<m>:V<n>[:STATe] <State>

Enables the corresponding voltage channel of the probe.

Suffix:
<m> 1..2
<n> 1..4

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "State" on page 178

ZVC:Z<m>:ID:NAME?

Queries the name of the probe.

Suffix:
<m> 1..2

Return values:
<Name>

Usage: Query only
Asynchronous command

ZVC:Z<m>:ID:PARTnumber?

Queries the R&S part number of the probe.

Suffix:
<m> 1..2

Return values:
<PartNumber>

Usage: Query only
Asynchronous command

ZVC:Z<m>:ID:SRNumber?

Queries the serial number of the probe.

Suffix:
<m> 1..2

Return values:
<SerialNo>

Usage: Query only
Asynchronous command

ZVC:Z<m>:ID:SWVersion?

Queries the version of the probe firmware.

Suffix:
<m> 1..2

Return values:
<Softwareversion>

Usage: Query only
Asynchronous command

ZVC:Z<m>:I<n>:ZERComp:DETect

Measures the zero offset, the mean value on a currentless DUT. If temperature changes, or if you change the shunt or other probe settings, repeat the measurement.

Suffix:
<m> 1..2

<n> 1..4

Usage: Event
Asynchronous command

Manual operation: See "ZeroComp" on page 181

ZVC:Z<m>:I<n>:ZERComp:USE <UseZeroComp>

Enables the automatic compensation of the measured zero offset.

Suffix:
<m> 1..2

<n> 1..4

Parameters:
<UseZeroComp> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Use" on page 181

ZVC:Z<m>:I<n>:ZERComp:STATe?

Returns the status of the zero compensation of the indicated current channel.

Suffix:
<m> 1..2

<n> 1..4

Return values:

<ZeroCompState> OFF | ON

ON: Zero compensation is used
Off: Zero Compensation is not used

*RST: OFF

Usage: Query only
Asynchronous command

Manual operation: See "Zero Comp" on page 179

27.8.8.2 Resolution and data

ACQuire:POINts:ZVALue? 1558
ACQuire:ZRESolution? 1558
ZVC:Z<m>:I<n>:DATA:HEADer? 1558
ZVC:Z<m>:V<n>:DATA:HEADer? 1558
ZVC:Z<m>:I<n>:DATA[:VALues]? 1559
ZVC:Z<m>:V<n>:DATA[:VALues]? 1559

ACQuire:POINts:ZVALue?

Returns the current record length used by the R&S RT-ZVCmulti-channel power probe channel.

Return values:

<ZUIRecordLength> Range: 1000 to 400E+6
Increment: 2
*RST: 1000
Default unit: pts

Usage: Query only
Asynchronous command

ACQuire:ZRESolution?

Returns the current resolution of the R&S RT-ZVCmulti-channel power probe channel.

Return values:

<ZUIResolution> Range: 1E-15 to 0.5
Increment: 10E-12
*RST: 500E-6
Default unit: s

Usage: Query only
Asynchronous command

ZVC:Z<m>:I<n>:DATA:HEADer?
ZVC:Z<m>:V<n>:DATA:HEADer?

Return the header of amperemeter and voltmeter waveform data.

Suffix:

<m> 1..2

<n> 1..4

Return values:

<Start> 1. header value: time of the first sample in s

<Stop> 2. header value: time of the last sample in s

<RecordLength> 3. header value: record length of the waveform in samples

<ValuesPerSample> 4. header value: number of values per sample. For most waveforms the result is 1, for peak detect and envelope waveforms it is 2. If the number is 2, the number of returned values is twice the number of samples (record length).

Example:

```
ZVC:Z2:V2:DATA:HEADer?
<-- -0.0001,0.0001,1000,1
```

Usage: Query only

ZVC:Z<m>:I<n>:DATA[:VALues]?
ZVC:Z<m>:V<n>:DATA[:VALues]?

Return the waveform data of the amperemeter and voltmeter for transmission from the instrument to the controlling computer. The data can be used in MATLAB, for example.

To set the export format, use `FORMat[:DATA]`. Supported formats are: ASCii | REAL,32 | INT,8 | INT,16. Export of raw data is not supported.

Suffix:

<m> 1..2

<n> 1..4

Return values:

<Data> Liste of comma-separated values according to the format setting.

Example:

```
FORMat:DATA ASCii
ZVC:Z2:V2:DATA:HEADer?
<-- -0.0001,0.0001,1000,1
ZVC:Z2:V2:DATA:VaLues?
<-- 0.00083049136446789,-0.0042279558256269,-0.0076707201078534,
-0.011294682510197,-0.015915233641863,-0.018905002623796,
-0.022423267364502, ….
```

1000 values are returned.

Usage: Query only

27.8.9 Differential signals

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

DIFFerential<m>:DIFFerential:OFFSet....1562
DIFFerential<m>:COMMon:POSition....1563
DIFFerential<m>:DIFFerential:POSition....1563

DIFFerential<m>:STATe <State>

Activates the differential signal. Two differential signals are available.

Suffix:
<m> 1..2
Differential signal

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 188

DIFFerential<m>:PSIGnal[:SELect] <Signal>
DIFFerential<m>:NSIGnal[:SELect] <Signal>

Select the analog input channel of the positive and negative signal.

Suffix:
<m> 1..2
Differential signal

Parameters:
<Signal> C1W1 | C2W1 | C3W1 | C4W1
*RST: C1W1

Usage: Asynchronous command

Manual operation: See "P, N" on page 188

DIFFerential<m>:AOUTput <Output>
DIFFerential<m>:BOUTput <Output>

Select the waveform that is the result of differential processing. 2 output waveforms per digital signal can be defined.

Suffix:
<m> 1..2
Differential signal

Parameters:
<Output> P | N | DIFF | COM

P | N
Positive or negative waveform.

DIFF
Differential waveform.

COM
Common mode waveform.

*RST: COM

Usage: Asynchronous command

Manual operation: See "Output: P, N, Diff, Common" on page 188

DIFFerential<m>:COMMon:STATe <State>
DIFFerential<m>:DIFFerential:STATe <State>
DIFFerential<m>:NSIGnal:STATe <State>
DIFFerential<m>:PSIGnal:STATe <State>

The commands enable the output waveforms if deembedding by software is active. In this case, all output waveforms can be displayed at the same time, and each output is enabled separately.

Suffix:
<m> 1..2
Differential signal

Parameters:
<State> OFF | ON

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Output: P, N, Diff, Common" on page 188

DIFFerential<m>:COMMon:SCALe <Scale>
DIFFerential<m>:DIFFerential:SCALe <Scale>

Set the vertical scale of differential and common mode waveforms, respectively.

Vertical settings of P and N output are the vertical settings of the input channels.

Suffix:
<m> 1..2
Differential signal

Parameters:
<Scale> Scale value, given in Volts per division.

Range: 1E-3 to 100
Increment: 1E-3
*RST: 0.05
Default unit: V/div

Usage: Asynchronous command

Manual operation: See "Scale" on page 189

DIFFerential<m>:COUPling <ScaleCoupling>

If enabled for a differential signal, the vertical scales of P, N, differential and common mode waveforms are coupled. The scales are related as follows:

$VertScale_P = VertScale_N = VertScale_{CM} = VertScale_{Diff}/2$

You can disable the scale coupling and set an individual scale for each waveform.

Suffix:
<m> 1..2
Differential signal

Parameters:
<ScaleCoupling> OFF | ON

*RST: ON

Usage: Asynchronous command

Manual operation: See "Scale coupling" on page 190

DIFFerential<m>:COMMon:OFFSet <Offset>
DIFFerential<m>:DIFFerential:OFFSet <Offset>

Set the offset of differential and common mode waveforms.

Vertical settings of P and N output are the vertical settings of the input channels.

Suffix:
<m> 1..2
Differential signal

Parameters:
<Offset> Offset value

Range: -1 to 1
Increment: 0.01
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "Offset" on page 190

DIFFerential<m>:COMMon:POSition <Position>
DIFFerential<m>:DIFFerential:POSition <Position>

Set the vertical position of differential and common mode waveforms.

Vertical settings of P and N output are the vertical settings of the input channels.

Suffix:
<m> 1..2
Differential signal

Parameters:
<Position> Position value

Range: -5 to 5
Increment: 0.02
*RST: 0
Default unit: div

Usage: Asynchronous command

Manual operation: See "Position" on page 190

27.8.10 Digital filter

CHANnel<ch>:DIGFilter:STATe....1563
CHANnel<ch>:DIGFilter:CUToff....1564
TRIGger<t>:COUPling....1564
TRIGger<t>:RFReject....1565

CHANnel<ch>:DIGFilter:STATe <State>

Enables the DSP filter for input channels.

Suffix:
<ch> 1..4

Parameters:

<State> OFF | ON

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Channel BW limit (On/Off)" on page 144

CHANnel<ch>:DIGFilter:CUToff <CutOffLP>

Sets the limit frequency of the lowpass filter for input channels.

Suffix:

<ch> 1..4
Selects the input channel. One filter is applied to a pair of channels - one filter for channels 1 and 2 and another filter for channels 3 and 4 (only 4-channel models).

Parameters:

<CutOffLP> Range: 100E+3 to instrument bandwidth
*RST: 1E+6
Default unit: Hz
Available filter values are:
100E+3, 200E+3, 300E+3, 500E+3, 1.0E+6, 2.0E+6, 3.0E+6, 5.0E+6, 10E+6, 20E+6, 30E+6, 50E+6, 100E+6, 500E+6, 1.0E+9, 1.5E+9, 2.0E+9, 2.5E+9, 3.0E+9, 3.5E+9, 4.0E+9, 4.5E+9, 5.0E+9, 5.5E+9, 6.0E+9

Usage: Asynchronous command

Manual operation: See "Channel BW limit" on page 144

TRIGger<t>:COUPling <DigTrigCpl>

Selects the filter for the trigger channel(s). Other channels must use the same filter, or proceed unfiltered.

Suffix:

<t> 1..3
Irrelevant, omit the suffix.

Parameters:

<DigTrigCpl> OFF | RFReject

OFF
The trigger signal is not filtered.

RFReject
Frequencies higher a given limit are rejected, lower frequencies pass the filter. The limit is set with `TRIGger<t>:RFReject`.

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Trigger BW limit" on page 144

TRIGger<t>:RFReject <Bandwidth>

Suffix:
<t> 1..3
Irrelevant, omit the suffix.

Parameters:
<Bandwidth> Range: 100E+3 to 2E+9
Increment: 1000
*RST: 1E+6
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Channel BW limit" on page 144

27.8.11 Skew

CHANnel<ch>:SKEW:MANual....1565
CHANnel<ch>:SKEW:TIME....1565
PROBe<ch>:SKEState....1566
CHANnel<ch>:SKEW:EXTended....1566

CHANnel<ch>:SKEW:MANual <ManualCompens>

If enabled, the skew offset value (`CHANnel<ch>:SKEW:TIME`) is used for compensation. This improves horizontal and trigger accuracy.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<ManualCompens> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "User skew" on page 124

CHANnel<ch>:SKEW:TIME <Offset>

Sets an delay value, that is known from the circuit specifics but cannot be compensated by the instrument automatically. It affects only the selected input channel.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:

<Offset>
Range: -100E-9 to 100E-9
Increment: 10E-15
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "Skew offset" on page 124

PROBe<ch>:SKEState <ProbeSkew>

If enabled, the skew of all connected active probes is measured, displayed, and used for deskewing.

Suffix:

<ch>
1..4
The suffix is irrelevant. The setting affects all active channels.

Parameters:

<ProbeSkew>
OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Probe skew" on page 124

CHANnel<ch>:SKEW:EXTended <ExtendSkew>

Enables a higher skew value range that can be set with `CHANnel<ch>:SKEW:TIME` on page 1565. The skew extension reduces the maximum number of acquisitions in the memory.

Suffix:

<ch>
1..4
The suffix is irrelevant. The setting affects all active channels.

Parameters:

<ExtendSkew>
OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Extend user skew" on page 124

27.8.12 AUX OUT

CALibration:SOURce:FREQuency 1567
CALibration:SOURce:STATe 1567

CALibration:SOURce:FREQuency <Frequency>

Frequency value and waveform type of the internal calibration source, which is output at the [Aux Out] connector.

Parameters:

<Frequency> KHZ7900 | MHZ10 | KHZ15800 | MHZ31_25 | KHZ31600 | KHZ63200 | GHZ1 | MHZ250MB | MHZ250mb | GHZ1_20DB | MHZ62 | MHZ125 | MHZ250 | MHZ500 | KHZ505500 | MHZ1R | MHZ31R | MHZ31_25R | MHZ498S | MHZ1257_2S | MHZ2491S | MHZ4060S | MHZ4350S | MHZ4810S | MHZ4991S | MHZ5940S | MHZ1000S | MHZ10 | MHZ31_25 | MHZ250MB | MHZ250mb | GHZ1_20DB | GHZ1

MHZ10
10 MHz square wave

MHZ31_25 | GHZ1 | MHZ250MB
31.25 MHz, 1 GHz, 250 MHz sine waves generated by the mainboard.
MHZ250MB = MHZ250mb

GHZ1_20DB
Clinched sine wave with indicated frequency, generated by the frontend.

GHZ1
1 GHz sine wave generated by the mainboard.

*RST: GHZ1

Example:
```
CAL:SOUR:FREQ GHZ1
CAL:SOUR:STAT ON
```
The commands activate the 1 GHz reference frequency.

Usage: Asynchronous command

Manual operation: See "Activate 1GHz Reference" on page 125

CALibration:SOURce:STATe <State>

Defines the state of the internal calibration source.

Parameters:

<State> OFF | ON

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Activate 1GHz Reference" on page 125

27.8.13 High definition mode

HDEFinition:STATe....1568
HDEFinition:BWIDth....1568
HDEFinition:RESolution?....1568
FORMat:BORDer....1569

HDEFinition:STATe <State>

Activates the high definition mode of the instrument.

Parameters:

<State> OFF | ON

ON: high definition mode, up to 16 bit digital resolution
OFF: normal oscilloscope mode

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 134

HDEFinition:BWIDth <Bandwidth>

Sets the filter bandwidth for the high definition mode.

Parameters:

<Bandwidth> Range: 10000 to max. 2 GHz, depending on the instrument bandwidth.
Increment: 1000
*RST: 1E+6
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Bandwidth" on page 134

See "Bandwidth" on page 134 for bandwidth limits.

HDEFinition:RESolution?

Returns the resulting digital resolution in high definition mode.

Return values:

<Resolution> Range: 0 to 16
Increment: 0.1
*RST: 0
Default unit: bit

Usage: Query only
Asynchronous command

Manual operation: See "Resolution" on page 135

FORMat:BORDer <ByteOrder>

Sets the endianess.

The command is only relevant for raw data export in high definition mode (16 bit word length).

Parameters:

<ByteOrder> LSBFirst | MSBFirst

LSB first: little endian, least significant byte first
MSB first: big endian, most significant byte first

*RST: LSBFirst

Usage: Asynchronous command

Manual operation: See "Byte order" on page 1408

27.8.14 Reference clock

Commands are related to the external reference input on the rear panel, and the output of the OCXO reference signal.

SENSe[:ROSCillator]:SOURce 1569
SENSe[:ROSCillator]:EXTernal:FREQuency 1569

SENSe[:ROSCillator]:SOURce <RefSource>

Enables the use of the external reference signal instead of the internal OCXO reference.

Parameters:

<RefSource> INTernal | EXTernal

*RST: INTernal

Usage: Asynchronous command

Manual operation: See "Use external reference" on page 125

SENSe[:ROSCillator]:EXTernal:FREQuency <ExternalRef>

Sets the frequency of an external reference input signal that is connected to the external reference input on the rear panel.

Parameters:

<ExternalRef> *RST: 10E+6
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "External reference" on page 125

27.9 Trigger

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

27.9.1 Basic trigger settings

TRIGger<t>:SOURce[:SELect]....1571
TRIGger<t>:TYPE....1572
TRIGger<t>:LEVel<n>[:VALue]....1573
TRIGger<t>:FINDlevel....1573
DISPlay:TRIGger:LINes....1574

TRIGger<t>:SOURce[:SELect] <SourceDetailed>

Selects the source of the trigger signal.

Suffix:

<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger
Available values depend on the selected trigger source. For input channels CHAN1...4, a trigger sequence can be configured.
For all other trigger sources, only suffix 1 is allowed.

Parameters:

<SourceDetailed> CHAN1 | CHANnel1 | CHAN2 | CHANnel2 | CHAN3 | CHANnel3 | CHAN4 | CHANnel4 | EXTernanalog | SBUS | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | LOGIC | MSOB1 | MSOB2 | MSOB3 | MSOB4 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2

CHAN1 = CHANnel1, CHAN2 = CHANnel2, CHAN3 = CHANnel3, CHAN4 = CHANnel4
Input channels

EXTernanalog
External analog signal connected to the External Trigger Input. For this source, only the analog edge trigger is available.

SBUS
Serial bus

D0...D15
Digital channels (option R&S RTO6-B1)
See also: Section 27.19.4, "Trigger settings for digital signals and parallel buses", on page 2836

LOGIc
Logic combination of digital channels, used as trigger source (option R&S RTO6-B1)

MSOB1 | MSOB2 | MSOB3 | MSOB4
Parallel bus (option R&S RTO6-B1)

Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4
Input channels of R&S RT-ZVCmulti-channel power probe. Only available in the A-trigger with trigger type EDGE.

DIFF1 | DIFF2 | COMMON1 | COMMON2
Differential signals

*RST: CHAN1

Usage: Asynchronous command

Manual operation: See "[Source]" on page 36

TRIGger<t>:TYPE <Type>

Selects the trigger type to trigger on analog channels or the external trigger input.

See also: Section 6.3, "Trigger types", on page 199.

To trigger on digital channels and parallel buses, use `TRIGger<t>:PARallel:TYPE`.

Suffix:

<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger
For suffixes 2 and 3, the following trigger types are availabe: EDGE, GLITch, WIDTh, RUNT, WINDow, TIMeout, INTerval, SLEWrate.

Parameters:

<Type> EDGE | GLITch | WIDTh | RUNT | WINDow | TIMeout | INTerval | SLEWrate | STATe | PATTern | ANEDge | SERPattern | TV | | SETHold | | NFC | CDR

Most of the type values are self-explanatory.

SETHold
SETHold: analyzes the relative timimg between a data signal and the synchronous clock signal. For trigger settings, see Section 27.9.10, "Setup & Hold", on page 1587.

ANEDge
Edge trigger for external trigger input. Only available if the trigger source is the external trigger input. This trigger type uses the analog input signal. For trigger settings, see Section 6.10.1, "External trigger setup", on page 242.

SERPattern
Serial pattern for signals with serial data patterns in relation to a clock signal. For trigger settings, see Section 27.9.13, "Serial pattern trigger", on page 1593

NFC
Specific trigger for Near Field Communication testing, requires option R&S RTO6--K11. For NFC trigger settings, see Section 27.22.3, "NFC trigger", on page 2890.

CDR
Trigger on the edges of a recovered clock signal, requires option R&S RTO6--K13. The CDR also uses the trigger level as threshold to detect signal edges. For CDR trigger settings, see Section 27.23.4, "Clock data recovery (hardware-based, option R&S RTO6-K13)", on page 2948.

*RST: EDGE

Usage: Asynchronous command

Manual operation: See "Type" on page 201

TRIGger<t>:LEVel<n>[:VALue] <Level>

Sets the trigger level for the specified event and source.

If the trigger source is serial bus, the trigger level is set by the thresholds in the protocol configuration.

Suffix:

<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

<n> 1..31
Indicates the trigger source:
1...4 = channel 1 to 4
5 = external trigger input
6...11 = not available
12...27 = R&S RT-ZVC input channels
28...31 = differential signals Diff1, Diff2 and Common1, Common2

Parameters:

<Level> Voltage for the trigger level.

Range: Depends on vertical scale, channel offset and other settings. The trigger level must be within the current display range.
Increment: 1E-3
*RST: 0
Default unit: V

Example: `TRIG:LEV5 0.01`
Sets the trigger level for the external trigger signal to 10 mV.
`TRIG2:LEV3 0.2`
Sets the trigger level for the B-event and B-trigger source channel 3 to 200 mV.

Usage: Asynchronous command

Manual operation: See "Level" on page 202

TRIGger<t>:FINDlevel

Sets the trigger level automatically. The command is only relevant if the trigger source is an analog channel CHAN1...4.

Suffix:

<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Usage: Event
Asynchronous command

Manual operation: See "Find level" on page 202

DISPlay:TRIGger:LINes <State>

Hides or shows the trigger levels in the diagrams.

Parameters:

<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Show trigger lines" on page 230

27.9.2 Edge trigger

TRIGger<t>:EDGE:SLOPe....1574

TRIGger<t>:EDGE:SLOPe <Slope>

Defines the edge for the edge trigger event.

Suffix:

<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:

<Slope> POSitive | NEGative | EITHer
See Section 27.4.3, "Slope parameter", on page 1453.
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Slope" on page 202

27.9.3 Glitch trigger

TRIGger<t>:GLITch:POLarity.... 1574
TRIGger<t>:GLITch:RANGe....1575
TRIGger<t>:GLITch:WIDTh....1575

TRIGger<t>:GLITch:POLarity <Polarity>

Defines the polarity of a pulse, that is the direction of the first pulse slope.

Suffix:

<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:

<Polarity> POSitive | NEGative | EITHer
See Section 27.4.4, "Polarity parameter", on page 1453.
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Polarity" on page 203

TRIGger<t>:GLITch:RANGe <RangeMode>

Selects which glitches are identified: shorter or longer than the width specified using `TRIGger<t>:GLITch:WIDTh`.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<RangeMode> SHORter | LONGer

SHORter
Glitches shorter than the specified width are identified.

LONGer
Glitches longer than the specified width are identified.

*RST: SHORter

Usage: Asynchronous command

Manual operation: See "Range" on page 203

TRIGger<t>:GLITch:WIDTh <Width>

Sets the length of a glitch. The instrument triggers on pulses shorter or longer than this value, depnding on the `TRIGger<t>:GLITch:RANGe` command.

You need to know the expected pulse widths of the circuit to set the glitch width correctly.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<Width> Range: 100E-12 to 10000
Increment: 100E-6
*RST: 1E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Width" on page 203

27.9.4 Width trigger

TRIGger<t>:WIDTh:POLarity....1576
TRIGger<t>:WIDTh:RANGe....1576
TRIGger<t>:WIDTh:WIDTh....1577
TRIGger<t>:WIDTh:DELTa....1577

TRIGger<t>:WIDTh:POLarity <Polarity>

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<Polarity> POSitive | NEGative
See Section 27.4.4, "Polarity parameter", on page 1453.
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Polarity" on page 204

TRIGger<t>:WIDTh:RANGe <RangeMode>

Defines how the range of a pulse width is defined in relation to the width and delta specified using `TRIGger<t>:WIDTh:WIDTh` and `TRIGger<t>:WIDTh:DELTa`, respectively.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<RangeMode> WITHin | OUTSide | SHORter | LONGer

WITHin
Triggers on pulses inside a given range. The range is defined by the width ±delta.

OUTSide
Triggers on pulses outside a given range. The range is defined by the width ±delta.

SHORter
Triggers on pulses shorter than the given width.

LONGer
Triggers on pulses longer than the given width.

*RST: WITHin

Usage: Asynchronous command

Manual operation: See "Range" on page 205

TRIGger<t>:WIDTh:WIDTh <Width>

For the ranges "Within" and "Outside" (defined using `TRIGger<t>:WIDTh:RANGe`), the width defines the center of a range which is defined by the limits "±Delta" (see `TRIGger<t>:WIDTh:DELTa` on page 1577).

For the ranges "Shorter" and "Longer", the width defines the maximum and minimum pulse width, respectively.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<Width>
Range: 100E-12 to 10000
Increment: 100E-9
*RST: 5E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Width" on page 205

TRIGger<t>:WIDTh:DELTa <WidthDelta>

Defines a range around the width value specified using `TRIGger<t>:WIDTh:WIDTh`.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<WidthDelta>
Range: 0 to 432
Increment: 500E-12
*RST: 0
Default unit: s

Usage: Asynchronous command

27.9.5 Runt trigger

TRIGger<t>:RUNT:POLarity 1578
TRIGger<t>:LEVel<n>:RUNT:LOWer 1578
TRIGger<t>:LEVel<n>:RUNT:UPPer 1578
TRIGger<t>:RUNT:RANGe 1578
TRIGger<t>:RUNT:WIDTh 1579
TRIGger<t>:RUNT:DELTa 1579

TRIGger<t>:RUNT:POLarity <Polarity>

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<Polarity> POSitive | NEGative | EITHer
See Section 27.4.4, "Polarity parameter", on page 1453.
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Polarity" on page 203

TRIGger<t>:LEVel<n>:RUNT:LOWer <Level>
TRIGger<t>:LEVel<n>:RUNT:UPPer <Level>

Set the lower and upper voltage thresholds.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

<n> 1..31
Indicates the trigger source:
1...4 = channel 1...4
5...27 = not available
28...31 = differential signals Diff1, Diff2 and Common1, Common2

Parameters:
<Level> Range: -10 to 10
Increment: 1E-3
*RST: Lower = -0.1, upper =0.1
Default unit: V

Usage: Asynchronous command

Manual operation: See "Upper level" on page 206

TRIGger<t>:RUNT:RANGe <Mode>

Defines the time limit of the runt pulse in relation to the `TRIGger<t>:RUNT:WIDTh` and `TRIGger<t>:RUNT:DELTa` settings.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<Mode> ANY | LONGer | SHORter | WITHin | OUTSide

ANY
Triggers on all runts fulfilling the level condition, without time limitation.

LONGer
Triggers on runts longer than the given "Runt width".

SHORter
Triggers on runts shorter than the given "Runt width".

WITHin
Triggers if the runt length is inside a given time range. The range is defined by "Runt width" and "±Delta".

OUTSide
Triggers if the runt length is outside a given time range. The range is defined by "Runt width" and "±Delta".

*RST: ANY

Usage: Asynchronous command

Manual operation: See "Range" on page 206

TRIGger<t>:RUNT:WIDTh <Width>

Defines the upper or lower voltage threshold. This command is not available if `TRIGger<t>:RUNT:RANGe` is set to "ANY".

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<Width>
Range: 100E-12 to 10000
Increment: 100E-9
*RST: 5E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Runt width" on page 207

TRIGger<t>:RUNT:DELTa <WidthDelta>

Defines a range around the runt width specified using `TRIGger<t>:RUNT:WIDTh`. This command is only available if `TRIGger<t>:RUNT:RANGe` is set to "WITHin" or "OUTSide".

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:

<WidthDelta>
Range: 100E-12 to 864
Increment: 100E-9
*RST: 100E-12
Default unit: s

Usage: Asynchronous command

Manual operation: See "±Delta" on page 207

27.9.6 Window trigger

TRIGger<t>:LEVel<n>:WINDow:LOWer 1580
TRIGger<t>:LEVel<n>:WINDow:UPPer 1580
TRIGger<t>:WINDow:RANGe 1580
TRIGger<t>:WINDow:TIME 1581
TRIGger<t>:WINDow:WIDTh 1582
TRIGger<t>:WINDow:DELTa 1582

TRIGger<t>:LEVel<n>:WINDow:LOWer <Level>
TRIGger<t>:LEVel<n>:WINDow:UPPer <Level>

Set the lower and upper voltage limits for the window.

Suffix:

<t>
1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

<n>
1..31
Indicates the trigger source:
1...4 = channel 1...4
5...27 = not available
28...31 = differential signals Diff1, Diff2 and Common1, Common2

Parameters:

<Level>
Range: -10 to 10
Increment: 1E-3
*RST: Lower = -0.1, upper =0.1
Default unit: V

Usage: Asynchronous command

Manual operation: See "Upper level" on page 208

TRIGger<t>:WINDow:RANGe <RangeMode>

Defines the signal run in relation to the window:

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<RangeMode> ENTer | EXIT | WITHin | OUTSide

ENTer
Triggers when the signal crosses the upper or lower level and thus enters the window made up of these two levels.

EXIT
Triggers when the signal leaves the window.

WITHin
Triggers if the signal stays between the upper and lower level for a specified time. The time is defined using the `TRIGger<t>:WINDow:TIME` command.

OUTSide
Triggers if the signal stays above the upper level or below the lower level for a specified time. The time is defined using the `TRIGger<t>:WINDow:TIME` command.

*RST: ENTer

Usage: Asynchronous command

Manual operation: See "Vertical condition" on page 208

TRIGger<t>:WINDow:TIME <TimeRangeMode>

Defines the limit of the window in relation to the time specified using `TRIGger<t>:WINDow:WIDTh` and `TRIGger<t>:WINDow:DELTa`. Time conditioning is available for `TRIGger<t>:WINDow:RANGe`= "WITHin" and "OUTSide".

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<TimeRangeMode> WITHin | OUTSide | SHORter | LONGer

WITHin
Triggers if the signal stays inside or outside the vertical window limits at least for the time *Width - Delta* and for *Width + Delta* at the most.

OUTSide
"Outside" is the opposite definition of "Within". The instrument triggers if the signal stays inside or outside the vertical window limits for a time shorter than *Width - Delta* or longer than *Width + Delta*.

SHORter
Triggers if the signal crosses vertical limits before the specified "Width" time is reached.

LONGer
Triggers if the signal crosses vertical limits before the specified "Width" time is reached.

*RST: WITHin

Usage: Asynchronous command

Manual operation: See "Time condition" on page 208

TRIGger<t>:WINDow:WIDTh <Width>

For the ranges "Within" and "Outside" (defined using `TRIGger<t>:WINDow:RANGe`), the width defines the center of a time range which is defined by the limits "±Delta" (see `TRIGger<t>:WINDow:DELTa` on page 1582).

For the ranges "Shorter" and "Longer", it defines the maximum and minimum time lapse, respectively.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<Width>
Range: 100E-12 to 10000
Increment: 100E-9
*RST: 5E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Width" on page 208

TRIGger<t>:WINDow:DELTa <WidthDelta>

Defines a range around the "Width" value specified using `TRIGger<t>:WINDow:WIDTh`.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<WidthDelta>
Range: 0 to 432
Increment: 500E-12
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "±Delta" on page 209

27.9.7 Timeout trigger

TRIGger<t>:TIMeout:RANGe 1583
TRIGger<t>:TIMeout:TIME 1583

TRIGger<t>:TIMeout:RANGe <TimeoutMode>

Defines the relation of the signal level to the trigger level.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<TimeoutMode> HIGH | LOW | EITHer

HIGH
The signal level stays above the trigger level.

LOW
The signal level stays below the trigger level.

EITHer
The signal level stays above or below the trigger level.

*RST: HIGH

Usage: Asynchronous command

Manual operation: See "Range" on page 209

TRIGger<t>:TIMeout:TIME <Time>

Defines the time limit for the timeout at which the instrument triggers.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<Time> Range: 100E-12 to 10000
Increment: 100E-9
*RST: 100E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Time" on page 210

27.9.8 Interval trigger

TRIGger<t>:INTerval:SLOPe 1584
TRIGger<t>:INTerval:RANGe 1584
TRIGger<t>:INTerval:WIDTh 1584
TRIGger<t>:INTerval:DELTa 1585

TRIGger<t>:INTerval:SLOPe <Slope>

Sets the edge for the trigger. You can analyze the interval between positive edges or between negative edges.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<Slope> POSitive | NEGative

See Section 27.4.3, "Slope parameter", on page 1453.

*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Slope" on page 210

TRIGger<t>:INTerval:RANGe <RangeMode>

Defines the range of an interval in relation to the interval width specified using `TRIGger<t>:INTerval:WIDTh` and `TRIGger<t>:INTerval:DELTa`.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<RangeMode> WITHin | OUTSide | SHORter | LONGer

WITHin
Triggers on pulses inside a given range. The range is defined by the interval width ±delta.

OUTSide
Triggers on pulses outside a given range. The range is defined by the interval width ±delta.

SHORter
Triggers on pulses shorter than the given interval width.

LONGer
Triggers on pulses longer than the given interval width.

*RST: OUTSide

Usage: Asynchronous command

Manual operation: See "Range" on page 210

TRIGger<t>:INTerval:WIDTh <Width>

Defines the time between two pulses.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:

<Width>
Range: 100E-12 to 10000
Increment: 100E-9
*RST: 5E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Interv. width" on page 211

TRIGger<t>:INTerval:DELTa <WidthDelta>

Defines a range around the "Interval width" value specified using `TRIGger<t>:INTerval:WIDTh` on page 1584.

Suffix:

<t>
1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:

<WidthDelta>
Range: 0 to 10
Increment: 100E-9
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "±Delta" on page 211

27.9.9 Slew rate trigger

TRIGger<t>:SLEW:SLOPe....1585
TRIGger<t>:LEVel<n>:SLEW:LOWer....1586
TRIGger<t>:LEVel<n>:SLEW:UPPer....1586
TRIGger<t>:SLEW:RANGe....1586
TRIGger<t>:SLEW:RATE....1587
TRIGger<t>:SLEW:DELTa....1587

TRIGger<t>:SLEW:SLOPe <Slope>

Selects the edge type for the trigger event.

Suffix:

<t>
1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:

<Slope>
POSitive | NEGative | EITHer
See Section 27.4.3, "Slope parameter", on page 1453.
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Slope" on page 202

TRIGger<t>:LEVel<n>:SLEW:LOWer <Level>
TRIGger<t>:LEVel<n>:SLEW:UPPer <Level>

Set the lower and upper voltage thresholds. When the signal crosses a level, the slew rate measurement starts or stops depending on the selected slope.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

<n> 1..31
Indicates the trigger source:
1...4 = channel 1...4
5...27 = not available
28...31 = differential signals Diff1, Diff2 and Common1, Common2

Parameters:
<Level> Range: -10 to 10
Increment: 1E-3
*RST: Lower = -0.1, upper =0.1
Default unit: V

Usage: Asynchronous command

Manual operation: See "Upper level" on page 212

TRIGger<t>:SLEW:RANGe <RangeMode>

Defines the time limit for the slew rate in relation to the upper or lower trigger level (see `TRIGger<t>:SLEW:RATE` on page 1587 and `TRIGger<t>:SLEW:DELTa` on page 1587). The time measurement starts when the signal crosses the first trigger level - the upper or lower level depending on the selected slope - and stops when the signal crosses the second level.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<RangeMode> INSRange | OUTRange | LTHan | GTHan

INSRange
Triggers on pulses inside a given range. The range is defined by the slew rate ±delta.

OUTRange
Triggers on pulses outside a given range. The range is defined by the slew rate ±delta.

LTHan
Triggers on pulses shorter than the given slew rate.

GTHan
Triggers on pulses longer than the given slew rate.
*RST: GTHan

Usage: Asynchronous command

Manual operation: See "Range" on page 212

TRIGger<t>:SLEW:RATE <Time>

For the ranges "Within" and "Outside", the slew rate defines the center of a range which is defined by the limits "±Delta".

For the ranges "Shorter" and "Longer", the slew rate defines the maximum and minimum slew rate limits, respectively. When the signal crosses this level, the slew rate measurement starts or stops depending on the selected slope (see `TRIGger<t>:SLEW:SLOPe` on page 1585).

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<Time> Range: 100E-12 to 10000
Increment: 100E-9
*RST: 100E-12
Default unit: s

Usage: Asynchronous command

Manual operation: See "Slew rate" on page 213

TRIGger<t>:SLEW:DELTa <TimeDelta>

Defines a time range around the slew rate specified using `TRIGger<t>:SLEW:RATE`.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<TimeDelta> Range: 0 to 10
Increment: 100E-9
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "±Delta" on page 213

27.9.10 Setup & Hold

The Setup & Hold trigger is only available for the A-event (Suffix = 1).

TRIGger<t>:SETHold:CSOurce:EDGE....1588
TRIGger<t>:SETHold:CSOurce:LEVel....1588
TRIGger<t>:SETHold:CSOurce[:VALue]....1588
TRIGger<t>:SETHold:HTIMe....1589
TRIGger<t>:SETHold:STIMe....1589
TRIGger<t>:SCOupling....1590

TRIGger<t>:SETHold:CSOurce:EDGE <ClockEdge>

Sets the edge of the clock signal to define the time reference point for the setup and hold time.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<ClockEdge> POSitive | NEGative | EITHer
See Section 27.4.3, "Slope parameter", on page 1453.
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Clock edge" on page 214

TRIGger<t>:SETHold:CSOurce:LEVel <ClockLevel>

Sets the voltage level for the clock signal. Both this command and `TRIGger<t>:SETHold:CSOurce:EDGE` define the starting point for calculation of the setup and hold time.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<ClockLevel> Range: -10 to 10
Increment: 1E-3
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "Clock level" on page 214

TRIGger<t>:SETHold:CSOurce[:VALue] <ClockSource>

Selects the source of the clock signal.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:

<ClockSource> CHAN1 | CHANnel1 | CHAN2 | CHANnel2 | CHAN3 | CHANnel3 | CHAN4 | CHANnel4

CHAN1 = CHANnel1, CHAN2 = CHANnel2, CHAN3 = CHANnel3, CHAN4 = CHANnel4
Input channel of the clock signal

*RST: CHAN1

Usage: Asynchronous command

Manual operation: See "Clock source" on page 214

TRIGger<t>:SETHold:HTIMe <HoldTime>

Sets the minimum time **after** the clock edge while the data signal must stay steady above or below the data level.

The hold time can be negative. In this case, the setup time is always positive. The setup/hold interval starts before the clock edge (setup time) and ends before the clock edge (hold time). If you change the negative hold time, the setup time is adjusted by the intrument.

Suffix:

<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:

<HoldTime> Range: -99.999E-9 to 100E-9
Increment: 1E-9
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "Hold time" on page 215

TRIGger<t>:SETHold:STIMe <SetupTime>

Sets the minimum time **before** the clock edge while the data signal must stay steady above or below the data level.

The setup time can be negative. In this case, the hold time is always positive. The setup/hold interval starts after the clock edge (setup time) and ends after the clock edge (hold time). If you change the negative setup time, the hold time is adjusted by the instrument.

Suffix:

<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:

<SetupTime>
Range: -99.999E-9 to 100E-9
Increment: 1E-9
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "Setup time" on page 215

TRIGger<t>:SCOupling <TrigLevSrcCpl>

Sets the trigger levels of all used channels to the level of the data line (Setup & Hold and serial pattern trigger), clock line (state trigger) or source line (pattern trigger).

Suffix:

<t>
1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:

<TrigLevSrcCpl>
OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Use data level for clock level" on page 215

27.9.11 State trigger

The state trigger combines the edge trigger settings with trigger qualification. It is only available for the A-event (Suffix = 1).

Use the following commands:

- `TRIGger<t>:EDGE:SLOPe` on page 1574
- `TRIGger<t>:LEVel<n>[:VALue]` on page 1573
- `TRIGger<t>:SCOupling` on page 1590
- To define the state, use the `TRIG:QUAL...[ENABle]` and `TRIG:QUAL...LOGic` commands, which are described in Section 27.9.15, "Trigger qualification", on page 1600.

27.9.12 Pattern trigger

The pattern trigger is only available for the A-event (Suffix = 1).

The pattern is defined using the commands:

- `TRIGger<t>:QUALify<n>:A[:ENABle]` on page 1602
- `TRIGger<t>:QUALify<n>:A:LOGic` on page 1602
- `TRIGger<t>:QUALify<n>:AB:LOGic` on page 1603

These are the commands for channel 1, use the similar commands for channels 2, 3, and 4.

TRIGger<t>:PATTern:MODE....1591
TRIGger<t>:PATTern:TIMeout:MODE....1591
TRIGger<t>:PATTern:TIMeout[:TIME]....1592
TRIGger<t>:PATTern:WIDTh:RANGe....1592
TRIGger<t>:PATTern:WIDTh[:WIDTh]....1593
TRIGger<t>:PATTern:WIDTh:DELTa....1593

TRIGger<t>:PATTern:MODE <Mode>

Adds additional time limitation to the pattern definition.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<Mode> OFF | TIMeout | WIDTh

OFF
No time limitation. The event occurs if the pattern condition is fulfilled.

TIMeout
Defines how long the result of the pattern condition must be true or false. The duration of the timeout is defined using `TRIGger<t>:PATTern:TIMeout[:TIME]`.

WIDTh
Defines a time range for keeping up the true result of the pattern condition. The range is defined using `TRIGger<t>:PATTern:WIDTh:RANGe`.

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Additional settings: Timing" on page 218

TRIGger<t>:PATTern:TIMeout:MODE <TimeoutMode>

Defines the condition for the timeout.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<TimeoutMode> HIGH | LOW

HIGH
The result stays high.

LOW
The result stays low.

*RST: HIGH

Usage: Asynchronous command

Manual operation: See "Additional settings: Timing" on page 218

TRIGger<t>:PATTern:TIMeout[:TIME] <Time>

Defines how long the result of the pattern condition must be true or false.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<Time> Range: 100E-12 to 10000
Increment: 100E-9
*RST: 100E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Additional settings: Timing" on page 218

TRIGger<t>:PATTern:WIDTh:RANGe <WidthRangeMode>

Defines how the range of a pulse width is defined for keeping up the true result of the pattern condition. The width and delta are specified using `TRIGger<t>:PATTern:WIDTh[:WIDTh]` and `TRIGger<t>:PATTern:WIDTh:DELTa`, respectively.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<WidthRangeMode> WITHin | OUTSide | SHORter | LONGer

WITHin
Triggers on pulses inside a given range. The range is defined by the width ±delta.

OUTSide
Triggers on pulses outside a given range. The range is defined by the width ±delta.

SHORter
Triggers on pulses shorter than the given width.

LONGer
Triggers on pulses longer than the given width.

*RST: WITHin

Usage: Asynchronous command

Manual operation: See "Additional settings: Timing" on page 218

TRIGger<t>:PATTern:WIDTh[:WIDTh] <Width>

For the ranges "Within" and "Outside" (defined using `TRIGger<t>:PATTern:WIDTh:RANGe`), the width defines the center of a range which is defined by the limits "±Delta" (see `TRIGger<t>:PATTern:WIDTh:DELTa` on page 1593).

For the ranges "Shorter" and "Longer", the width defines the maximum and minimum pulse width, respectively.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<Width>
Range: 100E-12 to 10000
Increment: 100E-9
*RST: 5E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Additional settings: Timing" on page 218

TRIGger<t>:PATTern:WIDTh:DELTa <WidthDelta>

Defines a range around the width value specified using `TRIGger<t>:PATTern:WIDTh[:WIDTh]`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<WidthDelta>
Range: 0 to 432
Increment: 500E-12
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "Additional settings: Timing" on page 218

27.9.13 Serial pattern trigger

The serial pattern trigger is only available for the A-event (Suffix = 1).

TRIGger<t>:SPATtern:CSOurce[:VALue] 1594
TRIGger<t>:SPATtern:CSOurce:EDGE 1594
TRIGger<t>:SPATtern:CSOurce:LEVel 1594
TRIGger<t>:SPATtern:PATTern 1595
TRIGger<t>:SPATtern:REFSource 1595

TRIGger<t>:SPATtern:CSOurce[:VALue] <ClockSource>

Defines the source of the clock signal.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<ClockSource> CHAN1 | CHANNEL1 | CHAN2 | CHANNEL2 | CHAN3 | CHANNEL3 | CHAN4 | CHANNEL4

CHAN1 = CHANnel1, CHAN2 = CHANnel2, CHAN3 = CHANnel3, CHAN4 = CHANnel4
Input channel of the clock signal

*RST: CHAN1

Usage: Asynchronous command

Manual operation: See "Clock source" on page 214

TRIGger<t>:SPATtern:CSOurce:EDGE <ClockEdge>

Together with the clock level (see `TRIGger<t>:SPATtern:CSOurce:LEVel` on page 1594), the clock edge defines the point in time when the state of the data signal is checked.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<ClockEdge> POSitive | NEGative | EITHer

See Section 27.4.3, "Slope parameter", on page 1453.

*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Clock edge" on page 220

TRIGger<t>:SPATtern:CSOurce:LEVel <ClockLevel>

Defines the voltage level for the clock signal.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<ClockLevel> Range: -10 to 10
Increment: 1E-3
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "Clock level " on page 220

TRIGger<t>:SPATtern:PATTern <Pattern>

The pattern contains the bits of the serial data to be found in the data stream. The maximum length of the pattern is 128 bit.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<Pattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Usage: Asynchronous command

Manual operation: See "Pattern" on page 221

TRIGger<t>:SPATtern:REFSource <RefSrc>

Selects if an explicit clock or a CDR signal is used as a reference signal.

Suffix:
<t> 1..3

Parameters:
<RefSrc> CLOCk | CDR
*RST: CDR

Usage: Asynchronous command

Manual operation: See "Clock / CDR" on page 220

27.9.14 TV/Video trigger

The TV or video trigger requires a channel input as trigger source (`TRIGger<t>:SOURce[:SELect]`). It is only available for the A-event (Suffix = 1).

Make sure to set the trigger level - the threshold of the sync pulse - with `TRIGger<t>:LEVel<n>[:VALue]`.

TRIGger<t>:TV:STANdard 1596
TRIGger<t>:TV:MODE 1596
TRIGger<t>:TV:POLarity 1597
TRIGger<t>:TV:LINE 1597
TRIGger<t>:TV:LFIeld 1598
TRIGger<t>:TV:CUSTom:SCANmode 1599

TRIGger<t>:TV:CUSTom:LDURation....1599
TRIGger<t>:TV:CUSTom:STYPe....1599
TRIGger<t>:TV:CUSTom:SDURation....1600

TRIGger<t>:TV:STANdard <Standard>

Sets the TV standard.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<Standard> CUSTom | PAL | PALM | NTSC | SECam | P480L60HZ | P720L30HZ | P720L50HZ | P720L60HZ | I1080L50HZ | I1080L60HZ | P1080L24HZ | P1080L24HZSF | P1080L25HZ | P1080L30HZ | P1080L50HZ | P1080L60HZ

CUSTom
User-defined signal. Configure the signal using:
`TRIGger<t>:TV:CUSTom:SCANmode`
`TRIGger<t>:TV:CUSTom:STYPe`
`TRIGger<t>:TV:CUSTom:LDURation`
`TRIGger<t>:TV:CUSTom:SDURation`

PAL | PALM | NTSC | SECam
SDTV standards. PALM = PAL-M

PxxxxLyyHZ
HDTV standards using progressive scanning (P). xxxx indicates the number of active lines, yy is the frame rate.

IxxxxLxxHZ
HDTV standards using interlaced scanning (I). xxxx indicates the number of active lines, yy is the field rate.

P1080L24HZSF
1080p/24sF is a HDTV standard using progressive segmented frame scanning.

*RST: PAL

Usage: Asynchronous command

Manual operation: See "Standard" on page 222

TRIGger<t>:TV:MODE <Mode>

Selects the lines or fields on which the instrument can trigger. Available modes depend on the scanning system.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<Mode> ALL | ODD | EVEN | ALINe | LINE

ALL
All fields, triggers on the frame start (progressive scanning) or field start (interlaced and progressive segmented frame scanning)

ODD | EVEN
Only available for interlaced scanning and progressive segmented frame scanning. Triggers on the field start of the odd or even field.

ALINe
All lines, triggers on all line starts.

LINE
Triggers on a specified line. To set the line number, use `TRIGger<t>:TV:LINE`. For NTSC signals, set also the field with `TRIGger<t>:TV:LFIeld`.

*RST: ALL

Usage: Asynchronous command

Manual operation: See "Mode" on page 223

TRIGger<t>:TV:POLarity <Polarity>

Sets the polarity of the *signal*. Note that the sync pulse has the opposite polarity, for example, a positive signal has a negative sync pulse.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<Polarity> POSitive | NEGative
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Signal polarity" on page 224

TRIGger<t>:TV:LINE <LineNumber>

Specifies the line number to trigger on. The command is relevant if `TRIGger<t>:TV:MODE` is set to `LINe`.

Usually the lines of the frame are counted beginning from the frame start. For NTSC signals, the lines are counted per field, not per frame. For these signals, set also the field with `TRIGger<t>:TV:LFIeld`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:

<LineNumber> Range: Depends on the standard, see table below
Increment: 1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Line #" on page 223

Standard	Minimum value	Maximum value
PAL	1	625
PAL-M	1	525
NTSC	1	263 in odd field 262 in even field
SECAM	1	625
480p/60 (`P480L60HZ`)	1	525
720p/30 (`P720L30HZ`) 720p/50 (`P720L50HZ`) 720p/60 (`P720L60HZ`)	1	750
1080i/50 (`I1080L50HZ`) 1080i/60 (`I1080L60HZ`) 1080p/24 (`P1080L24HZ`) 1080p/24sF (`P1080L24HZSF`) 1080p/25 (`P1080L25HZ`) 1080p/30 (`P1080L30HZ`) 1080p/50 (`P1080L50HZ`) 1080p/60 (`P1080L60HZ`)	1	1125

TRIGger<t>:TV:LFIeld <LineField>

The commands is only relevant for NTSC signals and sets the field in which the line number is counted.

Suffix:

<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:

<LineField> FIELD1 | FIELD2
FIELD1 = odd field
FIELD2 = even field
*RST: FIELD1

Usage: Asynchronous command

Manual operation: See "Line #" on page 223

TRIGger<t>:TV:CUSTom:SCANmode <ScanMode>

Sets the scanning system. Only relevant if `TRIGger<t>:TV:STANdard` is set to `CUSTom`.

See also: "Scan" on page 225.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<ScanMode> INTerlaced | PROGressive | SEGMented

SEGMented: Progressive segmented frame uses progressive scanning to capture the frame, and interlaced scanning for transmission and display.

*RST: INTerlaced

Usage: Asynchronous command

Manual operation: See "Scan" on page 225

TRIGger<t>:TV:CUSTom:LDURation <LinePeriod>

Sets the duration of a line, the time between two successive sync pulses. Only relevant if `TRIGger<t>:TV:STANdard` is set to `CUSTom`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<LinePeriod> Range: 1E-6 to 500E-6
Increment: 100E-9
*RST: 64E-6
Default unit: s

Usage: Asynchronous command

Manual operation: See "Line period" on page 224

TRIGger<t>:TV:CUSTom:STYPe <SyncPulseType>

Sets the type of the sync pulse. Only relevant if `TRIGger<t>:TV:STANdard` is set to `CUSTom`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<SyncPulseType> BILevel | TRILevel

BILevel
Bi-level sync pulse, usually used in SDTV signals

TRILevel
Tri-level sync pulse, used in HDTV signals

*RST: BILevel

Usage: Asynchronous command

Manual operation: See "Pulse type" on page 224

TRIGger<t>:TV:CUSTom:SDURation <SyncPulseDurat>

Sets the width of the sync pulse. Only relevant if `TRIGger<t>:TV:STANdard` is set to `CUSTom`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<SyncPulseDurat> Range: 100E-9 to 100E-6
Increment: 100E-9
*RST: 4.7E-6
Default unit: s

Usage: Asynchronous command

Manual operation: See "Pulse width" on page 225

27.9.15 Trigger qualification

The A-event can have its own trigger qualification. Qualification is not available for B- and R-events (event suffix m = 2 | 3) and some trigger types.

A suffix defines the trigger type to which the qualification belongs.

Table 27-1: Trigger type suffixes

Suffix	Trigger type
1	EDGE
2	GLITch
3	WIDTh
4	RUNT
5	WINDow
6	TIMeout
7	INTerval
8	Qualification is not supported (SLEWrate)
9	Qualification is not supported (SETHold)

Suffix	Trigger type
10	STATe
11	PATTern
12	qualification is not supported (ANEDge, ext. trigger input)
13	Currently not used
14	Currently not used
15	Qualification is not supported (SERPattern)
16	Qualification is not supported (NFC)
17	Qualification is not supported (TV)
18	Qualification is not supported (CDR)

TRIGger<t>:QUALify<n>:STATe 1601
TRIGger<t>:QUALify<n>:A[:ENABle] 1602
TRIGger<t>:QUALify<n>:B[:ENABle] 1602
TRIGger<t>:QUALify<n>:C[:ENABle] 1602
TRIGger<t>:QUALify<n>:D[:ENABle] 1602
TRIGger<t>:QUALify<n>:A:LOGic 1602
TRIGger<t>:QUALify<n>:B:LOGic 1602
TRIGger<t>:QUALify<n>:C:LOGic 1602
TRIGger<t>:QUALify<n>:D:LOGic 1602
TRIGger<t>:QUALify<n>:AB:LOGic 1603
TRIGger<t>:QUALify<n>:CD:LOGic 1603
TRIGger<t>:QUALify<n>:ABCD:LOGic 1603

TRIGger<t>:QUALify<n>:STATe <AddTrigLogi>

Enables the use of the qualification definition for the selected trigger event.

Suffix:

<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<n> 1..18
Defines the trigger type, see Table 27-1.

Parameters:

<AddTrigLogi> OFF | ON

ON
The qualification expression is considered for the trigger event.

OFF
The qualification expression is ignored for the trigger event.

*RST: OFF

Usage: Asynchronous command

TRIGger<t>:QUALify<n>:A[:ENABle] <State>
TRIGger<t>:QUALify<n>:B[:ENABle] <State>
TRIGger<t>:QUALify<n>:C[:ENABle] <State>
TRIGger<t>:QUALify<n>:D[:ENABle] <State>

The command is relevant for qualification, for pattern trigger and for state trigger.

Select the channels to be considered:

- A[:ENABle]: C1
- B[:ENABle]: C2
- C[:ENABle]: C3
- D[:ENABle]: C4

The trigger source cannot be enabled.

Suffix:

<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<n> 1..18
Trigger type, see Table 27-1.

Parameters:

<State> OFF | ON

ON
The qualification expression is considered.

OFF
The qualification expression is ignored.

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Pattern" on page 217

TRIGger<t>:QUALify<n>:A:LOGic <Operator>
TRIGger<t>:QUALify<n>:B:LOGic <Operator>
TRIGger<t>:QUALify<n>:C:LOGic <Operator>
TRIGger<t>:QUALify<n>:D:LOGic <Operator>

Defines the logic for the indicated channel:

- A: C1
- B: C2
- C: C3
- D: C4

Suffix:

<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<n> 1..18
Trigger type, see Table 27-1.

Parameters:
<Operator> DIRect | HIGH | NOT | LOW

DIRect
Input value remains unchanged

NOT
Input value is inverted

*RST: DIRect

Usage: Asynchronous command

Manual operation: See "Pattern" on page 217

TRIGger<t>:QUALify<n>:AB:LOGic <Operator>
TRIGger<t>:QUALify<n>:CD:LOGic <Operator>
TRIGger<t>:QUALify<n>:ABCD:LOGic <Operator>

Defines the logical combination of the indicated channels after evaluating the previous logical operations:

- AB: CH1 and CH2
- CD: CH3 and CH4
- ABCD: result of AB and CD

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<n> 1..18
Trigger type, see Table 27-1.

Parameters:
<Operator> AND | NAND | OR | NOR

AND
logical AND, conjunctive combination

NAND
logical NOT AND

OR
logical OR, disjunctive combination

NOR
logical NOT OR

*RST: AND

Usage: Asynchronous command

Manual operation: See "Pattern" on page 217

27.9.16 Holdoff

TRIGger<t>:HOLDoff:MODE 1604
TRIGger<t>:HOLDoff:TIME 1605
TRIGger<t>:HOLDoff:EVENts 1605
TRIGger<t>:HOLDoff:MIN 1606
TRIGger<t>:HOLDoff:MAX 1606
TRIGger<t>:HOLDoff:AUTotime? 1607
TRIGger<t>:HOLDoff:SCALing 1607

TRIGger<t>:HOLDoff:MODE <Mode>

Selects the method to define the holdoff condition.

The trigger holdoff defines when the next trigger after the current will be recognized. Thus, it affects the next trigger to occur after the current one. Holdoff helps to obtain stable triggering when the oscilloscope is triggering on undesired events.

Holdoff settings are not available at the following conditions:

- The trigger source is an external trigger input.
- The trigger source is a serial bus.

Suffix:

<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:

<Mode> TIME | EVENts | RANDom | AUTO | OFF

TIME
Defines the holdoff directly as a time period. The next trigger occurs only after the "Holdoff time" has passed (defined using `TRIGger<t>:HOLDoff:TIME`).

EVENts
Defines the holdoff as a number of trigger events. The next trigger occurs only when this number of events is reached. The number of triggers to be skipped is defined using `TRIGger<t>:HOLDoff:EVENts`.

RANDom
Defines the holdoff as a random time limited by `TRIGger<t>:HOLDoff:MIN` on page 1606 and `TRIGger<t>:HOLDoff:MAX` on page 1606. For each acquisition period, the instrument selects a new random holdoff time from the specified range.

AUTO
The holdoff time is calculated automatically based on the current horizontal scale.

OFF
No holdoff

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Holdoff mode" on page 227

TRIGger<t>:HOLDoff:TIME <Time>

Defines the holdoff time period. The next trigger occurs only after this time has passed. The setting is relevant if the holdoff mode is set to TIME.

See also:

- `TRIGger<t>:HOLDoff:MODE`

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<Time> Range: 100E-9 to 10
Increment: 200E-6
*RST: 1E-3
Default unit: s

Example:
```
TRIGger:HOLDoff:MODE TIME
TRIGger:HOLDoff:TIME 1ms
```
The holdoff time is set to 1 ms.

Usage: Asynchronous command

Manual operation: See "Holdoff mode" on page 227

TRIGger<t>:HOLDoff:EVENts <Events>

Defines the number of triggers to be skipped. The next trigger only occurs when this number of events is reached. The setting is relevant if the holdoff mode is set to EVENts.

See also:

- `TRIGger<t>:HOLDoff:MODE`

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<Events> Range: 1 to 2.14748E+9
Increment: 1
*RST: 1

Example:
```
TRIGger:HOLDoff:MODE EVENts
TRIGger:HOLDoff:EVENts 5
```

Usage: Asynchronous command

Manual operation: See "Holdoff mode" on page 227

TRIGger<t>:HOLDoff:MIN <RandomMinTime>

Defines the lower limit for the random time holdoff. The setting is relevant if the holdoff mode is set to RANDom.

See also:

- `TRIGger<t>:HOLDoff:MODE`
- `TRIGger<t>:HOLDoff:MAX`

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<RandomMinTime> Range: 100E-9 to 5
Increment: 200E-6
*RST: 1E-3
Default unit: s

Example:
```
TRIGger:HOLDoff:MODE RANDom
TRIGger:HOLDoff:MIN 1ms
TRIGger:HOLDoff:MAX 2ms
```
The holdoff time is set randomly between 1 ms and 2 ms.

Usage: Asynchronous command

Manual operation: See "Holdoff mode" on page 227

TRIGger<t>:HOLDoff:MAX <RandomMaxTime>

Defines the upper limit for the random time holdoff. The setting is relevant if the holdoff mode is set to RANDom.

See also:

- `TRIGger<t>:HOLDoff:MODE`
- `TRIGger<t>:HOLDoff:MIN`

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<RandomMaxTime> Range: 100E-9 to 10
Increment: 200E-6
*RST: 2E-3
Default unit: s

Usage: Asynchronous command

Manual operation: See "Holdoff mode" on page 227

TRIGger<t>:HOLDoff:AUTotime?

Returns the resulting holdoff time if the holdoff mode is set to AUTO: *Auto time* = *Auto time scaling* * *Horizontal scale*. The auto time scaling factor is defined with `TRIGger<t>:HOLDoff:SCALing`.

See also: `TRIGger<t>:HOLDoff:MODE`

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Return values:
<AutoTime> Holdoff time
Range: 100E-9 to 10
*RST: 1E-3
Default unit: s

Example:
```
TRIGger:HOLDoff:MODE AUTO
TRIGger:HOLDoff:SCALing 0.5
TRIGger:HOLDoff:AUTotime?
1ms
```
Result if the horizontal scale is 1 ns/div

Usage: Query only
Asynchronous command

Manual operation: See "Holdoff mode" on page 227

TRIGger<t>:HOLDoff:SCALing <AutoTimeScl>

Sets the auto time scaling factor the horizontal scale is multipied with: *Auto time* = *Auto time scaling* * *Horizontal scale*. The setting is relevant if the holdoff mode is set to AUTO.

See also:

- `TRIGger<t>:HOLDoff:MODE`
- `TRIGger<t>:HOLDoff:AUTotime?` on page 1607

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<AutoTimeScl> Range: 1E-3 to 1000
Increment: 1
*RST: 0.5

Usage: Asynchronous command

Manual operation: See "Holdoff mode" on page 227

27.9.17 Conditioning

TRIGger<t>:LEVel<n>:NOISe[:STATe] 1608
TRIGger<t>:LEVel<n>:NOISe:MODE 1608
TRIGger<t>:LEVel<n>:NOISe:ABSolute 1609
TRIGger<t>:LEVel<n>:NOISe:PERDivision 1609
TRIGger<t>:LEVel<n>:NOISe:RELative 1610
TRIGger<t>:ANEDge:NREJect 1610

TRIGger<t>:LEVel<n>:NOISe[:STATe] <HysteresisMode>

Selects how the hysteresis is set.

Suffix:

<t> 1..3
Irrelevant, omit the suffix.

<n> 1..31
Indicates the trigger source:
1...4 = channel 1 to 4
5 = external trigger input
6...11 = not available
12...27 = R&S RT-ZVC input channels
28...31 = differential signals Diff1, Diff2 and Common1, Common2

Parameters:

<HysteresisMode> AUTO | MANual

AUTO
This is the recommended mode. The hysteresis is set by the instrument to reject at least the internal noise of the instrument. You can define a higher minimum value using `TRIGger<t>:LEVel<n>:NOISe:ABSolute`.

MANual
The hysteresis is defined directly with `TRIGger<t>:LEVel<n>:NOISe:ABSolute`.

*RST: AUTO

Usage: Asynchronous command

Manual operation: See "Hysteresis mode" on page 229

TRIGger<t>:LEVel<n>:NOISe:MODE <HystMode>

Selects how the hysteresis is set.

Suffix:

<t> 1..3
Irrelevant, omit the suffix.

<n> 1..31
Indicates the trigger source: see TRIGger<t>:LEVel<n>:NOISe[:STATe] on page 1608.

Parameters:
<HystMode> ABS | REL

ABS
The hysteresis is set in absolute values (voltage).

REL
The hysteresis is defined in relative values (div).

*RST: ABS

Usage: Asynchronous command

Manual operation: See "Size mode" on page 229

TRIGger<t>:LEVel<n>:NOISe:ABSolute <HystAbs>

Defines a range in absolute values around the trigger level. If the signal oscillates inside this range and crosses the trigger level thereby, no trigger event occurs.

Suffix:
<t> 1..3
Irrelevant, omit the suffix.

<n> 1..31
Indicates the trigger source: see TRIGger<t>:LEVel<n>:NOISe[:STATe] on page 1608.

Parameters:
<HystAbs> Range: 0 to The value corresponding to full division range. The exact maximum value depends on the selected vertical scale.
Increment: 1E-3
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "Absolute hysteresis" on page 229

TRIGger<t>:LEVel<n>:NOISe:PERDivision <HystInDivs>

Defines a range in divisions around the trigger level. If the signal oscillates inside this range and crosses the trigger level thereby, no trigger event occurs.

Suffix:
<t> 1..3
Irrelevant, omit the suffix.

<n> 1..31
Indicates the trigger source: see TRIGger<t>:LEVel<n>:NOISe[:STATe] on page 1608.

Parameters:

<HystInDivs> Hysteresis size in divisions

Range: 0 to 5
Increment: 0.01
*RST: 0
Default unit: div

Usage: Asynchronous command

Manual operation: See "Relative hysteresis" on page 230

TRIGger<t>:LEVel<n>:NOISe:RELative <HystRel>

Defines a range in percent around the trigger level. If the signal oscillates inside this range and crosses the trigger level thereby, no trigger event occurs.

Suffix:

<t> 1..3
Irrelevant, omit the suffix.

<n> 1..31
Indicates the trigger source: see `TRIGger<t>:LEVel<n>:NOISe[:STATe]` on page 1608.

Parameters:

<HystRel> Hysteresis in %. 10% = 1 div

Range: 0 to 50
Increment: 1
*RST: 0
Default unit: %

Usage: Asynchronous command

Manual operation: See "Relative hysteresis" on page 230

TRIGger<t>:ANEDge:NREJect <NoiseReject>

Enables the noise reject for the external trigger input.

Suffix:

<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:

<NoiseReject> OFF | ON

*RST: OFF

Usage: Asynchronous command

Firmware/software: FW 2.25

Manual operation: See "Noise reject (Extern)" on page 230

27.9.18 Trigger sequence

TRIGger<t>:EVENt[:EVENt] 1611
TRIGger<t>:SEQuence:TYPE 1611
TRIGger<t>:ECOupling 1612
TRIGger<t>:SEQuence:DELay 1612
TRIGger<t>:SEQuence:COUNt 1612
TRIGger<t>:SEQuence:RESet:EVENt 1613
TRIGger<t>:SEQuence:RESet:TIMeout[:ENABle] 1613
TRIGger<t>:SEQuence:RESet:TIMeout:TIME 1613

TRIGger<t>:EVENt[:EVENt] <Class>

Selects, if you want to trigger on a single event, or on a series of events.

Suffix:
<t> 1..3

Parameters:
<Class> SINGle | SEQuence
*RST: SINGle

Usage: Asynchronous command

Manual operation: See "Trigger on" on page 200

TRIGger<t>:SEQuence:TYPE <Sequence>

Selects the type of the sequence. All trigger sequences require that input channels CH1...4 are set as trigger sources for all conditions.

See also: Section 6.8, "Sequence", on page 235.

Suffix:
<t> 1..3
Irrelevant, omit the suffix.

Parameters:
<Sequence> ABR | AZ | ABRZ | AORB | AORBZ

ABR
Triggers if all conditions of A- and B-events, as well as additional delay and reset timeout or R-event (reset) conditions are fulfilled.

AZ
Triggers if the conditions of the A-event and the zone trigger are fulfilled. Additionally, a holdoff condition can be set.

ABRZ
Triggers if all conditions of A- and B-events, reset timeout or R-event (reset) conditions are fulfilled for the defined zone.

AORB
Triggers if the conditions of A-event or the conditions of the B-event are fulfilled.

AORBZ
Triggers if the conditions of A-event or the conditions of the B-event are fulfilled for the defined zone. Additionally, a holdoff condition can be set.

*RST: ABR

Usage: Asynchronous command

Manual operation: See "Sequence" on page 237

TRIGger<t>:ECOupling <TrigLevEvtCpl>

Event coupling of trigger levels: Sets the trigger levels to the values of the indicated event. Thus, channel 1 has one trigger level for all events, channel 2 has one trigger level and so on.

Suffix:
<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

Parameters:
<TrigLevEvtCpl> OFF | ON

*RST: ON

Usage: Asynchronous command

Manual operation: See "Couple sequence thresholds" on page 238

TRIGger<t>:SEQuence:DELay <Delay>

Sets the time the instrument waits after an A-event until it recognizes B-events.

Suffix:
<t> 1..3
Irrelevant, omit the suffix.

Parameters:
<Delay>
Range: 0 to 50
Increment: 1E-12
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "After 1st event wait" on page 237

TRIGger<t>:SEQuence:COUNt <Events>

Sets the number of B-events to be fulfilled after an A-event. The last B-event causes the trigger.

Suffix:
<t> 1..3
Irrelevant, omit the suffix.

Parameters:
<Events> Range: 1 to 2.14748E+9
Increment: 1
*RST: 1

Usage: Asynchronous command

Manual operation: See "2nd event count" on page 237

TRIGger<t>:SEQuence:RESet:EVENt <EnabRstEvt>

If set to ON, the trigger sequence is restarted by the R-event if the specified number of B-event does not occur.

Suffix:
<t> 1..3
Irrelevant, omit the suffix.

Parameters:
<EnabRstEvt> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Reset on event/Reset event" on page 237

TRIGger<t>:SEQuence:RESet:TIMeout[:ENABle] <State>

If set to ON, the instrument waits for the time defined using `TRIGger<t>:SEQuence:RESet:TIMeout:TIME` for the specified number of B-events. If no trigger occurs during that time, the sequence is restarted with the A-event.

Suffix:
<t> 1..3
Irrelevant, omit the suffix.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Reset on timeout/Reset timeout" on page 238

TRIGger<t>:SEQuence:RESet:TIMeout:TIME <ResetTimeout>

The time the instrument waits for the number of B-events specified using `TRIGger<t>:SEQuence:COUNt` before the sequence is restarted with the A-event.

Suffix:
<t> 1..3
Irrelevant, omit the suffix.

Parameters:
<ResetTimeout> Range: 0 to 50
Increment: 1E-12
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "Reset on timeout/Reset timeout" on page 238

27.9.19 Trigger control

TRIGger<t>:MODE 1614
TRIGger<t>:FORCe 1615
TRIGger<t>:OUT:POLarity 1615
TRIGger<t>:OUT:PLENgth 1615
TRIGger<t>:OUT:DELay 1615

TRIGger<t>:MODE <TriggerMode>

Sets the trigger mode which determines the behaviour of the instrument if no trigger occurs.

Suffix:
<t> 1..3
Irrelevant, omit the suffix.

Parameters:
<TriggerMode> AUTO | NORMal | FREerun

AUTO
The instrument triggers repeatedly after a time interval if the trigger conditions are not fulfilled. If a real trigger occurs, it takes precedence. The time interval depends on the time base.

NORMal
The instrument acquires a waveform only if a trigger occurs.

FREerun
The instrument triggers after a very short time interval - faster than in AUTO mode. Real triggers are ignored.

*RST: AUTO

Usage: Asynchronous command

Manual operation: See "[Auto Norm]" on page 36

TRIGger<t>:FORCe

If the acquisition is running in normal mode and no valid trigger occurs, forcing the trigger provokes an immediate single acquisition. Thus you can confirm that a signal is available and use the waveform display to determine how to trigger on it.

Suffix:
<t> 1..3
Irrelevant, omit the suffix.

Usage: Event
Asynchronous command

Manual operation: See "Force Trigger" on page 227

TRIGger<t>:OUT:POLarity <Polarity>

Sets the polarity of the trigger out pulse.

Suffix:
<t> 1..3
Irrelevant, omit the suffix.

Parameters:
<Polarity> POSitive | NEGative
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Trigger out signal setup" on page 232

TRIGger<t>:OUT:PLENgth <PulseLength>

Sets the length of the trigger out pulse.

Suffix:
<t> 1..3
Irrelevant, omit the suffix.

Parameters:
<PulseLength> Range: 4E-9 to 0.06
Increment: 20E-9
*RST: 100E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Trigger out signal setup" on page 232

TRIGger<t>:OUT:DELay <Delay>

Sets the delay of the first pulse edge to the trigger point.

The setting is not available if a mask test or measurement is running and the on-violation event is set to trigger out pulse.

Suffix:
<t> 1..3
Irrelevant, omit the suffix.

Parameters:
<Delay> Range: 800E-9 to 1
Increment: 1E-9
*RST: 800E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Trigger out signal setup" on page 232

27.9.20 Actions on trigger

TRIGger<t>:EVENt:BEEP....1616
TRIGger<t>:EVENt:PRINt....1616
TRIGger<t>:EVENt:RUNexec....1617
TRIGger<t>:EVENt:TRIGgerout....1617
TRIGger<t>:EVENt:WFMSave....1617
TRIGger<t>:EVENt:RESSave....1618

TRIGger<t>:EVENt:BEEP <Beep>

Generates a beep sound if the command is set to `TRIGger`.

Suffix:
<t> 1..3
The suffix is irrelevant.

Parameters:
<Beep> NOACtion | TRIGger
*RST: NOACtion

Usage: Asynchronous command

Manual operation: See "Actions on trigger" on page 231

TRIGger<t>:EVENt:PRINt <Print>

Saves a screenshot at each trigger if the command is set to `TRIGger`.

For screenshot settings, see Section 27.16.8, "Screenshots", on page 1876.

Suffix:
<t> 1..3
The suffix is irrelevant.

Parameters:
<Print> NOACtion | TRIGger
*RST: NOACtion

Usage: Asynchronous command

Manual operation: See "Actions on trigger" on page 231

TRIGger<t>:EVENt:RUNexec <RunExecutable>

Starts an external application if the command is set to `TRIGger`.

Use the following commands to set up the application:

- `EXECutable:NAME` on page 1884
- `EXECutable:PARameter` on page 1885
- `EXECutable:WDIRectory` on page 1885

Suffix:
<t> 1..3
The suffix is irrelevant.

Parameters:
<RunExecutable> NOACtion | TRIGger
*RST: NOACtion

Usage: Asynchronous command

Manual operation: See "Actions on trigger" on page 231

TRIGger<t>:EVENt:TRIGgerout <TrigOutPls>

Sends the trigger out signal to the [Trigger Out] connector if the command is set to `TRIGger` and a trigger occurs.

Suffix:
<t> Irrelevant, omit the suffix.

Parameters:
<TrigOutPls> NOACtion | TRIGger
*RST: NOACtion

Usage: Asynchronous command

Manual operation: See "Actions on trigger" on page 231

TRIGger<t>:EVENt:WFMSave <SaveWfm>

Saves the waveform data to file at each trigger if the command is set to `TRIGger`.

For data export settings, see Section 27.16.4, "Waveform data: export to file", on page 1863

Suffix:
<t> 1..3
The suffix is irrelevant.

Parameters:
<SaveWfm> NOACtion | TRIGger
*RST: NOACtion

Usage: Asynchronous command

Manual operation: See "Actions on trigger" on page 231

TRIGger<t>:EVENt:RESSave <SaveResults>

Starts the export of selected results to file at each trigger if the command is set to `TRIGger`.

Suffix:
<t> 1..3
The suffix is irrelevant.

Parameters:
<SaveResults> NOACtion | TRIGger
*RST: NOACtion

Usage: Asynchronous command

Manual operation: See "Actions on trigger" on page 231

27.9.21 Zone trigger

TRIGger<t>:ZONE:EXPRession[:DEFine] <LogiExpr>

Defines the zone trigger.

Suffix:
<t> 1..3
The suffix is irrelevant.

Parameters:
<LogiExpr> String with the logical expression

Example: Prerequisite: mask tests MT1 and MT2 are defined, and also Zone1.

```
TRIGger:ZONE:EXPRession 'MT1 and MT2 and Zone1'
TRIGger:ZONE:EXPRession?
<-- MT1 and MT2 and Zone1
```

Usage: Asynchronous command

Firmware/software: FW 3.20

Manual operation: See "[Zone]" on page 37

SWTRigger:HISTory <ApplyZnTrigHistory>

Applies the zone trigger condition to the acquisitions in the history memory during history replay.

See: "Apply zone trigger to history" on page 241.

Parameters:
<ApplyZnTrigHistory> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Apply zone trigger to history" on page 241

27.9.22 External trigger input

External trigger signals, which are connected to the external trigger input, can be triggered with an edge trigger.

TRIGger<t>:ANEDge:COUPling <Coupling>

Sets the coupling for the external trigger signal.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<Coupling> DC | DCLimit | AC

DC
Direct connection with 50 Ω termination, passes both DC and AC components of the trigger signal.

DCLimit
Direct connection with 1 MΩ termination, passes both DC and AC components of the trigger signal.

AC
Connection through DC capacitor, removes DC and very low-frequency components.

Usage: Asynchronous command

Manual operation: See "Coupling" on page 243

TRIGger<t>:ANEDge:FILTer <Filter>

Sets a filter for the external trigger signal to reject high or low frequencies.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<Filter> OFF | LFReject | RFReject

OFF
The trigger signal is not filtered.

LFReject
Frequencies higher than the "Cut-off" frequency are rejected, lower frequencies pass the filter.
You can adjust the "Cut-off" frequency using the `TRIGger<t>:ANEDge:CUToff:LOWPass` command, the default is 50 kHz.

RFReject
Frequencies below the "Cut-off" frequency are rejected, higher frequencies pass the filter.
You can adjust the "Cut-off" frequency using the `TRIGger<t>:ANEDge:CUToff:HIGHpass` command, the default is 50 kHz.

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Filter" on page 243

TRIGger<t>:ANEDge:CUToff:HIGHpass <AnalogCutOffHP>

Frequencies below the "Cut-off" frequency are rejected, higher frequencies pass the filter.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<AnalogCutOffHP> KHZ5 | KHZ50 | MHZ50

Cut-off frequency

KHZ5
5 kHz

KHZ50
50 kHz

MHZ50
50 MHz

*RST: KHZ50

Usage: Asynchronous command

Manual operation: See "Filter" on page 243

TRIGger<t>:ANEDge:CUToff:LOWPass <AnalogCutOffLP>

Frequencies higher than the "Cut-off" frequency are rejected, lower frequencies pass the filter.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<AnalogCutOffLP> KHZ5 | KHZ50 | MHZ50

KHZ5
5 kHz

KHZ50
50 kHz

MHZ50
50 MHz

*RST: KHZ50

Usage: Asynchronous command

Manual operation: See "Filter" on page 243

TRIGger<t>:ANEDge:GND <Ground>

Connects the analog signal to the ground.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<Ground> OFF | ON

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Ground" on page 243

TRIGger<t>:ANEDge:SLOPe <Slope>

Sets the edge for the trigger event.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<Slope> POSitive | NEGative
See Section 27.4.3, "Slope parameter", on page 1453.

*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Slope" on page 202

TRIGger<t>:EXTern:OVERload <Overload>

The query returns the overload status of the external trigger input.

`:TRIGger:EXTern:OVERload 0` confirms the information in the message box, it has same effect as OK.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<Overload> OFF | ON

ON | 1
Iindicates an overload of the probe

OFF | 0
In a query: no overlaod.
Ssetting: confirms the information in the message box

*RST: OFF

Usage: Asynchronous command

27.9.23 Acquisition info

ACQuire:CURRent?

Shows the current number of acquisitions that have been acquired.

Return values:
<CurrAcqCnt> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only
Asynchronous command

27.10 Waveform analysis

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

LAYout:ZOOM:ADD
<NodeName>,<ParentType>,<InsertBefore>,<XStart>,<XStop>,<YStart>,<YStop>,<NewZoomName>

Adds a new zoom diagram based on the specified waveform.

For numerical values, the input of a unit is not supported for this command.

Setting parameters:

<NodeName> String with the name of diagram to be zoomed

<ParentType> VERTical, OFF
The new zoom diagram is displayed below the original one.

<InsertBefore> OFF
Position of the zoom diagram, depending on `ParentType`

<XStart> Defines the x-value at the beginning of the zoom area.

<XStop> Defines the x-value at the end of the zoom area.

<YStart> Defines the y-value at the beginning of the zoom area.

<YStop> Defines the y-value at the end of the zoom area.

<NewZoomName> String with the name of the new zoom diagram.

Example: `LAYout:ZOOM:ADD 'Diagram1', VERT, OFF, -10e-9, 20e-9, -0.1, 0.05, 'MyZoom1'`
Creates the zoom diagram 'MyZoom1' for 'Diagram1'.

Example: See Section 27.3.1.2, "Creating zoom diagrams", on page 1427

Usage: Setting only
Asynchronous command

Manual operation: See "Standard zoom" on page 57

LAYout:ZOOM:ADDCoupled <ZoomName>,<XOffset>,<YOffset>,<NewZoomName>
LAYout:ZOOM:ADDCoupled? <NewZoomName>

Creates a new zoom diagram based on the settings of an existing zoom area for the same source.

For numerical values, the input of a unit is not supported for this command.

Setting parameters:

<ZoomName> Defines the name of the zoom diagram to be copied.

<XOffset> Defines an offset to the existing zoom area in x direction.

<YOffset> Defines an offset to the existing zoom area in y direction.

Parameters for setting and query:

<NewZoomName> Defines the name of the new zoom diagram.

Usage: Asynchronous command

Manual operation: See "Coupled zoom" on page 57

LAYout:ZOOM:POSCoupling <DiagGroupNme>,<ZmDiagNme>,<PosiCpl>
LAYout:ZOOM:POSCoupling? <DiagGroupNme>,<ZmDiagNme>

Enables or disables the position coupling of coupled zooms. If position coupling is enabled and one zoom area is moved, the other coupled zoom areas are moved, too, and keep their distance.

Parameters:

<PosiCpl> OFF | ON
*RST: OFF

Parameters for setting and query:
<DiagGroupNme> String with the name of the diagram on which the zoom is based

<ZmDiagNme> String with the name of the zoom diagram

Usage: Asynchronous command

Manual operation: See "Position coupling" on page 250

LAYout:ZOOM:HORZ:MODE <DiagGroupNme>,<ZmDiagNme>,<Mode>
LAYout:ZOOM:HORZ:MODE? <DiagGroupNme>,<ZmDiagNme>

Defines whether absolute or relative values are used to specify the x-axis values. Since the zoom area refers to the active signal, relative values ensure that the zoom area remains the same.

Parameters:
<Mode> ABS | REL

Mode used to specify the x-axis values of the zoom area.

*RST: ABS

Parameters for setting and query:
<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Example: See Section 27.3.1.2, "Creating zoom diagrams", on page 1427

Usage: Asynchronous command

Manual operation: See "X mode" on page 250

LAYout:ZOOM:HORZ:ABSolute:POSition
<DiagGroupNme>,<ZmDiagNme>,<Position>
LAYout:ZOOM:HORZ:ABSolute:POSition? <DiagGroupNme>,<ZmDiagNme>

Defines the x-value of the centerpoint of the zoom area.

For numerical values, the input of a unit is not supported for this command.

Parameters:
<Position> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0.01

Parameters for setting and query:
<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Usage: Asynchronous command

Manual operation: See "X position" on page 249

LAYout:ZOOM:HORZ:ABSolute:SPAN <DiagGroupNme>,<ZmDiagNme>,<Span>
LAYout:ZOOM:HORZ:ABSolute:SPAN? <DiagGroupNme>,<ZmDiagNme>

Defines the width of the zoom area.

For numerical values, the input of a unit is not supported for this command.

Parameters:

<Span>
Range: 0 to 100E+24
Increment: 0.01
*RST: 0.01

Parameters for setting and query:

<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Usage: Asynchronous command

Manual operation: See "X range" on page 250

LAYout:ZOOM:HORZ:ABSolute:STARt <DiagGroupNme>,<ZmDiagNme>,<Start>
LAYout:ZOOM:HORZ:ABSolute:STARt? <DiagGroupNme>,<ZmDiagNme>

Defines the lower limit of the zoom area on the x-axis.

For numerical values, the input of a unit is not supported for this command.

Parameters:

<Start>
Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0

Parameters for setting and query:

<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Usage: Asynchronous command

Manual operation: See "X start" on page 249

LAYout:ZOOM:HORZ:ABSolute:STOP <DiagGroupNme>,<ZmDiagNme>,<Stop>
LAYout:ZOOM:HORZ:ABSolute:STOP? <DiagGroupNme>,<ZmDiagNme>

Defines the upper limit of the zoom area on the x-axis.

For numerical values, the input of a unit is not supported for this command.

Parameters:

<Stop>
Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0.01

Parameters for setting and query:

<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Usage: Asynchronous command

Manual operation: See "X stop" on page 249

LAYout:ZOOM:HORZ:RELative:POSition
<DiagGroupNme>,<ZmDiagNme>,<RelPosi>
LAYout:ZOOM:HORZ:RELative:POSition? <DiagGroupNme>,<ZmDiagNme>

Defines the x-value of the centerpoint of the zoom area.

Parameters:
<RelPosi> Relative position of the centerpoint (x-value)

Range: 0 to 100
Increment: 0.1
*RST: 100
Default unit: %

Parameters for setting and query:
<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Example: See Section 27.3.1.2, "Creating zoom diagrams", on page 1427

Usage: Asynchronous command

Manual operation: See "X position" on page 249

LAYout:ZOOM:HORZ:RELative:SPAN
<DiagGroupNme>,<ZmDiagNme>,<RelativeSpan>
LAYout:ZOOM:HORZ:RELative:SPAN? <DiagGroupNme>,<ZmDiagNme>

Defines the width of the zoom area.

Parameters:
<RelativeSpan> Range: 1E-15 to 100
Increment: 0.1
*RST: 1
Default unit: %

Parameters for setting and query:
<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Example: See Section 27.3.1.2, "Creating zoom diagrams", on page 1427

Usage: Asynchronous command

Manual operation: See "X range" on page 250

LAYout:ZOOM:HORZ:RELative:STARt
<DiagGroupNme>,<ZmDiagNme>,<RelativeStart>
LAYout:ZOOM:HORZ:RELative:STARt? <DiagGroupNme>,<ZmDiagNme>

Defines the lower limit of the zoom area on the x-axis.

Parameters:
<RelativeStart> Range: 0 to 100
Increment: 0.1
*RST: 0
Default unit: %

Parameters for setting and query:
<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Usage: Asynchronous command

Manual operation: See "X start" on page 249

LAYout:ZOOM:HORZ:RELative:STOP
<DiagGroupNme>,<ZmDiagNme>,<RelativeStop>
LAYout:ZOOM:HORZ:RELative:STOP? <DiagGroupNme>,<ZmDiagNme>

Defines the upper limit of the zoom area on the x-axis.

Parameters:
<RelativeStop> Range: 0 to 100
Increment: 0.1
*RST: 100
Default unit: %

Parameters for setting and query:
<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Usage: Asynchronous command

Manual operation: See "X stop" on page 249

LAYout:ZOOM:VERTical:MODE <DiagGroupNme>,<ZmDiagNme>,<Mode>
LAYout:ZOOM:VERTical:MODE? <DiagGroupNme>,<ZmDiagNme>

Defines whether absolute or relative values are used to specify the y-axis values. Since the zoom area refers to the active signal, relative values ensure that the zoom area remains the same.

Parameters:
<Mode> ABS | REL
Mode used to specify the y-axis values of the zoom area.
*RST: ABS

Parameters for setting and query:
<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Usage: Asynchronous command

Manual operation: See "Y mode" on page 250

LAYout:ZOOM:VERTical:ABSolute:POSition
<DiagGroupNme>,<ZmDiagNme>,<Position>
LAYout:ZOOM:VERTical:ABSolute:POSition? <DiagGroupNme>,<ZmDiagNme>

Defines the y-value of the centerpoint of the zoom area.

For numerical values, the input of a unit is not supported for this command.

Parameters:
<Position> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0.01

Parameters for setting and query:
<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Usage: Asynchronous command

Manual operation: See "Y position" on page 250

LAYout:ZOOM:VERTical:ABSolute:SPAN <DiagGroupNme>,<ZmDiagNme>,<Span>
LAYout:ZOOM:VERTical:ABSolute:SPAN? <DiagGroupNme>,<ZmDiagNme>

Defines the height of the zoom area.

For numerical values, the input of a unit is not supported for this command.

Parameters:
<Span> Range: 0 to 100E+24
Increment: 0.01
*RST: 0.01

Parameters for setting and query:
<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Usage: Asynchronous command

Manual operation: See "Y range" on page 250

LAYout:ZOOM:VERTical:ABSolute:STARt <DiagGroupNme>,<ZmDiagNme>,<Start>
LAYout:ZOOM:VERTical:ABSolute:STARt? <DiagGroupNme>,<ZmDiagNme>

Defines the lower limit of the zoom area on the y-axis.

For numerical values, the input of a unit is not supported for this command.

Parameters:

<Start>
Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0

Parameters for setting and query:

<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Usage: Asynchronous command

Manual operation: See "Y start" on page 249

LAYout:ZOOM:VERTical:ABSolute:STOP <DiagGroupNme>,<ZmDiagNme>,<Stop>
LAYout:ZOOM:VERTical:ABSolute:STOP? <DiagGroupNme>,<ZmDiagNme>

Defines the upper limit of the zoom area on the y-axis.

For numerical values, the input of a unit is not supported for this command.

Parameters:

<Stop>
Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0.01

Parameters for setting and query:

<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Usage: Asynchronous command

Manual operation: See "Y stop" on page 249

LAYout:ZOOM:VERTical:RELative:POSition
<DiagGroupNme>,<ZmDiagNme>,<RelPosi>
LAYout:ZOOM:VERTical:RELative:POSition? <DiagGroupNme>,<ZmDiagNme>

Defines the y-value of the centerpoint of the zoom area.

Parameters:

<RelPosi> Relative position of the centerpoint (y-value)

Range: 0 to 100
Increment: 0.1
*RST: 100
Default unit: %

Parameters for setting and query:

<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Usage: Asynchronous command

Manual operation: See "Y position" on page 250

LAYout:ZOOM:VERTical:RELative:SPAN
<DiagGroupNme>,<ZmDiagNme>,<RelativeSpan>
LAYout:ZOOM:VERTical:RELative:SPAN? <DiagGroupNme>,<ZmDiagNme>

Defines the height of the zoom area.

Parameters:

<RelativeSpan>
Range: 1E-15 to 100
Increment: 0.1
*RST: 1
Default unit: %

Parameters for setting and query:

<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Usage: Asynchronous command

Manual operation: See "Y range" on page 250

LAYout:ZOOM:VERTical:RELative:STARt
<DiagGroupNme>,<ZmDiagNme>,<RelativeStart>
LAYout:ZOOM:VERTical:RELative:STARt? <DiagGroupNme>,<ZmDiagNme>

Defines the lower limit of the zoom area on the y-axis.

Parameters:

<RelativeStart>
Range: 0 to 100
Increment: 0.1
*RST: 0
Default unit: %

Parameters for setting and query:

<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Usage: Asynchronous command

Manual operation: See "Y start" on page 249

LAYout:ZOOM:VERTical:RELative:STOP
<DiagGroupNme>,<ZmDiagNme>,<RelativeStop>
LAYout:ZOOM:VERTical:RELative:STOP? <DiagGroupNme>,<ZmDiagNme>

Defines the upper limit of the zoom area on the y-axis.

Parameters:

<RelativeStop> Range: 0 to 100
Increment: 0.1
*RST: 100
Default unit: %

Parameters for setting and query:

<DiagGroupNme> Name of the diagram on which the zoom area is based.

<ZmDiagNme> Name of the zoom diagram

Usage: Asynchronous command

Manual operation: See "Y stop" on page 249

LAYout:ZOOM:REMove <Diagram>,<Zoom>

Removes the specified zoom diagram.

Setting parameters:

<Diagram> Name of the diagram on which the zoom area is based.

<Zoom> Name of the zoom diagram

Example: See Section 27.3.1.2, "Creating zoom diagrams", on page 1427

Usage: Setting only
Asynchronous command

27.10.2 Reference waveforms

- Reference....1632
- Scaling....1635
- Waveform data export....1639
- Import of multichannel waveform data....1641
- CDR reference files....1642

27.10.2.1 Reference

REFCurve<rc>:SOURce....1632
REFCurve<rc>:STATe....1633
REFCurve<rc>:NAME....1633
REFCurve<rc>:OPEN....1634
REFCurve<rc>:UPDate....1634
REFCurve<rc>:SAVE....1634
REFCurve<rc>:DELete....1634
REFCurve<rc>:CLEar....1634

REFCurve<rc>:SOURce <Source>

Selects the source waveform to be used as a reference.

Suffix:
<rc> 1..4
Reference waveform

Parameters:
<Source> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | R1 | R2 | R3 | R4 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2 | LANE1 | LANE2 | LANE3 | LANE4

Source of the reference waveform, see Section 27.4.2, "Waveform parameter", on page 1451

*RST: C1W1

Usage: Asynchronous command

Manual operation: See "Source" on page 258

REFCurve<rc>:STATe <State>

If enabled, the reference waveform is displayed in the diagram.

Suffix:
<rc> 1..4
Reference waveform

Parameters:
<State> OFF | ON

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Show" on page 258

REFCurve<rc>:NAME <Name>

Defines the name of the reference waveform file to be loaded, saved or deleted.

Suffix:
<rc> 1..4
Reference waveform

Parameters:
<Name> Path and name of the file that contains the reference waveform or to which the reference waveform is to be stored (`.xml` or `.bin` format), enclosed in single quotes.

Usage: Asynchronous command

REFCurve<rc>:OPEN

Loads the reference waveform file selected by `REFCurve<rc>:NAME` on page 1633.

Suffix:
<rc> 1..4
Reference waveform

Usage: Setting only

Manual operation: See "File" on page 259

REFCurve<rc>:UPDate

Copies the selected source waveform (see `REFCurve<rc>:SOURce` on page 1632) with all its settings to the memory of the reference waveform.

Suffix:
<rc> 1..4
Reference waveform

Usage: Event

Manual operation: See "Update" on page 259

REFCurve<rc>:SAVE

Saves the reference waveform to the file selected by `REFCurve<rc>:NAME` on page 1633.

Suffix:
<rc> 1..4
Reference waveform

Usage: Setting only

Manual operation: See "File" on page 259

REFCurve<rc>:DELete

Deletes the reference waveform file selected by `REFCurve<rc>:NAME` on page 1633.

Suffix:
<rc> 1..4
Reference waveform

Usage: Setting only

Manual operation: See "File" on page 259

REFCurve<rc>:CLEar

The selected reference waveform is no longer displayed, its memory is deleted.

Suffix:
<rc> 1..4
Reference waveform

Usage: Event
Asynchronous command

Manual operation: See "Clear" on page 259

27.10.2.2 Scaling

REFCurve<rc>:RESTore....1635

REFCurve<rc>:RESCale:HORizontal:FACTor....1639
REFCurve<rc>:RESCale:HORizontal:POSition....1639

REFCurve<rc>:RESTore

Resets the time scale and the reference point to the original values of the reference waveform.

Suffix:
<rc> 1..4
Reference waveform

Usage: Event
Asynchronous command

Manual operation: See "Restore Settings" on page 260

REFCurve<rc>:VMODe <VerticalMode>

Selects the coupling of vertical settings.

Suffix:
<rc> 1..4
Reference waveform

Parameters:
<VerticalMode> COUPled | INDependent

COUPled
Vertical position and scale of the source are used.

INDependent
Scaling and position can be set specific to the reference waveform.

*RST: INDependent

Usage: Asynchronous command

Manual operation: See "Mode" on page 260

REFCurve<rc>:SCALe <VerticalScale>

Sets the scale factor for the reference waveform if vertical scaling is set to "Independent" (see `REFCurve<rc>:VMODe` on page 1635).

Suffix:
<rc> 1..4
Reference waveform

Parameters:
<VerticalScale>
Range: 1E-15 to 100E+24
Increment: 10E-6
*RST: 0.5
Default unit: V/div

Usage: Asynchronous command

Manual operation: See "Scale" on page 261

REFCurve<rc>:POSition <VertPosi>

Moves the reference waveform and its horizontal axis up or down in the diagram, if vertical scaling is set to "Independent" (see `REFCurve<rc>:VMODe` on page 1635).

Suffix:
<rc> 1..4
Reference waveform

Parameters:
<VertPosi>
Range: -100E+24 to 100E+24
Increment: 0.02
*RST: 0
Default unit: div

Usage: Asynchronous command

Manual operation: See "Position" on page 261

REFCurve<rc>:OFFSet?

Returns the vertical offset of the indicated reference waveform.

Suffix:
<rc> 1..4
Reference waveform

Return values:

<VerticalOffset> Range: -100E+24 to 100E+24
Increment: 1E-6
*RST: 0
Default unit: V

Usage: Query only
Asynchronous command

REFCurve<rc>:TOORignal

Restores the original vertical settings of the reference waveform (vertical scale, position, and offset), if vertical scaling is set to independent (see `REFCurve<rc>:VMODe` on page 1635).

Suffix:

<rc> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Set to original" on page 261

REFCurve<rc>:RESCale:VERTical:STATe <State>

Enables and disables the vertical stretching. Stretching changes the display of the waveform independent of the vertical scale and position.

Suffix:

<rc> 1..4
Reference waveform

Parameters:

<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 262

REFCurve<rc>:RESCale:VERTical:FACTor <ScaleFactor>

Defines the vertical stretching factor. A factor greater than 1 stretches the waveform vertically, a factor lower than 1 compresses the curve.

Suffix:

<rc> 1..4
Reference waveform

Parameters:

<ScaleFactor> Range: -1E+6 to 1E+6
Increment: 0.1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Factor" on page 262

REFCurve<rc>:RESCale:VERTical:OFFSet <Offset>

Moves the reference waveform vertically. Like vertical offset of channel waveforms, the offset of a reference waveform is subtracted from the measured value.

Suffix:
<rc> 1..4
Reference waveform

Parameters:
<Offset> Negative values shift the waveform up, positive values shift it down.

Range: -100E+24 to 100E+24
Increment: 1E-6
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "Offset" on page 262

REFCurve<rc>:HMODe <HorizontalMode>

Selects the coupling of horizontal settings.

Suffix:
<rc> 1..4
Reference waveform

Parameters:
<HorizontalMode> ORIGinal | COUPled

ORIGinal
Horizontal scaling and reference point of the source waveform are used.

COUPled
The current horizontal settings of the diagram are used.

*RST: ORIGinal

Usage: Asynchronous command

Manual operation: See "Mode" on page 262

REFCurve<rc>:RESCale:HORizontal:STATe <State>

Enables and disables the horizontal stretching.

Stretching changes the display of the waveform independent of the horizontal settings of the source waveform and of the horizontal diagram settings.

Suffix:
<rc> 1..4
Reference waveform

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 262

REFCurve<rc>:RESCale:HORizontal:FACTor <ScaleFactor>

A factor greater than 1 stretches the waveform horizontally, a factor lower than 1 compresses the curve.

Suffix:
<rc> 1..4
Reference waveform

Parameters:
<ScaleFactor> Range: 1E-6 to 1E+6
Increment: 0.1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Factor" on page 262

REFCurve<rc>:RESCale:HORizontal:POSition <Offset>

Moves the waveform horizontally. Enter a value with a time unit suitable for the time scale of the diagram. Positive values shift the waveform to the right, negative values shift it to the left.

Suffix:
<rc> 1..4

Parameters:
<Offset> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "Position" on page 263

27.10.2.3 Waveform data export

Commands for saving waveform data to file are described in Section 27.16.4, "Waveform data: export to file", on page 1863.

Commands for reference waveforms are listed below.

REFCurve<rc>:DATA:STYPe?....1640
REFCurve<rc>:DATA:HEADer?....1640
REFCurve<rc>:DATA[:VALues]?....1640

REFCurve<rc>:DATA:STYPe?

Returns the signal type of the source of the reference waveform.

Suffix:
<rc> 1..4
Reference waveform

Return values:
<SignalType> SOUR | SPEC | CORR | NONE
SOURce = normal signal
SPECtrum = FFT spectrum, specific math signal
CORRelation = correlated signal, specific math signal
NONE = undefined

Usage: Query only

REFCurve<rc>:DATA:HEADer?

Returns information on the reference waveform.

Suffix:
<rc> 1..4
Reference waveform

Return values:
<Start> 1. header value: time of the first sample in s

<Stop> 2. header value: time of the last sample in s

<RecordLength> 3. header value: record length of the waveform in samples

<ValuesPerSample> 4. header value: number of values per sample. For reference waveforms the number is always 1.

Example:
```
REFC:DATA:HEAD?
-9.477E-008,9.477E-008,200000,1
```
The start time of the data is -9.477E-008 = - 94,77 ns, and the end time of the data is 9.477E-008 = 94,77 ns. The data stream has 200000 values with one value per sample.

Usage: Query only

REFCurve<rc>:DATA[:VALues]?

Returns the data of the channel waveform points for transmission from the instrument to the controlling computer. The data can be used in MATLAB, for example.

To set the export format, use `FORMat[:DATA]`. Supported formats are: ASCii | REAL,32 | INT,8 | INT,16.

You can retrieve only Y-values, or X- and Y-values. Use `EXPort:WAVeform:INCXvalues` to define this.

Suffix:
<rc> 1..4
Reference waveform

Return values:
<Data> List of comma-separated values according to the format and content settings.

Usage: Query only

27.10.2.4 Import of multichannel waveform data

Commands for saving waveform data to file are described in Section 27.16.4, "Waveform data: export to file", on page 1863.

Commands for reference waveforms are listed below.

REFCurve<rc>:MULTichannel:NAME 1641
REFCurve<rc>:MULTichannel:IMPort 1641
REFCurve<rc>:MULTichannel:OPEN 1642

REFCurve<rc>:MULTichannel:NAME <MltChImptPath>

Defines the path and the file to be imported. If not path is given, the default path `C:\Users\Public\Public Documents\Rohde-Schwarz\RTx\RefWaveforms` is used.

Suffix:
<rc> 1..4
The suffix is irrelevant.

Parameters:
<MltChImptPath> String with path and filename

Example: See `REFCurve<rc>:MULTichannel:IMPort` on page 1641.

Usage: Asynchronous command

REFCurve<rc>:MULTichannel:IMPort <MltChImptWfmSel>

Assigns a waveform from the multichannel file to a reference waveform. To import all waveforms that are in the file, you must assign each waveform to another reference waveform.

Suffix:
<rc> 1..4
Selects the reference waveform.

Parameters:

<MltChImptWfmSel> NONE | NONE | WF1 | WAVeform1 | WF2 | WAVeform2 | WF3 | WAVeform3 | WF4 | WAVeform4

WF1 = WAVeform1, WF2 = WAVeform2, WF3 = WAVeform3, WF4 = WAVeform4
Selects the waveform in the export file.

*RST: NONE

Example: Prerequisite: file `RefCurve_2016-02-16_01.bin` is a multi-channel export with at least WF1, WF3 and WF4.

```
REFCurve:MULTichannel:NAME 'RefCurve_2016-02-16_01.bin'
REFCurve1:MULTichannel:IMPort WF1
REFCurve2:MULTichannel:IMPort WF3
REFCurve3:MULTichannel:IMPort WF4
REFCurve:MULTichannel:OPEN
```

Usage: Asynchronous command

Firmware/software: FW 3.20

REFCurve<rc>:MULTichannel:OPEN

Loads the waveform data to the reference waveforms.

Suffix:

<rc> 1..4
The suffix is irrelevant.

Example: See `REFCurve<rc>:MULTichannel:IMPort` on page 1641.

Usage: Event
Asynchronous command

27.10.2.5 CDR reference files

The following commands query the settings of the reference waveform, after a `RefCurve.CDR.*` file has been recalled.

REFCurve<rc>:CDR:ALGorithm? 1642
REFCurve<rc>:CDR:BITRate? 1643
REFCurve<rc>:CDR:BWIDth? 1643
REFCurve<rc>:CDR:RELBwidth? 1643
REFCurve<rc>:CDR:SAMTime? 1644
REFCurve<rc>:CDR:SOURce? 1644

REFCurve<rc>:CDR:ALGorithm?

Queries the algorithm of the CDR reference waveform.

Suffix:

<rc> 1..4
Reference waveform

Return values:
<Algorithm> CFRequency | FF
`CFRequency`: constant frequency
`FF`: feed forward
*RST: FF

Usage: Query only
Asynchronous command

Manual operation: See "CDR" on page 1215

REFCurve<rc>:CDR:BITRate?

Queries the bit rate of the CDR reference waveform.

Suffix:
<rc> 1..4
Reference waveform

Return values:
<Bitrate> Range: 1000 to 40E+9
Increment: 10
*RST: 1E+9
Default unit: bps

Usage: Query only
Asynchronous command

Manual operation: See "CDR" on page 1215

REFCurve<rc>:CDR:BWIDth?

Queries the bandwidth of the CDR reference waveform.

Suffix:
<rc> 1..4
Reference waveform

Return values:
<Bandwidth> Range: 20E+3 to 10E+6
Increment: 10
*RST: 599.88E+3
Default unit: Hz

Usage: Query only
Asynchronous command

Manual operation: See "CDR" on page 1215

REFCurve<rc>:CDR:RELBwidth?

Queries the relative bandwidth of the CDR reference waveform.

Suffix:
<rc> 1..4
Reference waveform

Return values:
<RelBw> Range: 500 to 3000
Increment: 1
*RST: 1667

Usage: Query only
Asynchronous command

Manual operation: See "CDR" on page 1215

REFCurve<rc>:CDR:SAMTime?

Queries the sampling time of the CDR reference waveform.

Suffix:
<rc> 1..4
Reference waveform

Return values:
<SamplingTime> Range: 0 to 1
Increment: 0.01
*RST: 0.5
Default unit: UI

Usage: Query only
Asynchronous command

Manual operation: See "CDR" on page 1215

REFCurve<rc>:CDR:SOURce?

Queries the analog source of the CDR refernce waveform.

Suffix:
<rc> 1..4
Reference waveform

Return values:
<AnalogSource> C1 | C2 | C3 | C4 | DIFF1 | DIFF2 | COMMON1 | COMMON2
*RST: C1

Usage: Query only
Asynchronous command

27.10.3 Mathematics

CALCulate:MATH<m>[:EXPRession][:DEFine] 1645
CALCulate:MATH<m>:STATe 1645
CALCulate:MATH<m>:ENVSelection 1645

CALCulate:MATH<m>:ARIThmetics....1646
CALCulate:MATH<m>:VERTical:OFFSet....1647
CALCulate:MATH<m>:VERTical:RANGe....1647
CALCulate:MATH<m>:VERTical:SCALe....1648
CALCulate:MATH<m>:VERTical:MAXimum....1648
CALCulate:MATH<m>:DATA:STYPe?....1648
CALCulate:MATH<m>:DATA:HEADer?....1649
CALCulate:MATH<m>:DATA[:VALues]?....1649

CALCulate:MATH<m>[:EXPRession][:DEFine] <RemComplExpr>

Defines the math expression to be calculated for the specified math channel.

For an overview of corresponding expressions for the available keys in the formula editor, see Section 7.3.4, "Equation", on page 268.

Suffix:
<m> 1..8
Selects the math waveform.

Parameters:
<RemComplExpr> String with regular expression for calculation

Example: `CALC:MATH 'Ch1Wfm1*Ch2Wfm1'`
Defines the multiplication of waveforms Ch1Wfm1 and Ch2Wfm1.

Usage: Asynchronous command

CALCulate:MATH<m>:STATe <State>

Enables the math waveform display.

Suffix:
<m> 1..8
math waveform

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Display" on page 265

CALCulate:MATH<m>:ENVSelection <EnvelopeCurve>

Selects the upper or lower part of the waveform for mathematic calculation, or a combination of both.

The setting is relevant for waveforms with waveform arithmetic mode "Envelope" or with "Peak detect" decimation. All mathematic operations - except for derivation - can be applied to envelope waveforms and waveforms with "Peak detect" decimation.

Suffix:
<m> 1..8
Selects the math waveform.

Parameters:
<EnvelopeCurve> MIN | MAX | BOTH
*RST: BOTH

Usage: Asynchronous command

Firmware/software: FW 2.25

Manual operation: See "Envelope selection" on page 265

CALCulate:MATH<m>:ARIThmetics <Arithmetics>

Selects the method to build the resulting math waveform from consecutive acquisitions. The processing is similar to the waveform arithmetics - instead of the acquired waveforms the results of the mathematic formula are used to create envelope, average and RMS.

To define the reset condition for arithmetics calculation, use `ACQuire:ARESet:MODE`.

Suffix:
<m> 1..8
Selects the math waveform.

Parameters:
<Arithmetics> OFF | ENVelope | AVERage | RMS | MINHold | MAXHold

Waveform arithmetic mode

OFF
The math waveform is built according to the mathematic formula.

ENVelope
Detects the minimum and maximum math values in a sample interval over a number of acquisitions.

AVERage
Calculates the average from the math data of the current acquisition and a number of acquisitions before. To define the number of acquisitions, use `ACQuire:COUNt`.

RMS
The resulting math waveform is the root mean square of the current acquisition and a number of acquisitions before. The result is the average power spectrum. Number of acquisitions: `ACQuire:COUNt`

MAXHold
Determines the maximum result for each input value from the math data of the current acquisition and a number of acquisitions before. To define the number of acquisitions, use `ACQuire:COUNt`.

MINHold
Determines the minimum result for each input value from the math data of the current acquisition and a number of acquisitions before. To define the number of acquisitions, use `ACQuire:COUNt`.

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Mode" on page 285

CALCulate:MATH<m>:VERTical:OFFSet <VerticalOffset>

Sets a voltage offset to adjust the vertical position of the math function on the screen.

Suffix:
<m> 1..8
Math waveform

Parameters:
<VerticalOffset> Negative values move the waveform au, positive values move it down.

Range: -100E+12 to 100E+12
Increment: 0.01
*RST: 0
Default unit: div

Usage: Asynchronous command

Manual operation: See "Vertical offset" on page 284

CALCulate:MATH<m>:VERTical:RANGe <VerticalRange>

Defines the range of FFT values to be displayed.

Suffix:
<m> 1..8
Math waveform

Parameters:
<VerticalRange> Range: 0 to 1E+15
Increment: 0.01
*RST: 0
Default unit: div

Usage: Asynchronous command

Manual operation: See "Vertical range" on page 410

CALCulate:MATH<m>:VERTical:SCALe <VerticalScale>

Defines the scale of the y-axis in the math function diagram. The value is defined as "V per division", e.g. *50V/div*. In this case, the horizontal grid lines are displayed in intervals of 50 V.

Suffix:
<m> 1..8
Math waveform

Parameters:
<VerticalScale> Range: 1E-12 to 100E+12
Increment: 10E-6
*RST: 0.5
Default unit: V/div

Usage: Asynchronous command

Manual operation: See "Vertical scale" on page 284

CALCulate:MATH<m>:VERTical:MAXimum <VerticalMax>

Defines the maximum value on y-axis for spectrum displays.

Suffix:
<m> 1..8

Parameters:
<VerticalMax> Range: -1E+15 to 1E+15
Increment: 0.01
*RST: 0
Default unit: div

Usage: Asynchronous command

Manual operation: See "Vertical maximum" on page 410

CALCulate:MATH<m>:DATA:STYPe?

Returns the signal type of the source of the math waveform.

Suffix:
<m> 1..8
Selects the math waveform.

Return values:
<SignalType> SOUR | SPEC | CORR | MEAS | NONE
SOURce = normal signal
SPECtrum = FFT spectrum, specific math signal
CORRelation = correlated signal, specific math signal
MEAsurement = result of a measurement
NONE = undefined

Usage: Query only
Asynchronous command

CALCulate:MATH<m>:DATA:HEADer?

Returns the header of math waveform data. The header contains attributes of the waveform.

Suffix:
<m> 1..8
Selects the math waveform.

Return values:
<Start> 1. header value: time of the first sample in s

<Stop> 2. header value: time of the last sample in s

<RecordLength> 3. header value: record length of the waveform in samples

<ValuesPerSample> 4. header value: number of values per sample. For most waveforms the result is 1, for peak detect and envelope waveforms it is 2. If the number is 2, the number of returned values is twice the number of samples (record length).

Example:
```
CALC:MATH1:DATA:HEAD?
-9.477E-008,9.477E-008,200000,1
```
The start time of the data is -9.477E-008 = - 94,77 ns, and the end time of the data is 9.477E-008 = 94,77 ns. The data stream has 200000 values with one value per sample.

Usage: Query only

CALCulate:MATH<m>:DATA[:VALues]?

Returns the data of the math waveform points for transmission from the instrument to the controlling computer. The data can be used in MATLAB, for example.

To set the export format, use `FORMat[:DATA]`. Supported formats are: ASCii | REAL,32 | INT,8 | INT,16.

You can retrieve only Y-values, or X- and Y-values. Use `EXPort:WAVeform:INCXvalues` to define this.

Suffix:
<m> 1..8
Selects the math waveform.

Return values:
<Data> List of comma-separated values according to the format and content settings.

Usage: Query only

27.10.4 Waveform histograms

LAYout:HISTogram:ADD
<HistogramName>,<Source>,<XStart>,<XStop>,<YStart>,<YStop>,<Relative>,<Orientation>

Defines and displays a new histogram for the specified source.

Note: To define the mode of the histogram (vertical or horizontal), use the `LAYout:HISTogram:MODE` command.

For numerical values, the input of a unit is not supported for this command.

Setting parameters:

<HistogramName> String defining the histogram name which is used to refer to the histogram by other functions.

<Source> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | MRESult1 | MRESult2 | MRESult3 | MRESult4 | MRESult5 | MRESult6 | MRESult7 | MRESult8 | SG1TL1 | SG1TL2 | SG2TL1 | SG2TL2 | SG3TL1 | SG3TL2 | SG4TL1 | SG4TL2 | SG5TL2 | SG6TL1 | SG6TL2 | SG7TL1 | SG7TL2 | SG8TL1 | SG8TL2 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2 | EYE1 | EYE2 | EYE3 | EYE4 | SRHist1 | SDHist1 | TJHist1 | DJHist1 | DDJHist1 | PJOHist1 | RJOHist1 | SEYE1 | SRHist2 | SDHist2 | TJHist2 | DJHist2 | DDJHist2 | PJHOist2 | RJOHist2 | SEYE2 | TNHist1 | DNHist1 | DDNHist1 | PNHist1 | RNOHist1 | TNHist2 | DNHist2 | DDNHist2 | PNHist2 | RNOHist2 | PJDHist1 | BUJHist1 | RJHist1 | PJDHist2 | BUJHist2 | RJHist2 | PNDHist1 | BUNHist1 | RNHist1 | PNDHist2 | BUNHist2 | RNHist2 | LANE1 | LANE2 | LANE3 | LANE4

Data source of the histogram, see Section 27.4.2, "Waveform parameter", on page 1451

<XStart> Defines the start value of the x-value range.

<XStop> Defines the stop value of the x-value range.

<YStart> Defines the start value of the y-value range.

<YStop> Defines the stop value of the y-value range.

<Relative> OFF | ON

Defines whether relative or absolute values are used for the value range definition.

<Orientation> VERTical | HORizontal

Example: See "Creating and reading histograms" on page 1429

Usage: Setting only
Asynchronous command

LAYout:HISTogram:ENABle <HistogramName>,<State>
LAYout:HISTogram:ENABle? <HistogramName>

Enables or disables the histogram evaluation and display.

Parameters:
<State> OFF | ON
*RST: ON

Parameters for setting and query:
<HistogramName> String parameter, name of the histogram as defined with `LAYout:HISTogram:ADD`.

Usage: Asynchronous command

Manual operation: See "Enable" on page 289

LAYout:HISTogram:HORZ:ABSolute:STARt <HistogramName>,<Start>
LAYout:HISTogram:HORZ:ABSolute:STARt? <HistogramName>

Defines the horizontal start value of the histogram.

For numerical values, the input of a unit is not supported for this command.

Parameters:
<Start> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0

Parameters for setting and query:
<HistogramName>

Usage: Asynchronous command

Manual operation: See "Start, Stop (Horizontal)" on page 290

LAYout:HISTogram:HORZ:ABSolute:STOP <HistogramName>,<Stop>
LAYout:HISTogram:HORZ:ABSolute:STOP? <HistogramName>

Defines the horizontal stop value of the histogram.

For numerical values, the input of a unit is not supported for this command.

Parameters:
<Stop> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0.01

Parameters for setting and query:
<HistogramName>

Usage: Asynchronous command

Manual operation: See "Start, Stop (Horizontal)" on page 290

LAYout:HISTogram:HORZ:MODE <HistogramName>,<Mode>
LAYout:HISTogram:HORZ:MODE? <HistogramName>

Defines or queries whether the value range limits are entered as absolute or relative values.

Parameters:
<Mode> ABS | REL
*RST: ABS

Parameters for setting and query:
<HistogramName>

Usage: Asynchronous command

Manual operation: See "Mode (Horizontal / Vertical)" on page 290

LAYout:HISTogram:HORZ:RELative:STARt <HistogramName>,<RelativeStart>
LAYout:HISTogram:HORZ:RELative:STARt? <HistogramName>

Defines the horizontal start value of the histogram.

Parameters:
<RelativeStart> Range: 0 to 100
Increment: 0.1
*RST: 0
Default unit: %

Parameters for setting and query:
<HistogramName>

Usage: Asynchronous command

Manual operation: See "Start, Stop (Horizontal)" on page 290

LAYout:HISTogram:HORZ:RELative:STOP <HistogramName>,<RelativeStop>
LAYout:HISTogram:HORZ:RELative:STOP? <HistogramName>

Defines the horizontal stop value of the histogram.

Parameters:
<RelativeStop> Range: 0 to 100
Increment: 0.1
*RST: 100
Default unit: %

Parameters for setting and query:
<HistogramName>

Usage: Asynchronous command

Manual operation: See "Start, Stop (Horizontal)" on page 290

LAYout:HISTogram:MODE <HistogramName>,<Mode>
LAYout:HISTogram:MODE? <HistogramName>

Defines or queries the type of histogram.

Parameters:
<Mode> VERTical | HORizontal

VERTical
Amplitude histogram (horizontal bars across amplitude)

HORizontal
Time or frequency histogram (vertical bars over time/frequencies)

*RST: VERTical

Parameters for setting and query:
<HistogramName> The name of the histogram as defined using `LAYout:HISTogram:ADD` on page 1650.

Usage: Asynchronous command

Manual operation: See "Mode" on page 289

LAYout:HISTogram:REMove <Name>

Removes the specified histogram.

Setting parameters:
<Name>

Usage: Setting only
Asynchronous command

LAYout:HISTogram:RESet <HistogramName>

Resets the values to begin a new histogram.

Setting parameters:
<HistogramName>

Usage: Event
Asynchronous command

Manual operation: See "Reset" on page 289

LAYout:HISTogram:SOURce <HistogramName>,<Source>
LAYout:HISTogram:SOURce? <HistogramName>

Defines the waveform which is the source of the histogram.

Parameters:

<Source> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | MRESult1 | MRESult2 | MRESult3 | MRESult4 | MRESult5 | MRESult6 | MRESult7 | MRESult8 | SG1TL1 | SG1TL2 | SG2TL1 | SG2TL2 | SG3TL1 | SG3TL2 | SG4TL1 | SG4TL2 | SG5TL2 | SG6TL1 | SG6TL2 | SG7TL1 | SG7TL2 | SG8TL1 | SG8TL2 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2 | EYE1 | EYE2 | EYE3 | EYE4 | SRHist1 | SDHist1 | TJHist1 | DJHist1 | DDJHist1 | PJOHist1 | RJOHist1 | SEYE1 | SRHist2 | SDHist2 | TJHist2 | DJHist2 | DDJHist2 | PJOHist2 | RJOHist2 | SEYE2 | TNHist1 | DNHist1 | DDNHist1 | PNHist1 | RNOHist1 | TNHist2 | DNHist2 | DDNHist2 | PNHist2 | RNOHist2 | PJDHist1 | BUJHist1 | RJHist1 | RJHist2 | PNDHist1 | BUNHist1 | RNHist1 | PNDHist2 | BUNHist2 | RNHist2 | LANE1 | LANE2 | LANE3 | LANE4

Waveform source of the histogram, see Section 27.4.2, "Waveform parameter", on page 1451.
If the histogram source is a measurement, the histogram shows the density distribution of the results for the selected measurement (`MEAS<m>:MAIN`).

Parameters for setting and query:

<HistogramName> String parameter

Usage: Asynchronous command

Manual operation: See "Source" on page 289

LAYout:HISTogram:VERTical:ABSolute:STARt <HistogramName>,<Start>
LAYout:HISTogram:VERTical:ABSolute:STARt? <HistogramName>

Defines the vertical start value of the histogram.

For numerical values, the input of a unit is not supported for this command.

Parameters:

<Start>
Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0

Parameters for setting and query:

<HistogramName>

Usage: Asynchronous command

Manual operation: See "Start, Stop (Vertical)" on page 290

LAYout:HISTogram:VERTical:ABSolute:STOP <HistogramName>,<Stop>
LAYout:HISTogram:VERTical:ABSolute:STOP? <HistogramName>

Defines the vertical stop value of the histogram.

For numerical values, the input of a unit is not supported for this command.

Parameters:
<Stop>
Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0.01

Parameters for setting and query:
<HistogramName>

Usage: Asynchronous command

Manual operation: See "Start, Stop (Vertical)" on page 290

LAYout:HISTogram:VERTical:MODE <HistogramName>,<Mode>
LAYout:HISTogram:VERTical:MODE? <HistogramName>

Defines or queries whether the value range limits are entered as absolute or relative values.

Parameters:
<Mode>
ABS | REL
*RST: ABS

Parameters for setting and query:
<HistogramName>

Usage: Asynchronous command

Manual operation: See "Mode (Horizontal / Vertical)" on page 290

LAYout:HISTogram:VERTical:RELative:STARt <HistogramName>,<RelativeStart>
LAYout:HISTogram:VERTical:RELative:STARt? <HistogramName>

Defines the vertical start value of the histogram.

Parameters:
<RelativeStart>
Range: 0 to 100
Increment: 0.1
*RST: 0
Default unit: %

Parameters for setting and query:
<HistogramName>

Usage: Asynchronous command

Manual operation: See "Start, Stop (Vertical)" on page 290

LAYout:HISTogram:VERTical:RELative:STOP <HistogramName>,<RelativeStop>
LAYout:HISTogram:VERTical:RELative:STOP? <HistogramName>

Defines the vertical stop value of the histogram.

Parameters:
<RelativeStop>
Range: 0 to 100
Increment: 0.1
*RST: 100
Default unit: %

Parameters for setting and query:
<HistogramName>

Usage: Asynchronous command

Manual operation: See "Start, Stop (Vertical)" on page 290

27.10.5 History

CHANnel<ch>[:WAVeform<wf>]:HISTory[:STATe] 1656
ACQuire:AVAilable? 1657
CHANnel<ch>[:WAVeform<wf>]:HISTory:CURRent 1657
CHANnel<ch>[:WAVeform<wf>]:HISTory:STARt 1657
CHANnel<ch>[:WAVeform<wf>]:HISTory:STOP 1658
CHANnel<ch>[:WAVeform<wf>]:HISTory:TPACq 1658
CHANnel<ch>[:WAVeform<wf>]:HISTory:PLAY 1659
CHANnel<ch>[:WAVeform<wf>]:HISTory:REPLay 1659
CHANnel<ch>[:WAVeform<wf>]:HISTory:TSDate? 1659
CHANnel<ch>[:WAVeform<wf>]:HISTory:TSABsolute? 1660
CHANnel<ch>[:WAVeform<wf>]:HISTory:TSRelative? 1660
CHANnel<ch>[:WAVeform<wf>]:HISTory:TSRReference? 1660

CHANnel<ch>[:WAVeform<wf>]:HISTory[:STATe] <State>

Enables or disables the history display.

Suffix:
<ch> 1..4
Selects the input channel.

<wf> 1..3
Selects the waveform. If [:WAVeform<n>] is omitted, waveform 1 is adressed.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Show history / Export history" on page 292

ACQuire:AVAilable?

Returns the number of acquisitions that is saved in the memory. This number of acquisitions is available for history viewing. It is also the number of acquisitions in a fast segmentation acquisition series.

Return values:
<AcquisitionCount> Range: 0 to 4294967295

Usage: Query only
Asynchronous command

CHANnel<ch>[:WAVeform<wf>]:HISTory:CURRent <CurrAcqIdx>

Accesses a particular acquisition in the memory to display it. The query returns the index of the segment that is shown.

Suffix:
<ch> 1..4
Selects the input channel.

<wf> 1..3
Selects the waveform. If [:WAVeform<n>] is omitted, waveform 1 is adressed.

Parameters:
<CurrAcqIdx> History index: the newest segment has the index "0", older segments have a negative index: -(n-1), ... -1 , 0
where n is the number of acquired segments.

Range: -2.14748E+9 to -(n-1)
Increment: 1

Example:
```
CHAN2:HIST:STAT ON
CHAN2:HIST:CURR -1
*OPC
```
Displays the acquisition before last from the history.

Usage: Asynchronous command

Manual operation: See "Current acquisition" on page 293

CHANnel<ch>[:WAVeform<wf>]:HISTory:STARt <StrtAcqIdx>

Sets the index of the oldest history acquisition for the history viewing.

Suffix:
<ch> 1..4
Selects the input channel.

<wf> 1..3
Selects the waveform. If [:WAVeform<n>] is omitted, waveform 1 is adressed.

Parameters:

<StrtAcqIdx> The start index is always negative.

Range: -2.14748E+9 to -(n-1)
Increment: 1

Usage: Asynchronous command

Manual operation: See "Start acquisition" on page 293

CHANnel<ch>[:WAVeform<wf>]:HISTory:STOP <StpAcqIdx>

Sets the index of the latest segment to be displayed in the history viewer.

Suffix:

<ch> 1..4
Selects the input channel.

<wf> 1..3
Selects the waveform. If [:WAVeform<n>] is omitted, waveform 1 is adressed.

Parameters:

<StpAcqIdx> Index of the stop acquisition. The newest acquisition always has the index "0".

Range: -2.14748E+9 to -(n-1)
Increment: 1

Usage: Asynchronous command

Manual operation: See "Stop acquisition" on page 293

CHANnel<ch>[:WAVeform<wf>]:HISTory:TPACq <TimePerAcq>

Sets the display time for one acquisition. The shorter the time, the faster is the replay.

Suffix:

<ch> 1..4
Selects the input channel.

<wf> 1..3
Selects the waveform. If [:WAVeform<n>] is omitted, waveform 1 is adressed.

Parameters:

<TimePerAcq> Range: 40E-6 to 10
Increment: 1
*RST: 0.05
Default unit: s

Usage: Asynchronous command

Manual operation: See "Display time" on page 293

CHANnel<ch>[:WAVeform<wf>]:HISTory:PLAY

Starts and stops the replay of the history waveforms.

Suffix:
<ch> 1..4
Selects the input channel.

<wf> 1..3
Selects the waveform. If [:WAVeform<n>] is omitted, waveform 1 is adressed.

Usage: Event
Asynchronous command

Manual operation: See "Start export" on page 488

CHANnel<ch>[:WAVeform<wf>]:HISTory:REPLay <AutoRepeat>

If ON, the replay of the history waveform sequence repeats automatically. Otherwise, the replay stops at the stop index set with `CHANnel<ch>[:WAVeform<wf>]:HISTory:STOP`.

Suffix:
<ch> 1..4
Selects the input channel.

<wf> 1..3
Selects the waveform. If [:WAVeform<n>] is omitted, waveform 1 is adressed.

Parameters:
<AutoRepeat> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Auto repeat" on page 293

CHANnel<ch>[:WAVeform<wf>]:HISTory:TSDate?

Returns the date of the current acquisition that is shown in the history viewer (`CHANnel<ch>[:WAVeform<wf>]:HISTory:CURRent`).

Suffix:
<ch> 1..4
Selects the input channel.

<wf> 1..3
Selects the waveform. If [:WAVeform<n>] is omitted, waveform 1 is adressed.

Return values:
<DateAbsString> String with date of the current acquisition (absolute time)

Usage: Query only
Asynchronous command

Manual operation: See "Time stamp" on page 294

CHANnel<ch>[:WAVeform<wf>]:HISTory:TSABsolute?

Returns the abolsute daytime of the current acquisition that is shown in the history viewer (`CHANnel<ch>[:WAVeform<wf>]:HISTory:CURRent`).

Suffix:
<ch> 1..4
Selects the input channel.

<wf> 1..3
Selects the waveform. If [:WAVeform<n>] is omitted, waveform 1 is adressed.

Return values:
<TimeAbsString> String containing the time and unit

Usage: Query only
Asynchronous command

Manual operation: See "Time stamp" on page 294

CHANnel<ch>[:WAVeform<wf>]:HISTory:TSRelative?

Returns the relative time of the current acquisition - the time difference to the newest acquisition (index = 0).

See also: (`CHANnel<ch>[:WAVeform<wf>]:HISTory:CURRent`).

Suffix:
<ch> 1..4
Selects the input channel.

<wf> 1..3
Selects the waveform. If [:WAVeform<n>] is omitted, waveform 1 is adressed.

Return values:
<TimeRelativ> Range: -100E+24 to 100E+24
Default unit: s

Usage: Query only
Asynchronous command

Manual operation: See "Time stamp" on page 294

CHANnel<ch>[:WAVeform<wf>]:HISTory:TSRReference?

Returns the relative time of the currently selected acquisition and the internal reference time (horizontal alignment) in history view with respect to the acquisition with index 0.

Suffix:
<ch> 1..4
Selects the input channel.

<wf> 1..3
Selects the waveform. If [:WAVeform<n>] is omitted, waveform 1 is adressed.

Return values:
<TimeRelIntRef> Range: -100E+24 to 100E+24
Increment: 1
*RST: 0
Default unit: s

Usage: Query only
Asynchronous command

Firmware/software: Version 2.70

Manual operation: See "Time stamp" on page 294

27.10.6 XY-Diagram

WAVeform<wf>:XYCurve:RATio....1661
WAVeform<wf>:XYCurve:STATe....1661
WAVeform<wf>:XYCurve:SWAP....1662
LAYout:SIGNal:AXIS....1662
WAVeform<wf>:XYCurve:XSOurce....1662
WAVeform<wf>:XYCurve:YSOurce....1663

WAVeform<wf>:XYCurve:RATio <CstXYRatio>

If enabled, the x- and y-axes maintain a constant ratio in the diagram.

Suffix:
<wf> 1..4
XY-diagram

Parameters:
<CstXYRatio> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Constant XY-ratio" on page 298

WAVeform<wf>:XYCurve:STATe <State>

Activates an XY-waveform.

Suffix:
<wf> 1..4
XY-diagram

Parameters:

<State> OFF | ON

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 297

WAVeform<wf>:XYCurve:SWAP

Replaces the source of the x-axis with the source of the y-axis and vice versa.

Suffix:

<wf> 1..4
XY-diagram

Usage: Event
Asynchronous command

Manual operation: See "Swap XY" on page 298

LAYout:SIGNal:AXIS <DiagramName>,<Source>,<XSource>

Creates an XY-diagram by adding a second waveform to a diagram.

Setting parameters:

<DiagramName> String with the name of the diagram where the waveform is added.

<Source> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | SG1TL1 | SG1TL2 | SG2TL1 | SG2TL2 | SG3TL1 | SG3TL2 | SG4TL1 | SG4TL2 | SG5TL1 | SG5TL2 | SG6TL1 | SG6TL2 | SG7TL1 | SG7TL2 | SG8TL1 | SG8TL2 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2

Waveform to be added, see Section 27.4.2, "Waveform parameter", on page 1451

<XSource> OFF | ON

If on, the added waveform is assigned to the x-axis.
If off, it is assigned to the y-axis.

Usage: Setting only
Asynchronous command

WAVeform<wf>:XYCurve:XSOurce <XSource>

Defines the signal source that supplies the x-values of the XY-diagram.

Suffix:
<wf> 1..4
XY-diagram

Parameters:
<XSource> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | SG1TL1 | SG1TL2 | SG2TL1 | SG2TL2 | SG3TL1 | SG3TL2 | SG4TL1 | SG5TL1 | SG5TL2 | SG6TL1 | SG6TL2 | SG7TL1 | SG7TL2 | SG8TL1 | SG8TL2 | SG4TL2 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2 | LANE1 | LANE2 | LANE3 | LANE4

Source of x-values, see Section 27.4.2, "Waveform parameter", on page 1451

*RST: C1W1

Usage: Asynchronous command

Manual operation: See "X-source" on page 297

WAVeform<wf>:XYCurve:YSOurce <YSource>

Defines the signal source that supplies the y-values of the XY-diagram.

Suffix:
<wf> 1..4
XY-diagram

Parameters:
<YSource> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | SG1TL1 | SG1TL2 | SG2TL1 | SG2TL2 | SG3TL1 | SG3TL2 | SG4TL1 | SG4TL2 | SG5TL2 | SG6TL1 | SG6TL2 | SG7TL1 | SG7TL2 | SG8TL1 | SG8TL2 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2 | LANE1 | LANE2 | LANE3 | LANE4

Source of y-values, see Section 27.4.2, "Waveform parameter", on page 1451

*RST: C2W1

Usage: Asynchronous command

Manual operation: See "Y-source" on page 298

27.11 Cursor measurements

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

- www.rohde-schwarz.com/rc-via-scpi, section "Command sequence and synchronization"
- Section 27.3, "Programming examples", on page 1425

CURSor<cu>:SIAD....1672

CURSor<cu>:STATe <State>

Switches the indicated cursor on or off.

Suffix:

<cu> 1..4
Selects the cursor set.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Cursor On/Off" on page 306

CURSor<cu>:AOFF

The command switches all cursors off.

Suffix:
<cu> The numeric suffix is irrelevant.

Usage: Event
Asynchronous command

CURSor<cu>:FUNCtion <Type>

Defines the type of the indicated cursor set.

Suffix:
<cu> 1..4
Selects the cursor set.

Parameters:
<Type> HORizontal | VERTical | PAIRed

HORizontal
A pair of horizontal cursor lines.

VERTical
A pair of vertical cursor lines.

PAIRed
Both vertical and horizontal cursor line pairs.

*RST: PAIRed

Usage: Asynchronous command

Manual operation: See "Type" on page 306

CURSor<cu>:SOURce <Source>

Defines the source of the cursor measurement.

Suffix:
<cu> 1..4
Selects the cursor set.

Parameters:

<Source> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | XY1 | XY2 | XY3 | XY4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | MSOB1 | MSOB2 | MSOB3 | MSOB4 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | SG1 | SG2 | SG3 | SG4 | SG5 | SG6 | SG7 | SG8 | SG1TL1 | SG1TL2 | SG2TL1 | SG2TL2 | SG3TL1 | SG3TL2 | SG4TL1 | SG4TL2 | SG5TL1 | SG5TL2 | SG6TL1 | SG6TL2 | SG7TL1 | SG7TL2 | SG8TL1 | SG8TL2 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2

Source of the cursor measurement, see Section 27.4.2, "Waveform parameter", on page 1451

*RST: C1W1

Usage: Asynchronous command

Manual operation: See "Source" on page 306

CURSor<cu>:SSOurce <Source2>

Selects the second cursor source.

Suffix:

<cu> 1..4
Selects the cursor set.

Parameters:

<Source2> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | XY1 | XY2 | XY3 | XY4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | MSOB1 | MSOB2 | MSOB3 | MSOB4 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | SG1 | SG2 | SG3 | SG4 | SG5 | SG6 | SG7 | SG8 | SG1TL1 | SG1TL2 | SG2TL1 | SG2TL2 | SG3TL1 | SG3TL2 | SG4TL1 | SG4TL2 | SG5TL1 | SG5TL2 | SG6TL1 | SG6TL2 | SG7TL1 | SG7TL2 | SG8TL1 | SG8TL2 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2 | EYE1 | EYE2 | EYE3 | EYE4 | TDRZ | TDRH | TDRR | BATHtub1 | BMEas1 | SRESponse1 | SRTRack1 | SDTRack1 | TJTRack1 | DJTRack1 | DDJTrack1 | PJTRack1 | RJOTRack1 | TJSPectrum1 | DDJSpectrum1 | PJOSPectrum1 | RJSPectrum1 | BATHtub2 | BMEas2 | SRESponse2 | SRTRack2 | SDTRack2 | TJTRack2 | DJTRack2 | DDJTrack2 | PJTRack2 | RJTORack2 | TJSPectrum2 | DDJSpectrum2 | PJSPectrum2 | RJOSPectrum2 | SEYE1 | SEYE2 | SDHist1 | TJHist1 | DJHist1 | DDJHist1 | PJHist1 | RJOHist1 | SRHist2 | SDHist2 | TJHist2 | DJHist2 | DDJHist2 | PJHist2 | RJOHist2 | NBAThtub1 | NBMeas1 | TNHist1 | DNHist1 | DDNHist1 | PNHist1 | RNOHist1 | TNTRack1 | DNTRack1 | DDNTrack1 | PNTRack1 | RNOTRack1 | TNSPectrum1 | DDNSpectrum1 | PNSPectrum1 | RNSPectrum1 | NBAThtub2 | NBMeas2 | TNHist2 | DNHist2 | DDNHist2 | PNHist2 | RNHist2 | TNTRack2 | DNTRack2 | DDNTrack2 | PNTRack2 | RNOTRack2 | TNSPectrum2 | DDNSpectrum2 | PNSPectrum2 | RNOSPectrum2 | LANE1 | LANE2 | LANE3 | LANE4

Second source of the cursor measurement, see Section 27.4.2, "Waveform parameter", on page 1451

*RST: C2W1

Usage: Asynchronous command

Firmware/software: FW 3.60

Manual operation: See "Second source, Source 2" on page 306

CURSor<cu>:USSource <UseSource2>

Enables the second cursor source. To select the second source, use `CURSor<cu>:SSOurce` on page 1666.

If enabled, the second corsor lines Cx.2 measure on the second source. Using a second source, you can measure differences between two channels with cursors.

Suffix:
<cu> 1..4
Selects the cursor set.

Parameters:
<UseSource2> OFF | ON
*RST: OFF

Usage: Asynchronous command

Firmware/software: FW 3.60

Manual operation: See "Second source, Source 2" on page 306

CURSor<cu>:TRACking[:STATe] <TrackCurve>

If set to ON, the horizontal cursor lines follow the waveform.

Suffix:
<cu> 1..4
Selects the cursor set.

Parameters:
<TrackCurve> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Track waveform" on page 307

CURSor<cu>:X1Position <XPosition1>

Defines the position of the left vertical cursor line.

Suffix:
<cu> 1..4
Selects the cursor set.

Parameters:
<XPosition1> Range: 0 to 500
Increment: 0.1
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "X1 position, X2 position" on page 306

CURSor<cu>:X2Position <XPosition2>

Defines the position of the right vertical cursor line.

Suffix:
<cu> 1..4
Selects the cursor set.

Parameters:
<XPosition2> Range: 0 to 500
Increment: 0.1
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "X1 position, X2 position" on page 306

CURSor<cu>:XCOupling <Coupling>

Defines the positioning mode of the vertical cursor.

Suffix:
<cu> 1..4
Selects the cursor set.

Parameters:
<Coupling> OFF | ON

ON
Moving one cursor line moves the other cursor line too. The cursor lines always remain a fixed distance.

OFF
Each cursor line is positioned independently.

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Coupling (2 follows 1)" on page 308

CURSor<cu>:Y1Position <YPosition1>

Defines the position of the lower horizontal cursor line.

If `CURSor<cu>:TRACking[:STATe]` is enabled, the query returns the measurement result - the lower vertical value of the waveform.

Suffix:
<cu> 1..4
Selects the cursor set.

Parameters:
<YPosition1> Range: -50 to 50
Increment: 0.01
*RST: 0
Default unit: The unit depends on the type of the waveform.

Usage: Asynchronous command

Manual operation: See "Y1 position, Y2 position" on page 306

CURSor<cu>:Y2Position <YPosition2>

Defines the position of the upper horizontal cursor line.

If `CURSor<cu>:TRACking[:STATe]` is enabled, the query returns the measurement result - the upper vertical value of the waveform.

Suffix:
<cu> 1..4
Selects the cursor set.

Parameters:
<YPosition2> Range: -50 to 50
Increment: 0.01
*RST: 0
Default unit: The unit depends on the type of the waveform.

Usage: Asynchronous command

Manual operation: See "Y1 position, Y2 position" on page 306

CURSor<cu>:YCOupling <Coupling>

Defines the positioning mode of the horizontal cursor. If the horizontal cursor lines track the waveform, the y-coupling is irrelevant (`CURSor<m>:MODE TRACk`).

Suffix:
<cu> 1..4
Selects the cursor set.

Parameters:
<Coupling> OFF | ON

ON
Moving one cursor line moves the other cursor line too. The cursor lines always remain a fixed distance.

OFF
Each cursor line is positioned independently.

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Coupling (2 follows 1)" on page 308

CURSor<cu>:X1ENvelope <EnvelopeCurve1>

If the waveform arithmetics are set to envelope curve (see `CHANnel<ch>[:WAVeform<wf>]:ARIThmetics` on page 1507) and `CURSor<cu>:TRACking[:STATe]` is set to "ON", this setting defines how the first horizontal cursor is positioned.

Suffix:
<cu> 1..*
Selects the cursor set. 4 cursor sets are available.

Parameters:
<EnvelopeCurve1> MIN | MAX

MIN
The horizontal cursor is set to the crossing point of the vertical cursor with the minimum waveform envelope.

MAX
The horizontal cursor is set to the crossing point of the vertical cursor with the maximum waveform envelope.

*RST: MIN

Usage: Asynchronous command

Manual operation: See "Envelope selection 1|2" on page 307

CURSor<cu>:X2ENvelope <EnvelopeCurve2>

If the waveform arithmetics are set to envelope curve (see `CHANnel<ch>[:WAVeform<wf>]:ARIThmetics` on page 1507) and `CURSor<cu>:TRACking[:STATe]` is set to "ON", this setting defines how the second horizontal cursor is positioned.

Suffix:
<cu> 1..*
Selects the cursor set. 4 cursor sets are available.

Parameters:
<EnvelopeCurve2> MIN | MAX

MIN
The horizontal cursor is set to the crossing point of the vertical cursor with the minimum waveform envelope.

MAX
The horizontal cursor is set to the crossing point of the vertical cursor with the maximum waveform envelope.

*RST: MAX

Usage: Asynchronous command

Manual operation: See "Envelope selection 1|2" on page 307

CURSor<cu>:LABel[:LABel] <ShowLabel>

Shows the cursor labels in the diagram.

Suffix:
<cu> 1..4
Selects the cursor set.

Parameters:
<ShowLabel> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Show label" on page 308

CURSor<cu>:LABel:X<n> <Name>

Defines a label to be displayed with the vertical cursors. X1 is the left cursor line, and X2 the right one. By default, the cursors are labeled as Cu1.X1, Cu1.X2, Cu2.X1, Cu2.X2, Cu3.X1, Cu3.X2, Cu4.X1, Cu4.X2.

Suffix:
<cu> 1..4
Selects the cursor set.

<n> 1..2

Parameters:
<Name> String with the cursor label

Usage: Asynchronous command

Manual operation: See "X1 label, X2 label" on page 309

CURSor<cu>:LABel:Y<n> <Name>

Defines a label to be displayed with the vertical cursors. Y1 is the lower cursor line, and Y2 the upper one. By default, the cursors are labeled as Cu1.Y1, Cu1.Y2, Cu2.Y1, Cu2.Y2, Cu3.Y1, Cu3.Y2, Cu4.Y1, Cu4.Y2.

Suffix:
<cu> 1..4
Selects the cursor set.

<n> 1..2

Parameters:
<Name> String with the cursor label

Usage: Asynchronous command

Manual operation: See "Y1 label, Y2 label" on page 309

CURSor<cu>:SIAD <ShwInAllDiags>

Shows the cursor lines of the selected cursor set in all active diagrams of the same (time/spectrum) domain.

Suffix:
<cu> 1..*
Selects the cursor set.

Parameters:
<ShwInAllDiags> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Show in all diagrams" on page 308

Note: the behavior of the command has been changed. In firmware versions 5.35. and older, the command affected all cursor sets, and the suffix was ignored. From FW version 5.40 on, the command affects only the cursor set that is selected by the suffix. If your script was written before the change and contains a deactivation of the cursor line display, you replace the single command by a loop over all cursor sets.

27.11.2 Cursor results

CURSor<cu>:XDELta[:VALue]?....1673
CURSor<cu>:XDELta:INVerse?....1673
CURSor<cu>:YDELta[:VALue]?....1674
CURSor<cu>:YDELta:SLOPe....1674

CURSor<cu>:XDELta[:VALue]?

Queries the delta value (distance) of two vertical cursor lines.

Suffix:
<cu> 1..4
Selects the cursor set.

Return values:
<Delta> Range: -100E+24 to 100E+24
*RST: 0
Default unit: s

Usage: Query only
Asynchronous command

CURSor<cu>:XDELta:INVerse?

Queries the inverse value of the delta value (distance) of the two vertical cursor lines.

Suffix:
<cu> 1..4
Selects the cursor set.

Return values:
<DeltaInverse> Range: -100E+24 to 100E+24
*RST: 0
Default unit: Hz

Usage: Query only
Asynchronous command

CURSor<cu>:YDELta[:VALue]?

Queries the delta value (distance) of the two horizontal cursor lines.

Suffix:
<cu> 1..4
Selects the cursor set.

Return values:
<Delta> Range: -100E+24 to 100E+24
*RST: 0

Usage: Query only
Asynchronous command

CURSor<cu>:YDELta:SLOPe <DeltaSlope>

Returns the inverse value of the voltage difference - the reciprocal of the vertical distance of two horizontal cursor lines: *1/ΔV*.

Suffix:
<cu> 1..4
Selects the cursor set.

Parameters:
<DeltaSlope> Range: -100E+24 to 100E+24
Increment: 0
*RST: 0

Usage: Asynchronous command

27.11.3 Peak search using cursors

CURSor<cu>:FFT:SETCenter....1674
CURSor<cu>:FFT:TOCenter....1675
CURSor<cu>:MAXimum[:PEAK]....1675
CURSor<cu>:MAXimum:LEFT....1675
CURSor<cu>:MAXimum:RIGHt....1675
CURSor<cu>:MAXimum:NEXT....1675

CURSor<cu>:FFT:SETCenter

Sets the center frequency to the frequency value that is measured at cursor line c1.

Suffix:
<cu> The suffix is irrelevant.

Usage: Event
Asynchronous command

Manual operation: See "Set center frequency to Cursor" on page 310

CURSor<cu>:FFT:TOCenter

Sets the vertical cursor line c1 to the center frequency.

Suffix:
<cu> The suffix is irrelevant.

Usage: Event
Asynchronous command

Manual operation: See "Center frequency" on page 310

CURSor<cu>:MAXimum[:PEAK]

Sets both cursors to the absolute peak value.

Suffix:
<cu> 1..4
Selects the cursor set.

Usage: Event

Manual operation: See "Absolute" on page 310

CURSor<cu>:MAXimum:LEFT

Sets cursor 2 to the next maximum to the left of the current position.

Suffix:
<cu> 1..4
Selects the cursor set.

Usage: Event

Manual operation: See "Next left" on page 310

CURSor<cu>:MAXimum:RIGHt

Sets cursor 2 to the next peak to the right (from the current position).

Suffix:
<cu> 1..4
Selects the cursor set.

Usage: Event

Manual operation: See "Next right" on page 310

CURSor<cu>:MAXimum:NEXT

Sets cursor 2 to the next smaller peak (from the current position).

Suffix:
<cu> 1..4
Selects the cursor set.

Usage: Event

Manual operation: See "Next absolute" on page 310

27.12 Automatic measurements

This chapter contains all remote commands to set up automatic measurements and to analyze the measurement results.

Selection of the measurement group: MEASurement<mg>

With R&S RTO6, you can configure up to eight simultaneous measurement groups. In manual operation, these eight measurement groups are represented by subtabs "MG1" to "MG8" in the "Measurements" dialog box. For remote operation, the measurement group is indicated by the suffix MEAS<mg>, containing the number of the measurement group.

Remote control: measurement suffix <mg>	Manual operation: "MG" subtab
1 to 8 correspond to	"MG1" to "MG8"
9, 10: do not use	Not available

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

27.12.1 General settings

MEASurement<mg>[:ENABle]....1677
MEASurement<mg>:SOURce....1677
MEASurement<mg>:FSRC....1679
MEASurement<mg>:SSRC....1679
MEASurement<mg>:CATegory....1679
MEASurement<mg>:MAIN....1680
MEASurement<mg>:ADDitional....1682
MEASurement<mg>:AON....1682
MEASurement<mg>:AOFF....1682
MEASurement<mg>:PAMPlitude....1683
MEASurement<mg>:PEYE....1683

MEASurement<mg>[:ENABle] <State>

Switches the indicated measurement on or off.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<State> OFF | ON
*RST: OFF

Example: See "Simple frequency and amplitude measurement" on page 1428.

Usage: Asynchronous command

Manual operation: See "Enable" on page 316

MEASurement<mg>:SOURce <SignalSource>,[<SignalSource2>]

Defines the source of the measurement. Availability of sources depends on the selected category and installed options.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:

<SignalSource> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | SBUS1 | SBUS2 | SBUS3 | SBUS4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | SG1TL1 | SG1TL2 | SG2TL1 | SG2TL2 | SG3TL1 | SG3TL2 | SG4TL1 | SG4TL2 | SG5TL1 | SG5TL2 | SG6TL1 | SG6TL2 | SG7TL1 | SG7TL2 | SG8TL1 | SG8TL2 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2 | | SRESponse1 | SRTRack1 | SDTRack1 | TJTRack1 | DJTRack1 | DDJTrack1 | PJTRack1 | RJTRack1 | SRESponse2 | SRTRack2 | SDTRack2 | TJTRack2 | DJTRack2 | DDJTrack2 | PJTRack2 | RJTRack2 | SEYE1 | SEYE2 | TNTRack1 | DNTRack1 | DDNTrack1 | PNTRack1 | RNOTrack1 | TNTRack2 | DNTRack2 | DDNTrack2 | PNTRack2 | RNOTrack2 | PJDTrack1 | PJDTrack2 | PNDTrack1 | PNDTrack2 | LANE1 | LANE2 | LANE3 | LANE

First source of the measurement, see Section 27.4.2, "Waveform parameter", on page 1451

<SignalSource2> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2 | | SRESponse1 | SRTRack1 | SDTRack1 | TJTRack1 | DJTRack1 | DDJTrack1 | PJTRack1 | RJTRack1 | SRESponse2 | SRTRack2 | SDTRack2 | TJTRack2 | DJTRack2 | DDJTrack2 | PJTRack2 | RJTRack2 | SEYE1 | SEYE2 | TNTRack1 | DNTRack1 | DDNTrack1 | PNTRack1 | RNOTrack1 | TNTRack2 | DNTRack2 | DDNTrack2 | PNTRack2 | RNOTrack2 | PJDTrack1 | PJDTrack2 | PNDTrack1 | PNDTrack2

Second measurement source. The 2nd source is required for amplitude/time measurements that are performed on two waveforms (e.g. delay, phase).
Digital channels are only available if <SignalSource> is a digital channel.
Step response, advanced jitter track components and synthetic eye sources are available for amplitude/time measurements only.

*RST: C1W1,C2W1

Example: See "Simple frequency and amplitude measurement" on page 1428.

Manual operation: See "Source, Source 2" on page 317

MEASurement<mg>:FSRC <Source>

Defines the first measurement source.

The command is an alternative to `MEASurement<mg>:SOURce`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Source> Source of the measurement, see `MEASurement<mg>:SOURce` on page 1677.
*RST: C1W1

Usage: Asynchronous command

MEASurement<mg>:SSRC <Source2>

Defines the second measurement source.

The command is an alternative to `MEASurement<mg>:SOURce`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Source2> Second source of the measurement, see `MEASurement<mg>:SOURce` on page 1677.
Digital channels are only available if a digital channel is set as first measurement source using `MEASurement<mg>:FSRC`.
*RST: C2W1

Usage: Asynchronous command

MEASurement<mg>:CATegory <Category>

Defines the measurement category.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Category> AMPTime | JITTer | EYEJitter | OPTical | SPECtrum | HISTogram | PROTocol | EMC

AMPTime
Amplitude and time measurements

JITTer
Jitter measurements, available if one of the jitter options is installed.

EMC
EMC/ESD test (option R&S RTO6-K155)

EYEJitter
Eye diagram measurements

OPTical
Optical measurements

SPECtrum
Spectrum measurements

HISTogram
Histogram measurements

PROTocol
Protocol measurements

*RST: AMPTime

Example: See "Creating and reading histograms" on page 1429

Usage: Asynchronous command

Manual operation: See "Category" on page 316

MEASurement<mg>:MAIN <MeasType>

Defines the measurement that is used as a source for math calculations and result analysis. This measurement is mandatory in the measurement group. Further measurements are added to the measurement group with `MEASurement<mg>:ADDitional`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<MeasType> **Amplitude/time measurements**
HIGH | LOW | AMPLitude | MAXimum | MINimum | PDELta | MEAN | RMS | STDDev | POVershoot | NOVershoot | AREA | RTIMe | FTIMe | PPULse | NPULse | PERiod | FREQuency | PDCYcle | NDCYcle | CYCarea | CYCMean | CYCRms | CYCStddev | PULCnt | DELay | PHASe | BWIDth | PSWitching | NSWitching | PULSetrain | EDGecount | SETup | HOLD | SHT | SHR | DTOTrigger | PROBemeter | SLERising | SLEFalling | ATAR | SIGNallvl | VOCRossing | NPERiod | CMIN | CMAX
See Section 27.12.2, "Amplitude/time measurements", on page 1683.
*RST value for amplitude/time measurements: `AMPLitude`.

Jitter measurements
CCJitter | NCJitter | CCWidth | CCDutycycle | TIE | UINTerval | DRATe | SKWDelay | SKWPhase
Only available if option R&S RTO6-K12 is installed. See Section 27.23.1, "Jitter measurements (option R&S RTO6-K12)", on page 2892.

EMC/ESD tests
FPEak | SPEak | I30 | I60 | LVADelay | TTValue
Available with option R&S RTO6-K155
See Section 27.12.9, "EMC/ESD measurements (option R&S RTO6-K155)", on page 1738.

Eye diagram measurements
ERPercent | ERDB | EHEight | EWIDth | ETOP | EBASe | CPOints | QFACtor | RMSNoise | SNRatio | DCDistortion | ERTime | EFTime | EBRate | EAMPlitude | PPJitter | STDJitter | RMSJitter
See Section 27.12.5, "Eye diagram measurements", on page 1710
*RST value for eye/jitter measurements: `ERPercent`.

Spectrum measurements
CPOWer | OBWidth | SBWidth | THD | THDPCT | THDA | THDU | THDR | PLISt | HAR | THDF | SPAR
See Section 27.12.7, "Spectrum measurements", on page 1726.
*RST value for spectrum measurements: `CPOWer`.

Histogram measurements
WCOunt | WSAMples | HSAMples | HPEak | PEAK | UPEakvalue | LPEakvalue | HMAXimum | HMINimum | MEDian | MAXMin | HMEan | HSTDdev | M1STddev | M2STddev | M3STddev | MKPositive | MKNegative
See Section 27.12.8.1, "Histogram measurement", on page 1733.
*RST value for histogram measurements: `WCOunt`.

Protocol measurements
NONE | AUDio | F2F | T2F | FLDValue | GAP | MBITrate | SBITrate | BIDLe | FCNT | FEC | FER | CFER
Requires option R&S RTO6-K500
See Section 27.12.10, "Protocol measurements", on page 1742

Optical measurements
OAP | OMA
See Section 27.12.6, "Optical measurements", on page 1723.

Example: See "Simple frequency and amplitude measurement" on page 1428.

Usage: Asynchronous command

Manual operation: See "Active measurements" on page 317

MEASurement<mg>:ADDitional <MeasType>,<State>
MEASurement<mg>:ADDitional? <MeasType>

Adds additional measurements to the indicated measurement group. Only one measurement can be enabled or disabled per command. The query returns the state of the specified measurement.

Note that each measurement group must contain measurements from the same category. For example, if the main measurement of measurement group 1 is amplitude, then you cannot enable an eye width measurement in the same measurement group.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<State> ON | OFF
Enables or disables the measurement.

Parameters for setting and query:
<MeasType> See `MEASurement<mg>:MAIN` on page 1680.

Usage: Asynchronous command

Manual operation: See "Active measurements" on page 317

MEASurement<mg>:AON

Enables all additional measurements in all categories of the indicated measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Usage: Event
Asynchronous command

MEASurement<mg>:AOFF

Disables all additional measurements in all categories of the indicated measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Usage: Event
Asynchronous command

MEASurement<mg>:PAMPlitude <MessageName>

Selects the level transition of a PAM-N signal for the plot of an amplitude/time meausrements.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<MessageName>

Usage: Asynchronous command

Manual operation: See "Measurement for plot" on page 380

MEASurement<mg>:PEYE <MessageName>

Selects the level transition for the plot of an eye meausrement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<MessageName>

Usage: Asynchronous command

Manual operation: See "Measurement for plot" on page 380

27.12.2 Amplitude/time measurements

The following table lists the <MeasType> parameter values with a short description.

In addition, the suffixes <n> for limit-check remote commands are listed.

For a detailed description, see Section 8.2.2.1, "Overview of amplitude/time measurements", on page 318.

Table 27-2: Amplitude and time measurements

<MeasType> parameter value (remote control)	Measurement (manual operation)	Description, result	Suffix <n>
HIGH	High	High signal level	1
LOW	Low	Low signal level	2
AMPLitude	Amplitude	Amplitude of the signal	3
MAXimum	Max	Maximum value of the waveform	4
MINimum	Min	Minimum value of the waveform	5

<MeasType> parameter value (remote control)	Measurement (manual operation)	Description, result	Suffix <n>
PDELta	Peak to peak	Peak-to-peak value of the waveform	6
MEAN	Mean	Mean value of the waveform	7
RMS	RMS	RMS (Root Mean Square) value of the voltage	8
STDDev	σ (S-dev)	Standard deviation of the waveform	9
POVershoot	Pos. overshoot	Positive overshoot of a square wave	10
NOVershoot	Neg. overshoot	Negative overshoot of a square wave	11
AREA	Area	Area beneath the waveform (integral)	12
RTIMe	Rise time	Rise time of the left-most rising edge of the waveform.	13
FTIMe	Fall time	Falling time of the left-most falling edge of the waveform.	14
PPULse	Pos. pulse	Width of a positive pulse – a rising edge followed by a falling edge. The measurement requires at least one complete period of a triggered signal.	15
NPULse	Neg. pulse	Width of a negative pulse – a falling edge followed by a rising edge. The measurement requires at least one complete period of a triggered signal.	16
PERiod	Period	Length of the left-most signal period of the waveform	17
FREQuency	Frequency	Frequency of the signal. The result is based on the period measurement.	18
PDCYcle	Pos. duty cycle	Positive duty cycle. The measurement requires at least one complete period of a triggered signal.	19
NDCYcle	Neg. duty cycle	Negative duty cycle. The measurement requires at least one complete period of a triggered signal.	20
CYCarea	Cycle area	Area (integral) beneath one cycle	21
CYCMean	Cycle mean	Mean value of one cycle	22
CYCRms	Cycle RMS	The RMS (Root Mean Square) value of one cycle	23
CYCStddev	Cycle σ (S-dev)	Standard deviation of one cycle	24
PULCnt	Pulse count	Number of positive or negative pulses of the waveform, or both	25
DELay	Delay	Time difference between any edges of two measurement sources at any reference level. The measurement result is negative if the edge of the second source comes before the edge of the first source.	26
PHASe	Phase	Phase difference between two waveforms	27
BWIDth	Burst width	Duration of one burst, measured from the first edge to the last	28
PSWitching	Pos. switching	Settling time at rising edges	29
NSWitching	Neg. switching	Settling time at falling edges	30

<MeasType> parameter value (remote control)	Measurement (manual operation)	Description, result	Suffix <n>
PULSetrain	Pulse train	Duration of N positive pulses, measured from the rising edge of the first pulse to the falling edge of the N-th pulse. N has to be configured.	31
EDGecount	Edge count	Number of positive or negative edges of the waveform, or both	32
SETup	Setup time	Parameters to query the setup and hold times. Use these parameters only in following queries: ● `MEASurement<mg>:ARES?` ● `MEASurement<n>:RESult:..` commands	33
HOLD	Hold time		
SHT	Setup/Hold time	Setting parameter to enable Setup/Hold time measurements. Use this parameter only as setting in: ● `MEASurement<mg>:MAIN` on page 1680 ● `MEASurement<mg>:ADDitional` on page 1682	35
SHR	Setup/Hold ratio	Setup/Hold ratio measurement. Setup/Hold ratio is the ratio of the setup time to the sum of hold and setup time: $T_{Setup} / (T_{Setup} + T_{Hold})$ Use this parameter as setting to activate the Setup/Hold ratio measurement in: ● `MEASurement<mg>:MAIN` on page 1680 ● `MEASurement<mg>:ADDitional` on page 1682 It is also used in the following queries: ● `MEASurement<mg>:ARES?` ● `MEASurement<n>:RESult:..` Used also in queries with and commands.	36
Used for limit checks on jitter measurements, see Section 27.23.1, "Jitter measurements (option R&S RTO6-K12)", on page 2892.			37 to 45
DTOTrigger	Delay to trigger	Time between the trigger event and a following signal slope. High accuracy even if the trigger event is outside the acquisition data.	46
PROBemeter	Trig. ProbeMeter	DC voltage measured by the connected active R&S probe	47
SLERising	Slew rate on rising edge	Steepness of the rising edge: voltage difference between the lower and higher reference level, divided by the rise time.	48
SLEFalling	Slew rate on falling edge	Steepness of the falling edge: voltage difference between the higher and lower reference level, divided by the fall time.	49
ATAR	Arithmetic for amplitude/time measurements	Basic arithmetic calculations with measurement values and scalars.	50
SIGNallvl	Signal level	The value of the signal level	51
VOCRossing	Voltage crossing	The point where the waveform crosses a predifined voltage level.	52
NPERiod	N-period	The time passed for N consecuitive crossings	53
CMIN	Cycle min	Minimum value of one cycle	54

<MeasType> parameter value (remote control)	Measurement (manual operation)	Description, result	Suffix <n>
CMAX	Cycle max	Maximum value of one cycle	55
Used for limit checks on EMC/ESD measurements, see Table 27-7.			56 to 61

MEASurement<mg>:ENVSelect <EnvelopeCurve>

The command is only relevant for measurements on envelope waveforms. It selects the envelope to be used for measurement.

Suffix:

<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:

<EnvelopeCurve> MIN | MAX | BOTH

MIN: measures on the lower envelope
MAX: measures on the upper envelope
BOTH: the envelope is ignored and the waveform measured as usual

*RST: BOTH

Usage: Asynchronous command

Manual operation: See "Envelope" on page 317

MEASurement<mg>:DETThreshold <SignDetectThres>

The measured signal value must reach a certain voltage or bit to be included in the measurement algorithm. This minimum value is defined in percent of the signal amplitude (difference of high and low signal levels). Values below this value are considered to be noise and they are ignored. The setting is relevant for area, time, and counting measurements.

Suffix:

<mg> 1..10
irrelevant

Parameters:

<SignDetectThres> Range: 0 to 50
Increment: 1
*RST: 5
Default unit: %

Usage: Asynchronous command

Manual operation: See "Signal threshold" on page 325

MEASurement<mg>:AMPTime:ALEVel <AreaLevel>

Defines the reference level used to integrate the waveform.

Suffix:

<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:

<AreaLevel> Range: -100E+24 to 100E+24
Increment: 0
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "Area level" on page 325

MEASurement<mg>:AMPTime:PFSLope <PeriodSlope>

Selects the slope direction for frequency and period measurements, except for N-Period measurements.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<PeriodSlope> FIRSt | POSitive | NEGative | EITHer

POSitive | NEGative
Measures the time between rising or falling edges, respectively.

EITHer
In multiple measurements, the time is measured both between rising edges and between falling edges.
In single measurements. the first edge is taken for the measurement.

FIRSt
Time is measured either between rising edges or between falling edges. The first edge is taken for the measurement. In single measurements, it works the same way as "Either".
Only available for analog measurement sources.

*RST: FIRSt (analog source), POSitive (digital source)

Usage: Asynchronous command

Manual operation: See "Measured slope" on page 326

MEASurement<mg>:AMPTime:PSLope <PulsesSlope>

Sets the first slope of the pulses to be counted. The setting is only relevant for pulse count measurement (`MEASurement<m>:MAIN PULCnt` or `MEASurement<m>:ADDitional PULCnt,ON`).

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<PulsesSlope> POSitive | NEGative | EITHer

Count either positive or negative pulses, or both.

*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Pulses slope" on page 326

MEASurement<mg>:AMPTime:NPFSlope <PeriodNSlope>

Selects the slope direction for N-Period measurements.

Suffix:
<mg> 1..10

Parameters:
<PeriodNSlope> FIRSt | POSitive | NEGative

POSitive | NEGative
Measures the time between rising or falling edges, respectively.

FIRSt
Time is measured either between rising edges or between falling edges. The first edge is taken for the measurement. In single measurements, it works the same way as "Either".
Only available for analog measurement sources.

*RST: FIRSt (analog source), POSitive (digital source)

Usage: Asynchronous command

Manual operation: See "Measured slope (N-Period)" on page 326

MEASurement<mg>:AMPTime:DELay<n>:DIRection <EdgeCntDirct>

Selects the direction for counting slopes for each source: from the beginning of the waveform, or from the end.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..2
Selects the source number.

Parameters:
<EdgeCntDirct> FRFI | FRLA

FRFI - FRom FIrst, counting starts with the first edge of the waveform.
FRLA - FRom LAst, counting starts with the last edge of the waveform.

*RST: FRFI

Usage: Asynchronous command

Manual operation: See "Settings for delay and phase measurements (analog sources)" on page 326

MEASurement<mg>:AMPTime:DELay<n>:ECOunt <EdgeIndex>

Sets the number of the edge that is relevant for delay measurement for each source.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..2
Selects the source number.

Parameters:
<EdgeIndex> Edge number

Range: 1 to 100E+3
Increment: 1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Settings for delay and phase measurements (analog sources)" on page 326

MEASurement<mg>:AMPTime:DELay<n>:LSELect <DelayLevelSelect>

Selects the reference level on which the time is measured for each source.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..2
Selects the source number.

Parameters:
<DelayLevelSelect> UPPer | MIDDle | LOWer

*RST: MIDDle

Usage: Asynchronous command

Manual operation: See "Settings for delay and phase measurements (analog sources)" on page 326

MEASurement<mg>:AMPTime:DELay<n>:SLOPe <Slope>

Sets the edge of each source, between which the delay is measured.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..2
Selects the source number.

Parameters:
<Slope> POSitive | NEGative | EITHer
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Settings for delay and phase measurements (analog sources)" on page 326

MEASurement<mg>:AMPTime:PTCount <PulseCount>

Sets the number of positive pulses for the pulse train measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<PulseCount> Range: 1 to 2.14748E+9
Increment: 1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Pulse count" on page 329

MEASurement<mg>:AMPTime:ESLope <EdgesSlope>

Sets the edge direction to be counted: rising edges, falling edges, or both. The setting is only relevant for edge count measurement (`MEASurement<m>:MAIN EDGecount` or `MEASurement<m>:ADDitional EDGecount,ON`).

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<EdgesSlope> POSitive | NEGative | EITHer
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Edges slope" on page 329

MEASurement<mg>:AMPTime:CSLope <SetHoldClkSlp>

Sets the edge of the clock from which the setup and hold times are measured.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<SetHoldClkSlp> POSitive | NEGative | EITHer

EITHer
The clock edges next to the data edge are considered regardless of the clock slope.

*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Setup/Hold measurement settings" on page 328

MEASurement<mg>:AMPTime:CLCK<n>:LSELect <ClockLevel>

Selects the reference level of the clock on which the time is measured. Reference level and clock slope define the time point for setup and hold measurements.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..2
The suffix is irrelevant, omit it.

Parameters:
<ClockLevel> UPPer | MIDDle | LOWer

*RST: MIDDle

Usage: Asynchronous command

Manual operation: See "Clock ref level, Ref level" on page 329

MEASurement<mg>:AMPTime:DATA<n>:LSELect <DataLevel>

Selects the reference level of the data on which the setup and hold time are measured.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..2
The suffix is irrelevant, omit it.

Parameters:
<DataLevel> UPPer | MIDDle | LOWer

*RST: MIDDle

Usage: Asynchronous command

Manual operation: See "Data ref level / Ref level" on page 329

MEASurement<mg>:AMPTime:DTOTrigger<n>:SLOPe <DelaySlope>

Sets the edge direction to be used for delay measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..2
The suffix is irrelevant.

Parameters:
<DelaySlope> POSitive | NEGative | EITHer
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Delay to trigger measurement settings" on page 329

MEASurement<mg>:AMPTime:DTOTrigger<n>:LSELect <RefLevel>

Selects the reference level of the measurement source on which the delay is measured.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..2
The suffix is irrelevant.

Parameters:
<RefLevel> UPPer | MIDDle | LOWer
*RST: MIDDle

Usage: Asynchronous command

Manual operation: See "Delay to trigger measurement settings" on page 329

MEASurement<mg>:AMPTime:LCHeck<n>:VALid [<BaseLevel>],[<TargetLevel>]

Selects the limit range for each measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..61
Number of the amplitude/time measurement, see Table 27-2.

Parameters:

<BaseLevel> Sets the base level for signals with PAM order > 2

<TargetLevel> Sets the target level for signals with PAM order > 2

Usage: Asynchronous command

Manual operation: See "Setup: Upper limit, Lower limit, Upper margin, Lower margin, Valid range" on page 386

MEASurement<mg>:AMPTime:LCHeck<n>:LOWer:LIMit [<Limit>], [<BaseLevel>], [<TargetLevel>]
MEASurement<mg>:AMPTime:LCHeck<n>:UPPer:LIMit [<Limit>], [<BaseLevel>], [<TargetLevel>]

Define the lower and upper limit for limit checking, respectiveley. The valid range is defined using the `MEASurement<mg>:AMPTime:LCHeck<n>:VALid` command.

Suffix:

<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..61
Number of the amplitude/time measurement, see Table 27-2.

Parameters:

<BaseLevel> Sets the base level for signals with PAM order > 2

<TargetLevel> Sets the target level for signals with PAM order > 2

Setting parameters:

<Limit>

Usage: Asynchronous command

Manual operation: See "Setup: Upper limit, Lower limit, Upper margin, Lower margin, Valid range" on page 386

MEASurement<mg>:AMPTime:LCHeck<n>:LOWer:MARGin [<Limit>], [<BaseLevel>], [<TargetLevel>]
MEASurement<mg>:AMPTime:LCHeck<n>:UPPer:MARGin [<Limit>], [<BaseLevel>], [<TargetLevel>]

Define the lower and upper margins for the limit check, respectively. Margins are not as strict as limits and must be within the valid value range. The valid range is defined using the `MEASurement<mg>:AMPTime:LCHeck<n>:VALid` command.

Suffix:

<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..61
Number of the amplitude/time measurement type, see Table 27-2.

Parameters:
<BaseLevel> Sets the base level for signals with PAM order > 2

<TargetLevel> Sets the target level for signals with PAM order > 2

Setting parameters:
<Limit>

Usage: Asynchronous command

Manual operation: See "Setup: Upper limit, Lower limit, Upper margin, Lower margin, Valid range" on page 386

MEASurement<mg>:AMPTime:NPERiod <PeriodNNum>

Selects the N-period number, the number of consecutive periods of the waveform for N-period measurements.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<PeriodNNum>
Range: 1 to 2.14748E+9
Increment: 1
*RST: 2

Usage: Asynchronous command

Manual operation: See "Settings for N-Period" on page 332

MEASurement<mg>:AMPTime:VCHYsteresis <VoltageCrossingHyst>

Sets the minimum level difference between the two sources before the next crossing can be detected.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<VoltageCrossingHyst>
Range: 0 to 100E+24
Increment: 0.01
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "Settings for Voltage crossing" on page 331

MEASurement<mg>:AMPTime:EINCrement <PeriodNEdgeIncrement>

Sets the number of edges to be skipped per measurement event for N-period measurements.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<PeriodNEdgeIncrement> Range: 0 to 2.14748E+9
Increment: 1
*RST: 0

Usage: Asynchronous command

Manual operation: See "Settings for N-Period" on page 332

MEASurement<mg>:AMPTime:PRLevel <PlsRefLevManual>

Available only if `MEASurement<mg>:AMPTime:PRLMode` is set to `USER`.

Sets the reference level for the positive and negative pulse measurements for the user defined reference level.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<PlsRefLevManual> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "Settings for Pos./ Neg. pulse measurements" on page 330

MEASurement<mg>:AMPTime:PRLMode <PlsRefLevMd>

Selects the reference level of the measurement source on which the pulse is measured: upper, middle, lower level or user defined level.

This command is relevant for the positive and negative pulse measurements.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<PlsRefLevMd> UPPer | MIDDle | LOWer | USER
*RST: MIDDle

Usage: Asynchronous command

Manual operation: See "Settings for Pos./ Neg. pulse measurements" on page 330

MEASurement<mg>:AMPTime:PLHYsteresis <PlsManualHyst>

Available only if `MEASurement<mg>:AMPTime:PRLMode` is set to `USER`.

Sets a hysteresis value for the measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<PlsManualHyst> Range: 0 to 100E+24
Increment: 0.01
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "Settings for Pos./ Neg. pulse measurements" on page 330

MEASurement<mg>:AMPTime:VCMLevel <VoltageCrossingMeasLev>

Sets the measurement reference level for the voltage crossing calculation.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<VoltageCrossingMeasLevel> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "Settings for Voltage crossing" on page 331

27.12.3 PAM Results

Requires option R&S RTO6-K135.

MEASurement<mg>:PAMResults:ACTive? 1698
MEASurement<mg>:PAMResults:ADD 1698
MEASurement<mg>:PAMResults:PRESetconfig:BASE 1698
MEASurement<mg>:PAMResults:PRESetconfig:EXPLicit 1699
MEASurement<mg>:PAMResults:PRESetconfig:LVLHeight 1699
MEASurement<mg>:PAMResults:PRESetconfig:MEASurement 1699
MEASurement<mg>:PAMResults:PRESetconfig:MODE 1699
MEASurement<mg>:PAMResults:PRESetconfig:PRESet 1700
MEASurement<mg>:PAMResults:PRESetconfig:SELMode 1700
MEASurement<mg>:PAMResults:PRESetconfig:TARGet 1700
MEASurement<mg>:PAMResults:REMove 1700
MEASurement<mg>:PAMResults:RESultconfig<n>:BASE 1701
MEASurement<mg>:PAMResults:RESultconfig<n>:MEASurement 1701
MEASurement<mg>:PAMResults:RESultconfig<n>:TARGet 1701

MEASurement<mg>:PAMResults:ACTive?

Returns a list the number of active components.

Suffix:
<mg> 1..10

Return values:
<ActedComponents> Range: 0 to 20
Increment: 1
*RST: 0

Usage: Query only

MEASurement<mg>:PAMResults:ADD

Adds a new measurement to the active measurements table of the selected category.

Suffix:
<mg> 1..10

Usage: Event

Manual operation: See "Add" on page 336

MEASurement<mg>:PAMResults:PRESetconfig:BASE <BaseLevel>

Selects the base lavel.

Suffix:
<mg> 1..10

Parameters:
<BaseLevel> LEVEL0 | LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6
*RST: LEVEL0

Usage: Asynchronous command

MEASurement<mg>:PAMResults:PRESetconfig:EXPLicit <ExplicitLevel>

Sets an explicit level to be set for all active measurements.

Suffix:
<mg> 1..10

Parameters:
<ExplicitLevel> LEVEL0 | LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6 | LEVEL7

*RST: LEVEL1

Usage: Asynchronous command

Manual operation: See "Selection mode" on page 335

MEASurement<mg>:PAMResults:PRESetconfig:LVLHeight <LevelHeight>

Sets a level height, level difference between the base and target level for all active measurements.

Suffix:
<mg> 1..10

Parameters:
<LevelHeight> LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6 | LEVEL7

*RST: LEVEL1

Usage: Asynchronous command

MEASurement<mg>:PAMResults:PRESetconfig:MEASurement <Component>

Selects the measurement type.

Suffix:
<mg> 1..10

Parameters:
<Component> AMPLitude | MAXimum | MINimum | PDELta | MEAN | RTIMe | FTIMe | SLERising | SLEFalling | SIGNallevel

*RST: ALL

Usage: Asynchronous command

Manual operation: See "Measurement" on page 335

MEASurement<mg>:PAMResults:PRESetconfig:MODE <Mode>

Selects if you want to add pre-defined user configurations to the active measurements or define your own user-defined settings.

Suffix:
<mg> 1..10

Parameters:
<Mode> PREDefined | USERdefined
*RST: PREDefined

Usage: Asynchronous command

Manual operation: See "Mode" on page 335

MEASurement<mg>:PAMResults:PRESetconfig:PRESet

Adds a pre-defined preset configuration for the selected component to the active measurements.

Suffix:
<mg> 1..10

Usage: Event

Manual operation: See "Preset" on page 335

MEASurement<mg>:PAMResults:PRESetconfig:SELMode <SelectionMode>

Selects how the level difference between the base and target level of the PAM-N signal is defined.

Suffix:
<mg> 1..10

Parameters:
<SelectionMode> HEIGht | EXPLicit
*RST: HEIGht

Usage: Asynchronous command

Manual operation: See "Selection mode" on page 335

MEASurement<mg>:PAMResults:PRESetconfig:TARGet <TargetLevel>

Selects the target level.

Suffix:
<mg> 1..10

Parameters:
<TargetLevel> LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6 | LEVEL7
*RST: LEVEL1

Usage: Asynchronous command

MEASurement<mg>:PAMResults:REMove [<Index>]

Removes the last component added to the category.

Suffix:
<mg> 1..10

Setting parameters:
<Index>

Usage: Setting only

Manual operation: See "Remove" on page 336

MEASurement<mg>:PAMResults:RESultconfig<n>:BASE <BaseLevel>

Selects the base level, the lowest amplitude level used in the modulation.

Suffix:
<mg> 1..10

<n> 1..25

Parameters:
<BaseLevel> LEVEL0 | LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6 | LEVEL7

Usage: Asynchronous command

Manual operation: See "Base" on page 336

MEASurement<mg>:PAMResults:RESultconfig<n>:MEASurement <Component>

Selects the measurement type.

Suffix:
<mg> 1..10

<n> 1..25

Parameters:
<Component> AMPLitude | MAXimum | MINimum | PDELta | MEAN | RTIMe | FTIMe | SLERising | SLEFalling | SIGNallevel

Usage: Asynchronous command

Manual operation: See "Measurement" on page 336

MEASurement<mg>:PAMResults:RESultconfig<n>:TARGet <TargetLevel>

Selects the target level.

Suffix:
<mg> 1..10

<n> 1..25

Parameters:
<TargetLevel> LEVEL0 | LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6 | LEVEL7

Usage: Asynchronous command

Manual operation: See "Target" on page 336

27.12.4 Arithmetic for amplitude/time and spectrum measurements

MEASurement<mg>:AMPTime:ARIThmetic:CONStant 1702
MEASurement<mg>:AMPTime:ARIThmetic:COUNit 1702
MEASurement<mg>:AMPTime:ARIThmetic:CUNState 1703
MEASurement<mg>:AMPTime:ARIThmetic:CUUNit 1703
MEASurement<mg>:AMPTime:ARIThmetic:CUUState 1704
MEASurement<mg>:AMPTime:ARIThmetic:OPERator 1704
MEASurement<mg>:AMPTime:ARIThmetic:PARameter<n>:AMPTime 1704
MEASurement<mg>:AMPTime:ARIThmetic:PARameter<n>:GROup 1705
MEASurement<mg>:AMPTime:ARIThmetic:PARameter<n>:SPECtrum 1705
MEASurement<mg>:AMPTime:ARIThmetic:PARameter<n>:TYPE 1706
MEASurement<mg>:SPECtrum:ARIThmetic:CONStant 1706
MEASurement<mg>:SPECtrum:ARIThmetic:COUNit 1707
MEASurement<mg>:SPECtrum:ARIThmetic:CUNState 1707
MEASurement<mg>:SPECtrum:ARIThmetic:CUUNit 1708
MEASurement<mg>:SPECtrum:ARIThmetic:CUUState 1708
MEASurement<mg>:SPECtrum:ARIThmetic:OPERator 1708
MEASurement<mg>:SPECtrum:ARIThmetic:PARameter<n>:AMPTime 1709
MEASurement<mg>:SPECtrum:ARIThmetic:PARameter<n>:GROup 1709
MEASurement<mg>:SPECtrum:ARIThmetic:PARameter<n>:SPECtrum 1710
MEASurement<mg>:SPECtrum:ARIThmetic:PARameter<n>:TYPE 1710

MEASurement<mg>:AMPTime:ARIThmetic:CONStant <ArithConstant>

Sets a constant numeric value as the second operand of the amplitude/time arithmetic measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ArithConstant>
Range: -340.282E+36 to 340.282E+36
Increment: 1
*RST: 0

Usage: Asynchronous command

Manual operation: See "Constant" on page 338

MEASurement<mg>:AMPTime:ARIThmetic:COUNit <ConstantUnit>

Sets the unit of the constant, which is used as operand of the amplitude/time arithmetic measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ConstantUnit> DBM | DB | DB_HZ | DB_GHZ | DBC | DBC_HZ | DBPW_HZ | DBW | DBPW | DBM_HZ | DBMW | W | MW | W_HZ | J | V_S | A_S | DBV | DBMV | DBMV_HZ | DBMV_MHZ | DBUV | DBUV_HZ | DBUV_SQRT_HZ | DBUV_MHZ | DBUV_M | DBMV_M_HZ | DBUV_M_MHZ | V | MV | UV | VPP | VV | UV_HZ | UV_M_HZ | V_SQRT_HZ | DBA | DBMA | DBMA_HZ | DBMA_MHZ | DBUA | DBUA_HZ | DBUA_SQRT_HZ | DBUA_MHZ | DBUA_M | DBUA_M_HZ | DBUA_M_MHZ | A | UA_HZ | UA_M_HZ | A_SQRT_HZ | PCT | DBPT | DBPT_HZ | H | PH_GHZ | F | FF_GHZ | OHM | SIEMENS | S | DBPS | DBNS | DBUS | DBMS | DBS | HZ | DBHZ | DBKHZ | DBMHZ | DBGHZ | M | IN | DEG | RAD | CNTN | PCT | SYMB | VA_LIN | VA_LOG | NDEF | NONE | IRE | MILES | SYMB_S | MSYMB_S | MBIT_S | BIT_S | BIT | WORD | PPM | DB | PER_SEC | S_DIV | HZ_DIV | V_DIV | A_DIV | OHM_DIV | NONE_DIV | DIV | BER | S | S_S | BAUD | TDEG | VS | USER | UINV | W_DIV | V_V | A_V | W_V | BYTS | V_A | V_W | VA | VAR | UI | LN | HRS | MIN

*RST: NONE

Usage: Asynchronous command

Manual operation: See "Constant unit" on page 339

MEASurement<mg>:AMPTime:ARIThmetic:CUNState <ArithCustomNmeSt>

Enables the use of user-defined custom name for the amplitude/time arithmetic measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ArithCustomNmeSt> OFF | ON

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Custom" on page 338

MEASurement<mg>:AMPTime:ARIThmetic:CUUNit <ArithCustomUnt>

Sets a user-defined unit for the amplitude/time arithmetic measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ArithCustomUnt> String parameter

Usage: Asynchronous command

MEASurement<mg>:AMPTime:ARIThmetic:CUUState <ArithCustomUntSt>

Enables the use of user-defined custom unit for the amplitude/time arithmetic measurement. You can set the unit with `MEASurement<mg>:AMPTime:ARIThmetic:CUUNit`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ArithCustomUntSt> OFF | ON
*RST: OFF

Usage: Asynchronous command

MEASurement<mg>:AMPTime:ARIThmetic:OPERator <ArithOperator>

Selects the operation type to be performed on the selected operands for the amplitude/time arithmetic measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ArithOperator> ADD | SUB | MUL | DIV
*RST: ADD

Usage: Asynchronous command

Manual operation: See "Operator" on page 338

MEASurement<mg>:AMPTime:ARIThmetic:PARameter<n>:AMPTime <ArithmeticsMeas>

Selects the amplitude/time arithmetics measurements for the measurement group.

Suffix:

<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..2
Selects the operand.

Parameters:

<ArithmeticsMeas> HIGH | LOW | AMPLitude | MAXimum | MINimum | PDELta | MEAN | RMS | STDDev | POVershoot | NOVershoot | AREA | RTIMe | FTIMe | PPULse | NPULse | PERiod | FREQuency | PDCYcle | NDCYcle | CYCarea | CYCMean | CYCRms | CYCStddev | PULCnt | DELay | PHASe | BWIDth | PSWitching | NSWitching | PULSetrain | EDGecount | SETup | HOLD | SHT | SHR | CCJitter | NCJitter | CCWidth | CCDutycycle | TIE | UINTerval | DRATe | SKWDelay | SKWPhase | DTOTrigger | PROBemeter | SLERising | SLEFalling | ATAR | SIGNallvl | VOCRossing | NPERiod | CMIN | CMAX

See Table 27-2.

*RST: HIGH

Usage: Asynchronous command

Manual operation: See "Operand 1" on page 338

MEASurement<mg>:AMPTime:ARIThmetic:PARameter<n>:GROup
<Op2MeasGroup>

Sets the measurement group for the second operand of the amplitude/time arithmetic measurement.

Suffix:

<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 2

Parameters:

<Op2MeasGroup> MEAS1 | MEAS2 | MEAS3 | MEAS4 | MEAS5 | MEAS6 | MEAS7 | MEAS8 | IMEAS | IMEas | QUICK | QUICk

*RST: MEAS1

Usage: Asynchronous command

Manual operation: See "Operand 2 meas group / Operand 2" on page 338

MEASurement<mg>:AMPTime:ARIThmetic:PARameter<n>:SPECtrum
<Op1MeasSpectrum>

Selects the spectrum arithmetics measurements for the measurement group.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..2
Selects the operand.

Parameters:
<Op1MeasSpectrum> CPOWer | ACPower | OBWidth | SBWidth | TOI | AMMod | THD | THDPCT | THDPct | THDA | THDU | THDR | PLISt | HAR | THDF | SPAR

*RST: CPOWer

Usage: Asynchronous command

Manual operation: See "Operand 1" on page 338

MEASurement<mg>:AMPTime:ARIThmetic:PARameter<n>:TYPE <ArithOp2Type>

Sets the type of amplitude arithmetic measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 2

Parameters:
<ArithOp2Type> MEASurement | CONStant

MEASurement
Performs an arithmetic operation between two measurement results.

CONStant
Performs an operation between a measurement result and a user defined fixed constant.

*RST: MEASurement

Usage: Asynchronous command

Manual operation: See "Type" on page 337

MEASurement<mg>:SPECtrum:ARIThmetic:CONStant <ArithConstant>

Sets a constant numeric value as the second operand of the spectrum arithmetic measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:

<ArithConstant> Range: -3.4E+38 to +3.4E+38
Increment: 1
*RST: 0

Usage: Asynchronous command

Manual operation: See "Constant" on page 338

MEASurement<mg>:SPECtrum:ARIThmetic:COUNit <ArithCstUnt>

Sets the unit for the constant, set with `MEASurement<mg>:SPECtrum:ARIThmetic:CONStant`.

Suffix:

<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:

<ArithCstUnt> DBM | DB | DB_HZ | DB_GHZ | DBC | DBC_HZ | DBPW_HZ | DBW | DBPW | DBM_HZ | DBMW | W | MW | W_HZ | J | V_S | A_S | DBV | DBMV | DBMV_HZ | DBMV_MHZ | DBUV | DBUV_HZ | DBUV_SQRT_HZ | DBUV_MHZ | DBUV_M | DBMV_M_HZ | DBUV_M_MHZ | V | MV | UV | VPP | VV | UV_HZ | UV_M_HZ | V_SQRT_HZ | DBA | DBMA | DBMA_HZ | DBMA_MHZ | DBUA | DBUA_HZ | DBUA_SQRT_HZ | DBUA_MHZ | DBUA_M | DBUA_M_HZ | DBUA_M_MHZ | A | UA_HZ | UA_M_HZ | A_SQRT_HZ | PCT | DBPT | DBPT_HZ | H | PH_GHZ | F | FF_GHZ | OHM | SIEMENS | S | DBPS | DBNS | DBUS | DBMS | DBS | HZ | DBHZ | DBKHZ | DBMHZ | DBGHZ | M | IN | DEG | RAD | CNTN | PCT | SYMB | VA_LIN | VA_LOG | NDEF | NONE | IRE | MILES | SYMB_S | MSYMB_S | MBIT_S | BIT_S | BIT | WORD | PPM | DB | PER_SEC | S_DIV | HZ_DIV | V_DIV | A_DIV | OHM_DIV | NONE_DIV | DIV | BER | S | S_S | BAUD | TDEG | VS | USER | UINV | W_DIV | V_V | A_V | W_V | BYTS | V_A | V_W | VA | VAR | UI | LN | HRS | MIN
*RST: NONE

Usage: Asynchronous command

Manual operation: See "Constant unit" on page 339

MEASurement<mg>:SPECtrum:ARIThmetic:CUNState <ArithCustomNmeSt>

Enables the use of user-defined custom name for the spectrum arithmetic measurement.

Suffix:

<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ArithCustomNmeSt> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Custom" on page 338

MEASurement<mg>:SPECtrum:ARIThmetic:CUUNit <ArithCustomUnt>

Sets a user-defined value of the unit for the spectrum arithmetic measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ArithCustomUnt>

Usage: Asynchronous command

MEASurement<mg>:SPECtrum:ARIThmetic:CUUState <ArithCustomUntSt>

Enables the use of user-defined custom unit for the amplitude/time arithmetic measurement. You can set the unit with `MEASurement<mg>:AMPTime:ARIThmetic:CUUNit`.

Suffix:
<mg> 1..10

Parameters:
<ArithCustomUntSt> OFF | ON
*RST: OFF

Usage: Asynchronous command

MEASurement<mg>:SPECtrum:ARIThmetic:OPERator <ArithOperator>

Selects the operation type to be performed on the selected operands for the spectrum arithmetic measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ArithOperator> ADD | SUB | MUL | DIV
*RST: ADD

Usage: Asynchronous command

Manual operation: See "Operator" on page 338

MEASurement<mg>:SPECtrum:ARIThmetic:PARameter<n>:AMPTime
<Op1MeasAmpTime>

Selects the amplitude/time arithmetics measurements for the measurement group.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..2
Selects the operand.

Parameters:
<Op1MeasAmpTime> HIGH | LOW | AMPLitude | MAXimum | MINimum | PDELta | MEAN | RMS | STDDev | POVershoot | NOVershoot | AREA | RTIMe | FTIMe | PPULse | NPULse | PERiod | FREQuency | PDCYcle | NDCYcle | CYCarea | CYCMean | CYCRms | CYCStddev | PULCnt | DELay | PHASe | BWIDth | PSWitching | NSWitching | PULSetrain | EDGecount | SETup | HOLD | SHT | SHR | CCJitter | NCJitter | CCWidth | CCDutycycle | TIE | UINTerval | DRATe | SKWDelay | SKWPhase | DTOTrigger | PROBemeter | SLERising | SLEFalling | ATAR | SIGNallvl | VOCRossing | NPERiod | CMIN | CMAX

*RST: HIGH

Usage: Asynchronous command

Manual operation: See "Operand 1" on page 338

MEASurement<mg>:SPECtrum:ARIThmetic:PARameter<n>:GROup
<Op2MeasGroup>

Sets the measurement group for the second operand of the spectrum arithmetic measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 2

Parameters:
<Op2MeasGroup> MEAS1 | MEAS2 | MEAS3 | MEAS4 | MEAS5 | MEAS6 | MEAS7 | MEAS8 | IMEAS | IMEas | QUICK | QUICk

*RST: MEAS1

Usage: Asynchronous command

Manual operation: See "Operand 2 meas group / Operand 2" on page 338

MEASurement<mg>:SPECtrum:ARIThmetic:PARameter<n>:SPECtrum
<Op1MeasSpectrum>

Selects the first operand for the sepctrum arithmetics measurements.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..2
Selects the operand.

Parameters:
<Op1MeasSpectrum> CPOWer | ACPower | OBWidth | SBWidth | TOI | AMMod | THD | THDPCT | THDPct | THDA | THDU | THDR | PLISt | HAR | THDF | SPAR

See Table 27-5.

*RST: CPOWer

Usage: Asynchronous command

Manual operation: See "Operand 1" on page 338

MEASurement<mg>:SPECtrum:ARIThmetic:PARameter<n>:TYPE
<ArithOp2Type>

Sets the type of spectrum arithmetic measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 2

Parameters:
<ArithOp2Type> MEASurement | CONStant

MEASurement
Performs an arithmetic operation between two measurement results.

CONStant
Performs an operation between a measurement result and a user defined fixed constant.

*RST: MEASurement

Usage: Asynchronous command

27.12.5 Eye diagram measurements

The following table lists the <MeasType> parameter values with a short description.

In addition, the suffixes <n> for limit-check remote commands are listed. Limit checks are not supported for eye measurements on PAM-N signals with PAM order > 2.

For a detailed description, see Section 8.2.3.1, "Overview of eye diagram measurements", on page 340.

Table 27-3: Eye diagram measurements

<MeasType> parameter value (remote control)	Measurement (manual operation)	Description/Result	Suffix <n>
		not used	1
ERPercent	Extinction ratio (%)	Eye base / Eye top *100 Prerequisite: Eye base > 0 and Eye top > 0	2
ERDB	Extinction ratio (dB)	10*log (Eye top / Eye base)	3
EHEight	Eye height	Vertical eye opening	4
EWIDth	Eye width	Horizontal eye opening	5
ETOP	Eye top	Mean of the upper vertical histogram	6
EBASe	Eye base	Mean of the lower vertical histogram	7
		not used	8
CPPercent		Crossing points percentage	9
QFACtor	Q factor	(Eye top – Eye base) / (σtop + σbase)	10
		not used	11...13
RMSNoise	Noise (RMS)	Quadratic mean of the noise of eye top and eye base	14
SNRatio	S/N ratio	Signal-to-noise ratio 10 * log (Eye amplitude / Noise RMS)	15
DCDistortion	Duty cycle distortion	20 * log (Eye amplitude / Noise RMS)	16
ERTime	Eye rise time	Duration for signal to rise from 10% to 90% of the high signal level	17
EFTime	Eye fall time	Duration for signal to fall from 90% to 10% of the high signal level	18
EBRate	Eye bit rate	Frequency between two crossings	19
EAMPlitude	Eye amplitude	Eye top - Eye base	20
		not used	21...27
PPJitter	Jitter (peak to peak)	Average of the jitter for both crossing points (σcrossing1 + σcrossing2) / 2	28
STDJitter	Jitter (6*σ)	Jitter *6	29
RMSJitter	Jitter (RMS)	Quadratic mean of the jitter at both crossing points	30

MEASurement<mg>:EYEJitter:LCHeck<n>:VALid 1712
MEASurement<mg>:EYEJitter:LCHeck<n>:LOWer:LIMit 1713
MEASurement<mg>:EYEJitter:LCHeck<n>:UPPer:LIMit 1713
MEASurement<mg>:EYEJitter:LCHeck<n>:LOWer:MARGin 1713
MEASurement<mg>:EYEJitter:LCHeck<n>:UPPer:MARGin 1713
MEASurement<mg>:EYEJitter:GENSettings:MLEHistogram:ALGorithm 1714
MEASurement<mg>:EYEJitter:GENSettings:MLEHistogram:THReshold 1714
MEASurement<mg>:EYEJitter:GENSettings:RELative:STARt 1714
MEASurement<mg>:EYEJitter:GENSettings:RELative:STOP 1715
MEASurement<mg>:EYEJitter:GENSettings:ABSolute:STARt 1715
MEASurement<mg>:EYEJitter:GENSettings:ABSolute:STOP 1716
MEASurement<mg>:EYEJitter:DCDistortion:RELative:LEVel 1716
MEASurement<mg>:EYEJitter:EYEWidth:ALGorithm 1716
MEASurement<mg>:EYEJitter:EYEWidth:MEASwindow 1717
MEASurement<mg>:EYEJitter:EYEWidth:RELative:STARt 1717
MEASurement<mg>:EYEJitter:EYEWidth:RELative:STOP 1718
MEASurement<mg>:EYEJitter:EYEWidth:ABSolute:STARt 1718
MEASurement<mg>:EYEJitter:EYEWidth:ABSolute:STOP 1718
MEASurement<mg>:EYEJitter:EYEWidth:MODE 1719
MEASurement<mg>:EYEJitter:EYEHeight:ALGorithm 1719
MEASurement<mg>:EYEJitter:EYEHeight:RELative:STARt 1720
MEASurement<mg>:EYEJitter:EYEHeight:RELative:STOP 1720
MEASurement<mg>:EYEJitter:EYEHeight:ABSolute:STARt 1720
MEASurement<mg>:EYEJitter:EYEHeight:ABSolute:STOP 1721
MEASurement<mg>:EYEJitter:EYEHeight:MODE 1721
MEASurement<mg>:EYEJitter:JITTer:MEASlevel 1722
MEASurement<mg>:EYEJitter:JITTer:RELative:LEVel 1722
MEASurement<mg>:EYEJitter:RTFTime:RELative:STOP 1722
MEASurement<mg>:EYEJitter:RTFTime:RELative:STARt 1723

MEASurement<mg>:EYEJitter:LCHeck<n>:VALid [<BaseLevel>],[<TargetLevel>]

Enables or disables limit checking for eye/jitter measurements in the specified measurement channel.

Suffix:

<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..30
Number of the eye/jitter measurement, see Table 27-3.

Parameters:

<BaseLevel> Sets the base level for signals with PAM order > 2

<TargetLevel> Sets the target level for signals with PAM order > 2

Usage: Asynchronous command

Manual operation: See "Setup: Upper limit, Lower limit, Upper margin, Lower margin, Valid range" on page 386

MEASurement<mg>:EYEJitter:LCHeck<n>:LOWer:LIMit [<Limit>], [<BaseLevel>], [<TargetLevel>]
MEASurement<mg>:EYEJitter:LCHeck<n>:UPPer:LIMit [<Limit>], [<BaseLevel>], [<TargetLevel>]

Define the lower and upper limit for the limit check, respectively. The valid range is defined using the `MEASurement<mg>:EYEJitter:LCHeck<n>:VALid` command.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..30
Number of the eye/jitter measurement, see Table 27-3.

Parameters:
<BaseLevel> Sets the base level for signals with PAM order > 2

<TargetLevel> Sets the target level for signals with PAM order > 2

Setting parameters:
<Limit> Default unit: The unit depends on the selected measurement.

Usage: Asynchronous command

Manual operation: See "Setup: Upper limit, Lower limit, Upper margin, Lower margin, Valid range" on page 386

MEASurement<mg>:EYEJitter:LCHeck<n>:LOWer:MARGin [<Limit>], [<BaseLevel>], [<TargetLevel>]
MEASurement<mg>:EYEJitter:LCHeck<n>:UPPer:MARGin [<Limit>], [<BaseLevel>], [<TargetLevel>]

Defines the upper margin for the limit check. Margins are not as strict as limits and must be within the valid value range. The valid range is defined using the `MEASurement<mg>:EYEJitter:LCHeck<n>:VALid` command.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..30
Number of the eye/jitter measurement, see Table 27-3.

Parameters:
<BaseLevel> Sets the base level for signals with PAM order > 2

<TargetLevel> Sets the target level for signals with PAM order > 2

Setting parameters:
<Limit> Default unit: The unit depends on the selected measurement.

Usage: Asynchronous command

Manual operation: See "Setup: Upper limit, Lower limit, Upper margin, Lower margin, Valid range" on page 386

MEASurement<mg>:EYEJitter:GENSettings:MLEHistogram:ALGorithm <Algorithm>

Defines how to compute the top/base level and the corresponding sigma values.

Suffix:
<mg> 1..10

Parameters:
<Algorithm> MEAN | PEAK | INNPeak | OUTPeak
*RST: MEAN

Usage: Asynchronous command

Manual operation: See "General" on page 343

MEASurement<mg>:EYEJitter:GENSettings:MLEHistogram:THReshold <Threshold>

Sets the threshold used to separate peaks: two peaks are separated if they are split by a valley of height *Threshold * Maximal_histogram_value*.

Suffix:
<mg> 1..10

Parameters:
<Threshold> Range: 1 to 99
Increment: 0.1
*RST: 50
Default unit: %

Usage: Asynchronous command

Manual operation: See "General" on page 343

MEASurement<mg>:EYEJitter:GENSettings:RELative:STARt <RelativeStart>

Defines the start of the measurement window in relative values.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to one of the following: `ERPercent, ERDB, EHEight, QFACtor, RMSNoise, SNRatio, EAMPlitude`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:

<RelativeStart>
Range: 1 to 99
Increment: 0.1
*RST: 40
Default unit: %

Usage: Asynchronous command

Manual operation: See "General" on page 343

MEASurement<mg>:EYEJitter:GENSettings:RELative:STOP <RelativeStop>

Defines the stop of the measurement window in relative values.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to one of the following: `ERPercent, ERDB, EHEight, QFACtor, RMSNoise, SNRatio, EAMPlitude .`

Suffix:

<mg>
1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:

<RelativeStop>
Range: 1 to 99
Increment: 0.1
*RST: 60
Default unit: %

Usage: Asynchronous command

Manual operation: See "General" on page 343

MEASurement<mg>:EYEJitter:GENSettings:ABSolute:STARt <AbsoluteStart>

Defines the start of the measurement window in absolute values.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to one of the following: `ERPercent, ERDB, EHEight, QFACtor, RMSNoise, SNRatio, EAMPlitude.`

Suffix:

<mg>
1..10

Parameters:

<AbsoluteStart>
Range: -100E+24 to 100E+24
Increment: 0.01
*RST: -1.25E-9
Default unit: s

Usage: Asynchronous command

MEASurement<mg>:EYEJitter:GENSettings:ABSolute:STOP <AbsoluteStop>

Defines the stop of the measurement window in absolute values.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to one of the following: `ERPercent, ERDB, EHEight, QFACtor, RMSNoise, SNRatio, EAMPlitude` .

Suffix:
<mg> 1..10

Parameters:
<AbsoluteStop>
Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 1.25E-9
Default unit: s

Usage: Asynchronous command

MEASurement<mg>:EYEJitter:DCDistortion:RELative:LEVel <RelLevel>

Defines the level of the measurement window in relative values.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to `DCDistortion`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<RelLevel>
Range: 1 to 99
Increment: 0.1
*RST: 50
Default unit: %

Usage: Asynchronous command

Manual operation: See "Duty cycle disortion" on page 346

MEASurement<mg>:EYEJitter:EYEWidth:ALGorithm <Algorithm>

Selects the algorithm for the measurement of the width.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to `EWIDth`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Algorithm> ACTWidth | AWMWindow | MAXWidth | TSIGma

ACTWidth
Measure actual width at crossing level.

AWMWindow
Measure actual width (meas. window)

MAXWidth
Maximum width

TSIGma
Extrapolate using three sigma. The eye width is measured at the crossing level.

*RST: TSIGma

Usage: Asynchronous command

Manual operation: See "Eye width" on page 345

MEASurement<mg>:EYEJitter:EYEWidth:MEASwindow <UseWindow>

If enabled, you can define a user defined start and stop values for the eye width measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<UseWindow> OFF | ON

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Eye width" on page 345

MEASurement<mg>:EYEJitter:EYEWidth:RELative:STARt <RelativeStart>

Sets the start of the measurement window in relative values.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to `EWIDth`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<RelativeStart>
Range: 1 to 99
Increment: 0.1
*RST: 40
Default unit: %

Usage: Asynchronous command

Manual operation: See "Eye width" on page 345

MEASurement<mg>:EYEJitter:EYEWidth:RELative:STOP <RelativeStop>

Sets the stop of the measurement window in relative values.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to `EWIDth`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<RelativeStop>
Range: 1 to 99
Increment: 0.1
*RST: 60
Default unit: %

Usage: Asynchronous command

Manual operation: See "Eye width" on page 345

MEASurement<mg>:EYEJitter:EYEWidth:ABSolute:STARt <AbsoluteStart>

Sets the sart of the measurement window in absolute value, if `MEASurement<mg>:EYEJitter:EYEWidth:MODE` is set to `ABSolute`.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to `EWIDth`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<AbsoluteStart>
Range: -100E+24 to 100E+24
Increment: 0.01
*RST: -0.05
Default unit: V

Usage: Asynchronous command

Manual operation: See "Eye width" on page 345

MEASurement<mg>:EYEJitter:EYEWidth:ABSolute:STOP <AbsoluteStop>

Defines the stop of the measurement window in absolute values, if `MEASurement<mg>:EYEJitter:EYEHeight:MODE` is set to `ABSolute`.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to `EHEight`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:

<AbsoluteStop>
Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0.05
Default unit: V

Usage: Asynchronous command

Manual operation: See "Eye width" on page 345

MEASurement<mg>:EYEJitter:EYEWidth:MODE <Mode>

Selects, if the measurement window is defined in absolute or relative values.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to `EWIDth`.

Suffix:

<mg>
1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:

<Mode>
ABS | REL
*RST: REL

Usage: Asynchronous command

Manual operation: See "Eye width" on page 345

MEASurement<mg>:EYEJitter:EYEHeight:ALGorithm <Algorithm>

Selects the algorithm for the measurement of the height.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to `EHEight`.

Suffix:

<mg>
1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:

<Algorithm>
ACTHeight | MAXHeight | TSIGma

ACTHeight
Measure actual height. You can define a measuerement window for the measurement.

MAXHeight
Measure maximum height. You can define a measuerement window for the measurement.

TSIGma
Extrapolate using three sigma. The eye height is measured with the settings defined with the general commands.

*RST: TSIGma

Usage: Asynchronous command

Manual operation: See "Eye height" on page 344

MEASurement<mg>:EYEJitter:EYEHeight:RELative:STARt <RelativeStart>

Defines the start of the measurement window in relative values.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to `EHEight`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<RelativeStart>
Range: 1 to 99
Increment: 0.1
*RST: 40
Default unit: %

Usage: Asynchronous command

Manual operation: See "Eye height" on page 344

MEASurement<mg>:EYEJitter:EYEHeight:RELative:STOP <RelativeStop>

Defines the start of the measurement window in relative values.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to `EHEight`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<RelativeStop>
Range: 1 to 99
Increment: 0.1
*RST: 60
Default unit: %

Usage: Asynchronous command

Manual operation: See "Eye height" on page 344

MEASurement<mg>:EYEJitter:EYEHeight:ABSolute:STARt <AbsoluteStart>

Defines the start of the measurement window in absolute values, if `MEASurement<mg>:EYEJitter:EYEHeight:MODE` is set to `ABSolute`.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to `EHEight`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<AbsoluteStart> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: -2.5E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Eye height" on page 344

MEASurement<mg>:EYEJitter:EYEHeight:ABSolute:STOP <AbsoluteStop>

Defines the stop of the measurement window in relative values, if `MEASurement<mg>:EYEJitter:EYEHeight:MODE` is set to `ABSolute`.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to one of the following: `ERPercent, ERDB, EHEight, QFACtor, RMSNoise, SNRatio, EAMPlitude .`

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<AbsoluteStop> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 2.5E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Eye height" on page 344

MEASurement<mg>:EYEJitter:EYEHeight:MODE <Mode>

Selects, if the start and stop values of the measurement window is defined in absolute or relative values.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to `EHEight`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Mode> ABS | REL
*RST: REL

Usage: Asynchronous command

Manual operation: See "Eye height" on page 344

MEASurement<mg>:EYEJitter:JITTer:MEASlevel <UseLevel>

If enabled, you can define a user defined level for the eye measurement jitter.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<UseLevel> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Jitter" on page 346

MEASurement<mg>:EYEJitter:JITTer:RELative:LEVel <RelLevel>

Defines the level of the measurement window in relative values.

This settings is relevant, if `MEASurement<mg>:MAIN` is set to one of the following measuerements: `PPJitter, STDJitter, RMSJitter`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<RelLevel> Range: 1 to 99
Increment: 0.1
*RST: 50
Default unit: %

Usage: Asynchronous command

Manual operation: See "Jitter" on page 346

MEASurement<mg>:EYEJitter:RTFTime:RELative:STOP <Stop>

Sets the local stop level of range for eye measurements rise/fall time.

Suffix:
<mg> 1..10

Parameters:

<Stop>
Range: 1 to 99
Increment: 0.1
*RST: 50
Default unit: %

Usage: Asynchronous command

Manual operation: See "Eye rise time,Eye fall time" on page 346

MEASurement<mg>:EYEJitter:RTFTime:RELative:STARt <Start>

Sets the local start level of range for eye measurements rise/fall time.

Suffix:

<mg> 1..10

Parameters:

<Start>
Range: 1 to 99
Increment: 0.1
*RST: 50
Default unit: %

Usage: Asynchronous command

Manual operation: See "Eye rise time,Eye fall time" on page 346

27.12.6 Optical measurements

The following table lists the <MeasType> parameter values with a short description.

In addition, the suffixes <n> for limit-check remote commands are listed.

Table 27-4: Optical measurements

<MeasType> parameter value (remote control)	Measurement (manual operation)	Description/Result	Suffix <n>
OAP	Average power	True average component of an optical signal. $X_{Average} = \frac{1}{N_{Eval}} * \sum_{i=1}^{N_{Eval}} x(i)$	1
OMA	Modulation amplitude	Measure of the difference between the optical power of a non-return-to-zero (NRZ) one pulse and the optical power of an NRZ zero pulse. OMA requires an NRZ pattern.	2

MEASurement<mg>:OPTical:OMAMplitude:RELative:STARt 1724
MEASurement<mg>:OPTical:OMAMplitude:RELative:STOP 1724
MEASurement<mg>:OPTical:UNIT 1724
MEASurement<mg>:OPTical:LCHeck<n>:LOWer:LIMit 1725
MEASurement<mg>:OPTical:LCHeck<n>:UPPer:LIMit 1725

MEASurement<mg>:OPTical:LCHeck<n>:LOWer:MARGin 1725
MEASurement<mg>:OPTical:LCHeck<n>:UPPer:MARGin 1725
MEASurement<mg>:OPTical:LCHeck<n>:VALid 1725

MEASurement<mg>:OPTical:OMAMplitude:RELative:STARt <Start>

Sets the start value of the range for the optical modulation amplitude.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Start> Range: 1 to 99
Increment: 0.1
*RST: 40
Default unit: %

Usage: Asynchronous command

Manual operation: See "Start" on page 349

MEASurement<mg>:OPTical:OMAMplitude:RELative:STOP <Stop>

Sets the end value of the range for the optical modulation amplitude.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Stop> Range: 1 to 99
Increment: 0.1
*RST: 60
Default unit: %

Usage: Asynchronous command

Manual operation: See "Stop" on page 349

MEASurement<mg>:OPTical:UNIT <Unit>

Selects the unit for the optical measurements.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Unit> WATT | DBM
*RST: WATT

Usage: Asynchronous command

Manual operation: See "Unit" on page 348

MEASurement<mg>:OPTical:LCHeck<n>:LOWer:LIMit <LowerLimit>
MEASurement<mg>:OPTical:LCHeck<n>:UPPer:LIMit <UpperLimit>

Define the lower/ upper limit for limit checking of the optical measurements.

The range is defined with `MEASurement<mg>:OPTical:LCHeck<n>:VALid`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..2

Parameters:
<UpperLimit>
Range: -100 to 100
Increment: 10E-6
*RST: 0

Usage: Asynchronous command

MEASurement<mg>:OPTical:LCHeck<n>:LOWer:MARGin <LowerMargin>
MEASurement<mg>:OPTical:LCHeck<n>:UPPer:MARGin <UpperMargin>

Define the lower/ upper margin for limit checking of the optical measurements.

The range is defined with `MEASurement<mg>:OPTical:LCHeck<n>:VALid`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..2

Parameters:
<UpperMargin>
Range: -100 to 100
Increment: 10E-6
*RST: 0

Usage: Asynchronous command

MEASurement<mg>:OPTical:LCHeck<n>:VALid <ValidRange>

Selects the condition for the limit check of the optical measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..2

Parameters:

<ValidRange> ILIMit | ULIMit | LLIMit | OLIMit

`ILIMit`: Inside (within) limit; between the upper and lower limit values
`ULIMit`: Upper limit; above the upper limit value
`LLIMit` : Lower limit; below the lower limit value
`OLIMit`: Outside limit; above the upper limit or below the lower limit values

*RST: ILIMit

Usage: Asynchronous command

27.12.7 Spectrum measurements

The following table lists the <MeasType> parameter values with a short description.

In addition, the suffixes <n> for limit-check remote commands are listed.

For a detailed description, see Section 8.2.5.1, "Overview of spectrum measurements", on page 349.

Table 27-5: Spectrum measurements

<MeasType> parameter value (remote control)	Measurement (manual operation)	Description/Result	Suffix <n>
CPOWer	Channel power	Power integrated over the sample values defined by a center frequency and a bandwidth; based on a defined impedance; the result is given in mW	1
		not used	2
OBWidth	Occupied bandwidth	From the defined center frequency, symmetric sample value pairs to the left and right are integrated until a user-defined percentage of the total power is reached	3
SBWidth	Bandwidth	n dB down bandwidth. The samples to the left and right of the peak value are analyzed until the n dB threshold is exceeded. Frequencies at which the threshold is exceeded define the limits of the requested bandwidth.	4
		not used	5, 6
THD	THD[dB]	Total harmonic distortion in dB	7
THDPCT	THD[%]	Total harmonic distortion in %	8
THDA	THD_a	Is equivalent to THD. Requires option R&S RTO6-K37.	9
THDU	THD_u	Requires option R&S RTO6-K37.	10
THDR	THD_r	Distortion factor. Requires option R&S RTO6-K37.	11
PLISt	Peak list	List of frequency and peak power value pairs.	12

<MeasType> parameter value (remote control)	Measurement (manual operation)	Description/Result	Suffix <n>
HAR	Harmonic search	Returns the measured harmonics. For each harmonic, the frequency and the value are listed. To get the number of result pairs (= harmonics), use MEASurement<mg>:RESult:COUNt?.	13
THDF	THD_f	Root mean square of the sum of all amplitudes of the harmonic waves in relation to the amplitude at the fundamental frequency (first harmonic). Requires option R&S RTO6-K37.	14
SPAR	Arithmetic for spectrum measurements	Basic arithmetic calculations with measurement values and scalars.	15

MEASurement<mg>:SPECtrum:CPOWer:BANDwidth 1727
MEASurement<mg>:SPECtrum:OBANdwidth 1728
MEASurement<mg>:SPECtrum:CPOWer:CFRequency 1728
MEASurement<mg>:SPECtrum:NDBDown 1728
MEASurement<mg>:SPECtrum:PEXCursion 1729
MEASurement<mg>:SPECtrum:ATHReshold 1729
MEASurement<mg>:SPECtrum:RESult<n>:COUNt 1729
MEASurement<mg>:SPECtrum:RESult<n>:MODE 1730
MEASurement<mg>:RESult:MAXCount 1730
MEASurement<mg>:RESult:SHFRequency 1731
MEASurement<mg>:RESult:SHLabels 1731
MEASurement<mg>:SPECtrum:LCHeck<n>:VALid 1732
MEASurement<mg>:SPECtrum:LCHeck<n>:LOWer:LIMit 1732
MEASurement<mg>:SPECtrum:LCHeck<n>:UPPer:LIMit 1732
MEASurement<mg>:SPECtrum:LCHeck<n>:LOWer:MARGin 1733
MEASurement<mg>:SPECtrum:LCHeck<n>:UPPer:MARGin 1733

MEASurement<mg>:SPECtrum:CPOWer:BANDwidth <ChPowBw>

Defines the bandwidth over which the channel power is calculated.

Suffix:

<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:

<ChPowBw>
Range: 0 to 4E+9
Increment: 1
*RST: 0
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Channel BW" on page 352

MEASurement<mg>:SPECtrum:OBANdwidth <OccupiedBW>

Defines the percentage of the total power used to determine the occupied bandwidth.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<OccupiedBW>
Range: 0.1 to 99.9
Increment: 1
*RST: 20
Default unit: %

Usage: Asynchronous command

Manual operation: See "Occup. BW" on page 352

MEASurement<mg>:SPECtrum:CPOWer:CFRequency <ChPowCtrFreq>

Defines the center frequency from which the channel power is calculated over the specified bandwidth.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ChPowCtrFreq>
Range: 0 to 6E+9
Increment: 1
*RST: 0
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Channel CF" on page 352

MEASurement<mg>:SPECtrum:NDBDown <NDbDown>

Defines the threshold until which the samples to the left and right of the peak value are analyzed in order to determine the "N dB down bandwidth".

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<NDbDown>
Range: 0 to 100
Increment: 1
*RST: 20
Default unit: dB

Usage: Asynchronous command

Manual operation: See "N db down" on page 351

MEASurement<mg>:SPECtrum:PEXCursion <Value>

Defines a relative threshold, the minimum level value by which the waveform must rise or fall to be considered as a peak. To avoid identifying noise peaks, enter a peak excursion value that is higher than the noise levels.

Suffix:
<mg> 1..10
The suffix is irrelevant.

Parameters:
<Value>

Usage: Asynchronous command

Firmware/software: Version 2.70

Manual operation: See "Peak excursion" on page 311

MEASurement<mg>:SPECtrum:ATHReshold <Value>

Defines an absolute threshold as an additional condition for the peak search. Only peaks that exceed the threshold are detected.

This setting is only available for spectrum waveforms. It is valid for cursor measurements, spectrum measurements and peak search.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Value> numeric value
Default unit: dBm

Usage: Asynchronous command

Manual operation: See "Threshold" on page 310

MEASurement<mg>:SPECtrum:RESult<n>:COUNt <MaxNoOfResults>

Sets the maximum number of measurement results that are listed in the result table. Available for peak list and harmonic search measurements (`MEASurement:MAIN` is set to `PLISt` or `HAR`).

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 12 | 13
12: Peak list measurements
13: Harmonic search measurements

Parameters:
<MaxNoOfResults> Range: 1 to 1000
Increment: 1
*RST: 10

Usage: Asynchronous command

Manual operation: See "Max results" on page 353

MEASurement<mg>:SPECtrum:RESult<n>:MODE <ResultMode>

Sets the way how the measurement results are displayed. Available only if `MEASurement:MAIN` is set to `PLISt` or `HAR`.

Suffix:
<mg> 1..10

<n> 12 | 13
12: Peak list measurements
13: Harmonic search measurements

Parameters:
<ResultMode> ABS | REL

ABS
The harmonics/peaks are shown in absolute value, dBm.

REL
The level of the carrier is shown in absolute value dBm. The values the harmonics/peaks are shown relatively to the carrier in dBc.

*RST: ABS

Example: `:MEASurement1:SPECtrum:RESult13:MODE ABS`
The harmonic measurements are shown in absolute value, dBm.

Usage: Asynchronous command

Manual operation: See "Result mode" on page 353

MEASurement<mg>:RESult:MAXCount <MeasType>,<Number>
MEASurement<mg>:RESult:MAXCount? <MeasType>

Defines the maximum number of peaks that are labeled in the diagram.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Number> Maximum number of peaks

Parameters for setting and query:

<MeasType> PLISt

Only for peaklist measurements. For other measurement, this command returns an error.

Manual operation: See "Result labels" on page 353

MEASurement<mg>:RESult:SHFRequency <MeasType>,<State>
MEASurement<mg>:RESult:SHFRequency? <MeasType>

Includes the frequency of the detected peak in the diagram labels (if `MEASurement<mg>:RESult:LABorder`=`ON`).

Suffix:

<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:

<State> ON | OFF

Parameters for setting and query:

<MeasType> PLISt

Only for peaklist measurements. For other measurements, this command returns an error.

Example: Display labels.

```
MEAS:RES:SHL PLIS,ON
```

Show frequency in labels.

```
MEAS:RES:SHFR PLIS,ON
```

Query the type of labels for peak lists.

```
MEAS:RES:SHFR? PLIS
//Result: ON
```

Manual operation: See "Result labels" on page 353

MEASurement<mg>:RESult:SHLabels <MeasType>,<State>
MEASurement<mg>:RESult:SHLabels? <MeasType>

Defines whether a description (label) is displayed for each detected peak in the spectrum diagram.

The layout of the label is defined by `MEASurement<mg>:RESult:LABorder`.

Suffix:

<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:

<State> ON | OFF

Parameters for setting and query:

<MeasType> PLISt

Only for peaklist measurements. For other measurements, this command returns an error.

Example: Display labels.
`MEAS:RES:SHL PLIS,ON`

Manual operation: See "Result labels" on page 353

MEASurement<mg>:SPECtrum:LCHeck<n>:VALid <ValidRange>

Enables or disables limit checking for spectrum measurements in the specified measurement channel.

Suffix:

<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..15
Number of the spectrum measurement, see Table 27-5.

Parameters:

<ValidRange> ILIMit | ULIMit | LLIMit | OLIMit

ILIMit
Inside (within) limit; between the upper and lower limit values

ULIMit
Upper limit; above the upper limit value

LLIMit
Lower limit; below the lower limit value

OLIMit
Outside limit; above the upper limit or below the lower limit values

*RST: ILIMit

Usage: Asynchronous command

Manual operation: See "Setup: Upper limit, Lower limit, Upper margin, Lower margin, Valid range" on page 386

MEASurement<mg>:SPECtrum:LCHeck<n>:LOWer:LIMit <Limit>
MEASurement<mg>:SPECtrum:LCHeck<n>:UPPer:LIMit <Limit>

Define the lower and upper limits for the limit check, respectively. The valid range is defined using the `MEASurement<mg>:SPECtrum:LCHeck<n>:VALid` command.

Suffix:

<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..15
Number of the spectrum measurement, see Table 27-5.

Parameters:
<Limit> Range: -100 to 100
Increment: 10E-6
*RST: 0

Usage: Asynchronous command

Manual operation: See "Setup: Upper limit, Lower limit, Upper margin, Lower margin, Valid range" on page 386

MEASurement<mg>:SPECtrum:LCHeck<n>:LOWer:MARGin <Limit>
MEASurement<mg>:SPECtrum:LCHeck<n>:UPPer:MARGin <Limit>

Define the lower and upper margins for the limit check, respectively. Margins are not as strict as limits and must be within the valid value range. The valid range is defined using the `MEASurement<mg>:SPECtrum:LCHeck<n>:VALid` command.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..15
Number of the spectrummeasurement, see Table 27-5.

Parameters:
<Limit> Range: -100 to 100
Increment: 10E-6
*RST: 0

Usage: Asynchronous command

Manual operation: See "Setup: Upper limit, Lower limit, Upper margin, Lower margin, Valid range" on page 386

27.12.8 Histogram measurements

See also: Section 27.16.5, "Waveform histogram: export to file", on page 1871.

- Histogram measurement.....1733

27.12.8.1 Histogram measurement

This chapter lists commands to set up measurements on histograms.

Note that the R&S RTO6 performs histogram measurements on the measurement that is defined with `MEASurement<mg>:MAIN`. Other measurements are not considered.

See also: "Creating and reading histograms" on page 1429.

The following table lists the <MeasType> parameter values with a short description.

In addition, the suffixes <n> for limit-check remote commands are listed.

For a detailed description, see Table 8-9.

Table 27-6: Histogram measurements

<MeasType> parameter value (remote control)	Measurement (manual operation)	Description/Result	Suffix <n>
WCOunt	Waveform count	Number of acquisitions (waveforms) the histogram is based on	1
WSAMples	Waveform samples	Number of samples from the most recent acquisition included in the current histogram	2
HSAMples	Histogram samples	Number of samples from all acquisitions included in the current histogram	3
HPEak	Histogram peak	Maximum sample value in the histogram	4
PEAK	Peak value	Signal value at the histogram peak	5
UPEakvalue	Upper peak value	Signal value at the maximum sample value in the upper half of the histogram	6
LPEakvalue	Lower peak value	Signal value at the maximum sample value in the lower half of the histogram	7
HMAXimum	Maximum	Highest signal value with a probability > 0	8
HMINimum	Minimum	Lowest signal value with a probability > 0	9
MEDian	Median	Signal value for which half the samples lie above, the other half below in the histogram	10
MAXMin	Max - Min	Range of signal values with a probability > 0	11
HMEan	Mean	Weighted arithmetic average of the histogram	12
HSTDdev	σ (S-dev)	Standard deviation of the sample numbers	13
M1STddev	Mean ±σ	Range between (mean value + standard deviation) and (mean value - standard deviation)	14
M2STddev	Mean ±2*σ	Range between (mean value + 3 * standard deviation) and (mean value - 2 * standard deviation)	15
M3STddev	Mean ±3*σ	Range between (mean value + 3 * standard deviation) and (mean value - 2 * standard deviation)	16
MKPositive	Marker + Probability %	Marker value (according to the selected probability domain marker type) plus the defined limit. Note that the value is restricted to the histogram range.	17
MKNegative	Marker - Probability %	Marker value (according to the selected probability domain marker type) minus the defined limit. Note that the value is restricted to the histogram range.	18

MEASurement<mg>:HISTogram:SELect 1735
MEASurement<mg>:HISTogram:PROBability:TYPE 1735
MEASurement<mg>:HISTogram:PROBability:LIMit 1736

MEASurement<mg>:HISTogram:LCHeck<n>:VALid 1736
MEASurement<mg>:HISTogram:LCHeck<n>:LOWer:LIMit 1737
MEASurement<mg>:HISTogram:LCHeck<n>:UPPer:LIMit 1737
MEASurement<mg>:HISTogram:LCHeck<n>:LOWer:MARGin 1737
MEASurement<mg>:HISTogram:LCHeck<n>:UPPer:MARGin 1737

MEASurement<mg>:HISTogram:SELect <Histogram>

Selects the histogram on which the measurement is based.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Histogram> String with the name of the histogram

Example: See "Creating and reading histograms" on page 1429

Usage: Asynchronous command

Manual operation: See "Source" on page 357

MEASurement<mg>:HISTogram:PROBability:TYPE <HistgPrbDomMark>

Defines the marker reference in the probability domain.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<HistgPrbDomMark> PEAK | UPPK | LWPK | MAXimum | MINimum | MEDian | MEAN

PEAK
The y-value with the maximum sample value in the histogram

UPPK
The y-value at the maximum sample value in the upper half of the histogram

LWPK
The y-value at the maximum sample value in the lower half of the histogram

MAXimum
The highest y-value with a probability > 0

MINimum
The lowest y-value with a probability > 0

MEDian
The y-value for which half the samples lie above, the other half below in the histogram

MEAN
The weighted arithmetic average of the histogram

*RST: PEAK

Usage: Asynchronous command

Manual operation: See "Probability domain marker, Reference" on page 357

MEASurement<mg>:HISTogram:PROBability:LIMit <HistgPrbDomLim>

Defines a range around the probability marker.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<HistgPrbDomLim> Range: 0 to 100
Increment: 10
*RST: 10
Default unit: %

Usage: Asynchronous command

Manual operation: See "Probability domain marker, Delta" on page 358

MEASurement<mg>:HISTogram:LCHeck<n>:VALid <ValidRange>

Enables or disables limit checking for histogram measurements in the specified measurement channel.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..18
Number of the histogram measurement, see Table 27-6.

Parameters:
<ValidRange> ILIMit | ULIMit | LLIMit | OLIMit

ILIMit
Inside (within) limit; between the upper and lower limit values

ULIMit
Upper limit; above the upper limit value

LLIMit
Lower limit; below the lower limit value

OLIMit
Outside limit; above the upper limit or below the lower limit values

*RST: ILIMit

Usage: Asynchronous command

Manual operation: See "Setup: Upper limit, Lower limit, Upper margin, Lower margin, Valid range" on page 386

MEASurement<mg>:HISTogram:LCHeck<n>:LOWer:LIMit <Margin>
MEASurement<mg>:HISTogram:LCHeck<n>:UPPer:LIMit <Margin>

Define the lower and upper limits for the limit check, respectively. The valid range is defined using the `MEASurement<mg>:HISTogram:LCHeck<n>:VALid` command.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..18
Number of the histogram measurement, see Table 27-6.

Parameters:
<Margin>
Range: -100 to 100
Increment: 10E-6
*RST: 0

Usage: Asynchronous command

Manual operation: See "Setup: Upper limit, Lower limit, Upper margin, Lower margin, Valid range" on page 386

MEASurement<mg>:HISTogram:LCHeck<n>:LOWer:MARGin <Margin>
MEASurement<mg>:HISTogram:LCHeck<n>:UPPer:MARGin <Margin>

Define the lower and upper margins for the limit check, respectively. Margins are not as strict as limits and must be within the valid value range. The valid range is defined using the `MEASurement<mg>:HISTogram:LCHeck<n>:VALid` command.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..18
Number of the histogram measurement, see Table 27-6.

Parameters:
<Margin>
Range: -100 to 100
Increment: 10E-6
*RST: 0

Usage: Asynchronous command

Manual operation: See "Setup: Upper limit, Lower limit, Upper margin, Lower margin, Valid range" on page 386

27.12.9 EMC/ESD measurements (option R&S RTO6-K155)

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

- www.rohde-schwarz.com/rc-via-scpi, section "Command sequence and synchronization"
- Section 27.3, "Programming examples", on page 1425

Available with option R&S RTO6-K155. See Section 8.2.8, "EMC/ESD measurements (option R&S RTO6-K155)", on page 358.

Table 27-7: EMC/ESD measurements

<MeasType> parameter value (remote control)	Measurement (manual operation)	Description/Result	Suffix <n> for limit checks
FPEak	First peak	Level of the first positive or negative peak of an event, for example an ESD pulse.	56
SPEak	Second peak	Level of the maximum (or minimum) in a specified time range after the reference point, which is at 10% of the peak level, by default.	57
I30	I30	Level of the current at 30 ns after the reference point, which is at 10% of the peak, by default.	58
I60	I60	Level of the current at 60 ns after the reference point, which is at 10% of the peak, by default.	59
LVADelay	Lvl@Delay	Level of the current at a specified delay after the reference point, which is at 10% of the peak, by default.	60
TTValue	Time to Value	Duration from the first rising edge to the time of a specified middle level on the falling edge.	61

For more details, see Section 8.2.8.1, "Overview of EMC/ESD measurements", on page 358.

For margin and limit checks, use the amplitude/time commands with the limit check suffixes given in Table 27-7. For commands, see Section 27.12.2, "Amplitude/time measurements", on page 1683.

- EMC/ESD measurement settings..... 1739
- EMC/ESD advanced settings.....1741

27.12.9.1 EMC/ESD measurement settings

Describes the settings available in the "Setup" measurements tab. See Section 8.2.8.2, "Setup for EMC/ESD measurements", on page 359.

MEASurement<mg>:EMC:SLOPe <Slope>

Selects the signal slope.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Slope> POSitive | NEGative

POSitive
Selects measuring on a positive slope, for example with maximum peaks.

NEGative
Selects measuring on a negative slope, for example with minimum peaks.

*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Slope" on page 362

MEASurement<mg>:EMC:SPEak:WINDow:STARt <WindowStart>

Sets the start time of the window for searching for the 2nd peak in a "Second peak" measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<WindowStart> Range: 0 to 100E+24
Increment: 1E-9
*RST: 10E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Start" on page 362

MEASurement<mg>:EMC:SPEak:WINDow:STOP <WindowStop>

Sets the end time of the window for searching for the 2nd peak in a "Second peak" measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<WindowStop> Range: 0 to 100E+24
Increment: 1E-9
*RST: 40E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Stop" on page 362

MEASurement<mg>:EMC:LVADelay:DELay <Delay>

Sets the delay value for measuring the level in a "Lvl@Delay" measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Delay>

Usage: Asynchronous command

Manual operation: See "Delay" on page 362

MEASurement<mg>:EMC:TTValue:LEVel <AdjustableLev>

Sets the level value for a "Time to value" measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<AdjustableLev> Range: 0 to 100
Increment: 1
*RST: 50
Default unit: %

Usage: Asynchronous command

Manual operation: See "Level" on page 362

27.12.9.2 EMC/ESD advanced settings

Describes the settings available in the "Limit check" section of the "Advanced" measurements tab. See Section 8.2.8.3, "Advanced EMC/ESD measurements", on page 362.

MEASurement<mg>:EMC:LIMit:SELection <LimitsStandard>

Selects the electrostatic discharge (ESD) immunity test levels according to the guidelines of the EN IEC 61000-4-2:2025 standard.

For contact discharge (CD) and air discharge (AD), it specifies the maximum voltage (kV).

- **CD1**: Contact discharge, 2 kV.
- **CD2**: Contact discharge, 4 kV.
- **CD3**: Contact discharge, 6 kV.
- **CD4**: Contact discharge, 8 kV.
- **AD1**: Air discharge, 2 kV.
- **AD2**: Air discharge, 4 kV.
- **AD3**: Air discharge, 8 kV.
- **AD4**: Air discharge, 15 kV.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<LimitsStandard> CD1 | CD2 | CD3 | CD4 | AD1 | AD2 | AD3 | AD4
*RST: CD1

Usage: Asynchronous command

Manual operation: See "Preset" on page 363

MEASurement<mg>:EMC:LIMit:APPLy

Updates the limit lines according to the test levels selected by `MEASurement<mg>:EMC:LIMit:SELection`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Usage: Event
Asynchronous command

Manual operation: See "Apply" on page 363

27.12.10 Protocol measurements

Before starting the protocol measurement, a bus type has to be selected (`BUS<b>:TYPE`) and the bus has to be activated (`BUS<b>[:STATe]`).

The following table lists the <MeasType> parameter values with a short description.

Table 27-8: Protocol measurements

<MeasType> parameter value (remote control)	Measurement (manual operation)	Description/Result
AUDio	Audio	
FLDValue	Field value	Value of a field over time
F2F	Frame to frame	The distance between two frame types
T2F	Trigger to frame	Distance between the trigger point and the first frame
GAP	Gap	Measures a gap, periods at which the bus is idle. The distance of a gap can only be measured between two identified frames.
MBITrate	Main bit rate	Bit rate of the protocol
SBITrate	2nd bit rate	Additional bit rate, protocol dependent.
BIDLe	Bus idle	Calculates the bus idle time
FCNT	Frame count	Number of all frames within the acquisition window
FEC	Frame error count	Sum of all frames with errors within the acquisition window
FER	Frame error rate	Sum of all frames with errors divided by all frames within the acquisition window
CFER	Consecutive frame error rate	Measures the frame error rate

MEASurement<mg>:PROTocol:T2FRame:FLD 1747
MEASurement<mg>:PROTocol:T2FRame:FRM 1747
MEASurement<mg>:PROTocol:T2FRame:VALue 1748

MEASurement<mg>:PROTocol:F2FRame:FLDFrom <FieldName>

Sets the type of field for the start frame of the frame to frame protocol measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<FieldName>

Manual operation: See "Frame to frame" on page 365

MEASurement<mg>:PROTocol:F2FRame:FLDTo <FieldName>

Sets the type of field for the end frame of the frame to frame protocol measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<FieldName>

Manual operation: See "Frame to frame" on page 365

MEASurement<mg>:PROTocol:F2FRame:FRMFrom <FrameName>

Sets the type of start frame for the frame to frame protocol measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<FrameName>

Manual operation: See "Frame to frame" on page 365

MEASurement<mg>:PROTocol:F2FRame:FRMTo <FrameName>

Sets the type of end frame for the frame to frame protocol measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<FrameName>

Manual operation: See "Frame to frame" on page 365

MEASurement<mg>:PROTocol:F2FRame:VALFrom <FrmFrmFromVal>

Sets the field value of the start frame for the frame to frame protocol measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<FrmFrmFromVal>

Usage: Asynchronous command

Manual operation: See "Frame to frame" on page 365

MEASurement<mg>:PROTocol:F2FRame:VALTo <FrmFrmVal>

Sets the field value of the end frame for the frame to frame protocol measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<FrmFrmVal>

Usage: Asynchronous command

Manual operation: See "Frame to frame" on page 365

MEASurement<mg>:PROTocol:FLDValue:FLD <FieldName>

Sets the type of field for the frame of the field value protocol measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<FieldName>

Manual operation: See "Field value" on page 368

MEASurement<mg>:PROTocol:FLDValue:FRM <FrameName>

Sets the type frame for the field value protocol measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<FrameName>

Manual operation: See "Field value" on page 368

MEASurement<mg>:PROTocol:FLDValue:TRCK <FieldName>

Sets the field to be tracked value of the frame for the field value protocol measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<FieldName>

Manual operation: See "Field value" on page 368

MEASurement<mg>:PROTocol:FLDValue:VAL <FieldValIdVal>

Sets the field value of the frame for the field value protocol measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<FieldValIdVal>

Usage: Asynchronous command

Manual operation: See "Field value" on page 368

MEASurement<mg>:PROTocol:MBITrate:FLD <FieldName>

Sets the type of field for the frame of the main bit rate protocol measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<FieldName>

Manual operation: See "Main bit rate / 2nd bit rate" on page 369

MEASurement<mg>:PROTocol:MBITrate:FRM <FrameName>

Sets the type frame for the main bit rate protocol measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<FrameName>

Manual operation: See "Main bit rate / 2nd bit rate" on page 369

MEASurement<mg>:PROTocol:MBITrate:VAL <MainBtRateIdVal>

Sets the field value of the frame for the main bit rate protocol measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<MainBtRateIdVal>

Usage: Asynchronous command

Manual operation: See "Main bit rate / 2nd bit rate" on page 369

MEASurement<mg>:PROTocol:SBITrate:FLD <FieldName>

Sets the type of field for the frame of the secondary bit rate protocol measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<FieldName>

Manual operation: See "Main bit rate / 2nd bit rate" on page 369

MEASurement<mg>:PROTocol:SBITrate:FRM <FrameName>

Sets the type frame for the secondary bit rate protocol measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<FrameName>

Manual operation: See "Main bit rate / 2nd bit rate" on page 369

MEASurement<mg>:PROTocol:SBITrate:VAL <SecondaryBtRateIdVal>

Sets the field value of the frame for the secondary bit rate protocol measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<SecondaryBtRateIdVal>

Usage: Asynchronous command

Manual operation: See "Main bit rate / 2nd bit rate" on page 369

MEASurement<mg>:PROTocol:T2FRame:DIRection <TrigFrmDirct>

Sets the direction of the field for trigger to frame protocol measurement.

Suffix:
<mg> 1..10

Parameters:
<TrigFrmDirct> T2F | F2T

`T2F`: trigger to frame
`F2T`: frame to trigger

*RST: T2F

Usage: Asynchronous command

Manual operation: See "Trigger to frame" on page 368

MEASurement<mg>:PROTocol:T2FRame:FLD <FieldName>

Sets the type of the field for trigger to frame protocol measurement.

Suffix:
<mg> 1..10

Parameters:
<FieldName>

Manual operation: See "Trigger to frame" on page 368

MEASurement<mg>:PROTocol:T2FRame:FRM <FrameName>

Sets the value of the frame for trigger to frame protocol measurement.

Suffix:
<mg> 1..10

Parameters:
<FrameName>

Manual operation: See "Trigger to frame" on page 368

MEASurement<mg>:PROTocol:T2FRame:VALue <TrigFrmVal>

Sets the value of the field for trigger to frame protocol measurement.

Suffix:
<mg> 1..10

Parameters:
<TrigFrmVal>

Usage: Asynchronous command

Manual operation: See "Trigger to frame" on page 368

27.12.11 Measurement gates

MEASurement<mg>:GATE[:STATe] ... 1748
MEASurement<mg>:GATE:SHOW ... 1749
MEASurement<mg>:GATE:MODE ... 1749
MEASurement<mg>:GATE:ABSolute:STARt ... 1749
MEASurement<mg>:GATE:ABSolute:STOP ... 1749
MEASurement<mg>:GATE:RELative:STARt ... 1750
MEASurement<mg>:GATE:RELative:STOP ... 1750
MEASurement<mg>:GATE:CURSor ... 1750
MEASurement<mg>:GATE:CCOupling ... 1750
MEASurement<mg>:GATE:ZCOupling ... 1751
MEASurement<mg>:GATE:ZDIagram ... 1751
MEASurement<mg>:GATE:GCOupling ... 1751

MEASurement<mg>:GATE[:STATe] <State>

Enables the gate settings for the selected measurement and displays the gate.

Gating is not available if the source of the selected measurement is a digital channel.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Use gate" on page 371

MEASurement<mg>:GATE:SHOW <DisplayState>

Indicates the gate area in the source diagram.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<DisplayState> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Use gate" on page 371

MEASurement<mg>:GATE:MODE <Mode>

Defines whether the gate settings are configured using absolute or relative values.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Mode> ABS | REL
*RST: ABS

Usage: Asynchronous command

Manual operation: See "Mode" on page 371

MEASurement<mg>:GATE:ABSolute:STARt <Start>
MEASurement<mg>:GATE:ABSolute:STOP <Stop>

Define the absolute start and end values for the gate.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Stop> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0.01

Usage: Asynchronous command

Manual operation: See "(Relative) Stop" on page 372

MEASurement<mg>:GATE:RELative:STARt <RelativeStart>
MEASurement<mg>:GATE:RELative:STOP <RelativeStop>

Define the relative start and end values for the gate, respectively.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<RelativeStop> Range: 0 to 100
Increment: 0.1
*RST: 100
Default unit: %

Usage: Asynchronous command

Manual operation: See "(Relative) Stop" on page 372

MEASurement<mg>:GATE:CURSor <Cursorset>

Selects the cursor set to be used for measurement gating. The gate area is defined by the cursor lines.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Cursorset> CURSOR1 | CURSor1 | CURSOR2 | CURSor2 | CURSOR3 | CURSor3 | CURSOR4 | CURSor4

CURSOR1 = CURSor1, CURSOR2 = CURSor2, CURSOR3 = CURSor3, CURSOR4 = CURSor4

*RST: CURSOR1

Usage: Asynchronous command

Manual operation: See "Cursor" on page 372

MEASurement<mg>:GATE:CCOupling <CursorCoupling>

Enables the cursor coupling for automatic measurements.

Select the cursor set to be used with `MEASurement<mg>:GATE:CURSor`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<CursorCoupling> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Cursor" on page 372

MEASurement<mg>:GATE:ZCOupling <ZoomCoupling>

If enabled, the gate area is defined identically to the zoom area for the zoom diagram.

If enabled, define the zoom area to be used as gate with `MEASurement<mg>:GATE:ZDIagram`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ZoomCoupling> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Zoom" on page 372

MEASurement<mg>:GATE:ZDIagram <DiagramName>, <ZoomName>

If `MEASurement<mg>:GATE:ZCOupling` is enabled, the gate area is defined identically to the zoom area for the selected zoom diagram.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ZoomName> String with the name of the diagram on which the zoom is based

Example: Prerequisite: Zoom 1 is available
```
MEASurement:GATE:ZCOupling ON
MEASurement:GATE:ZDIagram "Diagram1","Zoom1"
```

Usage: Asynchronous command

Manual operation: See "Zoom" on page 372

MEASurement<mg>:GATE:GCOupling <GateCoupling>

If you enable the gate coupling, the gate settings of the selected measurement are copied to all other measurements. If zoom or cursor coupling is active in a measurement, the zoom size and cursor positions are adjusted.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<GateCoupling> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Apply to all meas" on page 371

27.12.12 Results

MEASurement<mg>:ARES? 1752
MEASurement<mg>:ARNames 1753
MEASurement<mg>:RESult[:ACTual]? 1753
MEASurement<mg>:RESult:AVG? 1753
MEASurement<mg>:RESult:EVTCount? 1753
MEASurement<mg>:RESult:NPEak? 1753
MEASurement<mg>:RESult:PPEak? 1753
MEASurement<mg>:RESult:RELiability? 1753
MEASurement<mg>:RESult:RMS? 1754
MEASurement<mg>:RESult:WFMCount? 1754
MEASurement<mg>:RESult:STDDev? 1754
MEASurement<mg>:RESult:STARt? 1754
MEASurement<mg>:RESult:STOP? 1754
MEASurement<mg>:RESult:COUNt? 1755

MEASurement<mg>:ARES?

Returns the results of all active measurements for the selected measurement group. If statistics are enabled, the instrument returns also statistical results.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Return values:
<Data> Result string

Example:
```
:MEASurement:ARES?
2.351778656126e-001,1.343873517787e-001,
-1.343873517787e-001
```

Example:
```
:MEASurement:ARNames 1
:MEASurement:ARES?
Amplitude: 2.351778656126e-001,Max:
1.343873517787e-001,Min: -1.343873517787e-001
```

Example:
```
:MEASurement:ARNames 1
:MEASurement:STATistics:ENABle 1
:MEASurement:ARES?
Amplitude:
2.312252964427e-001,2.608695652174e-001,
2.292490118577e-001,2.391822576775e-001,

-1.324110671937e-001,-1.324110671937e-001,
-1.343873517787e-001,-1.340169449387e-001,
1.340191641476e-001,7.712812700636e-004,12447,
12447
Results: current, peak+, peak-, average, RMS,
standard deviation, event count, waveform count
```

Usage: Query only
Asynchronous command

MEASurement<mg>:ARNames <Identifier>

Enables a prefix that indicates the measurement in the result string of the `MEASurement<mg>:ARES?` command.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Identifier> OFF | ON
*RST: OFF

Example:
```
:MEASurement:ARNames 1
:MEASurement:ARES?
Low: -1.185770750988e-001,Amplitude:
2.371541501976e-001,Max: 1.343873517787e-001
```

Usage: Asynchronous command

MEASurement<mg>:RESult[:ACTual]? [<MeasType>],[<BaseLevel>],
[<TargetLevel>]
MEASurement<mg>:RESult:AVG? [<MeasType>],[<BaseLevel>],[<TargetLevel>]
MEASurement<mg>:RESult:EVTCount? [<MeasType>],[<BaseLevel>],
[<TargetLevel>]
MEASurement<mg>:RESult:NPEak? [<MeasType>],[<BaseLevel>],[<TargetLevel>]
MEASurement<mg>:RESult:PPEak? [<MeasType>],[<BaseLevel>],[<TargetLevel>]
MEASurement<mg>:RESult:RELiability? [<MeasType>],[<BaseLevel>],
[<TargetLevel>]

MEASurement<mg>:RESult:RMS? [<MeasType>],[<BaseLevel>],[<TargetLevel>]
MEASurement<mg>:RESult:WFMCount? [<MeasType>],[<BaseLevel>],
[<TargetLevel>]
MEASurement<mg>:RESult:STDDev? [<MeasType>],[<BaseLevel>],[<TargetLevel>]

Return the statistic results of the specified measurement. If no parameter is specified, the result of the main measurement is returned. The main measurement is defined using `MEASurement<mg>:MAIN`.

- [:ACTual]: current measurement result
- AVG: average of the long-term measurement results
- EVTCount: number of measurement results in the long-term measurement
- NPEak: negative peak value of the long-term measurement results
- PPEak: positive peak value of the long-term measurement results
- RELiability: reliability of the measurement result
- RMS: RMS value of the long-term measurement results
- STDDev: standard deviation of the long-term measurement results

For a detailed description of the results, see "Selection of the measurement group: MEASurement<mg>" on page 1676.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Query parameters:
<MeasType> See `MEASurement<mg>:MAIN` on page 1680.

<BaseLevel> Sets the base level for signals with PAM order > 2

<TargetLevel> Sets the target level for signals with PAM order > 2

Return values:
<Value> Measurement result

Example: See "Simple frequency and amplitude measurement" on page 1428.

Usage: Query only

MEASurement<mg>:RESult:STARt? [<MeasType>],[<BaseLevel>],[<TargetLevel>]
MEASurement<mg>:RESult:STOP? [<MeasType>],[<BaseLevel>],[<TargetLevel>]

Return the start and stop times of the specified measurement. The parameter defines the measurement. If no parameter is specified, the result of the main measurement is returned. The main measurement is defined using `MEASurement<mg>:MAIN`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Query parameters:

<MeasType> See MEASurement<mg>:MAIN on page 1680.

<BaseLevel> Sets the base level for signals with PAM order > 2

<TargetLevel> Sets the target level for signals with PAM order > 2

Return values:

<Value>

Usage: Query only

MEASurement<mg>:RESult:COUNt? [<MeasType>],[<BaseLevel>],[<TargetLevel>]

Returns the number of result groups that are returned by MEASurement:RESult:ACTual? HAR.

Suffix:

<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Query parameters:

<MeasType> HAR
The command is only relevant for harmonic search.

<BaseLevel> Sets the base level for signals with PAM order > 2

<TargetLevel> Sets the target level for signals with PAM order > 2

Return values:

<Value>

Example:

```
:MEASurement:RESult:ACTual? HAR
99.9;-6.000139236;199.8;-80.701713562;299.7;-15.528377533;399.6;-79.84082
:MEASurement:RESult:COUNt? HAR
&lt;-- 5
```

Usage: Query only

Firmware/software: Version 2.70

27.12.13 Display

MEASurement<mg>:DISPlay:LEVels 1755
MEASurement<mg>:DISPlay:RESults 1756
MEASurement<mg>:DISPlay:STYLe 1756
MEASurement<mg>:DISPlay:HISTogram 1757

MEASurement<mg>:DISPlay:LEVels <DisplayLevels>

If enabled, the reference levels used for the measurement are displayed in the diagram.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<DisplayLevels> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Reference levels" on page 377

MEASurement<mg>:DISPlay:RESults <DisplayResult>

If enabled, the intermediate result linesare displayed in the measurement diagram.

Result lines mark the samples in the waveform that are used to obtain the measurement result. These are, for example, maximum and minimum values, mean, cycle start and cycle end, and others.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<DisplayResult> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Result lines" on page 377

MEASurement<mg>:DISPlay:STYLe <DisplayStyle>

Selects the style in which the measurement waveform is displayed.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<DisplayStyle> LINE | MARKer

LINE
The individual data points are connected by a line.

MARKer
Only the individual data points are displayed as markers.

*RST: LINE

Usage: Asynchronous command

MEASurement<mg>:DISPlay:HISTogram <DispHistg>

Displays a histogram for the source of the selected measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<DispHistg> OFF | ON
*RST: OFF

Usage: Asynchronous command

27.12.14 Statistics and long-term measurements

See also: Section 27.16.7, "Long term measurement results and measurement histogram: export to file", on page 1874.

MEASurement<mg>:STATistics[:ENABle] 1757
MEASurement<mg>:CLEar 1758
MEASurement<mg>:MULTiple 1758
MEASurement<mg>:MNOMeas 1758
MEASurement<mg>:STATistics:HISTogram 1759
MEASurement<mg>:STATistics:HBINs 1759
MEASurement<mg>:STATistics:MODE 1759
MEASurement<mg>:STATistics:RCOunt 1760
MEASurement<mg>:STATistics:RMEascount 1760
MEASurement<mg>:STATistics:RTIMe 1761
MEASurement<mg>:STATistics:RESet 1761
MEASurement<mg>:VERTical:CONT 1761
MEASurement<mg>:VERTical:AUTO 1762
MEASurement<mg>:VERTical:OFFSet 1762
MEASurement<mg>:VERTical:SCALe 1762
MEASurement<mg>:LTMeas[:STATe] 1763
MEASurement<mg>:LTMeas:COUNt 1763
MEASurement<mg>:LTMeas:TIME 1763

MEASurement<mg>:STATistics[:ENABle] <State>

Enables statistics calculation for the measurement.

For details on the statistics results, see Section 8.2.11.2, "Statistics", on page 374.

Suffix:
<mg> See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Statistics" on page 317

MEASurement<mg>:CLEar

Deletes the statistic results of the indicated mesurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Usage: Event
Asynchronous command

MEASurement<mg>:MULTiple <MultiMeas>

The measurement is performed repeatedly if the measured parameter occurs several times inside the acquisition or defined gate.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<MultiMeas> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Measure all events in each acquisition" on page 385

MEASurement<mg>:MNOMeas <MaxMeasPerAcq>

Sets the maximum number of measurements per acquisition if repeated measurement is enabled (`MEASurement<mg>:MULTiple` is `ON`).

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<MaxMeasPerAcq> Range: 2 to 1E+6
Increment: 1
*RST: 1000

Usage: Asynchronous command

Manual operation: See "Measure all events in each acquisition" on page 385

MEASurement<mg>:STATistics:HISTogram <ShowHistogram>

Displays a histogram of the statistical results. Enabling the histogram enables also the calculation and display of statistics for the measurement results if statistics were disabled. the histogram shows the cumulative occurence distribution of mean measurement results in a graphic.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ShowHistogram> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable (Histogram)" on page 381

MEASurement<mg>:STATistics:HBINs <HistogramBins>

Sets the number of bins - the number of vertical bars that build the histogram.

If `MEASurement<mg>:VERTical:CONT` is ON, the instrument determines the number of bins automatically based on the time base, the current measurements, and other settings.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<HistogramBins> Range: 2 to 1000
Increment: 10
*RST: 1000

Usage: Asynchronous command

Manual operation: See "Number of bins" on page 381

MEASurement<mg>:STATistics:MODE <ResetMode>

Defines when the statistics for long term measurements are reset.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ResetMode> TIME | WFMS | MEAS

TIME
Sets one long term measurement point after the time defined using `MEASurement<mg>:STATistics:RTIMe`.

WFMS - Waveforms
Sets one long term measurement point after a number of acquired waveforms defined using `MEASurement<mg>:STATistics:RCOunt`.

MEAS
Sets one long term measurement point after a number of measurement results.

*RST: TIME

Usage: Asynchronous command

Manual operation: See "Horizontal scaling" on page 383

MEASurement<mg>:STATistics:RCOunt <ResetWaveforms>

Defines the number of measured waveforms from which one point of the long term measurement is created (reset of statistics).

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ResetWaveforms>
Range: 1 to 65535
Increment: 10
*RST: 1000

Usage: Asynchronous command

Manual operation: See "Waveforms / point" on page 384

MEASurement<mg>:STATistics:RMEascount <ResetMeasCount>

Defines the number of measurement results from which one point of the long term measurement is created.

This setting is only available if `MEASurement<mg>:STATistics:MODE` is set to `MEAS`.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ResetMeasCount>
Range: 1 to 65535
Increment: 10
*RST: 1000

Usage: Asynchronous command

Manual operation: See "Measurements / point" on page 384

MEASurement<mg>:STATistics:RTIMe <ResetTime>

Defines the time or period after which the statistics are reset.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ResetTime> Range: 0.1 to 2.14748E+9
Increment: 1E-3
*RST: 0.2
Default unit: s

Usage: Asynchronous command

Manual operation: See "Time / point" on page 383

MEASurement<mg>:STATistics:RESet

Resets the histogram, the long term measurement and the statistics.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Usage: Event
Asynchronous command

Manual operation: See "Reset all" on page 382

MEASurement<mg>:VERTical:CONT <ContAutoScl>

If enabled, automatic vertical scaling is performed whenever the waveform does not fit in the diagram during the long term measurement period.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ContAutoScl> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Analysis scale" on page 382

MEASurement<mg>:VERTical:AUTO

Performs an automatic scaling once so that the scaling is adapted to the current measurement results. Available only for long term measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Usage: Event
Asynchronous command

Manual operation: See "Analysis scale" on page 382

MEASurement<mg>:VERTical:OFFSet <VerticalOffset>

Defines a vertical offset for the long term measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<VerticalOffset>
Range: -100E+12 to 100E+12
Increment: 1E-6
*RST: 0
Default unit: div

Usage: Asynchronous command

Manual operation: See "Analysis scale" on page 382

MEASurement<mg>:VERTical:SCALe <VerticalScale>

Defines the vertical scaling per division, so that the scaling can be adapted automatically during the long term measurement period.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<VerticalScale>
Range: 1E-12 to 100E+12
Increment: 10E-6
*RST: 0.5
Default unit: V/div

Usage: Asynchronous command

Manual operation: See "Analysis scale" on page 382

MEASurement<mg>:LTMeas[:STATe] <ShowDiagram>

Enables long term measurement for a defined number of measurement points (see `MEASurement<mg>:LTMeas:COUNt` on page 1763) or a specified time (see`MEASurement<mg>:LTMeas:TIME` on page 1763).

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ShowDiagram> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable (Long term)" on page 380

MEASurement<mg>:LTMeas:COUNt <MeasCnt>

Defines the total number of points to be measured during the long term measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<MeasCnt> Range: 1000 to 200E+3
Increment: 10
*RST: 1000

Usage: Asynchronous command

Manual operation: See "Number of points" on page 383

MEASurement<mg>:LTMeas:TIME <MeasTime>

Defines the total duration of the long term measurement.

This setting is only available if `MEASurement<mg>:STATistics:MODE` is set to "Time".

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<MeasTime> Range: 0.01 to 2.14748E+9
Increment: 1
*RST: 200
Default unit: s

Usage: Asynchronous command

Manual operation: See "Measurement time" on page 383

27.12.15 Track

MEASurement<mg>:TRACk[:STATe] 1764
MEASurement<mg>:TRACk:DATA:HEADer? 1764
MEASurement<mg>:TRACk:DATA:STYPe? 1764
MEASurement<mg>:TRACk:DATA[:VALues]? 1765

MEASurement<mg>:TRACk[:STATe] <State>

Enables the track functionality and displays the track.

The track functionality requires at least one option, see "Enable (Track)" on page 382.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable (Track)" on page 382

MEASurement<mg>:TRACk:DATA:HEADer?

Returns the header of the track.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Return values:
<Start> 1. header value: time of the first sample in s

<Stop> 2. header value: time of the last sample in s

<RecordLength> 3. header value: record length of the waveform in samples

<ValuesPerSample> 4. header value: number of values per sample.

Usage: Query only

MEASurement<mg>:TRACk:DATA:STYPe?

Returns the data type.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Return values:
<SignalType> String: "TRK" (track)

Usage: Query only

MEASurement<mg>:TRACk:DATA[:VALues]?

Returns the data of track points for transmission from the instrument to the controlling computer. The data can be used in MATLAB, for example.

To set the export format, use `FORMat[:DATA]`. Supported formats are: ASCii | REAL,64 | INT,8 | INT,16.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Return values:
<Data> Comma-separated list of data.

Usage: Query only

27.12.16 Limit check and event actions

MEASurement<mg>:LCHeck 1765
MEASurement<mg>:ONViolation:BEEP 1766
MEASurement<mg>:ONViolation:ACQStop 1766
MEASurement<mg>:ONViolation:PRINt 1766
MEASurement<mg>:ONViolation:WFMSave 1767
MEASurement<mg>:ONViolation:REPort 1767
MEASurement<mg>:ONViolation:TRIGgerout 1768
MEASurement<mg>:ONViolation:RUNexec 1768
MEASurement<mg>:ONViolation:RESSave 1768

MEASurement<mg>:LCHeck <LimitCheckState>

Defines the type of the limit check that can run together with the measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<LimitCheckState> OFF | LIMit | LMARgin

OFF
No limit check.

LIMit
Only limits are checked.

LMARgin
Limits and margins are checked.

*RST: OFF

Usage: Asynchronous command

MEASurement<mg>:ONViolation:BEEP <Beep>

Generates a beep sound for the specified event.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Beep> NOACtion | SUCCess | VIOLation
See Section 27.4.5, "Event parameter", on page 1453
*RST: NOACtion

Usage: Asynchronous command

Manual operation: See "Beep" on page 388

MEASurement<mg>:ONViolation:ACQStop <StopAcq>

Stops data acquisition for the specified event.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<StopAcq> NOACtion | SUCCess | VIOLation
See Section 27.4.5, "Event parameter", on page 1453
*RST: NOACtion

Usage: Asynchronous command

Manual operation: See "Stop acquisition" on page 388

MEASurement<mg>:ONViolation:PRINt <Print>

Saves a screenshot on limit or margin violation or on successful completion of the measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Print> NOACtion | SUCCess | VIOLation
See Section 27.4.5, "Event parameter", on page 1453
*RST: NOACtion

Usage: Asynchronous command

Manual operation: See "Save screenshot" on page 388

MEASurement<mg>:ONViolation:WFMSave <SaveWfm>

Saves the waveform data using the default RefCurve filename.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<SaveWfm> NOACtion | SUCCess | VIOLation
See Section 27.4.5, "Event parameter", on page 1453
*RST: NOACtion

Usage: Asynchronous command

Manual operation: See "Save waveform" on page 388

MEASurement<mg>:ONViolation:REPort <Report>

Creates and saves a report of the current settings and results.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Report> NOACtion | SUCCess | VIOLation
See Section 27.4.5, "Event parameter", on page 1453
*RST: NOACtion

Usage: Asynchronous command

Manual operation: See "Report" on page 388

MEASurement<mg>:ONViolation:TRIGgerout <TrigOutPls>

Creates a trigger out pulse on limit or margin violation or on successful completion of the measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<TrigOutPls> NOACtion | SUCCess | VIOLation
*RST: NOACtion

Usage: Asynchronous command

Manual operation: See "Trigger out pulse" on page 388

MEASurement<mg>:ONViolation:RUNexec <RunExecutable>

Starts an external application if the command is set to `VIOLation` or `SUCCess`.

Use the following commands to set up the application:

- `EXECutable:NAME` on page 1884
- `EXECutable:PARameter` on page 1885
- `EXECutable:WDIRectory` on page 1885

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<RunExecutable> NOACtion | SUCCess | VIOLation
See Section 27.4.5, "Event parameter", on page 1453
*RST: NOACtion

Usage: Asynchronous command

Manual operation: See "Start executable" on page 388

MEASurement<mg>:ONViolation:RESSave <SaveResults>

Starts the export of selected results to file on limit or margin violation or on successful completion of the measurement.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:

<SaveResults> NOACtion | SUCCess | VIOLation

*RST: NOACtion

Usage: Asynchronous command

Manual operation: See "Results" on page 388

27.13 Spectrum analysis

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

- www.rohde-schwarz.com/rc-via-scpi, section "Command sequence and synchronization"
- Section 27.3, "Programming examples", on page 1425

CALCulate:MATH<m>:FFT:COUPled:WITH<n> 1783

CALCulate:MATH<m>:FFT:LOGScale <XAxisMode>

Defines the scaling method for the frequency (x-)axis of the spectrogram.

Suffix:
<m> 1..8

Parameters:
<XAxisMode> LIN | LOG

LOG
Logarithmic scaling

LIN
Linear scaling

*RST: LIN

Usage: Asynchronous command

Manual operation: See "Frequency axis" on page 401

CALCulate:MATH<m>:FFT:STARt <StartFreq>

Defines the start frequency of the displayed frequency span.

Suffix:
<m> 1..8
math waveform

Parameters:
<StartFreq> start frequency

Range: 0 to 5E+9
Increment: 1
*RST: 2E+9
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Start frequency" on page 401

CALCulate:MATH<m>:FFT:STOP <StopFreq>

Defines the stop frequency of the displayed frequency span.

Suffix:
<m> 1..8
math waveform

Parameters:
<StopFreq> stop frequency
Range: 0 to 5E+9
Increment: 1
*RST: 2E+9
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Stop frequency" on page 401

CALCulate:MATH<m>:FFT:CFRequency <CenterFreq>

Defines the position of the displayed frequency range, which is (Center - Span/2) to (Center + Span/2). The width of the range is defined using the `CALCulate:MATH<m>:FFT:SPAN` command.

Suffix:
<m> 1..8
math waveform

Parameters:
<CenterFreq> center frequency
Range: 0 to 2E+12
Increment: 1
*RST: 2.5E+9
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Center frequency" on page 401

CALCulate:MATH<m>:FFT:FULLspan

Performs FFT calculation for the full frequency span.

Suffix:
<m> 1..8
math waveform

Usage: Event
Asynchronous command

Manual operation: See "Full span" on page 401

CALCulate:MATH<m>:FFT:SPAN <FreqSpan>

The span is specified in Hertz and defines the width of the displayed frequency range, which is (Center - Span/2) to (Center + Span/2). The position of the span is defined using the `CALCulate:MATH<m>:FFT:CFRequency` command.

Suffix:
<m> 1..8
Math waveform

Parameters:
<FreqSpan> Frequency span
Range: 1 to 10E+9
Increment: 1
*RST: Bandwidth of the instrument model, bandwidth extension options are not considered
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Frequency span" on page 401

CALCulate:MATH<m>:FFT:TYPE <Type>

Selects between the magnitude and phase spectrum type.

Suffix:
<m> 1..8

Parameters:
<Type> MAGNitude | PHASe
*RST: MAGNitude

Usage: Asynchronous command

Manual operation: See "Type" on page 400

CALCulate:MATH<m>:FFT:BANDwidth[:RESolution]:ADJusted?

Queries the effective resolution bandwidth.

Suffix:
<m> 1..8
Math waveform

Return values:
<AdjResBW> effective resolution bandwidth
Range: 0.01 to 20E+12
*RST: 0
Default unit: Hz

Usage: Query only

Manual operation: See "Resolution BW" on page 402

CALCulate:MATH<m>:FFT:BANDwidth[:RESolution]:AUTO <State>

Couples the frequency span to the RBW.

Suffix:
<m> 1..8
math waveform

Parameters:
<State> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Span/RBW Coupling" on page 402

CALCulate:MATH<m>:FFT:BANDwidth[:RESolution]:RATio <SpanRBWRatio>

This command defines the ratio of span (Hz) / resolution bandwidth (Hz).

Suffix:
<m> 1..8
math waveform

Parameters:
<SpanRBWRatio> ratio span / resolution bandwidth
Range: 1 to 1000
Increment: 1
*RST: 100

Usage: Asynchronous command

Manual operation: See "Span/RBW Ratio" on page 402

CALCulate:MATH<m>:FFT:BANDwidth[:RESolution][:VALue] <ResolutionBW>

This command defines the resolution bandwidth.

Suffix:
<m> 1..8
math waveform

Parameters:
<ResolutionBW> resolution bandwidth
Range: 5E-3 to 160E+6
Increment: 0.01
*RST: 2E+6
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Resolution BW" on page 402

CALCulate:MATH<m>:FFT:WINDow:TYPE <WindowType>

Windowing helps minimize the discontinuities at the end of the measured signal interval and thus reduces the effect of spectral leakage, increasing the frequency resolution.

Various different window functions are provided in the R&S RTO6 to suit different input signals. Each of the window functions has specific characteristics, including some advantages and some trade-offs. These characteristics need to be considered carefully to find the optimum solution for the measurement task.

Suffix:

<m> 1..8
math waveform

Parameters:

<WindowType> RECTangular | HAMMing | HANN | BLACkharris | GAUSsian | FLATTOP2 | FLATtop2 | KAISerbessel

RECTangular
The rectangular window has the best frequency resolution, but a poor amplitude accuracy and is recommended for separating two tones with almost equal amplitudes and a small frequency distance.

HAMMing
The Hamming window is bell shaped and has a good frequency resolution and fair amplitude accuracy. It is recommended for frequency response measurements as well as sine waves, periodic signals and narrow-band noise

HANN
The Hann window is bell shaped and has a slightly worse frequency resolution but smaller sidelobe level than the Hamming window. The applications are the same.

BLACkharris
The Blackman window is bell shaped and has a poor frequency resolution, but very good amplitude accuracy. It is recommended mainly for signals with single frequencies to detect harmonics.

GAUSsian
Good frequiency resolution and best magnitude resolution, recommended for weak signals and short duration

FLATTOP2 = FLATtop2
The flattop window has a poor frequency resolution, but the best amplitude accuracy and the sharpest side lobe. It is recommended for accurate single-tone amplitude measurements.

KAISerbessel
The Kaiser-Bessel window has a fair frequency resolution and good amplitude accuracy, and a very high sidelobe level. It is recommended for separating two tones with differing amplitudes and a small frequency distance.

*RST: BLACkharris

Usage: Asynchronous command

Firmware/software: Version 3.35 and higher: Use FLATTOP2 or FLATtop2 instead of FLAT2

Manual operation: See "Window type" on page 402

CALCulate:MATH<m>:FFT:FRAMe:ARIThmetics <Arithmetics>

The arithmetic mode defines how the final FFT result is calculated from the individual frame results.

Suffix:
<m> 1..8
Selects the math waveform.

Parameters:
<Arithmetics> OFF | ENVelope | AVERage | RMS | MINHold | MAXHold
See "Segment arithmetic" on page 404
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Segment arithmetic" on page 404

CALCulate:MATH<m>:FFT:FRAMe:COVerage?

Due to the restriction of the number of frames (see `CALCulate:MATH<m>:FFT:FRAMe:MAXCount` on page 1775), the waveform may only be analyzed partially. This command queries the percentage of the trace that was analyzed, i.e. which part of the trace was included in the frame calculation.

Suffix:
<m> 1..8
math waveform

Return values:
<FrameCoverage> Range: 0 to 100
*RST: 100
Default unit: %

Usage: Query only
Asynchronous command

Manual operation: See "Max FFTs per acquisition" on page 404

CALCulate:MATH<m>:FFT:FRAMe:MAXCount <MaxFrameCount>

Restricts the maximum number of frames to be calculated. Due to the other parameter settings, the required number of frames may become very high, thus slowing performance. By restricting the number of frames, you can avoid performance loss without changing the other parameters.

Suffix:
<m> 1..8
math waveform

Parameters:
<MaxFrameCount> Range: 1 to 10000
Increment: 10
*RST: 1000

Usage: Asynchronous command

Manual operation: See "Max FFTs per acquisition" on page 404

CALCulate:MATH<m>:FFT:FRAMe:OFACtor <OverlapFactor>

Defines the minimum factor by which two neighboring frames overlap. If the required number of frames to cover the input values allows for more overlap, the factor is increased.

The higher the overlap factor, the more frames are used. This leads to more individual results and improves detection of transient signal effects. However, it also extends the duration of the calculation.

Suffix:
<m> 1..8
math waveform

Parameters:
<OverlapFactor> Range: 0 to 90
Increment: 1
*RST: 50
Default unit: %

Usage: Asynchronous command

Manual operation: See "Overlap Factor" on page 404

CALCulate:MATH<m>:FFT:GATE:COUPling <GateRBWCoupling>

Defines the behaviour of the record length or RBW value in dependancy to the other FFT parameters.

See also:

- "Record Length/RBW Coupling" on page 407
- Section 9.1.1, "Fundamentals of FFT analysis", on page 391

Suffix:
<m> 1..8
math waveform

Parameters:
<GateRBWCoupling> LENGth | RBW

LENGth
The record length remains constant. If not enough samples are available for the selected RBW, the RBW will be decreased.

RBW
The RBW is not adapted, i.e. remains as defined by the user. The required acquisition time for this RBW is indicated. If necessary and possible, the record length is extended to acquire the required number of samples.

*RST: RBW

Usage: Asynchronous command

Manual operation: See "Record Length/RBW Coupling" on page 407

TIMebase:RACTime?

Queries the required acquisition time. If FFT gating is used and the resolution BW is set to constant, record length can be extended to acquire the required number of samples. In this case, the required acquisition time differs from the adjusted acquisition time (`TIMebase:RANGe`).

Return values:
<RqrdAcqTime> Required acquisition time for FFT

Range: 125E-12 to 100E+3
*RST: 0.5
Default unit: s

Usage: Query only
Asynchronous command

Manual operation: See "Required acquisition time" on page 407

CALCulate:MATH<m>:FFT:GATE:ABSolute:STARt <Start>

Defines the starting value for the gate.

Suffix:
<m> 1..8
math waveform

Parameters:
<Start>
Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0

Usage: Asynchronous command

Manual operation: See "(Relative) Start" on page 372

CALCulate:MATH<m>:FFT:GATE:ABSolute:STOP <Stop>

Defines the end value for the gate.

Suffix:
<m> 1..8
math waveform

Parameters:
<Stop> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0.01

Usage: Asynchronous command

Manual operation: See "(Relative) Stop" on page 372

CALCulate:MATH<m>:FFT:GATE:MODE <Mode>

Defines whether the gate settings are configured using absolute or relative values.

Suffix:
<m> 1..8
math waveform

Parameters:
<Mode> ABS | REL
*RST: ABS

Usage: Asynchronous command

Manual operation: See "Gate description" on page 406

CALCulate:MATH<m>:FFT:GATE:RELative:STARt <RelativeStart>

Defines the starting value for the gate in percent.

Suffix:
<m> 1..8
math waveform

Parameters:
<RelativeStart> Range: 0 to 100
Increment: 0.1
*RST: 0
Default unit: %

Usage: Asynchronous command

Manual operation: See "(Relative) Start" on page 372

CALCulate:MATH<m>:FFT:GATE:RELative:STOP <RelativeStop>

Defines the end value for the gate in percent.

Suffix:
<m> 1..8
math waveform

Parameters:

<RelativeStop>
Range: 0 to 100
Increment: 0.1
*RST: 100
Default unit: %

Usage: Asynchronous command

Manual operation: See "(Relative) Stop" on page 372

CALCulate:MATH<m>:FFT:GATE:SHOW <DisplayState>

Indicates the gate area in the source diagram.

Suffix:

<m>
1..8
math waveform

Parameters:

<DisplayState>
OFF | ON
*RST: OFF

Usage: Asynchronous command

CALCulate:MATH<m>:FFT:GATE:ZCOupling <ZoomCoupling>

If enabled, the gate area is defined identically to the zoom area for the zoom diagram.

Suffix:

<m>
1..8
math waveform

Parameters:

<ZoomCoupling>
OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Zoom" on page 372

CALCulate:MATH<m>:FFT:GATE:ZDIagram <ZoomDiagram>

If `CALCulate:MATH<m>:FFT:GATE:ZCOupling` is set to "ON", the gate area is defined identically to the zoom area for the zoom diagram specified with this command.

Suffix:

<m>
1..8
math waveform

Parameters:

<ZoomDiagram>
String with the name of the zoom diagram, which is used as gate.

Usage: Asynchronous command

CALCulate:MATH<m>:FFT:GATE[:STATe] <State>

Enables FFT gating.

Suffix:
<m> 1..8
math waveform

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

CALCulate:MATH<m>:FFT:MAGNitude:LEVel <VerticalMax>

Defines the reference level for dB scaling.

Suffix:
<m> 1..8
Math waveform

Parameters:
<VerticalMax> Range: -1E+15 to 1E+15
Increment: 0.01
*RST: 0
Default unit: div

Usage: Asynchronous command

Manual operation: See "Reference level" on page 410

CALCulate:MATH<m>:FFT:MAGNitude:RANGe <Range>

Defines the vertical value range in spectrum mode.

Suffix:
<m> 1..8
math waveform

Parameters:
<Range> Range: 1 to 500
Increment: 1
*RST: 100
Default unit: dB

Usage: Asynchronous command

CALCulate:MATH<m>:FFT:MAGNitude:SCALe <MagnitudeScale>

Defines the scaling of the y-axis for magnitude spectrums. The display values are valid for 50Ω termination impendance.

Select the unit according to the vertical unit of the source waveform.

Suffix:
<m> 1..8
math waveform

Parameters:
<MagnitudeScale> LINear | DBM | DB | DBUV | DBMV | DBV | DBPS | DBNS | DBUS | DBMS | DBS | DBHZ | DBKHZ | DBKHz | DBMHZ | DBMHz | DBGHZ | DBGHz | DBA | DBMA | DBUA

LINear
Linear scaling; displays the RMS value.

DBM | DB | DBUV | DBMV | DBV
Basic FFT

DBPS | DBNS | DBUS | DBMS | DBS | DBHZ | DBKHZ | DBKHz | DBMHZ | DBMHz | DBGHZ | DBGHz
FFT on tracks of time or frequency measurements

DBA | DBMA | DBUA
FFT on current waveforms

*RST: DBM

Usage: Asynchronous command

Manual operation: See "Unit" on page 410

Table 27-9: Logarithmic scaling values

DBM	dBm
DB	dB (related to reference level) Set the reference level with `CALCulate:MATH<m>:FFT:MAGNitude:LEVel`.
DBUV	dBµV
DBMV	dBmV
DBV	dBV
DBPS	dBps
DBNS	dBns
DBUS	dBµs
DBMS	dBms
DBS	dBs
DBHZ	dBHz
DBKHZ = DBKHz	dBkHz
DBMHZ = DBMHz	dBMHz
DBGHZ = DBGHz	dBGHz
DBA	dBA
DBMA	dBmA
DBUA	dBµA

CALCulate:MATH<m>:FFT:PHASe:SCALe <PhaseScale>

Defines the scaling unit for phase display.

Suffix:
<m> 1..8
math waveform

Parameters:
<PhaseScale> DEGRees | RADians
*RST: DEGRees

Usage: Asynchronous command

Manual operation: See "Unit" on page 410

CALCulate:MATH<m>:FFT:PHASe:SUPPression <Suppression>

Enables noise suppression. Phase calculation is restricted to frequencies with a minimum magnitude, the threshold value (see `CALCulate:MATH<m>:FFT:PHASe:THReshold` on page 1782).

Suffix:
<m> 1..8
math waveform

Parameters:
<Suppression> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Suppression" on page 410

CALCulate:MATH<m>:FFT:PHASe:THReshold <SupprThres>

Defines the minimum frequency magnitude for which phases are calculated. This setting is only available if `CALCulate:MATH<m>:FFT:PHASe:SUPPression` is set to "ON".

Suffix:
<m> 1..8
math waveform

Parameters:
<SupprThres> Range: -180 to 180
Increment: 0.1
*RST: 0
Default unit: dBm

Usage: Asynchronous command

Manual operation: See "Threshold" on page 410

CALCulate:MATH<m>:FFT:PHASe:UNWRap <Unwrap>

If enabled, phase shifts due to a limitation of the value range are eliminated.

Suffix:
<m> 1..8
math waveform

Parameters:
<Unwrap> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Unwrap" on page 410

CALCulate:MATH<m>:FFT:COUPled:WITH<n> <MathIndex>

Copies the current FFT settings of the selected math waveform (m) to the other selected math waveform (n), and couples the two waveforms. This can be repeated for all math waveforms.

If any FFT setting for any of the coupled spectrums is changed, it is changed for all coupled spectrums.

Suffix:
<m>, <n> 1..8
FFT waveforms to be coupled. <m>, <n> must be active and distinct.

Parameters:
<MathIndex> ON | OFF
*RST: OFF

Example: Prerequisite: FFT waveforms M1 and M2 are active.
`CALC:MATH1:FFT:COUP:WITH2 ON`
Couples the math waveforms M1 and M2.

Usage: Asynchronous command

Manual operation: See "Coupled to M1...M8" on page 408

27.13.2 Waveform data

CALCulate:MATH<m>:DATA:STYPe? 1783
CALCulate:MATH<m>:DATA:HEADer? 1784
CALCulate:MATH<m>:DATA[:VALues]? 1784

CALCulate:MATH<m>:DATA:STYPe?

Returns the signal type of the source of the math waveform.

Suffix:
<m> 1..8
Selects the math waveform.

Return values:
<SignalType> SOUR | SPEC | CORR | MEAS | NONE
SOURce = normal signal
SPECtrum = FFT spectrum, specific math signal
CORRelation = correlated signal, specific math signal
MEAsurement = result of a measurement
NONE = undefined

Usage: Query only
Asynchronous command

CALCulate:MATH<m>:DATA:HEADer?

Returns the header of math waveform data. The header contains attributes of the waveform.

Suffix:
<m> 1..8
Selects the math waveform.

Return values:
<Start> 1. header value: time of the first sample in s

<Stop> 2. header value: time of the last sample in s

<RecordLength> 3. header value: record length of the waveform in samples

<ValuesPerSample> 4. header value: number of values per sample. For most waveforms the result is 1, for peak detect and envelope waveforms it is 2. If the number is 2, the number of returned values is twice the number of samples (record length).

Example:
```
CALC:MATH1:DATA:HEAD?
-9.477E-008,9.477E-008,200000,1
```
The start time of the data is -9.477E-008 = - 94,77 ns, and the end time of the data is 9.477E-008 = 94,77 ns. The data stream has 200000 values with one value per sample.

Usage: Query only

CALCulate:MATH<m>:DATA[:VALues]?

Returns the data of the math waveform points for transmission from the instrument to the controlling computer. The data can be used in MATLAB, for example.

To set the export format, use `FORMat[:DATA]`. Supported formats are: ASCii | REAL,32 | INT,8 | INT,16.

You can retrieve only Y-values, or X- and Y-values. Use `EXPort:WAVeform:INCXvalues` to define this.

Suffix:
<m> 1..8
Selects the math waveform.

Return values:
<Data> List of comma-separated values according to the format and content settings.

Usage: Query only

27.13.3 Spectrum analysis (option R&S RTO6-K37)

In all `CALC:MATH<m>:FFT` commands, the suffix <m> selects the math waveform.

In all `CALC:MATH<m>:FFT:SPEC:TIM` commands, the suffix <m> selects the timeline.

CALCulate:MATH<m>:FFT:SPECtrogram:CMODe 1785
CALCulate:MATH<m>:FFT:USEColtab 1785
CALCulate:MATH<m>:FFT:SPECtrogram:STATe 1786
CALCulate:MATH<m>:FFT:SPECtrogram:TIMeline<n>:POSition 1786
CALCulate:MATH<m>:FFT:SPECtrogram:TIMeline<n>:STATe 1787

CALCulate:MATH<m>:FFT:SPECtrogram:CMODe <ColorTableMode>

Selects the color table mode for the frequency analysis display.

Suffix:
<m> 1..8

Parameters:
<ColorTableMode> INCI | AMPL

INCI
("Incidence") The display color is set depending on the frequency of occurrence of a value.

AMPL
("Amplitude") In the spectrogram and the frequency analysis display, the color is used to indicate the magnitude of the FFT signal. The higher the amplitude the higher the color in the assigned color table.

*RST: INCI

Usage: Asynchronous command

CALCulate:MATH<m>:FFT:USEColtab <UseColorTable>

If enabled, the selected waveform is displayed according to its assigned color table. For information on the available color tables, see Section 4.3.2, "Color tables", on page 76.

If this option is disabled, the preset color of the selected channel source is displayed, and the intensity of the specific signal color varies according to the cumulative occurrence of the values.

Suffix:
<m> 1..8

Parameters:
<UseColorTable> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Use color table" on page 403

CALCulate:MATH<m>:FFT:SPECtrogram:STATe <State>

Enables the spectrogram display for a math waveform.

Suffix:
<m> 1..8

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Display" on page 414

CALCulate:MATH<m>:FFT:SPECtrogram:TIMeline<n>:POSition <Position>

Defines the position of one of the two possible time lines in a spectrogram. The time line must be enabled first, using the `CALCulate:MATH<m>:FFT:SPECtrogram:TIMeline<n>:STATe` command.

Suffix:
<m> 1..8

<n> 1..2

Parameters:
<Position> The position of the time line is defined by the index of the data acquisition in the history. How many acquisitions are available depends on the history settings.
Range: 0 to 4294967295
Increment: 1
*RST: 0

Usage: Asynchronous command

Manual operation: See "Time line 1/2" on page 414

CALCulate:MATH<m>:FFT:SPECtrogram:TIMeline<n>:STATe <State>

Enables one of two possible time lines in a spectrogram diagram. A time line marks a single waveform in the spectrogram, that is: the power vs frequency results for the data acquired at a specific time. After enabling a time line, the results for that time are displayed in the spectrum diagram.

The position of the time line is defined using the `CALCulate:MATH<m>:FFT:SPECtrogram:TIMeline<n>:POSition` command.

Suffix:
<m> 1..8

<n> 1..2

Parameters:
<State> OFF | ON

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Time line 1/2" on page 414

27.14 Mask testing

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

- www.rohde-schwarz.com/rc-via-scpi, section "Command sequence and synchronization"
- Section 27.3, "Programming examples", on page 1425

- Mask test definition 1787
- Mask definition: user mask 1792
- Mask definition: waveform mask 1798
- Event actions 1801
- Results 1804
- Eye mask testing 1806

27.14.1 Mask test definition

MTESt:ADD 1788
MTESt:REMove 1788
MTESt[:STATe] 1788

MTESt:SHOW 1789
MTESt:RST 1789
MTESt:SOURce 1789
MTESt:CONDition 1790
MTESt:TOLerance 1790
MTESt:CTYPe 1790
MTESt:FILE:NAME 1791
MTESt:FILE:SAVE 1791
MTESt:FILE:OPEN 1791
MTESt:FILE:DELete 1792

MTESt:ADD <MaskTestName>

Creates a new mask test definition with the specified name.

Setting parameters:
<MaskTestName> String with the name of the mask test

Example: See Section 27.3.3.1, "Creating a user mask", on page 1431

Usage: Setting only
Asynchronous command

MTESt:REMove <MaskTestName>

Deletes the mask test definition with the specified name.

Setting parameters:
<MaskTestName> String with the name of the mask test

Usage: Setting only
Asynchronous command

MTESt[:STATe] <MaskTestName>,<State>
MTESt[:STATe]? <MaskTestName>

Activates and deactivates the mask test. If the acquisition is running, the test starts immediately. Otherwise, the test starts when acquisition is started.

The testing is stopped when acquisition is stopped, also due to the `MTESt:ONViolation:STOP` command, or if `MASK[:STATe]` is set to "OFF".

The coommand needs `*OPC` command synchronisation.

Parameters:
<State> OFF | ON
*RST: OFF

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Example:
```
MTEST:STAT 'MyMask', ON; *OPC?
```
See Section 27.3.3.1, "Creating a user mask", on page 1431

Usage: Asynchronous command

Manual operation: See "Enable" on page 418

MTESt:SHOW <State>

Switches the display of all mask segments on or off.

Parameters:

<State> OFF | ON

*RST: ON

Usage: Asynchronous command

Manual operation: See "Show mask" on page 429

MTESt:RST

Clears all totals and results in all "Mask Test" result tables.

Usage: Event
Asynchronous command

Manual operation: See "Mask results > Reset all" on page 429

MTESt:SOURce <MaskTestName>,<Source>
MTESt:SOURce? <MaskTestName>

Selects the waveform to be tested against the mask.

Parameters:

<Source> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | XY1 | XY2 | XY3 | XY4 | SG1TL1 | SG1TL2 | SG2TL1 | SG2TL2 | SG3TL1 | SG3TL2 | SG4TL1 | SG4TL2 | SG5TL1 | SG5TL2 | SG6TL1 | SG6TL2 | SG7TL1 | SG7TL2 | SG8TL1 | SG8TL2 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2

Waveform to be tested, see Section 27.4.2, "Waveform parameter", on page 1451

*RST: C1W1

Parameters for setting and query:

<MaskTestName> String containing the name of the mask test

Usage: Asynchronous command

Manual operation: See "Target" on page 418

MTESt:CONDition <MaskTestName>,<PassFailMode>
MTESt:CONDition? <MaskTestName>

Sets the first criteria for a failed test, the kind of hits to be considered for test evaluation. A test has failed if the number of sample hits or acquisition hits exceeds the limit defined by `MTESt:TOLerance`.

Parameters:
<PassFailMode> SAMPles | ACQuisitions

SAMPles
Considers the number of samples that hit the mask.

ACQuisitions
Considers the number of acquisitions that contain at least one sample hit. How many samples hit the mask in that acquisition is not relevant.

*RST: SAMPles

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Fail condition, Violation tolerance" on page 426

MTESt:TOLerance <MaskTestName>,<TolViolCnt>
MTESt:TOLerance? <MaskTestName>

Sets the second criteria for a failed test, the number of tolerable sample hits or acquisition hits. Use `MTESt:CONDition` to define which hits are considered for test evaluation.

Parameters:
<TolViolCnt> Range: 0 to 4E+9
Increment: 1
*RST: 0

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Fail condition, Violation tolerance" on page 426

MTESt:CTYPe <MaskTestName>,<DefinitionType>
MTESt:CTYPe? <MaskTestName>

Sets the method of mask definition.

Parameters:
<DefinitionType> USER | WFML | EYEMask | PROTocol

USER
The mask segments are created by entering the numerical x- and y-values of the mask points.
See: Section 27.14.2, "Mask definition: user mask", on page 1792

WFML
The mask is created from the envelope of an existing waveform.
See: Section 27.14.3, "Mask definition: waveform mask", on page 1798

EYEMask
Mask for eye diagram testing. See: Section 27.23.6, "Eye mask testing", on page 2951.
Requires jitter option R&S RTO6-K12

*RST: USER

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Mask Type" on page 418

MTESt:FILE:NAME <MaskTestName>,<Path>
MTESt:FILE:NAME? <MaskTestName>

Specifies a file to save the mask test.

Parameters:
<Path> String containing path and file name, format .xml

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Manual operation: See "Save / load mask" on page 418

MTESt:FILE:SAVE <MaskTestName>

Saves the specified mask test. It contains the mask definition, defined actions and fail conditions.

Setting parameters:
<MaskTestName> String with the name of the mask test

Usage: Setting only
Asynchronous command

Manual operation: See "Save / load mask" on page 418

MTESt:FILE:OPEN <MaskTestName>

Loads the specified mask test to the instrument.

Setting parameters:
<MaskTestName> String with the name of the mask test

Usage: Setting only
Asynchronous command

Manual operation: See "Save / load mask" on page 418

MTESt:FILE:DELete <MaskTestName>

Deletes the specified mask test.

Setting parameters:
<MaskTestName> String with the name of the mask test

Usage: Setting only
Asynchronous command

Manual operation: See "Save / load mask" on page 418

27.14.2 Mask definition: user mask

The chapter contains commands required for the definition of user masks - `MTESt:CTYPe` is set to `USER`.

Segment and point indices
In remote control, the numbering of segments and points starts from 0. But in manual operation, the numbering starts from 1.

MTESt:SEGMent:STATe <MaskTestName>,<MskSegmIdx>,<State>
MTESt:SEGMent:STATe? <MaskTestName>,<MskSegmIdx>

Enables and disables the mask segment. Disabled segments are not considered by running tests.

Parameters:
<State> OFF | ON
*RST: ON

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

<MskSegmIdx> Number of the segment. Counting starts from 0.

Usage: Asynchronous command

Manual operation: See "Mask segments" on page 420

MTESt:SEGMent:ADD <MaskTestName>

Creates a new segment in the mask definition.

Setting parameters:
<MaskTestName> String with the name of the mask test

Example: See Section 27.3.3.1, "Creating a user mask", on page 1431

Usage: Setting only
Asynchronous command

Manual operation: See "Mask segments" on page 420

MTESt:SEGMent:COUNt? <MaskTestName>

Returns the number of segments in the mask definition

Query parameters:
<MaskTestName> String with the name of the mask test

Return values:
<Count> Number of segments

Usage: Query only

Manual operation: See "Mask segments" on page 420

MTESt:SEGMent:INSert <MaskTestName>,<MaskSegmIdx>

Inserts a new segment before the specified index in the mask definition.

Setting parameters:
<MaskTestName> String with the name of the mask test

<MaskSegmIdx> Number of the segment. Counting starts from 0.

Usage: Setting only
Asynchronous command

Manual operation: See "Mask segments" on page 420

MTESt:SEGMent:REMove <MaskTestName>,<MskSegmIdx>

Removes the specified segment from the mask definition.

Setting parameters:

<MaskTestName> String with the name of the mask test

<MskSegmIdx> Number of the segment. Counting starts from 0.

Usage: Setting only
Asynchronous command

Manual operation: See "Mask segments" on page 420

MTESt:SEGMent:CLEar <MaskTestName>

Deletes all mask segments of the indicated mask test.

Setting parameters:

<MaskTestName> String with the name of the mask test

Usage: Setting only
Asynchronous command

MTESt:SEGMent:REGion <MaskTestName>,<MskSegmIdx>,<Region>
MTESt:SEGMent:REGion? <MaskTestName>,<MskSegmIdx>

Defines the region of the segment that builds the mask.

Parameters:

<Region> UPPer | LOWer | INNer

UPPer
the segment points are connected to a line, the display area above this line is the mask segment

LOWer
the segment points are connected to a line, the display area below this line is the mask segment

INNer
the segment points form a closed geometrical shape, which is the mask segment

*RST: INNer

Parameters for setting and query:

<MaskTestName> String with the name of the mask test

<MskSegmIdx> Number of the segment. Counting starts from 0.

Example: See Section 27.3.3.1, "Creating a user mask", on page 1431

Usage: Asynchronous command

Manual operation: See "Mask segments" on page 420

MTESt:SEGMent:POINt:ADD <MaskTestName>,<MaskSegmIdx>

Adds a new point to the segment definition.

Setting parameters:

<MaskTestName> String with the name of the mask test

<MaskSegmIdx> Number of the segment. Counting starts from 0.

Example: See Section 27.3.3.1, "Creating a user mask", on page 1431

Usage: Setting only
Asynchronous command

Manual operation: See "Definition of segment" on page 421

MTESt:SEGMent:POINt:INSert
<MaskTestName>,<MaskSegmIdx>,<MaskSegmPtIdx>

Inserts a new point before the specified mask segment point.

Setting parameters:

<MaskTestName> String with the name of the mask test

<MaskSegmIdx> Number of the segment. Counting starts from 0.

<MaskSegmPtIdx> Number of the point. Counting starts from 0.

Usage: Setting only
Asynchronous command

Manual operation: See "Definition of segment" on page 421

MTESt:SEGMent:POINt:REMove
<MaskTestName>,<MaskSegmIdx>,<MaskSegmPtIdx>

Removes the specified point from the mask segment.

Setting parameters:

<MaskTestName> String with the name of the mask test

<MaskSegmIdx> Number of the segment. Counting starts from 0.

<MaskSegmPtIdx> Number of the point. Counting starts from 0.

Usage: Setting only
Asynchronous command

Manual operation: See "Definition of segment" on page 421

MTESt:SEGMent:POINt:COUNt? <MaskTestName>,<MskSegmIdx>

Returns the number of defined points for the specified mask segment.

Query parameters:

<MaskTestName> String with the name of the mask test

<MskSegmIdx> Number of the segment. Counting starts from 0.

Return values:

<Number>

Usage: Query only

Manual operation: See "Definition of segment" on page 421

MTESt:SEGMent:POINt:X <MaskTestName>,<MskSegmIdx>,<MskSegmPtIdx>,<X>
MTESt:SEGMent:POINt:X? <MaskTestName>,<MskSegmIdx>,<MskSegmPtIdx>

Defines the x-value of the mask segment point.

Parameters:

<X>
Range: -100E+24 to 100E+24
Increment: 1E-6
*RST: 0
Default unit: s

Parameters for setting and query:

<MaskTestName> String with the name of the mask test

<MskSegmIdx> Number of the segment. Counting starts from 0.

<MskSegmPtIdx> Number of the point. Counting starts from 0.

Example: See Section 27.3.3.1, "Creating a user mask", on page 1431

Usage: Asynchronous command

Manual operation: See "Definition of segment" on page 421

MTESt:SEGMent:POINt:Y <MaskTestName>,<MskSegmIdx>,<MskSegmPtIdx>,<Y>
MTESt:SEGMent:POINt:Y? <MaskTestName>,<MskSegmIdx>,<MskSegmPtIdx>

Defines the y-value of the mask segment point.

Parameters:

<Y>
Range: -100E+24 to 100E+24
Increment: 1E-6
*RST: 0
Default unit: V

Parameters for setting and query:

<MaskTestName> String with the name of the mask test

<MskSegmIdx> Number of the segment. Counting starts from 0.

<MskSegmPtIdx> Number of the point. Counting starts from 0.

Example: See Section 27.3.3.1, "Creating a user mask", on page 1431

Usage: Asynchronous command

Manual operation: See "Definition of segment" on page 421

MTESt:SEGMent:RESCale:RECalculate <MaskTestName>,<MskSegmIdx>

Multiplies and adds the given x- and y-factors and offsets to the coordinates of all points of the selected mask segment.

Setting parameters:

<MaskTestName> String with the name of the mask test

<MskSegmIdx> Number of the segment. Counting starts from 0.

Usage: Setting only
Asynchronous command

Manual operation: See "Apply" on page 422

MTESt:SEGMent:RESCale:XFACtor
<MaskTestName>,<MskSegmIdx>,<ExpansFactX>
MTESt:SEGMent:RESCale:XFACtor? <MaskTestName>,<MskSegmIdx>
MTESt:SEGMent:RESCale:YFACtor
<MaskTestName>,<MskSegmIdx>,<ExpansFactY>
MTESt:SEGMent:RESCale:YFACtor? <MaskTestName>,<MskSegmIdx>

Stretches or compresses the selected mask segment in horizontal (XFACtor) or vertical direction (YFACtor). The x- or y-values of all points of the selected mask segment are multiplied with this factor. Factors >1 stretch the mask segment, while factors between 0 and 1 compress it. Negative values are possible and change the algebraic sign.

Only takes effect after the `MTESt:SEGMent:RESCale:RECalculate` command.

Parameters:

<ExpansFactY>
Range: -100 to 100
Increment: 1
*RST: 1

Parameters for setting and query:

<MaskTestName> String with the name of the mask test

<MskSegmIdx> Number of the segment. Counting starts from 0.

Usage: Asynchronous command

Manual operation: See "Factor Y" on page 422

MTESt:SEGMent:RESCale:XOFFset <MaskTestName>,<MskSegmIdx>,<OffsetX>
MTESt:SEGMent:RESCale:XOFFset? <MaskTestName>,<MskSegmIdx>

Moves the mask segment horizontally. The specified offset is added to the x-values of all points of the selected mask segment.

Only takes effect after the `MTESt:SEGMent:RESCale:RECalculate` command.

Parameters:

<OffsetX>
Range: -50 to 50
Increment: 1E-9
*RST: 0
Default unit: s

Parameters for setting and query:

<MaskTestName> String with the name of the mask test

<MskSegmIdx> Number of the segment. Counting starts from 0.

Usage: Asynchronous command

Manual operation: See "Offset X" on page 422

MTESt:SEGMent:RESCale:YOFFset <MaskTestName>,<MskSegmIdx>,<OffsetY>
MTESt:SEGMent:RESCale:YOFFset? <MaskTestName>,<MskSegmIdx>

Moves the mask segment vertically. The specified offset is added to the y-values of all points of the selected mask segment.

Only takes effect after the `MTESt:SEGMent:RESCale:RECalculate` command.

Parameters:

<OffsetY>
Range: -1000 to 1000
Increment: 1E-6
*RST: 0
Default unit: V

Parameters for setting and query:

<MaskTestName> String with the name of the mask test

<MskSegmIdx> Number of the segment. Counting starts from 0.

Usage: Asynchronous command

Manual operation: See "Offset Y" on page 422

27.14.3 Mask definition: waveform mask

The chapter contains commands required for the definition of waveform masks - `MTESt:CTYPe` is set to `WFML`.

MTESt:REFWfm 1799
MTESt:WFMLupdate 1799
MTESt:WFMRescale:XWIDth 1799
MTESt:WFMRescale:YWIDth 1800
MTESt:WFMRescale:YPOSition 1800
MTESt:WFMRescale:YSTRetch 1800

MTESt:REFWfm <MaskTestName>,<Source>
MTESt:REFWfm? <MaskTestName>

Sets the reference waveform from which the mask is created.

The reference waveform can be created before, or loaded from a file with REFCurve commands, see Section 27.10.2, "Reference waveforms", on page 1632.

Parameters:
<Source> REF1 | REFerence1 | REF2 | REFerence2 | REF3 | REFerence3 | REF4 | REFerence4

REF1 = REFerence1, REF2 = REFerence2, REF3 = REFerence3, REF4 = REFerence4: reference waveforms

*RST: REF1

Parameters for setting and query:
<MaskTestName> String containing the name of the mask test

Usage: Asynchronous command

MTESt:WFMLupdate <MaskTestName>

Creates the upper and lower mask limit from the envelope of the selected reference waveform. If the reference waveform was not defined before, it is created automatically from the mask test source waveform which is set wtih `MTESt:SOURce`.

Setting parameters:
<MaskTestName> String containing the name of the mask test

Usage: Event
Asynchronous command

MTESt:WFMRescale:XWIDth <MaskTestName>,<HorizWdt>
MTESt:WFMRescale:XWIDth? <MaskTestName>

Sets the width of the mask in horizontal direction. The specified factor in divisions is added to the positive x-values and subtracted from the negative x-values of the mask limits in relation to the source waveform of the mask.

Parameters:
<HorizWdt> Range: 0 to 1000
Increment: 0.01
*RST: 0
Default unit: div

Parameters for setting and query:
<MaskTestName> String containing the name of the mask test

Usage: Asynchronous command

Manual operation: See "Horizontal width" on page 424

MTESt:WFMRescale:YWIDth <MaskTestName>,<VerticalWidth>
MTESt:WFMRescale:YWIDth? <MaskTestName>

Sets the width of the waveform mask in vertical direction. The specified factor in divisions is added to the y-values of the upper mask limit and subtracted from the y-values of the lower mask limit. Thus, the upper half of the mask is pulled upwards, the lower half is pulled down.

Parameters:
<VerticalWidth> Vertical mask width in divisions

Range: 0 to 1000
Increment: 0.01
*RST: 0
Default unit: div

Parameters for setting and query:
<MaskTestName> String containing the name of the mask test

Usage: Asynchronous command

Manual operation: See "Vertical width" on page 424

MTESt:WFMRescale:YPOSition <MaskTestName>,<VertPosi>
MTESt:WFMRescale:YPOSition? <MaskTestName>

Moves the mask vertically within the display.

Parameters:
<VertPosi>

Range: -1000 to 1000
Increment: 0.01
*RST: 0
Default unit: div

Parameters for setting and query:
<MaskTestName> String containing the name of the mask test

Usage: Asynchronous command

Manual operation: See "Vertical position" on page 425

MTESt:WFMRescale:YSTRetch <MaskTestName>,<VertStretch>
MTESt:WFMRescale:YSTRetch? <MaskTestName>

Sets the vertical scaling to stretch the mask in y-direction. The scaling axis is the horizontal line through the lowest value of the lower mask limit.

Parameters:
<VertStretch> Scale factor in %

Range: 10 to 1000
Increment: 1
*RST: 100
Default unit: %

Parameters for setting and query:
<MaskTestName> String containing the name of the mask test

Usage: Asynchronous command

Manual operation: See "Vertical stretch" on page 425

27.14.4 Event actions

MTESt:ONViolation:BEEP....1801
MTESt:ONViolation:STOP....1801
MTESt:ONViolation:PRINt....1802
MTESt:ONViolation:SAVewaveform....1802
MTESt:ONViolation:REPort....1802
MTESt:ONViolation:TRIGgerout....1803
MTESt:ONViolation:RUNexec....1803
MTESt:ONViolation:RESSave....1803

MTESt:ONViolation:BEEP <MaskTestName>,<Beep>
MTESt:ONViolation:BEEP? <MaskTestName>

Generates a beep sound for the specified event.

Parameters:
<Beep> NOACtion | SUCCess | VIOLation
See Section 27.4.5, "Event parameter", on page 1453
*RST: NOACtion

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Beep" on page 427

MTESt:ONViolation:STOP <MaskTestName>,<StopAcq>
MTESt:ONViolation:STOP? <MaskTestName>

Stops data acquisition for the specified event.

Parameters:
<StopAcq> NOACtion | SUCCess | VIOLation
See Section 27.4.5, "Event parameter", on page 1453
*RST: NOACtion

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Stop acq." on page 427

MTESt:ONViolation:PRINt <MaskTestName>,<Print>
MTESt:ONViolation:PRINt? <MaskTestName>

Saves a screenshot including the measurement results for the specified event.

Parameters:
<Print> NOACtion | SUCCess | VIOLation
See Event parameter
*RST: NOACtion

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Save screenshot" on page 428

MTESt:ONViolation:SAVewaveform <MaskTestName>,<SaveWfm>
MTESt:ONViolation:SAVewaveform? <MaskTestName>

Saves the waveform data.

Parameters:
<SaveWfm> NOACtion | SUCCess | VIOLation
See Section 27.4.5, "Event parameter", on page 1453
*RST: NOACtion

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Save waveform" on page 428

MTESt:ONViolation:REPort <MaskTestName>,<Report>
MTESt:ONViolation:REPort? <MaskTestName>

Creates and saves a report of the current settings and results.

Parameters:
<Report> NOACtion | SUCCess | VIOLation
See Section 27.4.5, "Event parameter", on page 1453
*RST: NOACtion

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Report" on page 428

MTESt:ONViolation:TRIGgerout <MaskTestName>,<TrigOutPls>
MTESt:ONViolation:TRIGgerout? <MaskTestName>

Creates a trigger out pulse on mask violation or successful completion of the test cycle.

Parameters:
<TrigOutPls> NOACtion | SUCCess | VIOLation
*RST: NOACtion

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Trigger out pulse" on page 428

MTESt:ONViolation:RUNexec <MaskTestName>,<RunExecutable>
MTESt:ONViolation:RUNexec? <MaskTestName>

Starts an external application if the command is set to `VIOLation` or `SUCCess`.

Use the following commands to set up the application:

- `EXECutable:NAME` on page 1884
- `EXECutable:PARameter` on page 1885
- `EXECutable:WDIRectory` on page 1885

Parameters:
<RunExecutable> NOACtion | SUCCess | VIOLation
See Section 27.4.5, "Event parameter", on page 1453
*RST: NOACtion

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Start Executable" on page 428

MTESt:ONViolation:RESSave <MaskTestName>,<SaveResults>
MTESt:ONViolation:RESSave? <MaskTestName>

Starts the export of selected results to file if the command is set to `VIOLation` or `SUCCess`.

Parameters:
<SaveResults> NOACtion | SUCCess | VIOLation
See Section 27.4.5, "Event parameter", on page 1453
*RST: NOACtion

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Save results" on page 428

27.14.5 Results

MTESt:RESult:STATe? 1804
MTESt:RESult[:RESult]? 1804
MTESt:RESult:COUNt:WAVeforms? 1805
MTESt:RESult:COUNt:REMaining? 1805
MTESt:RESult:COUNt:FWAVeforms? 1805
MTESt:RESult:COUNt:FAILures? 1805
MTESt:RESult:FRATe? 1806

MTESt:RESult:STATe? <MaskTestName>

Shows if the test is running or has finished. The state is set to "Finished" if no acquisitions remain (see `MTESt:RESult:COUNt:REMaining?` on page 1805).

Query parameters:
<MaskTestName>

Return values:
<State> RUNNing | FINished
*RST: RUNNing

Usage: Query only
Asynchronous command

Manual operation: See "State" on page 416

MTESt:RESult[:RESult]? <MaskTestName>

Returns the test result.

A test has failed if the number of sample hits or acquisition hits exceeds the limit of "Violation tolerance" hits (see `MTESt:TOLerance` on page 1790, `MTESt:RESult:COUNt:FAILures?` on page 1805 and `MTESt:RESult:COUNt:FWAVeforms?` on page 1805).

Query parameters:
<MaskTestName>

Return values:
<TestResult> PASS | FAIL
*RST: PASS

Usage: Query only
Asynchronous command

Manual operation: See "Test result" on page 417

MTESt:RESult:COUNt:WAVeforms? <MaskTestName>

Returns the number of tested acquisitions.

Query parameters:
<MaskTestName>

Return values:
<AcqsCompleted> Range: 0 to 100E+24
*RST: 0

Usage: Query only
Asynchronous command

Manual operation: See "Acq. completed" on page 416

MTESt:RESult:COUNt:REMaining? <MaskTestName>

Remaining acquisitions until "Average count / Nx Single count" is reached.

The value is useful if you test a specified number of acquisitions with action "Stop acquisition" on violation, or if the acquisition has been stopped manually.

Query parameters:
<MaskTestName>

Return values:
<AcqsRemaining> Range: 0 to 100E+24
*RST: 0

Usage: Query only
Asynchronous command

Manual operation: See "Acq. remaining" on page 416

MTESt:RESult:COUNt:FWAVeforms? <MaskTestName>

Returns the number of acquisitions that contained at least one sample hit.

Query parameters:
<MaskTestName>

Return values:
<AcqHits> Range: 0 to 100E+24
*RST: 0

Usage: Query only
Asynchronous command

Manual operation: See "Acquisition hits" on page 416

MTESt:RESult:COUNt:FAILures? <MaskTestName>

Returns the number of sample hits that violated the mask.

Query parameters:
<MaskTestName>

Return values:
<SampleHits> Range: 0 to 100E+24
*RST: 0

Usage: Query only
Asynchronous command

Manual operation: See "Sample hits" on page 416

MTESt:RESult:FRATe? <MaskTestName>

Ratio of acquisition hits to the number of tested acquisitions.

Query parameters:
<MaskTestName>

Return values:
<FailRate> Range: -100E+24 to 100E+24
*RST: 0
Default unit: %

Usage: Query only
Asynchronous command

Manual operation: See "Fail rate" on page 416

27.14.6 Eye mask testing

27.14.6.1 Definition of eye masks

To perform mask testing on eye diagrams, the option R&S RTO6-K12 adds a special mask definition type to the common mask definitions: the definition type "Eye".

MTESt:CEMask ... 1807
MTESt:EYEMask:TYPE ... 1807
MTESt:EYEMask:HEIGht<m>[:VALue] ... 1807
MTESt:EYEMask:WIDTh<m>[:VALue] ... 1808
MTESt:EYEMask:MSKRight ... 1808
MTESt:EYEMask:MSKLeft ... 1808
MTESt:EYEMask:HPERiod ... 1808
MTESt:EYEMask:MSKTop ... 1809
MTESt:EYEMask:MSKBottom ... 1809
MTESt:EYEMask:TOFFset ... 1809
MTESt:EYEMask:BOFFset ... 1809
MTESt:EYEMask:TBSYmmetric ... 1809
MTESt:EYEMask:TBWidth ... 1810
MTESt:EYEMask:HPOSition ... 1810
MTESt:EYEMask:VPOSition ... 1810

MTESt:EYEMask:PAMNeye 1811
MTESt:EYEMask:REFDelta 1811
MTESt:RESult:VDETails? 1811

MTESt:CEMask <MaskTestName>

Converts the test and mask definitions of the current mask test to a new mask test of type "User".

Setting parameters:
<MaskTestName> String with the name of the mask test

Usage: Event
Asynchronous command

Manual operation: See "Convert to user mask" on page 432

MTESt:EYEMask:TYPE <MaskTestName>,<Type>
MTESt:EYEMask:TYPE? <MaskTestName>

Defines the outline of the eye mask.

Parameters:
<Type> SQUare | DIAMond | HEXagon | OCTagon | ELLipse
*RST: DIAMond

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Shape" on page 430

MTESt:EYEMask:HEIGht<m>[:VALue] <MaskTestName>,<value>

Defines the main heigth af all eye mask shapes and the minor height for octagon mask shapes.

Suffix:
<m> 1..2
1 - main width
2 - minor width

Parameters:
<value> Default unit: s

Setting parameters:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Main height (H1), Minor height (H2)" on page 431

MTESt:EYEMask:WIDTh<m>[:VALue] <MaskTestName>,<value>

Defines the main width af all eye mask shapes and the minor width for hexagon and octagon mask shapes.

Suffix:
<m> 1..2
1 - main width
2 - minor width

Parameters:
<value> Default unit: s

Setting parameters:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Main width (W1), Minor width (W2)" on page 431

MTESt:EYEMask:MSKRight <MaskTestName>,<Copy>
MTESt:EYEMask:MSKRight? <MaskTestName>
MTESt:EYEMask:MSKLeft <MaskTestName>,<Copy>
MTESt:EYEMask:MSKLeft? <MaskTestName>

Copies the eye shape to the right and left, respectively.

The distance of the copy is defined using `MTESt:EYEMask:HPERiod`.

Parameters:
<Copy> OFF | ON
*RST: OFF

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Segments" on page 432

MTESt:EYEMask:HPERiod <MaskTestName>,<InterpattLength>
MTESt:EYEMask:HPERiod? <MaskTestName>

Defines the time distance between the shape centers if `MTESt:EYEMask:MSKLeft` and/or `MTESt:EYEMask:MSKRight` are ON.

Parameters:
<InterpattLength> Range: 0 to 100
Increment: 0.01
*RST: 0.5
Default unit: s

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Periodicity" on page 431

MTESt:EYEMask:MSKTop <MaskTestName>,<Add>
MTESt:EYEMask:MSKTop? <MaskTestName>
MTESt:EYEMask:MSKBottom <MaskTestName>,<Add>
MTESt:EYEMask:MSKBottom? <MaskTestName>

Enable the upper (top) and lower (bottom) mask region, respectively.

Parameters:
<Add> OFF | ON
*RST: OFF

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Segments" on page 432

MTESt:EYEMask:TOFFset <MaskTestName>,<RectDistTop>
MTESt:EYEMask:TOFFset? <MaskTestName>
MTESt:EYEMask:BOFFset <MaskTestName>,<RectDistBtom>
MTESt:EYEMask:BOFFset? <MaskTestName>

Voltage distance from the eye shape center that limit the upper (TOFFset) and lower (BOFFset) regions.

Parameters:
<RectDistBtom> Range: 0 to 100
Increment: 0.01
*RST: 0.5
Default unit: V

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Offset top, Offset bottom" on page 432

MTESt:EYEMask:TBSYmmetric <MaskTestName>,<TopBtomSymetrie>
MTESt:EYEMask:TBSYmmetric? <MaskTestName>

Sets bottom and top offsets to the same value so that the outer regions are symmetric to the eye shape.

Parameters:
<TopBtomSymetrie> OFF | ON
*RST: ON

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Symmetric" on page 431

MTESt:EYEMask:TBWidth <MaskTestName>,<Rectlgth>
MTESt:EYEMask:TBWidth? <MaskTestName>

Sets the time width of the outer regions, symmetric to the eye shape center.

Parameters:
<Rectlgth>
Range: 0 to 100
Increment: 0.01
*RST: 0.5
Default unit: s

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Width" on page 432

MTESt:EYEMask:HPOSition <MaskTestName>,<PatOffsetX>
MTESt:EYEMask:HPOSition? <MaskTestName>

Sets the horizontal (time) value of the eye shape enter and thus defines the horizontal position of the eye shape on the display.

Parameters:
<PatOffsetX>
Range: -100 to 100
Increment: 0.01
*RST: 0
Default unit: s

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Horizontal center/Vertical center" on page 431

MTESt:EYEMask:VPOSition <MaskTestName>,<PatOffsetY>
MTESt:EYEMask:VPOSition? <MaskTestName>

Sets the vertical (voltage) value of the eye shape enter and thus defines the vertical position of the eye shape on the display.

Parameters:
<PatOffsetY> Range: -100 to 100
Increment: 0.01
*RST: 0
Default unit: V

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Usage: Asynchronous command

Manual operation: See "Horizontal center/Vertical center" on page 431

MTESt:EYEMask:PAMNeye <MaskTestName>,<PAMEye>
MTESt:EYEMask:PAMNeye? <MaskTestName>

Enable if a PAM-N signal is used for the mask.

Parameters:
<PAMEye> OFF | ON
*RST: OFF

Parameters for setting and query:
<MaskTestName>

Usage: Asynchronous command

Manual operation: See "PAM eye" on page 430

MTESt:EYEMask:REFDelta <MaskTestName>,<DeltaYToRefLev>
MTESt:EYEMask:REFDelta? <MaskTestName>

Sets the vertical delta to the reference level for a PAM-N signal eye.

Available, if `MTESt:EYEMask:PAMNeye` is set to `ON`.

Parameters:
<DeltaYToRefLev> Range: -100 to 100
Increment: 0.01
*RST: 0
Default unit: V

Parameters for setting and query:
<MaskTestName>

Usage: Asynchronous command

Manual operation: See "Vertical data to ref. level" on page 431

MTESt:RESult:VDETails? <MaskTestName>,<DetailedResults>
MTESt:RESult:VDETails?? <MaskTestName>

Returns the detailed mask test results if the test source is an eye.

Parameters for setting and query:
<MaskTestName> String with the name of the mask test

Return values:
<DetailedResults> OFF | ON
*RST: OFF

Usage: Query only
Asynchronous command

27.15 Search

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

- www.rohde-schwarz.com/rc-via-scpi, section "Command sequence and synchronization"
- Section 27.3, "Programming examples", on page 1425

- Search results 1847

27.15.1 General search settings

SEARch:ADD 1813
SEARch:CLEar 1813
SEARch:REMove 1813

SEARch:SOURce 1813
SEARch:ONLine 1814
SEARch:ALL 1814

SEARch:ADD <SearchName>

Creates a new search definition with the specified name.

Setting parameters:
<SearchName> String with the name of the search

Example: See Section 27.3.4.1, "Searching for a pulse of a specified width", on page 1432

Usage: Setting only
Asynchronous command

SEARch:CLEar <SearchName>

Clears the search results once to start a new search.

Setting parameters:
<SearchName> Search definition

Usage: Event
Asynchronous command

Manual operation: See "Clear results" on page 461

SEARch:REMove <Key>

Deletes the specified search definition.

Setting parameters:
<Key> String with the name of the search

Usage: Setting only
Asynchronous command

SEARch:SOURce <SearchName>,<Source>
SEARch:SOURce? <SearchName>

Defines the source on which the search conditions are applied. The source can be any analog or digital channel, math or reference waveform as well as a serial bus configured for a supported protocol.

Parameters:

<Source> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | SBUS1 | SBUS2 | SBUS3 | SBUS4 | LANE1 | LANE2 | LANE3 | LANE4

Source of the search, see Section 27.4.2, "Waveform parameter", on page 1451

*RST: C1W1

Parameters for setting and query:

<SearchName> String with the name of the search

Example: See Section 27.3.4.1, "Searching for a pulse of a specified width", on page 1432

Usage: Asynchronous command

Manual operation: See "Source" on page 443

SEARch:ONLine <SearchName>,<OnlineState>
SEARch:ONLine? <SearchName>

If enabled, a search is performed repeatedly for each new data acquisition.

Parameters:

<OnlineState> OFF | ON

*RST: OFF

Parameters for setting and query:

<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Enable" on page 443

SEARch:ALL <SearchName>

Performs a search for all results on the existing data from the selected source.

The command does *not* support serial bus sources (`SEARch:SOURce` SBUS1 | SBUS2 | SBUS3 | SBUS4)

Setting parameters:

<SearchName> Search definition

Example: See Section 27.3.4.1, "Searching for a pulse of a specified width", on page 1432

Usage: Event
Asynchronous command

Manual operation: See "Enable" on page 443

27.15.2 Basic trigger search conditions

SEARch:TRIGger:CONDitions? 1815
SEARch:TRIGger:EDGE[:STATe] 1815
SEARch:TRIGger:GLITch[:STATe] 1815
SEARch:TRIGger:INTerval[:STATe] 1815
SEARch:TRIGger:PATTern[:STATe] 1815
SEARch:TRIGger:RUNT[:STATe] 1816
SEARch:TRIGger:SETHold[:STATe] 1816
SEARch:TRIGger:SLEWrate[:STATe] 1816
SEARch:TRIGger:STATe[:STATe] 1816
SEARch:TRIGger:TIMeout[:STATe] 1816
SEARch:TRIGger:WIDTh[:STATe] 1816
SEARch:TRIGger:WINDow[:STATe] 1816
SEARch:TRIGger:LEVel[:VALue] 1816
SEARch:TRIGger:EDGE:ACOPy 1817
SEARch:TRIGger:GLITch:ACOPy 1817
SEARch:TRIGger:INTerval:ACOPy 1817
SEARch:TRIGger:PATTern:ACOPy 1817
SEARch:TRIGger:RUNT:ACOPy 1817
SEARch:TRIGger:SETHold:ACOPy 1817
SEARch:TRIGger:SLEWrate:ACOPy 1817
SEARch:TRIGger:STATe:ACOPy 1817
SEARch:TRIGger:TIMeout:ACOPy 1817
SEARch:TRIGger:WIDTh:ACOPy 1817
SEARch:TRIGger:WINDow:ACOPy 1817

SEARch:TRIGger:CONDitions? <SearchName>

Returns the trigger types selected for search.

Setting parameters:

<SearchName> String with the search name

Return values:

<TriggerTypes> Comma-separated list of active search triggers.

Example:

```
:SEARch:TRIGger:CONDitions? "Search1"
--> GLIT,RUNT
```

Usage: Query only
Asynchronous command

SEARch:TRIGger:EDGE[:STATe] <SearchName>,<State>
SEARch:TRIGger:EDGE[:STATe]? <SearchName>
SEARch:TRIGger:GLITch[:STATe] <SearchName>,<State>
SEARch:TRIGger:GLITch[:STATe]? <SearchName>
SEARch:TRIGger:INTerval[:STATe] <SearchName>,<State>
SEARch:TRIGger:INTerval[:STATe]? <SearchName>
SEARch:TRIGger:PATTern[:STATe] <SearchName>,<State>
SEARch:TRIGger:PATTern[:STATe]? <SearchName>

SEARch:TRIGger:RUNT[:STATe] <SearchName>,<State>
SEARch:TRIGger:RUNT[:STATe]? <SearchName>
SEARch:TRIGger:SETHold[:STATe] <SearchName>,<State>
SEARch:TRIGger:SETHold[:STATe]? <SearchName>
SEARch:TRIGger:SLEWrate[:STATe] <SearchName>,<State>
SEARch:TRIGger:SLEWrate[:STATe]? <SearchName>
SEARch:TRIGger:STATe[:STATe] <SearchName>,<State>
SEARch:TRIGger:STATe[:STATe]? <SearchName>
SEARch:TRIGger:TIMeout[:STATe] <SearchName>,<State>
SEARch:TRIGger:TIMeout[:STATe]? <SearchName>
SEARch:TRIGger:WIDTh[:STATe] <SearchName>,<State>
SEARch:TRIGger:WIDTh[:STATe]? <SearchName>
SEARch:TRIGger:WINDow[:STATe] <SearchName>,<State>
SEARch:TRIGger:WINDow[:STATe]? <SearchName>

Includes the search conditions for the selected trigger event type in the next search.

Parameters:
<State> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Edge, Glitch, Width, Runt, Window, Timeout, Interval, Slew rate, Setup & Hold, State, Pattern" on page 444

SEARch:TRIGger:LEVel[:VALue] <SearchName>, <SignalSource>, <Value>
SEARch:TRIGger:LEVel[:VALue]? <Key>,<SignalSource>

Sets the voltage of the trigger level that is used to determine other parameters.

Parameters:
<Value> Voltage value

Parameters for setting and query:
<SearchName> String with the name of the search

<SignalSource> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4

Source of the search, see Section 27.4.2, "Waveform parameter", on page 1451

Usage: Asynchronous command

Manual operation: See "Level" on page 445

SEARch:TRIGger:EDGE:ACOPy <SearchName>
SEARch:TRIGger:GLITch:ACOPy <SearchName>
SEARch:TRIGger:INTerval:ACOPy <SearchName>
SEARch:TRIGger:PATTern:ACOPy <SearchName>
SEARch:TRIGger:RUNT:ACOPy <SearchName>
SEARch:TRIGger:SETHold:ACOPy <SearchName>
SEARch:TRIGger:SLEWrate:ACOPy <SearchName>
SEARch:TRIGger:STATe:ACOPy <SearchName>
SEARch:TRIGger:TIMeout:ACOPy <SearchName>
SEARch:TRIGger:WIDTh:ACOPy <SearchName>
SEARch:TRIGger:WINDow:ACOPy <SearchName>

Copies the trigger event configuration from Trigger A for the selected channel source to the search condition settings.

See Section 6.3, "Trigger types", on page 199.

Setting parameters:
<SearchName> Search definition

Usage: Event
Asynchronous command

Manual operation: See "Copy from trigger A'" on page 444

27.15.3 Edge search conditions

Trigger level setting: `SEARch:TRIGger:LEVel[:VALue]` on page 1816

SEARch:TRIGger:EDGE:SLOPe 1817

SEARch:TRIGger:EDGE:SLOPe <SearchName>,<Slope>
SEARch:TRIGger:EDGE:SLOPe? <SearchName>

Selects the edge type.

Parameters:
<Slope> POSitive | NEGative | EITHer
See Section 27.4.3, "Slope parameter", on page 1453.
*RST: POSitive

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Slope" on page 445

27.15.4 Glitch search conditions

Trigger level setting: `SEARch:TRIGger:LEVel[:VALue]` on page 1816

SEARch:TRIGger:GLITch:POLarity....1818
SEARch:TRIGger:GLITch:RANGe....1818
SEARch:TRIGger:GLITch:WIDTh....1818

SEARch:TRIGger:GLITch:POLarity <SearchName>,<Polarity>
SEARch:TRIGger:GLITch:POLarity? <SearchName>

Indicates the polarity of a pulse, that is the direction of the first pulse slope.

Parameters:
<Polarity> POSitive | NEGative | EITHer
See Section 27.4.4, "Polarity parameter", on page 1453.
*RST: POSitive

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Polarity, Range, Width" on page 446

SEARch:TRIGger:GLITch:RANGe <SearchName>,<RangeMode>
SEARch:TRIGger:GLITch:RANGe? <SearchName>

Selects which glitches are identified: shorter or longer than the specified width (see `SEARch:TRIGger:GLITch:WIDTh` on page 1818).

Parameters:
<RangeMode> SHORter | LONGer
*RST: SHORter

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Polarity, Range, Width" on page 446

SEARch:TRIGger:GLITch:WIDTh <SearchName>,<Width>
SEARch:TRIGger:GLITch:WIDTh? <SearchName>

Sets the length of a glitch. The instrument triggers on pulses shorter or longer than this value (see also `SEARch:TRIGger:GLITch:RANGe` on page 1818).

You need to know the expected pulse widths of the circuit to set the glitch width correctly.

Parameters:
<Width> Range: 100E-12 to 1E-3
Increment: 100E-6
*RST: 1E-9
Default unit: s

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Polarity, Range, Width" on page 446

27.15.5 Interval search conditions

Trigger level setting: `SEARch:TRIGger:LEVel[:VALue]` on page 1816

SEARch:TRIGger:INTerval:SLOPe....1819
SEARch:TRIGger:INTerval:DELTa....1819
SEARch:TRIGger:INTerval:RANGe....1820
SEARch:TRIGger:INTerval:WIDTh....1820

SEARch:TRIGger:INTerval:SLOPe <SearchName>,<Slope>
SEARch:TRIGger:INTerval:SLOPe? <SearchName>

Sets the edge for the search.

Parameters:
<Slope> POSitive | NEGative | EITHer
See Section 27.4.3, "Slope parameter", on page 1453.
*RST: POSitive

Parameters for setting and query:
<SearchName> String parameter, name of the search definition

Usage: Asynchronous command

Manual operation: See "Slope, Range, Interv. width, ±Delta" on page 451

SEARch:TRIGger:INTerval:DELTa <SearchName>,<WidthDelta>
SEARch:TRIGger:INTerval:DELTa? <SearchName>

Defines a range around the "Interval width" value (see `SEARch:TRIGger:INTerval:WIDTh` on page 1820).

Parameters:
<WidthDelta> Range: 0 to 10
Increment: 100E-9
*RST: 0
Default unit: s

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Slope, Range, Interv. width, ±Delta" on page 451

SEARch:TRIGger:INTerval:RANGe <SearchName>,<RangeMode>
SEARch:TRIGger:INTerval:RANGe? <SearchName>

Selects how the range of an interval is defined based on the interval width and delta (see `SEARch:TRIGger:INTerval:WIDTh` on page 1820 and `SEARch:TRIGger:INTerval:DELTa` on page 1819).

Parameters:

<RangeMode> WITHin | OUTSide | SHORter | LONGer

WITHin
Triggers on pulse intervals inside a given range. The range is defined by "Interv. width" and "±Delta".

OUTSide
Triggers on intervals outside a given range. The range definition is the same as for "Within" range.

SHORter
Triggers on intervals shorter than the given "Interv. width".

LONGer
Triggers on intervals longer than the given "Interv. width".

*RST: OUTSide

Parameters for setting and query:

<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Slope, Range, Interv. width, ±Delta" on page 451

SEARch:TRIGger:INTerval:WIDTh <SearchName>,<Width>
SEARch:TRIGger:INTerval:WIDTh? <SearchName>

Defines the time between two pulses.

Parameters:

<Width>
Range: 100E-12 to 864
Increment: 100E-9
*RST: 5E-9
Default unit: s

Parameters for setting and query:

<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Slope, Range, Interv. width, ±Delta" on page 451

27.15.6 Runt search conditions

SEARch:TRIGger:RUNT:DELTa....1821
SEARch:TRIGger:RUNT:POLarity....1821
SEARch:TRIGger:RUNT:RANGe....1821

SEARch:TRIGger:RUNT:WIDTh 1822
SEARch:TRIGger:LEVel:RUNT:LOWer 1822
SEARch:TRIGger:LEVel:RUNT:UPPer 1822

SEARch:TRIGger:RUNT:DELTa <SearchName>,<WidthDelta>
SEARch:TRIGger:RUNT:DELTa? <SearchName>

Defines a range around the given runt width.

Parameters:
<WidthDelta> Range: 100E-12 to 864
Increment: 100E-9
*RST: 100E-12
Default unit: s

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Polarity, Range, Runt width, ±Delta" on page 448

SEARch:TRIGger:RUNT:POLarity <SearchName>,<Polarity>
SEARch:TRIGger:RUNT:POLarity? <SearchName>

Indicates the polarity of a pulse, that is the direction of the first pulse slope.

Parameters:
<Polarity> POSitive | NEGative | EITHer
See Section 27.4.4, "Polarity parameter", on page 1453.
*RST: POSitive

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Polarity, Range, Runt width, ±Delta" on page 448

SEARch:TRIGger:RUNT:RANGe <SearchName>,<Mode>
SEARch:TRIGger:RUNT:RANGe? <SearchName>

Selects how the time limit of the runt pulse is defined based on the runt width and delta (see `SEARch:TRIGger:RUNT:WIDTh` on page 1822 and `SEARch:TRIGger:RUNT:DELTa` on page 1821).

Parameters:
<Mode> ANY | LONGer | SHORter | WITHin | OUTSide
ANY
Triggers on all runts fulfilling the level condition, without time limitation.

LONGer
Triggers on runts longer than the given "Runt width".

SHORter
Triggers on runts shorter than the given "Runt width".

WITHin
Triggers if the runt length is inside a given time range. The range is defined by "Runt width" and "±Delta".

OUTSide
Triggers if the runt length is outside a given time range. The range definition is the same as for "Within" range.

*RST: ANY

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Polarity, Range, Runt width, ±Delta" on page 448

SEARch:TRIGger:RUNT:WIDTh <SearchName>,<Width>
SEARch:TRIGger:RUNT:WIDTh? <SearchName>

For the ranges "Shorter" and "Longer", the runt width defines the maximum and minimum pulse width, respectively.

For the ranges "Within" and "Outside", the runt width defines the center of a range which is defined by "±Delta".

The range is defined using `SEARch:TRIGger:RUNT:RANGe` on page 1821.

Parameters:
<Width>
Range: 100E-12 to 864
Increment: 100E-9
*RST: 5E-9
Default unit: s

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Polarity, Range, Runt width, ±Delta" on page 448

SEARch:TRIGger:LEVel:RUNT:LOWer <SearchName>, <SignalSource>, <Value>
SEARch:TRIGger:LEVel:RUNT:LOWer? <Key>,<SignalSource>
SEARch:TRIGger:LEVel:RUNT:UPPer <SearchName>, <SignalSource>, <Value>
SEARch:TRIGger:LEVel:RUNT:UPPer? <Key>,<SignalSource>

Set the lower and upper voltage threshold, respectively.

Parameters:
<Value> Voltage value

Parameters for setting and query:

<SearchName> String with the name of the search

<SignalSource> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | LANE1 | LANE2 | LANE3 | LANE4

Source of the search, see Section 27.4.2, "Waveform parameter", on page 1451

Usage: Asynchronous command

Manual operation: See "Upper level, Lower level" on page 448

27.15.7 Slew rate search conditions

SEARch:TRIGger:SLEWrate:DELTa....1823
SEARch:TRIGger:SLEWrate:RANGe....1824
SEARch:TRIGger:SLEWrate:SLOPe....1824
SEARch:TRIGger:SLEWrate:TIME....1824
SEARch:TRIGger:LEVel:TRANsition:LOWer....1825
SEARch:TRIGger:LEVel:TRANsition:UPPer....1825

SEARch:TRIGger:SLEWrate:DELTa <SearchName>,<TimeDelta>
SEARch:TRIGger:SLEWrate:DELTa? <SearchName>

Defines a time range around the given slew rate.

Parameters:

<TimeDelta>

Range:	0 to 10
Increment:	100E-9
*RST:	0
Default unit:	s

Parameters for setting and query:

<SearchName> String with the name of the search

Usage: Asynchronous command

Manual operation: See "Polarity, Range, Slew rate, ±Delta" on page 452

SEARch:TRIGger:SLEWrate:RANGe <SearchName>,<RangeMode>
SEARch:TRIGger:SLEWrate:RANGe? <SearchName>

Selects how the time limit for the slew rate is defined. The time measurement starts when the signal crosses the first trigger level - the upper or lower level depending on the selected slope - and stops when the signal crosses the second level.

Parameters:

<RangeMode> INSRange | OUTRange | LTHan | GTHan

INSRange
Triggers on slew rates inside a given time range. The range is defined by "Slew rate" and "±Delta".

OUTRange
Triggers on slew rates outside a given time range. The range definition is the same as for "Within" range.

LTHan
Triggers on slew rates shorter than the given "Slew rate" limit.

GTHan
Triggers on slew rates longer than the given "Slew rate" limit.

*RST: GTHan

Parameters for setting and query:

<SearchName> String with the name of the search

Usage: Asynchronous command

Manual operation: See "Polarity, Range, Slew rate, ±Delta" on page 452

SEARch:TRIGger:SLEWrate:SLOPe <SearchName>,<Slope>
SEARch:TRIGger:SLEWrate:SLOPe? <SearchName>

Selects the edge type.

Parameters:

<Slope> POSitive | NEGative | EITHer

See Section 27.4.3, "Slope parameter", on page 1453.

*RST: POSitive

Parameters for setting and query:

<SearchName> String with the name of the search

Usage: Asynchronous command

Manual operation: See "Polarity, Range, Slew rate, ±Delta" on page 452

SEARch:TRIGger:SLEWrate:TIME <SearchName>,<Time>
SEARch:TRIGger:SLEWrate:TIME? <SearchName>

For the ranges "Within" and "Outside", the slew rate defines the center of a range which is defined by the limits "±Delta".

For the ranges "Shorter" and "Longer", the slew rate defines the maximum and minimum slew rate limits, respectively.

The range is defined using `SEARch:TRIGger:SLEWrate:RANGe`.

Parameters:

<Time>
Range: 100E-12 to 864
Increment: 100E-9
*RST: 100E-12
Default unit: s

Parameters for setting and query:

<SearchName> String with the name of the search

Usage: Asynchronous command

Manual operation: See "Polarity, Range, Slew rate, ±Delta" on page 452

SEARch:TRIGger:LEVel:TRANsition:LOWer <SearchName>, <SignalSource>, <Value>
SEARch:TRIGger:LEVel:TRANsition:LOWer? <Key>,<SignalSource>
SEARch:TRIGger:LEVel:TRANsition:UPPer <SearchName>, <SignalSource>, <Value>
SEARch:TRIGger:LEVel:TRANsition:UPPer? <Key>,<SignalSource>

Set the lower and upper voltage thresholds, respectively. When the signal crosses this level, the slew rate measurement starts or stops depending on the selected slope.

Parameters:

<Value> Voltage value

Parameters for setting and query:

<SearchName> String with the name of the search

<SignalSource> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | LANE1 | LANE2 | LANE3 | LANE4

Source of the search, see Section 27.4.2, "Waveform parameter", on page 1451

Usage: Asynchronous command

Manual operation: See "Upper level, Lower level" on page 452

27.15.8 Timeout search conditions

Trigger level setting: SEARch:TRIGger:LEVel[:VALue] on page 1816

SEARch:TRIGger:TIMeout:RANGe....1826
SEARch:TRIGger:TIMeout:TIME....1826

SEARch:TRIGger:TIMeout:RANGe <SearchName>,<TimeoutMode>
SEARch:TRIGger:TIMeout:RANGe? <SearchName>

Selects the relation of the signal level to the trigger level:

Parameters:

<TimeoutMode> HIGH | LOW | EITHer

HIGH
The signal level stays above the trigger level.

LOW
The signal level stays below the trigger level.

EITHer
The signal level stays above or below the trigger level.

*RST: HIGH

Parameters for setting and query:

<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Range, Time" on page 450

SEARch:TRIGger:TIMeout:TIME <SearchName>,<Time>
SEARch:TRIGger:TIMeout:TIME? <SearchName>

Defines the time limit for the timeout at which the instrument triggers.

Parameters:

<Time> Range: 100E-12 to 864
Increment: 100E-9
*RST: 100E-9
Default unit: s

Parameters for setting and query:

<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Range, Time" on page 450

27.15.9 Width search conditions

Trigger level setting: SEARch:TRIGger:LEVel[:VALue] on page 1816

SEARch:TRIGger:WIDTh:DELTa 1827
SEARch:TRIGger:WIDTh:POLarity 1827
SEARch:TRIGger:WIDTh:RANGe 1827
SEARch:TRIGger:WIDTh:WIDTh 1828

SEARch:TRIGger:WIDTh:DELTa <SearchName>,<WidthDelta>
SEARch:TRIGger:WIDTh:DELTa? <SearchName>

Defines a range around the given width value (see also `SEARch:TRIGger:WIDTh:WIDTh` on page 1828).

Parameters:

<WidthDelta>
Range: 0 to 432
Increment: 500E-12
*RST: 0
Default unit: s

Parameters for setting and query:

<SearchName> Search definition

Example: See Section 27.3.4.1, "Searching for a pulse of a specified width", on page 1432

Usage: Asynchronous command

Manual operation: See "Polarity, Range, Width, ±Delta" on page 447

SEARch:TRIGger:WIDTh:POLarity <SearchName>,<Polarity>
SEARch:TRIGger:WIDTh:POLarity? <SearchName>

Indicates the polarity of a pulse, that is the direction of the first pulse slope.

Parameters:

<Polarity>
POSitive | NEGative | EITHer
See Section 27.4.4, "Polarity parameter", on page 1453.
*RST: POSitive

Parameters for setting and query:

<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Polarity, Range, Width, ±Delta" on page 447

SEARch:TRIGger:WIDTh:RANGe <SearchName>,<RangeMode>
SEARch:TRIGger:WIDTh:RANGe? <SearchName>

Selects how the range of a pulse width is defined in relation to the width and delta (see `SEARch:TRIGger:WIDTh:WIDTh` on page 1828 and `SEARch:TRIGger:WIDTh:DELTa` on page 1827).

Parameters:

<RangeMode> WITHin | OUTSide | SHORter | LONGer

WITHin
Triggers on pulses inside a given range. The range of the pulse width is defined by "Width" and "±Delta".

OUTSide
Triggers on pulses outside a given range. The range definition is the same as for "Within" range.

SHORter
Triggers on pulses shorter than the given "Width".

LONGer
Triggers on pulses longer than the given "Width".

*RST: WITHin

Parameters for setting and query:
<SearchName> Search definition

Example: See Section 27.3.4.1, "Searching for a pulse of a specified width", on page 1432

Usage: Asynchronous command

Manual operation: See "Polarity, Range, Width, ±Delta" on page 447

SEARch:TRIGger:WIDTh:WIDTh <SearchName>,<Width>
SEARch:TRIGger:WIDTh:WIDTh? <SearchName>

For the ranges "Within" and "Outside", the width defines the center of a range which is defined by the limits "±Delta".

For the ranges "Shorter" and "Longer", the width defines the maximum and minimum pulse width, respectively.

The range is defined using `SEARch:TRIGger:WIDTh:RANGe`.

Parameters:
<Width>
Range: 100E-12 to 864
Increment: 100E-9
*RST: 5E-9
Default unit: s

Parameters for setting and query:
<SearchName> Search definition

Example: See Section 27.3.4.1, "Searching for a pulse of a specified width", on page 1432

Usage: Asynchronous command

Manual operation: See "Polarity, Range, Width, ±Delta" on page 447

27.15.10 Window search conditions

SEARch:TRIGger:WINDow:DELTa....1829
SEARch:TRIGger:WINDow:RANGe....1829
SEARch:TRIGger:WINDow:TIMerange....1830
SEARch:TRIGger:WINDow:WIDTh....1830
SEARch:TRIGger:LEVel:WINDow:LOWer....1831
SEARch:TRIGger:LEVel:WINDow:UPPer....1831

SEARch:TRIGger:WINDow:DELTa <SearchName>,<WidthDelta>
SEARch:TRIGger:WINDow:DELTa? <SearchName>

Defines a range around the "Width" value (see `SEARch:TRIGger:WINDow:WIDTh` on page 1830).

Parameters:

<WidthDelta>
Range: 0 to 432
Increment: 500E-12
*RST: 0
Default unit: s

Parameters for setting and query:

<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Time condition, Width, ±Delta" on page 449

SEARch:TRIGger:WINDow:RANGe <SearchName>,<RangeMode>
SEARch:TRIGger:WINDow:RANGe? <SearchName>

Selects how the signal run is compared with the window.

Parameters:

<RangeMode> ENTer | EXIT | WITHin | OUTSide

ENTer
Triggers when the signal crosses the upper or lower level and thus enters the window made up of these two levels.

EXIT
Triggers when the signal leaves the window.

WITHin
Triggers if the signal stays between the upper and lower level for a specified time. The time is defined in various ways by the `SEARch:TRIGger:WINDow:TIMerange` command.

OUTSide
Triggers if the signal stays above the upper level or below the lower level for a specified time. The time is also defined by the `SEARch:TRIGger:WINDow:TIMerange` command.

*RST: ENTer

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Vertical condition" on page 449

SEARch:TRIGger:WINDow:TIMerange <SearchName>,<TimeRangeMode>
SEARch:TRIGger:WINDow:TIMerange? <SearchName>

Selects how the time limit of the window is defined. Time conditioning is available for the vertical conditions "WITHin" and "OUTSide" (see `SEARch:TRIGger:WINDow:RANGe` on page 1829).

Parameters:
<TimeRangeMode> WITHin | OUTSide | SHORter | LONGer

WITHin
Triggers if the signal stays inside or outside the vertical window limits at least for the time *Width - Delta* and for *Width + Delta* at the most.

OUTSide
"Outside" is the opposite definition of "Within". The instrument triggers if the signal stays inside or outside the vertical window limits for a time shorter than *Width - Delta* or longer than *Width + Delta*.

SHORter
Triggers if the signal crosses vertical limits before the specified "Width" time is reached.

LONGer
Triggers if the signal crosses vertical limits before the specified "Width" time is reached.

*RST: WITHin

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Time condition, Width, ±Delta" on page 449

SEARch:TRIGger:WINDow:WIDTh <SearchName>,<Width>
SEARch:TRIGger:WINDow:WIDTh? <SearchName>

For the ranges "Within" and "Outside", the width defines the center of a time range which is defined by the limits "±Delta".

For the ranges "Shorter" and "Longer", it defines the maximum and minimum time lapse, respectively.

The range is defined using `SEARch:TRIGger:WINDow:RANGe`.

Parameters:

<Width>
Range: 100E-12 to 864
Increment: 100E-9
*RST: 5E-9
Default unit: s

Parameters for setting and query:

<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Time condition, Width, ±Delta" on page 449

SEARch:TRIGger:LEVel:WINDow:LOWer <SearchName>, <SignalSource>, <Value>
SEARch:TRIGger:LEVel:WINDow:LOWer? <Key>,<SignalSource>
SEARch:TRIGger:LEVel:WINDow:UPPer <SearchName>, <SignalSource>, <Value>
SEARch:TRIGger:LEVel:WINDow:UPPer? <Key>,<SignalSource>

Set the lower and upper voltage limits for the window.

Parameters:

<Value> Voltage value

Parameters for setting and query:

<SearchName> String with the name of the search

<SignalSource> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | LANE1 | LANE2 | LANE3 | LANE4

Source of the search, see Section 27.4.2, "Waveform parameter", on page 1451

Usage: Asynchronous command

Manual operation: See "Upper level, Lower level" on page 449

27.15.11 Data2clock search conditions

Data level setting: `SEARch:TRIGger:LEVel[:VALue]` on page 1816

SEARch:TRIGger:SETHold:CEDGe....1832
SEARch:TRIGger:SETHold:CLEVel....1832
SEARch:TRIGger:SETHold:CSOurce....1832
SEARch:TRIGger:SETHold:HTIMe....1833
SEARch:TRIGger:SETHold:STIMe....1833

SEARch:TRIGger:SETHold:CEDGe <SearchName>,<ClockEdge>
SEARch:TRIGger:SETHold:CEDGe? <SearchName>

Sets the edge of the clock signal to define the time reference point for the setup and hold time.

Parameters:
<ClockEdge> POSitive | NEGative | EITHer
See Section 27.4.3, "Slope parameter", on page 1453.
*RST: POSitive

Parameters for setting and query:
<SearchName>

Usage: Asynchronous command

Manual operation: See "Clock source, Clock edge, Clock level" on page 453

SEARch:TRIGger:SETHold:CLEVel <SearchName>,<ClockLevel>
SEARch:TRIGger:SETHold:CLEVel? <SearchName>

Sets the voltage level for the clock signal. Both this command and `SEARch:TRIGger:SETHold:CEDGe` define the starting point for calculation of the setup and hold time.

Parameters:
<ClockLevel> Range: -10 to 10
Increment: 1E-3
*RST: 0
Default unit: V

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Clock source, Clock edge, Clock level" on page 453

SEARch:TRIGger:SETHold:CSOurce <SearchName>,<ClockSource>
SEARch:TRIGger:SETHold:CSOurce? <SearchName>

Selects the waveform used for the clock signal.

Parameters:
<ClockSource> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
Source of the clock signal, see Section 27.4.2, "Waveform parameter", on page 1451
*RST: C1W1

Parameters for setting and query:
<SearchName> Search definition name

Usage: Asynchronous command

Manual operation: See "Clock source, Clock edge, Clock level" on page 453

SEARch:TRIGger:SETHold:HTIMe <SearchName>,<HoldTime>
SEARch:TRIGger:SETHold:HTIMe? <SearchName>

Sets the minimum time **after** the clock edge while the data signal must stay steady above or below the data level.

The hold time can be negative. In this case, the setup time is always positive. The setup/hold interval starts before the clock edge (setup time) and ends before the clock edge (hold time). If you change the negative hold time, the setup time is adjusted by the intrument.

Parameters:

<HoldTime>
Range: -99.999E-9 to 0.1
Increment: 1E-9
*RST: 0
Default unit: s

Parameters for setting and query:

<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Setup time, Hold time" on page 453

SEARch:TRIGger:SETHold:STIMe <SearchName>,<SetupTime>
SEARch:TRIGger:SETHold:STIMe? <SearchName>

Sets the minimum time **before** the clock edge while the data signal must stay steady above or below the data level.

The setup time can be negative. In this case, the hold time is always positive. The setup/hold interval starts after the clock edge (setup time) and ends after the clock edge (hold time). If you change the negative setup time, the hold time is adjusted by the intrument.

Parameters:

<SetupTime>
Range: -99.999E-9 to 0.1
Increment: 1E-9
*RST: 0
Default unit: s

Parameters for setting and query:

<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Setup time, Hold time" on page 453

27.15.12 Pattern search conditions

SEARch:TRIGger:PATTern:A[:ENABle] 1834
SEARch:TRIGger:PATTern:B[:ENABle] 1834
SEARch:TRIGger:PATTern:C[:ENABle] 1834
SEARch:TRIGger:PATTern:D[:ENABle] 1834
SEARch:TRIGger:PATTern:A:LOGic 1834
SEARch:TRIGger:PATTern:B:LOGic 1834
SEARch:TRIGger:PATTern:C:LOGic 1835
SEARch:TRIGger:PATTern:D:LOGic 1835
SEARch:TRIGger:PATTern:AB:LOGic 1835
SEARch:TRIGger:PATTern:CD:LOGic 1835
SEARch:TRIGger:PATTern:ABCD:LOGic 1835
SEARch:TRIGger:PATTern:MODE 1836
SEARch:TRIGger:PATTern:TIMeout:MODE 1836
SEARch:TRIGger:PATTern:TIMeout[:TIME] 1837
SEARch:TRIGger:PATTern:WIDTh:RANGe 1837
SEARch:TRIGger:PATTern:WIDTh[:WIDTh] 1837
SEARch:TRIGger:PATTern:WIDTh:DELTa 1838

SEARch:TRIGger:PATTern:A[:ENABle] <Searchname>,<State>
SEARch:TRIGger:PATTern:A[:ENABle]? <Searchname>
SEARch:TRIGger:PATTern:B[:ENABle] <Searchname>,<State>
SEARch:TRIGger:PATTern:B[:ENABle]? <Searchname>
SEARch:TRIGger:PATTern:C[:ENABle] <Searchname>,<State>
SEARch:TRIGger:PATTern:C[:ENABle]? <Searchname>
SEARch:TRIGger:PATTern:D[:ENABle] <Searchname>,<State>
SEARch:TRIGger:PATTern:D[:ENABle]? <Searchname>

Enables the channel to be considered in the pattern search. The trigger source channel is selected by default.

- A[:ENABle]: CH1
- B[:ENABle]: CH2
- C[:ENABle]: CH3
- D[:ENABle]: CH4

Digital channels are not available.

Parameters:
<State> OFF | ON

Parameters for setting and query:
<Searchname> String with name of the search

Usage: Asynchronous command

SEARch:TRIGger:PATTern:A:LOGic <Searchname>,<Operator>
SEARch:TRIGger:PATTern:A:LOGic? <Searchname>
SEARch:TRIGger:PATTern:B:LOGic <Searchname>,<Operator>
SEARch:TRIGger:PATTern:B:LOGic? <Searchname>

SEARch:TRIGger:PATTern:C:LOGic <Searchname>,<Operator>
SEARch:TRIGger:PATTern:C:LOGic? <Searchname>
SEARch:TRIGger:PATTern:D:LOGic <Searchname>,<Operator>
SEARch:TRIGger:PATTern:D:LOGic? <Searchname>

Defines the logic for the indicated channel:

- A: CH1
- B: CH2
- C: CH3
- D: CH4

Parameters:

<Operator> DIRect | HIGH | NOT | LOW

DIRect
Input value remains unchanged

NOT
Input value is inverted

Parameters for setting and query:

<Searchname> String with the name of the search

Usage: Asynchronous command

SEARch:TRIGger:PATTern:AB:LOGic <Searchname>,<Operator>
SEARch:TRIGger:PATTern:AB:LOGic? <Searchname>
SEARch:TRIGger:PATTern:CD:LOGic <Searchname>,<Operator>
SEARch:TRIGger:PATTern:CD:LOGic? <Searchname>
SEARch:TRIGger:PATTern:ABCD:LOGic <Searchname>,<Operator>
SEARch:TRIGger:PATTern:ABCD:LOGic? <Searchname>

Defines the logical combination of the indicated channels after evaluating the previous logical operations:

- AB: CH1 and CH2
- CD: CH3 and CH4
- ABCD: result of AB and CD

Parameters:

<Operator> AND | NAND | OR | NOR

AND: logical AND, conjunctive combination
NAND:logical NOT AND
OR:logical OR, disjunctive combination
NOR: logical NOT OR

Parameters for setting and query:

<Searchname> String with the name of the search

Usage: Asynchronous command

Manual operation: See "Pattern" on page 455

SEARch:TRIGger:PATTern:MODE <SearchName>,<Mode>
SEARch:TRIGger:PATTern:MODE? <SearchName>

Adds additional time limitation to the pattern definition.

Parameters:

<Mode> OFF | TIMeout | WIDTh

OFF
No time limitation. The event is found if the pattern condition is fulfilled.

TIMeout
Defines how long the result of the pattern condition stays high or low. The duration of the timeout is defined using `SEARch:TRIGger:PATTern:TIMeout[:TIME]` The result state is defined using `SEARch:TRIGger:PATTern:TIMeout:MODE`.

WIDTh
Defines a time range for keeping up the true result of the pattern condition. The range is defined using `SEARch:TRIGger:PATTern:WIDTh:RANGe`.

*RST: OFF

Parameters for setting and query:

<SearchName> String with the name of the search

Usage: Asynchronous command

Manual operation: See "Timing condition: Mode, Range, Time, Width, ±Delta" on page 455

SEARch:TRIGger:PATTern:TIMeout:MODE <SearchName>,<TimeoutMode>
SEARch:TRIGger:PATTern:TIMeout:MODE? <SearchName>

Defines the condition for the timeout.

Parameters:

<TimeoutMode> HIGH | LOW | EITHer

EITHer
High or low, the pattern remains unchanged for the given time.

*RST: HIGH

Parameters for setting and query:

<SearchName> String with the name of the search

Usage: Asynchronous command

Manual operation: See "Timing condition: Mode, Range, Time, Width, ±Delta" on page 455

SEARch:TRIGger:PATTern:TIMeout[:TIME] <SearchName>,<Time>
SEARch:TRIGger:PATTern:TIMeout[:TIME]? <SearchName>

Defines how long the result of the pattern condition must keep the given state.

Parameters:
<Time> Range: 100E-12 to 864
Increment: 100E-9
*RST: 100E-9
Default unit: s

Parameters for setting and query:
<SearchName> String with the name of the search

Usage: Asynchronous command

Manual operation: See "Timing condition: Mode, Range, Time, Width, ±Delta" on page 455

SEARch:TRIGger:PATTern:WIDTh:RANGe <SearchName>,<WidthRangeMode>
SEARch:TRIGger:PATTern:WIDTh:RANGe? <SearchName>

Defines the time range of a pulse width for keeping up the true result of the pattern condition. The width and delta are specified using `SEARch:TRIGger:PATTern:WIDTh[:WIDTh]` and `SEARch:TRIGger:PATTern:WIDTh:DELTa`.

Parameters:
<WidthRangeMode> WITHin | OUTSide | SHORter | LONGer

WITHin | OUTSide
Triggers on pulses inside or outside a given range. The range is defined by the width ±delta.

SHORter | LONGer
Triggers on pulses shorter or longer than the given width.

*RST: WITHin

Parameters for setting and query:
<SearchName> String with the name of the search

Usage: Asynchronous command

Manual operation: See "Timing condition: Mode, Range, Time, Width, ±Delta" on page 455

SEARch:TRIGger:PATTern:WIDTh[:WIDTh] <SearchName>,<Width>
SEARch:TRIGger:PATTern:WIDTh[:WIDTh]? <SearchName>

For the ranges WITHin and OUTSide, the width defines the center of a range that is defined by the limits ±delta.

For the ranges SHORter and LONGer, the width defines the maximum and minimum pulse width, respectively.

To set the range mode, use SEARch:TRIGger:PATTern:WIDTh:RANGe. To set the delta value, use SEARch:TRIGger:PATTern:WIDTh:DELTa.

Parameters:

<Width>
Range: 100E-12 to 864
Increment: 100E-9
*RST: 5E-9
Default unit: s

Parameters for setting and query:

<SearchName> String with the name of the search

Usage: Asynchronous command

Manual operation: See "Timing condition: Mode, Range, Time, Width, ±Delta" on page 455

SEARch:TRIGger:PATTern:WIDTh:DELTa <SearchName>,<WidthDelta>
SEARch:TRIGger:PATTern:WIDTh:DELTa? <SearchName>

Defines a range around the width value specified using SEARch:TRIGger:PATTern:WIDTh[:WIDTh].

Parameters:

<WidthDelta>
Range: 0 to 432
Increment: 500E-12
*RST: 0
Default unit: s

Parameters for setting and query:

<SearchName> String with the name of the search

Usage: Asynchronous command

Manual operation: See "Timing condition: Mode, Range, Time, Width, ±Delta" on page 455

27.15.13 State search conditions

SEARch:TRIGger:STATe:ABCD:LOGic 1841

SEARch:TRIGger:STATe:CSOurce <SearchName>,<Source>
SEARch:TRIGger:STATe:CSOurce? <SearchName>

Sets the source of the clock signal.

Parameters:
<Source> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

Parameters for setting and query:
<SearchName> String with the name of the search

Usage: Asynchronous command

Manual operation: See "Clock source, Clock edge" on page 454

SEARch:TRIGger:STATe:CEDGe <SearchName>,<ClockEdge>
SEARch:TRIGger:STATe:CEDGe? <SearchName>

Sets the trigger edge of the clock signal.

Parameters:
<ClockEdge> POSitive | NEGative | EITHer
*RST: POSitive

Parameters for setting and query:
<SearchName> String with the name of the search

Usage: Asynchronous command

Manual operation: See "Clock source, Clock edge" on page 454

SEARch:TRIGger:STATe:CLEVel <SearchName>,<ClockLevel>
SEARch:TRIGger:STATe:CLEVel? <SearchName>

Sets the trigger level of the clock signal.

The command has the same effect as with `SEARch:TRIGger:LEVel[:VALue]`.

Parameters:
<ClockLevel> Range: -10 to 10
Increment: 1E-3
*RST: 0
Default unit: V

Parameters for setting and query:
<SearchName> String with the name of the search

Usage: Asynchronous command

Manual operation: See "Clock source, Clock edge" on page 454

SEARch:TRIGger:STATe:A[:ENABle] <Searchname>,<State>
SEARch:TRIGger:STATe:A[:ENABle]? <Searchname>
SEARch:TRIGger:STATe:B[:ENABle] <Searchname>,<State>
SEARch:TRIGger:STATe:B[:ENABle]? <Searchname>
SEARch:TRIGger:STATe:C[:ENABle] <Searchname>,<State>
SEARch:TRIGger:STATe:C[:ENABle]? <Searchname>
SEARch:TRIGger:STATe:D[:ENABle] <Searchname>,<State>
SEARch:TRIGger:STATe:D[:ENABle]? <Searchname>

Enables the channel to be considered in the state search. You can enable all channel signals except for the trigger source.

- A[:ENABle]: CH1
- B[:ENABle]: CH2
- C[:ENABle]: CH3
- D[:ENABle]: CH4

Digital channels are not available.

Parameters:
<State> OFF | ON

Parameters for setting and query:
<Searchname> String with the name of the search

Usage: Asynchronous command

SEARch:TRIGger:STATe:A:LOGic <Searchname>,<Operator>
SEARch:TRIGger:STATe:A:LOGic? <Searchname>
SEARch:TRIGger:STATe:B:LOGic <Searchname>,<Operator>
SEARch:TRIGger:STATe:B:LOGic? <Searchname>
SEARch:TRIGger:STATe:C:LOGic <Searchname>,<Operator>
SEARch:TRIGger:STATe:C:LOGic? <Searchname>
SEARch:TRIGger:STATe:D:LOGic <Searchname>,<Operator>
SEARch:TRIGger:STATe:D:LOGic? <Searchname>

Defines the logic for the indicated channel:

- A: CH1
- B: CH2
- C: CH3
- D: CH4

Parameters:
<Operator> DIRect | HIGH | NOT | LOW

DIRect
Input value remains unchanged

NOT
Input value is inverted

Parameters for setting and query:
<Searchname> String with the name of the search

Usage: Asynchronous command

SEARch:TRIGger:STATe:AB:LOGic <Searchname>,<Operator>
SEARch:TRIGger:STATe:AB:LOGic? <Searchname>
SEARch:TRIGger:STATe:CD:LOGic <Searchname>,<Operator>
SEARch:TRIGger:STATe:CD:LOGic? <Searchname>
SEARch:TRIGger:STATe:ABCD:LOGic <Searchname>,<Operator>
SEARch:TRIGger:STATe:ABCD:LOGic? <Searchname>

Defines the logical combination of the indicated channels after evaluating the previous logical operations:

- AB: CH1 and CH2
- CD: CH3 and CH4
- ABCD: result of AB and CD

Parameters:
<Operator> AND | NAND | OR | NOR

AND: logical AND, conjunctive combination
NAND:logical NOT AND
OR:logical OR, disjunctive combination
NOR: logical NOT OR

Parameters for setting and query:
<Searchname> String with the name of the search

Usage: Asynchronous command

Manual operation: See "State pattern" on page 454

27.15.14 Search on spectrum

CURSor<cu>:PEXCursion <Value>

Defines the minimum level by which the waveform must rise or fall so that it will be identified as a maximum or a minimum by the search functions.

Suffix:
<cu> The suffix is irrelevant

Parameters:
<Value>
Range: 0 to 100
Increment: 1
*RST: 5
Default unit: dB

Usage: Asynchronous command

Manual operation: See "Peak excursion" on page 311

CURSor<cu>:THReshold <Value>

Defines an absolute threshold as an additional condition for the peak search. Only peaks that exceed the threshold are detected.

Suffix:
<cu> The suffix is irrelevant.

Parameters:
<Value> Threshold in dBm

Usage: Asynchronous command

Firmware/software: Version 2.70

Manual operation: See "Threshold" on page 310

27.15.15 Search gate settings

SEARch:GATE[:STATe] 1842
SEARch:GATE:MODE 1842
SEARch:GATE:SHOW 1843
SEARch:GATE:ABSolute:STARt 1843
SEARch:GATE:ABSolute:STOP 1843
SEARch:GATE:RELative:STARt 1844
SEARch:GATE:RELative:STOP 1844
SEARch:GATE:ZCOupling 1844
SEARch:GATE:ZDIagram 1845

SEARch:GATE[:STATe] <SearchName>,<State>
SEARch:GATE[:STATe]? <SearchName>

Performs the search only on the defined gate area of the source waveform.

Parameters:
<State> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Use gate" on page 458

SEARch:GATE:MODE <SearchName>,<Mode>
SEARch:GATE:MODE? <SearchName>

Defines whether the gate settings are configured using absolute or relative values.

Parameters:
<Mode> ABS | REL
*RST: ABS

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Gate description" on page 458

SEARch:GATE:SHOW <SearchName>,<DisplayState>
SEARch:GATE:SHOW? <SearchName>

If enabled, the gate area is indicated in the source diagram.

Parameters:
<DisplayState> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Display state" on page 458

SEARch:GATE:ABSolute:STARt <SearchName>,<Start>
SEARch:GATE:ABSolute:STARt? <SearchName>

Defines the starting value for the gate.

Parameters:
<Start> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "(Relative) Start" on page 372

SEARch:GATE:ABSolute:STOP <SearchName>,<Stop>
SEARch:GATE:ABSolute:STOP? <SearchName>

Defines the end value for the gate.

Parameters:
<Stop> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0.01

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "(Relative) Stop" on page 372

SEARch:GATE:RELative:STARt <SearchName>,<RelativeStart>
SEARch:GATE:RELative:STARt? <SearchName>

Defines the starting value for the gate.

Parameters:
<RelativeStart> Range: 0 to 100
Increment: 0.1
*RST: 0
Default unit: %

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "(Relative) Start" on page 372

SEARch:GATE:RELative:STOP <SearchName>,<RelativeStop>
SEARch:GATE:RELative:STOP? <SearchName>

Defines the end value for the gate.

Parameters:
<RelativeStop> Range: 0 to 100
Increment: 0.1
*RST: 100
Default unit: %

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "(Relative) Stop" on page 372

SEARch:GATE:ZCOupling <SearchName>,<ZoomCoupling>
SEARch:GATE:ZCOupling? <SearchName>

If enabled, the gate area is set to the limits of a zoom area.

The zoom diagramm is selected using `SEARch:GATE:ZDIagram`.

Parameters:
<ZoomCoupling> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName> String with the name of the search

Usage: Asynchronous command

Manual operation: See "Zoom" on page 372

SEARch:GATE:ZDIagram <SearchName>, <DiagramName>, <ZoomName>
SEARch:GATE:ZDIagram? <SearchName>

Selects the zoom to which the gate area is set if `SEARch:GATE:ZCOupling` is set to "ON".

Parameters:
<ZoomDiagram> String with the name of the diagram, where the zoom is defined

Parameters for setting and query:
<SearchName> String with the name of the search

Example: Prerequisite: Search1 and Zoom2 are available.

```
SEARch:GATE:ZCOupling 'Search1',ON
SEARch:GATE:ZDIagram 'Search1','Diagram1','Zoom2'
SEARch:GATE:ZDIagram? 'Search1'
<-- Diagram1;Zoom2
SEARch:GATE:STATe 'Search1', ON
SEARch:GATE:SHOW 'Search2', ON
```

Enables the zoom coupling to define the gate,and selects Zoom2 as gate area. Zoom2 is based on Diagram1. Then the gate is activated and displayed.

Usage: Asynchronous command

Manual operation: See "Zoom" on page 372

27.15.16 Noise rejection

SEARch:TRIGger:LEVel:NOISe:ABSolute 1845
SEARch:TRIGger:LEVel:NOISe:MODE 1846
SEARch:TRIGger:LEVel:NOISe:RELative 1846
SEARch:TRIGger:LEVel:NOISe[:STATe] 1847

SEARch:TRIGger:LEVel:NOISe:ABSolute <SearchName>, <SignalSource>, <Value>
SEARch:TRIGger:LEVel:NOISe:ABSolute? <Key>,<SignalSource>

Defines the trigger hysteresis, a range in absolute values around the trigger level. If the signal jitters inside this range and crosses the trigger level, no trigger event is detected.

Parameters:
<Value> Hysteresis value

Parameters for setting and query:
<SearchName> String with the name of the search

<SignalSource> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4

Source of the search, see Section 27.4.2, "Waveform parameter", on page 1451

Usage: Asynchronous command

SEARch:TRIGger:LEVel:NOISe:MODE <SearchName>, <SignalSource>, <Mode>
SEARch:TRIGger:LEVel:NOISe:MODE? <Key>,<SignalSource>

Defines whether absolute values or relative values to the vertical scaling are used as a hysteresis for noise rejection.

Parameters:
<Mode> ABS | REL

Parameters for setting and query:
<SearchName> String with the name of the search

<SignalSource> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4

Source of the trigger waveform, see Section 27.4.2, "Waveform parameter", on page 1451

Usage: Asynchronous command

SEARch:TRIGger:LEVel:NOISe:RELative <SearchName>, <SignalSource>, <Value>
SEARch:TRIGger:LEVel:NOISe:RELative? <Key>,<SignalSource>

Defines a range around the trigger level in relative values. If the signal jitters inside this range and crosses the trigger level, no trigger event is detected.

Parameters:
<Value> Hysteresis value in %

Parameters for setting and query:
<SearchName> String with the name of the search

<SignalSource> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4

Source of the search, see Section 27.4.2, "Waveform parameter", on page 1451

Usage: Asynchronous command

SEARch:TRIGger:LEVel:NOISe[:STATe] <SearchName>, <SignalSource>, <State>
SEARch:TRIGger:LEVel:NOISe[:STATe]? <Key>,<SignalSource>

If enabled, the noise reject settings for the waveform are considered for the search.

Parameters:

<State> OFF | ON

Parameters for setting and query:

<SearchName> String with the name of the search

<SignalSource> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4

Source of the search, see Section 27.4.2, "Waveform parameter", on page 1451

Usage: Asynchronous command

27.15.17 Search results

SEARch:RESDiagram:HORZ:ABSolute:POSition 1848
SEARch:RESDiagram:HORZ:ABSolute:SPAN 1848
SEARch:RESDiagram:HORZ:MODE 1848
SEARch:RESDiagram:HORZ:RELative:POSition 1849
SEARch:RESDiagram:HORZ:RELative:SPAN 1849
SEARch:RESDiagram:SHOW 1849
SEARch:RESDiagram:VERT:ABSolute:POSition 1850
SEARch:RESDiagram:VERT:ABSolute:SPAN 1850
SEARch:RESDiagram:VERT:MODE 1850
SEARch:RESDiagram:VERT:RELative:POSition 1850
SEARch:RESDiagram:VERT:RELative:SPAN 1851
SEARch:RESult:LIMit 1851
SEARch:RESult:SHOW 1852

SEARch:RESult:SORT:ASCending 1852
SEARch:RESult:SORT[:MODE] 1852
SEARch:RESult[:ALL]? 1853

SEARch:RESDiagram:HORZ:ABSolute:POSition <SearchName>,<Position>
SEARch:RESDiagram:HORZ:ABSolute:POSition? <SearchName>

Defines the x-value of the centerpoint of the zoom area.

Parameters:

<Position> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0.01

Parameters for setting and query:

<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "X position" on page 249

SEARch:RESDiagram:HORZ:ABSolute:SPAN <SearchName>,<Span>
SEARch:RESDiagram:HORZ:ABSolute:SPAN? <SearchName>

Defines the width of the zoom area.

Parameters:

<Span> Range: 0 to 100E+24
Increment: 0.01
*RST: 0.01

Parameters for setting and query:

<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "X range" on page 250

SEARch:RESDiagram:HORZ:MODE <SearchName>,<Mode>
SEARch:RESDiagram:HORZ:MODE? <SearchName>

Defines whether absolute or relative values are used to specify the x-axis values.

Parameters:

<Mode> ABS | REL
*RST: ABS

Parameters for setting and query:

<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "X mode" on page 250

SEARch:RESDiagram:HORZ:RELative:POSition <SearchName>,<RelPosi>
SEARch:RESDiagram:HORZ:RELative:POSition? <SearchName>

Defines the x-value of the centerpoint of the zoom area.

Parameters:
<RelPosi> Range: 0 to 100
Increment: 0.1
*RST: 100
Default unit: %

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "X position" on page 249

SEARch:RESDiagram:HORZ:RELative:SPAN <SearchName>,<RelativeSpan>
SEARch:RESDiagram:HORZ:RELative:SPAN? <SearchName>

Defines the width of the zoom area.

Parameters:
<RelativeSpan> Range: 1E-15 to 100
Increment: 0.1
*RST: 1
Default unit: %

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "X range" on page 250

SEARch:RESDiagram:SHOW <SearchName>,<ShwSearchWind>
SEARch:RESDiagram:SHOW? <SearchName>

If enabled, a zoom window is displayed for the currently selected search result. The zoom area is indicated in the diagram that displays the source waveform of the search.

Parameters:
<ShwSearchWind> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Show result zoom" on page 461

SEARch:RESDiagram:VERT:ABSolute:POSition <SearchName>,<Position>
SEARch:RESDiagram:VERT:ABSolute:POSition? <SearchName>

Defines the y-value of the centerpoint of the zoom area.

Parameters:
<Position> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0.01

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Y position" on page 250

SEARch:RESDiagram:VERT:ABSolute:SPAN <SearchName>,<Span>
SEARch:RESDiagram:VERT:ABSolute:SPAN? <SearchName>

Defines the height of the zoom area.

Parameters:
<Span> Range: 0 to 100E+24
Increment: 0.01
*RST: 0.01

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Y range" on page 250

SEARch:RESDiagram:VERT:MODE <SearchName>,<Mode>
SEARch:RESDiagram:VERT:MODE? <SearchName>

Defines whether absolute or relative values are used to specify the y-axis values.

Parameters:
<Mode> ABS | REL
*RST: ABS

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Y mode" on page 250

SEARch:RESDiagram:VERT:RELative:POSition <SearchName>,<RelPosi>
SEARch:RESDiagram:VERT:RELative:POSition? <SearchName>

Defines the y-value of the centerpoint of the zoom area.

Parameters:

<RelPosi> Range: 0 to 100
Increment: 0.1
*RST: 100
Default unit: %

Parameters for setting and query:

<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Y position" on page 250

SEARch:RESDiagram:VERT:RELative:SPAN <SearchName>,<RelativeSpan>
SEARch:RESDiagram:VERT:RELative:SPAN? <SearchName>

Defines the height of the zoom area.

Parameters:

<RelativeSpan> Range: 1E-15 to 100
Increment: 0.1
*RST: 1
Default unit: %

Parameters for setting and query:

<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Y range" on page 250

SEARch:RESult:LIMit <SearchName>,<ResListLim>
SEARch:RESult:LIMit? <SearchName>

Defines the maximum number of entries in the search result table.

Parameters:

<ResListLim> Range: 1 to 1000
Increment: 1
*RST: 100

Parameters for setting and query:

<SearchName> Search definition

Example: See Section 27.3.4.1, "Searching for a pulse of a specified width", on page 1432

Usage: Asynchronous command

Manual operation: See "Max result count" on page 461

SEARch:RESult:SHOW <SearchName>,<ShwResTbl>
SEARch:RESult:SHOW? <SearchName>

Displays or hides the search result table.

Parameters:
<ShwResTbl> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Show result table" on page 461

SEARch:RESult:SORT:ASCending <SearchName>,<SortAscending>
SEARch:RESult:SORT:ASCending? <SearchName>

If enabled, the results are listed in asscending order, i.e. the smallest value at the top.

Parameters:
<SortAscending> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Sort ascending" on page 461

SEARch:RESult:SORT[:MODE] <SearchName>,<SortMode>
SEARch:RESult:SORT[:MODE]? <SearchName>

Sorts the search result table by x-value position or value of the result.

Parameters:
<SortMode> POSition | VALue

POSition
Sorts the search result table by the x-value position.

VALue
Sorts the search result table by the value of the result.

*RST: POSition

Parameters for setting and query:
<SearchName> Search definition

Usage: Asynchronous command

Manual operation: See "Sort by" on page 461

SEARch:RESult[:ALL]? <SearchName>

Returns all search results.

Setting parameters:

<SearchName> Search definition

Return values:

<Data> List of search results, separated by commas. For each result, six values are returned:
1. Acquisition index, currently always 0.
2. X-position of the search result
3. Y-position of the search result, currently not relevant
4. Type of the search result (Edge, Glitch, ...)
5. Slope or polarity of the search result
6. For runt, glitch, width, and window searches, the value contains the width. For timeout and interval searches, it contains the timeout. For transition searches, it contains the slew rate. For all other searches, the value is not relevant.

Example:

```
SEAR:RES? 'Search1'
0,1.5375e-007,-84,Edge,Positive,9.91E+37,
0,5.3e-008,-84,Edge,Positive,9.91E+37
```

The query returns two search results for edge search on rising edges at X-position 153,75 ns and 53 ns.

Usage: Query only
Asynchronous command

27.16 Data management

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

27.16.1 Instrument settings

The Mass MEMory subsystem provides commands to access the storage media and to save and reload instrument settings.

File and directory names

The <file_name> and <directory_name> parameters are strings. Some commands use a fixed directory; for others the <file_name> can contain the complete path including the drive name and all subdirectories. If no complete path is specified, the file location is relative to the current directory, queried with `MMEMory:CDIRectory?`. The filename itself may contain the period as a separator for extensions.

Example: '`C:\TEMP\TRASH\test.txt`' for the file named `test.txt` in the `TEMP\TRASH` subdirectory of the internal hard disk drive C:\.

File and directory names can be chosen according to Windows™ conventions. All letters and numbers are allowed, as well as the special characters "_", "^", "$", "~", "!", "#", "%", "&", "-", "{", "}", "(", ")", "@" and "`". Reserved filenames are CON, AUX, COM1, ..., COM4, LPT1, ..., LPT3, NUL and PRN.

The use of wildcards ? and * is not allowed.

MMEMory:DRIVes?

Returns a list of the logical drives of the instrument as configured in the operating system.

Return values:

<Drive> List of strings, for example, `"C:\","F:\","H:\"`

Usage: Query only

MMEMory:MSIS [<msus>]

Changes the default storage device to the indicated drive or network server.

Parameters:

<msus> String parameter. Drives are indicated with their drive letter, network servers require the UNC format.

Example:
```
MMEM:MSIS 'C:'
```

Example:
```
MMEM:MSIS '\\server1\share1'
```

MMEMory:DCATalog? [<PathName>]

Returns the subdirectories of the current or of a specified directory.

Query parameters:

<PathName> String parameter to specify the directory. If the directory is omitted, the command queries the contents of the current directory, to be set and queried with `MMEMory:CDIRectory`.

Return values:

<FileEntry> Names of the subdirectories separated by colons. The first two strings are related to the parent directory.

Example:
```
MMEM:DCAT?
".","..","Documents and Settings","Program
Files","temp"
```

Usage: Query only

MMEMory:DCATalog:LENGth? [<PathName>]

Returns the number of subdirectories of the current or of a specified directory. The number includes the parent directory strings "." and ".." and corresponds to the number of strings returned by the `MMEMory:DCATalog?` command.

Query parameters:

<PathName> String parameter to specify the directory. If the directory is omitted, the command queries the contents of the current directory, to be set and queried with `MMEMory:CDIRectory`.

Return values:

<FileEntryCount> Number of parent directories and subdirectories.

Example: `MMEM:DCAT:LENG?`
`5`

Usage: Query only

MMEMory:CDIRectory [<DirectoryName>]

Changes the default directory for file access.

Parameters:

<DirectoryName> String parameter to specify the directory.
If the string also contains a drive letter or network server name, the command `MMEMory:MSIS` is executed implicitly.

*RST: "\"

Example: `MMEM:CDIR 'C:\USER\DATA'`

Usage: SCPI confirmed

MMEMory:MDIRectory <DirectoryName>

Creates a new directory with the specified name.

Setting parameters:

<DirectoryName> String parameter to specify the new directory. If the path consists of several subdirectories, the complete tree is created if necessary.
If no drive letter or server name is indicated, the directory is created on the default storage device specified with `MMEMory:MSIS`.

Example: `MMEM:MDIR 'C:\USER\DATA'`

Usage: Setting only

MMEMory:RDIRectory <DirectoryName>

Deletes the specified directory.

Setting parameters:

<DirectoryName> String parameter to specify the directory to be deleted.
This directory must be empty, otherwise it is not deleted.

Example: `MMEM:RDIR 'C:\USER\TEST'`

Usage: Setting only

MMEMory:CATalog? [<PathName>][, <Format>]

Returns a list of files contained in the specified directory. The result corresponds to the number of files returned by the MMEMory:CATalog:LENgth command.

Query parameters:

<PathName> String parameter to specify the directory. If the directory is omitted, the command queries directory specified with `MMEMory:CDIRectory`.

<Format> ALL | WTIMe

ALL: Extended result including file, date, time and attributes
WTIMe: Extended result including file, date, time

Return values:

<UsedMemory> Total amount of storage currently used in the directory, in bytes.

<FreeMemory> Total amount of storage available in the directory, in bytes.

<FileEntry> All files and subdirectories of the directory are listed with their filename, format and size in bytes. The first two strings are related to the parent directory.

Example:

```
MMEM:CAT? 'C:\USER\DATA'
529479,1831777894400,".,DIR,0",",.,DIR,0",
"Backup,DIR,0","CSS,DIR,0","DATEN,DIR,0",
"Commands.jar,BIN,529479","FAVORITES,DIR,0",
"LOG,DIR,0","DATA,DIR,0","test,DIR,0",
"TotalCMD,DIR,0"
```

Usage: Query only
SCPI confirmed

MMEMory:CATalog:LENGth? [<PathName>]

Returns the number of files and subdirectories of the current or specified directory. The number includes the parent directory strings "." and ".." and it corresponds to the number of <FileEntry> strings returned by the `MMEMory:CATalog?` command.

Query parameters:

<PathName> String parameter, directory to be queried. If the directory is omitted, the current directory is queried, specified with `MMEMory:CDIRectory`.

Return values:

<Count> Number of files and subdirectories including parent directory entries.

Example:

```
MMEM:CDIR 'C:\USER\DATA'
MMEM:CAT:LENG?
11
```

Usage: Query only

MMEMory:COPY <FileSource>[, <FileDestination>]

Copies an existing file to a new file.

Setting parameters:

<FileSource> String parameter. Contains name and path of the file to be copied. Wildcards (* and ?) are allowed.

<FileDestination> String parameter. Contains name and path of the new file. If the file already exists, it is overwritten without notice. If no file destination is specified, the source file is written to the current directory specified with `MMEMory:CDIRectory`.

Example:
```
MMEM:COPY 'C:\Users\Public\Documents
\Rohde-Schwarz\RTx\RefWaveforms
\RefCurve_2011-03-16*.bin','E:'
```
Copies all reference waveforms saved on March 16, 2011 to an external storage medium, mapped to drive `E:\`.

Usage: Setting only
SCPI confirmed

MMEMory:MOVE <FileSource>, <FileDestination>

Moves the specified file to a new location on the same drive and renames it.

Setting parameters:

<FileSource> String parameter, contains name and path of the file to be copied.
Wildcards (* and ?) are allowed. Therefore, specify a directory for <FileDestination>. Renaming is not possible.

<FileDestination> String parameter. Contains name and path of the new file. If no path is specified, the <FileSource> directory is used - the file is renamed.

Example:
```
MMEM:MOVE 'C:\USER\DATA\SETUP.CFG','C:\STORE'
```
Moves the file "Setup.cfg" from the directory `C:\USER\DATA` to `C:\STORE`.

Usage: Setting only
SCPI confirmed

MMEMory:DELete <FileName>

Removes the specified file/files. To delete directories, use `MMEMory:RDIRectory`.

Setting parameters:

<FileName> String parameter to specify the name and directory of the file to be removed. Wildcards (* and ?) are allowed.
If no path is defined, the current directory is used, specified with `MMEMory:CDIRectory`.

Example:
```
MMEM:DEL '*.CFG'
```
Deletes all CFG files from the current directory.

Usage: Setting only
SCPI confirmed

Manual operation: See "Save to file" on page 503

MMEMory:DATA <FileName>, <Data>
MMEMory:DATA? <FileName>

Stores data in the specified file to the storage location specified using `MMEMory:CDIRectory`.

Parameters:

<Data> <block>

488.2 block data format. The delimiter EOI must be selected to achieve correct data transfer.
The block begins with character '#'. The next digit is the length of the length information, followed by this given number of digits providing the number of bytes in the following binary data.

Parameters for setting and query:

<FileName> String parameter, the name of the file the data is stored to.

Example: `MMEM:DATA 'abc.txt', #216This is the file`
#2: the length information has two digits.
16: the binary data has 16 bytes.

Example: `MMEM:DATA? 'abc.txt'`
Returns the data from file `abc.txt`.

MMEMory:ATTRibute <FileName>, <Attributes>
MMEMory:ATTRibute? <FileName>

Sets file attributes for the specified file/files. The command can be used for files only.

Setting parameters:

<Attributes> String with attributes and setting information.
'+' before the attribute: sets the attribute
'-' before the attribute: deletes the attribute
'R': read only
'A': archive file
'S': system file
'H': hidden file

Parameters for setting and query:

<FileName> String parameter, contains name and path of the file. Wildcards (* and ?) are allowed.

Return values:

<FileEntry> String containing: "<file_name>,<file_attributes>"

Example: `MMEM:ATTR 'C:\USER\DATA\*.LOG', '-R -A'`
Deletes the read-only and archive attributes from all log files in the directory`C:\USER\DATA\*.LOG`.

Example:
```
MMEM:ATTR? 'C:\USER\DATA\*.*'
"Datei1.LOG,A", "Datei2.LOG,A",
"Datei3.LOG,ASH", "Datei4.DLL,RSH",
"Datei5.INI,SH"
```

MMEMory:SAV <FileDestination>

Stores the current instrument settings to the specified file.

This command has the same effect as the combination of `*SAV` and `MMEMory:STORe:STATe`.

Parameters:

<FileDestination> String parameter specifying path and filename of the target file. Wildcards are not allowed.

Example: `MMEM:SAV 'C:\mysavefile.dfl'`
Saves the current instrument settings to the file `mysavefile.dfl` located in the directory C:\.

Usage: Event

Manual operation: See "Save to file" on page 469

MMEMory:RCL <FileSource>

Restores the instrument settings from the specified file.

This command has the same effect as the combination of `MMEMory:LOAD:STATe` and `*RCL`.

Parameters:

'<FileSource>' String parameter specifying the path and filename of the source file. Wildcards are not allowed.

Example: `MMEM:RCL 'C:\mysavefile.dfl'`
Loads and activates the instrument settings from the file `mysavefile.dfl` located in the directory C:\.

Usage: Event

Manual operation: See "Load from file" on page 469

MMEMory:STORe:STATe <MemoryNumber>, <FileName>

Stores the instrument settings from the specified internal memory to the specified file. To store the current instrument settings to the internal memory, use `*SAV` first.

Setting parameters:

<MemoryNumber> Number of the internal memory

Range: 1 to 99

<FileName> String parameter specifying the complete path and filename of the source file.

Example: `*SAV 4`
`MMEM:STORe:STATe 4,'C:\Settings\Settings_1051.dfl'`
Saves current instrument settings to the internal memory number 4. Then stores the settings from the internal memory number 4 to the file `C:\Settings\Settings_1051.dfl`.

Usage: Setting only

MMEMory:LOAD:STATe <MemoryNumber>, <FileName>

Loads the instrument settings from the specified file to the specified internal memory. After the file has been loaded, the settings must be activated using a `*RCL` command.

Setting parameters:

<MemoryNumber> Number of the internal memory
Range: 1 to 99

<FileName> String parameter specifying the complete path and filename of the source file.

Example:
```
MMEM:LOAD:STATe 4,'C:\Settings\Settings_1051.dfl'
*RCL 4
```
Loads instrument settings from the file `C:\Settings\Settings_1051.dfl` to the internal memory number 4, and then activates the settings in internal memory number 4.

Usage: Setting only

27.16.2 Savesets and one file

SAVeset:CONFig:PREView....1861
SAVeset:ONEFile:NAME....1862
SAVeset:ONEFile:SAVE....1862
SAVeset:ONEFile:OPEN....1862
SAVeset:ONEFile:USERpref....1862

SAVeset:CONFig:PREView <Include>

If set to OFF, the saveset is stored without the preview image to reduce the file size.

Use the command each time before you save a saveset.

Parameters:

<Include> OFF | ON
*RST: ON

Usage: Asynchronous command

SAVeset:ONEFile:NAME <Name>

Sets the path and the file name of the One File. The file format is ZIP.

Parameters:
<Name> String parameter

Usage: Asynchronous command

Manual operation: See "Save to file" on page 470

SAVeset:ONEFile:SAVE

Saves the One File data to the file that is specified with `SAVeset:ONEFile:NAME`.

Usage: Setting only

Manual operation: See "Save to file" on page 470

SAVeset:ONEFile:OPEN

Loads the One File that is specified with `SAVeset:ONEFile:NAME`.

Usage: Setting only

Manual operation: See "Load from file" on page 471

SAVeset:ONEFile:USERpref <Include>

If ON, the user preferences settings are also restored together with the saveset and reference waveform. User preferences settings include the user-specific display settings like diagram layout, toolbar, intensity and transparency settings.

Parameters:
<Include> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Include user preferences" on page 471

27.16.3 Waveform data transmission

The R&S RTO6 provides specific data export commands for the various waveform types. The commands transmit the data of the waveform points from the instrument to the controlling computer. The data can be used in MATLAB, for example.

The commands are described in the relevant chapters:

- Analog waveforms: Section 27.8.6, "Waveform data", on page 1515
- Reference waveforms: Section 27.10.2.3, "Waveform data export", on page 1639
- Math waveforms: Section 27.10.3, "Mathematics", on page 1644
- Spectrum waveforms: Section 27.13.2, "Waveform data", on page 1783

- Logic channels: Section 27.19.5, "MSO data", on page 2848
- I/Q data: Section 27.22.2, "I/Q data output", on page 2889

27.16.4 Waveform data: export to file

The resulting files of waveforms exports are described in Section 12.3.1, "Waveform export files", on page 476.

EXPort:WAVeform:SOURce 1863
EXPort:WAVeform:MULTichannel 1864
CHANnel<ch>:EXPortstate 1865
EXPort:WAVeform:NAME 1865
EXPort:WAVeform:SAVE 1866
EXPort:WAVeform:SCOPe 1866
EXPort:WAVeform:STARt 1866
EXPort:WAVeform:STOP 1867
EXPort:WAVeform:ZOOM 1867
EXPort:WAVeform:CURSorset 1867
EXPort:WAVeform:MEAS 1868
EXPort:WAVeform:DLOGging 1868
EXPort:WAVeform:TIMestamps 1869
EXPort:WAVeform:INCXvalues 1869
EXPort:WAVeform:RAW 1870
EXPort:WAVeform:DISPlayoff 1870
EXPort:WAVeform:FASTexport 1870
EXPort:WAVeform:ICDR 1871

EXPort:WAVeform:SOURce <Source>

Selects the waveform to be exported to file.

The commands takes effect if `EXPort:WAVeform:MULTichannel` is `OFF`.

Parameters:

<Source> | C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | MSOB1 | MSOB2 | MSOB3 | MSOB4 | TRK1 | TRK2 | TRK3 | TRK4 | TRK5 | TRK6 | TRK7 | TRK8 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2 | BATHtub1 | BMEas1 | SRESponse1 | SRHist1 | SDHist1 | TJHist1 | DJHist1 | DDJHist1 | PJHist1 | RJOHist1 | SRTRack1 | SDTRack1 | TJTRack1 | DJTRack1 | DDJTrack1 | PJTRack1 | RJOTrack1 | TJSPectrum1 | DDJSpectrum1 | PJSPectrum1 | RJOSpectrum1 | SEYE1 | BATHtub2 | BMEas2 | SRESponse2 | SRHist2 | SDHist2 | TJHist2 | DJHist2 | DDJHist2 | PJHist2 | RJOHist2 | SRTRack2 | SDTRack2 | TJTRack2 | DJTRack2 | DDJTrack2 | PJTRack2 | RJOTrack2 | TJSPectrum2 | DDJSpectrum2 | PJSPectrum2 | RJOSpectrum2 | SEYE2 | NBAThtub1 | NBMeas1 | TNHist1 | DNHist1 | DDNHist1 | PNHist1 | RNOHist1 | TNTRack1 | DNTRack1 | DDNTrack1 | PNTRack1 | RNOTrack1 | TNSPectrum1 | DDNSpectrum1 | PNSPectrum1 | RNOSpectrum1 | NBAThtub2 | NBMeas2 | TNHist2 | DNHist2 | DDNHist2 | PNHist2 | RNOHist2 | TNTRack2 | DNTRack2 | DDNTrack2 | PNTRack2 | RNOTrack2 | TNSPectrum2 | DDNSpectrum2 | PNSPectrum2 | RNOSpectrum2 | PJDHist1 | BUJHist1 | RJHist1 | PJDTrack1 | PJDSpectrum1 | PJDHist2 | BUJHist2 | RJHist2 | PJDTrack2 | PJDSpectrum2 | PNDHist1 | BUNHist1 | RNHist1 | PNDTrack1 | PNDSpectrum1 | PNDHist2 | BUNHist2 | RNHist2 | PNDTrack2 | PNDSpectrum2 | LANE1 | LANE2 | LANE3 | LANE4

*RST: C1W1

Example: See Section 27.3.5.2, "Exporting waveform data to file", on page 1433

Usage: Asynchronous command

Manual operation: See "Source" on page 485

EXPort:WAVeform:MULTichannel <MltChXpt>

Enables or disables the multichannel export.

If you enable the multichannel export, all active channels are included to the export data. You can change the export state using the `CHANnel<ch>:EXPortstate` command.

If multichannel export is disabled, select the waveform to be exported using the `EXPort:WAVeform:SOURce` command.

Note that `CHANnel<ch>[:WAVeform<wf>]:DATA[:VALues]?` returns the data of all channels that are selected for export, no matter of the channel suffix.

Parameters:

<MltChXpt> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Multi channel" on page 484

CHANnel<ch>:EXPortstate <ExportState>

Includes or excludes the indicated channel in waveform export. The data of channel waveform 1 is exported.

The commands takes effect if `EXPort:WAVeform:MULTichannel` is `ON`.

Suffix:

<ch> 1..4
Selects the input channel.

Parameters:

<ExportState> OFF | ON
If you enable the multichannel export, the export state of all active channels is automatically set ON.
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Selected sources" on page 485

EXPort:WAVeform:NAME <FileName>

Sets the file name, file format and path to save the waveform to.

See also: Section 12.3.1, "Waveform export files", on page 476

Parameters:

<FileName> String with path and file name with extension .xml, .bin, or .csv

Example:
```
EXPort:WAVeform:NAME 'C:\temp\Export_Ch11.xml'
EXPort:WAVeform:SAVE
```
Saves the waveform data in XML format to `C:\temp\Export_Ch1.xml`.

Example:
```
EXPort:WAVeform:NAME 'C:\temp\Export_Ch2.bin'
EXPort:WAVeform:SAVE
```
Saves the waveform data in binary format to `C:\temp\Export_Ch2.bin`.

Usage: Asynchronous command

Manual operation: See "Save to file" on page 487

EXPort:WAVeform:SAVE

Saves the waveform(s) to the file specified with `EXPort:WAVeform:NAME`. The file format is also set using the `...NAME` command.

Example: See Section 27.3.5.2, "Exporting waveform data to file", on page 1433

Usage: Setting only

Manual operation: See "Save to file" on page 487

EXPort:WAVeform:SCOPe <Scope>

Defines the part of the waveform record that has to be stored.

Parameters:

<Scope> WFM | ZOOM | CURSor | GATE | MANual

WFM
Complete waveform

ZOOM
Data included in the zoom area if a zoom is defined for the source waveform.

CURSor
Data between the cursor lines if a cursor measurement is defined for the source waveform.

GATE
data included in the measurement gate if a gated measurement is defined for the source waveform.

MANual
Saves the data between user-defined start and stop values to be set with `EXPort:WAVeform:STARt` and `EXPort:WAVeform:STOP`.

*RST: WFM

Example: See Section 27.3.5.2, "Exporting waveform data to file", on page 1433

Usage: Asynchronous command

Manual operation: See "Scope" on page 485

EXPort:WAVeform:STARt <Start>

Sets the start value of the waveform section for export, if `EXPort:WAVeform:SCOPe` is set to `Manual`.

Parameters:

<Start> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0.01
Default unit: s

Usage: Asynchronous command

Manual operation: See "Scope" on page 485

EXPort:WAVeform:STOP <Stop>

Sets the end value of the waveform section for export, if `EXPort:WAVeform:SCOPe` is set to `Manual`.

Parameters:

<Stop> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0.01
Default unit: s

Usage: Asynchronous command

Manual operation: See "Scope" on page 485

EXPort:WAVeform:ZOOM <ZoomDiagram>,<ZoomName>

Sets the zoom area to be used for limited data export if `EXPort:WAVeform:SCOPe` is set to `ZOOM`.

Parameters:

<ZoomDiagram> Name of the diagram on which the zoom area is based.

<ZoomName> Name of the zoom diagram

Example: See "Exporting interleaved x/y data of a zoom to CSV file" on page 1435

Usage: Asynchronous command

Manual operation: See "Scope" on page 485

EXPort:WAVeform:CURSorset <Cursorset>

Sets the cursor set to be used for limited data export if `EXPort:WAVeform:SCOPe` is set to `CURSor`.

Parameters:

<Cursorset> CURSOR1 | CURSor1 | CURSOR2 | CURSor2 | CURSOR3 | CURSor3 | CURSOR4 | CURSor4

CURSOR1 = CURSor1, CURSOR2 = CURSor2, CURSOR3 = CURSor3, CURSOR4 = CURSor4

Usage: Asynchronous command

Manual operation: See "Scope" on page 485

EXPort:WAVeform:MEAS <MeasGate>

Sets the gate to be used for limited data export if `EXPort:WAVeform:SCOPe` is set to `GATE`.

Parameters:

<MeasGate> MEAS1 | MEAS2 | MEAS3 | MEAS4 | MEAS5 | MEAS6 | MEAS7 | MEAS8

Measurement for which the gate is defined.

Example: See "Exporting raw data of a measurement gate to a BIN file" on page 1434

Usage: Asynchronous command

Manual operation: See "Scope" on page 485

EXPort:WAVeform:DLOGging <DataLogging>

The command enables the export of subsequent acquisitions of the selected waveforms. The waveforms are taken from a running Nx Single acquisition (data logging, history is disabled), or from the history (multiple waveforms, history is enabled).

If the history is disabled (`CHANnel<ch>[:WAVeform<wf>]:HISTory[:STATe]`) and data logging is enabled, a specified number of waveforms is transferred to file directly during RUN Nx SINGLE acquisition. Enabling data logging stops a running acquisition. Set the number of acquisitions to be acquired and stored with `ACQuire:COUNt` and start export using `RUNSingle`.

If the history is enabled, the subsequent waveforms are taken from the history. Specify the range with `CHANnel<ch>[:WAVeform<wf>]:HISTory:STARt` and `CHANnel<ch>[:WAVeform<wf>]:HISTory:STOP`. Then play the history with `CHANnel<ch>[:WAVeform<wf>]:HISTory:PLAY`.

The commands `EXPort:WAVeform:SAVE`, `CHANnel<ch>[:WAVeform<wf>]:DATA[:VALues]?` and `CHANnel<ch>[:WAVeform<wf>]:DATA:HEADer?` are not available if data logging is enabled. The `RUNContinous` command disables data logging.

If data logging is off, and the history is enabled, one waveform out of the history is written to file. Specify the waveform using `CHANnel<ch>[:WAVeform<wf>]:HISTory:CURRent` and save it using `EXPort:WAVeform:SAVE`.

Parameters:

<DataLogging> OFF | ON

*RST: OFF

Example: See:
"Exporting multiple running acquisitions of a single waveform to an XML file" on page 1436
"Exporting multiple acquisitions of the history to an XML file" on page 1437
"Exporting a single acquisition of the history to a BIN file" on page 1436

Usage: Asynchronous command

Manual operation: See "Enable" on page 489

EXPort:WAVeform:TIMestamps <UseTimestamps>

Exports the relative timestamps of all history waveforms to the waveform data file. The time is written at the beginning of each waveform record.

Parameters:
<UseTimestamps> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Time stamps" on page 488

EXPort:WAVeform:INCXvalues <IncHorValues>

Includes horizontal values in the retrieved data (time or frequency values, depending on the waveform). X and Y-values are written alternately to the file. If disabled, only Y-values - mostly voltage values - are written. The X-values are always returned in 64 bit real format, regardless of the defined data format.

The setting is not available for the export of raw data.

The command affects the content of export files as well as data retrieved with:

- `CHANnel<ch>[:WAVeform<wf>]:DATA[:VALues]?`
- `CALCulate:MATH<m>:DATA[:VALues]?`
- `REFCurve<rc>:DATA[:VALues]?`
- `DIGital<m>:DATA[:VALues]?`
- `BUS<b>:PARallel:DATA[:VALues]?`
- `ZVC:Z<m>:I<n>:DATA[:VALues]?`
- `ZVC:Z<m>:V<n>:DATA[:VALues]?`

Parameters:
<IncHorValues> OFF | ON
*RST: OFF

Example: See:
"Exporting interleaved x/y data of a single waveform to a CSV file" on page 1435
"Exporting interleaved x/y data of a zoom to CSV file" on page 1435

Usage: Asynchronous command

Manual operation: See "Interleaved x/y" on page 487

EXPort:WAVeform:RAW <RawValues>

Enables the export of raw sample data, and sets the data format to integer 8 bit. In high definition acquisition mode, the data format is integer 16 bit. Fot INT16, you can set the byte order using the `FORMat:BORDer` command.

The raw format reduces the file size but changes also the precision of the values.

Currently, the setting is not available for the export of digital channel data and data of R&S RT-ZVC channels.

The raw export of interleaved X/Y values is not supported.

Parameters:
<RawValues> OFF | ON
*RST: OFF

Example: See:
"Exporting raw data of a single waveform to a BIN file" on page 1434
"Exporting raw data of a measurement gate to a BIN file" on page 1434

Usage: Asynchronous command

Manual operation: See "Raw (ADC direct)" on page 486

EXPort:WAVeform:DISPlayoff <FastExport>

Enables or disables the display update during an Nx Single acquisition.

Parameters:
<FastExport> OFF | ON
ON: Disables the display update for maximum export speed.
OFF: Enables the display update. The export is slower.
*RST: OFF

Usage: Asynchronous command

EXPort:WAVeform:FASTexport <Enable>

To improve the performance of data export to file, the measurements are performed slower while the data export speeds up.

Setting parameters:
<Enable> ON | OFF

Example: See Section 27.3.5.2, "Exporting waveform data to file", on page 1433

Usage: Setting only
Asynchronous command

EXPort:WAVeform:ICDR <IncludeCDRInformation>

Includes the CDR information in the waveform file.

Parameters:
<IncludeCDRInformation> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Include CDR info" on page 484

27.16.5 Waveform histogram: export to file

EXPort:HISTogram:SELect....1871
EXPort:HISTogram:INCidence....1871
EXPort:HISTogram:NAME....1872
EXPort:HISTogram:SAVE....1872
EXPort:HISTogram:DATA?....1872

EXPort:HISTogram:SELect <Name>

Selects the histogram to be exported.

Parameters:
<Name> String with the histogram name.

Example: See "Exporting histogram data to file" on page 1430

Usage: Asynchronous command

Manual operation: See "Select" on page 491

EXPort:HISTogram:INCidence <Incidence>

Sets the mode of exported data: relative or absolute frequency of amplitude values.

Parameters:
<Incidence> ABS | REL
*RST: REL

Example: See "Exporting histogram data to file" on page 1430

Usage: Asynchronous command

Manual operation: See "Incidence" on page 491

EXPort:HISTogram:NAME <Path>

Sets the file name and path to save the histogram to.

Parameters:

<Path> String with path and file name. The file extension defines the file format: XML, CSV, or BIN.

Example: See "Exporting histogram data to file" on page 1430

Usage: Asynchronous command

Manual operation: See "Save to file" on page 491

EXPort:HISTogram:SAVE

Saves the histogram to the file specified with `EXPort:HISTogram:NAME`.

Example: See "Exporting histogram data to file" on page 1430

Usage: Setting only
Asynchronous command

Manual operation: See "Save to file" on page 491

EXPort:HISTogram:DATA?

Transfers the histogram data to the controlling computer. The data can be used in MATLAB, for example.

To set the export data format, use `FORMat[:DATA]`. Supported formats are: ASCii | REAL,64 | INT,8 | INT,16.

Return values:

<Data> List of comma-separated values according to the format settings and `EXPort:HISTogram:INCidence`.

Example: See "Transferring histogram data" on page 1430.

Usage: Query only

Manual operation: See "Save to file" on page 491

27.16.6 Eye data: export to file

EXPort:EYE:DATA? 1873
EXPort:EYE:NAME 1873
EXPort:EYE:SAVE 1873
EXPort:EYE:SELect 1873
EXPort:EYE:SOURce? 1873

EXPort:EYE:DATA?

Transfers the eye data to the controlling computer. The data can be used in MATLAB, for example.

The command returns UINT16 values and ignores the setting of `FORMat[:DATA]`.

Return values:
<Data> Comma-separated list of values

Usage: Query only

Manual operation: See "Save to file" on page 497

EXPort:EYE:NAME <Path>

Sets the path, the file name, and the file format for the eye file. Available file formats are *csv and *bin.

Parameters:
<Path>

Usage: Asynchronous command

Manual operation: See "Save to file" on page 497

EXPort:EYE:SAVE

Saves the selected eye to the file that is specified with `EXPort:EYE:NAME`.

Usage: Setting only

Manual operation: See "Save to file" on page 497

EXPort:EYE:SELect <SelectableEye>

Selects the eye that you want to save to a file.

Parameters:
<SelectableEye> EYE1 | EYE2 | EYE3 | EYE4
*RST: EYE1

Usage: Asynchronous command

Manual operation: See "Select/ Source" on page 497

EXPort:EYE:SOURce?

Returns the source of the eye measurement, selected with `EXPort:EYE:SELect`.

Return values:
<Source> C1W1 | C1W2 | C1W3 | C1W4 | C2W1 | C2W2 | C2W3 | C2W4 | C3W1 | C3W2 | C3W3 | C3W4 | C4W1 | C4W2 | C4W3 | C4W4
*RST: NONE

Usage: Query only
Asynchronous command

Manual operation: See "Select/ Source" on page 497

27.16.7 Long term measurement results and measurement histogram: export to file

EXPort:MEASurement:SELect....1874
EXPort:MEASurement:TYPE....1874
EXPort:MEASurement:NAME....1875
EXPort:MEASurement:SAVE....1875
EXPort:MEASurement:DATA?....1875

EXPort:MEASurement:SELect <SelcMeas>

Selects the measurement for export of long term or measurement histogram data.

Parameters:
<SelcMeas> MEAS1 | MEAS2 | MEAS3 | MEAS4 | MEAS5 | MEAS6 | MEAS7 | MEAS8
*RST: MEAS1

Example: See "Exporting long-term measurement data to file" on page 1430

Usage: Asynchronous command

Manual operation: See "Measurement" on page 495

EXPort:MEASurement:TYPE <ExportType>

You can export the result data of the long term measurement, or the measurement histogram, or the track data.

To export the measurement histogram, it must be enabled using `MEASurement<mg>:STATistics:HISTogram`.

To export the long term results, the long term measurement must be enabled using `MEASurement<mg>:LTMeas[:STATe]`.

To export a track, the track must be enabled before. Track measurements require an option, see "Enable (Track)" on page 382.

Parameters:
<ExportType> LONGterm | HISTogram | TRACk
LONGTERM = LONGterm, HISTOGRAM = HISTogram
*RST: HISTogram

Example: See "Exporting long-term measurement data to file" on page 1430

Usage: Asynchronous command

Manual operation: See "Export type" on page 495

EXPort:MEASurement:NAME <Path>

Sets the file name and path to save the long term or measurement histogram data to.

Parameters:

<Path> String with path and file name. The file extension defines the file format: XML, CSV, or BIN.

Example: See "Exporting long-term measurement data to file" on page 1430

Usage: Asynchronous command

EXPort:MEASurement:SAVE

Saves the long term or measurement histogram results to the file specified using `EXPort:MEASurement:NAME`.

The measurement data can be exported as absolute or relative values, which is defined using `EXPort:HISTogram:INCidence`.

Example: See "Exporting long-term measurement data to file" on page 1430

Usage: Setting only

Manual operation: See "Save to file" on page 496

EXPort:MEASurement:DATA?

Transfers the long term measurement data to the controlling computer. The data can be used in MATLAB, for example. The transferred data are the same as the data written to files.

To set the export data format, use `FORMat[:DATA]`. Supported formats are: ASCii | REAL,64 | INT,8 | INT,16.

Return values:

<Data> List of comma-separated values according to the format settings
Long term data:
If statistics are disabled, the current value of each long term point is returned.
If statistics are enabled (`MEASurement<mg>:STATistics[:ENABle]`), seven values for each long term point are returned: upper peak, lower peak, RMS, standard deviation, average, number of measured results per long term point, number of waveforms per long term point.
For measurement histograms, absolute values are returned.
See also: Section 12.3.5, "Result plots analysis", on page 493.

Example: See "Transferring long-term measurement data" on page 1431

Usage: Query only

Manual operation: See "Save to file" on page 496

27.16.8 Screenshots

The HCOPy subsystem and some other commands control the output of display information for documentation purposes. The instrument allows two independent output configurations which can be set separately with the suffix.

Note that the remote mode is intended for maximum performance. Therefore, the display does not follow the remote commmands consistantly. To get a correct screenshot, turn the display on using `SYST:DISP:UPD ON`.

HCOPy:DESTination<m>....1876
MMEMory:NAME....1877
HCOPy:DEVice<m>:LANGuage....1877
HCOPy:DEVice<m>:INVerse....1877
HCOPy:WBKG....1878
HCOPy:CMAP<m>:DEFault....1878
HCOPy:SSD....1878
HCOPy:ISBA....1879
HCOPy:IMMediate<m>....1879
HCOPy:IMMediate<m>:NEXT....1880
HCOPy:STABs....1880

HCOPy:DESTination<m> <Medium>

Selects the output medium: file, printer or clipboard.

Suffix:
<m> 1..2
Selects the output configuration.

Parameters:
<Medium> MMEM | SYST:COMM:CLIP

String parameter

MMEM
Directs the display image to a file. The `MMEMory:NAME` command defines the file name. The file format is defined with `HCOPy:DEVice<m>:LANGuage`.

SYST:COMM:CLIP
Directs the hardcopy to the clipboard.

*RST: SYST:COMM:CLIP

Example: `HCOP:DEST 'MMEM'`
See also Section 27.3.5.1, "Saving a screenshot to file", on page 1433

Usage: Asynchronous command

Manual operation: See "Save to file" on page 503

MMEMory:NAME <FileName>

Defines the file name when an image of the display is stored to a file.

Setting parameters:

<FileName> String parameter specifiying path and file name of the screenshot.

Example: See Section 27.3.5.1, "Saving a screenshot to file", on page 1433

Usage: Setting only
SCPI confirmed
Asynchronous command

Manual operation: See "Save to file" on page 503

HCOPy:DEVice<m>:LANGuage <FileFormat>

Defines the file format for output of the display image to file.

To set the output to file, use `HCOPy:DESTination<m>` with parameter `'MMEM'`.

Suffix:

<m> 1..2
Selects the output configuration.

Parameters:

<FileFormat> PNG | JPG | BMP | TIFF | PDF

*RST: PNG

Example: See Section 27.3.5.1, "Saving a screenshot to file", on page 1433

Usage: Asynchronous command

Manual operation: See "Save to file" on page 503

HCOPy:DEVice<m>:INVerse <InverseColor>

Inverts the colors of the output, i.e. a dark waveform is printed on a white background. Screenshots are inverted per default when you save using remote commands. Turn inversion off if you want the screen display in the screenshot.

See also:

- `HCOPy:WBKG` on page 1878
- "White background" on page 502

Suffix:

<m> 1..2
Selects the output configuration.

Parameters:
<InverseColor> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Inverse color" on page 503

HCOPy:WBKG <WhiteBackground>

Inverts the background color. So you can print waveforms with normal waveform collors on white background.

If both `HCOPy:WBKG` and `HCOPy:DEVice<m>:INVerse` are ON, the instrument inverts the background twice, and it appears black.

See also: "White background" on page 502.

Parameters:
<WhiteBackground> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "White background" on page 502

HCOPy:CMAP<m>:DEFault <PrintColorSet>

Defines the default color set for printing of the display image.

To set the output to printer, use `HCOPy:DESTination<m>` with parameter `'SYST:COMM:PRIN'`.

Suffix:
<m> 1..2
Selects the output configuration.

Parameters:
<PrintColorSet> DEF1 | DEF4

DEF1
Current screen colors with white background and black grid.

DEF4
Current screen colors without any changes (black background).

*RST: DEF1

Usage: Asynchronous command

HCOPy:SSD <ShowSetupDialog>

Enables or disables the display of open dialogs in screenshots. Use this command if you want to document settings in screenshots.

Parameters:
<ShowSetupDialog> OFF | ON
*RST: OFF

Usage: Asynchronous command

Firmware/software: FW 3.20

Manual operation: See "Show setup dialog" on page 503

HCOPy:ISBA IncludeSignalBar

If the value is set to `OFF`, the screenshot shows only the diagram area, without the signal bar.

Parameters:
IncludeSignalBar OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Show only grid" on page 503

HCOPy:IMMediate<m>

Starts the immediate output of the display image, depending on the `HCOPy:DESTination<m>` destination setting.

By default, screenshots are inverted when saving them with remote commands. If you want the screen display in the screenshot, turn inversion off (`HCOPy:DEVice<m>:INVerse`).

To get a correct screenshot of the diagrams, results, and dialog boxes, turn on the display using `SYST:DISP:UPD ON`.

Suffix:
<m> 1..2
Selects the output configuration.

Example:
```
SYST:DISP:UPD ON
HCOP:DEST 'MMEM'
MMEM:NAME 'C:\Temp\Print.bmp'
HCOP:IMM; *OPC?
```

Example: See Section 27.3.5.1, "Saving a screenshot to file", on page 1433

Usage: Event
Asynchronous command

Manual operation: See "Save to file" on page 503

HCOPy:IMMediate<m>:NEXT

Starts the output of the next display image, depending on the `HCOPy:DESTination<m>` destination setting.

If the screenshot is saved to a file, the file name used in the last saving process is automatically counted up to the next unused name.

Suffix:
<m> 1..2
Selects the output configuration.

Example: See Section 27.3.5.1, "Saving a screenshot to file", on page 1433

Usage: Event
Asynchronous command

Manual operation: See "Save to file" on page 503

HCOPy:STABs

Saves screenshots of all tabs in the diagrams. The instrument creates one screenshot for each tab.

Usage: Event
Asynchronous command

Manual operation: See "Screenshot of tabs" on page 503

27.16.9 Reports

The following commands configure and save report files. To configure the screenshot that is included in the report, use the commands explained in Section 27.16.8, "Screenshots", on page 1876.

REPort:LANGuage....1880
REPort:PAPersize....1881
REPort:LOGType....1881
REPort:LOGO....1881
REPort:USER....1881
REPort:COMMent....1882
REPort:FILE:NAME....1882
REPort:FILE:SAVE....1882

REPort:LANGuage <Language>

Sets the language to be used in the report. Available languages are listed in the specifications document.

Parameters:
<Language> String with the english language name, upper case.

Example: `REPort:LANGuage 'Spanish'`

Manual operation: See "Language" on page 505

REPort:PAPersize <PaperSize>

Selects the paper size: A4 or US Letter.

Parameters:

<PaperSize> A4 | USL

*RST: A4

Usage: Asynchronous command

Manual operation: See "Paper size" on page 506

REPort:LOGType <Logo>

By default, the Rohde & Schwarz logo is shown in the header of the report pages. You can switch the logo off, or select your logo to be shown.

Parameters:

<Logo> RS | CUST | NONE

CUST
Select the logo file using `REPort:LOGO`.

*RST: RS

Usage: Asynchronous command

Manual operation: See "Logo" on page 506

REPort:LOGO <LogoFile>

Defines the logo file that is used on the report if `REPort:LOGType` is set to `CUSTom`.

Parameters:

<LogoFile> String with the path and filename of the logo image.

Example: `REPort:LOGO 'C:\Company files\logo.jpg'`

Usage: Asynchronous command

Manual operation: See "Logo" on page 506

REPort:USER <User>

Enter the user name that appears in the general information section at the beginning of the report.

Parameters:

<User> String parameter

Usage: Asynchronous command

Manual operation: See "User name / Comment" on page 506

REPort:COMMent <Comment>

Enter a comment that appears in the general information section at the beginning of the report.

Parameters:
<Comment> String parameter

Usage: Asynchronous command

Manual operation: See "User name / Comment" on page 506

REPort:FILE:NAME <ReportFile>

Sets the file name and path to save the report to.

Parameters:
<ReportFile> String with path and file name. The file extension defines the file format: PDF, HTML, or DOC.

Usage: Asynchronous command

Manual operation: See "Save to file" on page 506

REPort:FILE:SAVE

Saves the report to the specified file.

Usage: Event
Asynchronous command

Manual operation: See "Save to file" on page 506

27.16.10 Autonaming

MMEMory:AUTonaming:PREFix 1882
MMEMory:AUTonaming:USERtext 1882
MMEMory:AUTonaming:DATE 1882
MMEMory:AUTonaming:INDex 1883
MMEMory:AUTonaming:TIME 1883
MMEMory:AUTonaming:TEXT 1883
MMEMory:AUTonaming:DEFaultpath 1883
MMEMory:AUTonaming:RESPath 1883
MMEMory:AUTonaming:RESall 1884

MMEMory:AUTonaming:PREFix <State>
MMEMory:AUTonaming:USERtext <State>
MMEMory:AUTonaming:DATE <State>

MMEMory:AUTonaming:INDex <State>
MMEMory:AUTonaming:TIME <State>

Includes or excludes the name part in the file name pattern for automatic file name generation. This name is used as the default file name.

The prefix indicates the type of data that is saved, for example, Histogram, RefCurve, Settings.

To define a user text, use `MMEMory:AUTonaming:TEXT`.

Parameters:
<State> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Time" on page 106

MMEMory:AUTonaming:TEXT <NameString>

Defines a text, that can be included in the autonaming pattern.

Parameters:
<NameString> String parameter

Usage: Asynchronous command

Manual operation: See "Text input" on page 105

MMEMory:AUTonaming:DEFaultpath <Path>

Sets the path where data and settings files will be stored. The factory default path is:

- `"C:\Users\Public\Documents\Rohde-Schwarz\RTx"` if no USB flash drive is connected
- Drive letter of the USB flash drive, for example, `"E:\"` or `"F:\"` if a USB flash drive is connected.

Parameters:
<Path> String parameter

Usage: Asynchronous command

Manual operation: See "Default path for all file operations" on page 106

MMEMory:AUTonaming:RESPath

Resets the path for file operations to the factory default path.

Usage: Event
Asynchronous command

Manual operation: See "Reset" on page 106

MMEMory:AUTonaming:RESall

Resets all autonaming settings to the default value, including the path.

Usage: Event
Asynchronous command

Manual operation: See "Reset" on page 106

27.16.11 CSV export

EXPort:RESult:DECSymbol 1884
EXPort:RESult:DELimiter 1884

EXPort:RESult:DECSymbol <DecimalSymbol>

Sets if point or comma is used as a decimal symbol.

Parameters:
<DecimalSymbol> POINt | COMMa
*RST: POINt

Usage: Asynchronous command

Manual operation: See "Decimal symbol" on page 107

EXPort:RESult:DELimiter <CsvDelimiter>

Selects the list separator symbol from a list.

Parameters:
<CsvDelimiter> SEMICOLON | COMMA | SPACE | TAB | COLON
*RST: COMMA

Usage: Asynchronous command

Manual operation: See "Csv delimiter" on page 107

27.16.12 External application

The commands configure an external application that can be started at various events, for example, trigger event, or mask test violation.

EXECutable:NAME 1884
EXECutable:PARameter 1885
EXECutable:WDIRectory 1885

EXECutable:NAME <ApplicationPath>

Sets the path to the application executable.

Parameters:
<ApplicationPath> String parameter containing path, filename, and file extension

Example:
```
EXECutable:NAME 'C:\Program
Files\Wireshark\Wireshark.exe'
TRIGger:EVENt:RUNexec TRIGger
```

Usage: Asynchronous command

EXECutable:PARameter <AppParameters>

Sets optional parameters for the external executable.

Parameters:
<AppParameters> String parameter

Usage: Asynchronous command

EXECutable:WDIRectory <WorkDirectory>

Sets the working directory for the executable.

Parameters:
<WorkDirectory> String parameter

Usage: Asynchronous command

27.16.13 Video raster analysis (option R&S RTO6-K129)

The commands configure the optional video raster application.

RASTer:AVERaging <State>

Enables the averaging, which improves the image quality by averaging multiple acquisitions. A stable and precise trigger condition is required to get exact results.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Averaging" on page 509

RASTer:EXPort:PATH <State>

Sets the file name, file format and path of the image file.

Parameters:
<State> String with path and file name with extension .png or .jpg.

Usage: Asynchronous command

Manual operation: See "Save image to file" on page 510

RASTer:EXPort:SAVE

Saves the raster image to the file specified with `RASTer:EXPort:PATH` on page 1885.

Usage: Setting only

Manual operation: See "Save image to file" on page 510

RASTer:GATe:STARt?

Returns the start time of the rastered part of the signal, which is the image start.

Return values:

<Start>
Range: -100E+24 to 100E+24
Increment: 1E-12
*RST: 0
Default unit: s

Usage: Query only
Asynchronous command

RASTer:GATe:STOP?

Returns the end time of the rastered part of the signal, which is the image end.

Return values:

<Stop>
Range: -100E+24 to 100E+24
Increment: 1E-12
*RST: 0
Default unit: s

Usage: Query only
Asynchronous command

RASTer:HSYNc <Value>

Sets the horizontal frequency of the video signal. It is the line frequency, the repetition rate of horizontal lines.

Parameters:

<Value>
Range: 0.1 to 10E+6
Increment: 1
*RST: 45E+3
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "H-Sync" on page 509

RASTer:LINes <Value>

Sets the number of horizontal lines in the raster image.

If you change the number of lines, the result of `RASTer:VSYNc` is changes too, and vice versa. If you change `RASTer:HSYNc`, the number of lines is also adjusted.

Parameters:

<Value>
Range: 0.1 to 10000
Increment: 1
*RST: 900

Usage: Asynchronous command

Manual operation: See "Lines" on page 510

RASTer:OFFSet <Value>

Sets the time between the acquisition start and the image start.

Parameters:

<Value>
Range: 0 to 100E+24
Increment: 1E-12
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "Horizontal offset" on page 509

RASTer:SOURce <Source>

Selects the waveform to be processed to a raster image.

Parameters:

<Source>
C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Usage: Asynchronous command

Manual operation: See "Source" on page 509

RASTer:STATe <State>

Activates the raster processing.

Parameters:

<State>
OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 509

RASTer:VSYNc <Value>

Sets the vertical frequency (refresh rate) if averaging is active.

Parameters:

<Value>
Range: 0.1 to 10E+9
Increment: 1E-3
*RST: 50
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "V-Sync" on page 509

27.17 Signal configuration

- General setup....1888
- Signal and reference levels for NRZ signals....1891
- Signal anad reference levels for PAM-N signals....1905

27.17.1 General setup

SIGNalconfig:SETup:ADD....1888
SIGNalconfig:SETup:COUNt?....1889
SIGNalconfig:SETup:REMove....1889
SIGNalconfig:SETup:SETTing<m>:PAMorder....1889
SIGNalconfig:SETup:PROPagate....1889
SIGNalconfig:SETup:SETTing<m>:SERStandard....1890
SIGNalconfig:SETup:SETTing<m>:SOURce....1890
SIGNalconfig:SETup:SETTing<m>:SYMBolrate....1890
SIGNalconfig:SETup:SOURce....1891
SIGNalconfig:SETup:SREStimation....1891

SIGNalconfig:SETup:ADD [<Source>][,<SerialStandard>]

Adds a new signal to be configured. You can define up to 8 signals.

Setting parameters:

<Source>
NONE | C1W1 | C2W1 | C3W1 | C4W1 | C1W4 | C2W4 | C3W4 | C4W4 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | DIFF1 | DIFF2 | COMMON1 | COMMON2

<SerialStandard>
See `SIGNalconfig:SETup:SETTing<m>:SERStandard` on page 1890.

Usage: Setting only
Asynchronous command

Manual operation: See "AddWaveFormAnalyzer.SignalConfigurationProperties.SignalConfiguration" on page 515

SIGNalconfig:SETup:COUNt?

Returns the number of lines defined in the signal configuration dialog.

Return values:
<Number>

Usage: Query only
Asynchronous command

Manual operation: See "AddWaveFormAnalyzer.SignalConfigurationProperties.SignalConfiguration" on page 515

SIGNalconfig:SETup:REMove <Index>

Removes the signal with the corresponding index.

Setting parameters:
<Index>

Usage: Setting only
Asynchronous command

Manual operation: See "Remove" on page 515

SIGNalconfig:SETup:SETTing<m>:PAMorder <PAMOrder>

Requires option R&S RTO6-K135.

Selects the PAM order. You can select a value up to 8.

Suffix:
<m> 1..20
Selects the index of the configured source.

Parameters:
<PAMOrder> PAM2 | PAM3 | PAM4 | PAM5 | PAM6 | PAM7 | PAM8
*RST: PAM2

Usage: Asynchronous command

Manual operation: See "PAM order" on page 515

SIGNalconfig:SETup:PROPagate

Propagates the selected source to all inactive application measurements of eye analysis, embedding, advanced jitter and advanced noise. The source is selected with `SIGNalconfig:SETup:SOURce`.

Example:
```
SIGNalconfig:SETup:SOURce C1W1
// selects C1W1 as a source
SIGNalconfig:SETup:PROPagate
// propagates C1W1 to the inactive application measurements
```

Usage: Event
Asynchronous command

Manual operation: See "Propagate source" on page 516

SIGNalconfig:SETup:SETTing<m>:SERStandard <SerialStandard>

Sets the serial standard. Set `CUSTOM` to adjust the symbol rate manually.

Suffix:
<m> 1..20
Selects the index of the configured source.

Parameters:
<SerialStandard> See Table 13-1 for SCPI abbreviation of the various standards.
Set `CUSTOM` to adjust the symbol rate manually.

Usage: Asynchronous command

Manual operation: See "Technology, Serial standard" on page 513

SIGNalconfig:SETup:SETTing<m>:SOURce <Source>

Selects the source for the signal configuration for the selected index.

Suffix:
<m> 1..20
Selects the index of the configured source.

Parameters:
<Source> NONE | C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | C1W4 | C2W4 | C3W4 | C4W4 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | DIFF1 | DIFF2 | COMMON1 | COMMON2

*RST: NONE

Usage: Asynchronous command

SIGNalconfig:SETup:SETTing<m>:SYMBolrate <SymbolRate>

Sets/ displays the symbol rate. Most standards have a pre-dfeind symbol rate, see Technology and serial standard properties.

Suffix:
<m> 1..20
Selects the index of the configured source.

Parameters:
<SymbolRate> Range: 100 to 40E+9
Increment: 10
*RST: 1E+9
Default unit: Baud

Usage: Asynchronous command

Manual operation: See "Symbol rate" on page 515

SIGNalconfig:SETup:SOURce <Source>

Selects the source that is used for the symbol rate estimation. You can only select sources that has been enabled

You can start the estimation of the symbol rate with `SIGNalconfig:SETup:SREStimation` on page 1891

Parameters:

<Source> NONE | C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | C1W4 | C2W4 | C3W4 | C4W4 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | DIFF1 | DIFF2 | COMMON1 | COMMON2

Usage: Asynchronous command

Manual operation: See "Source" on page 513

SIGNalconfig:SETup:SREStimation

Starts a software algorithm for the automatic determination of the symbol rate for the source selected with `SIGNalconfig:SETup:SOURce`.

Example:

```
SIGNalconfig:SETup:SOURce C1W1
// selects C1W1 as a source
SIGNalconfig:SETup:SREStimation
// starts a symbol rate estimation for C1W1
```

Usage: Event
Asynchronous command

Manual operation: See "Estimate symbol rate" on page 515

27.17.2 Signal and reference levels for NRZ signals

- General reference level settings 1891
- Automatic configuration 1894
- Manual configuration 1896
- Hysteresis 1901
- Tube 1901
- Results 1903

27.17.2.1 General reference level settings

REFLevel<rl>:LDETection 1892
REFLevel<rl>:LMODe 1892
REFLevel<rl>:RELative:MODE 1892
REFLevel<rl>:USRLevel 1893

REFLevel<rl>:LDETection <Mode>

Defines whether the reference level is configured manually or automatically.

For automatic configuration, select the signal level to be used (see `REFLevel<rl>:AUTO:MODE` on page 1894).

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Mode> AUTO | MANual

Example: `REFLevel2:LDETection MANual`
Sets manual level configuration for C1W1. C1W1 corresponds to suffix number 2.

Example: See: Section 27.3.2.2, "Setting reference levels", on page 1428

Usage: Asynchronous command

Manual operation: See "Level detection mode" on page 520

REFLevel<rl>:LMODe <Mode>

Defines whether the reference is configured using absolute or relative values.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Mode> ABS | REL

Example: `REFLevel2:LMODe ABS`
Sets definition of reference levels to absolute values for C1W1. C1W1 corresponds to suffix number 2.

Example: See: "Manual reference level definition using relative values" on page 1428

Usage: Asynchronous command

Manual operation: See "Level mode" on page 523

REFLevel<rl>:RELative:MODE <Mode>

The lower, middle and upper reference levels, defined as percentages of the high signal level.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Mode> FIVE | TEN | TWENty | USER

FIVE
5/50/95

TEN
10/50/90

TWENty
20/50/80

USER
Set the reference levels to individual values
with `REFLevel<rl>:RELative:LOWer`, `REFLevel<rl>:RELative:MIDDle`, and `REFLevel<rl>:RELative:UPPer`.

Example: `REFL2:REL:MODE FIVE`
Reference levels for C1W1: Lower reference level = 5% of high signal level, middle reference level = 50% of high signal level, upper reference level = 95% of high signal level

Example: See: "Manual reference level definition using relative values" on page 1428

Usage: Asynchronous command

Manual operation: See "Relative levels" on page 524

REFLevel<rl>:USRLevel <Mode>

Defines whether the user-defined signal levels or user-defined reference levels are used for the measurements.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Mode> USIGnal | UREF

USIGnal
The high and low signal levels are defined by the user.

UREF
The reference levels are defined by the user.

Example: `REFLevel2:USRLevel UREF`
Sets user-defined reference levels to be used for C1W1. C1W1 corresponds to suffix number 2.

Example: See: "Manual reference level definition using absolute values" on page 1428

Usage: Asynchronous command

Manual operation: See "User level" on page 524

27.17.2.2 Automatic configuration

REFLevel<rl>:AUTO:MODE 1894
REFLevel<rl>:AUTO[:STATe] 1895
REFLevel<rl>:AUTO:COUNt 1895

REFLevel<rl>:AUTO:MODE <Mode>

Defines the high and low signal levels from which the reference levels are derived.

This setting is only available for automatic reference level mode (see `REFLevel<rl>:LDETection` on page 1892).

Suffix:

<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:

<Mode> AUTO | PPRobability | MPRobability | ABSolutepeak | UPLM | UMLP | UALM | UMLA

AUTO
Auto select absolute probability: most suitable signal levels for the selected measurement

PPRobability
Peak probability: signal levels with the highest probability value

MPRobability
Mean probability: signal levels with mean probability

ABSolutepeak
Absolute peak: absolute peak signal levels

UPLM
Upper absolute peak, lower mean probability: high signal level is the upper absolute peak, low signal level is the level with the mean probability in the lower half of the histogram.

UMLP
Upper mean probability, lower absolute peak: high signal level is the level with mean probability in the upper half of the histogram, low signal level is the lower absolute peak.

UALM
Upper absolute peak, lower manual value: high signal level is the maximum result value of the amplitude measurement; low signal level is manually set using `REFLevel<rl>:RELative:LOWer`.

UMLA
Upper manual, lower absolute peak: The upper signal level is set manually using `REFLevel<rl>:RELative:UPPer`. The lower level is the minimum result value of the amplitude measurement.

Example: `REFLevel5:AUTO:MODE PPRobability`
Sets the automatic reference level mode for C2W1 to "Peak probability". C2W1 corresponds to suffix number 5.

Example: See: "Automatic level detection, peak probability" on page 1429

Usage: Asynchronous command

Manual operation: See "Auto level mode" on page 521

REFLevel<rl>:AUTO[:STATe] <Value>

Enables averaging over several histograms to determine the reference levels. The number of histograms to consider is defined using `REFLevel<rl>:AUTO:COUNt`.

This function is only available in automatic reference level mode (see `REFLevel<rl>:LDETection` on page 1892).

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value> OFF | ON

Usage: Asynchronous command

Manual operation: See "Histogram averaging" on page 522

REFLevel<rl>:AUTO:COUNt <Value>

Defines the number of histograms from which the average is calculated.

Prerequisites:

- `REFLevel<rl>:AUTO[:STATe]` is set to `ON`
- `REFLevel<rl>:LDETection` on page 1892 is set to `AUTO`

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value>

Usage: Asynchronous command

Manual operation: See "Average Count" on page 522

27.17.2.3 Manual configuration

REFLevel<rl>:ABSolute:HIGH 1896
REFLevel<rl>:ABSolute:LOW 1896
REFLevel<rl>:ABSolute:TDIStance 1897
REFLevel<rl>:ABSolute:BDIStance 1897
REFLevel<rl>:ABSolute:MLEVel 1898
REFLevel<rl>:ABSolute:ULEVel 1898
REFLevel<rl>:ABSolute:LLEVel 1899
REFLevel<rl>:RELative:UPPer 1899
REFLevel<rl>:RELative:MIDDle 1900
REFLevel<rl>:RELative:LOWer 1900

REFLevel<rl>:ABSolute:HIGH <Value>

The signal value that represents a high level.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value>

Example: `REFLevel2:ABSolute:HIGH 0.015`
Sets the high signal level for C1W1 to 15 mV. C1W1 corresponds to suffix number 2.

Usage: Asynchronous command

Manual operation: See "High" on page 521

REFLevel<rl>:ABSolute:LOW <Value>

The signal value that represents a low level.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value>

Example: `REFLevel2:ABSolute:Low 0.0015`
Sets the low signal level forC1W1 to 1.5 mV. C1W1 corresponds to suffix number 2.

Usage: Asynchronous command

Manual operation: See "Low" on page 521

REFLevel<rl>:ABSolute:TDIStance <Value>

The distance between the high signal level and the upper reference level.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value>

Example: `REFLevel2:ABSolute:TDIStance 0.0002`
Sets the top distance for C1W1 to 0.2 mV. C1W1 corresponds to suffix number 2.

Example: See: "Manual reference level definition using absolute values" on page 1428

Usage: Asynchronous command

Manual operation: See "Top distance" on page 525

REFLevel<rl>:ABSolute:BDIStance <Value>

The distance between the lower reference level and the low signal value.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value>

Example: `REFLevel2:ABSolute:BDIStance 0.0002`
Sets the bottom distance for C1W1 to 0.2 mV. C1W1 corresponds to suffix number 2.

Example: See: "Manual reference level definition using absolute values" on page 1428

Usage: Asynchronous command

Manual operation: See "Bottom distance" on page 524

REFLevel<rl>:ABSolute:MLEVel <Value>

For user signal level selection, the level is the middle level between high and low signal level. The value is adjusted automatically if you change the high or low signal levels. Vice versa, if you change the middle level, the high and low signal levels are adjusted.

For user reference level selection, the level is the middle level between upper and lower reference level. The value is adjusted automatically if you change the upper or lower reference levels. Vice versa, if you change the middle level, the upper and lower reference levels are adjusted.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value>

Example: `REFLevel2:ABSolute:MLEVel 0.05`
Sets the middle signal level for C1W1 to 50 mV. C1W1 corresponds to suffix number 2.

Example: See: "Manual reference level definition using absolute values" on page 1428

Usage: Asynchronous command

Manual operation: See "Middle" on page 525

REFLevel<rl>:ABSolute:ULEVel <Value>

The upper reference level, required e.g. to determine a rise.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value>

Example: `REFLevel2:ABSolute:ULEVel 0.01`
Sets the upper reference level for C1W1 to 10 mV. C1W1 corresponds to suffix number 2.

Example: See: "Manual reference level definition using absolute values" on page 1428

Usage: Asynchronous command

Manual operation: See "Upper level" on page 524

REFLevel<rl>:ABSolute:LLEVel <Value>

The lower reference level, required e.g. to determine a fall.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value>

Example: `REFLevel2:ABSolute:LLEVel 0.001`
Sets the lower reference level for C1W1 to 1 mV. C1W1 corresponds to suffix number 2.

Example: See: "Manual reference level definition using absolute values" on page 1428

Usage: Asynchronous command

Manual operation: See "Lower level" on page 524

REFLevel<rl>:RELative:UPPer <Value>

Sets the upper relative reference level if `REFLevel<rl>:RELative:MODE` is set to `USER`.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value> Percentage of the high signal level.

Example: `REFLevel8:RELative:LOWer 85`
Sets the upper reference level for C3W1 to 85 %. C3W1 corresponds to suffix number 8.

Example: See: "Manual reference level definition using relative values" on page 1428

Usage: Asynchronous command

Manual operation: See "Upper ref level, Middle ref level, Lower ref level" on page 524

REFLevel<rl>:RELative:MIDDle <Value>

Sets the middle relative reference level if `REFLevel<rl>:RELative:MODE` is set to `USER`.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value> Percentage of the high signal level.

Example: `REFLevel8:RELative:MIDDle 50`
Sets the middle reference level for C3W1 to 50 %. C3W1 corresponds to suffix number 8.

Example: See: "Manual reference level definition using relative values" on page 1428

Usage: Asynchronous command

Manual operation: See "Upper ref level, Middle ref level, Lower ref level" on page 524

REFLevel<rl>:RELative:LOWer <Value>

Sets the lower relative reference level if `REFLevel<rl>:RELative:MODE` is set to `USER`.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value> Percentage of the high signal level.

Example: `REFLevel8:RELative:LOWer 15`
Sets the lower reference level for C3W1 to 15 %. C3W1 corresponds to suffix number 8.

Example: See: "Manual reference level definition using relative values" on page 1428

Usage: Asynchronous command

Manual operation: See "Upper ref level, Middle ref level, Lower ref level" on page 524

27.17.2.4 Hysteresis

REFLevel<rl>:RELative:HYSTeresis <Value>

Defines a hysteresis for the middle reference level. A rise or fall from the middle reference value that does not exceed the hysteresis is rejected as noise.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value>

Usage: Asynchronous command

Manual operation: See "Hysteresis" on page 525

27.17.2.5 Tube

REFLevel<rl>:RELative:OTUBe....1901
REFLevel<rl>:RELative:ITUBe....1902
REFLevel<rl>:ABSolute:TOTube....1902
REFLevel<rl>:ABSolute:TITube....1902
REFLevel<rl>:ABSolute:BITube....1903
REFLevel<rl>:ABSolute:BOTube....1903

REFLevel<rl>:RELative:OTUBe <Value>

Defines a percentage of the signal level by which the absolute signal level may be larger than the high signal level or lower than the low signal level to be considered high or low, respectively.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value>

Usage: Asynchronous command

Manual operation: See "Relative outer" on page 526

REFLevel<rl>:RELative:ITUBe <Value>

Defines a percentage of the signal level by which the absolute signal level may be higher than the low signal level or lower than the high signal level to be considered low or high, respectively.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value>

Usage: Asynchronous command

Manual operation: See "Relative inner" on page 526

REFLevel<rl>:ABSolute:TOTube <Value>

Defines an area above the high signal level which is still considered to be high level.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value>

Usage: Asynchronous command

Manual operation: See "Top outer" on page 526

REFLevel<rl>:ABSolute:TITube <Value>

Defines an area beneath the high signal level which is still considered to be high level.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value>

Usage: Asynchronous command

Manual operation: See "Top inner" on page 526

REFLevel<rl>:ABSolute:BITube <Value>

Defines an area above the low signal level which is still considered to be low level.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value>

Usage: Asynchronous command

Manual operation: See "Bottom inner" on page 526

REFLevel<rl>:ABSolute:BOTube <Value>

Defines an area beneath the low signal level which is still considered to be low level.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<Value>

Usage: Asynchronous command

Manual operation: See "Bottom outer" on page 526

27.17.2.6 Results

MEASurement<mg>:REFLevel:RESult:LOWer? 1903
MEASurement<mg>:REFLevel:RESult:MIDDle? 1903
MEASurement<mg>:REFLevel:RESult:UPPer? 1903
MEASurement<mg>:REFLevel:RESult:SIGLow? 1904
MEASurement<mg>:REFLevel:RESult:SIGHigh? 1904
MEASurement<mg>:REFLevel:RESult:BINNer? 1904
MEASurement<mg>:REFLevel:RESult:BOUTer? 1904
MEASurement<mg>:REFLevel:RESult:TINNer? 1905
MEASurement<mg>:REFLevel:RESult:TOUTer? 1905

MEASurement<mg>:REFLevel:RESult:LOWer?
MEASurement<mg>:REFLevel:RESult:MIDDle?
MEASurement<mg>:REFLevel:RESult:UPPer?

Return the lower, middle, and upper reference level, respectively.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Return values:
<Upper> Range: -100E+24 to 100E+24
*RST: 0

Usage: Query only
Asynchronous command

MEASurement<mg>:REFLevel:RESult:SIGLow?
MEASurement<mg>:REFLevel:RESult:SIGHigh?

Return the signal value that represents a low or high level, respectively.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Return values:
<SignalHigh> Range: -100E+24 to 100E+24
*RST: 0

Usage: Query only
Asynchronous command

MEASurement<mg>:REFLevel:RESult:BINNer?

Returns the area above the low signal level which is still considered to be low level.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Return values:
<BottomInner> Range: -100E+24 to 100E+24
*RST: 0

Usage: Query only
Asynchronous command

Manual operation: See "Bottom inner" on page 526

MEASurement<mg>:REFLevel:RESult:BOUTer?

Returns the area beneath the low signal level which is still considered to be low level.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Return values:
<BottomOuter> Range: -100E+24 to 100E+24
*RST: 0

Usage: Query only
Asynchronous command

Manual operation: See "Bottom outer" on page 526

MEASurement<mg>:REFLevel:RESult:TINNer?

Returns the area beneath the high signal level which is still considered to be high level.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Return values:
<TopInner> Range: -100E+24 to 100E+24
*RST: 0

Usage: Query only
Asynchronous command

Manual operation: See "Top inner" on page 526

MEASurement<mg>:REFLevel:RESult:TOUTer?

Returns the area above the high signal level which is still considered to be high level.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Return values:
<TopOuter> Range: -100E+24 to 100E+24
*RST: 0

Usage: Query only
Asynchronous command

Manual operation: See "Top outer" on page 526

27.17.3 Signal anad reference levels for PAM-N signals

Requires option R&S RTO6-K135.

REFLevel<rl>:PAMReference:LOWer....1906
REFLevel<rl>:PAMReference:LVLDef....1906
REFLevel<rl>:PAMReference:LVLJumphgt<n>:THReshold<o>:ABSLower....1907
REFLevel<rl>:PAMReference:LVLJumphgt<n>:THReshold<o>:ABSMiddle....1907
REFLevel<rl>:PAMReference:LVLJumphgt<n>:THReshold<o>:ABSupper....1907
REFLevel<rl>:PAMReference:LVLJumphgt<n>:THReshold<o>:RELLower....1908
REFLevel<rl>:PAMReference:LVLJumphgt<n>:THReshold<o>:RELMiddle....1908
REFLevel<rl>:PAMReference:LVLJumphgt<n>:THReshold<o>:RELupper....1909
REFLevel<rl>:PAMReference:MIDDle....1909
REFLevel<rl>:PAMReference:PRESet....1910
REFLevel<rl>:PAMReference:RELLevel....1910
REFLevel<rl>:PAMReference:UPPer....1910
REFLevel<rl>:PAMSignal:ESTimate....1911
REFLevel<rl>:PAMSignal:LEVel<n>....1911
REFLevel<rl>:PAMSignal:LVLalgorithm....1912

REFLevel<rl>:PAMReference:LOWer <DefaultLowRefLev>

Sets the lower relative reference level if `REFLevel<rl>:PAMReference:RELLevel` is set to `USER`.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<DefaultLowRefLev> Range: 0 to 100
Increment: 1
*RST: 10
Default unit: %

Manual operation: See "Upper ref level, Middle ref level, Lower ref level" on page 529

REFLevel<rl>:PAMReference:LVLDef <RefLevMd>

Defines whether the reference is configured using absolute or relative values.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<RefLevMd> ABS | REL
*RST: REL

Manual operation: See "Referenc level mode" on page 529

REFLevel<rl>:PAMReference:LVLJumphgt<n>:THReshold<o>:ABSLower
<AbsLowRefLev>

Sets the lower absolute reference level if `REFLevel<rl>:PAMReference:LVLDef` is set to `ABS`.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

<n> 1..7
Selects the level jump height

<o> *
Selects the threshold

Parameters:
<AbsLowRefLev>

Manual operation: See "Level jump height dependent reference levels" on page 529

REFLevel<rl>:PAMReference:LVLJumphgt<n>:THReshold<o>:ABSMiddle
<AbsMidRefLev>

Sets the middle absolute reference level if `REFLevel<rl>:PAMReference:LVLDef` is set to `ABS`.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

<n> 1..7
Selects the level jump height

<o> *
Selects the threshold

Parameters:
<AbsMidRefLev>

Manual operation: See "Level jump height dependent reference levels" on page 529

REFLevel<rl>:PAMReference:LVLJumphgt<n>:THReshold<o>:ABSupper
<AbsUppRefLev>

Sets the upper absolute reference level if `REFLevel<rl>:PAMReference:LVLDef` is set to `ABS`.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

<n> 1..7
Selects the level jump height

<o> *
Selects the threshold

Parameters:
<AbsUppRefLev>

Manual operation: See "Level jump height dependent reference levels" on page 529

REFLevel<rl>:PAMReference:LVLJumphgt<n>:THReshold<o>:RELLower
<RelLowRefLev>

Sets the lower relative reference level if `REFLevel<rl>:PAMReference:LVLDef` is set to `REL`.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

<n> 1..7
Selects the level jump height

<o> *
Selects the threshold

Parameters:
<RelLowRefLev>

Manual operation: See "Level jump height dependent reference levels" on page 529

REFLevel<rl>:PAMReference:LVLJumphgt<n>:THReshold<o>:RELMiddle
<RelMidRefLev>

Sets the middle relative reference level if `REFLevel<rl>:PAMReference:LVLDef` is set to `REL`.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

<n> 1..7
Selects the level jump height

<o> *
Selects the threshold

Parameters:
<RelMidRefLev>

Manual operation: See "Level jump height dependent reference levels" on page 529

REFLevel<rl>:PAMReference:LVLJumphgt<n>:THReshold<o>:RELupper <RelUppRefLev>

Sets the upper relative reference level if `REFLevel<rl>:PAMReference:LVLDef` is set to `REL`.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

<n> 1..7
Selects the level jump height

<o> *
Selects the threshold

Parameters:
<RelUppRefLev>

Manual operation: See "Level jump height dependent reference levels" on page 529

REFLevel<rl>:PAMReference:MIDDle <DefaultMidRefLev>

Sets the middle relative reference level if `REFLevel<rl>:PAMReference:RELLevel` is set to `USER`.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<DefaultMidRefLev> Range: 0 to 100
Increment: 1
*RST: 50
Default unit: %

Manual operation: See "Upper ref level, Middle ref level, Lower ref level" on page 529

REFLevel<rl>:PAMReference:PRESet

Presets the the level jump height dependent reference levels according to the value of the selected `REFLevel<rl>:PAMReference:RELLevel`.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Usage: Event

Manual operation: See "Preset" on page 529

REFLevel<rl>:PAMReference:RELLevel <DefaultRelLevs>

The lower, middle and upper reference levels, defined as percentages of the high signal level.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<DefaultRelLevs> FIVE | TEN | TWENty | USER

FIVE
5/50/95

TEN
10/50/90

TWENty
20/50/80

USER
Set the reference levels to individual values with `REFLevel<rl>:PAMReference:LOWer`, `REFLevel<rl>:PAMReference:MIDDle`, and `REFLevel<rl>:PAMReference:UPPer`.

*RST: TEN

Manual operation: See "Preset levels" on page 529

REFLevel<rl>:PAMReference:UPPer <DefaultUppRefLev>

Sets the upper relative reference level if `REFLevel<rl>:PAMReference:RELLevel` is set to `USER`.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<DefaultUppRefLev> Range: 0 to 100
Increment: 1
*RST: 90
Default unit: %

Manual operation: See "Upper ref level, Middle ref level, Lower ref level" on page 529

REFLevel<rl>:PAMSignal:ESTimate

Starts a software algorithm for the automatic determination of the signal level.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Usage: Event
Asynchronous command

Manual operation: See "Estimate signal levels" on page 528

REFLevel<rl>:PAMSignal:LEVel<n> <SignalLevel>

Sets the signal levels for the discrete amplitudes that the PAM signal can take based on the digital data being transmitted. The number of signal levels available ,0..7, depends on the PAM order of the signal.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

<n> 0..7

Parameters:
<SignalLevel>

Example: The following example sets the signal levels 0 to 3.

```
REFLevel1:PAMSignal:LEVel0 -0.124
REFLevel1:PAMSignal:LEVel1 -0.024
REFLevel1:PAMSignal:LEVel2 0.024
REFLevel1:PAMSignal:LEVel3 0.124
```

Manual operation: See "Signal levels" on page 528

REFLevel<rl>:PAMSignal:LVLalgorithm <LevDetectAlgorithm>

Selects the algorithm that defines how the signal levels are detected.

Suffix:
<rl> Valid suffix numbers: 2 to 21, 61 to 68, 108 to 118, 151 to 157, 173 to 179
Source waveform of the measurement, see Section 27.4.1, "Waveform suffix", on page 1446.

Parameters:
<LevDetectAlgorithm>KMEans

*RST: KMEans

Manual operation: See "Level detection algorithm" on page 528

27.18 Protocols

- Configuration settings for all serial protocols 1913
- Trigger settings for all serial protocols 1917
- I²C (option R&S RTO6-K510) 1919
- I3C (option R&S RTO6-K550) 1955
- SPI (option R&S RTO6-K510) 1983
- UART/RS-232/RS-422/RS-485 (option R&S RTO6-K510) 2004
- Audio signals (option R&S RTO6-K510) 2015
- Custom: manchester / NRZ (option R&S RTO6-K510) 2031
- CAN (option R&S RTO6-K520) 2078
- CAN-XL (option R&S RTO6-K520) 2125
- LIN (option R&S RTO6-K520) 2160
- Flexray (option R&S RTO6-K520) 2191
- SENT (option R&S RTO6-K520) 2229
- CXPI (option R&S RTO6-K520) 2262
- MIL-1553 (option R&S RTO6-K530) 2291
- ARINC 429 (option R&S RTO6-K530) 2321
- Space wire (option R&S RTO6-K530) 2339
- Ethernet 10BASE-T and 100BASE-TX (option R&S RTO6-K540) 2358
- MDIO (option R&S RTO6-K540) 2382
- RFFE (option R&S RTO6-K550) 2398
- 10BASE-T1S (option R&S RTO6-K560) 2432
- Ethernet 100BASE-T1 (option R&S RTO6-K560) 2457
- Ethernet 1000BASE-T1 (option R&S RTO6-K560) 2488
- USB (option R&S RTO6-K570) 2521
- USB 3.1 (option R&S RTO6-K570) 2567
- USBPD (option R&S RTO6-K570) 2599
- D-PHY (option R&S RTO6-K580) 2625
- M-PHY (option R&S RTO6-K580) 2659
- 8B/10B (option R&S RTO6-K590) 2720
- PCIe (option R&S RTO6K72) 2737
- DDR (option R&S RTO6-K91) 2782

27.18.1 Configuration settings for all serial protocols

BUS<b>:TYPE 1913
BUS<b>[:STATe] 1913
BUS<b>:SETReflevels 1914
BUS<b>:FAUToset 1914
BUS<b>:RESult 1914
BUS<b>:THReshold 1915
BUS<b>:FORMat 1915
BUS<b>:NEWList 1915
BUS<b>:SYMBols 1915
BUS<b>:ZCOupling 1916
DISPlay:RESultboxes:DEPosition 1916
BUS<b>:EXPResult:DETail 1916
BUS<b>:EXPResult:SAVE 1917
BUS<b>:EXPResult:TIME 1917

BUS<b>:TYPE <Type>

Defines the bus or protocol type for analysis. The type of available buses depends on the installed options.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<Type> I2C | SPI | UART | CAN | CANFd | LIN | MILS1553 | MILStd1553 | ARIN429 | ARINc429 | SWIRe | USB | USB3 | USBPD | RFFE | DPHY | MPHY | PCIE | ETHernet | MDIO | HBTO | TBTO | EBTB | CMSB | FLXRay | I2S | SENT | CXPI | I3C | CANXL | TNOS

MILS1553 = MILStd1553: specification MIL-STD-1553
ARIN429 = ARINc429: specification ARINC 429
HBTO: Ethernet 100BASE-T1
TBTO: Ethernet 1000BASE-T1
TNOS: automotive Ethernet 10BASE-T1S
CMSB: custom decode serial bus
EBTB: 8b/10b general decoding
SWIRe: SpaceWire

*RST: I2C

Usage: Asynchronous command

Manual operation: See "Protocol" on page 533

BUS<b>[:STATe] <State>

Enables the decoding of the specified bus.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Decode" on page 534

BUS<b>:SETReflevels

Executes the measurement of reference levels and sets the thresholds to the middle reference level of the measured amplitude.

Suffix:
<b> 1..4
Selects the serial bus.

Usage: Event
Asynchronous command

Manual operation: See "Threshold" on page 545

BUS<b>:FAUToset

Starts software algorithms for determining the signal threshold levels and bitrate.

Suffix:
<b> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Threshold" on page 545

BUS<b>:RESult <ShowResultTable>

Opens a table with decoded data of the serial signal. The function affects all protocol types and requires the option for the analyzed protocol.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<ShowResultTable> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Show table" on page 535

BUS<b>:THReshold <ShwThresLines>

If ON, the threshold levels are displayed in the diagram.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<ShwThresLines> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Show thresholds" on page 545

BUS<b>:FORMat <DataFormat>

Sets the number format for decoded data values of the indicated serial bus. It defines the format in the decode table, and in the combs of the decoded signal on the screen.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<DataFormat> HEX | OCT | BIN | ASCII | ASCii | SIGN | USIG
ASCII = ASCii
USIG = unsigned
*RST: HEX

Manual operation: See "Data format" on page 536

BUS<b>:NEWList <FileName>

Loads a label list file.

Suffix:
<b> 1..4
Selects the serial bus.

Setting parameters:
<FileName> String parameter with path and file name.

Example:
```
BUS1:NEWList 'C:\Protocols\CAN.csv'
BUS1:SYMBols ON
```

Usage: Setting only

Manual operation: See "Load symbols" on page 536

BUS<b>:SYMBols <UseTranslation>

Activates the lable list to be used for decoding.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<UseTranslation> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Show symbols" on page 536

BUS<b>:ZCOupling <ZoomCoupling>

If enabled, the protocol decode zoom and result table are synchronized.

Suffix:
<b> 1..4

Parameters:
<ZoomCoupling> OFF | ON
*RST: OFF

Manual operation: See "Zoom coupling" on page 536

DISPlay:RESultboxes:DEPosition <DecodePosition>

Defines the position of the protocol decode result table on the screen.

Parameters:
<DecodePosition> PREV | FLOA | DOCK

PREV
Preview: result icon on the sidebar.

FLOA
Floating result box in front of the diagrams.

DOCK
Docked: fixed tab below the diagrams.

*RST: DOCK

Usage: Asynchronous command

Manual operation: See "Table position" on page 90

BUS<b>:EXPResult:DETail <XptResDetails>

Includes the detailed results for all frames for the exported protocol results.

Suffix:
<b> 1..4

Parameters:
<XptResDetails> OFF | ON
*RST: ON

Manual operation: See "Include details" on page 539

BUS<b>:EXPResult:SAVE <FileName>

Saves the selected results to the indicated file.

Suffix:
<b> 1..4

Setting parameters:
<FileName>

Usage: Setting only

Manual operation: See "Export to file" on page 539

BUS<b>:EXPResult:TIME <XptResTim>

Includes the frame timing for the exported protocol results.

Suffix:
<b> 1..4

Parameters:
<XptResTim> OFF | ON
*RST: ON

Manual operation: See "Include frame timing" on page 539

27.18.2 Trigger settings for all serial protocols

The following commands are available for all serial protocols that have a protocol trigger.

TRIGger<t>:SOURce[:SELect] 1917
TRIGger<t>:SOURce:SBSelect 1918
BUS<b>:TYPE 1919

TRIGger<t>:SOURce[:SELect] <SourceDetailed>

Selects the source of the trigger signal.

Suffix:

<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger
Available values depend on the selected trigger source. For input channels CHAN1...4, a trigger sequence can be configured.
For all other trigger sources, only suffix 1 is allowed.

Parameters:

<SourceDetailed> CHAN1 | CHANnel1 | CHAN2 | CHANnel2 | CHAN3 | CHANnel3 | CHAN4 | CHANnel4 | EXTernanalog | SBUS | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | LOGIC | MSOB1 | MSOB2 | MSOB3 | MSOB4 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2

CHAN1 = CHANnel1, CHAN2 = CHANnel2, CHAN3 = CHANnel3, CHAN4 = CHANnel4
Input channels

EXTernanalog
External analog signal connected to the External Trigger Input. For this source, only the analog edge trigger is available.

SBUS
Serial bus

D0...D15
Digital channels (option R&S RTO6-B1)
See also: Section 27.19.4, "Trigger settings for digital signals and parallel buses", on page 2836

LOGIc
Logic combination of digital channels, used as trigger source (option R&S RTO6-B1)

MSOB1 | MSOB2 | MSOB3 | MSOB4
Parallel bus (option R&S RTO6-B1)

Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4
Input channels of R&S RT-ZVCmulti-channel power probe. Only available in the A-trigger with trigger type EDGE.

DIFF1 | DIFF2 | COMMON1 | COMMON2
Differential signals

*RST: CHAN1

Usage: Asynchronous command

Manual operation: See "[Source]" on page 36

TRIGger<t>:SOURce:SBSelect <SerialBus>

Selects the serial bus to be triggered on.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<SerialBus> SBUS1 | SBUS2 | SBUS3 | SBUS4

Usage: Asynchronous command

Firmware/software: Version 2.70

Manual operation: See "Serial bus" on page 547

BUS<b>:TYPE <Type>

Defines the bus or protocol type for analysis. The type of available buses depends on the installed options.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Type> I2C | SPI | UART | CAN | CANFd | LIN | MILS1553 | MILStd1553 | ARIN429 | ARINc429 | SWIRe | USB | USB3 | USBPD | RFFE | DPHY | MPHY | PCIE | ETHernet | MDIO | HBTO | TBTO | EBTB | CMSB | FLXRay | I2S | SENT | CXPI | I3C | CANXL | TNOS

MILS1553 = MILStd1553: specification MIL-STD-1553
ARIN429 = ARINc429: specification ARINC 429
HBTO: Ethernet 100BASE-T1
TBTO: Ethernet 1000BASE-T1
TNOS: automotive Ethernet 10BASE-T1S
CMSB: custom decode serial bus
EBTB: 8b/10b general decoding
SWIRe: SpaceWire

*RST: I2C

Usage: Asynchronous command

Manual operation: See "Protocol" on page 533

27.18.3 I²C (option R&S RTO6-K510)

- Configuration....1920
- Trigger....1922
- Decode results....1930
- I²C search settings....1938
- I²C search results....1948

27.18.3.1 Configuration

BUS<b>:I2C:SCL:SOURce 1920
BUS<b>:I2C:SDA:SOURce 1920
BUS<b>:I2C:SCL:THReshold 1921
BUS<b>:I2C:SDA:THReshold 1921
BUS<b>:I2C:TECHnology 1921
BUS<b>:I2C:RWBit 1922

BUS<b>:I2C:SCL:SOURce <SCLSource>

Sets the waveform of the clock line.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<SCLSource> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

Digital and analog channels cannot be used at the same time for data and clock lines.
See Section 27.4.2, "Waveform parameter", on page 1451

*RST: C2W1

Usage: Asynchronous command

Manual operation: See "SDA, SCL" on page 544

BUS<b>:I2C:SDA:SOURce <SDASource>

Sets the waveform of the data line.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<SDASource> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

Digital and analog channels cannot be used at the same time for data and clock lines.
See Section 27.4.2, "Waveform parameter", on page 1451

*RST: C1W1

Usage: Asynchronous command

Manual operation: See "SDA, SCL" on page 544

BUS<b>:I2C:SCL:THReshold <SCLThreshold>

Sets a user-defined threshold value for the clock line.

Alternatively, you can set the threshold according to the signal technology with `BUS<b>:I2C:TECHnology`.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<SCLThreshold> User-defined clock threshold

Range: -12 to 12
Increment: 0.1
*RST: 0
Default unit: V

Manual operation: See "Threshold" on page 545

BUS<b>:I2C:SDA:THReshold <SDAThreshold>

Sets a user-defined threshold value for the data line.

Alternatively, you can set the threshold according to the signal technology with `BUS<b>:I2C:TECHnology`.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<SDAThreshold> User-defined data threshold

Range: -12 to 12
Increment: 0.1
*RST: 0
Default unit: V

Manual operation: See "Threshold" on page 545

BUS<b>:I2C:TECHnology <Technology>

Sets the threshold voltage clock and data lines as defined for various signal technologies.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Technology> V15 | V25 | V165 | V125 | V09 | VM13 | V38 | V20 | V0 | MANual

V15 | V25 | V165 | V125 | V09 | V38 | V20 | V0
1.5 V, 2.5 V, 1.65 V ... respectively

VM13
-1.3 V (negative value)

MANual
Manual setting of user-defined values with `BUS<b>:I2C:SCL:THReshold` and `BUS<b>:I2C:SDA:THReshold`.

*RST: V165

Manual operation: See "Threshold" on page 545

BUS<b>:I2C:RWBit <BusConfig>

Defines if the R/W bit of a 7-bit address is considered separately or as part of the address. 10-bit addresses are not affected. The setting defines which address lengths are available with `TRIGger<t>:I2C:AMODe`.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<BusConfig> SEParate | INADdress

SEParate
7-bit address and separate R/W bit.

INADdress
8-bit address with R/W bit included.

*RST: SEParate

Manual operation: See "R/W bit" on page 544

27.18.3.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:I2C:TYPE 1923
TRIGger<t>:I2C:ACCess 1923
TRIGger<t>:I2C:ADNack 1924
TRIGger<t>:I2C:DWNack 1924
TRIGger<t>:I2C:DRNack 1924
TRIGger<t>:I2C:AMODe 1925
TRIGger<t>:I2C:ACONdition 1925
TRIGger<t>:I2C:ADDRess 1926
TRIGger<t>:I2C:ADDTo 1926
TRIGger<t>:I2C:ADOR<n>:ENABle 1926

TRIGger<t>:I2C:ADOR<n>:ADRType....1927
TRIGger<t>:I2C:ADOR<n>[:VALue]....1927
TRIGger<t>:I2C:ADOR<n>:RWBit....1927
TRIGger<t>:I2C:DPOPerator....1928
TRIGger<t>:I2C:DPOSition....1928
TRIGger<t>:I2C:DPTO....1928
TRIGger<t>:I2C:DCONdition....1929
TRIGger<t>:I2C:DMIN....1929
TRIGger<t>:I2C:DMAX....1929

TRIGger<t>:I2C:TYPE <Type>

Selects the trigger type for I²C analysis.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<Type> STARt | REPStart | STOP | NACK | ADDRess | ADOR | ADAT

STARt
Start condition

REPStart
Repeated start - the start condition occurs without previous stop condition.

NACK
Missing acknowledge bit. To localize specific missing acknowledge bits, use `TRIGger<t>:I2C:ADNack`, `TRIGger<t>:I2C:DWNack`, and `TRIGger<t>:I2C:DRNack`.

ADDRess
Triggers on one specific address

ADOR
Triggers on an OR combination with up to four four address conditions.

ADAT
Triggers on a combination of address and data condition.

STOP
Stop condition, end of frame

*RST: STARt

Usage: Asynchronous command

Manual operation: See "Trigger type" on page 547

TRIGger<t>:I2C:ACCess <RWBitAddress>

Sets the trigger condition for the R/W bit - the transfer direction of the data.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<RWBitAddress> READ | WRITe | EITHer

EITHer
Transfer direction is not relevant.

*RST: EITHer

Usage: Asynchronous command

Manual operation: See "R/W bit" on page 550

TRIGger<t>:I2C:ADNack <AddressNack>

Triggers if the address acknowledge bit is missing - no slave recognizes the address.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<AddressNack> OFF | ON

*RST: ON

Usage: Asynchronous command

Manual operation: See "No Ack conditions" on page 549

TRIGger<t>:I2C:DWNack <DataWriteNack>

Triggers if a date acknowledge bit is missing - the addressed slave does not accept the data.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataWriteNack> OFF | ON

*RST: ON

Usage: Asynchronous command

Manual operation: See "No Ack conditions" on page 549

TRIGger<t>:I2C:DRNack <DataReadNack>

Triggers on the end of the read process when the master reads data from the slave. This Nack is sent according to the protocol definition, it is not an error.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataReadNack> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "No Ack conditions" on page 549

TRIGger<t>:I2C:AMODe <AddressType>

Sets the address length. The setting affects the address input with `TRIGger<t>:I2C:ADDRess` and `TRIGger<t>:I2C:ADDTo`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<AddressType> BIT7 | BIT7_RW | BIT10 | ANY

BIT7
Enter the 7 address bits. Only available if `BUS<b>:I2C:RWBitSEParate` is set.

BIT7_RW
Enter 7 address bits and the R/W bit. Only available if `BUS<b>:I2C:RWBitINADdress` is set.

BIT10
10-bit address

ANY
Only available for trigger type "Address + data" (`TRIGger<t>:I2C:TYPE ADAT`). Used to trigger on data only, regardless of the address.

*RST: BIT7

Usage: Asynchronous command

Manual operation: See "Adress Type" on page 550

TRIGger<t>:I2C:ACONdition <AddressOperator>

Sets the operator to set a specific address or an address range. The address values are set with `TRIGger<t>:I2C:ADDRess` and `TRIGger<t>:I2C:ADDTo`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<AddressOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

*RST: EQUal

TRIGger<t>:I2C:ADDRess <Address>

Triggers on the specified slave address, or sets the the start value of an address range depending on the condition set with `TRIGger<t>:I2C:ACONdition`.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<Address> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Manual operation: See "Address" on page 550

TRIGger<t>:I2C:ADDTo <AddressTo>

Sets the the end value of an address range if the condition is set to an address range with `TRIGger<t>:I2C:ACONdition`.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<AddressTo> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Usage: Asynchronous command

Manual operation: See "Address" on page 550

TRIGger<t>:I2C:ADOR<n>:ENABle <UseAddress>

Includes the indicated ADOR address in the "address OR" trigger condition.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

<n> 1..4
Index of the address in an "address OR" condition (OR slot)

Parameters:

<UseAddress> OFF | ON

*RST: OFF

Manual operation: See "OR x" on page 551

TRIGger<t>:I2C:ADOR<n>:ADRType <AddressType>

Sets the address type for the indicated ADOR address in the "address OR" trigger condition.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

<n> 1..4
Index of the address in an "address OR" condition (OR slot)

Parameters:
<AddressType> BIT7 | BIT7_RW | BIT10
*RST: BIT7

Manual operation: See "Adress Type" on page 550

TRIGger<t>:I2C:ADOR<n>[:VALue] <Address>

Defines the address pattern of the indicated ADOR address in the "address OR" trigger condition.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

<n> 1..4
Index of the address in an "address OR" condition (OR slot)

Parameters:
<Address> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Manual operation: See "Address" on page 550

TRIGger<t>:I2C:ADOR<n>:RWBit <RWBit>

Defines the R/W bit of the indicated ADOR address in the "address OR" trigger condition.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

<n> 1..4
Index of the address in an "address OR" condition (OR slot)

Parameters:
<RWBit> UNDefined | READ | WRITe | EITHer
UNDefined
Return value only
*RST: EITHer

Manual operation: See "R/W bit" on page 550

TRIGger<t>:I2C:DPOPerator <DataPosOperator>

Sets the operator for the data position. You can defined an exact position, or a position range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataPosOperator> ANY | OFF | EQUal | GETHan | INRange | RANGe

ANY = OFF
The position of the required pattern is not relevant.

EQUal | GETHan
Equal, Greater or equal than. These conditions require one data position to be set with `TRIGger<t>:I2C:DPOSition`.

INRange = RANGe
In range: Set the minimum and maximum value of the range with `TRIGger<t>:I2C:DPOSition` and `TRIGger<t>:I2C:DPTO`.

*RST: ANY

Manual operation: See "Position" on page 551

TRIGger<t>:I2C:DPOSition <DataPosition>

Sets the number of data bytes before the first byte of interest. These bytes are ignored.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataPosition> The index 0 is associated with the first data byte.

Range: 0 to 4095
Increment: 1
*RST: 0

Manual operation: See "Position" on page 551

TRIGger<t>:I2C:DPTO <DataPositionTo>

Defines the last byte of interest, if `TRIGger<t>:I2C:DPOPerator` is set to `RANGe`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<DataPositionTo> Range: 0 to 4095
Increment: 1
*RST: 0

Manual operation: See "Position" on page 551

TRIGger<t>:I2C:DCONdition <DataOperator>

Sets the operator to set a specific data value or a data range.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<DataOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange
*RST: EQUal

Manual operation: See "Data" on page 551

TRIGger<t>:I2C:DMIN <Data>

Specifies the data bit pattern, or sets the the start value of a data pattern range.. Enter the bytes in msb first bit order. The maximum pattern length is 64 bit. Waveform data is compared with the pattern byte-by-byte.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<Data> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Usage: Asynchronous command

Manual operation: See "Data" on page 551

TRIGger<t>:I2C:DMAX <DataTo>

Sets the the end value of an data range if `TRIGger<t>:I2C:DCONdition` is set to `INRange` or `OORange`.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<DataTo> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Usage: Asynchronous command

Manual operation: See "Data" on page 551

27.18.3.3 Decode results

To load and acivate a label list, use:

- `BUS<b>:NEWList` on page 1915
- `BUS<b>:SYMBols` on page 1915

BUS<b>:I2C:FRAMe<fr>:DATA? 1930
BUS<b>:I2C:FCOunt? 1931
BUS<b>:I2C:FRAMe<fr>:AACCess? 1931
BUS<b>:I2C:FRAMe<fr>:ACCess? 1931
BUS<b>:I2C:FRAMe<fr>:ACOMplete? 1932
BUS<b>:I2C:FRAMe<fr>:ADBStart? 1932
BUS<b>:I2C:FRAMe<fr>:ADDRess? 1932
BUS<b>:I2C:FRAMe<fr>:ADEVice? 1933
BUS<b>:I2C:FRAMe<fr>:AMODe? 1933
BUS<b>:I2C:FRAMe<fr>:ASTart? 1933
BUS<b>:I2C:FRAMe<fr>:BITRate? 1934
BUS<b>:I2C:FRAMe<fr>:RWBStart? 1934
BUS<b>:I2C:FRAMe<fr>:STATus? 1934
BUS<b>:I2C:FRAMe<fr>:STARt? 1935
BUS<b>:I2C:FRAMe<fr>:STOP? 1935
BUS<b>:I2C:FRAMe<fr>:SYMBol? 1936
BUS<b>:I2C:FRAMe<fr>:BCOunt? 1936
BUS<b>:I2C:FRAMe<fr>:BYTE<o>:ACCess? 1936
BUS<b>:I2C:FRAMe<fr>:BYTE<o>:ACKStart? 1937
BUS<b>:I2C:FRAMe<fr>:BYTE<o>:COMPlete? 1937
BUS<b>:I2C:FRAMe<fr>:BYTE<o>:STARt? 1937
BUS<b>:I2C:FRAMe<fr>:BYTE<o>:VALue? 1938

BUS<b>:I2C:FRAMe<fr>:DATA?

Returns the data words of the specified frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<Data> Comma-separated list of integer values (N, D1, D2,…, DN). N is the number of bytes in the frame, and D1…DN are the values of the bytes.

Example:
```
BUS:I2C:FRAMe4:DATA?
<-- 3,74,164,18
```

Usage: Query only

BUS<b>:I2C:FCOunt?

Returns the number of decoded frames.

Suffix:

<b> 1..4
Selects the serial bus.

Return values:

<Count> Total number of decoded frames.

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:AACCess?

Returns the address acknowledge bit value for the indicated frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<AddressAckBit> INComplete | ACK | NACK | EITHer
*RST: INComplete

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:ACCess?

Returns the value of the R/W bit of the indicated frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<RWBit> UNDefined | READ | WRITe | EITHer
*RST: UNDefined

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:ACOMplete?

Returns if the address is completely contained in the acquisition.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<AddrComplete> OFF | ON
*RST: OFF

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:ADBStart?

Returns the start time of the address acknowledge bit.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<AddrAckBtStrt> Range: -100E+24 to 100E+24
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:ADDRess?

Returns the device address value of the indicated frame, that is, the address value that is shown in the decoded cells and in the decode results table.

If the frame has a 7-bit address, the command considers the status of `BUS<b>:I2C:RWBit`. If `BUS<b>:I2C:RWBit INADdress` is set, the returned address includes the R/W bit (8 bit). Otherwise, the pure address without the R/W bit is returned (7 bit, same result as returned with `BUS<b>:I2C:FRAMe<fr>:ADEVice?`).

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<AddressValue> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and default – are decimal values.

Range: 0 to 1023
*RST: 0

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:ADEVice?

Returns the pure device address of the indicated frame *without* the R/W bit.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<DeviceAddress> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and default – are decimal values.

Range: 0 to 1023
*RST: 0

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:AMODe?

Returns the address length.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<AddressType> BIT7 | BIT7_RW | BIT10 | AUTO | ANY
*RST: BIT7

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:ASTart?

Returns the start time of the address for the indicated frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<AddressStart> Range: -100E+24 to 100E+24
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:BITRate?

Returns the primary bit rate.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<PrimaryBitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:RWBStart?

Returns the start time of the R/W bit

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<RWBitStart> Range: -100E+24 to 100E+24
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:STATus?

Returns the overall state of the frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<FrameState> INComplete | OK | UNEXpstop | INSufficient | ADDifferent | UNKNown

INComplete
The stop bit is missing.

OK
The frame is valid.

UNEXpstop
A stop bit was detected but clock and data are continued.

INSufficient
The frame is not completely contained in the acquisition. The acquired part of the frame is valid.

ADDifferent
Error in 10 bit address. In case of a read access on a 10 bit address, the first address byte is sent twice, first as write, the second as read. The first seven bits of the byte must be identical. If they are not identical, the ADDiffernt error is indicated.

*RST: OK

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:STARt?

Returns the start time of the specified frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<FrameStart> Range: -100E+24 to 100E+24
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:STOP?

Returns the end time of the specified frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<FrameStop> Range: -100E+24 to 100E+24
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:SYMBol?

Returns the symbolic label of the specified frame if the label list is enabled.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the number of the frame in the current acquisition, 1...n.

Return values:
<Translation> String with symbolic name of the address

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:BCOunt?

Returns the number of bytes in the specified frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<Count> Byte count

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:BYTE<o>:ACCess?

Returns the acknowledge bit value of the specified data byte.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<o> *
Selects the byte number.

Return values:

<AckBit> INComplete | ACK | NACK | EITHer
*RST: INComplete

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:BYTE<o>:ACKStart?

Returns the start time of the acknowledge bit of the specified byte.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<o> *
Selects the byte number.

Return values:

<AckBitStart> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and reset – are decimal values.
Range: -100E+24 to 100E+24
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:BYTE<o>:COMPlete?

Returns if the indicated byte is completely contained in the acquisition.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<o> *
Selects the byte number.

Return values:

<ValueComplete> OFF | ON
*RST: OFF

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:BYTE<o>:STARt?

Returns the start time of the specified data byte.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<o> *
Selects the byte number.

Return values:

<FrameByteStart> Range: -100E+24 to 100E+24
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:I2C:FRAMe<fr>:BYTE<o>:VALue?

Returns the data value of the specified byte.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<o> *
Selects the byte number.

Return values:

<Value> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and default – are decimal values.
Range: 0 to 255
*RST: 0

Usage: Query only

27.18.3.4 I²C search settings

In search setup commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name. The commands are similar to I²C trigger commands.

SEARch:TRIGger:I2C:SCONdition....1939
SEARch:TRIGger:I2C:RCONdition....1939

SEARch:TRIGger:I2C:DRNack 1947
SEARch:TRIGger:I2C:DWNack 1948

SEARch:TRIGger:I2C:SCONdition <SearchName>,<Start>
SEARch:TRIGger:I2C:SCONdition? <SearchName>

Enables the search for the start of the message.

Parameters:
<Start> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Select search types" on page 554

SEARch:TRIGger:I2C:RCONdition <SearchName>,<RepeatedStart>
SEARch:TRIGger:I2C:RCONdition? <SearchName>

Enables the search for a start condition without previous stop condition.

Parameters:
<RepeatedStart> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Select search types" on page 554

SEARch:TRIGger:I2C:STCNdition <SearchName>,<Stop>
SEARch:TRIGger:I2C:STCNdition? <SearchName>

Enables the search for the start of the message.

Parameters:
<Stop> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Select search types" on page 554

SEARch:TRIGger:I2C:NACKnowledge <SearchName>,<NoAcknowledge>
SEARch:TRIGger:I2C:NACKnowledge? <SearchName>

Searches for missing address acknowledge bits.

Parameters:
<NoAcknowledge> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Select search types" on page 554

SEARch:TRIGger:I2C:SADDress <SearchName>,<Address>
SEARch:TRIGger:I2C:SADDress? <SearchName>

Enables the search for one specific address condition or for a combination of address conditions.

To define the address condition, use the following commands:

- `SEARch:TRIGger:I2C:ACONdition` on page 1941
- `SEARch:TRIGger:I2C:ADDRess` on page 1942
- `SEARch:TRIGger:I2C:ADDTo` on page 1942
- `SEARch:TRIGger:I2C:AMODe` on page 1942
- `SEARch:TRIGger:I2C:ACCess` on page 1943

Parameters:
<Address> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Select search types" on page 554

SEARch:TRIGger:I2C:ADOR <SearchName>,<AddressOr>
SEARch:TRIGger:I2C:ADOR? <SearchName>

Enables the search for one to four address conditions.

- `SEARch:TRIGger:I2C:ADDO<m>:ENABle` on page 1943

- SEARch:TRIGger:I2C:ADDO<m>:ADRType on page 1944
- SEARch:TRIGger:I2C:ADDO<m>[:VALue] on page 1944
- SEARch:TRIGger:I2C:ADDO<m>:RWBit on page 1944

Parameters:
<AddressOr> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Select search types" on page 554

SEARch:TRIGger:I2C:ADData <SearchName>,<AddressData>
SEARch:TRIGger:I2C:ADData? <SearchName>

Enables the search for a combination of address and data conditions.

Parameters:
<AddressData> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Select search types" on page 554

SEARch:TRIGger:I2C:ACONdition <SearchName>,<AddressOperator>
SEARch:TRIGger:I2C:ACONdition? <SearchName>

Sets the operator to set a specific address or an address range.

Parameters:
<AddressOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These condition require one identifier pattern to be set with SEARch:TRIGger:I2C:ADDRess on page 1942.

INRange | OORange
In range / Out of range: Set the minimum and maximum value of the range with SEARch:TRIGger:I2C:ADDRess on page 1942 and SEARch:TRIGger:I2C:ADDTo on page 1942.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Address setup: Condition, Type, Addr. min, Addr. max, R/W bit" on page 555

SEARch:TRIGger:I2C:AMODe <SearchName>,<AddressType>
SEARch:TRIGger:I2C:AMODe? <SearchName>

Sets the address length.

Parameters:

<AddressType> BIT7 | BIT7_RW | BIT10 | ANY

BIT7 | BIT10
Enter only address bits in the address pattern.

BIT7_RW
Enter seven address bits and also the R/W bit in the address pattern.

ANY
Only available for search criteria "Address and data" (`SEARch:TRIGger:I2C:ADData` is set `ON`). Used to search for data only, regardless of the address.

*RST: BIT7

Parameters for setting and query:
<SearchName>

Usage: Asynchronous command

Manual operation: See "Address setup: Condition, Type, Addr. min, Addr. max, R/W bit" on page 555

SEARch:TRIGger:I2C:ADDRess <SearchName>,<Address>
SEARch:TRIGger:I2C:ADDRess? <SearchName>

Specifies an address pattern, or sets the the start value of an address range.

Parameters:

<Address> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.
The pattern length is defined with `SEARch:TRIGger:I2C:AMODe`.

Parameters for setting and query:
<SearchName>

Manual operation: See "Address setup: Condition, Type, Addr. min, Addr. max, R/W bit" on page 555

SEARch:TRIGger:I2C:ADDTo <SearchName>,<AddressTo>
SEARch:TRIGger:I2C:ADDTo? <SearchName>

Sets the the end value of an address range if `SEARch:TRIGger:I2C:ACONdition` is set to `INRange` or `OORange`.

Parameters:
<AddressTo> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.
The pattern length is defined with `SEARch:TRIGger:I2C:AMODe`.

Parameters for setting and query:
<SearchName>

Usage: Asynchronous command

Manual operation: See "Address setup: Condition, Type, Addr. min, Addr. max, R/W bit" on page 555

SEARch:TRIGger:I2C:ACCess <SearchName>,<RWBitAddress>
SEARch:TRIGger:I2C:ACCess? <SearchName>

Sets the transfer direction of the data.

Parameters:
<RWBitAddress> READ | WRITe | EITHer
*RST: EITHer

Parameters for setting and query:
<SearchName>

Usage: Asynchronous command

Manual operation: See "Address setup: Condition, Type, Addr. min, Addr. max, R/W bit" on page 555

SEARch:TRIGger:I2C:ADDO<m>:ENABle <SearchName>,<UseAddress>
SEARch:TRIGger:I2C:ADDO<m>:ENABle? <SearchName>

Includes the indicated ADOR address in the "address OR" search condition.

Suffix:
<m> 1..4
Index of the address in an "address OR" condition (OR slot)

Parameters:
<UseAddress> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Address OR setup: , OR x Address type, Address, R/W bit" on page 555

SEARch:TRIGger:I2C:ADDO<m>:ADRType <SearchName>,<AddressType>
SEARch:TRIGger:I2C:ADDO<m>:ADRType? <SearchName>

Sets the address type for the indicated ADOR address in the "address OR" search condition.

Suffix:
<m> 1..4
Index of the address in an "address OR" condition (OR slot)

Parameters:
<AddressType> BIT7 | BIT7_RW | BIT10

BIT7 | BIT10
Enter only address bits in the address pattern.

BIT7_RW
Enter seven address bits and also the R/W bit in the address pattern.

*RST: BIT7

Parameters for setting and query:
<SearchName>

Manual operation: See "Address OR setup: , OR x Address type, Address, R/W bit" on page 555

SEARch:TRIGger:I2C:ADDO<m>[:VALue] <SearchName>,<Address>
SEARch:TRIGger:I2C:ADDO<m>[:VALue]? <SearchName>

Defines the address pattern of the indicated ADOR address in the "address OR" search condition.

Suffix:
<m> 1..4
Index of the address in an "address OR" condition (OR slot)

Parameters:
<Address> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.
The pattern length is defined with `SEARch:TRIGger:I2C:ADDO<m>:ADRType`.

Parameters for setting and query:
<SearchName>

Manual operation: See "Address OR setup: , OR x Address type, Address, R/W bit" on page 555

SEARch:TRIGger:I2C:ADDO<m>:RWBit <SearchName>,<RWBit>
SEARch:TRIGger:I2C:ADDO<m>:RWBit? <SearchName>

Defines the R/W bit of the indicated ADOR address in the "address OR" search condition.

Suffix:
<m> 1..4
Index of the address in an "address OR" condition (OR slot)

Parameters:
<RWBit> UNDefined | READ | WRITe | EITHer

UNDefined
Only return value

*RST: EITHer

Parameters for setting and query:
<SearchName>

Manual operation: See "Address OR setup: , OR x Address type, Address, R/W bit" on page 555

SEARch:TRIGger:I2C:DPOPerator <SearchName>,<DataPosOperator>
SEARch:TRIGger:I2C:DPOPerator? <SearchName>

Sets the operator for the data position. You can defined an exact position, or a position range.

Parameters:
<DataPosOperator> ANY | OFF | EQUal | GETHan | INRange | RANGe

ANY = OFF
The position of the required pattern is not relevant.

EQUal | GETHan
Equal, Greater or equal than. These conditions require one data position to be set with `SEARch:TRIGger:I2C:DPOSition`.

INRange = RANGe
In range: Set the minimum and maximum value of the range with `SEARch:TRIGger:I2C:DPOSition` and `SEARch:TRIGger:I2C:DPTO`.

*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "Data setup: Condition, Position, Index min, Index max, Value min, Value max" on page 555

SEARch:TRIGger:I2C:DPOSition <SearchName>,<DataPosition>
SEARch:TRIGger:I2C:DPOSition? <SearchName>

Defines the first byte of interest. All bytes before that byte are ignored.

Parameters:
<DataPosition> The index 0 is associated with the first data byte.

Range: 0 to 4095
Increment: 1
*RST: 0

Parameters for setting and query:
<SearchName>

Manual operation: See "Data setup: Condition, Position, Index min, Index max, Value min, Value max" on page 555

SEARch:TRIGger:I2C:DPTO <SearchName>,<DataPositionTo>
SEARch:TRIGger:I2C:DPTO? <SearchName>

Defines the last byte of interest, if `SEARch:TRIGger:I2C:DPOPerator` defines a range.

Parameters:
<DataPositionTo> Range: 0 to 4095
Increment: 1
*RST: 0

Parameters for setting and query:
<SearchName>

Manual operation: See "Data setup: Condition, Position, Index min, Index max, Value min, Value max" on page 555

SEARch:TRIGger:I2C:DCONdition <SearchName>,<DataOperator>
SEARch:TRIGger:I2C:DCONdition? <SearchName>

Sets the operator to set a specific data value or a data range.

Parameters:
<DataOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange
*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Data setup: Condition, Position, Index min, Index max, Value min, Value max" on page 555

SEARch:TRIGger:I2C:DMIN <SearchName>,<Data>
SEARch:TRIGger:I2C:DMIN? <SearchName>

Specifies the data bit pattern, or sets the the start value of a data pattern range.. Enter the bytes in msb first bit order. The maximum pattern length is 64 bit. Waveform data is compared with the pattern byte-by-byte.

Parameters:
<Data> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Parameters for setting and query:
<SearchName>

Usage: Asynchronous command

Manual operation: See "Data setup: Condition, Position, Index min, Index max, Value min, Value max" on page 555

SEARch:TRIGger:I2C:DMAX <SearchName>,<DataTo>
SEARch:TRIGger:I2C:DMAX? <SearchName>

Sets the the end value of an address range if `SEARch:TRIGger:I2C:DCONdition` is set to `INRange` or `OORange`.

Parameters:
<DataTo> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Parameters for setting and query:
<SearchName>

Usage: Asynchronous command

Manual operation: See "Data setup: Condition, Position, Index min, Index max, Value min, Value max" on page 555

SEARch:TRIGger:I2C:ADNack <SearchName>,<AddressNack>
SEARch:TRIGger:I2C:ADNack? <SearchName>

Parameters:
<AddressNack> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Usage: Asynchronous command

SEARch:TRIGger:I2C:DRNack <SearchName>,<DataReadNack>
SEARch:TRIGger:I2C:DRNack? <SearchName>

Searches for the end of the read process when the master reads data from the slave. This Nack is sent according to the protocol definition, it is not an error.

Parameters:
<DataReadNack> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Usage: Asynchronous command

Manual operation: See "No ACK setup: Addr/W/R NACK" on page 556

SEARch:TRIGger:I2C:DWNack <SearchName>,<DataWriteNack>
SEARch:TRIGger:I2C:DWNack? <SearchName>

Searches for missing data write acknowledge bits.

Parameters:
<DataWriteNack> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Usage: Asynchronous command

Manual operation: See "No ACK setup: Addr/W/R NACK" on page 556

27.18.3.5 I²C search results

The search on decoded CAN data returns the same results as the queries for decode results.

In search result commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name.

For a description of the returned values, see the corresponding commands in Section 27.18.3.3, "Decode results", on page 1930.

27.18.4 I3C (option R&S RTO6-K550)

- Configuration....1955
- Trigger....1957
- Decode results....1962
- I3C search settings....1970
- I3C search results....1974

27.18.4.1 Configuration

BUS<b>:I3C:SCL:SOURce....1955
BUS<b>:I3C:SCL:THReshold....1955
BUS<b>:I3C:SCL:HYSTeresis....1956
BUS<b>:I3C:SDA:SOURce....1956
BUS<b>:I3C:SDA:THReshold....1956
BUS<b>:I3C:SDA:HYSTeresis....1956
BUS<b>:I3C:MINGap:SELect....1957
BUS<b>:I3C:MINGap:WIDTh....1957

BUS<b>:I3C:SCL:SOURce <SCLSource>

Selects the waveform source of the clock line.

Suffix:
<b> 1..4

Parameters:
<SCLSource> C1 | C2 | C3 | C4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Usage: Asynchronous command

Manual operation: See "SDA, SCL" on page 559

BUS<b>:I3C:SCL:THReshold <SCLThreshold>

Sets a threshold value for the clock line.

Suffix:
<b> 1..4

Parameters:
<SCLThreshold> Range: -12 to 12
Increment: 0.01
*RST: 1.65
Default unit: V

Manual operation: See "SCL/SDA threshold / SCL/SDA hysteresis" on page 559

BUS<b>:I3C:SCL:HYSTeresis <SCLHysteresis>

Sets a hysteresis value for the clock line.

Suffix:
<b> 1..4

Parameters:
<SCLHysteresis> Range: -12 to 12
Increment: 0.01
*RST: 0.2
Default unit: V

Manual operation: See "SCL/SDA threshold / SCL/SDA hysteresis" on page 559

BUS<b>:I3C:SDA:SOURce <SDASource>

Selects the waveform source of the data line.

Suffix:
<b> 1..4

Parameters:
<SDASource> C1 | C2 | C3 | C4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Usage: Asynchronous command

Manual operation: See "SDA, SCL" on page 559

BUS<b>:I3C:SDA:THReshold <SDAThreshold>

Sets a threshold value for the data line.

Suffix:
<b> 1..4

Parameters:
<SDAThreshold> Range: -12 to 12
Increment: 0.01
*RST: 1.65
Default unit: V

Manual operation: See "SCL/SDA threshold / SCL/SDA hysteresis" on page 559

BUS<b>:I3C:SDA:HYSTeresis <SDAHysteresis>

Sets a hysteresis value for the data line.

Suffix:
<b> 1..4

Parameters:

<SDAHysteresis> Range: -12 to 12
Increment: 0.01
*RST: 0.2
Default unit: V

Manual operation: See "SCL/SDA threshold / SCL/SDA hysteresis" on page 559

BUS<b>:I3C:MINGap:SELect <MinGapSelect>

Specifies whether a minimum gap before the 1st decoded frame is required.

Suffix:

<b> 1..4

Parameters:

<MinGapSelect> OFF | ON
*RST: ON

Manual operation: See "Require min gap" on page 560

BUS<b>:I3C:MINGap:WIDTh <MinGapWidth>

Specifies the minimum duration of the gap.

Available, if `BUS<b>:I3C:MINGap:SELect` is set to `ON`.

Suffix:

<b> 1..4

Parameters:

<MinGapWidth> Range: 10E-12 to 1
Increment: 10E-12
*RST: 1E-6
Default unit: s

Manual operation: See "Min gap width" on page 560

27.18.4.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:I3C:ERRor<n>:ENABle ... 1961

TRIGger<t>:I3C:CHKall

Enables the software trigger for all available frames and error types.

Suffix:
<t> 1..3

Usage: Event
Asynchronous command

Manual operation: See "Select all, Unselect all" on page 563

TRIGger<t>:I3C:CLR

Disables the software trigger for all available frames and error types.

Suffix:
<t> 1..3

Usage: Event
Asynchronous command

Manual operation: See "Select all, Unselect all" on page 563

TRIGger<t>:I3C:FRENable <Frame>,<Enabler>
TRIGger<t>:I3C:FRAMe<fr>:ENABle <Enable>

Enables or disables the checking condition for the selected frame for the trigger.

Suffix:
<t> 1..3

<fr> *

Parameters:
<Enable> OFF | ON
*RST: OFF

Manual operation: See "Frame type" on page 563

TRIGger<t>:I3C:BIT <Frame>,<Field>,<Bit>
TRIGger<t>:I3C:FRAMe<fr>:FLD<fl>:BIT <BitState>

Sets the bit state of a field that only consists of one bit for the trigger.

Suffix:
<t> 1..3
<fr> *
<fl> *

Parameters:
<BitState> ONE | ZERO | DC
*RST: DC

Manual operation: See "Set details" on page 563

TRIGger<t>:I3C:DMAX <Frame>,<Field>,<Data>
TRIGger<t>:I3C:FRAMe<fr>:FLD<fl>:DMAX <Data_Max>

Sets the end value of a data pattern range for the trigger, if the operator is set to `INRange` or `OORANGe`.

You can set the operator with `TRIGger<t>:I3C:FRAMe<fr>:FLD<fl>:DOPerator`.

Suffix:
<t> 1..3
<fr> *
<fl> *

Parameters:
<Data_Max> List of comma-separated values.

Manual operation: See "Set details" on page 563

TRIGger<t>:I3C:DMIN <Frame>,<Field>,<Data>
TRIGger<t>:I3C:FRAMe<fr>:FLD<fl>:DMIN <Data_Min>

Specifies the data pattern, or sets the start value of a data pattern range for the trigger.

Suffix:
<t> 1..3
<fr> *
<fl> *

Parameters:
<Data_Min> List of comma-separated values.

Manual operation: See "Set details" on page 563

TRIGger<t>:I3C:DOPerator <Frame>,<Field>,<Operator>
TRIGger<t>:I3C:FRAMe<fr>:FLD<fl>:DOPerator <Data_Operator>

Sets the operator for the data pattern of the trigger in the selected field of the selected frame.

Suffix:
<t> 1..3

<fr> *

<fl> *

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

*RST: EQUal

Manual operation: See "Set details" on page 563

TRIGger<t>:I3C:FIENable <Frame>,<Field>,<Enabler>
TRIGger<t>:I3C:FRAMe<fr>:FLD<fl>:ENABle <CondEnabler>

Enables or disables the checking condition for the selected field of the selected frame of the trigger.

Suffix:
<t> 1..3

<fr> *

<fl> *

Parameters:
<CondEnabler> OFF | ON

*RST: OFF

Manual operation: See "Set details" on page 563

TRIGger<t>:I3C:IMAX <Frame>,<Field>,<Data>
TRIGger<t>:I3C:FRAMe<fr>:FLD<fl>:IMAX <Index_Max>

Sets the end value of an index range for the trigger if the operator is set to `INRange`.

You can set the operator with `TRIGger<t>:I3C:FRAMe<fr>:FLD<fl>:IOPerator`.

Suffix:
<t> 1..3

<fr> *

<fl> *

Parameters:

<Index_Max> Range: 1 to 65.534E+3
Increment: 1
*RST: 65.534E+3

Manual operation: See "Set details" on page 563

TRIGger<t>:I3C:IMIN <Frame>,<Field>,<Data>
TRIGger<t>:I3C:FRAMe<fr>:FLD<fl>:IMIN <Index_Min>

Specifies the index, or sets the start value of an index range for the trigger.

Suffix:

<t> 1..3

<fr> *

<fl> *

Parameters:

<Index_Min> Range: 1 to 65.534E+3
Increment: 1
*RST: 1

Manual operation: See "Set details" on page 563

TRIGger<t>:I3C:IOPerator <Frame>,<Field>,<Operator>
TRIGger<t>:I3C:FRAMe<fr>:FLD<fl>:IOPerator <Index_Operator>

Sets the operator for the index in the selected field of the selected frame for the trigger.

Suffix:

<t> 1..3

<fr> *

<fl> *

Parameters:

<Index_Operator> EQUal | INRange | RANGe
*RST: INRange

Manual operation: See "Set details" on page 563

TRIGger<t>:I3C:ERENable <ErrorName>,<Enabler>
TRIGger<t>:I3C:ERRor<n>:ENABle <Enable>

Enables triggering for selected protocol error types.

Suffix:

<t> 1..3

<n> *

Parameters:

<Enable> OFF | ON
*RST: ON

Manual operation: See "Error type" on page 565

27.18.4.3 Decode results

To load and acivate a label list, use:

- BUS<b>:NEWList on page 1915
- BUS<b>:SYMBols on page 1915

BUS<b>:I3C:FRAMe<fr>:RWBit? 1969
BUS<b>:I3C:FRAMe<fr>:TYPE? 1969

BUS<b>:I3C:FCOunt?

Returns the number of decoded frames.

Suffix:

<b> 1..4

Return values:

<Count> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:ADDRess?

Returns the device address value of the indicated frame. That is, the address value that is shown in the decoded cells and in the decode results table.

Suffix:
<b> 1..4

<fr> *

Return values:
<AddressValue> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:ASTart?

Returns the start time of the address for the indicated frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<AddressStart> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:FLDCount?

Returns the number of fields in the specified frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<Count> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:BITRate?

Returns the primary bit rate.

Suffix:
<b> 1..4

<fr> *

Return values:
<BitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:RWBStart?

Returns the start time of the R/W bit.

Suffix:
<b> 1..4

<fr> *

Return values:
<RWBitStart> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:STARt?

Returns the start time of the specified frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<FrameStart> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:STATus?

Returns the overall state of the frame.

Suffix:
<b> 1..4

<fr> *

Return values:

<FrameState> OK | ACK | PAR | CRC | LENGth | UNKNown | INComplete

OK
The frame is valid.

ACK
Wrong acknowledgment (ACK) delimiter occurred.

PAR
Wrong parity detected.

CRC
Cyclic redundancy check failed.

LENGth
Wrong length of frame.

UNKNown
Unknown frame type detected.

INComplete
The frame is not completely contained in the acquisition. The acquired part of the frame is usually valid, but cannot always be trusted.

*RST: OK

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:STOP?

Returns the end time of the specified frame.

Suffix:

<b> 1..4

<fr> *

Return values:

<FrameStop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:SYMBol?

Returns the symbolic label of the specified frame, if the label list is enabled.

Suffix:

<b> 1..4

<fr> *

Return values:
<Translation> String with the symbolic name of the frame.

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:ACK?

Returns the value of the acknowledge bit for the selected frame. Because this ACK bit is transmitted right after the address field, it acknowledges receiving the address.

Suffix:
<b> 1..4

<fr> *

Return values:
<AckBitValue> INComplete | ACK | NACK | EITHer
*RST: EITHer

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:ACKStart?

Returns the start time of the acknowledge bit for the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<AckBitStart> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:FLD<fl>:FVALue?

Returns the formatted value of the specified field for the selected frame.

Suffix:
<b> 1..4

<fr> *

<fl> *

Return values:
<FormattedValue>

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:FLD<fl>:LABel?

Returns the name (label) of the specified field in the selected frame.

Suffix:
<b> 1..4
<fr> *
<fl> *

Return values:
<Type>

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:FLD<fl>:STATe?

Returns the overall state of the specified field for the selected frame.

Suffix:
<b> 1..4
<fr> *
<fl> *

Return values:
<State> OK | ACK | PAR | CRC | LENGth | UNKNown | INComplete

OK
The field has no error, it is valid.

ACK
Wrong acknowledgment (ACK) delimiter occurred.

PAR
Wrong parity detected.

CRC
Cyclic redundancy check failed.

LENGth
Wrong length of the field.

UNKNown
Unknown field type detected.

INComplete
The field is not completely contained in the acquisition. The acquired part of the field is usually valid, but cannot always be trusted.

*RST: OK

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:FLD<fl>:VALue?

Returns the data value of the specified field.

Suffix:
<b> 1..4
<fr> *
<fl> *

Return values:
<Value> Increment: 1
*RST: 0

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:COMMand?

Returns the selected frame's command response, which is an integer.

Suffix:
<b> 1..4
<fr> *

Return values:
<Command> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:CRC?

Returns the cyclic redundancy check (CRC) checksum of the selected frame.

Suffix:
<b> 1..4
<fr> *

Return values:
<CRCValue> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:FADDress?

Returns the formatted address for the selected frame.

Suffix:
<b> 1..4
<fr> *

Return values:
<FormattedAddrVal>

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:FCOMmand?

Returns the formatted command from the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<FormattedCmd>

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:FCRC?

Returns the formatted CRC value for the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<FormattedCRCVal>

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:RWBit?

Returns the value of the R/W bit of the selected frame. The value "0" denotes "Write", the value "1" denotes "Read".

Suffix:
<b> 1..4

<fr> *

Return values:
<RWBitValue> READ | WRITe

Usage: Query only

BUS<b>:I3C:FRAMe<fr>:TYPE?

Returns the frame type of the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<FrameType> UNKNown | PROB | READ | WRIT | BRDC | DRCT | HDDR | HTSX
*RST: UNKNown

Usage: Query only

27.18.4.4 I3C search settings

In search setup commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name. The commands are similar to I3C trigger commands.

SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:ENABle....1974

SEARch:TRIGger:I3C:CHKall <SearchName>

Enables the filter for all available frames and error types.

Setting parameters:
<SearchName>

Usage: Event
Asynchronous command

Manual operation: See "Select all, Unselect all" on page 568

SEARch:TRIGger:I3C:CLR <SearchName>

Disables the filter for all available frames and error types.

Setting parameters:
<SearchName>

Usage: Event
Asynchronous command

Manual operation: See "Select all, Unselect all" on page 568

SEARch:TRIGger:I3C:FRENable <SearchName>,<Frame>,<Enabler>
SEARch:TRIGger:I3C:FRAMe<fr>:ENABle <SearchName>,<Enable>
SEARch:TRIGger:I3C:FRAMe<fr>:ENABle? <SearchName>

Enables or disables the specific frame to be filtered on.

Suffix:
<fr> *

Parameters:
<Enable> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame type" on page 568

SEARch:TRIGger:I3C:DMAX <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:DMAX <SearchName>,<Data_Max>
SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:DMAX? <SearchName>

Sets the end value of a data pattern range if the operator is set to `INRange` or `OORANGe`.

You can set the operator with `SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:DOPerator`.

Suffix:
<fr> *

<fl> *

Parameters:
<Data_Max> List of comma-separated values.

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 568

SEARch:TRIGger:I3C:DMIN <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:DMIN <SearchName>,<Data_Min>
SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:DMIN? <SearchName>

Specifies the data pattern, or sets the start value of a data pattern range.

Suffix:
<fr> *

<fl> *

Parameters:
<Data_Min> List of comma-separated values.

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 568

SEARch:TRIGger:I3C:DOPerator <SearchName>,<Frame>,<Field>,<Operator>
SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:DOPerator
<SearchName>,<Data_Operator>
SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:DOPerator? <SearchName>

Sets the operator for the data pattern in the selected field of the selected frame.

Suffix:
<fr> *

<fl> *

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 568

SEARch:TRIGger:I3C:ERENable <SearchName>,<ErrorName>,<Enabler>
SEARch:TRIGger:I3C:ERRor<m>:ENABle <SearchName>,<Enable>
SEARch:TRIGger:I3C:ERRor<m>:ENABle? <SearchName>

Defines the error type to be filtered on.

Suffix:
<m> *

Parameters:
<Enable> OFF | ON

*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error type" on page 570

SEARch:TRIGger:I3C:IMAX <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:IMAX <SearchName>,<Index_Max>
SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:IMAX? <SearchName>

Sets the end value of an index range if the operator is set to `INRange`.

You can set the operator with `SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:IOPerator`.

Suffix:
<fr> *

<fl> *

Parameters:
<Index_Max> Range: 1 to 65.534E+3
Increment: 1
*RST: 65.534E+3

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 568

SEARch:TRIGger:I3C:IMIN <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:IMIN <SearchName>,<Index_Min>
SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:IMIN? <SearchName>

Specifies the index, or sets the start value of an index range.

Suffix:
<fr> *

<fl> *

Parameters:
<Index_Min> Range: 1 to 65.534E+3
Increment: 1
*RST: 1

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 568

SEARch:TRIGger:I3C:IOPerator <SearchName>,<Frame>,<Field>,<Operator>
SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:IOPerator
<SearchName>,<Index_Operator>
SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:IOPerator? <SearchName>

Sets the operator for the index in the selected field of the selected frame.

Suffix:
<fr> *

<fl> *

Parameters:
<Index_Operator> EQUal | INRange | RANGe
*RST: INRange

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 568

SEARch:TRIGger:I3C:BIT <SearchName>,<Frame>,<Field>,<Bit>
SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:BIT <SearchName>,<BitState>
SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:BIT? <SearchName>

Sets the bit state of a field that only consists of one bit.

Suffix:
<fr> *

<fl> *

Parameters:
<BitState> ONE | ZERO | DC
*RST: DC

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 568

SEARch:TRIGger:I3C:FIENable <SearchName>,<Frame>,<Field>,<Enabler>
SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:ENABle <SearchName>,<CondEnabler>
SEARch:TRIGger:I3C:FRAMe<fr>:FLD<fl>:ENABle? <SearchName>

Enables or disables the checking condition for the selected field of the selected frame.

Suffix:
<fr> *

<fl> *

Parameters:
<CondEnabler> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 568

27.18.4.5 I3C search results

The search on decoded I3C data returns the same results as the queries for decode results.

In search result commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name.

For a description of the returned values, see the corresponding commands in Section 27.18.4.3, "Decode results", on page 1962.

SEARch:RESult:I3C:FRAMe<fr>:TYPE? 1983

SEARch:RESult:I3C:FCOunt? <SearchName>

Returns the number of decoded frames.

Query parameters:
<SearchName>

Return values:

<Count>	Range:	0 to 100E+3
	Increment:	1
	*RST:	0

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:ADDRess? <SearchName>

Returns the device address value of the indicated frame. That is, the address value that is shown in the decoded cells and in the decode results table.

Suffix:

<fr>	*

Query parameters:
<SearchName>

Return values:
<AddressValue> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:ASTart? <SearchName>

Returns the start time of the address for the indicated frame.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<AddressStart> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:FLDCount? <SearchName>

Returns the number of fields in the specified frame.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Count> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:BITRate? <SearchName>

Returns the primary bit rate.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:

<BitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:RWBStart? <SearchName>

Returns the start time of the R/W bit

Suffix:

<fr> *

Query parameters:

<SearchName>

Return values:

<RWBitStart> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:STARt? <SearchName>

Returns the start time of the specified frame.

Suffix:

<fr> *

Query parameters:

<SearchName>

Return values:

<FrameStart> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:STATus? <SearchName>

Returns the overall state of the frame.

Suffix:

<fr> *

Query parameters:
<SearchName>

Return values:
<FrameState> OK | ACK | PAR | CRC | LENGth | UNKNown | INComplete

OK
The frame is valid.

ACK
Wrong acknowledgment (ACK) delimiter occurred.

PAR
Wrong parity detected.

CRC
Cyclic redundancy check failed.

LENGth
Wrong length of frame.

UNKNown
Unknown frame type detected.

INComplete
The frame is not completely contained in the acquisition. The acquired part of the frame is usually valid, but cannot always be trusted.

*RST: OK

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:STOP? <SearchName>

Returns the end time of the specified frame.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameStop>
Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:SYMBol? <SearchName>

Returns the symbolic label of the specified frame, if the label list is enabled.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Translation> String with the symbolic name of the frame.

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:ACK? <SearchName>

Returns the value of the acknowledge bit for the selected frame. Because this ACK bit is transmitted right after the address field, it acknowledges receiving the address.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<AckBitValue> INComplete | ACK | NACK | EITHer
*RST: EITHer

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:ACKStart? <SearchName>

Returns the start time of the acknowledge bit for the selected frame.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<AckBitStart> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:FLD<fl>:FVALue? <SearchName>

Returns the formatted value of the specified field for the selected frame.

Suffix:
<fr> *

<fl> *

Query parameters:
<SearchName>

Return values:
<FormattedValue>

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:FLD<fl>:LABel? <SearchName>

Returns the name (label) of the specified field in the selected frame.

Suffix:
<fr> *

<fl> *

Query parameters:
<SearchName>

Return values:
<Type>

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:FLD<fl>:STATe? <SearchName>

Returns the overall state of the specified field for the selected frame.

Suffix:
<fr> *

<fl> *

Query parameters:
<SearchName>

Return values:
<State> OK | ACK | PAR | CRC | LENGth | UNKNown | INComplete

OK
The field has no error, it is valid.

ACK
Wrong acknowledgment (ACK) delimiter occurred.

PAR
Wrong parity detected.

CRC
Cyclic redundancy check failed.

LENGth
Wrong length of the field.

UNKNown
Unknown field type detected.

INComplete
The field is not completely contained in the acquisition. The acquired part of the field is usually valid, but cannot always be trusted.

*RST: OK

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:FLD<fl>:VALue? <SearchName>

Returns the data value of the specified field.

Suffix:
<fr> *

<fl> *

Query parameters:
<SearchName>

Return values:
<Value> Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:COMMand? <SearchName>

Returns the selected frame's command response, which is an integer.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Command> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:CRC? <SearchName>

Returns the cyclic redundancy check (CRC) checksum of the selected frame.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<CRCValue> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:FADDress? <SearchName>

Returns the formatted address for the selected frame.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FormattedAddrVal>

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:FCOMmand? <SearchName>

Returns the formatted command from the selected frame.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FormattedCmd>

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:FCRC? <SearchName>

Returns the formatted CRC value for the selected frame.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FormattedCRCVal>

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:RWBit? <SearchName>

Returns the value of the R/W bit of the selected frame. The value "0" denotes "Write", the value "1" denotes "Read".

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<RWBitValue> READ | WRITe

Usage: Query only

SEARch:RESult:I3C:FRAMe<fr>:TYPE? <SearchName>

Returns the frame type of the selected frame.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameType> UNKNown | PROB | READ | WRIT | BRDC | DRCT | HDDR | HTSX

*RST: UNKNown

Usage: Query only

27.18.5 SPI (option R&S RTO6-K510)

- SPI bus configuration....1983
- SPI trigger....1988
- SPI decode results....1992
- SPI search settings....1997
- SPI search results....2000

27.18.5.1 SPI bus configuration

BUS<b>:SPI:BORDer....1984
BUS<b>:SPI:WSIZe....1984
BUS<b>:SPI:SCLK:SOURce....1984
BUS<b>:SPI:SSELect:SOURce....1985
BUS<b>:SPI:SSELect:POLarity....1985
BUS<b>:SPI:MISO:SOURce....1985
BUS<b>:SPI:MISO:POLarity....1986
BUS<b>:SPI:MOSI:SOURce....1986
BUS<b>:SPI:MOSI:POLarity....1987
BUS<b>:SPI:SCLK:THReshold....1987
BUS<b>:SPI:MISO:THReshold....1987
BUS<b>:SPI:MOSI:THReshold....1987
BUS<b>:SPI:SSELect:THReshold....1987
BUS<b>:SPI:FRCondition....1987
BUS<b>:SPI:TIMeout....1988

BUS<b>:SPI:BORDer <BitOrder>

Defines if the data of the messages starts with msb (most significant bit) or lsb (least significant bit).

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<BitOrder> LSBF | MSBF
*RST: MSBF

Usage: Asynchronous command

Manual operation: See "Bit order" on page 574

BUS<b>:SPI:WSIZe <WordLength>

Sets the number of bits in a message.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<WordLength> Number of bits
Range: 4 to 64
Increment: 1
*RST: 8

Usage: Asynchronous command

Manual operation: See "Word length" on page 575

BUS<b>:SPI:SCLK:SOURce <SCLKSource>

Sets the input channel of the clock line.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<SCLKSource> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15
Digital and analog channels cannot be used at the same time for data, clock and slave select lines.
See Section 27.4.2, "Waveform parameter", on page 1451
*RST: C2W1

Usage: Asynchronous command

Manual operation: See "SCLK source" on page 573

BUS<b>:SPI:SSELect:SOURce <SlaveSelectSource>

Sets the input channel of the slave select line.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<SlaveSelectSource> NONE | C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

Digital and analog channels cannot be used at the same time for data, clock and slave select lines.
See Section 27.4.2, "Waveform parameter", on page 1451

*RST: None

Usage: Asynchronous command

Manual operation: See "Source" on page 573

BUS<b>:SPI:SSELect:POLarity <SSPolarity>

Selects whether transmitted slave select signal is high active (high = 1) or low active (low = 1).

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<SSPolarity> ACTLow | ACTHigh

*RST: ACTLow

Usage: Asynchronous command

Manual operation: See "Polarity" on page 573

BUS<b>:SPI:MISO:SOURce <MISOSource>

Sets the input channel of the MISO line.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:

<MISOSource> NONE | C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

Digital and analog channels cannot be used at the same time for data, clock and slave select lines.
See Section 27.4.2, "Waveform parameter", on page 1451

*RST: None

Usage: Asynchronous command

Manual operation: See "Source" on page 573

BUS<b>:SPI:MISO:POLarity <MISOPolarity>

Selects whether transmitted data is high active (high = 1) or low active (low = 1).

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<MISOPolarity> ACTLow | ACTHigh

*RST: ACTHigh

Usage: Asynchronous command

Manual operation: See "Polarity" on page 573

BUS<b>:SPI:MOSI:SOURce <MOSISource>

Sets the input channel of the MOSI line.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<MOSISource> NONE | C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

Digital and analog channels cannot be used at the same time for data, clock and slave select lines.
See Section 27.4.2, "Waveform parameter", on page 1451

*RST: C1W1

Usage: Asynchronous command

Manual operation: See "Source" on page 573

BUS<b>:SPI:MOSI:POLarity <MOSIPolarity>

Selects whether transmitted data is high active (high = 1) or low active (low = 1).

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<MOSIPolarity> ACTLow | ACTHigh
*RST: ACTHigh

Usage: Asynchronous command

Manual operation: See "Polarity" on page 573

BUS<b>:SPI:SCLK:THReshold <SCLKThreshold>
BUS<b>:SPI:MISO:THReshold <MISOThreshold>
BUS<b>:SPI:MOSI:THReshold <MOSIThreshold>
BUS<b>:SPI:SSELect:THReshold <SSThreshold>

Set user-defined threshold values for the clock, MISO, MOSI and slave select lines.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<SSThreshold> User-defined value
Range: -12 to 12
Increment: 0.1
*RST: 0
Default unit: V

Manual operation: See "Set Thresholds" on page 574

BUS<b>:SPI:FRCondition <FrameCondition>

Defines the start of a frame. A frame contains a number of successive words, at least one word.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<FrameCondition> SS | CLKTimeout

SS
Start and end of the frame is defined by the active state of the slave select signal, see `BUS<b>:SPI:SSELect:POLarity`.

CLKTimeout
Defines a timeout on the clock line SCLK as limiter between two frames. The timeout condition is used for SPI connections without an SS line.

*RST: SS

Manual operation: See "Frame condition" on page 575

BUS<b>:SPI:TIMeout <ClockTimeout>

Defines a timeout on the clock line SCLK as limiter between two frames. The timeout condition is used for SPI connections without an SS line.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<ClockTimeout> Range: 50E-9 to 10
Increment: 1E-6
*RST: 1E-3
Default unit: s

Manual operation: See "Timeout" on page 575

27.18.5.2 SPI trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:SPI:TYPE 1988
TRIGger<t>:SPI:PALignment 1989
TRIGger<t>:SPI:DPOPerator 1990
TRIGger<t>:SPI:DPOSition 1990
TRIGger<t>:SPI:DPTO 1990
TRIGger<t>:SPI:FCONdition 1991
TRIGger<t>:SPI:MISopattern 1991
TRIGger<t>:SPI:MOSipattern 1991

TRIGger<t>:SPI:TYPE <Type>

Selects the trigger type for SPI analysis.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<Type> SSACtive | TIMeout | MOSI | MISO | MOMI

SSACtive
Start of the message: slave select signal SS changes to the active state.

TIMeout
Triggers on the next message start after the "Timeout" time.

MOSI
Triggers on a specified data pattern in that is expected on the MOSI line. Define the pattern with `TRIGger<t>:SPI:MOSipattern`.

MISO
Triggers on a specified data pattern in that is expected on the MISO line. Define the pattern with `TRIGger<t>:SPI:MISopattern`

MOMI
Triggers on a specified data patterns on the MISO and MISO lines.

*RST: SSACtive

Usage: Asynchronous command

Manual operation: See "Trigger type" on page 577

TRIGger<t>:SPI:PALignment <DataAlignment>

Defines how the specified data pattern is searched.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataAlignment> WORD | BIT

WORD
The pattern is matched only at word boundaries.

BIT
Bit-by bit: the pattern can be at any position in the data word.

*RST: WORD

Usage: Asynchronous command

Manual operation: See "Search mode" on page 578

TRIGger<t>:SPI:DPOPerator <DataPosOperator>

Sets the operator for the data position. You can defined an exact position, or a position range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataPosOperator> ANY | OFF | EQUal | GETHan | INRange | RANGe

ANY = OFF
The position of the required pattern is not relevant.

EQUal | GETHan
Equal, Greater or equal than. These conditions require one data position to be set with `TRIGger<t>:SPI:DPOSition`.

INRange = RANGe
Set the minimum and maximum value of the range with `TRIGger<t>:SPI:DPOSition` and `TRIGger<t>:SPI:DPTO`.

*RST: ANY

Manual operation: See "Position" on page 578

TRIGger<t>:SPI:DPOSition <DataPosition>

Sets the number of bits or words to be ignored before the first bit or word od interest. The effect is defined by `TRIGger<t>:SPI:PALignment`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataPosition> The index 0 is associated with the first data byte.

Range: 0 to 4095 for triggering on one line (MISO or MOSI), 2047 for triggering on both lines.
Increment: 1
*RST: 0

Manual operation: See "Index min, Index max" on page 578

TRIGger<t>:SPI:DPTO <DataPositionTo>

Defines the last bit or word of interest, if `TRIGger<t>:SPI:DPOPerator` is set to `INRange`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<DataPositionTo> Range: 1 to 4095 for triggering on one line (MISO or MOSI), 2047 for triggering on both lines.
Increment: 1
*RST: 1

Manual operation: See "Index min, Index max" on page 578

TRIGger<t>:SPI:FCONdition <DataOperator>

Selects the operator for the MISO and MOSI pattern.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<DataOperator> EQUal | NEQual
*RST: EQUal

Manual operation: See "Condition" on page 578

TRIGger<t>:SPI:MISopattern <MISOPattern>

Specifies the pattern to be triggered on the MISO line.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<MISOPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Usage: Asynchronous command

Manual operation: See "MOSI pattern, MISO pattern" on page 578

TRIGger<t>:SPI:MOSipattern <MOSIPattern>

Specifies the pattern to be triggered on the MOSI line.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<MOSIPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Usage: Asynchronous command

Manual operation: See "MOSI pattern, MISO pattern" on page 578

27.18.5.3 SPI decode results

BUS<b>:SPI:FRAMe<fr>:DATA? 1992
BUS<b>:SPI:FCOunt? 1992
BUS<b>:SPI:FRAMe<fr>:COUNt? 1992
BUS<b>:SPI:FRAMe<fr>:BITRate? 1993
BUS<b>:SPI:FRAMe<fr>:STATus? 1993
BUS<b>:SPI:FRAMe<fr>:STARt? 1994
BUS<b>:SPI:FRAMe<fr>:STOP? 1994
BUS<b>:SPI:FRAMe<fr>:WCOunt? 1994
BUS<b>:SPI:FRAMe<fr>:WORD<w>:STARt? 1995
BUS<b>:SPI:FRAMe<fr>:WORD<w>:STOP? 1995
BUS<b>:SPI:FRAMe<fr>:WORD<w>:MISO? 1995
BUS<b>:SPI:FRAMe<fr>:WORD<w>:FMISo? 1996
BUS<b>:SPI:FRAMe<fr>:WORD<w>:MOSI? 1996
BUS<b>:SPI:FRAMe<fr>:WORD<w>:FMOSi? 1997

BUS<b>:SPI:FRAMe<fr>:DATA?

Returns the data words of the specified frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<FrameData> Comma-separated sequence of integer values (N, L1, R1,…, LN, RN). N is the number of word pairs in the frame, and {L1,R1}…{LN,RN} are the value pairs. The values Lx and Rx are associated with the MOSI and the MISO channel, respectively. If a channel is disabled, an empty value is returned.

Example:

```
BUS:SPI:FRAMe3:DATA?
<-- 2,10,108,35,70 (MOSI+MISO)
2,10,,35, (MOSI only)
2,,108,,70 (MISO only)
```

Usage: Query only

BUS<b>:SPI:FCOunt?
BUS<b>:SPI:FRAMe<fr>:COUNt?

Returns the number of decoded frames.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *

Return values:
<Count> Total number of decoded frames.

Usage: Query only

BUS<b>:SPI:FRAMe<fr>:BITRate?

Returns the primary bit rate.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<PrimaryBitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

BUS<b>:SPI:FRAMe<fr>:STATus?

Returns the overall state of the specified frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<FrameState> OK | VOID | INCFirst | INCLast | INSufficient
OK: the frame is valid.
VOID: the frame is empty.
INCFirst: INComplete First word. The first word does not have the expected word length.
INCLast: INComplete Last word. The last word does not have the expected word length.
INSufficient: The frame is not completely contained in the acquisition. The acquired part of the frame is valid.
*RST: OK

Usage: Query only

BUS<b>:SPI:FRAMe<fr>:STARt?

Returns the start time of the specified frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<FrameStart> Range: -100E+24 to 100E+24
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:SPI:FRAMe<fr>:STOP?

Returns the end time of the specified frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<FrameStop> Range: -100E+24 to 100E+24
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:SPI:FRAMe<fr>:WCOunt?

Returns the number of words in the specified frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<FrameWordCount> Range: 0 to 4096
*RST: 0

Usage: Query only

BUS<b>:SPI:FRAMe<fr>:WORD<w>:STARt?

Returns the start time of the specified data word.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<w> *
Selects the word number.

Return values:

<FrameWordStart> Range: -100E+24 to 100E+24
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:SPI:FRAMe<fr>:WORD<w>:STOP?

Returns the end time of the specified data word.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<w> *
Selects the word number.

Return values:

<FrameWordStop> Range: -100E+24 to 100E+24
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:SPI:FRAMe<fr>:WORD<w>:MISO?

Returns the data value of the specified word on the MISO line.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<w> *
Selects the word number.

Return values:

<MISOValue> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and reset – are decimal values.

Range: 0 to 4294967295
*RST: 0

Usage: Query only

BUS<b>:SPI:FRAMe<fr>:WORD<w>:FMISo?

Returns the formatted value of the specified word on the MISO line.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<w> *
Selects the word number.

Return values:

<FormattedMISOVal>

Usage: Query only

BUS<b>:SPI:FRAMe<fr>:WORD<w>:MOSI?

Returns the data value of the specified word on the MOSI line.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<w> *
Selects the word number.

Return values:

<MOSIValue> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and reset – are decimal values.

Range: 0 to 4294967295
*RST: 0

Usage: Query only

BUS<b>:SPI:FRAMe<fr>:WORD<w>:FMOSi?

Returns the formatted value of the specified word on the MOSI line.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<w> *
Selects the word number.

Return values:
<FormattedMOSIVal>

Usage: Query only

27.18.5.4 SPI search settings

In search setup commands, you must specify the <SearchName> parameter. It is a string parameter that contains the search definition name. All commands are similar to SPI trigger commands.

SEARch:TRIGger:SPI:TYPE 1997
SEARch:TRIGger:SPI:FCONdition 1998
SEARch:TRIGger:SPI:MISopattern 1998
SEARch:TRIGger:SPI:MOSipattern 1998
SEARch:TRIGger:SPI:DPOPerator 1999
SEARch:TRIGger:SPI:DPOSition 1999
SEARch:TRIGger:SPI:DPTO 1999
SEARch:TRIGger:SPI:PALignment 2000

SEARch:TRIGger:SPI:TYPE <SearchName>,<Type>
SEARch:TRIGger:SPI:TYPE? <SearchName>

Sets the event to be searched for.

Parameters:

<Type> SSACtive | TIMeout | MOSI | MISO | MOMI

SSACtive
Searches for the start of the frame when slave select signal SS changes to the active state. This type is available if the slave select line is configured in the bus setup, and `BUS<b>:SPI:FRCondition` is `SS`.

TIMeout
Searches for the start of the frame when the clock idle time exceeds the timeout. This type is available if the slave select line is configured in the bus setup, and `BUS<b>:SPI:FRCondition` is `CLKTimeout`.

MOSI | MISO
Searches for a specified data pattern expected on the MOSI line or on the MISO line, respectively.

MOMI
Searches in parallel for specified data patterns expected on the MOSI and MISO lines.

*RST: SSACtive

Parameters for setting and query:
<SearchName>

Usage: Asynchronous command

Manual operation: See "Type" on page 580

SEARch:TRIGger:SPI:FCONdition <SearchName>,<DataOperator>
SEARch:TRIGger:SPI:FCONdition? <SearchName>

Selects the operator for the data pattern: equal or not equal.

Parameters:
<DataOperator> EQUal | NEQual

*RST: EQUal

Parameters for setting and query:
<SearchName>

Firmware/software: FW 3.30

Manual operation: See "MOSI and MISO data search" on page 581

SEARch:TRIGger:SPI:MISopattern <SearchName>,<MISOPattern>
SEARch:TRIGger:SPI:MISopattern? <SearchName>
SEARch:TRIGger:SPI:MOSipattern <SearchName>,<MOSIPattern>
SEARch:TRIGger:SPI:MOSipattern? <SearchName>

Specifies a data pattern for the MISO or MOSI line, respectively.

Parameters:
<MOSIPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Parameters for setting and query:
<SearchName>

Usage: Asynchronous command

Firmware/software: FW 3.30

Manual operation: See "MOSI and MISO data search" on page 581

SEARch:TRIGger:SPI:DPOPerator <SearchName>,<DataPosOperator>
SEARch:TRIGger:SPI:DPOPerator? <SearchName>

Operator for the data position. You can define an exact position, a position range, or let the position undefined (ANY).

Parameters:
<DataPosOperator> ANY | OFF | EQUal | GETHan | INRange | RANGe
ANY = OFF, INRange = RANGe
*RST: ANY

Parameters for setting and query:
<SearchName>

Firmware/software: FW 3.30

Manual operation: See "MOSI and MISO data search" on page 581

SEARch:TRIGger:SPI:DPOSition <SearchName>,<DataPosition>
SEARch:TRIGger:SPI:DPOSition? <SearchName>

Sets the number of bits or words before the first word of interest, see also `SEARch:TRIGger:SPI:PALignment`. These offset bits/words are skipped. The index 0 is associated with the first data bit or word.

If the position operator defines a range, also define the last bit/word of interest using `SEARch:TRIGger:SPI:DPTO`

Parameters:
<DataPosition> Range: 0 to 32.767E+3
Increment: 1
*RST: 0

Parameters for setting and query:
<SearchName>

Firmware/software: FW 3.30

Manual operation: See "MOSI and MISO data search" on page 581

SEARch:TRIGger:SPI:DPTO <SearchName>,<DataPositionTo>
SEARch:TRIGger:SPI:DPTO? <SearchName>

Sets the the end value of a data postion range.

Parameters:
<DataPositionTo> Range: 1 to 32.767E+3
Increment: 1
*RST: 1

Parameters for setting and query:
<SearchName>

Firmware/software: FW 3.30

Manual operation: See "MOSI and MISO data search" on page 581

SEARch:TRIGger:SPI:PALignment <SearchName>,<DataAlignment>
SEARch:TRIGger:SPI:PALignment? <SearchName>

Defines how the specified data pattern is searched.

Parameters:
<DataAlignment> WORD | BIT

WORD
The pattern is matched only at word boundaries.

BIT
Bit-by-bit: the pattern can start at any position in the message.

*RST: WORD

Parameters for setting and query:
<SearchName>

Usage: Asynchronous command

Firmware/software: FW 3.30

Manual operation: See "MOSI and MISO data search" on page 581

27.18.5.5 SPI search results

The search on decoded SPI data returns the same results as the queries for decode results.

In search result commands, you must specify the <SearchName> parameter. It is a string parameter that contains the search definition name.

The suffix FRAMe<m> indicates the frame index. The suffix WORD<n> indicates the word index inside a frame-

For a description of the returned values, see the corresponding commands in Section 27.18.5.3, "SPI decode results", on page 1992.

SEARch:RESult:SPI:FRAMe<fr>:WORD<w>:STOP? 2003

SEARch:RESult:SPI:FCOunt? <SearchName>

Query parameters:
<SearchName>

Return values:
<Count> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:SPI:FRAMe<fr>:COUNt?

Returns the number of frames that have matched the search criteria. In the search result table on the display, the number of rows is the number of frames that match the search criteria.

Suffix:
<fr> *

Return values:
<Count>

Usage: Query only

SEARch:RESult:SPI:FRAMe<fr>:DATA? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameData>

Usage: Query only

SEARch:RESult:SPI:FRAMe<fr>:STARt? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameStart> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:SPI:FRAMe<fr>:STATus? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameState> OK | VOID | INCFirst | INCLast | INSufficient
*RST: OK

Usage: Query only

SEARch:RESult:SPI:FRAMe<fr>:STOP? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameStop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:SPI:FRAMe<fr>:WCOunt? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameWordCount> Range: 0 to 4096
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:SPI:FRAMe<fr>:WORD<w>:MISO? <SearchName>

Suffix:
<fr> *

<w> *

Query parameters:
<SearchName>

Return values:
<WordMISOValue> Range: 0 to 4294967295
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:SPI:FRAMe<fr>:WORD<w>:MOSI? <SearchName>

Suffix:
<fr> *

<w> *

Query parameters:
<SearchName>

Return values:
<WordMOSIValue> Range: 0 to 4294967295
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:SPI:FRAMe<fr>:WORD<w>:STARt? <SearchName>

Suffix:
<fr> *

<w> *

Query parameters:
<SearchName>

Return values:
<FrameWordStart> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:SPI:FRAMe<fr>:WORD<w>:STOP? <SearchName>

Suffix:
<fr> *

<w> *

Query parameters:
<SearchName>

Return values:

<FrameWordStop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

27.18.6 UART/RS-232/RS-422/RS-485 (option R&S RTO6-K510)

- Configuration....2004
- Trigger....2010
- Decode results....2012

27.18.6.1 Configuration

BUS<b>:UART:RX:SOURce....2004
BUS<b>:UART:TX:SOURce....2005
BUS<b>:UART:RX:THReshold....2005
BUS<b>:UART:TX:THReshold....2005
BUS<b>:UART:TECHnology....2006
BUS<b>:UART:BITRate....2006
BUS<b>:UART:BAUDrate....2006
BUS<b>:UART:PARity....2007
BUS<b>:UART:POLarity....2007
BUS<b>:UART:SBIT....2008
BUS<b>:UART:SSIZe....2008
BUS<b>:UART:PACKets....2008
BUS<b>:UART:TOUT....2009
BUS<b>:UART:EWORd....2009

BUS<b>:UART:RX:SOURce <RxSource>

Selects the input channel for the receiver signal.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<RxSource> NONE | C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

Digital and analog channels cannot be used at the same time for RX and TX lines.
See Section 27.4.2, "Waveform parameter", on page 1451

*RST: None

Usage: Asynchronous command

Manual operation: See "Source: Tx, Rx" on page 583

BUS<b>:UART:TX:SOURce <TxSource>

Selects the input channel for the transmitter signal.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<TxSource> NONE | C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

Digital and analog channels cannot be used at the same time for RX and TX lines.
See Section 27.4.2, "Waveform parameter", on page 1451

*RST: C1W1

Usage: Asynchronous command

Manual operation: See "Source: Tx, Rx" on page 583

BUS<b>:UART:RX:THReshold <RxThreshold>

Sets a user-defined threshold value for the Rx line.

Alternatively, you can set the threshold according to the signal technology with `BUS<b>:UART:TECHnology`.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<RxThreshold> User-defined clock threshold

Range: -15 to 15
Increment: 0.1
*RST: 0
Default unit: V

Manual operation: See "Threshold" on page 583

BUS<b>:UART:TX:THReshold <TxThreshold>

Sets a user-defined threshold value for the Tx line.

Alternatively, you can set the threshold according to the signal technology with `BUS<b>:UART:TECHnology`.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:

<TxThreshold> User-defined clock threshold

Range: -15 to 15
Increment: 0.1
*RST: 0
Default unit: V

Manual operation: See "Threshold" on page 583

BUS<b>:UART:TECHnology <Technology>

Sets the threshold voltage Tx and Rx lines as defined for various signal technologies.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<Technology> V15 | V25 | V165 | V125 | V09 | VM13 | V38 | V20 | V0 | MANual

V15 | V25 | V165 | V125 | V09 | V38 | V20 | V0
1.5 V, 2.5 V, 1.65 V ... respectively

VM13
-1.3 V (negative value)

MANual
Manual setting of user-defined values with `BUS<b>:UART:RX:THReshold` and `BUS<b>:UART:TX:THReshold`.

*RST: V165

Manual operation: See "Threshold" on page 583

BUS<b>:UART:BITRate <Bitrate>

Sets the number of transmitted bits per second.

Suffix:

<b> 1..4

Parameters:

<Bitrate> Range: 300 to 20E+6
Increment: 1
*RST: 9600
Default unit: bps

Usage: Asynchronous command

Manual operation: See "Bit rate" on page 584

BUS<b>:UART:BAUDrate <Bitrate>

Same as `BUS<b>:UART:BITRate`.

Suffix:
<b> 1..4

Parameters:
<Bitrate> Range: 300 to 20E+6
Increment: 1
*RST: 9600
Default unit: bps

Usage: Asynchronous command

Manual operation: See "Bit rate" on page 584

BUS<b>:UART:PARity <Parity>

Defines the optional parity bit that is used for error detection.

See also: "Parity" on page 584.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Parity> NONE | ODD | EVEN | MARK | SPC | DC

MARK
The parity bit is always a logic 1.

SPC
SPaCe: The parity bit is always a logic 0.

DC
Don't Care: the parity is ignored.

*RST: NONE

Usage: Asynchronous command

Manual operation: See "Parity" on page 584

BUS<b>:UART:POLarity <Polarity>

Defines the idle state of the bus. The idle state corresponds to a logic 1. The transmitted data on the bus is high (high = 1) or low (low = 1) active.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Polarity> IDLLow | IDLHigh

*RST: IDLHigh

Usage: Asynchronous command

Manual operation: See "Polarity" on page 584

BUS<b>:UART:SBIT <StopBits>

Sets the number of stop bits: 1; 1.5 or 2 stop bits are possible.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<StopBits> B1 | B15 | B2
*RST: B1

Usage: Asynchronous command

Manual operation: See "Stop bits" on page 584

BUS<b>:UART:SSIZe <DataBits>

Sets the number of data bits in a message.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<DataBits> Number of data bits. 9 data bits are only possible with parity = none.
Range: 5 to 9
Increment: 1
*RST: 8

Usage: Asynchronous command

Manual operation: See "Data bits" on page 584

BUS<b>:UART:PACKets <Packets>

Defines the method of packet separation. A packet is a number of subsequent words in a date stream.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Packets> NONE | EWORd | TOUT

NONE
Packets are not considered.

EWORd
End word, the end condition of a packet is a pattern. To define the end word, use `BUS<b>:UART:EWORd`

TOUT
Defines a timeout between the packets. To set the timeout, use
BUS<b>:UART:TOUT

*RST: NONE

Firmware/software: FW 2.25

Manual operation: See "Packets" on page 585

BUS<b>:UART:TOUT <InterframeTime>

Sets the timeout between packets in a UART data stream. A new packet starts with the first start bit after the timeout.

The command is relevant if BUS<b>:UART:PACKets is set to TOUT.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<InterframeTime> Range: 1E-6 to 1
Increment: 1
*RST: 1E-3
Default unit: s

Usage: Asynchronous command

Firmware/software: FW 2.25

Manual operation: See "Packets" on page 585

BUS<b>:UART:EWORd <EndFrame>

Sets the end pattern of the packets. A new packet starts with the first start bit after the defined end pattern.

The command is relevant if BUS<b>:UART:PACKets is set to EWORd.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<EndFrame> End word value in decimal format (range 0 to 255) or hexadecimal format (prefix #H). The query always returns hexadecimal values.

Example:
```
:BUS:UART:PACK EWOR
:BUS:UART:EWOR 10 // Decimal value
:BUS:UART:EWOR?
#H0A // Query returns hex
```

Example:
```
:BUS:UART:PACK EWOR
:BUS:UART:EWOR #Hff // Hexadecimal, prefix #H
:BUS:UART:EWOR?
#HFF
```

Usage: Asynchronous command

Firmware/software: FW 2.25

Manual operation: See "Packets" on page 585

27.18.6.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:UART:TYPE 2010
TRIGger<t>:UART:SOURce 2011
TRIGger<t>:UART:DPOPerator 2011
TRIGger<t>:UART:DPOSition 2011
TRIGger<t>:UART:DPTO 2012
TRIGger<t>:UART:FCONdition 2012
TRIGger<t>:UART:DATA 2012

TRIGger<t>:UART:TYPE <Type>

Selects the trigger type for UART analysis.

See also: "Type" on page 587

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<Type> STBT | PCKS | DATA | PRER | BRKC | STPerror

STBT: Start bit
PCKS: Packet start
DATA: Serial pattern
PRER: Parity error
BRKC: Break condition
STPerror: Stop error

*RST: STBT

Usage: Asynchronous command

Manual operation: See "Type" on page 587

TRIGger<t>:UART:SOURce <Source>

Selects the transmitter or receiver line as trigger source.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<Source> TX | RX
*RST: TX

Usage: Asynchronous command

Manual operation: See "Trigger source" on page 588

TRIGger<t>:UART:DPOPerator <DataPosOperator>

Sets the operator for the data position. You can defined an exact position, or a position range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataPosOperator> EQUal | GETHan | INRange | RANGe
INRange = RANGe
*RST: GETHan

Usage: Asynchronous command

Manual operation: See "Position" on page 589

TRIGger<t>:UART:DPOSition <DataPosition>

Sets the number of words before the first word of interest. These offset words are ignored.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataPosition> Number of words
Range: 0 to 32.767E+3
Increment: 1
*RST: 0

Usage: Asynchronous command

Manual operation: See "Index min, Index max" on page 589

TRIGger<t>:UART:DPTO <DataPositionTo>

Defines the last word of interest, if `TRIGger<t>:UART:DPOPerator` defines a position range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataPositionTo> Range: 0 to 32.767E+3
Increment: 1
*RST: 0

Usage: Asynchronous command

Manual operation: See "Index min, Index max" on page 589

TRIGger<t>:UART:FCONdition <DataOperator>

Selects the operator for the data pattern (`TRIGger<t>:UART:DATA`).

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataOperator> EQUal | NEQual
*RST: EQUal

Manual operation: See "Condition" on page 588

TRIGger<t>:UART:DATA <Data>

Specifies the data pattern to be found on the specified trigger source, in binary or hex format. Enter the words in msb first bit order.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<Data> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Usage: Asynchronous command

Manual operation: See "Pattern" on page 589

27.18.6.3 Decode results

BUS<b>:UART:WORD<w>:RXValue? 2013
BUS<b>:UART:WORD<w>:TXValue? 2013

BUS<b>:UART:WORD<w>:BITRate?....2013
BUS<b>:UART:WORD<w>:COUNt?....2013
BUS<b>:UART:WORD<w>:SOURce?....2014
BUS<b>:UART:WORD<w>:STARt?....2014
BUS<b>:UART:WORD<w>:STATe?....2014

BUS<b>:UART:WORD<w>:RXValue?
BUS<b>:UART:WORD<w>:TXValue?

Returns the value of the specified word on the Rx line or Tx line, respectively.

Suffix:

<b> 1..4
Selects the serial bus.

<w> *
Selects the word.

Return values:

<TxValue> To set the value format, use `FORMat:BPATtern`.
The stated values for range, increment and reset are decimal values.

Range: 0 to 511
*RST: 0

Usage: Query only

BUS<b>:UART:WORD<w>:BITRate?

Returns the primary bit rate.

Suffix:

<b> 1..4
Selects the serial bus.

<w> *
The suffix is irrelevant.

Return values:

<PrimaryBitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

BUS<b>:UART:WORD<w>:COUNt?

Returns the number of words in the acquisition.

Suffix:

<b> 1..4
Selects the serial bus.

<w> *
The suffix is irrelevant.

Return values:
<Count> Number of words

Usage: Query only

BUS<b>:UART:WORD<w>:SOURce?

Returns the line on which the specified word was transferred.

Suffix:
<b> 1..4
Selects the serial bus.

<w> *
Selects the word.

Return values:
<WordSource> TX | RX
*RST: TX

Usage: Query only

BUS<b>:UART:WORD<w>:STARt?

Returns the start time of the specified word.

Suffix:
<b> 1..4
Selects the serial bus.

<w> *
Selects the word.

Return values:
<WordStart> Range: -100E+24 to 100E+24
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:UART:WORD<w>:STATe?

Returns the status of the specified word.

Suffix:
<b> 1..4
Selects the serial bus.

<w> *
Selects the word.

Return values:
<WordState> OK | FRSTart | FRENd | FRME | BREak | STERror | SPERror | PRERror | INSufficient
OK: the frame is valid.
BREak:stop bit error with 0x00 word
STERror: StarT ERror, incorrect start bit
SPERror: StoP ERror, incorrect stop bit
PRERror:PaRity ERror, incorrect parity bit.
INSufficient: The frame is not completely contained in the acquisition. The acquired part of the frame is valid.
*RST: OK

Usage: Query only

BUS<b>:I2S:FOFFset....2021
BUS<b>:I2S:CHANnel:LENGth....2021

BUS<b>:I2S:AVARiant <AudioVariant>

Selects the audio signal type.

For details, see Section 14.6.2.1, "Audio signal configuration", on page 593.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<AudioVariant> I2S | LJ | RJ | TDM
I2S: Inter-IC Sound standard audio format.
LJ: left-justified data format
RJ: right-justified data format
TDM: Time Division Multiplexed audio format
*RST: I2S

Manual operation: See "Audio Variant" on page 594

BUS<b>:I2S:CLOCk:SOURce <ClockSource>

Selects the source of the clock line.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<ClockSource> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15
Digital channels require installation of R&S RTO6-B1. Digital and analog channels cannot be used at the same time. For triggering on a serial bus, analog or digital input channels are required.
*RST: C1W1

Manual operation: See "SCLK" on page 595

BUS<b>:I2S:CLOCk:POLarity <BitClockEdge>

Sets the polarity of the clock signal, that is the edge at which the instrument samples the data on the data line.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<BitClockEdge> FALLing | RISing
*RST: RISing

Manual operation: See "SCLK Polarity" on page 595

BUS<b>:I2S:WSELect:SOURce <WSsource>

Selects the source of the word select line for I²S standard, left- und right-justified data formats, or the source of the frame synchronization pulse for TDM audio signals.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<WSsource> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

Digital channels require installation of R&S RTO6-B1. Digital and analog channels cannot be used at the same time. For triggering on a serial bus, analog or digital input channels are required.

*RST: C2W1

Manual operation: See "WS / FSYNC" on page 595

BUS<b>:I2S:WSELect:POLarity <WSPolarity>

For a word select line, the polarity defines the signal values assigned to the left and right channels.

For an FSYNC line (TDM), the polarity defines the edge of the FSYNC pulse that identifies the beginning of a frame.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<WSPolarity> NORMal | INVert

NORMal: 0 = left, 1 = right channel; or rising edge for TDM
INVert: 1= left, 0 = right channel; or falling edge for TDM

*RST: NORMal

Manual operation: See "WS / FSYNC Polarity" on page 595

BUS<b>:I2S:DATA:SOURce <DataSource>

Selects the source of the audio data line.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:

<DataSource> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

Digital channels require installation of R&S RTO6-B1.Digital and analog channels cannot be used at the same time. For triggering on a serial bus, analog or digital input channels are required.

*RST: C3W1

Manual operation: See "SDATA" on page 595

BUS<b>:I2S:DATA:POLarity <SDataPolarity>

Defines the interpretation of high and low signal states on the data line.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<SDataPolarity> ACTLow | ACTHigh

ACTHigh: HIGH = 1 and LOW = 0
ACTLow: HIGH = 0 and LOW = 1

*RST: ACTHigh

Manual operation: See "SDATA Polarity" on page 596

BUS<b>:I2S:TCOupling <Coupling>

Sets all thresholds to the value of the clock threshold `BUS<b>:I2S:CLOCk:THReshold`.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<Coupling> OFF | ON

*RST: ON

Manual operation: See "Threshold setup" on page 596

BUS<b>:I2S:CLOCk:THReshold <SCLKThreshold>

Sets the threshold value for the clock line SCLK.

If `BUS<b>:I2S:TCOupling` is `ON`, the command sets the threshold for all lines.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<SCLKThreshold> Range: -10 to 10
Increment: 1E-3
*RST: 1.6
Default unit: V

Manual operation: See "Threshold setup" on page 596

BUS<b>:I2S:WSELect:THReshold <WSThreshold>

Sets the threshold value for the word select and FSYNC lines.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<WSThreshold> Range: -10 to 10
Increment: 1E-3
*RST: 1.6
Default unit: V

Manual operation: See "Threshold setup" on page 596

BUS<b>:I2S:DATA:THReshold <SDATAThreshold>

Sets the threshold value for the data line.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<SDATAThreshold> Range: -10 to 10
Increment: 1E-3
*RST: 1.6
Default unit: V

Manual operation: See "Threshold setup" on page 596

BUS<b>:I2S:CHANnel:ORDer <ChannelOrder>

Defines if the left or the right channel is the first channel in the frame.

The setting is not available for TDM audio signals.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<ChannelOrder> LFIRst | RFIRst
Left channel first or right first
*RST: LFIRst

Manual operation: See "Channel order" on page 598

BUS<b>:I2S:WLENgth <WordLength>

Defines the number of bits in an audio data word.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<WordLength> Range: 4 to 32
Increment: 4
*RST: 8
Default unit: bit

Manual operation: See "Word length" on page 597

BUS<b>:I2S:BORDer <BitOrder>

Sets the bit order of the audio data words.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<BitOrder> LSBF | MSBF
LSB first or MSB first
*RST: MSBF

Manual operation: See "Bit order" on page 597

BUS<b>:I2S:CHANnel:OFFSet <ChannelOffset>

Sets the number of bits between the channel start and the start of the audio word.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<ChannelOffset> Range: 0 to 32 (left-justified). TDM: maximum delay is Channel length - Word length
Increment: 1
*RST: 0
Default unit: bit

Manual operation: See "Channel offset" on page 598

BUS<b>:I2S:CHANnel:TDMCount <ChannelsTDM>

Sets the number of channels transmitted on the TDM audio line.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<ChannelsTDM> Range: 1 to 8
Increment: 1
*RST: 1

Manual operation: See "Number of channels" on page 598

BUS<b>:I2S:FOFFset <FrameOffsetTDM>

Sets the number of bits between the frame start and the start of the first channel of a TDM audio line. Each FSYNC edge restarts the offset count.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<FrameOffsetTDM> Range: 0 to 256
Increment: 1
*RST: 0
Default unit: bit

Manual operation: See "Frame offset" on page 598

BUS<b>:I2S:CHANnel:LENGth <ChlgthTDM>

Sets the number of bits in a TDM channel block.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<ChlgthTDM> Range: 4 to 32
Increment: 4
*RST: 8
Default unit: bit

Manual operation: See "Channel length" on page 598

27.18.7.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:I2S:TYPE....2022
TRIGger<t>:I2S:TCONdition<n>:CHANnel....2023
TRIGger<t>:I2S:TCONdition<n>:CONDtion....2024
TRIGger<t>:I2S:TCONdition<n>:DMIN....2024
TRIGger<t>:I2S:TCONdition<n>:DMAX....2025
TRIGger<t>:I2S:SOWords....2025
TRIGger<t>:I2S:WSSLope....2026

TRIGger<t>:I2S:TYPE <Type>

Selects the trigger type for audio signal analysis.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<Type> DATA | WINDow | CONDition | WSELect | ECONdition

DATA
Triggers on a data word or data range on a specified channel or on any channel.
To set the channel, use `TRIGger<t>:I2S:TCONdition<n>:CHANnel`.
To set the data condition, use: `TRIGger<t>:I2S:TCONdition<n>:CONDtion`, `TRIGger<t>:I2S:TCONdition<n>:DMIN` and `TRIGger<t>:I2S:TCONdition<n>:DMAX`.

WINDow
Triggers if the decoded data values stay inside a "window" that is formed by a data range and a time specified by a number of subsequent words. It considers a selected channel or all channels.
To set up a window trigger, you define the channel and data condition in the same way as for DATA trigger type. Additionally, you set the time limit with `TRIGger<t>:I2S:SOWords`.

CONDition
The frame condition trigger sets the trigger on an AND combination of data conditions on different channels. The instrument triggers if all conditions are met inside one frame.
To set up a CONDition trigger, you define up to four channel and data conditions in the same way as for DATA trigger type.

WSELect
WordSELect: Triggers on the selected edge of the WS line (I²S standard, left- and right-justified). For TDM signals, it triggers on the selected edge of the FSYNC line. Set the edge with `TRIGger<t>:I2S:WSSLope`.

ECONdition
ErrorCONdition: Triggers on irregularities between the WS or FSYNC edges.

*RST: DATA

Usage: Asynchronous command

Manual operation: See "Type" on page 600

TRIGger<t>:I2S:TCONdition<n>:CHANnel <Channel>

Selects the audio channel on which the instrument looks for the specified data condition.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

<n> 1..4
1 if trigger type is DATA or WINDow
Specifies the condition number if trigger type is CONDition:
– 1 | 2 for I²S standard, left- und right-justified data formats
– 1 | 2 | 3 | 4 for TDM signals

Parameters:
<Channel> ANY | TDMC1 | TDMCh1 | TDMC2 | TDMCh2 | TDMC3 | TDMCh3 | TDMC4 | TDMCh4 | TDMC5 | TDMCh5 | TDMC6 | TDMCh6 | TDMC7 | TDMCh7 | TDMC8 | TDMCh8 | LEFT | RIGHT | RIGHt

ANY
The instrument triggers on any channel on which the specified data is found.

LEFT | RIGHT = RIGHt
Available for I²S Standard, left- und right-justified data formats.

TDMCh1 | TDMCh2 | TDMCh3 | TDMCh4 | TDMCh5 | TDMCh6 | TDMCh7 | TDMCh8
Available for TDM audio signals
TDMC1 = TDMCh1, TDMC2 = TDMCh2, TDMC3 = TDMCh3, TDMC4 = TDMCh4, TDMC5 = TDMCh5, TDMC6 = TDMCh6, TDMC7 = TDMCh7, TDMC8 = TDMCh8. Query returns short form.
Note: Available audio channels depend on the configuration of the audio bus. The command `BUS<b>:I2S:CHANnel:TDMCount` specifies the number of channels in a TDM frame.

*RST: ANY

Manual operation: See "Channel" on page 601

TRIGger<t>:I2S:TCONdition<n>:CONDtion <DataCondition>

Sets the operator to set a specific data pattern or a data pattern range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

<n> 1..4
1 if trigger type is DATA or WINDow
Specifies the condition number if trigger type is CONDition:
– 1 | 2 for I²S standard, left- und right-justified data formats
– 1 | 2 | 3 | 4 for TDM signals

Parameters:
<DataCondition> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

OFF = ANY
No range is defined.

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with `TRIGger<t>:I2S:TCONdition<n>:DMIN`.

INRange | OORange
In range, Out of range: Set the minimum and maximum value of the range with `TRIGger<t>:I2S:TCONdition<n>:DMIN` and `TRIGger<t>:I2S:TCONdition<n>:DMAX`.

*RST: OFF

Manual operation: See "Data condition" on page 601

TRIGger<t>:I2S:TCONdition<n>:DMIN <DataMinPattern>

Specifies a data pattern, or sets the the start value of a data pattern range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

<n> 1..4
1 if trigger type is DATA or WINDow
Specifies the condition number if trigger type is CONDition:
– 1 | 2 for I²S standard, left- und right-justified data formats
– 1 | 2 | 3 | 4 for TDM signals

Parameters:
<DataMinPattern> Numeric pattern in 2's complement format. See also: Section 27.4.6, "Bit pattern parameter", on page 1453
X bits are not allowed. If the bit string is shorter than the word length, the rightmost bit of the input bit string is aligned to the rightmost (LSB) bit of the word.

Manual operation: See "Data condition" on page 601

TRIGger<t>:I2S:TCONdition<n>:DMAX <DataMaxPattern>

Sets the the end value of an data range if the operator `TRIGger<t>:I2S:TCONdition<n>:CONDtion` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

<n> 1..4
1 if trigger type is DATA or WINDow
Specifies the condition number if trigger type is CONDition:
– 1 | 2 for I²S standard, left- und right-justified data formats
– 1 | 2 | 3 | 4 for TDM signals

Parameters:
<DataMaxPattern> Numeric pattern in 2's complement format. See also: Section 27.4.6, "Bit pattern parameter", on page 1453
DMAX must be greater or equal than DMIN.
X bits are not allowed. If the bit string is shorter than the word length, the rightmost bit of the input bit string is aligned to the rightmost (LSB) bit of the word.

Manual operation: See "Data condition" on page 601

TRIGger<t>:I2S:SOWords <SequenceWords>

Sets the number of words that is used as time limit for the "Window" trigger type. The instrument triggers if the data condition is fulfilled on the same channel for the given number of subsequent frames.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<SequenceWords> Range: 1 to 1E+6
Increment: 1
*RST: 1
Default unit: word

Usage: Asynchronous command

Manual operation: See " Window length" on page 602

TRIGger<t>:I2S:WSSLope <WSSlope>

Sets the edge of the WS or FSYNC signal as trigger condition. The instrument triggers on the first clock edge after the specified edge.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<WSSlope> POSitive | NEGative
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Word select: Slope" on page 602

27.18.7.3 Decode results

BUS<b>:I2S:FCOunt? 2026
BUS<b>:I2S:FRAMe<fr>:STATe? 2027
BUS<b>:I2S:FRAMe<fr>:STARt? 2027
BUS<b>:I2S:FRAMe<fr>:STOP? 2027
BUS<b>:I2S:FRAMe<fr>:LEFT:VALue? 2027
BUS<b>:I2S:FRAMe<fr>:RIGHt:VALue? 2027
BUS<b>:I2S:FRAMe<fr>:LEFT:STATe? 2028
BUS<b>:I2S:FRAMe<fr>:RIGHt:STATe? 2028
BUS<b>:I2S:FRAMe<fr>:TDM<o>:STATe? 2028
BUS<b>:I2S:FRAMe<fr>:TDM<o>:VALue? 2029

BUS<b>:I2S:FCOunt?

Returns the number of decoded frames.

Suffix:

<b> 1..4
Selects the serial bus.

Return values:

<Count> Number of decoded audio frames

Usage: Query only

BUS<b>:I2S:FRAMe<fr>:STATe?

Returns the overall state of the selected frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<FrameState> ERRor | OK | INSufficient
OK: the frame is valid.
ERRor: an error occured in the frame.
INSufficient: The frame is not completely contained in the acquisition. The acquired part of the frame is valid.

Usage: Query only

BUS<b>:I2S:FRAMe<fr>:STARt?
BUS<b>:I2S:FRAMe<fr>:STOP?

Return the start time and stop time of the selected frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<Start>, <Stop> Range: -100E+24 to 100E+24
*RST: 0

Usage: Query only

BUS<b>:I2S:FRAMe<fr>:LEFT:VALue?
BUS<b>:I2S:FRAMe<fr>:RIGHt:VALue?

Return the data values of the left and right channel, respectively.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<Value> Comma-separated list of values. To set the value format, use FORMat:BPATtern.

Range: -2.14748E+9 to 4294967295
*RST: 0

Usage: Query only

BUS<b>:I2S:FRAMe<fr>:LEFT:STATe?
BUS<b>:I2S:FRAMe<fr>:RIGHt:STATe?

Return the status of the left and right channel of the selected frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<WordState> ERRor | OK | INSufficient

OK: the channel data is valid.
ERRor: an error occured in the channel.
INSufficient: the channel is not completely contained in the acquisition.

Usage: Query only

BUS<b>:I2S:FRAMe<fr>:TDM<o>:STATe?

Returns the state of the indicated channel of the selected frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<o> 1..8
Selects the TDM channel.

Return values:

<State> ERRor | OK | INSufficient

OK: the channel data is valid.
ERRor: an error occured in the channel.
INSufficient: the channel is not completely contained in the acquisition.

*RST: UNDefined

Usage: Query only

BUS<b>:I2S:FRAMe<fr>:TDM<o>:VALue?

Returns the data value of the indicated TDM channel.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<o> 1..8
Selects the TDM channel.

Return values:

<Value> To set the value format, use `FORMat:BPATtern` on page 1461.
The stated values for range, increment and reset are decimal values.

Range: -2.14748E+9 to 4294967295
Increment: 1
*RST: 0

Usage: Query only

27.18.7.4 Track and trend

BUS<b>:I2S:TRACk:LEFT 2029
BUS<b>:I2S:TRACk:RIGHt 2029
BUS<b>:I2S:TRACk:TD1Ch 2030
BUS<b>:I2S:TRACk:TD2Ch 2030
BUS<b>:I2S:TRACk:TD3Ch 2030
BUS<b>:I2S:TRACk:TD4Ch 2030
BUS<b>:I2S:TRACk:TD5Ch 2030
BUS<b>:I2S:TRACk:TD6Ch 2030
BUS<b>:I2S:TRACk:TD7Ch 2030
BUS<b>:I2S:TRACk:TD8Ch 2030
MEASurement<mg>:TRACk[:STATe] 2030
MEASurement<mg>:TRACk:DATA:HEADer? 2030
MEASurement<mg>:TRACk:DATA:STYPe? 2031
MEASurement<mg>:TRACk:DATA[:VALues]? 2031

BUS<b>:I2S:TRACk:LEFT <Left>
BUS<b>:I2S:TRACk:RIGHt <Right>

Enables or disables the track of the indicated channel. The commands are relevant for I²S standard, left-justified and right-justified audio data formats.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "Show Track Waveform(s)" on page 606

BUS<b>:I2S:TRACk:TD1Ch <TDMChX>
BUS<b>:I2S:TRACk:TD2Ch <TDMChX>
BUS<b>:I2S:TRACk:TD3Ch <TDMChX>
BUS<b>:I2S:TRACk:TD4Ch <TDMChX>
BUS<b>:I2S:TRACk:TD5Ch <TDMChX>
BUS<b>:I2S:TRACk:TD6Ch <TDMChX>
BUS<b>:I2S:TRACk:TD7Ch <TDMChX>
BUS<b>:I2S:TRACk:TD8Ch <TDMChX>

Enables or disables the track of the indicated channel. The commands are relevant for TDM audio data.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<TDMChX> OFF | ON
*RST: OFF

Manual operation: See "Show Track Waveform(s)" on page 606

MEASurement<mg>:TRACk[:STATe] <State>

Enables the track functionality and displays the track.

The track functionality requires at least one option, see "Enable (Track)" on page 382.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable (Track)" on page 382

MEASurement<mg>:TRACk:DATA:HEADer?

Returns the header of the track.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Return values:
<Start> 1. header value: time of the first sample in s

<Stop> 2. header value: time of the last sample in s

<RecordLength> 3. header value: record length of the waveform in samples

<ValuesPerSample> 4. header value: number of values per sample.

Usage: Query only

MEASurement<mg>:TRACk:DATA:STYPe?

Returns the data type.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Return values:
<SignalType> String: "TRK" (track)

Usage: Query only

MEASurement<mg>:TRACk:DATA[:VALues]?

Returns the data of track points for transmission from the instrument to the controlling computer. The data can be used in MATLAB, for example.

To set the export format, use `FORMat[:DATA]`. Supported formats are: ASCii | REAL,64 | INT,8 | INT,16.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Return values:
<Data> Comma-separated list of data.

Usage: Query only

27.18.8 Custom: manchester / NRZ (option R&S RTO6-K510)

BUS<b>:CMSB:CODing <CodingStandard>

Selects the custom serial bus coding standard.

Suffix:
<b> 1..4

Parameters:
<CodingStandard> MANC | MANT | NRZ | NRZU

MANC
Manchester (normal polarity)

MANT
Manchester II (inverted polarity).
Note that some additional subtle differences between MANC and MANT require separate protocols.

NRZ
NRZ (non-return-to-zero), clocked

NRZU
NRZ (non-return-to-zero), unclocked

*RST: MANC

Manual operation: See "Coding Standard" on page 611

BUS<b>:CMSB:MANChester:DATA <SourceMANData>

Selects the source channel for the data signal. For triggering on a serial bus, analog channels "C1"–"C4" are required. Otherwise, if no serial bus trigger has been selected, permitted source selections include the mathematical channels and the reference channels .

Suffix:
<b> 1..4

Parameters:
<SourceMANData> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

*RST: C1W1

Manual operation: See "Data Source" on page 612

BUS<b>:CMSB:MANChester:POLarity <MAN_PolaDat>

Selects the polarity of the custom serial bus data signal in Manchester coding standards.

Suffix:
<b> 1..4

Parameters:
<MAN_PolaDat> NORMal | INVert

NORMal
Manchester or Manchester II polarity remains unchanged

INVert
Manchester polarity is inverted and becomes Manchester II polarity, Manchester II polarity is inverted and becomes Manchester polarity

*RST: NORMal

Manual operation: See "Data Polarity (Manchester)" on page 613

BUS<b>:CMSB:MANChester:THReshold:HIGH <MAN_ThresUpp>

Sets the upper threshold for data signal digitization in Manchester coding standards.

Suffix:
<b> 1..4

Parameters:
<MAN_ThresUpp> Range: -25 to 25
Increment: 0.1
*RST: 5
Default unit: V

Manual operation: See "Set Thresholds" on page 615

BUS<b>:CMSB:MANChester:THReshold:LOW <MAN_ThresLow>

Sets the lower threshold for data signal digitization in Manchester coding standards.

Suffix:
<b> 1..4

Parameters:
<MAN_ThresLow> Range: -25 to 25
Increment: 0.1
*RST: -5
Default unit: V

Manual operation: See "Set Thresholds" on page 615

BUS<b>:CMSB:MANChester:THReshold:PRESet <PresetValue>

Sets the Manchester thresholds to predefined or individually definable voltage levels.

Suffix:
<b> 1..4

Parameters:
<PresetValue> V05 | V2 | V5 | V7 | MANual

V05
Sets the upper threshold to +0.5 V and the lower threshold to -0.5 V

V2
Sets the upper threshold to +2.0 V and the lower threshold to -2.0 V

V5
Sets the upper threshold to +5.0 V and the lower threshold to -5.0 V

V7
Sets the upper threshold to +7.0 V and the lower threshold to -7.0 V

MANual
Allows to set individual threshold voltage levels

*RST: V5

BUS<b>:CMSB:MANChester:THReshold:COUPling <MAN_ThresCpl>

Couples the upper and lower threshold values for the Manchester and Manchester II coding standards. The values are coupled to voltages with the same magnitude but opposite sign (positive for the upper threshold and negative for the lower threshold). However, if the upper threshold is set to a negative voltage or the lower threshold is set to a positive voltage, coupling is disabled, and the other voltage (the one that was not actively set) is automatically adjusted, to avoid an upper threshold below the lower one, or a lower threshold above the upper one.

Suffix:
<b> 1..4

Parameters:
<MAN_ThresCpl> OFF | ON

ON
Activates coupling of the upper and lower threshold values.

OFF
Disables coupling of the upper and lower threshold values.

*RST: ON

Manual operation: See "Set Thresholds" on page 615

BUS<b>:CMSB:MANChester:CPHase <MAN_ClkPhaseMd>

Selects the phase of the custom serial bus clock signal for the "Manchester" coding standards. For details, see "Clock Phase (Manchester)" on page 613.

Suffix:
<b> 1..4

Parameters:
<MAN_ClkPhaseMd> FEDGe | SEDGe

FEDGe
Sets the sampling edge to be on the first edge.

SEDGe
Sets the sampling edge to be on the second edge.

AUTO
Lets the decoder automatically select the method ("First Edge" or "Second Edge") for detecting the sampling edge.

*RST: SEDGe

Manual operation: See "Clock Phase (Manchester)" on page 613

BUS<b>:CMSB:NRZ:CLCK <SourceNRZClock>

Selects the source channel for the clock signal in the NRZ Clocked coding standard.

For triggering on the serial bus when the NRZ clocked coding standard is selected, analog or digital channel sources are required.

Otherwise, if no serial bus trigger has been selected, permitted source selections include the mathematical channels and the reference channels.

Suffix:
<b> 1..4

Parameters:
<SourceNRZClock> NONE | C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

*RST: C2W1

Manual operation: See "Clock Source" on page 612

BUS<b>:CMSB:NRZ:DATA <SourceNRZData>

Selects the source channel for the data signal in NRZ coding standards.

For triggering on the serial bus when the NRZ clocked coding standard is selected, analog or digital channel sources are required.

For triggering on the serial bus when the NRZ unclocked coding standard is selected, analog channel sources are required.

Otherwise, if no serial bus trigger has been selected, permitted source selections include the mathematical channels and the reference channels.

Suffix:
<b> 1..4

Parameters:
<SourceNRZData> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

*RST: C1W1

Manual operation: See "Data Source" on page 612

BUS<b>:CMSB:NRZ:IDLPolarity <NRZ_PolaIdle>

Selects the idle polarity of the custom serial bus data signal (only available for the coding standard "NRZ Unclocked").

Suffix:
<b> 1..4

Parameters:
<NRZ_PolaIdle> IDLLow | IDLHigh

IDLLow
Sets the base value of the data bus to be "0". After an idle period, the data signal starts with a low-to-high transition

IDLHigh
Sets the base value of the data bus to be "1". After an idle period, the data signal starts with a high-to-low transition

*RST: IDLLow

Manual operation: See "Data Idle Polarity (NRZ Unclocked)" on page 613

BUS<b>:CMSB:NRZ:CPOLarity <CPOLMode>

Selects the polarity of the clock signal for the coding standard NRZ Clocked.

Suffix:
<b> 1..4

Parameters:
<CPOLMode> IDLLow | IDLHigh

IDLLow
Sets the base value of the clock to be "0", the clock signal starts with a low-to-high transition

IDLHigh
Sets the base value of the clock to be "1", the clock signal starts with a high-to-low transition.

*RST: IDLLow

Manual operation: See "Clock Polarity (NRZ Clocked)" on page 613

BUS<b>:CMSB:NRZ:CPHase <CPHAMode>

Selects the phase of the custom serial bus clock signal for the coding standard "NRZ Clocked", depending on `BUS<b>:CMSB:NRZ:IDLPolarity` on page 2037.

Suffix:
<b> 1..4

Parameters:
<CPHAMode> FEDGe | SEDGe

FEDGe
Sets the clocking transaction to be on the first edge:
If Clock Polarity = "IDLLow", data are captured on the clock's rising edge (low-to-high transition) and propagated on a falling edge
If Clock Polarity = "IDLHigh", data are captured on the clock's falling edge (high-to-low transition) and propagated on a rising edge

SEDGe
Sets the clocking transaction to be on the second edge:
If Clock Polarity = "IDLLow", data are captured on the clock's falling edge (high-to-low transition) and propagated on a rising edge
If Clock Polarity = "IDLHigh", data are captured on the clock's rising edge (low-to-high transition) and propagated on a falling edge

*RST: FEDGe

Manual operation: See "Clock Phase (NRZ Clocked)" on page 614

BUS<b>:CMSB:NRZ:ENBLe <SrcNRZEnab>

Selects the input source for the custom serial bus enable signal.

If an input is chosen, signals will be only decoded while this channel is in the enabled state. This allows you to mark a time when the signal on the selected source is active and when not.

For triggering on a serial bus, analog channels "C1"–"C4" are required. Otherwise, if no serial bus trigger has been selected, permitted source selections include the mathematical channels and the reference channels.

Suffix:
<b> 1..4

Parameters:
<SrcNRZEnab> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

Manual operation: See "Enable Source (NRZ)" on page 614

BUS<b>:CMSB:NRZ:ENAPolarity <NRZ_PolaEnab>

Sets whether the transmitted enable signal is active when the voltage is below the threshold (`ENALow`) or higher than it (`ENAHIgh`).

Suffix:
<b> 1..4

Parameters:
<NRZ_PolaEnab> ENALow | ENAHigh
*RST: ENAHigh

Manual operation: See "Enable Polarity (NRZ)" on page 614

BUS<b>:CMSB:NRZ:POLarity <NRZ_PolaDat>

Selects the polarity of the custom serial bus data signal in NRZ coding standards.

Suffix:
<b> 1..4

Parameters:
<NRZ_PolaDat> ACTLow | ACTHigh

ACTLow
Active low: the value "1" is represented by a voltage below the threshold

ACTHigh
Active high: the value "1" is represented by a voltage above the threshold

*RST: ACTHigh

Manual operation: See "Data Polarity (NRZ)" on page 613

BUS<b>:CMSB:NRZ:THReshold:CLCK <NRZ_ThresClk>

Sets the threshold for the clock signal digitization in the NRZ Clocked coding standard.

Suffix:
<b> 1..4

Parameters:
<NRZ_ThresClk> Range: -25 to 25
Increment: 0.1
*RST: 2
Default unit: V

Manual operation: See "Set Thresholds" on page 615

BUS<b>:CMSB:NRZ:HYSTeresis:CLCK <NRZ_HystClk>

Sets the hysteresis size on the clock channel.

Suffix:
<b> 1..4

Parameters:
<NRZ_HystClk> Range: -25 to 25
Increment: 0.1
*RST: 0.1
Default unit: V

Manual operation: See "Set Thresholds" on page 615

BUS<b>:CMSB:NRZ:THReshold:DATA <NRZ_ThresDat>

Sets the threshold for the data signal digitization in NRZ coding standards.

Suffix:
<b> 1..4

Parameters:
<NRZ_ThresDat> Range: -25 to 25
Increment: 0.1
*RST: 2
Default unit: V

Manual operation: See "Set Thresholds" on page 615

BUS<b>:CMSB:NRZ:HYSTeresis:DATA <NRZ_HystDat>

Sets the hysteresis size on the data line channel.

Suffix:
<b> 1..4

Parameters:
<NRZ_HystDat> Range: -25 to 25
Increment: 0.1
*RST: 0.1
Default unit: V

Manual operation: See "Set Thresholds" on page 615

BUS<b>:CMSB:NRZ:THReshold:ENBLe <NRZ_ThresEnab>

Sets the threshold for the enable signal digitization in NRZ coding standards.

Suffix:
<b> 1..4

Parameters:
<NRZ_ThresEnab> Range: -25 to 25
Increment: 0.1
*RST: 2
Default unit: V

Manual operation: See "Set Thresholds" on page 615

BUS<b>:CMSB:NRZ:HYSTeresis:ENBLe <NRZ_HystEnab>

Sets the hysteresis size on the enable line channel.

Suffix:
<b> 1..4

Parameters:
<NRZ_HystEnab> Range: -25 to 25
Increment: 0.1
*RST: 0.1
Default unit: V

Manual operation: See "Set Thresholds" on page 615

BUS<b>:CMSB:NRZ:THReshold:PRESet <PresetValue>

Sets the NRZ thresholds to predefined or individually definable voltage levels.

Suffix:
<b> 1..4

Parameters:
<PresetValue> V05 | V2 | V5 | V7 | MANual

V05
Sets the clock and data threshold to +0.5 V (in case of NRZ Unclocked: data threshold, only)

V2
Sets the clock and data threshold to +2.0 V (in case of NRZ Unclocked: data threshold, only)

V5
Sets the clock and data threshold to +5.0 V (in case of NRZ Unclocked: data threshold, only)

V7
Sets the clock and data threshold to +7.0 V (in case of NRZ Unclocked: data threshold, only)

MANual
Allows to set individual threshold voltage levels

*RST: V5

BUS<b>:CMSB:NRZ:THReshold:COUPling <NRZ_ThresCpl>

Couples the clock and data threshold values for the NRZ Clocked coding standard. The values are coupled to the same number.

Suffix:
<b> 1..4

Parameters:
<NRZ_ThresCpl> OFF | ON

ON
Activates coupling of the NRZ clock and data threshold values.

OFF
Disables coupling of the NRZ clock and data threshold values.

*RST: ON

Manual operation: See "Set Thresholds" on page 615

BUS<b>:CMSB:BITRate:ENABle <BitrateEnable>

Enables the bit rate settings (must always be enabled for the coding standard "NRZ Unclocked", and also for triggering on signals in any coding standard).

Suffix:
<b> 1..4

Parameters:
<BitrateEnable> OFF | ON

ON
Bit rate settings enabled

OFF
Bit rate settings disabled

*RST: OFF

Manual operation: See "Check bit rate" on page 617

BUS<b>:CMSB:BITRate:VALue <Bitrate>

Sets the transmission speed setting for the custom serial bus data signal.

Suffix:
<b> 1..4

Parameters:
<Bitrate> Range: 300 to 2E9
Increment: 100E3
*RST: 10E6
Default unit: bps

Manual operation: See "Bit Rate" on page 617

BUS<b>:CMSB:GAPTime:ENABle <GapTimeEnable>

Enables the gap time settings (must always be enabled for the coding standard "NRZ Unclocked", and also for triggering on signals in any coding standard).

Suffix:
<b> 1..4

Parameters:
<GapTimeEnable> OFF | ON

ON
Gap time settings enabled

OFF
Gap time settings disabled

*RST: OFF

Manual operation: See "Check gap time" on page 617

BUS<b>:CMSB:GAPTime:VALue <MinGapTime>

Sets a minimum gap time for synchronization.

Suffix:
<b> 1..4

Parameters:
<MinGapTime> Range: 1E-9 to 1
Increment: 1E-9
*RST: 10E-6
Default unit: s

Manual operation: See "Min gap time" on page 618

BUS<b>:CMSB:ADDFrame

Creates an empty frame format description and adds it to the end of the frame description list.

Suffix:
<b> 1..4

Usage: Event

Manual operation: See "Frames" on page 619

BUS<b>:CMSB:FCOunt?

Returns the number of frames.

Suffix:
<b> 1..4

Return values:
<Count>

Usage: Query only

Manual operation: See "Frames" on page 619

BUS<b>:CMSB:CLR

Erases all cells and frames that have been created for a specific custom protocol.

Suffix:
<b> 1..4

Usage: Event

Manual operation: See "Frames" on page 619

BUS<b>:CMSB:FRAMe<fr>:TYPE <FrameType>

Enables the user to set a string to describe the frame type, typically according to the applicable protocol standard specifications. (For example, MDIO (option R&S RTO6-K540) defines the frames READ, WRITE, ADDRESS, etc.)

Suffix:
<b> 1..4

<fr> *

Parameters:
<FrameType>

Manual operation: See "Frames" on page 619

BUS<b>:CMSB:FRAMe<fr>:APPend

Creates an empty cell description and adds it to the end of the active frame description.

Suffix:
<b> 1..4

<fr> *

Usage: Event

Manual operation: See "Field name" on page 620

BUS<b>:CMSB:FRAMe<fr>:CCOunt?

Returns the number of cells in the specified frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<Count>

Usage: Query only

Manual operation: See "Field name" on page 620

BUS<b>:CMSB:FRAMe<fr>:CELL<ce>:NAME <CellName>

Enables the user to set a cell name within a frame. Names do not have to be unique, they are just for user support.

Suffix:
<b> 1..4
<fr> *
<ce> *

Parameters:
<CellName>

Manual operation: See "Field Name" on page 620

BUS<b>:CMSB:FRAMe<fr>:CELL<ce>:BITCount <BitCount>

Sets the bit count of a cell, hence its length. Based upon the lengths of the previous cells, this also defines the position of the cell start and end within a frame.

Suffix:
<b> 1..4
<fr> *
<ce> *

Parameters:
<BitCount> Range: 1 to 64
Increment: 1
*RST: 1

Manual operation: See "Bits" on page 621

BUS<b>:CMSB:FRAMe<fr>:CELL<ce>:CONDition <Condition>

Sets various operators for a cell, to identify, e.g., mandatory values such as a CRC checksum or an ID, that help to identify a frame.

The implemented conditions and functionalities are the "equal" and "array" operators.

The numeric format of the condition needs to be set according to `BUS<b>:CMSB:FRAMe<fr>:CELL<ce>:FORMat` on page 2046.

Suffix:
<b> 1..4
<fr> *
<ce> *

Parameters:
<Condition>

Manual operation: See "Condition" on page 621

BUS<b>:CMSB:FRAMe<fr>:CELL<ce>:FORMat <CellFormat>

Selects the numeric data format for the command `BUS<b>:CMSB:FRAMe<fr>:CELL<ce>:CONDition` on page 2045, as well as for the result and honeycomb display.

Suffix:

<b> 1..4

<fr> *

<ce> *

Parameters:

<CellFormat> DEC | HEX | OCT | BIN

DEC
Decimal

HEX
Hexadecimal

OCT
Octal

BIN
Binary

*RST: BIN

Manual operation: See "Format" on page 624

BUS<b>:CMSB:FRAMe<fr>:CELL<ce>:BITorder <BitOrder>

Selects in which order the bits of a cell are evaluated, as well as presented in the results table and honeycomb display.

Suffix:

<b> 1..4

<fr> *

<ce> *

Parameters:

<BitOrder> LSBF | MSBF

LSBF
Least significant bit first, evaluation starts at the LSB

MSBF
Most significant bit first, evaluation starts at the MSB

*RST: MSBF

Manual operation: See "Bit Order" on page 625

BUS<b>:CMSB:FRAMe<fr>:CELL<ce>:CRGB <Color>

Selects a cell's color representation in the honeycomb display.

Suffix:
<b> 1..4
<fr> *
<ce> *

Parameters:
<Color> ARGB value of the color to be used for the table entry.
ARGB=<Opacity(alpha) value><red value><green value><blue value>, in hexadecimal or decimal format.
Range: 0 to 4294967295
Increment: 1
*RST: 4294967040

Manual operation: See "Color" on page 625

BUS<b>:CMSB:FRAMe<fr>:CELL<ce>:COLor <CellColor>

Selects a cell's color representation in the honeycomb display.

Suffix:
<b> 1..4
<fr> *
<ce> *

Parameters:
<CellColor> YELLow | BLUE | GREEN | GREen | PURPLE | PURPle | GRAY
GREEN = GREen, PURPLE = PURPle
*RST: YELLow

BUS<b>:CMSB:EXRBits

Exports the decoded frames as raw bits.

Suffix:
<b> 1..4

Usage: Event

BUS<b>:CMSB:FRAMe<fr>:CELL<ce>:CLMN <Column>

Selects which cell shall be displayed in which result column of the decode table.

The decode table supports three result columns, which have to be unique for each frame type. For different frame types, though, different result columns can be defined to display unrelated information.

Suffix:
<b> 1..4
<fr> *

<ce> *

Parameters:

<Column> NONE | COL1 | COL2 | COL3

NONE
The result is not displayed in the decode table.

COL1
The result is displayed in column 1 of the decode table.

COL2
The result is displayed in column 2 of the decode table.

COL3
The result is displayed in column 3 of the decode table.

*RST: NONE

Manual operation: See "Result" on page 625

BUS<b>:CMSB:LOAD <FileName>

Opens an existing frame description file in xml format. The default path is `\\Public\Documents\Rohde-Schwarz\RTx\SaveXML`

Suffix:

<b> 1..4

Setting parameters:

<FileName>

Usage: Setting only

Manual operation: See "Open or Save XML File" on page 625

BUS<b>:CMSB:SAVE <FileName>

Saves a created frame description into an xml file ("Save As..."). The default path is `\\Public\Documents\Rohde-Schwarz\RTx\SaveXML`

Suffix:

<b> 1..4

Setting parameters:

<FileName>

Usage: Setting only

Manual operation: See "Open or Save XML File" on page 625

27.18.8.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- TRIGger<t>:SOURce[:SELect] is set to SBUS.
- The sources of the serial bus are channel signals: use BUS<b>:...:SOURce commands.
- Decoding is enabled: BUS<b>[:STATe] is set to ON.

TRIGger<t>:CMSB:TYPE....2049
TRIGger<t>:CMSB:PATTern....2050
TRIGger<t>:CMSB:ICONdition....2050
TRIGger<t>:CMSB:IMIN....2050

TRIGger<t>:CMSB:TYPE <Type>

Selects the trigger type for custom serial bus analysis.

Suffix:
<t> 1..3

Parameters:
<Type> STARt | PATTern | ADVanced

STARt
Triggers on the frame start, which is the end of the gap time as specified in BUS<b>:CMSB:GAPTime:VALue on page 2043

ADVanced
Advanced trigger with TRIGger:CMSB:ADVanced commands. Only available if frames are defined.

PATTern
Triggers on a data pattern to be specified in `TRIGger<t>:CMSB:PATTern` on page 2050

*RST: STARt

Manual operation: See "Type" on page 630

TRIGger<t>:CMSB:PATTern <DataPattern>

Sets the pattern match conditions for a payload data check. The trigger is set to the first occurrence of a matching data bit pattern (which can be freely specified), starting after the minimum gap time (`BUS<b>:CMSB:GAPTime:VALue` on page 2043), and after the detected start of the data frame.

Suffix:
<t> 1..3

Parameters:
<DataPattern>

Manual operation: See "Pattern" on page 631

TRIGger<t>:CMSB:ICONdition <DataPosOperator>

Sets the operator to set a specific bit index (data position).

Suffix:
<t> 1..3

Parameters:
<DataPosOperator> EQUal | GETHan | INRange

EQUal
Equal

GETHan
Greater than or equal

INRange
In range

*RST: INRange

Manual operation: See "Pattern" on page 631

TRIGger<t>:CMSB:IMIN <DataPosition>

Sets the bit index (data position). If `TRIGger<t>:CMSB:ICONdition` on page 2050 is set to "INRange", "IMIN" sets the start value of the bit index range.

Suffix:
<t> 1..3

Parameters:

<DataPosition> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Manual operation: See "Pattern" on page 631

TRIGger<t>:CMSB:IMAX <DataPositionTo>

Sets the end value of the bit index range (data position range), if `TRIGger<t>:CMSB:ICONdition` on page 2050 is set to "INRange".

Suffix:

<t> 1..3

Parameters:

<DataPositionTo> Range: 0 to 65.535E+3
Increment: 1
*RST: 65.535E+3

Manual operation: See "Pattern" on page 631

TRIGger<t>:CMSB:NRZ:WRDLength <NRZ_WordLength>

Sets the number of bits in an NRZ Unclocked word.

Suffix:

<t> 1..3

Parameters:

<NRZ_WordLength> Range: 0 to 31
Increment: 1
*RST: 8

Manual operation: See "Pattern" on page 631

TRIGger<t>:CMSB:ADVanced:FRAMe<fr>:ENABle <Enable>
TRIGger<t>:CMSB:ADVanced:FRENable <Frame>,<Enabler>

Enables or disables the specific frame to be triggered on.

Suffix:

<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Setting parameters:

<Frame>

<Enabler> OFF | ON

Example: `:TRIGger:CMSB:ADVanced:FRENable "Master" 1`
Enables the Master frame.
`:TRIGger:CMSB:ADVanced:FRAMe1:ENABle 1`
Enables the 1st frame that you have defined.

Usage: Setting only

TRIGger<t>:CMSB:ADVanced:FRAMe<fr>:FLD<fl>:ENABle <CondEnabler>
TRIGger<t>:CMSB:ADVanced:FIENable <Frame>,<Field>,<Enabler>

Enables or disables the specific field within the defined frame to be triggered on.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Setting parameters:
<Frame>

<Field>

<Enabler> OFF | ON

Example: `:TRIGger:CMSB:ADVanced:FIEN "Master", "CRC", 1`
Enables the CRC field of the Master frame.
`:TRIGger:CMSB:ADVanced:FRAMe1:FLD3:ENABle 1`
Enables the 3rd field of the 1st frame that you have defined.

Usage: Setting only

Manual operation: See "Field name / Condition / Enable" on page 633

TRIGger<t>:CMSB:ADVanced:FRAMe<fr>:FLD<fl>:BIT <BitState>
TRIGger<t>:CMSB:ADVanced:BIT <Frame>,<Field>,<Bit>

Sets the bit state of a field to be triggered on that only consists of one bit.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Setting parameters:
<Frame>

<Field>

<Bit> ONE | ZERO | DC

ONE
1

ZERO
0

DC
"Do not care" (DC) = X

Usage: Setting only

Manual operation: See "BitState" on page 634

TRIGger<t>:CMSB:ADVanced:FRAMe<fr>:FLD<fl>:DMAX <Data_Max>
TRIGger<t>:CMSB:ADVanced:DMAX <Frame>,<Field>,<Data>

Sets the end value of a data pattern range if `TRIGger<t>:CMSB:ADVanced:DOPerator` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Setting parameters:
<Frame>

<Field>

<Data>

Usage: Setting only

Manual operation: See "Data" on page 634

TRIGger<t>:CMSB:ADVanced:FRAMe<fr>:FLD<fl>:DMIN <Data_Min>
TRIGger<t>:CMSB:ADVanced:DMIN <Frame>,<Field>,<Data>

Specifies the data pattern, or sets the start value of a data pattern range.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Setting parameters:
<Frame>

<Field>

<Data>

Usage: Setting only

Manual operation: See "Data" on page 634

TRIGger<t>:CMSB:ADVanced:FRAMe<fr>:FLD<fl>:DOPerator <Data_Operator>
TRIGger<t>:CMSB:ADVanced:DOPerator <Frame>,<Field>,<Operator>

Sets the operator for the data pattern.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Setting parameters:
<Frame>

<Field>

<Operator> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

ANY = OFF
The data of the required pattern is not relevant.

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
This condition requires one endpoint value to be set using `TRIGger<t>:CMSB:ADVanced:DMIN`.

INRange | RANGe
This condition requires a range of endpoint values to be set using `TRIGger<t>:CMSB:ADVanced:DMAX` and `TRIGger<t>:CMSB:ADVanced:DMIN`.

Usage: Setting only

Manual operation: See "Data" on page 634

TRIGger<t>:CMSB:ADVanced:ERRor<n>:ENABle <Enable>
TRIGger<t>:CMSB:ADVanced:ERENable <ErrorName>,<Enabler>

Enables triggering on errors. You can search for all error types in parallel.

Suffix:
<t> 1..3

Setting parameters:
<ErrorName>

<Enabler> OFF | ON

Usage: Setting only

Manual operation: See "Error types: Item name, Enable" on page 633

TRIGger<t>:CMSB:ADVanced:FRAMe<fr>:FLD<fl>:IMAX <Index_Max>
TRIGger<t>:CMSB:ADVanced:IMAX <Frame>,<Field>,<IndexMax>

Sets the end value of an index range if `TRIGger<t>:CMSB:ADVanced:IMAX` is set to `INRange` or `RANGe`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Setting parameters:
<Frame>

<Field>

<IndexMax>

Usage: Setting only

Manual operation: See "Index" on page 634

TRIGger<t>:CMSB:ADVanced:FRAMe<fr>:FLD<fl>:IMIN <Index_Min>
TRIGger<t>:CMSB:ADVanced:IMIN <Frame>,<Field>,<IndexMin>

Specifies the index, or sets the start value of an index range.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Setting parameters:
<Frame>

<Field>

<IndexMin>

Usage: Setting only

Manual operation: See "Index" on page 634

TRIGger<t>:CMSB:ADVanced:FRAMe<fr>:FLD<fl>:IOPerator <Index_Operator>
TRIGger<t>:CMSB:ADVanced:IOPerator <Frame>,<Field>,<IndexOperator>

Sets the operator for the index in the selected field of the selected frame.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Setting parameters:
<Frame>

<Field>

<IndexOperator> ANY | OFF | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | RANGe

ANY = OFF
The index of the required pattern is not relevant.

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
This condition requires one endpoint value to be set using `TRIGger<t>:CMSB:ADVanced:IMIN`.

INRange | RANGe
This condition requires a range of endpoint values to be set using `TRIGger<t>:CMSB:ADVanced:IMAX` and `TRIGger<t>:CMSB:ADVanced:IMIN`.

Usage: Setting only

Manual operation: See "Index" on page 634

BUS<b>:CMSB:FILTer:ENABle <Enable>

Enables filtering for the custom serial bus.

Suffix:
<b> 1..4

Parameters:
<Enable> OFF | ON
*RST: OFF

Manual operation: See "Apply Filter" on page 628

BUS<b>:CMSB:FILTer:ERENable <ErrorName>,<Enabler>

Enables filtering on error.

Suffix:
<b> 1..4

Setting parameters:
<ErrorName>

<Enabler> OFF | ON

Usage: Setting only

BUS<b>:CMSB:FILTer:ERRor<n>:ENABle <Enable>

Enables filtering on error. You can filter all error types in parallel.

Suffix:
<b> 1..4
<n> *

Parameters:
<Enable> OFF | ON
*RST: ON

Manual operation: See "Error types: Item name, Enable" on page 637

BUS<b>:CMSB:FILTer:FIENable <Frame>,<Field>,<Enabler>
BUS<b>:CMSB:FILTer:FRAMe<fr>:FLD<fl>:ENABle <CondEnabler>

Enables or disables the specific field within the defined frame to be filtered.

Suffix:
<b> 1..4
<fr> *
<fl> *

Parameters:
<CondEnabler> OFF | ON
*RST: OFF

Manual operation: See "Field name / Condition / Enable" on page 637

BUS<b>:CMSB:FILTer:BIT <Frame>,<Field>,<Bit>
BUS<b>:CMSB:FILTer:FRAMe<fr>:FLD<fl>:BIT <BitState>

Sets the bit state of a field to be filtered on that only consists of one bit.

Suffix:
<b> 1..4
<fr> *
<fl> *

Parameters:
<BitState> ONE | ZERO | DC
*RST: DC

Manual operation: See "Bit State" on page 637

BUS<b>:CMSB:FILTer:DMAX <Frame>,<Field>,<Data>
BUS<b>:CMSB:FILTer:FRAMe<fr>:FLD<fl>:DMAX <Data_Max>

Sets the end value of a data pattern range if `BUS<b>:CMSB:FILTer:FRAMe<fr>:FLD<fl>:DOPerator` is set to `INRange` or `OORange`.

Suffix:
<b> 1..4
<fr> *
<fl> *

Parameters:
<Data_Max>

Manual operation: See "Data" on page 637

BUS<b>:CMSB:FILTer:DMIN <Frame>,<Field>,<Data>
BUS<b>:CMSB:FILTer:FRAMe<fr>:FLD<fl>:DMIN <Data_Min>

Specifies the data pattern, or sets the start value of a data pattern range.

Suffix:
<b> 1..4
<fr> *
<fl> *

Parameters:
<Data_Min>

Manual operation: See "Data" on page 637

BUS<b>:CMSB:FILTer:DOPerator <Frame>,<Field>,<Operator>
BUS<b>:CMSB:FILTer:FRAMe<fr>:FLD<fl>:DOPerator <Data_Operator>

Sets the operator for the data pattern.

Suffix:
<b> 1..4
<fr> *
<fl> *

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange
*RST: EQUal

Manual operation: See "Data" on page 637

BUS<b>:CMSB:FILTer:FRENable <Frame>,<Enabler>
BUS<b>:CMSB:FILTer:FRAMe<fr>:ENABle <Enable>

Enables or disables the specific frame to be filtered.

Suffix:
<b> 1..4
<fr> *

Parameters:
<Enable> OFF | ON
*RST: OFF

Manual operation: See "Frame type" on page 636

BUS<b>:CMSB:FILTer:IMAX <Frame>,<Field>,<Data>
BUS<b>:CMSB:FILTer:FRAMe<fr>:FLD<fl>:IMAX <Index_Max>

Sets the end value of an index range if `BUS<b>:CMSB:FILTer:FRAMe<fr>:FLD<fl>:IOPerator` is set to `INRange` or `RANGe`.

Suffix:
<b> 1..4
<fr> *
<fl> *

Parameters:
<Index_Max> Range: 1 to 65.534E+3
Increment: 1
*RST: 65.534E+3

Manual operation: See "Index" on page 637

BUS<b>:CMSB:FILTer:IMIN <Frame>,<Field>,<Data>
BUS<b>:CMSB:FILTer:FRAMe<fr>:FLD<fl>:IMIN <Index_Min>

Specifies the index, or sets the start value of an index range.

Suffix:
<b> 1..4
<fr> *
<fl> *

Parameters:
<Index_Min> Range: 1 to 65.534E+3
Increment: 1
*RST: 1

Manual operation: See "Index" on page 637

BUS<b>:CMSB:FILTer:IOPerator <Frame>,<Field>,<Operator>
BUS<b>:CMSB:FILTer:FRAMe<fr>:FLD<fl>:IOPerator <Index_Operator>

Sets the operator for the index in the selected field of the selected frame.

Suffix:
<b> 1..4
<fr> *
<fl> *

Parameters:
<Index_Operator> EQUal | INRange | RANGe
*RST: INRange

Manual operation: See "Index" on page 637

27.18.8.4 Decode results

In all `BUS<b>:CSMB:RESult<n>` commands, the suffix <b> selects the serial bus, the suffix <n> selects the result number in the decode table, and the suffix <ce> selects the cell number.

The following is an example for a set of query commands for bus 1 and result 1 is shown in the following, together with examples for outcomes of these queries:

- `:BUS1:CMSB:RCOunt?` !5

- `:BUS1:CMSB:RESult1:STATe?` !OK
- `:BUS1:CMSB:RESult1:STARt?` ! -0.0024964177
- `:BUS1:CMSB:RESult1:STOP?` ! -0.0024030384
- `:BUS1:CMSB:RESult1:TYPE?` !ff
- `:BUS1:CMSB:RESult1:CONE?` !0b11111111
- `:BUS1:CMSB:RESult1:CTWO?` !0xAA
- `:BUS1:CMSB:RESult1:CTHR?` !0xF590

- `:BUS1:CMSB:RESult1:CCOunt?` !5

- `:BUS1:CMSB:RESult1:CELL1:STAT?` !OK
- `:BUS1:CMSB:RESult1:CELL1:NAME?` !Start Delim
- `:BUS1:CMSB:RESult1:CELL1:VALue?` !101010101HL10HL0

- `:BUS1:CMSB:RESult1:CELL2:STAT?` !OK
- `:BUS1:CMSB:RESult1:CELL2:NAME?` !OP-FF
- `:BUS1:CMSB:RESult1:CELL2:VALue?` !0b11111111

- `:BUS1:CMSB:RESult1:CELL3:STAT?` !OK

- :BUS1:CMSB:RESult1:CELL3:NAME? !data
- :BUS1:CMSB:RESult1:CELL3:VALue? !0xAA

- :BUS1:CMSB:RESult1:CELL4:STAT? !OK
- :BUS1:CMSB:RESult1:CELL4:NAME? !CRC
- :BUS1:CMSB:RESult1:CELL4:VALue? !0xF590

- :BUS1:CMSB:RESult1:CELL5:STAT? !OK
- :BUS1:CMSB:RESult1:CELL5:NAME? !End Delim
- :BUS1:CMSB:RESult1:CELL5:VALue? !1HLHL101

To show the results on the screen, use the following commands:

- BUS<b>:RESult on page 1914

BUS<b>:CMSB:RCOunt? 2061
BUS<b>:CMSB:RESult<n>:STATe? 2061
BUS<b>:CMSB:RESult<n>:STARt? 2062
BUS<b>:CMSB:RESult<n>:STOP? 2062
BUS<b>:CMSB:RESult<n>:TYPE? 2063
BUS<b>:CMSB:RESult<n>:CONE? 2063
BUS<b>:CMSB:RESult<n>:CTWO? 2063
BUS<b>:CMSB:RESult<n>:CTHRee? 2064
BUS<b>:CMSB:RESult<n>:CCOunt? 2064
BUS<b>:CMSB:RESult<n>:CELL<ce>:NAME? 2064
BUS<b>:CMSB:RESult<n>:CELL<ce>:STARt? 2064
BUS<b>:CMSB:RESult<n>:CELL<ce>:STOP? 2065
BUS<b>:CMSB:RESult<n>:CELL<ce>:STATe? 2065
BUS<b>:CMSB:RESult<n>:CELL<ce>:VALue? 2066

BUS<b>:CMSB:RCOunt?

Returns the count number of decoded result frames in a custom serial bus waveform. Basically, this is the maximum result index <n> when querying results by using BUS<b>:CMSB:RESult<n>:XXX.

Suffix:
<b> 1..4

Return values:
<Count>

Usage: Query only

BUS<b>:CMSB:RESult<n>:STATe?

Returns the overall state of the frame: either OK or the relevant error condition. R&S RTO6-K510 marks each frame with a status that indicates whether the decode succeeded or not.

Suffix:
<b> 1..4
<n> *

Return values:
<State> OK | LENGth | UNKNown | INComplete | CRC | PARity

OK
The frame was decoded normally and conforms to the frame description.

LENGth
The length error indicates that the frame ended prematurely, or an array in the frame had too few elements. The amount of bits that the software expected (based upon the user's frame description) was not found before the frame was terminated. This might occur because a new frame synchronized, or a gap appeared between the bits.

UNKNown
Unknown error

INComplete
The frame ended prematurely because it extends past the end of the record.

CRC
Checksum error in cyclic redundancy check (error in data)

PARity
Parity bit error, indicating a transmission error (only available if a parity is configured)

*RST: OK

Usage: Query only

BUS<b>:CMSB:RESult<n>:STARt?

Returns the start time of the frame.

Suffix:
<b> 1..4
<n> *

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:CMSB:RESult<n>:STOP?

Returns the stop time of the frame.

Suffix:
<b> 1..4
<n> *

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:CMSB:RESult<n>:TYPE?

Returns the name of the selected frame (n) from the user defined frame format description, labeled according to BUS<b>:CMSB:FRAMe<fr>:TYPE on page 2044.

Suffix:
<b> 1..4
<n> *

Return values:
<Type>

Usage: Query only

BUS<b>:CMSB:RESult<n>:CONE?

Returns the 1st cell content as specified in the "Result" column of the "Frame Format" specification table.

Suffix:
<b> 1..4
<n> *

Return values:
<Custom1>

Usage: Query only

BUS<b>:CMSB:RESult<n>:CTWO?

Returns the 2nd cell content as specified in the "Result" column of the "Frame Format" specification table.

Suffix:
<b> 1..4
<n> *

Return values:
<Custom2>

Usage: Query only

BUS<b>:CMSB:RESult<n>:CTHRee?

Returns the 3rd cell content as specified in the "Result" column of the "Frame Format" specification table.

Suffix:
<b> 1..4

<n> *

Return values:
<Custom3>

Usage: Query only

BUS<b>:CMSB:RESult<n>:CCOunt?

Returns the number of decoded cells in the specified result frame.

Suffix:
<b> 1..4

<n> *

Return values:
<NumWords> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CMSB:RESult<n>:CELL<ce>:NAME?

Returns the name of the specified cell. Cell names are not necessarily unique.

Suffix:
<b> 1..4

<n> *

<ce> *

Return values:
<Name>

Usage: Query only

BUS<b>:CMSB:RESult<n>:CELL<ce>:STARt?

Returns the start time of the selected cell.

Suffix:

<b> 1..4
Selects the serial bus.

<n> *

<ce> *
Selects the cell.

Return values:

<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:CMSB:RESult<n>:CELL<ce>:STOP?

Returns the end time of the selected cell.

Suffix:

<b> 1..4
Selects the serial bus.

<n> *

<ce> *
Selects the cell.

Return values:

<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:CMSB:RESult<n>:CELL<ce>:STATe?

Returns the state of the cell.

Suffix:

<b> 1..4

<n> *

<ce> *

Return values:

<State> OK | LENGth | UNKNown | INComplete | CRC | PARity
OK
No error detected

LENGth
The length error indicates that the cell ended prematurely. The amount of bits that the software expected (based upon the user's frame description) was not found before the cell was terminated. This might occur because a new frame synchronized, or a gap appeared between the bits.

UNKNown
Unknown error

INComplete
The cell ended prematurely because it extends past the end of the record.

CRC
Checksum error in cyclic redundancy check (error in data)

PARity
Parity bit error, indicating a transmission error (only available if a parity is configured)

Usage: Query only

BUS<b>:CMSB:RESult<n>:CELL<ce>:VALue?

Data content of the specified cell.

Suffix:
<b> 1..4
<n> *
<ce> *

Return values:
<Value>

Usage: Query only

SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:BIT <SearchName>,<BitState>
SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:BIT? <SearchName>

Sets the bit state of a field to be searched that only consists of one bit.

Suffix:
<fr> *

<fl> *

Parameters:
<BitState> ONE | ZERO | DC

ONE
1

ZERO
0

DC
"Do not care" (DC) = X

*RST: DC

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame" on page 640

SEARch:TRIGger:CMSB:DMAX <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:CMSB:FRAMe<fr>:FIELd<n>:DMAX <SearchName>,<DataMax>
SEARch:TRIGger:CMSB:FRAMe<fr>:FIELd<n>:DMAX? <SearchName>
SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:DMAX <SearchName>,<Data_Max>
SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:DMAX? <SearchName>

Sets the end value of a data pattern range if `SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:DOPerator` is set to `INRange` or `OORange`.

Suffix:
<fr> *

<fl> *

Parameters:
<Data_Max> Specifies the name of the generic trigger setting frame.

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame" on page 640

SEARch:TRIGger:CMSB:DMIN <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:CMSB:FRAMe<fr>:FIELd<n>:DMIN <SearchName>,<DataMin>
SEARch:TRIGger:CMSB:FRAMe<fr>:FIELd<n>:DMIN? <SearchName>
SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:DMIN <SearchName>,<Data_Min>
SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:DMIN? <SearchName>

Specifies the data pattern to be searched, or sets the start value of a data pattern range to be searched.

Suffix:
<fr> *

<fl> *

Parameters:
<Data_Min> Specifies the name of the generic trigger setting frame.

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame" on page 640

SEARch:TRIGger:CMSB:DOPerator <SearchName>,<Frame>,<Field>,<Operator>
SEARch:TRIGger:CMSB:FRAMe<fr>:FIELd<n>:DOPerator
<SearchName>,<DataOperator>
SEARch:TRIGger:CMSB:FRAMe<fr>:FIELd<n>:DOPerator? <SearchName>
SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:DOPerator
<SearchName>,<Data_Operator>
SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:DOPerator? <SearchName>

Sets the operator to set a specific data pattern to be searched in the selected field of the selected frame.

Suffix:
<fr> *

<fl> *

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one endpoint value to be set using `SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:DMIN`.

INRange | OORange
In range, out of range. These conditions require a range of endpoint values to be set using `SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:DMIN` and `SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:DMAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame" on page 640

SEARch:TRIGger:CMSB:IMAX <SearchName>,<Frame>,<Field>,<IndexMax>
SEARch:TRIGger:CMSB:FRAMe<fr>:FIELd<n>:IMAX <SearchName>,<IndexMax>
SEARch:TRIGger:CMSB:FRAMe<fr>:FIELd<n>:IMAX? <SearchName>
SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:IMAX <SearchName>,<Index_Max>
SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:IMAX? <SearchName>

Sets the end value of an index range if `SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:IOPerator` is set to `INRange` or `RANGe`.

Suffix:
<fr> *

<fl> *

Parameters:

<Index_Max> Specifies the end value for the index range within the field.
The index range, increment and *RST values depend on the field type.

Range: 1 to 65.534E+3
Increment: 1
*RST: 65.534E+3

Parameters for setting and query:

<SearchName>

Manual operation: See "Frame" on page 640

SEARch:TRIGger:CMSB:IMIN <SearchName>,<Frame>,<Field>,<IndexMin>
SEARch:TRIGger:CMSB:FRAMe<fr>:FIELd<n>:IMIN <SearchName>,<IndexMin>
SEARch:TRIGger:CMSB:FRAMe<fr>:FIELd<n>:IMIN? <SearchName>
SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:IMIN <SearchName>,<Index_Min>
SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:IMIN? <SearchName>

Specifies the index at which the data is to be searched, or sets the start value of an index range in which the data is to be searched.

Suffix:

<fr> *

<fl> *

Parameters:

<Index_Min> Specifies the index value or the start value of an index range within the field.
The index range, increment and *RST values depend on the field type.

Range: 1 to 65.534E+3
Increment: 1
*RST: 1

Parameters for setting and query:

<SearchName>

Manual operation: See "Frame" on page 640

SEARch:TRIGger:CMSB:IOPerator
<SearchName>,<Frame>,<Field>,<IndexOperator>
SEARch:TRIGger:CMSB:FRAMe<fr>:FIELd<n>:IOPerator
<SearchName>,<IndexOperator>
SEARch:TRIGger:CMSB:FRAMe<fr>:FIELd<n>:IOPerator? <SearchName>
SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:IOPerator
<SearchName>,<Index_Operator>
SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:IOPerator? <SearchName>

Sets the operator for the index for searching in the selected field of the selected frame.

Suffix:
<fr> *

<fl> *

Parameters:
<Index_Operator> EQUal | INRange | RANGe

EQUal
This condition requires one endpoint value to be set using `SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:IMIN`.

INRange | RANGe
This condition requires a range of endpoint values to be set using `SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:IMIN` and `SEARch:TRIGger:CMSB:FRAMe<fr>:FLD<fl>:IMAX`.

*RST: INRange

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame" on page 640

27.18.8.6 Search results

SEARch:RESult:CMSB<m>:FCOunt? 2072
SEARch:RESult:CMSB<m>:FRAMe<fr>:CCOunt? 2073
SEARch:RESult:CMSB<m>:FRAMe<fr>:CELL<ce>:NAME? 2073

SEARch:RESult:CMSB<m>:FRAMe<fr>:CELL<ce>:STATe? 2074
SEARch:RESult:CMSB<m>:FRAMe<fr>:CELL<ce>:STOP? 2075
SEARch:RESult:CMSB<m>:FRAMe<fr>:CELL<ce>:VALue? 2075
SEARch:RESult:CMSB<m>:FRAMe<fr>:CONE? 2075
SEARch:RESult:CMSB<m>:FRAMe<fr>:CTHRee? 2076
SEARch:RESult:CMSB<m>:FRAMe<fr>:CTWO? 2076
SEARch:RESult:CMSB<m>:FRAMe<fr>:STARt? 2076
SEARch:RESult:CMSB<m>:FRAMe<fr>:STATe? 2077
SEARch:RESult:CMSB<m>:FRAMe<fr>:STOP? 2077
SEARch:RESult:CMSB<m>:FRAMe<fr>:TYPE? 2078

SEARch:RESult:CMSB<m>:FCOunt? <SearchName>

Returns the count number of decoded result frames in a custom serial bus waveform. Basically, this is the maximum result index <n> when querying results by using `SEARch:RESult:CMSB<m>:FRAMe<n>:XXX`.

Suffix:
<m> *

Query parameters:
<SearchName>

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:CMSB<m>:FRAMe<fr>:CCOunt? <SearchName>

Returns the count number of cell in the frames, within the search result, in a custom serial bus waveform.

Suffix:
<m> *

<fr> *

Query parameters:
<SearchName>

Return values:
<NumWords> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:CMSB<m>:FRAMe<fr>:CELL<ce>:NAME? <SearchName>

Returns the name of the specified cell within the search result. Cell names are not necessarily unique.

Suffix:
<m> *

<fr> *

<ce> *

Query parameters:
<SearchName>

Return values:
<Name>

Usage: Query only

SEARch:RESult:CMSB<m>:FRAMe<fr>:CELL<ce>:STARt? <SearchName>

Returns the start time of the cell within the search result.

Suffix:
<m> *

<fr> *

<ce> *

Query parameters:
<SearchName>

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:CMSB<m>:FRAMe<fr>:CELL<ce>:STATe? <SearchName>

Returns the state of the cell within the search result.

Suffix:
<m> *

<fr> *

<ce> *

Query parameters:
<SearchName>

Return values:
<State> OK | LENGth | UNKNown | INComplete | CRC | PARity

OK
No error detected

LENGth
The length error indicates that the cell ended prematurely. The amount of bits that the software expected (based upon the user's frame description) was not found before the cell was terminated. This might occur because a new frame synchronized, or a gap appeared between the bits.

UNKNown
Unknown error

INComplete
The cell ended prematurely because it extends past the end of the record.

CRC
Checksum error in cyclic redundancy check (error in data)

PARity
Parity bit error, indicating a transmission error (only available if a parity is configured)

*RST: OK

Usage: Query only

SEARch:RESult:CMSB<m>:FRAMe<fr>:CELL<ce>:STOP? <SearchName>

Returns the stop time of the cell within the search result.

Suffix:
<m> *

<fr> *

<ce> *

Query parameters:
<SearchName>

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:CMSB<m>:FRAMe<fr>:CELL<ce>:VALue? <SearchName>

Data content of the specified cell within the search result.

Suffix:
<m> *

<fr> *

<ce> *

Query parameters:
<SearchName>

Return values:
<Value>

Usage: Query only

SEARch:RESult:CMSB<m>:FRAMe<fr>:CONE? <SearchName>

Returns the 1st field content within the search result.

Suffix:
<m> *

<fr> *

Query parameters:
<SearchName>

Return values:
<Custom1>

Usage: Query only

SEARch:RESult:CMSB<m>:FRAMe<fr>:CTHRee? <SearchName>

Returns the 3rd field content.

Suffix:
<m> *

<fr> *

Query parameters:
<SearchName>

Return values:
<Custom3>

Usage: Query only

SEARch:RESult:CMSB<m>:FRAMe<fr>:CTWO? <SearchName>

Returns the 2nd field content.

Suffix:
<m> *

<fr> *

Query parameters:
<SearchName>

Return values:
<Custom2>

Usage: Query only

SEARch:RESult:CMSB<m>:FRAMe<fr>:STARt? <SearchName>

Returns the start time of the frame within the search result.

Suffix:
<m> *

<fr> *

Query parameters:
<SearchName>

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:CMSB<m>:FRAMe<fr>:STATe? <SearchName>

Returns the overall state of the frame within the search result: either OK or the relevant error condition. R&S RTO6-K510 marks each frame with a status that indicates whether the decode succeeded or not.

Suffix:
<m> *

<fr> *

Query parameters:
<SearchName>

Return values:
<State> OK | LENGth | UNKNown | INComplete | CRC | PARity

OK
The frame was decoded normally and conforms to the frame description.

LENGth
The length error indicates that the frame ended prematurely, or an array in the frame had too few elements. The amount of bits that the software expected (based upon the user's frame description) was not found before the frame was terminated. This might occur because a new frame synchronized, or a gap appeared between the bits.

UNKNown
Unknown error

INComplete
The frame ended prematurely because it extends past the end of the record.

CRC
Checksum error in cyclic redundancy check (error in data)

*RST: OK

Usage: Query only

SEARch:RESult:CMSB<m>:FRAMe<fr>:STOP? <SearchName>

Returns the stop time of the frame within the search result.

Suffix:
<m> *

<fr> *

Query parameters:
<SearchName>

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:CMSB<m>:FRAMe<fr>:TYPE? <SearchName>

Returns the name of the selected frame (n) from the user defined frame format description, labeled according to `BUS<b>:CMSB:FRAMe<fr>:TYPE` on page 2044.

Suffix:
<m> *

<fr> *

Query parameters:
<SearchName>

Return values:
<Type>

Usage: Query only

BUS<b>:CAN:FDATa:PSTandard....2079
BUS<b>:CAN:DATA:THReshold....2080
BUS<b>:CAN:TECHnology....2080
BUS<b>:CAN:BITRate....2081
BUS<b>:CAN:FDATa:ENABle....2081
BUS<b>:CAN:FDATa:DBITrate....2081
BUS<b>:CAN:FDATa:SAMPlepoint....2082
BUS<b>:CAN:SAMPlepoint....2082
BUS<b>:CAN:FDATa:T1Segment....2082
BUS<b>:CAN:T1Segment....2082
BUS<b>:CAN:FDATa:T2Segment....2083
BUS<b>:CAN:T2Segment....2083

BUS<b>:CAN:FDATa:JWIDth....2083
BUS<b>:CAN:JWIDth....2083

BUS<b>:CAN:DATA:SOURce <DataSource>

Sets the source of the data line that is selected with `BUS<b>:CAN:TYPE`.

Usually, the source is one of the analog channels. Reference and math waveforms are available as sources if the trigger source is one of the analog channels but not the serial bus.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<DataSource> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15
*RST: C1W1

Usage: Asynchronous command

Manual operation: See "Data" on page 644

BUS<b>:CAN:TYPE <SignalType>

Selects the CAN-High or CAN-Low line. Both lines are required for differential signal transmission used by CAN.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<SignalType> CANH | CANL
*RST: CANL

Manual operation: See "Type" on page 645

BUS<b>:CAN:FDATa:PSTandard <ProtStd>

Only available for CAN FD buses. Selects whether the tested signal is an ISO CAN FD signal or not.

Suffix:
<b> 1..4

Parameters:
<ProtStd> ISO | NISO

ISO
Signals are decoded according to the the ISO CAN FD protocol. This protocol has an additional stuff count field before the CRC sequence.

NISO
Non-ISO. Signals are decoded according to the the Bosch CAN FD protocol.

*RST: ISO

Firmware/software: FW 3.35

Manual operation: See "Standard" on page 645

BUS<b>:CAN:DATA:THReshold <Threshold>

Sets a user-defined threshold value.

Alternatively, you can set the threshold according to the signal technology with `BUS<b>:CAN:TECHnology`.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Threshold> Range: -12 to 12
Increment: 0.1
*RST: 0
Default unit: V

Manual operation: See "Threshold" on page 645

BUS<b>:CAN:TECHnology <Technology>

Sets the threshold voltage as defined for various signal technologies.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Technology> V25 | V3 | V2 | V0 | MANual

V25
2.5 Volt (CMOS 5.0 V)

V3
3.0 Volt (CAN_H HS / CAN_L LS)

V2
2.0 Volt (CAN_L HS / CAN_H LS)

V0
Ground

MANual
Manual setting of user-defined values with `BUS<b>:CAN:DATA:THReshold`.

*RST: V25

Manual operation: See "Threshold" on page 645

BUS<b>:CAN:BITRate <Bitrate>

For CAN buses, the "Bit rate" sets the number of transmitted bits per second.

For CAN FD buses, this parameter is called "Arbitration rate" and sets the bit rate of the arbitration phase.

The maximum bit rate for High Speed CAN is 1 Mbit/s. The bit rate is uniform and fixed for a given CAN or CAN FD bus.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Bitrate> Range: 100 to 5E+6
Increment: 1
*RST: 100E+3
Default unit: bps

Manual operation: See "Bit rate (CAN) / Arbitration rate (CAN FD)" on page 646

BUS<b>:CAN:FDATa:ENABle <CANFDEnabled>

Enables the CAN FD protocol configuration.

Suffix:
<b> 1..4

Parameters:
<CANFDEnabled> OFF | ON
*RST: ON

Manual operation: See "CAN-FD" on page 645

BUS<b>:CAN:FDATa:DBITrate <FlexDatBitrate>

Sets the bit rate of the data phase. The data rate can be higher than the arbitration rate, but it is uniform and fixed for a given CAN FD bus.

Suffix:
<b> 1..4

Parameters:

<FlexDatBitrate>
Range: 100 to 15E+6
Increment: 1
*RST: 1E+6
Default unit: bps

Manual operation: See "Data rate" on page 646

BUS<b>:CAN:FDATa:SAMPlepoint <FlexDatSamplePt>
BUS<b>:CAN:SAMPlepoint <SamplePoint>

Sets the position of the sample point within the bit in percent of the nominal bit time.

Alternatively, you can set the sample point with `BUS<b>:CAN:T1Segment` and `BUS<b>:CAN:T2Segment`.

For CAN FD signals, `BUS<b>:CAN:SAMPlepoint` defines the synchronization of the arbitration phase, and `BUS<b>:CAN:FDATa:SAMPlepoint` defines the synchronization of the data phase.

Suffix:

<b>
1..4
Selects the serial bus.

Parameters:

<SamplePoint>
Range: 12 to 96 if number of segments is 24. The range reduces if the signal has fewer segments.
Increment: 5
*RST: 66
Default unit: %

Manual operation: See "Sample point" on page 648

BUS<b>:CAN:FDATa:T1Segment <FlexDatTimeSeg1>
BUS<b>:CAN:T1Segment <TimeSeg1>

Sets the number of time quanta before the sample point (T1Segment). T1Segment comprises the segments Synch_seg, Prop_seg, and Phase_seg1 which are specified in the CAN standard.

Make sure to set also `BUS<b>:CAN:T2Segment` for correct definition of the sample point. Alternatively, you can use `BUS<b>:CAN:SAMPlepoint`.

See also: Section 14.8.2.2, "Advanced settings", on page 646

For CAN FD signals, `BUS<b>:CAN:T1Segment` defines the synchronization of the arbitration phase, and `BUS<b>:CAN:FDATa:T1Segment` defines the synchronization of the data phase.

Suffix:

<b>
1..4

Parameters:

<TimeSeg1> Time quanta

Range: 3 to 23
Increment: 1
*RST: 6.6

Manual operation: See "Time segment1, Time segment2" on page 648

BUS<b>:CAN:FDATa:T2Segment <FlexDatTimeSeg2>
BUS<b>:CAN:T2Segment <TimeSeg2>

Sets the number of time quanta after the sample point (T2Segment). T2Segment matches Phase_seg2 specified in the CAN standard.

Make sure to set also `BUS<b>:CAN:T1Segment` on page 2082 for correct definition of the sample point. Alternatively, you can use `BUS<b>:CAN:SAMPlepoint`.

See also: Section 14.8.2.2, "Advanced settings", on page 646

For CAN FD signals, `BUS<b>:CAN:T2Segment` defines the synchronization of the arbitration phase, and `BUS<b>:CAN:FDATa:T2Segment` defines the synchronization of the data phase.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<TimeSeg2> Time quanta

Range: 1 to 21
Increment: 1
*RST: 3.4

Manual operation: See "Time segment1, Time segment2" on page 648

BUS<b>:CAN:FDATa:JWIDth <FlexDatJumpWdt>
BUS<b>:CAN:JWIDth <JumpWidth>

Defines the maximum number of time quanta for phase correction. Time segment1 may be lengthened or Time segment2 may be shortened due to resynchronization. Resynchronization corrects the phase error of an edge caused by the drift of the oscillators.

For CAN FD signals, this setting defines the synchronization of the arbitration phase.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<JumpWidth> Time quanta

Range: 1 to 4, available maximum depends on the number of segments and the sample point
Increment: 1
*RST: 1

Manual operation: See "Jump width" on page 648

27.18.9.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:CAN:TYPE <Type>

Selects the trigger type for CAN analysis.

See: "Trigger type" on page 651.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<Type> STOF | FTYP | ID | IDDT | ERRC

STOF
STart Of Frame: triggers on the first edge of the dominant SOF bit (synchronization bit).

FTYP
Frame TYPe: triggers on a specified frame type (data, remote, error, or overload) and on the identifier format.
To set the frame type, use `TRIGger<t>:CAN:FTYPe`. ´Set the identifier format with `TRIGger<t>:CAN:ITYPe`

ID
IDentifier: Sets the trigger to one specific identifier or an identifier range. To set the identifier, use `TRIGger<t>:CAN:ICONdition`, `TRIGger<t>:CAN:IMIN`, and `TRIGger<t>:CAN:IMAX`.

IDDT
IDentifier and DaTa: Combination of identifier and data conditions To set the identifier condition, use `TRIGger<t>:CAN:ICONdition`, `TRIGger<t>:CAN:IMIN`, and `TRIGger<t>:CAN:IMAX`.
To set the data condition, use `TRIGger<t>:CAN:DCONdition`, `TRIGger<t>:CAN:DMIN`, and `TRIGger<t>:CAN:DMAX`.

ERRC
ERRor Condition: Define the error types with
`TRIGger<t>:CAN:ACKerror`,
`TRIGger<t>:CAN:BITSterror`,
`TRIGger<t>:CAN:CRCerror`,
`TRIGger<t>:CAN:FORMerror`,
`TRIGger<t>:CAN:FDATa:SCERror` on page 2094.

*RST: STOF

Manual operation: See "Trigger type" on page 651

TRIGger<t>:CAN:FDATa:STANdard <Standard>

Selects the CAN standard. Use `ANY` if the standard of the signal is unknown.

Suffix:
<t> 1..3

Parameters:
<Standard> ANY | CAN | CANFd

*RST: CAN

Manual operation: See "Standard" on page 653

TRIGger<t>:CAN:FTYPe <FrameType>

Selects the CAN frame type if `TRIGger<t>:CAN:TYPE` is set to FTYP (frame type) or ID (identifier).

For data and remote frames, the identifier format has to be set with `TRIGger<t>:CAN:ITYPe`.

See also: "Frame type" on page 653

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<FrameType> ANY | DATA | REMote | ERRor | OVERload
Available values depend on the CAN standard and on the `TRIGger<t>:CAN:TYPE` setting:
Remote frames are not available in the CAN FD protocol.
If the trigger type is set to FTYP (frame type), you can set the values `DATA | REMote | ERRor | OVERload`.
If the trigger type is set to ID (identifier), you can set the values `ANY | DATA | REMote`.

*RST: ANY

Manual operation: See "Frame type" on page 653

TRIGger<t>:CAN:ITYPe <IdentifierType>

Selects the format of data and remote frames.

Remote frames are not available in the CAN FD protocol.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<IdentifierType> ANY | B11 | B29

B11
11 bit identifier (standard format). The instrument triggers on the sample point of the IDE bit.

B29
29 bit identifier (extended format). The instrument triggers on the sample point of the RTR bit.

ANY
The ID type and ID pattern are not relevant for the trigger condition.

*RST: ANY

Manual operation: See "ID type" on page 653

TRIGger<t>:CAN:ICONdition <IdOperator>

Sets the operator to set a specific identifier or an identifier range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<IdOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These condition require one identifier pattern to be set with `TRIGger<t>:CAN:IMIN`.

INRange | OORange
In range / Out of range: Set the minimum and maximum value of the range with `TRIGger<t>:CAN:IMIN` and `TRIGger<t>:CAN:IMAX` on page 2087.

*RST: EQUal

Manual operation: See "Identifier setup: Condition, Identifier min, Identifier max" on page 654

TRIGger<t>:CAN:IMIN <IdPattern>

Specifies a message identifier pattern, or sets the the start value of an identifier range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<IdPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Manual operation: See "Identifier setup: Condition, Identifier min, Identifier max" on page 654

TRIGger<t>:CAN:IMAX <IdPatternTo>

Sets the the end value of an identifier range if `TRIGger<t>:CAN:ICONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<IdPatternTo> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Manual operation: See "Identifier setup: Condition, Identifier min, Identifier max" on page 654

TRIGger<t>:CAN:FDATa:FDF <FDF_Bit>

Specifies the CAN FD frame format. It corresponds to the EDL bit (extended data length), which only exists in CAN FD format.

Suffix:
<t> 1..3

Parameters:
<FDF_Bit> ONE | ZERO | DC

ONE: CAN FD.
ZERO: CAN.
DC: don't care, the format is not relevant.

*RST: DC

Manual operation: See "FD bits" on page 654

TRIGger<t>:CAN:FDATa:BRS <BRS_Bit>

Sets the bit rate switch bit.

Suffix:
<t> 1..3

Parameters:
<BRS_Bit> ONE | ZERO | DC

ONE: the bit rate switches from the bit rate of the arbitration phase to the faster data rate.

*RST: ONE

Manual operation: See "FD bits" on page 654

TRIGger<t>:CAN:FDATa:ESI <ESI_Bit>

Sets the error state indicator bit.

Suffix:
<t> 1..3

Parameters:
<ESI_Bit> ONE | ZERO | DC

DC: don't care, bit is nor relevant

*RST: DC

Manual operation: See "FD bits" on page 654

TRIGger<t>:CAN:DCONdition <DataOperator>

Sets the operator to set a specific data pattern or a data pattern range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with `TRIGger<t>:CAN:DMIN`.

INRange | OORange
In range / Out of range: Set the minimum and maximum value of the range with `TRIGger<t>:CAN:DMIN` and `TRIGger<t>:CAN:DMAX`.

*RST: EQUal

Manual operation: See "Data setup: DLC, NDB, Transfer, Condition, Data min, Data max" on page 654

TRIGger<t>:CAN:DMIN <DataPattern>

Specifies a data pattern, or sets the the start value of a data pattern range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data setup: DLC, NDB, Transfer, Condition, Data min, Data max" on page 654

TRIGger<t>:CAN:DMAX <DataPatternTo>

Sets the the end value of an data range if `TRIGger<t>:CAN:DCONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<DataPatternTo> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data setup: DLC, NDB, Transfer, Condition, Data min, Data max" on page 654

TRIGger<t>:CAN:BORDer <Endianness>

Sets the byte order (endianness) of the data transfer. Only for CAN protocol.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<Endianness> BENDian | LENDian

BENDian
Big endian, data is analyzed and evaluated in the order of reception.

LENDian
Little endian, the instrument reads the complete data, reverses the byte order of the data, and compares it with the specified data word.

*RST: BENDian

Manual operation: See "Data setup: DLC, NDB, Transfer, Condition, Data min, Data max" on page 654

TRIGger<t>:CAN:DLCCondition <DLCOperator>

Operator to set the data length code for triggering on CAN and CAN FD data.

For details, see "Data setup: DLC, NDB, Transfer, Condition, Data min, Data max" on page 654.

The number of data bytes to be found is set with `TRIGger<t>:CAN:DLC`.

See also: `TRIGger<t>:CAN:BORDer`.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<DLCOperator> EQUal | GETHan

For little endian transfer direction, EQUal must be set.

*RST: GETHan

Manual operation: See "Data setup: DLC, NDB, Transfer, Condition, Data min, Data max" on page 654

TRIGger<t>:CAN:DLC <WordCount>

Sets the Data Length Code, the number of data bytes to be found. For complete definition, set also the operator with `TRIGger<t>:CAN:DLCCondition` on page 2090.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<WordCount> Range: CAN: 1 to 8, CAN FD: 1 to 15 (64 bytes)
Increment: 1
*RST: 1

Manual operation: See "Data setup: DLC, NDB, Transfer, Condition, Data min, Data max" on page 654

TRIGger<t>:CAN:NDBYtes?

Returns the number of data bytes defined by DLC. DLC and NDB are different in CAN FD for DLCs > 8.

See also: "Data setup: DLC, NDB, Transfer, Condition, Data min, Data max" on page 654.

Suffix:
<t> 1..3

Return values:
<NDBytes> Range: 1 to 64
Increment: 1
*RST: 1

Usage: Query only

Manual operation: See "Data setup: DLC, NDB, Transfer, Condition, Data min, Data max" on page 654

TRIGger<t>:CAN:FDATa:DPOPerator <DataPosOperator>

Sets the operator to define an exact position or a data range where the instrument looks for the specified data pattern.

The position can be defined if the data field of the frame is longer than 8 bytes - if `TRIGger<t>:CAN:DLC`≥9.

Suffix:
<t> 1..3

Parameters:
<DataPosOperator> ANY | OFF | EQUal | GETHan | INRange | RANGe

ANY = OFF
The data position is not relevant for the trigger condition.

EQUal | GETHan
Equal, Greater or equal than. These conditions require one data position to be set with `TRIGger<t>:CAN:FDATa:DPOSition`.

INRange = RANGe
In range: Set the minimum and maximum value of the range with `TRIGger<t>:CAN:FDATa:DPOSition` and `TRIGger<t>:CAN:FDATa:DPTO`.

*RST: ANY

Manual operation: See "Data position" on page 655

TRIGger<t>:CAN:FDATa:DPOSition <DataPosition>

Defines the number of the first data byte at which the data pattern may start.

Suffix:
<t> 1..3

Parameters:
<DataPosition> Range: 1 to 57
Increment: 1
*RST: 1

Manual operation: See "Data position" on page 655

TRIGger<t>:CAN:FDATa:DPTO <DataPositionTo>

Sets the number of the last byte at which the required data pattern may start.

Suffix:
<t> 1..3

Parameters:
<DataPositionTo> Range: 8 to 64
Increment: 1
*RST: 8

Manual operation: See "Data position" on page 655

TRIGger<t>:CAN:ACKerror <AckError>

Triggers when the transmitter does not receive an acknowledgment - a dominant bit during the Ack Slot.

The trigger type has to be set before: `TRIGger<t>:CAN:TYPE` to `ERRC`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<AckError> OFF | ON
*RST: ON

Manual operation: See "Error conditions" on page 656

TRIGger<t>:CAN:BITSterror <BitStuffError>

Triggers if astuff error occurs - when the 6th consecutive equal bit level in the mentioned fields is detected.

The trigger type has to be set before: `TRIGger<t>:CAN:TYPE` to `ERRC`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<BitStuffError> OFF | ON
*RST: ON

Manual operation: See "Error conditions" on page 656

TRIGger<t>:CAN:CRCerror <ChecksumError>

Triggers on CRC errors. A CRC error occurs when the CRC calculated by the receiver differs from the received value in the CRC sequence.

The trigger type has to be set before: `TRIGger<t>:CAN:TYPE` to `ERRC`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<ChecksumError> OFF | ON
*RST: ON

Manual operation: See "Error conditions" on page 656

TRIGger<t>:CAN:FORMerror <FormError>

Triggers when a fixed-form bit field contains one or more illegal bits.

The trigger type has to be set before: `TRIGger<t>:CAN:TYPE` to `ERRC`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<FormError> OFF | ON
*RST: ON

Manual operation: See "Error conditions" on page 656

TRIGger<t>:CAN:FDATa:SCERror <StuffCountError>

Triggers on stuff count errors. A stuff count error occurs if th received stuff count value does not match the value calculated from the own stuff bit count.

The trigger type `TRIGger<t>:CAN:TYPE` must be set to `ERRC`.

Only relevant for CAN FD signals in ISO standard.

Suffix:
<t> 1..3

Parameters:
<StuffCountError> OFF | ON
*RST: ON

Manual operation: See "Error conditions" on page 656

27.18.9.3 Decode results

To load and acivate a label list, use:

- `BUS<b>:NEWList` on page 1915
- `BUS<b>:SYMBols` on page 1915

BUS<b>:CAN:FCOunt? 2095
BUS<b>:CAN:FDATa:FRAMe<fr>:STANdard? 2095
BUS<b>:CAN:FRAMe<fr>:STATus? 2095
BUS<b>:CAN:FRAMe<fr>:NDBYtes? 2096
BUS<b>:CAN:FRAMe<fr>:STARt? 2096

BUS<b>:CAN:FRAMe<fr>:BYTE<o>:STATe? 2102
BUS<b>:CAN:FRAMe<fr>:BYTE<o>:VALue? 2102

BUS<b>:CAN:FCOunt?

Returns the number of decoded frames of the acquisition.

Suffix:
<b> 1..4
Selects the serial bus.

Return values:
<Count> Total number of decoded frames.
Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CAN:FDATa:FRAMe<fr>:STANdard?

Returns the CAN standard.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> The frame suffix is irrelevant.

Return values:
<Standard> CAN | CANFd
*RST: CAN

Usage: Query only

Manual operation: See "CAN-FD" on page 645

BUS<b>:CAN:FRAMe<fr>:STATus?

Returns the overall state of the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<FrameState> OK | FORM | BTST | CRC | CRCD | NOACk | ACKD | EOFD | CAERror | FCERor | INSufficient | SERRror | SFERror | SCERror | SAERror | SCAE | SCFE
OK: the frame is valid.
FORM: Fixed-bit form error
BTST: Bit stuffing error occured.
CRC: Cyclic redundancy check failed.
CRCD: Wrong CRC delimiter occured.

NOACK: Acknowlegde is missing.
ACKD: Wrong ACK delimiter occured.
EOFD: Wrong end of frame.
CAERror: CRC error followed by an acknowledgement error (missing acknowledge)
FCERor: CRC error followed by a form error (wrong CRC delimiter or wrong ACK delimiter)
INSufficient: The frame is not completely contained in the acquisition. The acquired part of the frame is valid.
SERRror: Stuff count error (CAN-FD ISO only)
SFER: Stuff count error and FORM error (CAN-FD ISO only)
SCER: Stuff count error and CRC error (CAN-FD ISO only)
SAER: Stuff count error and ACK error (CAN-FD ISO only)
SCAE: Stuff count error and CRC error and ACK error (CAN-FD ISO only)
SCFE: Stuff count error and CRC error and FORM error (CAN-FD ISO only)

*RST: OK

Usage: Query only

BUS<b>:CAN:FRAMe<fr>:NDBYtes?

REturns the number of data bytes.

Suffix:

<b> 1..4

<fr> *

Return values:

<NDBytes> Range: 1 to 64
Increment: 1
*RST: 1

Usage: Query only

Firmware/software: FW 3.35

BUS<b>:CAN:FRAMe<fr>:STARt?
BUS<b>:CAN:FRAMe<fr>:STOP?

Return the start time and stop time of the selected frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<Start>, <Stop> Time

Range: -100E+24 to 100E+24
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:CAN:FRAMe<fr>:SYMBol?

Returns the symbolic label of the specified frame if the label list is enabled.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the number of the frame in the current acquisition, 1...n.

Return values:

<Label> String with symbolic label of the identifier

Example: `BUS:CAN:FRAMe:SYMBol?`
Response: `Temperature`

Usage: Query only

BUS<b>:CAN:FRAMe<fr>:TYPE?

Returns the frame type of the selected frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<FrameType> DATA | REMote | ERR | OVLD
Data, remote, error or overload frame.
*RST: DATA

Usage: Query only

BUS<b>:CAN:FRAMe<fr>:DATA?

Returns the data of the specified frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<Data> Comma-separated list of values. The first value is the number of bytes, followed by the values of the data bytes.

Example: `BUS1:CAN:FRAMe2:DATA?`
`--> 3,208,231,32`
Returns the data of the second frame: the number of bytes is 3 data (first value).

Usage: Query only

BUS<b>:CAN:FRAMe<fr>:ACKState?
BUS<b>:CAN:FRAMe<fr>:CSSTate?
BUS<b>:CAN:FRAMe<fr>:DLCState?
BUS<b>:CAN:FRAMe<fr>:IDSTate?

Return the states of following parts of a message

- ACKState: state of acknowledgement field
- CSSTate: state of checksum field (CRC)
- DLCState: state of data length code
- IDSTate: identifier state

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<State> OK | ERRor | UNDF
UNDF: Undefined
*RST: OK

Usage: Query only

BUS<b>:CAN:FRAMe<fr>:ACKValue?

Returns the value of the acknowledge slot for the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<FrameAckValue> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and reset – are decimal values.

Range: 0 to 1
*RST: 0

Usage: Query only

BUS<b>:CAN:FRAMe<fr>:BITRate?

Returns the primary bit rate.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<PrimaryBitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

BUS<b>:CAN:FRAMe<fr>:CSValue?

Returns the CRC sequence value of the selected frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<ChecksumValue> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and reset – are decimal values.

Range: 0 to 2.09715E+6
*RST: 0

Usage: Query only

BUS<b>:CAN:FRAMe<fr>:DLCValue?

Returns the data length code of the selected frame - the number of data bytes in the frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<FrameDLCValue> Number of data bytes in decimal values.
Range: 0 to 15
*RST: 0

Usage: Query only

BUS<b>:CAN:FRAMe<fr>:IDTYpe?

Returns the identifier type of the selected frame, the identifier format of data and remote frames.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<IdentifierType> ANY | B11 | B29
B11: standard format, 11 bit
B29: extended format, 29 bit
*RST: B11

Usage: Query only

BUS<b>:CAN:FRAMe<fr>:IDValue?

Returns the identifier value of the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<IdtfVal> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and reset – are decimal values.
Range: 0 to 536.871E+6
*RST: 0

Usage: Query only

BUS<b>:CAN:FRAMe<fr>:BSEPosition?

Returns the location of a bit stuffing error.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<BitStuffErrorPos> Time when the error occured
Range: 0 to 5000
*RST: 0

Usage: Query only

BUS<b>:CAN:FRAMe<fr>:FERCause?

Returns information on a form error, if the frame status query returned a FORM error.

See also: BUS<b>:CAN:FRAMe<fr>:STATus? on page 2095

Suffix:
<b> 1..4

<fr> *

Return values:
<FormErrorCause> NONE | CRCDerror | ACKDerror | FSBE | RESerror
CRCD = CRC delimiter error
ACKD = ACK delimiter error
FSBE = Fixed stuff bit error (CAN-FD ISO only)
RESE = Reserved bit error
*RST: NONE

Usage: Query only

BUS<b>:CAN:FRAMe<fr>:SDEXport?

Returns the symbolic data of the frame in export format.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<SymbolicData>

Usage: Query only

BUS<b>:CAN:FDATa:FRAMe<fr>:SCValue?

Returns the stuff bit count modulo 8 value.

Suffix:

<b> 1..4

<fr> *

Return values:

<StuffCount> Range: 0 to 7
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CAN:FRAMe<fr>:BYTE<o>:STATe?

Returns the state of the specified byte.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<o> *
Selects the byte number.

Return values:

<State> OK | ERRor | UNDF
UNDF: Undefined
*RST: OK

Usage: Query only

BUS<b>:CAN:FRAMe<fr>:BYTE<o>:VALue?

Returns the value of the specified byte.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<o> *
Selects the byte number.

Return values:

<Value> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and reset – are decimal values.

Range: 0 to 255
*RST: 0

Usage: Query only

SEARch:TRIGger:CAN[:SSOFrame] <SearchName>,<FrameStart>
SEARch:TRIGger:CAN[:SSOFrame]? <SearchName>

Enables the search for a start of frame.

Parameters:

<FrameStart> OFF | ON

*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search Criteria" on page 659

SEARch:TRIGger:CAN:SFTYpe <SearchName>,<CheckFrameType>
SEARch:TRIGger:CAN:SFTYpe? <SearchName>

Enables the search for a specified frame type.

Parameters:
<CheckFrameType> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search Criteria" on page 659

SEARch:TRIGger:CAN:SFIDentifier <SearchName>,<Identifier>
SEARch:TRIGger:CAN:SFIDentifier? <SearchName>

Enables the search for frame indentifier.

Parameters:
<Identifier> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search Criteria" on page 659

SEARch:TRIGger:CAN:SIDData <SearchName>,<IdentifierData>
SEARch:TRIGger:CAN:SIDData? <SearchName>

Enables the search for identifier and data.

Parameters:
<IdentifierData> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search Criteria" on page 659

SEARch:TRIGger:CAN:SERRor <SearchName>,<ErrorCondition>
SEARch:TRIGger:CAN:SERRor? <SearchName>

Enables the search for a specified error.

Parameters:
<ErrorCondition> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search Criteria" on page 659

SEARch:TRIGger:CAN:FDATa:STANdard <SearchName>,<Standard>
SEARch:TRIGger:CAN:FDATa:STANdard? <SearchName>

Selects the CAN standard: CAN, CAN FD, or Any.

Use "Any" to search on either CAN or CAN-FD frame. In this case, the search configuration provides all possible settings, for CAN as well as for CAN FD.

Parameters:
<Standard> ANY | CAN | CANFd
*RST: CAN

Parameters for setting and query:
<SearchName> String with the search name

Manual operation: See "Standard" on page 661

SEARch:TRIGger:CAN:BORDer <SearchName>,<Endianness>
SEARch:TRIGger:CAN:BORDer? <SearchName>

Sets the byte order (endianness) of the data transfer.

Parameters:
<Endianness> BENDian | LENDian

BENDian
Big endian, most significant byte first.

LENDian
Little endian, least significant byte first.

*RST: BENDian

Parameters for setting and query:
<SearchName>

SEARch:TRIGger:CAN:FTYPe <SearchName>,<FrameType>
SEARch:TRIGger:CAN:FTYPe? <SearchName>

Selects the CAN frame type to be searched for.

For data and remote frames, the identifier format has to be set with `SEARch:TRIGger:CAN:ITYPe` on page 2106.

Parameters:
<FrameType> ANY | DATA | REMote | ERRor | OVERload
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame type" on page 661

SEARch:TRIGger:CAN:ITYPe <SearchName>,<IdentifierType>
SEARch:TRIGger:CAN:ITYPe? <SearchName>

Selects the format of data and remote frames: 11 bit for CAN base frames, or 29 bits for CAN extended frames.

Parameters:
<IdentifierType> ANY | B11 | B29
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "ID type" on page 661

SEARch:TRIGger:CAN:ICONdition <SearchName>,<IdOperator>
SEARch:TRIGger:CAN:ICONdition? <SearchName>

Sets the operator to set a specific identifier or an identifier range.

Parameters:
<IdOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These condition require one identifier pattern to be set with `SEARch:TRIGger:CAN:IMIN`.

INRange | OORange
In range / Out of range: Set the minimum and maximum value of the range with `SEARch:TRIGger:CAN:IMIN` and `SEARch:TRIGger:CAN:IMAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Identifier setup: Condition, Identifier min, Identifier max" on page 661

SEARch:TRIGger:CAN:IMAX <SearchName>,<IdPatternTo>
SEARch:TRIGger:CAN:IMAX? <SearchName>

Sets the the end value of an identifier range if `SEARch:TRIGger:CAN:ICONdition` is set to `INRange` or `OORange`.

Parameters:
<IdPatternTo> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Parameters for setting and query:
<SearchName>

Manual operation: See "Identifier setup: Condition, Identifier min, Identifier max" on page 661

SEARch:TRIGger:CAN:IMIN <SearchName>,<IDPattern>
SEARch:TRIGger:CAN:IMIN? <SearchName>

Specifies a message identifier pattern, or sets the the start value of an identifier range.

Parameters:
<IDPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Parameters for setting and query:
<SearchName>

Manual operation: See "Identifier setup: Condition, Identifier min, Identifier max" on page 661

SEARch:TRIGger:CAN:DCONdition <SearchName>,<DataOperator>
SEARch:TRIGger:CAN:DCONdition? <SearchName>

Sets the operator to set a specific data pattern or a data pattern range.

Parameters:
<DataOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with `SEARch:TRIGger:CAN:DMIN`.

INRange | OORange
In range / Out of range: Set the minimum and maximum value of the range with `SEARch:TRIGger:CAN:DMIN` and `SEARch:TRIGger:CAN:DMAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Data setup: DLC, NDB, Condition, Data min, Data max" on page 662

SEARch:TRIGger:CAN:DMIN <SearchName>,<DataPattern>
SEARch:TRIGger:CAN:DMIN? <SearchName>

Specifies a data pattern, or sets the the start value of a data pattern range.

Parameters:
<DataPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Data setup: DLC, NDB, Condition, Data min, Data max" on page 662

SEARch:TRIGger:CAN:DMAX <SearchName>,<DataPatternTo>
SEARch:TRIGger:CAN:DMAX? <SearchName>

Sets the the end value of an data range if `SEARch:TRIGger:CAN:DCONdition` is set to `INRange` or `OORange`.

Parameters:
<DataPatternTo> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Data setup: DLC, NDB, Condition, Data min, Data max" on page 662

SEARch:TRIGger:CAN:DLCCondition <SearchName>,<DLCOperator>
SEARch:TRIGger:CAN:DLCCondition? <SearchName>

Operator to set the data length code for search.

Parameters:
<DLCOperator> EQUal | GETHan

*RST: GETHan

Parameters for setting and query:
<SearchName>

Manual operation: See "Data setup: DLC, NDB, Condition, Data min, Data max" on page 662

SEARch:TRIGger:CAN:DLC <SearchName>,<WordCount>
SEARch:TRIGger:CAN:DLC? <SearchName>

Sets the Data Length Code, the number of data bytes to be found. For complete definition, set also the operator with `SEARch:TRIGger:CAN:DLCCondition`.

Parameters:
<WordCount> Range: 1 to 8
Increment: 1
*RST: 1

Parameters for setting and query:
<SearchName>

Manual operation: See "Data setup: DLC, NDB, Condition, Data min, Data max" on page 662

SEARch:RESult:CAN:FRAMe<fr>:NDBYtes? <SearchName>

Returns the number of data bytes defined by DLC. DLC and NDB are different in CAN FD for DLCs > 8.

See also: "Data setup: DLC, NDB, Transfer, Condition, Data min, Data max" on page 654.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<NDBytes> Range: 1 to 64
Increment: 1
*RST: 1

Usage: Query only

Manual operation: See "Data setup: DLC, NDB, Condition, Data min, Data max" on page 662

SEARch:TRIGger:CAN:FDATa:DPOPerator <SearchName>,<DataPosOperator>
SEARch:TRIGger:CAN:FDATa:DPOPerator? <SearchName>

Sets the operator for the data position if DLC ≥ 9. You can define an exact position, or a position range.

Parameters:
<DataPosOperator> ANY | OFF | EQUal | GETHan | INRange | RANGe

ANY = OFF
The data position is not relevant for the search.

EQUal | GETHan
Equal, Greater or equal than. These conditions require one data position to be set with `SEARch:TRIGger:CAN:FDATa:DPOSition`.

INRange = RANGe
In range: Set the minimum and maximum value of the range with `SEARch:TRIGger:CAN:FDATa:DPOSition` and `SEARch:TRIGger:CAN:FDATa:DPTO`.

*RST: ANY

Parameters for setting and query:
<SearchName> String with the search name

Manual operation: See "Data position" on page 662

SEARch:TRIGger:CAN:FDATa:DPOSition <SearchName>,<DataPosition>
SEARch:TRIGger:CAN:FDATa:DPOSition? <SearchName>

Defines the first possible start position of the data pattern.

Parameters:
<DataPosition>
Range: 1 to 57
Increment: 1
*RST: 1

Parameters for setting and query:
<SearchName> String with the search name

Manual operation: See "Data position" on page 662

SEARch:TRIGger:CAN:FDATa:DPTO <SearchName>,<DataPositionTo>
SEARch:TRIGger:CAN:FDATa:DPTO? <SearchName>

Defines the last possible start position of the data pattern if the position operator `SEARch:TRIGger:CAN:FDATa:DPOPerator` defines a range.

Parameters:
<DataPositionTo>
Range: 8 to 64
Increment: 1
*RST: 8

Parameters for setting and query:
<SearchName> String with the search name

Manual operation: See "Data position" on page 662

SEARch:TRIGger:CAN:ACKerror <SearchName>,<AckError>
SEARch:TRIGger:CAN:ACKerror? <SearchName>

Searches for acknowledgement errors. An acknowledgement error occurs when the transmitter does not receive an acknowledgment - a dominant bit during the Ack Slot.

Parameters:
<AckError> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 662

SEARch:TRIGger:CAN:BITSterror <SearchName>,<BitStuffError>
SEARch:TRIGger:CAN:BITSterror? <SearchName>

Searches for bit stuffing errors.

Parameters:
<BitStuffError> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 662

SEARch:TRIGger:CAN:CRCerror <SearchName>,<ChecksumError>
SEARch:TRIGger:CAN:CRCerror? <SearchName>

Searches for errors in the Cyclic Redundancy Check.

Parameters:
<ChecksumError> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 662

SEARch:TRIGger:CAN:FORMerror <SearchName>,<FormError>
SEARch:TRIGger:CAN:FORMerror? <SearchName>

Searches for form errors. A form error occurs when a fixed-form bit field contains one or more illegal bits.

Parameters:
<FormError> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 662

SEARch:TRIGger:CAN:FDATa:SCERror <SearchName>,<StuffCountError>
SEARch:TRIGger:CAN:FDATa:SCERror? <SearchName>

Triggers on stuff count errors. A stuff count error occurs if th received stuff count value does not match the value calculated from the own stuff bit count.

Only relevant for CAN FD signals in ISO standard.

Parameters:
<StuffCountError> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 662

SEARch:TRIGger:CAN:FDATa[:FDF] <SearchName>,<FDF_Bit>
SEARch:TRIGger:CAN:FDATa[:FDF]? <SearchName>

Sets the EDL bit (extended data length), which determines whether a frame is CAN or CAN-FD.

Parameters:
<FDF_Bit> ONE | ZERO | DC
ONE: CAN FD.
ZERO: CAN.
DC: don't care, the format is not relevant.
*RST: DC

Parameters for setting and query:
<SearchName> String with the search name

Manual operation: See "FD bits" on page 662

SEARch:TRIGger:CAN:FDATa:BRS <SearchName>,<BRS_Bit>
SEARch:TRIGger:CAN:FDATa:BRS? <SearchName>

Sets the bit rate switching bit for identifier and identifier + data searches.

Parameters:
<BRS_Bit> ONE | ZERO | DC
DC: Don't care
*RST: ONE

Parameters for setting and query:
<SearchName> String with the search name

Manual operation: See "FD bits" on page 662

SEARch:TRIGger:CAN:FDATa:ESI <SearchName>,<ESI_Bit>
SEARch:TRIGger:CAN:FDATa:ESI? <SearchName>

Sets the error state indicator bit for identifier and identifier + data searches.

Parameters:
<ESI_Bit> ONE | ZERO | DC
*RST: DC

Parameters for setting and query:
<SearchName> String with the search name

Manual operation: See "FD bits" on page 662

27.18.9.5 Search results

The search on decoded CAN data returns the same results as the queries for decode results.

In search result commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name.

For a description of the returned values, see the corresponding commands in Section 27.18.9.3, "Decode results", on page 2094.

Return values:
<FrameDLCValue> Range: 0 to 15
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:CAN:FRAMe<fr>:FERCause? <SearchName>

Returns information on a form error, if the frame status query returned a FORM error.

See also: `SEARch:RESult:CAN:FRAMe<fr>:STATus?` on page 2118.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FormErrorCause> NONE | CRCDerror | ACKDerror | FSBE | RESerror
See `BUS<b>:CAN:FRAMe<fr>:FERCause?` on page 2101.
*RST: NONE

Usage: Query only

SEARch:RESult:CAN:FRAMe<fr>:IDTYpe? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<IdentifierType> ANY | B11 | B29
*RST: B11

Usage: Query only

SEARch:RESult:CAN:FRAMe<fr>:IDValue? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<IdtfVal> Range: 0 to 536.871E+6
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:CAN:FDATa:FRAMe<fr>:SCValue? <SearchName>

Returns the stuff bit count modulo 8.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<StuffCount> Range: 0 to 7
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:CAN:FDATa:FRAMe<fr>:STANdard? <SearchName>

Returns the CAN protocol standard: CAN or CAN FD.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Standard> CAN | CANFd
*RST: CAN

Usage: Query only

SEARch:RESult:CAN:FRAMe<fr>:STARt? <SearchName>

Suffix:

Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:CAN:FRAMe<fr>:STATus? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameState> OK | FORM | BTST | CRC | CRCD | NOACk | ACKD | EOFD | CAERror | FCERor | INSufficient | SERRror | SFERror | SCERror | SAERror | SCAE | SCFE

See BUS<b>:CAN:FRAMe<fr>:STATus? on page 2095.

*RST: OK

Usage: Query only

SEARch:RESult:CAN:FRAMe<fr>:STOP? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameStop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:CAN:FRAMe<fr>:SYMBol? <SearchName>

Returns the symbolic label of the specified frame if the label list is enabled.

Suffix:
<fr> *
Selects the number of the frame in the current acquisition, 1...n.

Query parameters:
<SearchName> String parameter that contains the search definition name

Return values:
<Label> Symbolic label (string)

Usage: Query only

SEARch:RESult:CAN:FRAMe<fr>:TYPE? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameType> DATA | REMote | ERR | OVLD
*RST: DATA

Usage: Query only

27.18.9.6 Symbolic trigger, decode and search

- Symbolic trigger....2119
- Symbolic decode results....2121
- Symbolic search....2122

Symbolic trigger

TRIGger<t>:CAN:SYMBolic:MSGValue....2119
TRIGger<t>:CAN:SYMBolic:TSIGnals....2120
TRIGger<t>:CAN:SYMBolic:SIGValue....2120
TRIGger<t>:CAN:SYMBolic:DMAX....2120
TRIGger<t>:CAN:SYMBolic:DMIN....2121
TRIGger<t>:CAN:SYMBolic:SGEValue....2121

TRIGger<t>:CAN:SYMBolic:MSGValue <MessageName>

Sets the message to be triggered or searched for.

The setting is used by symbolic trigger and symbolic search. Thus, you always trigger on and search for the same message if symbolic trigger and symbolic search is used at the same time.

See also: `SEARch:TRIGger:CAN:SYMBolic:MSGValue` on page 2123

Suffix:
<t> 1..3

Parameters:
<MessageName> String with the symbolic message name

Manual operation: See "Message" on page 664

TRIGger<t>:CAN:SYMBolic:TSIGnals <TriggerOnSignal>

Enables the trigger on a specific signal value that is part of the selected message.

Suffix:
<t> 1..3

Parameters:
<TriggerOnSignal> OFF | ON
*RST: OFF

Manual operation: See "Signal trigger" on page 665

TRIGger<t>:CAN:SYMBolic:SIGValue <SignalName>

Sets the signal name to be triggered or searched for.

The setting is used by symbolic trigger and symbolic search. Thus, you always trigger on and search for the same signal if symbolic trigger and symbolic search is used at the same time.

See also: `SEARch:TRIGger:CAN:SYMBolic:SIGValue` on page 2123

Suffix:
<t> 1..3

Parameters:
<SignalName> String with the signal name as defined in the DBC file.

Manual operation: See "Signal" on page 665

TRIGger<t>:CAN:SYMBolic:DMAX <DataPatternTo>

Defines the maximum data value of the signal.

This value is required to specify a range if condition `INRange | OORange` is set with `TRIGger<t>:CAN:DCONdition`.

Suffix:
<t> 1..3

Parameters:
<DataPatternTo> Decimal representation of the data pattern
Range: -100E+24 to 100E+24
Increment: 1
*RST: 1

Manual operation: See "Value max" on page 665

TRIGger<t>:CAN:SYMBolic:DMIN <DataPattern>

Defines the minimum data value of the signal.

To set the condition, use `TRIGger<t>:CAN:DCONdition`.

Suffix:
<t> 1..3

Parameters:
<DataPattern> Decimal representation of the data pattern

Range: -100E+24 to 100E+24
Increment: 1
*RST: 0

Manual operation: See "Value, Value min" on page 665

TRIGger<t>:CAN:SYMBolic:SGEValue <SignEnumVal>
TRIGger<t>:CAN:SYMBolic:SGEValue? <SignalEnumValue>

Sets a symbolic data value for signals with enumerated values.

Suffix:
<t> 1..3

Parameters:
<SignalEnumValue> Numeric value according to the value definition in the DBC file

Example: Definition line in DBC file:

```
VAL_ 2175091489 Gear 0 "Idle" 1 "Gear_1" 2 "Gear_2" 3 "Gear_3"
4 "Gear_4" 5 "Gear_5" ;
```

Search for "Gear_4"

```
TRIGger:CAN:SYMBolic:SGEValue 4
```

Manual operation: See "Value, Value min" on page 665

Symbolic decode results

BUS<b>:CAN:FRAMe<fr>:SDATa?

Returns the complete symbolic data of the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<SymbolicData> String with comma-separated list of symbolic data

Example:
```
BUS:CAN:FRAMe9:SDATa?
<-- [sym] 325 kW, 0x0A, 423 N, 174 l, Running, 90 degC, 0x06, 437 rpm
```
Returns the symbolic results of the 9th frame.

Usage: Query only

Symbolic search

SEARch:RESult:CAN:FRAMe<fr>:SDATa? 2122
SEARch:TRIGger:CAN:SSYMbolic 2122
SEARch:TRIGger:CAN:SYMBolic:MSGValue 2123
SEARch:TRIGger:CAN:SYMBolic:SSIGnals 2123
SEARch:TRIGger:CAN:SYMBolic:SIGValue 2123
SEARch:TRIGger:CAN:SYMBolic:DMIN 2124
SEARch:TRIGger:CAN:SYMBolic:DMAX 2124
SEARch:TRIGger:CAN:SYMBolic:SGEValue 2124

SEARch:RESult:CAN:FRAMe<fr>:SDATa? <SearchName>

Returns the symbolic data of the selected result frame.

Suffix:
<fr> *
Sets the index of the search result frame.

Query parameters:
<SearchName> String that contains the search definition name

Return values:
<SymbolicData> String with comma-separated list of symbolic data

Example:
```
SEARch:RESult:CAN:FRAMe:SDATa? 'Search1'
<-- [sym] 325 kW, 0x0A, 423 N, 174 l, Running, 90 degC, 0x06, 437 rpm
```
Returns the symbolic results of the first search result.

Usage: Query only

SEARch:TRIGger:CAN:SSYMbolic <SearchName>,<CheckSymbolic>
SEARch:TRIGger:CAN:SSYMbolic? <SearchName>

Enables the symbolic search and disables all other search criteria.

Parameters:
<CheckSymbolic> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName> String that contains the search definition name

Manual operation: See "Search Criteria" on page 659

SEARch:TRIGger:CAN:SYMBolic:MSGValue <SearchName>,<MessageName>
SEARch:TRIGger:CAN:SYMBolic:MSGValue? <SearchName>

Sets the message to be triggered or searched for.

The setting is used by symbolic trigger and symbolic search. Thus, you always trigger on and search for the same message if symbolic trigger and symbolic search is used at the same time.

See also: `TRIGger<t>:CAN:SYMBolic:MSGValue` on page 2119

Parameters:
<MessageName> String that contains the symbolic message name

Parameters for setting and query:
<SearchName> String that contains the search definition name

Example: `SEARch:TRIGger:CAN:SYMBolic:MSGValue "Search1","EngineData"`

Manual operation: See "Message" on page 667

SEARch:TRIGger:CAN:SYMBolic:SSIGnals <SearchName>,<SymbolicSearch>
SEARch:TRIGger:CAN:SYMBolic:SSIGnals? <SearchName>

Enables the search for symbolic values if DBC label list file is loaded and applied. Symbolic search disables all other search criteria.

Parameters:
<SymbolicSearch> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName> String that contains the search definition name

Manual operation: See "Search signals" on page 667

SEARch:TRIGger:CAN:SYMBolic:SIGValue <SearchName>,<SignalName>
SEARch:TRIGger:CAN:SYMBolic:SIGValue? <SearchName>

Sets the signal name to be triggered or searched for.

The setting is used by symbolic trigger and symbolic search. Thus, you always trigger on and search for the same signal if symbolic trigger and symbolic search is used at the same time.

See also: `TRIGger<t>:CAN:SYMBolic:SIGValue` on page 2120

Parameters:
<SignalName> String that contains the symbolic signal name

Parameters for setting and query:
<SearchName> String that contains the search definition name

Example: `SEARch:TRIGger:CAN:SYMBolic:SIGValue "Search1","EngForce"`

Manual operation: See "Signal" on page 667

SEARch:TRIGger:CAN:SYMBolic:DMIN <SearchName>,<DataPattern>
SEARch:TRIGger:CAN:SYMBolic:DMIN? <SearchName>

Defines the minimum data pattern in a symbolic search.

To set the condition, use `SEARch:TRIGger:CAN:DCONdition`.

Parameters:
<DataPattern> Range: -100E+24 to 100E+24
Increment: 1
*RST: 0

Parameters for setting and query:
<SearchName> String that contains the search definition name

Manual operation: See "Value, Value (min)" on page 667

SEARch:TRIGger:CAN:SYMBolic:DMAX <SearchName>,<DataPatternTo>
SEARch:TRIGger:CAN:SYMBolic:DMAX? <SearchName>

Defines the maximum data pattern of the signal in a symbolic search.

This value is required to specify a range if condition `INRange | OORange` is set with `SEARch:TRIGger:CAN:DCONdition` on page 2107.

Parameters:
<DataPatternTo> Range: -100E+24 to 100E+24
Increment: 1
*RST: 1

Parameters for setting and query:
<SearchName> String that contains the search definition name

Manual operation: See "Value (max)" on page 667

SEARch:TRIGger:CAN:SYMBolic:SGEValue <SearchName>,<SignEnumVal>
SEARch:TRIGger:CAN:SYMBolic:SGEValue? <SearchName>

Sets a symbolic data value for signals with enumerated values.

Parameters:
<SignEnumVal> Numeric value according to the value definition in the DBC file

Parameters for setting and query:
<SearchName> String that contains the search definition name

Example: Definition line in DBC file:

```
VAL_ 2175091489 Gear 0 "Idle" 1 "Gear_1" 2 "Gear_2"
3 "Gear_3" 4 "Gear_4" 5 "Gear_5" ;
```

Search for "Gear_3"

```
SEARch:TRIGger:CAN:SYMBolic:SGEValue "Search1",3
```

Manual operation: See "Value, Value (min)" on page 667

BUS<b>:CANXl:SIC:HYSTeresis....2128
BUS<b>:CANXl:FAST:THReshold....2128
BUS<b>:CANXl:FAST:HYSTeresis....2129

BUS<b>:CANXl:SOURce <DataSource>

Sets the CAN-XL source channel to which the selected data line is connected.

Suffix:
<b> 1..4

Parameters:
<DataSource> With digital channels in SIC mode:
C1 | C2 | C3 | C4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
Without digital channels in FAST mode:
C1 | C2 | C3 | C4 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Manual operation: See "Data" on page 669

BUS<b>:CANXl:TYPE <SignalType>

Selects the CAN-High or CAN-Low line. Both lines are required for differential signal transmission used by CAN-XL.

Suffix:
<b> 1..4

Parameters:
<SignalType> CANL | CANH
*RST: CANL

Manual operation: See "Type" on page 669

BUS<b>:CANXI:TRCVmode <TransceiverMd>

Selects the transceiver mode for CAN-XL decoding.

Suffix:
<b> 1..4

Parameters:
<TransceiverMd> SIC | FAST
*RST: SIC

Manual operation: See "Transceiver mode" on page 669

BUS<b>:CANXI:BITRate <Bitrate>

Sets the number of transmitted bits per second for basic CAN.

Suffix:
<b> 1..4

Parameters:
<Bitrate> Range: 10000 to 5E+6
Increment: 100
*RST: 100E+3
Default unit: bps

Manual operation: See "Nominal bit rate" on page 670

BUS<b>:CANXI:SAMPlepoint <SamplePoint>

Sets for basic CAN the position of the sample point within the bit in percent of the nominal bit time.

Suffix:
<b> 1..4

Parameters:
<SamplePoint> Range: 30 to 90
Increment: 5
*RST: 66
Default unit: %

Manual operation: See "Sample point" on page 670

BUS<b>:CANXI:FDATa:DBITrate <FDBitrate>

Sets the bit rate of the data phase for the CAN-FD frame.

Suffix:
<b> 1..4

Parameters:
<FDBitrate> Range: 10000 to 15E+6
Increment: 100
*RST: 1E+6
Default unit: bps

Manual operation: See "FD bit rate" on page 670

BUS<b>:CANXI:FDATa:SAMPlepoint <FDSamplePoint>

Sets for CAN-FD the position of the sample point within the bit in percent of the nominal bit time.

Suffix:
<b> 1..4

Parameters:
<FDSamplePoint> Range: 30 to 90
Increment: 5
*RST: 66
Default unit: %

Manual operation: See "FD sample point" on page 670

BUS<b>:CANXI:XDATa:DBITrate <XLBitrate>

Sets the bit rate of the data phase for the CAN-XL frame.

Suffix:
<b> 1..4

Parameters:
<XLBitrate> Range: 10000 to 30E+6
Increment: 100
*RST: 10E+6
Default unit: bps

Manual operation: See "XL bit rate" on page 670

BUS<b>:CANXI:XDATa:SAMPlepoint <XLSamplePoint>

Sets for CAN-XL the position of the sample point within the bit in percent of the nominal bit time.

Suffix:
<b> 1..4

Parameters:

<XLSamplePoint>
Range: 30 to 90
Increment: 5
*RST: 66
Default unit: %

Manual operation: See "XL sample point" on page 670

BUS<b>:CANXI:SIC:THReshold <SICThreshold>

Sets a threshold value for the SIC transceiver mode.

Suffix:

<b> 1..4

Parameters:

<SICThreshold>
Range: -12 to 12
Increment: 0.01
*RST: 2.5
Default unit: V

Manual operation: See "SIC threshold" on page 671

BUS<b>:CANXI:SIC:HYSTeresis <SICHysteresis>

Sets a hysteresis value for the SIC transceiver mode.

Suffix:

<b> 1..4

Parameters:

<SICHysteresis>
Range: 0 to 12
Increment: 0.01
*RST: 0.05
Default unit: V

Manual operation: See "SIC hysteresis" on page 671

BUS<b>:CANXI:FAST:THReshold <FASTThreshold>

Sets a threshold value for the FAST transceiver mode.

Suffix:

<b> 1..4

Parameters:

<FASTThreshold>
Range: -12 to 12
Increment: 0.01
*RST: 0
Default unit: V

Manual operation: See "FAST threshold" on page 671

BUS<b>:CANXI:FAST:HYSTeresis <FASTHysteresis>

Sets a hysteresis value for the FAST transceiver mode.

Suffix:
<b> 1..4

Parameters:
<FASTHysteresis> Range: 0 to 12
Increment: 0.01
*RST: 0.05
Default unit: V

Manual operation: See "FAST hysteresis" on page 671

27.18.10.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:CANXI:CHKall....2130
TRIGger<t>:CANXI:CLR....2130

TRIGger<t>:CANXI:ERENable....2133
TRIGger<t>:CANXI:ERRor<n>:ENABle....2133

TRIGger<t>:CANXI:CHKall

Enables the software trigger for all available frame types.

Suffix:
<t> 1..3

Usage: Event
Asynchronous command

Manual operation: See "Select all, Unselect all" on page 672

TRIGger<t>:CANXI:CLR

Disables the software trigger for all available frame types.

Suffix:
<t> 1..3

Usage: Event
Asynchronous command

Manual operation: See "Select all, Unselect all" on page 672

TRIGger<t>:CANXI:FRENable <Frame>,<Enabler>
TRIGger<t>:CANXI:FRAMe<fr>:ENABle <Enable>

Enables or disables the checking condition for the selected frame for the trigger.

Suffix:
<t> 1..3

<fr> *

Parameters:
<Enable> OFF | ON

*RST: OFF

Manual operation: See "Frame type" on page 673

TRIGger<t>:CANXI:FIENable <Frame>,<Field>,<Enabler>
TRIGger<t>:CANXI:FRAMe<fr>:FLD<fl>:ENABle <CondEnabler>

Enables or disables the checking condition for the selected field of the selected frame of the trigger.

Suffix:
<t> 1..3

<fr> *

<fl> *

Parameters:
<CondEnabler> OFF | ON
*RST: OFF

Manual operation: See "Set details" on page 673

TRIGger<t>:CANXI:BIT <Frame>,<Field>,<Bit>
TRIGger<t>:CANXI:FRAMe<fr>:FLD<fl>:BIT <BitState>

Sets the bit state of a field that only consists of one bit for the trigger.

Suffix:
<t> 1..3
<fr> *
<fl> *

Parameters:
<BitState> ONE | ZERO | DC
*RST: DC

Manual operation: See "Set details" on page 673

TRIGger<t>:CANXI:DMAX <Frame>,<Field>,<Data>
TRIGger<t>:CANXI:FRAMe<fr>:FLD<fl>:DMAX <Data_Max>

Sets the end value of a data pattern range for the trigger, if the operator is set to `INRange` or `OORANGe`.

You can set the operator with `TRIGger<t>:CANXl:FRAMe<fr>:FLD<fl>:DOPerator`.

Suffix:
<t> 1..3
<fr> *
<fl> *

Parameters:
<Data_Max>

Manual operation: See "Set details" on page 673

TRIGger<t>:CANXI:DMIN <Frame>,<Field>,<Data>
TRIGger<t>:CANXI:FRAMe<fr>:FLD<fl>:DMIN <Data_Min>

Specifies the data pattern, or sets the start value of a data pattern range for the trigger.

Suffix:
<t> 1..3
<fr> *
<fl> *

Parameters:
<Data_Min>

Manual operation: See "Set details" on page 673

TRIGger<t>:CANXI:DOPerator <Frame>,<Field>,<Operator>
TRIGger<t>:CANXI:FRAMe<fr>:FLD<fl>:DOPerator <Data_Operator>

Sets the operator for the data pattern of the trigger in the selected field of the selected frame.

Suffix:
<t> 1..3

<fr> *

<fl> *

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

*RST: EQUal

Manual operation: See "Set details" on page 673

TRIGger<t>:CANXI:IMAX <Frame>,<Field>,<Data>
TRIGger<t>:CANXI:FRAMe<fr>:FLD<fl>:IMAX <Index_Max>

Sets the end value of an index range for the trigger if the operator is set to `INRange`.

You can set the operator with `TRIGger<t>:CANXl:FRAMe<fr>:FLD<fl>:IOPerator`.

Suffix:
<t> 1..3

<fr> *

<fl> *

Parameters:
<Index_Max> Range: 1 to 65.534E+3
Increment: 1
*RST: 65.534E+3

Manual operation: See "Set details" on page 673

TRIGger<t>:CANXI:IMIN <Frame>,<Field>,<Data>
TRIGger<t>:CANXI:FRAMe<fr>:FLD<fl>:IMIN <Index_Min>

Specifies the index, or sets the start value of an index range for the trigger.

Suffix:
<t> 1..3

<fr> *

<fl> *

Parameters:
<Index_Min> Range: 1 to 65.534E+3
Increment: 1
*RST: 1

Manual operation: See "Set details" on page 673

TRIGger<t>:CANXI:IOPerator <Frame>,<Field>,<Operator>
TRIGger<t>:CANXI:FRAMe<fr>:FLD<fl>:IOPerator <Index_Operator>

Sets the operator for the index in the selected field of the selected frame for the trigger.

Suffix:
<t> 1..3

<fr> *

<fl> *

Parameters:
<Index_Operator> EQUal | INRange | RANGe
*RST: INRange

Manual operation: See "Set details" on page 673

TRIGger<t>:CANXI:ERENable <ErrorName>,<Enabler>
TRIGger<t>:CANXI:ERRor<n>:ENABle <Enable>

Enables triggering for selected protocol error types.

Suffix:
<t> 1..3

<n> *

Parameters:
<Enable> OFF | ON
*RST: ON

Manual operation: See "Error type" on page 674

27.18.10.3 Decode results

To load and acivate a label list, use:

- `BUS<b>:NEWList` on page 1915
- `BUS<b>:SYMBols` on page 1915

BUS<b>:CANXI:FCOunt? 2134

BUS<b>:CANXI:FRAMe<fr>:XDATa<o>:FCRC? 2145

BUS<b>:CANXI:FCOunt?

Returns the number of decoded frames for the CAN-XL protocol analysis.

Suffix:
<b> 1..4

Return values:
<Count> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:FLDCount?

Returns the number of fields in the specified frame.

Suffix:
<b> 1..4

<fr> *

Return values:

<Count> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:ACKState?

Return the states of the acknowledgment field.

Suffix:

<b> 1..4

<fr> *

Return values:

<FrameAckState> OK | ERRor | UNDF
*RST: OK

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:ACKValue?

Returns the value of the acknowledge slot for the selected frame.

Suffix:

<b> 1..4

<fr> *

Return values:

<FrameAckValue> Range: 0 to 1
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:FLD<fl>:STATe?

Returns the state of the specified field in the specified frame.

Suffix:

<b> 1..4

<fr> *

<fl> *

Return values:

<State> OK | EOFD | ACKD | NOACk | CRCD | CRC | SERRror | FORM | BTST | UNKNown | INComplete

OK
The field has no error, it is valid.

EOFD
Wrong end of field

ACKD
Acknowledgment delimiter error

NOACk
Field acknowledgment is missing

CRCD
Checksum delimiter error

CRC
Checksum error, cyclic redundancy check failed

SERRror
Stuff count error (CAN-FD ISO only)

FORM
Fixed-bit form error

BTST
Bit stuffing error

UNKNown
State unknown

INComplete
Field not completely contained in the acquisition.

*RST: OK

Usage: Query only

BUS<b>:CANXl:FRAMe<fr>:FLD<fl>:LABel?

Returns the label of the specified field in the specified frame.

Suffix:
<b> 1..4

<fr> *

<fl> *

Return values:
<Label>

Usage: Query only

BUS<b>:CANXl:FRAMe<fr>:FLD<fl>:VALue?

Returns the value of the specified field in the specified frame.

Suffix:
<b> 1..4

<fr> *

<fl> *

Return values:
<Value> Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:FLD<fl>:FVALue?

Returns the formatted value of the specified field in the specified frame.

Suffix:
<b> 1..4

<fr> *

<fl> *

Return values:
<FormattedValue>

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:CSSTate?

Return the states of the checksum field (CRC).

Suffix:
<b> 1..4

<fr> *

Return values:
<ChecksumState> OK | ERRor | UNDF
*RST: OK

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:CSValue?

Returns the CRC sequence value of the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<ChecksumValue> Range: 0 to 4294967295
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:DLCState?

Return the states of the state of data length code.

Suffix:
<b> 1..4

<fr> *

Return values:
<FrameDLCState> OK | ERRor | UNDF
*RST: OK

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:DLCValue?

Returns the data length code of the selected frame - the number of data bytes in the frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<FrameDLCValue> Range: 0 to 2047
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:IDSTate?

Return the states of the identifier state.

Suffix:
<b> 1..4

<fr> *

Return values:
<IdtfSt> OK | ERRor | UNDF
*RST: OK

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:IDTYpe?

Returns the identifier type of the selected frame, the identifier format of data and remote frames.

Suffix:
<b> 1..4

<fr> *

Return values:

<IdentifierType> B11 | B29

B11: standard format, 11 bit
B29: extended format, 29 bit

*RST: B11

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:IDValue?

Returns the identifier value of the selected frame.

Suffix:

<b> 1..4

<fr> *

Return values:

<IdtfVal> Range: 0 to 536.871E+6
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:NDBYtes?

Returns the number of data bytes.

Suffix:

<b> 1..4

<fr> *

Return values:

<NDBytes> Range: 0 to 2048
Increment: 1
*RST: 1

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:STARt?

Return the start time of the selected frame.

Suffix:

<b> 1..4

<fr> *

Return values:

<FrameStart> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:STATus?

Returns the overall state of the selected frame.

Suffix:

<b> 1..4

<fr> *

Return values:

<FrameState> OK | EOFD | ACKD | NOACk | CRCD | CRC | SERRror | FORM | BTST | UNKNown | INComplete

`OK`: the frame is valid.
`EOFD`: Wrong end of frame.
`ACKD`: Wrong ACK delimiter occurred.
`NOACK`: Acknowledge is missing.
`CRCD`: Wrong CRC delimiter occurred.
`CRC`: Cyclic redundancy check failed.
`SERRror`: Stuff count error (CAN FD ISO only).
`FORM`: Fixed-bit form error.
`BTST`: Bit stuffing error occurred.
`UNKNown`: State unknown error
`INSufficient`: The frame is not completely contained in the acquisition. The acquired part of the frame is valid.

*RST: OK

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:STOP?

Return the stop time of the selected frame.

Suffix:

<b> 1..4

<fr> *

Return values:

<FrameStop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:SYMBol?

Returns the symbol of the specified frame if the label list is enabled.

Suffix:
<b> 1..4

<fr> *

Return values:
<Label>

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:TYPE?

Returns the frame type of the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<FrameType> CBFF | CBFR | CEFF | CEFR | FBFF | FEFF | XLFF | ERRor | OVERload | UNDefined

`CBFF`: classical base frame format data
`CBFRemote`: classical base frame format remote
`CEFF`: classical extended frame format data
`CEFRemote`: classical extended frame format remote
`FBFF`: FD base frame format
`FEFF`: FD extended frame format
`XLFF`: XL frame format
`ERR`: error
`OVLD`: overload

*RST: CBFF

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:XDATa<o>:AF?

Returns the value of the acceptance field for the selected frame.

Suffix:
<b> 1..4

<fr> *

<o> *

Return values:
<AF> Range: 0 to 4294967295
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CANXl:FRAMe<fr>:XDATa<o>:PCRC?

Returns the value of the preamble cyclic redundant check (PCRC) for the selected frame.

Suffix:
<b> 1..4

<fr> *

<o> *

Return values:
<PCRC> Range: 0 to 65535
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CANXl:FRAMe<fr>:SBC?

Returns the value of the stuff bit count (SBC) field for the selected CAN-XL frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<SBC> Range: 0 to 15
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CANXl:FRAMe<fr>:XDATa<o>:SEC?

Returns the value of the simple extended content (SEC) field for the selected CAN-XL frame.

Suffix:
<b> 1..4

<fr> *

<o> *

Return values:
<SEC> Range: 0 to 1
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:XDATa<o>:VCID?

Returns the value of the vector communication identifier (VCID) field for the selected CAN-XL frame.

Suffix:
<b> 1..4
<fr> *
<o> *

Return values:
<VCID> Range: 0 to 255
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:FDATa<o>:ESI?

Returns the value of the error state indicator (ESI) field for the selected frame.

Suffix:
<b> 1..4
<fr> *
<o> *

Return values:
<ESI> Range: 0 to 1
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:FDATa<o>:BRS?

Returns the value of the bit rate switch (BRS) field for the selected frame.

Suffix:
<b> 1..4
<fr> *
<o> *

Return values:
<BRS> Range: 0 to 1
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:DBITrate?

Returns the data bit rate of the frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<DataBitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:NBITrate?

Returns the nominal bit rate of the frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<NominalBitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

BUS<b>:CANXI:FRAMe<fr>:XDATa<o>:SDT?

Returns the symbol duration time (SDT) for the selected CAN-XL field in the selected frame. The SDT is important for correct bus timing, when the protocol switches between the different communication speeds of CAN, CAN-FD and CAN-XL. SDT is calculated as the ratio of the data bit rate (DBIT) and the nominal bit rate (NBIT) times the basic time quantum (TQ) of the CAN protocol: SDT = (DBIT / NBIT) * TQ.

Suffix:
<b> 1..4

<fr> *

<o> *

Return values:
<SDT> Range: 0 to 255
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CANXl:FRAMe<fr>:XDATa<o>:FCRC?

Returns the value of the frame CRC for the selected frame.

Suffix:

<b>	1..4
<fr>	*
<o>	*

Return values:

<FCRC>	Range:	0 to 4294967295
	Increment:	1
	*RST:	0

Usage: Query only

27.18.10.4 CAN-XL search settings

In search setup commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name. The commands are similar to CAN-XL trigger commands.

SEARch:TRIGger:CANXl:CHKall....2145

SEARch:TRIGger:CANXl:CHKall <SearchName>

Enables the search for all available frame types.

Setting parameters:
<SearchName>

Usage: Event
Asynchronous command

Manual operation: See "Select all, Unselect all" on page 677

SEARch:TRIGger:CANXl:CLR <SearchName>

Disables the search for all available frame types.

Setting parameters:
<SearchName>

Usage: Event
Asynchronous command

Manual operation: See "Select all, Unselect all" on page 677

SEARch:TRIGger:CANXl:FRENable <SearchName>,<Frame>,<Enabler>
SEARch:TRIGger:CANXl:FRAMe<fr>:ENABle <SearchName>,<Enable>
SEARch:TRIGger:CANXl:FRAMe<fr>:ENABle? <SearchName>

Enables searching on CAN-XL frames. Only the frames that match the selected search conditions are displayed.

Suffix:
<fr> *

Parameters:
<Enable> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame type" on page 677

SEARch:TRIGger:CANXl:FIENable <SearchName>,<Frame>,<Field>,<Enabler>
SEARch:TRIGger:CANXl:FRAMe<fr>:FLD<fl>:ENABle
<SearchName>,<CondEnabler>
SEARch:TRIGger:CANXl:FRAMe<fr>:FLD<fl>:ENABle? <SearchName>

Enables or disables the checking condition for the selected field of the selected frame.

Suffix:
<fr> *

<fl> *

Parameters:
<CondEnabler> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 678

SEARch:TRIGger:CANXI:BIT <SearchName>,<Frame>,<Field>,<Bit>
SEARch:TRIGger:CANXI:FRAMe<fr>:FLD<fl>:BIT <SearchName>,<BitState>
SEARch:TRIGger:CANXI:FRAMe<fr>:FLD<fl>:BIT? <SearchName>

Sets the bit state of a field to be searched that only consists of one bit.

Suffix:
<fr> *

<fl> *

Parameters:
<BitState> ONE | ZERO | DC

*RST: DC

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 678

SEARch:TRIGger:CANXI:DMAX <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:CANXI:FRAMe<fr>:FLD<fl>:DMAX <SearchName>,<Data_Max>
SEARch:TRIGger:CANXI:FRAMe<fr>:FLD<fl>:DMAX? <SearchName>

Sets the end value of a data pattern range if the operator is set to `INRange` or `OORANGe`.

You can set the operator with `SEARch:TRIGger:CANXl:FRAMe<fr>:FLD<fl>:DOPerator`.

Suffix:
<fr> *

<fl> *

Parameters:
<Data_Max> List of comma-separated values.

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 678

SEARch:TRIGger:CANXI:DMIN <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:CANXI:FRAMe<fr>:FLD<fl>:DMIN <SearchName>,<Data_Min>
SEARch:TRIGger:CANXI:FRAMe<fr>:FLD<fl>:DMIN? <SearchName>

Specifies the data pattern to be searched, or sets the start value of a data pattern range to be searched.

Suffix:
<fr> *

<fl> *

Parameters:
<Data_Min> List of comma-separated values.

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 678

SEARch:TRIGger:CANXl:DOPerator <SearchName>,<Frame>,<Field>,<Operator>
SEARch:TRIGger:CANXl:FRAMe<fr>:FLD<fl>:DOPerator
<SearchName>,<Data_Operator>
SEARch:TRIGger:CANXl:FRAMe<fr>:FLD<fl>:DOPerator? <SearchName>

Sets the operator for the data pattern to be searched in the selected field of the selected frame.

Suffix:
<fr> *

<fl> *

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal, In range, Out of range.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 678

SEARch:TRIGger:CANXl:IMAX <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:CANXl:FRAMe<fr>:FLD<fl>:IMAX <SearchName>,<Index_Max>
SEARch:TRIGger:CANXl:FRAMe<fr>:FLD<fl>:IMAX? <SearchName>

Sets the end value of an index range if the operator is set to `INRange`.

You can set the operator with `SEARch:TRIGger:CANXl:FRAMe<fr>:FLD<fl>:IOPerator`.

Suffix:
<fr> *

<fl> *

Parameters:
<Index_Max> Range: 1 to 65.534E+3
Increment: 1
*RST: 65.534E+3

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 678

SEARch:TRIGger:CANXI:IMIN <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:CANXI:FRAMe<fr>:FLD<fl>:IMIN <SearchName>,<Index_Min>
SEARch:TRIGger:CANXI:FRAMe<fr>:FLD<fl>:IMIN? <SearchName>

Specifies the index, or sets the start value of an index range.

Suffix:
<fr> *

<fl> *

Parameters:
<Index_Min> Range: 1 to 65.534E+3
Increment: 1
*RST: 1

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 678

SEARch:TRIGger:CANXI:IOPerator <SearchName>,<Frame>,<Field>,<Operator>
SEARch:TRIGger:CANXI:FRAMe<fr>:FLD<fl>:IOPerator
<SearchName>,<Index_Operator>
SEARch:TRIGger:CANXI:FRAMe<fr>:FLD<fl>:IOPerator? <SearchName>

Sets the operator for the index in the selected field of the selected frame.

Suffix:
<fr> *

<fl> *

Parameters:
<Index_Operator> EQUal | INRange | RANGe
*RST: INRange

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 678

SEARch:TRIGger:CANXI:ERENable <SearchName>,<ErrorName>,<Enabler>
SEARch:TRIGger:CANXI:ERRor<m>:ENABle <SearchName>,<Enable>
SEARch:TRIGger:CANXI:ERRor<m>:ENABle? <SearchName>

Enables or disables the checking condition for the selected error type to be searched.

Suffix:
<m> *

Parameters:
<Enable> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error type" on page 679

27.18.10.5 CAN-XL search results

The search on decoded CAN-XL data returns the same results as the queries for decode results.

In search result commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name.

For a description of the returned values, see the corresponding commands in Section 27.18.10.3, "Decode results", on page 2133.

27.18.11 LIN (option R&S RTO6-K520)

- Configuration....2160
- Trigger....2162
- Decode results....2170
- LIN search settings....2177
- LIN search results....2186

27.18.11.1 Configuration

BUS<b>:LIN:DATA:SOURce....2160
BUS<b>:LIN:DATA:THReshold....2160
BUS<b>:LIN:TECHnology....2161
BUS<b>:LIN:BITRate....2161
BUS<b>:LIN:POLarity....2162
BUS<b>:LIN:STANdard....2162

BUS<b>:LIN:DATA:SOURce <DataSource>

Sets the waveform of the data line.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<DataSource> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

See Section 27.4.2, "Waveform parameter", on page 1451

*RST: C1W1

Usage: Asynchronous command

Manual operation: See "Data" on page 683

BUS<b>:LIN:DATA:THReshold <Threshold>

Sets a user-defined threshold value.

Alternatively, you can set the threshold according to the signal technology with BUS<b>:LIN:TECHnology.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Threshold> Range: -12 to 12
Increment: 0.1
*RST: 0
Default unit: V

Manual operation: See "Threshold" on page 683

BUS<b>:LIN:TECHnology <Technology>

Sets the threshold voltage as defined for various signal technologies.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Technology> V15 | V25 | V35 | V6 | V9 | MANual

V15
1.5 Volt (TTL)

V25
2.5 Volt (CMOS 5.0 V)

V35 | V6 | V9
3.5 V (7 V supply), 6.0 V (12 V supply), 9.0 V (18 V supply) respectively

MANual
Manual setting of user-defined values with BUS<b>:LIN:DATA:THReshold.

*RST: V35

Manual operation: See "Threshold" on page 683

BUS<b>:LIN:BITRate <Bitrate>

Sets the number of transmitted bits per second.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Bitrate> Range: 1000 to 20E+3
Increment: 1
*RST: 9600
Default unit: bps

Manual operation: See "Bit rate" on page 683

BUS<b>:LIN:POLarity <Polarity>

Defines the idle state of the bus. The idle state is the rezessive state and corresponds to a logic 1.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Polarity> IDLLow | IDLHigh
*RST: IDLHigh

Manual operation: See "Polarity" on page 684

BUS<b>:LIN:STANdard <Standard>

Selects the version of the LIN standard.

See also: "LIN standard" on page 682

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Standard> V1X | V2X | J2602 | AUTO
*RST: AUTO

Manual operation: See "LIN standard" on page 682

27.18.11.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:LIN:TYPE....2163
TRIGger<t>:LIN:ICONdition....2164
TRIGger<t>:LIN:IMIN....2164
TRIGger<t>:LIN:IMAX....2164
TRIGger<t>:LIN:DCONdition....2165
TRIGger<t>:LIN:DMIN....2165
TRIGger<t>:LIN:DMAX....2165
TRIGger<t>:LIN:BORDer....2166

TRIGger<t>:LIN:DLECondition 2166
TRIGger<t>:LIN:DLENgth 2167
TRIGger<t>:LIN:IDOR<n>:ENABle 2167
TRIGger<t>:LIN:IDOR<n>[:VALue] 2168
TRIGger<t>:LIN:SYERror 2168
TRIGger<t>:LIN:IPERror 2168
TRIGger<t>:LIN:CHKSerror 2169
TRIGger<t>:LIN:ERRPattern 2169
TRIGger<t>:LIN:CRCDatalen 2170
TRIGger<t>:LIN:STANdard 2170

TRIGger<t>:LIN:TYPE <Type>

Selects the trigger type for LIN analysis.

See: "Trigger type" on page 687.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<Type> SYNC | ID | IDOR | IDDT | WKFR | ERRC

SYNC
Start of the frame, triggers on the stop bit of the sync field.

ID
Sets the trigger to one specific identifier or an identifier range.
To set the identifier, use `TRIGger<t>:LIN:ICONdition`, `TRIGger<t>:LIN:IMIN` on page 2164, and `TRIGger<t>:LIN:IMAX` on page 2164.

IDOR
Triggers on an OR combination with up to four identifier conditions. For each identifier condition, enable it with `TRIGger<t>:LIN:IDOR<n>:ENABle` and set the value with `TRIGger<t>:LIN:IDOR<n>[:VALue]`

IDDT
Combination of identifier and data conditions
To set the identifier condition, use `TRIGger<t>:LIN:ICONdition`, `TRIGger<t>:LIN:IMIN`, and `TRIGger<t>:LIN:IMAX`.
To set the data condition, use `TRIGger<t>:LIN:DCONdition`, `TRIGger<t>:LIN:DMIN`, and `TRIGger<t>:LIN:DMAX`.

WKFR
Wakeup frame

ERRC
Error condition. Define the error types with `TRIGger<t>:LIN:CHKSerror` on page 2169, `TRIGger<t>:LIN:IPERror`, and `TRIGger<t>:LIN:SYERror`

*RST: SYNC

Manual operation: See "Trigger type" on page 687

TRIGger<t>:LIN:ICONdition <IdOperator>

Sets the operator to set a specific identifier or an identifier range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<IdOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These condition require one identifier pattern to be set with `TRIGger<t>:LIN:IMIN`

INRange | OORange
In range / Out of range: Set the minimum and maximum value of the range with `TRIGger<t>:LIN:IMIN` and `TRIGger<t>:LIN:IMAX`

*RST: EQUal

Manual operation: See "Identifier setup: Condition, Frame ID min, Frame ID max" on page 688

TRIGger<t>:LIN:IMIN <IdPattern>

Specifies a slave identifier pattern, or sets the the start value of an identifier range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<IdPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Manual operation: See "Identifier setup: Condition, Frame ID min, Frame ID max" on page 688

TRIGger<t>:LIN:IMAX <IdPatternTo>

Sets the the end value of an identifier range if `TRIGger<t>:LIN:ICONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<IdPatternTo> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Manual operation: See "Identifier setup: Condition, Frame ID min, Frame ID max" on page 688

TRIGger<t>:LIN:DCONdition <DataOperator>

Sets the operator to set a specific data pattern or a data pattern range.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<DataOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with `TRIGger<t>:LIN:DMIN`.

INRange | OORange
In range / Out of range: Set the minimum and maximum value of the range with `TRIGger<t>:LIN:DMIN` and `TRIGger<t>:LIN:DMAX`

*RST: EQUal

Manual operation: See "Data setup: Data length, Transfer, Condition, Data min, Data max" on page 689

TRIGger<t>:LIN:DMIN <DataPattern>

Specifies a data pattern, or sets the the start value of a data pattern range.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<DataPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data setup: Data length, Transfer, Condition, Data min, Data max" on page 689

TRIGger<t>:LIN:DMAX <DataPatternTo>

Sets the the end value of an data range if `TRIGger<t>:LIN:DCONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataPatternTo> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data setup: Data length, Transfer, Condition, Data min, Data max" on page 689

TRIGger<t>:LIN:BORDer <Endianness>

Sets the byte order (endianness) of the data transfer.

According to the standard, LIN data is transmitted in little endian transfer order.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<Endianness> BENDian | LENDian

BENDian
Big endian, data is analyzed and evaluated in the order of reception.

LENDian
Little endian, the instrument reads the complete data, reverses the byte order of the data, and compares it with the specified data word.

*RST: BENDian

Manual operation: See "Data setup: Data length, Transfer, Condition, Data min, Data max" on page 689

TRIGger<t>:LIN:DLECondition <DLCOperator>

Operator to set the data length for triggering on LIN data.

For Big Endian transfer direction, you can trigger on a number of bytes less than the data length of the frame, that means, on the first bytes that are transmitted. For Little Endian transfer direction, the exact number of data bytes in the frame must be set.

Example: The data word to be sent is *12 34 56*, and it is sent little endian by the LIN node. With Data length ≥ 2 and Transfer = Big endian, you trigger on the data of the first two bytes, that is *56 34*. With Data length = 3 and Transfer = Little endian, you trigger on the required data word *12 34 56*.

The number of data bytes to be found is set with `TRIGger<t>:LIN:DLENgth` on page 2167.

See also:`TRIGger<t>:LIN:BORDer` on page 2166 .

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DLCOperator> EQUal | GETHan
For little endian transfer direction, EQUal must be set.
*RST: GETHan

Manual operation: See "Data setup: Data length, Transfer, Condition, Data min, Data max" on page 689

TRIGger<t>:LIN:DLENgth <WordCount>

Sets the length of the bit pattern to be found, in bytes. For "Big Endian" transfer direction, you can trigger on a number of bytes less than the data length of the frame, that means, on the beginning of the data pattern. For "Little Endian" transfer direction, the exact number of data bytes in the frame must be set.

For complete definition, set also the operator with `TRIGger<t>:LIN:DLECondition` on page 2166.

Suffix:
<t> 1..3

Parameters:
<WordCount> Range: 1 to 8
Increment: 1
*RST: 1

Manual operation: See "Data setup: Data length, Transfer, Condition, Data min, Data max" on page 689

TRIGger<t>:LIN:IDOR<n>:ENABle <UseIdentifier>

Includes the indicated IDOR address in the "identifier OR" trigger condition.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

<n> 1..4
Index of the identifier in an "identifier OR" condition

Parameters:
<UseIdentifier> OFF | ON
*RST: OFF

Manual operation: See "Identifier OR setup: Monitor, Frame ID" on page 689

TRIGger<t>:LIN:IDOR<n>[:VALue] <IdPattern>

Defines the pattern of the indicated IDOR identifier in the "identifier OR" trigger condition.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

<n> 1..4
Index of the identifier in an "identifier OR" condition

Parameters:
<IdPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The parameter accepts the bit value X (don't care).

Manual operation: See "Identifier OR setup: Monitor, Frame ID" on page 689

TRIGger<t>:LIN:SYERror <SyncError>

Triggers if a synchronization error occurs.

The trigger type has to be set before: `TRIGger<t>:LIN:TYPE` to `ERRC`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<SyncError> OFF | ON
*RST: ON

Manual operation: See "Error conditions" on page 690

TRIGger<t>:LIN:IPERror <IdParityError>

Triggers if an error occurs in the identifier parity bits. These are the bits 6 and 7 of the identifier.

The trigger type has to be set before: `TRIGger<t>:LIN:TYPE` to `ERRC`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<IdParityError> OFF | ON
*RST: ON

Manual operation: See "Error conditions" on page 690

TRIGger<t>:LIN:CHKSerror <ChecksumError>

Triggers on checksum errors according to the LIN standard set with `BUS<b>:LIN:STANdard`.

The trigger type has to be set before: `TRIGger<t>:LIN:TYPE` to `ERRC`.

The frame identifier must be set with `TRIGger<t>:LIN:ERRPattern` on page 2169 and the data length with `TRIGger<t>:LIN:CRCDatalen` on page 2170.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<ChecksumError> OFF | ON
*RST: ON

Manual operation: See "Error conditions" on page 690

TRIGger<t>:LIN:ERRPattern <ErrorPattern>

Sets the frame identifier to trigger on a checksum error with `TRIGger<t>:LIN:CHKSerror` on page 2169.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<ErrorPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.
Possible values depend on `TRIGger<t>:LIN:CRCDatalen`.
Defining don't care bits 'X' in the ERRP bit string resets CRCDatalen to 0. When CRCDatalen is different than 0, then all the bits in ERRP must be 1 or 0, and X bits are set to 0.

Example:
```
FORM:BPAT STRG
TRIG1:LIN:ERRP '1X0'
TRIG1:LIN:ERRP?
<-- 1X0XXX
TRIGger:LIN:CRCDatalen?
<-- 0
TRIGger:LIN:CRCDatalen 4
TRIG1:LIN:ERRP?
<-- 100000
TRIG1:LIN:ERRP '00x11'
TRIG1:LIN:ERRP?
<-- 00X11X
TRIGger:LIN:CRCDatalen?
<-- 0
```

Manual operation: See "Error conditions" on page 690

TRIGger<t>:LIN:CRCDatalen <CRCDataLength>

Sets the number of data bytes to trigger on CRC errors (`TRIGger<t>:LIN:TYPE` is set to ERRC and `TRIGger<t>:LIN:CHKSerror` is set ON.)

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<CRCDataLength> Values ≠0 restrict allowed bit values in `TRIGger<t>:LIN:ERRPattern` to 0 and 1.

Range: 0 to 8
Increment: 1
*RST: 0

Manual operation: See "Error conditions" on page 690

TRIGger<t>:LIN:STANdard <LINStandard>

Sets the LIN standard to trigger on CRC errors (`TRIGger<t>:LIN:TYPE` is set to ERRC and `TRIGger<t>:LIN:CHKSerror` is set ON.)

See also: "LIN standard" on page 682.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<LINStandard> V1X | V2X | J2602 | AUTO
*RST: AUTO

Manual operation: See "Error conditions" on page 690

27.18.11.3 Decode results

To load and acivate a label list, use:

- `BUS<b>:NEWList` on page 1915
- `BUS<b>:SYMBols` on page 1915

BUS<b>:LIN:FCOunt? 2171
BUS<b>:LIN:FRAMe<fr>:STATus? 2171
BUS<b>:LIN:FRAMe<fr>:STARt? 2172
BUS<b>:LIN:FRAMe<fr>:STOP? 2172
BUS<b>:LIN:FRAMe<fr>:SDATa? 2172
BUS<b>:LIN:FRAMe<fr>:SDEXport? 2172
BUS<b>:LIN:FRAMe<fr>:SYMBol? 2172
BUS<b>:LIN:FRAMe<fr>:VERSion? 2173
BUS<b>:LIN:FRAMe<fr>:DATA? 2173
BUS<b>:LIN:FRAMe<fr>:IDSTate? 2174

BUS<b>:LIN:FRAMe<fr>:IDValue? 2174
BUS<b>:LIN:FRAMe<fr>:IDPValue? 2174
BUS<b>:LIN:FRAMe<fr>:SYSTate? 2175
BUS<b>:LIN:FRAMe<fr>:CSSTate? 2175
BUS<b>:LIN:FRAMe<fr>:CSValue? 2176
BUS<b>:LIN:FRAMe<fr>:BITRate? 2176
BUS<b>:LIN:FRAMe<fr>:BYTE<o>:STATe? 2176
BUS<b>:LIN:FRAMe<fr>:BYTE<o>:VALue? 2177

BUS<b>:LIN:FCOunt?

Returns the number of decoded frames.

Suffix:

<b> 1..4
Selects the serial bus.

Return values:

<Count> Total number of decoded frames.

Usage: Query only

BUS<b>:LIN:FRAMe<fr>:STATus?

Returns the overall state of the selected frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<FrameState> OK | UART | CHCKsum | VERS | LENer | SPERror | PRERror | SYERror | WAKeup | CPERror | INSufficient | INComplete

UART: at least one UART error occured. LIN uses UART words without parity bit.
CHCKsum: checksum error
VERS: the version of the LIN standard is not valid
LENer: unexpected length
SPERror: stop error
PRERror: parity error in identifier
SYERror: synchronization error
WAKeup: the frame is a wakeup frame
CPERror: parity error and checksum error
INSufficient: the frame is not completely contained in the acquisition. The decoded part of the frame is valid.
INComplete: the frame is missing some parts

*RST: OK

Usage: Query only

BUS<b>:LIN:FRAMe<fr>:STARt?
BUS<b>:LIN:FRAMe<fr>:STOP?

Returns the start time and stop time of the selected frame, respectively.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<Start>, <Stop> Range: -100E+24 to 100E+24
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:LIN:FRAMe<fr>:SDATa?

Returns the complete symbolic data of the frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<SymbolicData>

Usage: Query only

BUS<b>:LIN:FRAMe<fr>:SDEXport?

Returns the symbolic data of the frame in export format.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<SymbolicData>

Usage: Query only

BUS<b>:LIN:FRAMe<fr>:SYMBol?

Returns the symbolic label of the specified frame if the label list is enabled.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the number of the frame in the current acquisition, 1...n.

Return values:
<Label> String with symbolic name of the identifier

Example: `BUS:LIN:FRAMe2:SYMBol?`
Response: `Temperature`

Usage: Query only

BUS<b>:LIN:FRAMe<fr>:VERSion?

Returns the version of the LIN standard for the specified frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<FrameVersion> V1X | V2X | UNK
UNK: Unknown
*RST: UNK

Usage: Query only

BUS<b>:LIN:FRAMe<fr>:DATA?

Returns the data bytes of the specified frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<Data> Comma-separated list of integer values (N, D1, D2,…, DN). N is the number of bytes in the frame, and D1…DN are the values of the bytes.

Example:
```
BUS:LIN:FRAMe4:DATA?
<-- 4,118,39,71,123
```

Usage: Query only

BUS<b>:LIN:FRAMe<fr>:IDSTate?

Returns the identifier state of the selected frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<IdentifierState> OK | STERror | SPERror | PRERror | UVAL | NOEXists | INSufficient

STERror: start error
SPERror: stop error
PRERror: parity error
UVAL: unexpected value
NOEXists: byte does not exist
INSufficient: the frame is not completely contained in the acquisition. The decoded part of the frame is valid.

*RST: OK

Usage: Query only

BUS<b>:LIN:FRAMe<fr>:IDValue?

Returns the identifier value of the selected frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<IdentifierValue> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and reset – are decimal values.

Range: 0 to 63
*RST: 0

Usage: Query only

BUS<b>:LIN:FRAMe<fr>:IDPValue?

Returns the value of the identifier parity bits of the selected frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<IdentifierParity> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and reset – are decimal values.
Range: 0 to 3
*RST: 0

Usage: Query only

BUS<b>:LIN:FRAMe<fr>:SYSTate?

Returns the state of the sync field for the specified frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<FrameSyncState> OK | STERror | SPERror | UVAL | NOEXists | INSufficient
STERror: start error
SPERror: stop error
UVAL: unexpected value
NOEXists: byte does not exist
INSufficient: the frame is not completely contained in the acquisition. The decoded part of the frame is valid.
*RST: OK

Usage: Query only

BUS<b>:LIN:FRAMe<fr>:CSSTate?

Returns the checksum state of the specified frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<ChecksumState> OK | STERror | SPERror | UVAL | NOEXists | INSufficient
STERror: start error
SPERror: stop error
UVAL: unexpected value
NOEXists: byte does not exist

INSufficient: the frame is not completely contained in the acquisition. The decoded part of the frame is valid.

*RST: OK

Usage: Query only

BUS<b>:LIN:FRAMe<fr>:CSValue?

Returns the checksum value of the specified frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<ChecksumValue> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and reset – are decimal values.

Range: 0 to 255
*RST: 0

Usage: Query only

BUS<b>:LIN:FRAMe<fr>:BITRate?

Returns the primary bit rate.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<PrimaryBitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

BUS<b>:LIN:FRAMe<fr>:BYTE<o>:STATe?

Returns the state of the specified byte.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<o> *
Selects the byte number.

Return values:

<FrameByteState> OK | STERror | SPERror | UVAL | NOEXists | INSufficient
STERror: start error
SPERror: stop error
UVAL: unexpected value
NOEXists: byte does not exist
INSufficient: the frame is not completely contained in the acquisition. The decoded part of the frame is valid.
*RST: OK

Usage: Query only

BUS<b>:LIN:FRAMe<fr>:BYTE<o>:VALue?

Returns the value of the specified byte.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<o> *
Selects the byte.

Return values:

<FrameByteValue> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and reset – are decimal values.
Range: 0 to 255
*RST: 0

Usage: Query only

27.18.11.4 LIN search settings

In search setup commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name. The commands are similar to LIN trigger commands.

SEARch:TRIGger:LIN:SSOFrame....2178
SEARch:TRIGger:LIN:SFIDentifier....2178
SEARch:TRIGger:LIN:IDENtifieror....2178
SEARch:TRIGger:LIN:SIDData....2179
SEARch:TRIGger:LIN:SERRor....2179
SEARch:TRIGger:LIN:WUFRame....2179

SEARch:TRIGger:LIN:ICONdition....2180
SEARch:TRIGger:LIN:IMIN....2180

SEARch:TRIGger:LIN:STANdard....2185

SEARch:TRIGger:LIN:SSOFrame <SearchName>,<FrameStart>
SEARch:TRIGger:LIN:SSOFrame? <SearchName>

Enables the search for the stop bit of the sync field, which marks the frame start.

Parameters:
<FrameStart> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search types" on page 692

SEARch:TRIGger:LIN:SFIDentifier <SearchName>,<Identifier>
SEARch:TRIGger:LIN:SFIDentifier? <SearchName>

Enables the search for one specific identifier or an identifier range.

Parameters:
<Identifier> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search types" on page 692

SEARch:TRIGger:LIN:IDENtifieror <SearchName>,<IdentifierOr>
SEARch:TRIGger:LIN:IDENtifieror? <SearchName>

Enables the search for one to four address conditions.

Parameters:
<IdentifierOr> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search types" on page 692

SEARch:TRIGger:LIN:SIDData <SearchName>,<IdentifierData>
SEARch:TRIGger:LIN:SIDData? <SearchName>

Enables the search for a combination of identifier and data conditions.

Parameters:
<IdentifierData> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search types" on page 692

SEARch:TRIGger:LIN:SERRor <SearchName>,<ErrorCondition>
SEARch:TRIGger:LIN:SERRor? <SearchName>

Enables the search for various errors in the frame.

Parameters:
<ErrorCondition> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search types" on page 692

SEARch:TRIGger:LIN:WUFRame <SearchName>,<WakeUpFrame>
SEARch:TRIGger:LIN:WUFRame? <SearchName>

Enables the search for wakeup frames.

Parameters:
<WakeUpFrame> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search types" on page 692

SEARch:TRIGger:LIN:ICONdition <SearchName>,<IdOperator>
SEARch:TRIGger:LIN:ICONdition? <SearchName>

Sets the operator to define a specific identifier or an identifier range.

Parameters:
<IdOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These operators require one identifier pattern to be set with `SEARch:TRIGger:LIN:IMIN`

INRange | OORange
In range / Out of range: Set the minimum and maximum value of the range with `SEARch:TRIGger:LIN:IMIN` and `SEARch:TRIGger:LIN:IMAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Identifier setup: Condition, Frame ID min, Frame ID max" on page 693

SEARch:TRIGger:LIN:IMIN <SearchName>,<IdPattern>
SEARch:TRIGger:LIN:IMIN? <SearchName>

Specifies a slave identifier pattern, or sets the the start value of an identifier range.

Parameters:
<IdPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Parameters for setting and query:
<SearchName>

Manual operation: See "Identifier setup: Condition, Frame ID min, Frame ID max" on page 693

SEARch:TRIGger:LIN:IMAX <SearchName>,<IdPatternTo>
SEARch:TRIGger:LIN:IMAX? <SearchName>

Sets the the end value of an identifier range if `SEARch:TRIGger:LIN:ICONdition` is set to `INRange` or `OORange`.

Parameters:
<IdPatternTo> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Parameters for setting and query:
<SearchName>

Manual operation: See "Identifier setup: Condition, Frame ID min, Frame ID max" on page 693

SEARch:TRIGger:LIN:IDOR<m>:ENABle <SearchName>,<UseIdentifier>
SEARch:TRIGger:LIN:IDOR<m>:ENABle? <SearchName>

Includes the indicated IDOR address in the "identifier OR" search.

Suffix:
<m> 1..4
Index of the identifier in an "identifier OR" condition

Parameters:
<UseIdentifier> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Identifier OR setup: Monitor, Frame ID" on page 693

SEARch:TRIGger:LIN:IDOR<m>[:VALue] <SearchName>,<IdPattern>
SEARch:TRIGger:LIN:IDOR<m>[:VALue]? <SearchName>

Defines the pattern of the indicated IDOR identifier in the "identifier OR" trigger condition.

Suffix:
<m> 1..4
Index of the identifier in an "identifier OR" condition

Parameters:
<IdPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Parameters for setting and query:
<SearchName>

Manual operation: See "Identifier OR setup: Monitor, Frame ID" on page 693

SEARch:TRIGger:LIN:DCONdition <SearchName>,<DataOperator>
SEARch:TRIGger:LIN:DCONdition? <SearchName>

Sets the operator to set a specific data pattern or a data pattern range.

Parameters:
<DataOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with `SEARch:TRIGger:LIN:DMIN`.

INRange | OORange
In range / Out of range: Set the minimum and maximum value of the range with `SEARch:TRIGger:LIN:DMIN` and `SEARch:TRIGger:LIN:DMAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Data setup: Condition, Data min, Data max, Data length, Transfer" on page 693

SEARch:TRIGger:LIN:DMIN <SearchName>,<DataPattern>
SEARch:TRIGger:LIN:DMIN? <SearchName>

Specifies a data pattern, or sets the the start value of a data pattern range.

Parameters:
<DataPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Parameters for setting and query:
<SearchName>

Manual operation: See "Data setup: Condition, Data min, Data max, Data length, Transfer" on page 693

SEARch:TRIGger:LIN:DMAX <SearchName>,<DataPatternTo>
SEARch:TRIGger:LIN:DMAX? <SearchName>

Sets the the end value of an identifier range if `SEARch:TRIGger:LIN:DCONdition` is set to `INRange` or `OORange`.

Parameters:
<DataPatternTo> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Parameters for setting and query:
<SearchName>

Manual operation: See "Data setup: Condition, Data min, Data max, Data length, Transfer" on page 693

SEARch:TRIGger:LIN:BORDer <SearchName>,<Endianness>
SEARch:TRIGger:LIN:BORDer? <SearchName>

Sets the byte order (endianness) of the data transfer.

Parameters:
<Endianness> BENDian | LENDian

BENDian
Big endian, data is analyzed and evaluated in the order of reception.

LENDian
Little endian, the instrument reads the complete data, reverses the byte order of the data, and compares it with the specified data word.

*RST: BENDian

Parameters for setting and query:
<SearchName>

Manual operation: See "Data setup: Condition, Data min, Data max, Data length, Transfer" on page 693

SEARch:TRIGger:LIN:DLECondition <SearchName>,<DLCOperator>
SEARch:TRIGger:LIN:DLECondition? <SearchName>

Operator to set the data length for search on LIN data.

For Big Endian transfer direction, you can trigger on a number of bytes less than the data length of the frame, that means, on the first bytes that are transmitted. For Little Endian transfer direction, the exact number of data bytes in the frame must be set.

Example: The data word to be sent is *12 34 56*, and it is sent little endian by the LIN node. With Data length ≥ 2 and Transfer = Big endian, you trigger on the data of the first two bytes, that is *56 34*. With Data length = 3 and Transfer = Little endian, you trigger on the required data word *12 34 56*.

The number of data bytes to be found is set with `SEARch:TRIGger:LIN:DLENgth`.

See also: `SEARch:TRIGger:LIN:BORDer` on page 2182.

Parameters:
<DLCOperator> EQUal | GETHan

For little endian transfer direction, EQUal must be set.

*RST: GETHan

Parameters for setting and query:
<SearchName>

Manual operation: See "Data setup: Condition, Data min, Data max, Data length, Transfer" on page 693

SEARch:TRIGger:LIN:DLENgth <SearchName>,<WordCount>
SEARch:TRIGger:LIN:DLENgth? <SearchName>

Sets the length of the bit pattern to be found, in bytes.

For complete definition, set the operator using `SEARch:TRIGger:LIN:DLECondition`, and the transfer direction with `SEARch:TRIGger:LIN:BORDer`.

Parameters:
<WordCount> Range: 1 to 8
Increment: 1
*RST: 1

Parameters for setting and query:
<SearchName>

Manual operation: See "Data setup: Condition, Data min, Data max, Data length, Transfer" on page 693

SEARch:TRIGger:LIN:IPERror <SearchName>,<IdParityError>
SEARch:TRIGger:LIN:IPERror? <SearchName>

Searches for errors in the identifier parity bits. These are the bits 6 and 7 of the identifier.

Parameters:
<IdParityError> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 694

SEARch:TRIGger:LIN:SYERror <SearchName>,<SyncError>
SEARch:TRIGger:LIN:SYERror? <SearchName>

Searches for synchronization errors.

Parameters:
<SyncError> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 694

SEARch:TRIGger:LIN:CHKSerror <SearchName>,<ChecksumError>
SEARch:TRIGger:LIN:CHKSerror? <SearchName>

Searches for checksum errors according to the LIN standard.

Use the following commands to configure the checksum error search:

- `SEARch:TRIGger:LIN:ERRPattern` on page 2185
- `SEARch:TRIGger:LIN:CRCDatalen` on page 2185
- `SEARch:TRIGger:LIN:STANdard` on page 2185

Parameters:
<ChecksumError> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 694

SEARch:TRIGger:LIN:ERRPattern <SearchName>,<ErrorPattern>
SEARch:TRIGger:LIN:ERRPattern? <SearchName>

Sets the frame identifier to search for a checksum error.

Parameters:
<ErrorPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 694

SEARch:TRIGger:LIN:CRCDatalen <SearchName>,<CRCDataLength>
SEARch:TRIGger:LIN:CRCDatalen? <SearchName>

Sets the number of data bytes search for CRC errors.

Parameters:
<CRCDataLength> Range: 0 to 8
Increment: 1
*RST: 0

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 694

SEARch:TRIGger:LIN:STANdard <SearchName>,<LINStandard>
SEARch:TRIGger:LIN:STANdard? <SearchName>

Sets the LIN standard to search for CRC errors.

Parameters:
<LINStandard> V1X | V2X | J2602 | AUTO
*RST: AUTO

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 694

27.18.11.5 LIN search results

The search on decoded LIN data returns the same results as the queries for decode results.

In search result commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name.

For a description of the returned values, see the corresponding commands in Section 27.18.11.3, "Decode results", on page 2170.

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:LIN:FRAMe<fr>:DATA? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Value> Data bytes in the frame

Usage: Query only

SEARch:RESult:LIN:FRAMe<fr>:SDATa? <SearchName>

Returns the symbolic data of the frame.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<SymbolicData>

Usage: Query only

SEARch:RESult:LIN:FRAMe<fr>:SDEXport? <SearchName>

Returns the symbolic data of the frame for the export format.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<SymbolicData>

Usage: Query only

SEARch:RESult:LIN:FRAMe<fr>:CSSTate? <SearchName>

Returns the status of the frame checksum.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<ChecksumState> OK | STERror | SPERror | PRERror | UVAL | NOEXists | INSufficient

STERror: StarT ERror, incorrect start bit
SPERror: StoP ERror, incorrect stop bit
PRERror:PaRity ERror, incorrect parity bit.
UVAL: unexpected value
NOEXists: byte does not exist

*RST: OK

Usage: Query only

SEARch:RESult:LIN:FRAMe<fr>:CSValue? <SearchName>

Returns the checksum value.

Suffix:

- Search settings....2213
- Search results....2224

27.18.12.1 Configuration

BUS<b>:FLXRay:SRCType....2192
BUS<b>:FLXRay:SOURce<n>....2192
BUS<b>:FLXRay:THReshold<n>....2193
BUS<b>:FLXRay:THENable....2193
BUS<b>:FLXRay:THData....2194
BUS<b>:FLXRay:PRSingle....2194
BUS<b>:FLXRay:PRDiff....2194
BUS<b>:FLXRay:PRLogic....2195

BUS<b>:FLXRay:POLarity....2195
BUS<b>:FLXRay:BITRate....2195
BUS<b>:FLXRay:CHTYpe....2196
BUS<b>:FLXRay:SEHB....2196

BUS<b>:FLXRay:SRCType <SourceType>

Sets the type of measurement.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<SourceType> SINGle | DIFFerential | LOGic

SINGle
Used for measurements with single-ended probes or single-ended voltage measurements with differential probes on the FlexRay bus. Two thresholds have to be defined as absolute voltage levels, see BUS<b>:FLXRay:THReshold<n> on page 2193.

DIFFerential
Used for differential measurements on the FlexRay bus. This is the most common measurement. Two thresholds have to be defined as differential voltages.

LOGic
Used for measurements of the logic signal inside the FlexRay node, between the communication controller and the bus driver. It is possible to measure simultaneously on a data line and on the "enable" line. Each line requires its own threshold.

*RST: SINGle

Manual operation: See "Source type" on page 695

BUS<b>:FLXRay:SOURce<n> <Sources>

Sets the input channel of the bus signal, or of the data and enable lines in case of a LOGic source type.

Suffix:
<b> 1..4
Selects the serial bus.

<n> 1..2
Selects the source: 1 = bus signal or data line, 2 = enable line

Parameters:
<Sources> NONE | C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

C1W1 | C2W1 | C3W1 | C4W1
Always available

NONE
Only available for SOURce2 (enable line)

M1 | M2 | M3 | M4 | R1 | R2 | R3 | R4
Only available if the trigger source is one of the input channels but not the serial bus.

D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15
Only available if `BUS<b>:FLXRay:SRCType` on page 2192 is set to `LOGic`.

*RST: SOURce1: C1W1, SOURce2: C2W1

Manual operation: See "Data" on page 695

BUS<b>:FLXRay:THReshold<n> <Thresholds>

Sets the thresholds for the bus signal if the source type is SINGle or DIFFerential.

For LOGic source type, use `BUS<b>:FLXRay:THData` on page 2194 and `BUS<b>:FLXRay:THENable` on page 2193.

Suffix:
<b> 1..4
Selects the serial bus.

<n> 1..2
1 = threshold high, 2 = threshold low

Parameters:
<Thresholds> Differential or absolute voltage level, depending on the source type. See `BUS<b>:FLXRay:SRCType` on page 2192.

Manual operation: See "Thresholds" on page 696

BUS<b>:FLXRay:THENable <ThresEnab>

Sets the threshold for the enable line if the source type is LOGic.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<ThresEnab>
Range: -12 to 12
Increment: 0.1
*RST: 2.65
Default unit: V

Manual operation: See "Thresholds" on page 696

BUS<b>:FLXRay:THData <ThresholdData>

Sets the threshold for the data line if the source type is LOGic.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<ThresholdData> Range: -12 to 12
Increment: 0.1
*RST: 2.35
Default unit: V

Manual operation: See "Thresholds" on page 696

BUS<b>:FLXRay:PRSingle <PresetSingleEnd>

Selects a default threshold voltage if `BUS<b>:FLXRay:SRCType` is set to `SINGle`.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<PresetSingleEnd> MV150 | MV200 | MV250 | MV300 | MANual

MV150 | MV200 | MV250 | MV300
2.5 ± 0.15 V; 2.5 ± 0.2 V; 2.5 ± 0.25 V; 2.5 ± 0.3 V, respectively

MANual
Manual setting of user-defined values with `BUS<b>:FLXRay:THReshold<n>` on page 2193.

*RST: MV150

Manual operation: See "Thresholds" on page 696

BUS<b>:FLXRay:PRDiff <PresetDiff>

Selects a default threshold voltage if `BUS<b>:FLXRay:SRCType` is set to `DIFFerential`.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<PresetDiff> MV150 | MV200 | MV250 | MV300 | MANual

MV150 | MV200 | MV250 | MV300
±150 mV, ±200 mV, ±250 mV, ±300 mV respectively

MANual
Manual setting of user-defined values with `BUS<b>:FLXRay:THReshold<n>` on page 2193.

*RST: MV150

Manual operation: See "Thresholds" on page 696

BUS<b>:FLXRay:PRLogic <PresetLogic>

Selects a default threshold voltage if `BUS<b>:FLXRay:SRCType` is set to `LOGic`.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<PresetLogic> V25 | V165 | V125 | V09 | V0 | MANual

V25 | V165 | V125 | V09 | V0
2.5 V (CMOS 5.0 V); 1.65 V (CMOS 3.5V), 1.25 V (CMOS 2.5V), 0.9 V (CMOS 1.8V), 0 V (ground)

MANual
Manual setting of user-defined values with `BUS<b>:FLXRay:THReshold<n>` on page 2193.

*RST: V25

Manual operation: See "Thresholds" on page 696

BUS<b>:FLXRay:POLarity <Polarity>

Selects the wire on which the bus signal is measured in case of SINGle source type. The setting affects the digitization of the signal.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Polarity> BPLus | BMINus

*RST: BPLus

Manual operation: See "Polarity" on page 697

BUS<b>:FLXRay:BITRate <Bitrate>

Selects the number of transmitted bits per second.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:

<Bitrate> M10 | M5 | M2_5

10, 5, or 2.5 Mbit/s.
The return value of 2.5 Mbit/s is M25.

*RST: M10

Example:

```
BUS:FLXRay:BITRate M2_5
BUS:FLXRay:BITRate?
M25
```

Manual operation: See "Bit rate" on page 697

BUS<b>:FLXRay:CHTYpe <Channel>

Selects the channel on which the signal is measured. The setting is considered in the calculation of the frame CRC.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<Channel> CHA | CHB

Channel A or channel B

*RST: CHA

Manual operation: See "Channel" on page 697

BUS<b>:FLXRay:SEHB <SeparateHdrBts>

The command affects the decoding and its display. If ON, the leading five indicator bits of the header are decoded as five single bits. Otherwise, the indicator bits are shown as one word with word length five bit.

Suffix:

<b> 1..4
Selects the serial bus.

Parameters:

<SeparateHdrBts> OFF | ON

*RST: OFF

Manual operation: See "Separate header bits" on page 697

27.18.12.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.

- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:FLXRay:TYPE 2197
TRIGger<t>:FLXRay:PLPReamble 2198

TRIGger<t>:FLXRay:FSSerror 2207
TRIGger<t>:FLXRay:HCRCerror 2207
TRIGger<t>:FLXRay:PCRCerror 2207

TRIGger<t>:FLXRay:TYPE <Type>

Selects the trigger type for FlexRay analysis.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<Type> STOF | IDDT | SYMBol | ERRC

STOF
STart Of Frame: triggers on the first rising edge after the transmission start sequence (TSS).

IDDT
IDentifier and DaTa: triggers on the decoded frame content, on header and payload data.
For all settings that are not needed for the trigger condition, make sure to set its condition to `OFF`.
Indicator bits: see `TRIGger<t>:FLXRay:NUFRame`
Frame identifier: sets the trigger to one specific frame ID or an identifier range. To set the identifier, use `TRIGger<t>:FLXRay:FCONdition`, `TRIGger<t>:FLXRay:FMIN`, and `TRIGger<t>:FLXRay:FMAX`.
Payload length: trigger on the number of words in the payload segment. To set the payload length, use `TRIGger<t>:FLXRay:PCONdition`, `TRIGger<t>:FLXRay:PMIN`, and `TRIGger<t>:FLXRay:PMAX`.
Cycle count: trigger on the number of the current FlexRay cycle. To set the cycle count, use `TRIGger<t>:FLXRay:CENable`, `TRIGger<t>:FLXRay:CMIN`, `TRIGger<t>:FLXRay:CMAX`, and `TRIGger<t>:FLXRay:CSTep`.
Data position: sets the position of the data bit pattern within the payload segment. To set the data position, use `TRIGger<t>:FLXRay:DPOPerator`, `TRIGger<t>:FLXRay:DPOSition`, and `TRIGger<t>:FLXRay:DPTO`.
Data bit pattern: sets the data bit pattern to be found in the payload segment. The starting point of the pattern is defined by the data position. To set the bit pattern, use `TRIGger<t>:FLXRay:DCONdition`, `TRIGger<t>:FLXRay:DMIN`, and `TRIGger<t>:FLXRay:DMAX`.

SYMBol
Triggers on a symbol or wakeup pattern. Set the required symbol with `TRIGger<t>:FLXRay:SYMBol`

ERRC
ERRor Condition: triggers on one or more errors that are detected in the decoded data. Use `TRIGger<t>:FLXRay:BSSerror`, `TRIGger<t>:FLXRay:FESerror`, `TRIGger<t>:FLXRay:FSSerror`, and `TRIGger<t>:FLXRay:PCRCerror`.

*RST: STOF

Manual operation: See "Trigger type" on page 700

TRIGger<t>:FLXRay:PLPReamble <PayloadPreamble>

Triggers on the payload preamble indicator bit that indicates a Network Management Vector in the payload segment.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<PayloadPreamble> ONE | ZERO | DC
Bit value: 1, 0, or X (don't care)
*RST: DC

Manual operation: See "Indicator bits" on page 701

TRIGger<t>:FLXRay:NUFRame <NullFrame>

Triggers on the null frame indicator bit, a frame without usable data.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<NullFrame> ONE | ZERO | DC
Bit value: 1, 0, or X (don't care)
*RST: DC

Manual operation: See "Indicator bits" on page 701

TRIGger<t>:FLXRay:SYFRame <SyncFrame>

Triggers on the sync frame used for synchronization of the FlexRay system. Only sync nodes can send this frame type.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<SyncFrame> ONE | ZERO | DC
Bit value: 1, 0, or X (don't care)
*RST: DC

Manual operation: See "Indicator bits" on page 701

TRIGger<t>:FLXRay:STFRame <StartupFrame>

Triggers on startup frames used for startup of the network. Only specific start nodes can send this frame type.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<StartupFrame> ONE | ZERO | DC
Bit value: 1, 0, or X (don't care)
*RST: DC

Manual operation: See "Indicator bits" on page 701

TRIGger<t>:FLXRay:FCONdition <IdOperator>

Sets the operator to set a frame ID or a frame ID range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<IdOperator> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

OFF = ANY
The frame ID is not relevant for the trigger condition.

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one frame ID to be set with `TRIGger<t>:FLXRay:FMIN`.

INRange | OORange
In range, Out of range: Set the minimum and maximum value of the range with `TRIGger<t>:FLXRay:FMIN` and `TRIGger<t>:FLXRay:FMAX`.

*RST: EQUal

Manual operation: See "Frame ID (min/max)" on page 702

TRIGger<t>:FLXRay:FMIN <IdPattern>

Specifies a frame identifier pattern - the number of the slot - or sets the the start value of an identifier range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<IdPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Manual operation: See "Frame ID (min/max)" on page 702

TRIGger<t>:FLXRay:FMAX <IdPatternTo>

Sets the the end value of an identifier range if the condition `TRIGger<t>:FLXRay:FCONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<IdPatternTo> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.
FMAX must be greater or equal than FMIN, and the position of the X bits are common to FMIN and FMAX.

Manual operation: See "Frame ID (min/max)" on page 702

TRIGger<t>:FLXRay:PCONdition <PayloadLengthOp>

Sets the operator for the payload length trigger setting. You can defined an exact value, or a range.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<PayloadLengthOp> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

OFF = ANY
The payload length is not relevant for the trigger condition.

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one payload length to be set with `TRIGger<t>:FLXRay:PMIN`.

INRange | OORange
In range / Out of range: Set the minimum and maximum value of the range with `TRIGger<t>:FLXRay:PMIN` and `TRIGger<t>:FLXRay:PMAX`.

*RST: OFF

Manual operation: See "Payload length (min/max)" on page 702

TRIGger<t>:FLXRay:PMIN <PayloadLength>

Specifies a payload length - the number of words in the payload segment - or sets the the start value of an payload length range. Information is transmitted in 2-byte words, so the number of data bytes in the payload segment is twice the payload length.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<PayloadLength> Range: 0 to 127
Increment: 1
*RST: 0

Manual operation: See "Payload length (min/max)" on page 702

TRIGger<t>:FLXRay:PMAX <PayloadLengthTo>

Sets the the end value of a payload length range if the condition `TRIGger<t>:FLXRay:PCONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<PayloadLengthTo> Range: 0 to 127
Increment: 1
*RST: 0

Manual operation: See "Payload length (min/max)" on page 702

TRIGger<t>:FLXRay:CENable <CycleCount>

Sets the operator to define a cycle count or a cycle count range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<CycleCount> OFF | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

OFF
The cycle count is not relevant for the trigger condition.

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one cycle count number to be set with `TRIGger<t>:FLXRay:CMIN`.

INRange | OORange
In range / Out of range: Set the minimum and maximum value of the range with `TRIGger<t>:FLXRay:CMIN` and `TRIGger<t>:FLXRay:CMAX`.

*RST: OFF

Manual operation: See "Cycle count (min, max), Step" on page 702

TRIGger<t>:FLXRay:CMIN <CycleCountMin>

Specifies a cycle count - the number of the current FlexRay cycle - or sets the the start value of an cycle count range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<CycleCountMin> Range: 0 to 63
Increment: 1
*RST: 0

Manual operation: See "Cycle count (min, max), Step" on page 702

TRIGger<t>:FLXRay:CMAX <CycleCountMax>

Sets the the end value of a cycle count range if the condition `TRIGger<t>:FLXRay:CENable` on page 2202 is set to `INRange` or `OORange`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<CycleCountMax> Range: 0 to 63
Increment: 1
*RST: 0

Manual operation: See "Cycle count (min, max), Step" on page 702

TRIGger<t>:FLXRay:CSTep <CycleCountStep>

Specifies a step to trigger on each n-th cycle inside the given range. This allows for specific triggering if slot multiplexing is used.

The condition `TRIGger<t>:FLXRay:CENable` on page 2202 must be set to `INRange` or `OORange`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<CycleCountStep> Range: 1 to 63
Increment: 1
*RST: 1

Manual operation: See "Cycle count (min, max), Step" on page 702

TRIGger<t>:FLXRay:DPOPerator <DataPosOperator>

Sets the operator for the data position. You can defined an exact position, or a position range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataPosOperator> ANY | OFF | EQUal | GETHan | INRange | RANGe

OFF = ANY
The data position is not relevant for the trigger condition.

EQUal | GETHan
Equal, Greater or equal than. These conditions require one data position to be set with `TRIGger<t>:FLXRay:DPOSition`.

INRange = RANGe
In range: Set the minimum and maximum value of the range with `TRIGger<t>:FLXRay:DPOSition` and `TRIGger<t>:FLXRay:DPTO`.

*RST: EQUal

Manual operation: See "Position, Index (min, max) - Data setup" on page 703

TRIGger<t>:FLXRay:DPOSition <DataPosition>

Sets the number of data bytes to be skipped after start of the payload segment

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataPosition> Range: 0 to 255
Increment: 1
*RST: 0

Manual operation: See "Position, Index (min, max) - Data setup" on page 703

TRIGger<t>:FLXRay:DPTO <DataPositionTo>

Defines the last byte of interest, if the position operator `TRIGger<t>:FLXRay:DPOPerator` defines a range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataPositionTo> Range: 0 to 255
Increment: 1
*RST: 0

Manual operation: See "Position, Index (min, max) - Data setup" on page 703

TRIGger<t>:FLXRay:DCONdition <DataOperator>

Sets the operator to set a specific data pattern or a data pattern range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataOperator> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

OFF = ANY
The data position is not relevant for the trigger condition.

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data position to be set with `TRIGger<t>:FLXRay:DMIN`.

INRange | OORange
In range, Out of range: Set the minimum and maximum value of the range with `TRIGger<t>:FLXRay:DMIN` and `TRIGger<t>:FLXRay:DMAX`.

*RST: EQUal

Manual operation: See "Condition, Data (min, max) - Data setup" on page 703

TRIGger<t>:FLXRay:DMIN <DataPattern>

Specifies a data pattern, or sets the the start value of a data pattern range.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Condition, Data (min, max) - Data setup" on page 703

TRIGger<t>:FLXRay:DMAX <DataPatternTo>

Sets the the end value of an data range if the operator `TRIGger<t>:FLXRay:DCONdition` is set to INRange or OORange.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<DataPatternTo> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Condition, Data (min, max) - Data setup" on page 703

TRIGger<t>:FLXRay:SYMBol <Symbol>

Triggers on a symbol or on a wakeup pattern.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<Symbol> CASMts | WAKeup

CASMts
Collision Avoidance Symbol / Media access Test Symbol. These symbols are identical and can be sent in the optional symbol window at the end of a communication cycle. They are used to avoid collisions during the system start.

WAKeup
The wakeup pattern is sent to activate the nodes of the system.

*RST: CASMts

Manual operation: See "Symbol" on page 704

TRIGger<t>:FLXRay:BSSerror <BSSError>

Triggers on error in SyteStart Sequence. The BSS is transmitted before each byte.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<BSSError> OFF | ON

*RST: ON

Manual operation: See "Error conditions" on page 704

TRIGger<t>:FLXRay:FESerror <FESError>

Triggers on error in Frame End Sequence. FES indicates the end of each frame.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<FESError> OFF | ON

*RST: ON

Manual operation: See "Error conditions" on page 704

TRIGger<t>:FLXRay:FSSerror <FSSError>

Triggers on Error in a Frame Start Sequence. FSS follows the Transmission Start Sequence TSS at the beginning of each frame.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<FSSError> OFF | ON
*RST: ON

Manual operation: See "Error conditions" on page 704

TRIGger<t>:FLXRay:HCRCerror <CRCHeaderError>

Triggers on error in the Cyclic Redundancy Check of the header data (mainly frame ID and payload length).

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<CRCHeaderError> OFF | ON
*RST: ON

Manual operation: See "Error conditions" on page 704

TRIGger<t>:FLXRay:PCRCerror <CRCPayloadError>

Triggers on error in the Cyclic Redundancy Check of the payload data.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<CRCPayloadError> OFF | ON
*RST: ON

Manual operation: See "Error conditions" on page 704

27.18.12.3 Decode results

To load and acivate a label list, use:

- `BUS<b>:NEWList` on page 1915
- `BUS<b>:SYMBols` on page 1915

To show the results on the screen, use the following commands:

- BUS<b>:RESult on page 1914

BUS<b>:FLXRay:FCOunt? 2208
BUS<b>:FLXRay:FRAMe<fr>:STATus? 2208
BUS<b>:FLXRay:FRAMe<fr>:STARt? 2209
BUS<b>:FLXRay:FRAMe<fr>:STOP? 2209
BUS<b>:FLXRay:FRAMe<fr>:SYMBol? 2209
BUS<b>:FLXRay:FRAMe<fr>:TYPE? 2210
BUS<b>:FLXRay:FRAMe<fr>:DATA? 2210
BUS<b>:FLXRay:FRAMe<fr>:FLAGs? 2210
BUS<b>:FLXRay:FRAMe<fr>:ADID? 2211
BUS<b>:FLXRay:FRAMe<fr>:PAYLength? 2211
BUS<b>:FLXRay:FRAMe<fr>:CYCount? 2211
BUS<b>:FLXRay:FRAMe<fr>:CSSTate? 2212
BUS<b>:FLXRay:FRAMe<fr>:CSValue? 2212
BUS<b>:FLXRay:FRAMe<fr>:FCSTate? 2212
BUS<b>:FLXRay:FRAMe<fr>:FCValue? 2213

BUS<b>:FLXRay:FCOunt?

Returns the number of decoded frames.

Suffix:

<b> 1..4
Selects the serial bus.

Return values:

<Count> Returns the number of decoded frames.

Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:FLXRay:FRAMe<fr>:STATus?

Returns the overall state of the selected frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<FrameState> OK | FSS | BSS | FES | INDicator | HCRCerror | CRCerr | LENER | LENer | HCFCerror | INSufficient

OK: the frame is valid.
FSS: Frame Start Sequence after TSS is missing.
BSS: Byte Start Sequence is missing.

FES: error in the Frame End Sequence.
INDicator: Error in indicator bits.
HCRCerror: Header CRC is not valid.
CRCerr: Payload CRC is not valid.
LENER = LENer: Unexpected length of the frame.
HCFCerror: Header CRC error and frame CRC error
INSufficient: The frame is not completely contained in the acquisition. The acquired part of the frame is valid.

*RST: OK

Usage: Query only

BUS<b>:FLXRay:FRAMe<fr>:STARt?
BUS<b>:FLXRay:FRAMe<fr>:STOP?

Return the start time and stop time of the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<Start>, <Stop> Time

Range: -100E+24 to 100E+24
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:FLXRay:FRAMe<fr>:SYMBol?

Returns the symbolic label of the specified frame if the label list is enabled.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the number of the frame in the current acquisition, 1...n.

Return values:
<Label> String with symbolic name of the identifier

Example: `BUS:FLXRay:FRAMe2:SYMBol?`
Response: `Temperature`

Usage: Query only

BUS<b>:FLXRay:FRAMe<fr>:TYPE?

Returns the frame type of the selected frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<FrameType> UNKNown | STATic | DYNamic | WAKE | SYMBol
STATic: frame of the static segment
DYNamic: frame of the dynamic segment
WAKE: frame contains wakeup pattern
SYMBol: frame contains a MTS or CAS symbol
*RST: STATic

Usage: Query only

BUS<b>:FLXRay:FRAMe<fr>:DATA?

Returns the data of the specified frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<Data> Comma-separated list of integer values (N, D1, D2,…, DN). N is the number of bytes in the frame, and D1…DN are the values of the bytes.

Example:
```
BUS:FLXRay:FRAMe4:DATA?
<-- 4,17,85,170,85
```

Usage: Query only

BUS<b>:FLXRay:FRAMe<fr>:FLAGs?

Returns the value of the indicator bits at the beginning of the header segment. The five bits are read as one word.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<Flags> Range: 0 to 31
*RST: 0

Usage: Query only

BUS<b>:FLXRay:FRAMe<fr>:ADID?

Returns the frame identifier, the number of the slot in which the frame is transmitted.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<AddressID> To set the value format, use `FORMat:BPATtern` on page 1461.
The values below – range, increment and default – are decimal values.
Range: 0 to 2047
*RST: 0

Usage: Query only

BUS<b>:FLXRay:FRAMe<fr>:PAYLength?

Returns the payload length, the number of data words in the payload segment. Information is transmitted in 2-byte words, so the number of data bytes in the payload segment is twice the payload length.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<PayLen> Range: 0 to 127
*RST: 0

Usage: Query only

BUS<b>:FLXRay:FRAMe<fr>:CYCount?

Returns the number of the current FlexRay cycle.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<CycleCount> Range: 0 to 63
*RST: 0

Usage: Query only

BUS<b>:FLXRay:FRAMe<fr>:CSSTate?

Returns the state of the cyclic redundancy check code of the header data.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<HdrCksumSt> OK | UVAL | INSufficient
OK: the CRC is valid.
UVAL: unexpected value
INSufficient: the frame is not completely contained in the acquisition. The decoded part of the frame is valid.
*RST: OK

Usage: Query only

BUS<b>:FLXRay:FRAMe<fr>:CSValue?

Returns the checksum value of the header CRC.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<HdrCksumVal> To set the value format, use `FORMat:BPATtern` on page 1461.
The values below – range, increment and default – are decimal values.
Range: 0 to 2047
*RST: 0

Usage: Query only

BUS<b>:FLXRay:FRAMe<fr>:FCSTate?

Returns the state of the cyclic redundancy check code of the frame data.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<ChecksumState> OK | UVAL | INSufficient
OK: the CRC is valid.
UVAL: unexpected value
INSufficient: the frame is not completely contained in the acquisition. The decoded part of the frame is valid.
*RST: OK

Usage: Query only

BUS<b>:FLXRay:FRAMe<fr>:FCValue?

Returns the cyclic redundancy check code of the frame CRC.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<ChecksumValue> To set the value format, use `FORMat:BPATtern` on page 1461.
The values below – range, increment and default – are decimal values.
Range: 0 to 16.7772E+6
*RST: 0

Usage: Query only

SEARch:TRIGger:FLXRay:SERRor <SearchName>,<ErrorCondition>
SEARch:TRIGger:FLXRay:SERRor? <SearchName>

Enables the search for specified error or error combination.

Parameters:
<ErrorCondition> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Select Search Types" on page 707

SEARch:TRIGger:FLXRay:SIDData <SearchName>,<IdentifierData>
SEARch:TRIGger:FLXRay:SIDData? <SearchName>

Enables the search for indentifier and data.

Parameters:
<IdentifierData> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Select Search Types" on page 707

SEARch:TRIGger:FLXRay[:SSOFrame] <SearchName>,<FrameStart>
SEARch:TRIGger:FLXRay[:SSOFrame]? <SearchName>

Enables the search for a start of frame.

Parameters:
<FrameStart> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Select Search Types" on page 707

SEARch:TRIGger:FLXRay:SSYMbol <SearchName>,<CheckSymbol>
SEARch:TRIGger:FLXRay:SSYMbol? <SearchName>

Enables the search for specified symbol.

Parameters:
<CheckSymbol> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Select Search Types" on page 707

SEARch:TRIGger:FLXRay:CENable <SearchName>,<CycleCount>
SEARch:TRIGger:FLXRay:CENable? <SearchName>

Sets the operator to define a cycle count or a cycle count range.

Parameters:
<CycleCount> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

OFF = ANY
The cycle count is not relevant for the search condition.

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one cycle count number to be set with `SEARch:TRIGger:FLXRay:CMIN`.

INRange | OORange
In range, Out of range: Set the minimum and maximum value of the range with `SEARch:TRIGger:FLXRay:CMIN` and `SEARch:TRIGger:FLXRay:CMAX`.

*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Cycle count (min, max), Step" on page 708

SEARch:TRIGger:FLXRay:CMAX <SearchName>,<CycleCountMax>
SEARch:TRIGger:FLXRay:CMAX? <SearchName>

Sets the the end value of a cycle count range if the condition `SEARch:TRIGger:FLXRay:CENable` is set to `INRange` or `OORange`.

Parameters:
<CycleCountMax> Range: 0 to 63
Increment: 1
*RST: 0

Parameters for setting and query:
<SearchName>

Manual operation: See "Cycle count (min, max), Step" on page 708

SEARch:TRIGger:FLXRay:CMIN <SearchName>,<CycleCountMin>
SEARch:TRIGger:FLXRay:CMIN? <SearchName>

Specifies a cycle count - the number of the current FlexRay cycle - or sets the the start value of an cycle count range.

Parameters:
<CycleCountMin> Range: 0 to 63
Increment: 1
*RST: 0

Parameters for setting and query:
<SearchName>

Manual operation: See "Cycle count (min, max), Step" on page 708

SEARch:TRIGger:FLXRay:CSTep <SearchName>,<CycleCountStep>
SEARch:TRIGger:FLXRay:CSTep? <SearchName>

Specifies a step to search for each n-th cycle inside the given range. This allows for a specific search if slot multiplexing is used.

The condition `SEARch:TRIGger:FLXRay:CENable` must be set to `INRange` or `OORange`.

Parameters:
<CycleCountStep> Range: 1 to 63
Increment: 1
*RST: 1

Parameters for setting and query:
<SearchName>

Manual operation: See "Cycle count (min, max), Step" on page 708

SEARch:TRIGger:FLXRay:DCONdition <SearchName>,<DataOperator>
SEARch:TRIGger:FLXRay:DCONdition? <SearchName>

Sets the operator to set a specific data pattern or a data pattern range.

Parameters:

<DataOperator> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

OFF = ANY
The data pattern is not relevant for the search condition.

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with `SEARch:TRIGger:FLXRay:DMIN`.

INRange | OORange
In range, Out of range: Set the minimum and maximum value of the range with `SEARch:TRIGger:FLXRay:DMIN` and `SEARch:TRIGger:FLXRay:DMAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Condition, Data (min, max) - Data setup" on page 709

SEARch:TRIGger:FLXRay:DMAX <SearchName>,<DataPatternTo>
SEARch:TRIGger:FLXRay:DMAX? <SearchName>

Sets the the end value of an data range if `SEARch:TRIGger:FLXRay:DCONdition` is set to `INRange` or `OORange`.

Parameters:

<DataPatternTo> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Condition, Data (min, max) - Data setup" on page 709

SEARch:TRIGger:FLXRay:DMIN <SearchName>,<DataPattern>
SEARch:TRIGger:FLXRay:DMIN? <SearchName>

Specifies a data pattern, or sets the the start value of a data pattern range.

Parameters:

<DataPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Condition, Data (min, max) - Data setup" on page 709

SEARch:TRIGger:FLXRay:DPOPerator <SearchName>,<DataPosOperator>
SEARch:TRIGger:FLXRay:DPOPerator? <SearchName>

Sets the operator for the data position. You can defined an exact position, or a position range.

Parameters:
<DataPosOperator> ANY | OFF | EQUal | GETHan | INRange | RANGe

OFF = ANY
The data position is not relevant for the search condition.

EQUal | GETHan
Equal, Greater or equal than. These conditions require one data position to be set with `SEARch:TRIGger:FLXRay:DPOSition`

INRange = RANGe
In range: Set the minimum and maximum value of the range with `SEARch:TRIGger:FLXRay:DPOSition` and `SEARch:TRIGger:FLXRay:DPTO`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Position, Index (min, max) - Data setup" on page 709

SEARch:TRIGger:FLXRay:DPOSition <SearchName>,<DataPosition>
SEARch:TRIGger:FLXRay:DPOSition? <SearchName>

Sets the number of data bytes to be skipped after start of the payload segment.

Parameters:
<DataPosition> Range: 0 to 255
Increment: 1
*RST: 0

Parameters for setting and query:
<SearchName>

Manual operation: See "Position, Index (min, max) - Data setup" on page 709

SEARch:TRIGger:FLXRay:DPTO <SearchName>,<DataPositionTo>
SEARch:TRIGger:FLXRay:DPTO? <SearchName>

Defines the last byte of interest, if the position operator `SEARch:TRIGger:FLXRay:DPOPerator` defines a range.

Parameters:
<DataPositionTo> Range: 0 to 255
Increment: 1
*RST: 0

Parameters for setting and query:
<SearchName>

Manual operation: See "Position, Index (min, max) - Data setup" on page 709

SEARch:TRIGger:FLXRay:FCONdition <SearchName>,<IdOperator>
SEARch:TRIGger:FLXRay:FCONdition? <SearchName>

Sets the operator to set a frame ID or a frame ID range.

Parameters:
<IdOperator> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

OFF = ANY
The frame ID is not relevant for the search condition.

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one frame ID to be set with `SEARch:TRIGger:FLXRay:FMIN`.

INRange | OORange
In range, Out of range: Set the minimum and maximum value of the range with `SEARch:TRIGger:FLXRay:FMIN` and `SEARch:TRIGger:FLXRay:FMAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame ID (min/max)" on page 708

SEARch:TRIGger:FLXRay:FMAX <SearchName>,<IdPatternTo>
SEARch:TRIGger:FLXRay:FMAX? <SearchName>

Sets the the end value of an identifier range if the condition `SEARch:TRIGger:FLXRay:FCONdition` is set to `INRange` or `OORange`.

Parameters:
<IdPatternTo> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame ID (min/max)" on page 708

SEARch:TRIGger:FLXRay:FMIN <SearchName>,<IdPattern>
SEARch:TRIGger:FLXRay:FMIN? <SearchName>

Specifies a frame identifier pattern - the number of the slot - or sets the the start value of an identifier range.

Parameters:
<IdPattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453.

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame ID (min/max)" on page 708

SEARch:TRIGger:FLXRay:NUFRame <SearchName>,<NullFrame>
SEARch:TRIGger:FLXRay:NUFRame? <SearchName>

Searches for the null frame indicator bit, a frame without usable data.

Parameters:
<NullFrame> ONE | ZERO | DC
Bit value: 1, 0, or X (don't care)
*RST: DC

Parameters for setting and query:
<SearchName>

Manual operation: See "Indicator bits" on page 707

SEARch:TRIGger:FLXRay:PLPReamble <SearchName>,<PayloadPreamble>
SEARch:TRIGger:FLXRay:PLPReamble? <SearchName>

Searches for the payload preamble indicator bit that indicates a Network Management Vector in the payload segment.

Parameters:
<PayloadPreamble> ONE | ZERO | DC
Bit value: 1, 0, or X (don't care)
*RST: DC

Parameters for setting and query:
<SearchName>

Manual operation: See "Indicator bits" on page 707

SEARch:TRIGger:FLXRay:PCONdition <SearchName>,<PayloadLengthOp>
SEARch:TRIGger:FLXRay:PCONdition? <SearchName>

Sets the operator for the payload length search setting. You can defined an exact value, or a range.

Parameters:

<PayloadLengthOp> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

OFF = ANY
The payload length is not relevant for the search condition.

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one payload length to be set with `SEARch:TRIGger:FLXRay:PMIN`.

INRange | OORange
In range, Out of range: Set the minimum and maximum value of the range with `SEARch:TRIGger:FLXRay:PMIN` and `SEARch:TRIGger:FLXRay:PMAX`.

*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Payload length (min/max)" on page 708

SEARch:TRIGger:FLXRay:PMAX <SearchName>,<PayloadLengthTo>
SEARch:TRIGger:FLXRay:PMAX? <SearchName>

Sets the the end value of a payload length range if the condition `SEARch:TRIGger:FLXRay:PCONdition` is set to `INRange` or `OORange`.

Parameters:

<PayloadLengthTo> Range: 0 to 127
Increment: 1
*RST: 0

Parameters for setting and query:
<SearchName>

Manual operation: See "Payload length (min/max)" on page 708

SEARch:TRIGger:FLXRay:PMIN <SearchName>,<PayloadLength>
SEARch:TRIGger:FLXRay:PMIN? <SearchName>

Specifies a payload length - the number of words in the payload segment - or sets the the start value of an payload length range. Information is transmitted in 2-byte words, so the number of data bytes in the payload segment is twice the payload length.

Parameters:
<PayloadLength> Range: 0 to 127
Increment: 1
*RST: 0

Parameters for setting and query:
<SearchName>

Manual operation: See "Payload length (min/max)" on page 708

SEARch:TRIGger:FLXRay:STFRame <SearchName>,<StartupFrame>
SEARch:TRIGger:FLXRay:STFRame? <SearchName>

Searches for startup frames used for startup of the network. Only specific start nodes can send this frame type.

Parameters:
<StartupFrame> ONE | ZERO | DC
Bit value: 1, 0, or X (don't care)
*RST: DC

Parameters for setting and query:
<SearchName>

Manual operation: See "Indicator bits" on page 707

SEARch:TRIGger:FLXRay:SYFRame <SearchName>,<SyncFrame>
SEARch:TRIGger:FLXRay:SYFRame? <SearchName>

Searches for the sync frame used for synchronization of the FlexRay system. Only sync nodes can send this frame type.

Parameters:
<SyncFrame> ONE | ZERO | DC
Bit value: 1, 0, or X (don't care)
*RST: DC

Parameters for setting and query:
<SearchName>

Manual operation: See "Indicator bits" on page 707

SEARch:TRIGger:FLXRay:SYMBol <SearchName>,<Symbol>
SEARch:TRIGger:FLXRay:SYMBol? <SearchName>

Searches for a symbol or for a wakeup pattern.

Parameters:
<Symbol> CASMts | WAKeup

CASMts
Collision Avoidance Symbol / Media access Test Symbol. These symbols are identical and can be sent in the optional symbol window at the end of a communication cycle. They are used to avoid collisions during the system start.

WAKeup
The wakeup pattern is sent to activate the nodes of the system.

*RST: CASMts

Parameters for setting and query:
<SearchName>

Manual operation: See "Symbol" on page 709

SEARch:TRIGger:FLXRay:BSSerror <SearchName>,<BSSError>
SEARch:TRIGger:FLXRay:BSSerror? <SearchName>

Searches for error in SyteStart Sequence. The BSS is transmitted before each byte.

Parameters:
<BSSError> OFF | ON

*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 709

SEARch:TRIGger:FLXRay:FESerror <SearchName>,<FESError>
SEARch:TRIGger:FLXRay:FESerror? <SearchName>

Searches for error in Frame End Sequence. FES indicates the end of each frame.

Parameters:
<FESError> OFF | ON

*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 709

SEARch:TRIGger:FLXRay:FSSerror <SearchName>,<FSSError>
SEARch:TRIGger:FLXRay:FSSerror? <SearchName>

Searches for an error in a Frame Start Sequence(FSS). FSS follows the Transmission Start Sequence (TSS) at the beginning of each frame.

Parameters:
<FSSError> OFF | ON

*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 709

SEARch:TRIGger:FLXRay:HCRCerror <SearchName>,<CRCHeaderError>
SEARch:TRIGger:FLXRay:HCRCerror? <SearchName>

Searches for an error in the Cyclic Redundancy Check of the header data (mainly frame ID and payload length).

Parameters:
<CRCHeaderError> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 709

SEARch:TRIGger:FLXRay:PCRCerror <SearchName>,<CRCPayloadError>
SEARch:TRIGger:FLXRay:PCRCerror? <SearchName>

Searches for error in the Cyclic Redundancy Check of the payload data.

Parameters:
<CRCPayloadError> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 709

27.18.12.5 Search results

The search on decoded FlexRay data returns the same results as the queries for decode results.

In search result commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name.

For a description of the returned values, see the corresponding commands in Section 27.18.12.3, "Decode results", on page 2207.

SEARch:RESult:FLXRay:FCOunt? 2225

SEARch:RESult:FLXRay:FCOunt? <SearchName>

Query parameters:
<SearchName>

Return values:
<Count> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:FLXRay:FRAMe<fr>:ADID? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<AddressID> Range: 0 to 2047
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:FLXRay:FRAMe<fr>:CSSTate? <SearchName>

Returns the status of the header checksum.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<HdrCksumSt> OK | STERror | SPERror | PRERror | UVAL | INSufficient

STERror: StarT ERror, incorrect start bit
SPERror: StoP ERror, incorrect stop bit
PRERror:PaRity ERror, incorrect parity bit.
UVAL: unexpected value

*RST: OK

Usage: Query only

SEARch:RESult:FLXRay:FRAMe<fr>:CSValue? <SearchName>

Returns the value of the header checksum.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<HdrCksumVal> Range: 0 to 2047
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:FLXRay:FRAMe<fr>:CYCount? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<CycleCount> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:FLXRay:FRAMe<fr>:DATA? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Value>

Usage: Query only

SEARch:RESult:FLXRay:FRAMe<fr>:FCSTate? <SearchName>

Returns the status of the frame checksum.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<ChecksumState> OK | STERror | SPERror | PRERror | UVAL | INSufficient
STERror: StarT ERror, incorrect start bit
SPERror: StoP ERror, incorrect stop bit
PRERror:PaRity ERror, incorrect parity bit.
UVAL: unexpected value
*RST: OK

Usage: Query only

SEARch:RESult:FLXRay:FRAMe<fr>:FCValue? <SearchName>

Returns the value of the frame checksum.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<ChecksumValue> Range: 0 to 16.7772E+6
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:FLXRay:FRAMe<fr>:FLAGs? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Flags> Range: 0 to 255
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:FLXRay:FRAMe<fr>:PAYLength? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<PayLen> Range: 0 to 127
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:FLXRay:FRAMe<fr>:STATus? <SearchName>

Returns the overall state of the selected frame.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<State> OK | FSS | BSS | FES | INDicator | HCRCerror | CRCerr | LENER | LENer | HCFCerror | INSufficient

OK: the frame is valid.
FSS: Frame Start Sequence after TSS is missing.
BSS: Byte Start Sequence is missing.
FES: error in the Frame End Sequence.
INDicator: Error in indicator bits.
HCRCerror: Header CRC is not valid.
CRCerr: Payload CRC is not valid.
LENER = LENer: Unexpected length of the frame.
HCFCerror: Header CRC error and frame CRC error
INSufficient: The frame is not completely contained in the acquisition. The acquired part of the frame is valid.

*RST: OK

Usage: Query only

SEARch:RESult:FLXRay:FRAMe<fr>:STARt? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:FLXRay:FRAMe<fr>:STOP? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:FLXRay:FRAMe<fr>:TYPE? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Type> UNKNown | STATic | DYNamic | WAKE | SYMBol
*RST: STATic

Usage: Query only

SEARch:RESult:FLXRay:FRAMe<fr>:SYMBol? <SearchName>

Returns the symbolic label of the specified frame if the label list is enabled.

Suffix:
<fr> *
Selects the number of the frame in the current acquisition, 1...n.

Query parameters:
<SearchName> String parameter that contains the search definition name

Return values:
<Translation> Symbolic label (string)

Usage: Query only

27.18.13 SENT (option R&S RTO6-K520)

- Configuration....2230
- Trigger....2233
- Decode results....2241
- SENT search settings....2248
- SENT search results....2257

27.18.13.1 Configuration

BUS<b>:SENT:DATA:SOURce....2230
BUS<b>:SENT:DATA:THReshold....2230
BUS<b>:SENT:TECHnology....2230
BUS<b>:SENT:CLKPeriod....2231
BUS<b>:SENT:CLKTolerance....2231

BUS<b>:SENT:SFORmat....2232
BUS<b>:SENT:CRCVersion....2232
BUS<b>:SENT:CRCMethod....2232
BUS<b>:SENT:PPULse....2233
BUS<b>:SENT:PPFLength....2233

BUS<b>:SENT:DATA:SOURce <DataSource>

Selects the source of the data line.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<DataSource> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
*RST: C1W1

Usage: Asynchronous command

Manual operation: See "Data" on page 716

BUS<b>:SENT:DATA:THReshold <Threshold>

Sets a user-defined threshold value. Alternatively, you can set the threshold according to the signal technology `BUS<b>:SENT:TECHnology`.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Threshold> Range: -12 to 12
Increment: 0.1
*RST: 1.65
Default unit: V

Manual operation: See "Threshold" on page 716

BUS<b>:SENT:TECHnology <Technology>

Selects the threshold voltage.

Suffix:
<b> 1..4
Selects the serial data bus.

Parameters:
<Technology> V25 | MANual

V25
The threshold value is 2.5 V, according to CMOS technology.

MANual
Sets the threshold to the value set with `BUS<b>:SENT:DATA:THReshold`.

*RST: V25

Manual operation: See "Threshold" on page 716

BUS<b>:SENT:CLKPeriod <ClockPeriod>

Sets the nominal clock period (clock tick).

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<ClockPeriod> Range: 1E-6 to 100E-6
Increment: 1E-6
*RST: 6E-6
Default unit: s

Manual operation: See "Clock Period" on page 716

BUS<b>:SENT:CLKTolerance <ClockTolerance>

Sets a tolerated deviation of the clock signal.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<ClockTolerance> Range: 0 to 25
Increment: 1
*RST: 20
Default unit: %

Manual operation: See "Clock tolerance" on page 716

BUS<b>:SENT:DNIBbles <DataNibbles>

Sets the number of data nibbles for a transmission sequence.

Suffix:
<b> 1..4
Selects the serial data bus.

Parameters:
<DataNibbles> Range: 1 to 6
Increment: 1
*RST: 6

Manual operation: See "Data Nibbles" on page 716

BUS<b>:SENT:SFORmat <Format>

Selects the serial message format.

Suffix:
<b> 1..4

Parameters:
<Format> SHORt | ENHanced | NONE
Short serial message, Enhanced serial message, none = single transmission sequence.
*RST: NONE

Manual operation: See "Serial protocol" on page 716

BUS<b>:SENT:CRCVersion <CRCVersion>

Selects the calculaction method for the cyclic redundancy check (CRC).

Suffix:
<b> 1..4
Selects the serial data bus.

Parameters:
<CRCVersion> LEGA | V2010
Legacy: method used up to 2010
V2010: current method
*RST: V2010

Manual operation: See "CRC version" on page 717

BUS<b>:SENT:CRCMethod <CRCCalculation>

Selects the calculation method for the CRC checksum.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<CRCCalculation> SAEJ | TLE

SAEJ: according to the standard
TLE: according to the computing method for TLE_4998X sensors.

*RST: SAEJ

Manual operation: See "CRC calculation" on page 717

BUS<b>:SENT:PPULse <PausePulse>

Determines if a pause pulse is part of the SENT transmission sequence.

Suffix:
<b> 1..4
Selects the serial data bus.

Parameters:
<PausePulse> NPP | PP | PPFL

NPP
Transmits the SENT message without pause pulse.

PP
Transmits the message with a fixed pulse length, automatically calculated.

PPFL
Transmits the pause pulse with a user-defined frame length to obtain a transmission sequence with constant length.

*RST: PPFL

Manual operation: See "Pause pulse" on page 717

BUS<b>:SENT:PPFLength <FrameLength>

Defines a constant transmission sequence length. To select the fixed sequence length, set `BUS:SENT:PPUL PPFL`.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<FrameLength> Range: 104 to 922
Increment: 1
*RST: 256

Manual operation: See "Frame length [clock ticks]" on page 717

27.18.13.2 Trigger

Event in a trigger sequence: 1 = A-event only

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:SENT:TYPE....2234
TRIGger<t>:SENT:TTYPe....2235
TRIGger<t>:SENT:STATus....2235
TRIGger<t>:SENT:TDCN....2236
TRIGger<t>:SENT:TDMN....2236
TRIGger<t>:SENT:TDMX....2236
TRIGger<t>:SENT:STYPe....2237
TRIGger<t>:SENT:SIDType....2237
TRIGger<t>:SENT:SICN....2237
TRIGger<t>:SENT:SIMN....2238
TRIGger<t>:SENT:SIMX....2238
TRIGger<t>:SENT:SDCN....2238
TRIGger<t>:SENT:SDMN....2239
TRIGger<t>:SENT:SDMX....2239
TRIGger<t>:SENT:FORMerror....2239
TRIGger<t>:SENT:PULSeerror....2240
TRIGger<t>:SENT:PPERioderror....2240
TRIGger<t>:SENT:CRCerror....2241
TRIGger<t>:SENT:IRFLength....2241

TRIGger<t>:SENT:TYPE <Type>

Selects the trigger event for the SENT transmission type.

Suffix:
<t> 1..3

Parameters:
<Type> CALI | TSEQ | SMSG | ERRC

CALI
CALIbration: triggers on the falling edge of the calibration/synchronization pulse.

TSEQ
Transmission SEQuence: triggers either on the falling edge of the status nibble, or on the last data nibble.
To set the transmission sequence conditions, use `TRIGger<t>:SENT:TTYPe` and `TRIGger<t>:SENT:STATus`.
To set the data condition, use `TRIGger<t>:SENT:TDCN`, `BUS<b>:SENT:DNIBbles`, `TRIGger<t>:SENT:TDMN` and `TRIGger<t>:SENT:TDMX`.

SMSG
Serial Message: combination of identifier and data conditions.
To select the sequence condition, use TRIGger<t>:SENT:STYPe.
To select the message ID format for an enhanced serial message, use TRIGger<t>:SENT:SIDType.
To set the identifier condition, use TRIGger<t>:SENT:SICN, TRIGger<t>:SENT:SIMN and TRIGger<t>:SENT:SIMX.
To set the data condition, use TRIGger<t>:SENT:SDCN, TRIGger<t>:SENT:SDMN and TRIGger<t>:SENT:SDMX.

ERRC
ERRor Condition: triggers on an error event.
Define the error types with TRIGger<t>:SENT:PULSeerror, TRIGger<t>:SENT:PPERioderror or TRIGger<t>:SENT:CRCerror.

*RST: CALI

Manual operation: See "Type" on page 719

TRIGger<t>:SENT:TTYPe <TSFieldType>

Selects the trigger sequence type for TRIGger<t>:SENT:TYPE TSEQ (transmission sequence).

Suffix:
<t> 1..3

Parameters:
<TSFieldType> STAT | STDA

STAT
Triggers on the status nibble.

STDA
Triggers at the end of the combination of status and data nibble(s).
Define the data conditions with TRIGger<t>:SENT:STATus, TRIGger<t>:SENT:TDCN, BUS<b>:SENT:DNIBbles, TRIGger<t>:SENT:TDMN and TRIGger<t>:SENT:TDMX

*RST: STAT

Manual operation: See "Sequence" on page 721

TRIGger<t>:SENT:STATus <StatusBits>

Sets the status nibble data.

Suffix:
<t> 1..3
Selects the serial data bus.

Parameters:

<StatusBits> Numeric or string pattern, Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Status" on page 721

TRIGger<t>:SENT:TDCN <TSDataOperator>

Sets the operator to set a specific data pattern or a data pattern range.

Suffix:

<t> 1..3

Parameters:

<TSDataOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater than, Greater or equal than. These conditions require one data pattern to be set with `TRIGger<t>:SENT:TDMN`.

INRange | OORange
In range / Out of range. To define the range set the minimum and maximum values with `TRIGger<t>:SENT:TDMN` and `TRIGger<t>:SENT:TDMX`.

*RST: EQUal

Manual operation: See "Condition" on page 721

TRIGger<t>:SENT:TDMN <TSDataPattern>

Specifies a data pattern, or sets the start value of a data pattern range.

Suffix:

<t> 1..3

Parameters:

<TSDataPattern> Numeric or string pattern, Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data min" on page 722

TRIGger<t>:SENT:TDMX <TSDataPatternTo>

Sets the end value of an identifier range for `TRIGger:SENT:TDCN INRange or OORange`.

Suffix:

<t> 1..3

Parameters:

<TSDataPatternTo> Numeric or string pattern, Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data max" on page 722

TRIGger<t>:SENT:STYPe <SMFieldType>

Selects the trigger sequence type for `TRIGger:SENT:TYPE SSMSg or ESMSg` (serial message).

Suffix:

<t> 1..3

Parameters:

<SMFieldType> ID | IDDT

ID
Triggers on the identifier.
To set the identifier condition for a serial message, use `TRIGger<t>:SENT:SICN`, `TRIGger<t>:SENT:SIMN` and `TRIGger<t>:SENT:SIMX`.

IDDT
Triggers at the end of the combination of identifier and data.
To set the identifier condition, use the commands shown above.
To set the data condition, use `TRIGger<t>:SENT:SDCN`, `TRIGger<t>:SENT:SDMN` and `TRIGger<t>:SENT:SDMX`.

*RST: ID

Manual operation: See "Sequence" on page 722

TRIGger<t>:SENT:SIDType <SMIDType>

Sets the message ID format (4 bit or 8 bit) of the enhanced serial message.

Suffix:

<t> 1..3

Parameters:

<SMIDType> B4 | B8

*RST: B4

Manual operation: See "ID Type" on page 722

TRIGger<t>:SENT:SICN <SMIDOperator>

Sets the operator to set a specific data pattern or a data pattern range.

Suffix:
<t> 1..3

Parameters:
<SMIDOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater than, Greater or equal than. These conditions require one data pattern to be set with `TRIGger<t>:SENT:SIMN`.

INRange | OORange
In range / Out of range. To define the range set the minimum and maximum values with `TRIGger<t>:SENT:SIMN` and `TRIGger<t>:SENT:SIMX`.

*RST: EQUal

Manual operation: See "Identifier Condition" on page 722

TRIGger<t>:SENT:SIMN <SMIDPattern>

Specifies a message identifier pattern, or sets the start value of an identifier range.

Suffix:
<t> 1..3

Parameters:
<SMIDPattern> Numeric or string pattern, Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Identifier min" on page 723

TRIGger<t>:SENT:SIMX <SMIDPatternTo>

Sets the end value of an identifier range for `TRIGger<t>:SENT:SICN INRange or OORange`.

Suffix:
<t> 1..3

Parameters:
<SMIDPatternTo> Numeric or string pattern, Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Identifier max" on page 723

TRIGger<t>:SENT:SDCN <SMDataOperator>

Sets the operator to set a specific data pattern or a data pattern range.

Suffix:
<t> 1..3

Parameters:
<SMDataOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater than, Greater or equal than. These conditions require one data pattern to be set with `TRIGger<t>:SENT:SDMN`.

INRange | OORange
In range / Out of range. To define the range set the minimum and maximum values with `TRIGger<t>:SENT:SDMN` and `TRIGger<t>:SENT:SDMX`.

*RST: EQUal

Manual operation: See "Data Condition" on page 723

TRIGger<t>:SENT:SDMN <SMDataPattern>

Specifies a data pattern, or sets the start value of a data pattern range.

Suffix:
<t> 1..3

Parameters:
<SMDataPattern> Numeric or string pattern, Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data min" on page 723

TRIGger<t>:SENT:SDMX <SMDataPatternTo>

Sets the end value of an identifier range for `TRIGger<t>:SENT:SCONdition INRange or OORange`.

Suffix:
<t> 1..3

Parameters:
<SMDataPatternTo> Numeric or string pattern, Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See " Data max" on page 723

TRIGger<t>:SENT:FORMerror <FormError>

Triggers on format errors in serial messages.

A form error occurs when at least one of the transmission sequences that form a serial message has an error.

To trigger on an error event, select the corresponding trigger type with `TRIGger<m>:SENT:TYPE ERRC`.

Suffix:
<t> 1..3

Parameters:
<FormError> OFF | ON
*RST: OFF

Manual operation: See "Error conditions setup" on page 724

TRIGger<t>:SENT:PULSeerror <CalibPulseError>

Trigger son calibration pulse erors in transmission sequences.

An error occurs when

- the duration of the "Calibration/Sync" pulse (in ticks) is less than 56*(1-clock tolerance) or more than 56*(1+clock tolerance)
- the "Calibration/Sync" pulse duration of frame (n-1) varies by more than 1.5625% from the "Calibration/Sync" pulse duration of frame (n)

To trigger on an error event, select the correspondig trigger type with `TRIGger<m>:SENT:TYPE ERRC`.

Suffix:
<t> 1..3

Parameters:
<CalibPulseError> OFF | ON
*RST: OFF

Manual operation: See "Error conditions setup" on page 724

TRIGger<t>:SENT:PPERioderror <PulsePeriodError>

Triggers on pulse period errors.

An error occurs when a nibble has any of the following:

- number of ticks at low is less than 4 ticks.
- nibble value < 0 (less than 12 ticks) or > 15 (more than 27 ticks).

To trigger on an error event, select the correspondig trigger type with `TRIGger<m>:SENT:TYPE ERRC`.

Suffix:
<t> 1..3

Parameters:
<PulsePeriodError> OFF | ON
*RST: OFF

Manual operation: See "Error conditions setup" on page 724

TRIGger<t>:SENT:CRCerror <CRCError>

Triggers on CRC errors in both, the transmission sequences and serial messages.

A CRC error occurs when the CRC calculated by the receiver differs from the received value in the CRC sequence. The CRC length is 4 bits for transmission sequences and short serial messages, and 6 bit of enhanced serial messages.

To trigger on an error event, select the correspondig trigger type with `TRIGger<m>:SENT:TYPE ERRC`.

Suffix:
<t> 1..3

Parameters:
<CRCError> OFF | ON
*RST: ON

Manual operation: See "Error conditions setup" on page 724

TRIGger<t>:SENT:IRFLength <IrregularFrmLen>

Triggers on frame length errors in transmission sequences when pause pulse for constant frame length is set, see `BUS<b>:SENT:PPULse PPFL`.

An error occurs when the total length of the transmission sequence (including pause pulse) does not match the frame length setting, see `BUS<b>:SENT:PPFLength` on page 2233.

To trigger on an error event, select the correspondig trigger type with `TRIGger<t>:SENT:TYPE ERRC`.

Suffix:
<t> 1..3

Parameters:
<IrregularFrmLen> OFF | ON
*RST: OFF

Manual operation: See "Error conditions setup" on page 724

27.18.13.3 Decode results

To load and acivate a label list, use:

- `BUS<b>:NEWList` on page 1915
- `BUS<b>:SYMBols` on page 1915

BUS<b>:SENT:FCOunt?....2242
BUS<b>:SENT:FRAMe<fr>:STATus?....2242
BUS<b>:SENT:FRAMe<fr>:STARt?....2243
BUS<b>:SENT:FRAMe<fr>:STOP?....2243
BUS<b>:SENT:FRAMe<fr>:CSValue?....2243
BUS<b>:SENT:FRAMe<fr>:DATA?....2243
BUS<b>:SENT:FRAMe<fr>:IDTYpe?....2244
BUS<b>:SENT:FRAMe<fr>:IDValue?....2244

BUS<b>:SENT:RDSL....2248
BUS<b>:SENT:FRAMe<fr>:BITRate?....2248

BUS<b>:SENT:FCOunt?

Returns the number of decoded frames of the acquisition.

Suffix:

<b> 1..4
Selects the serial data bus.

Return values:

<Count> Total number of decoded frames.

Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:SENT:FRAMe<fr>:STATus?

Returns the overall state of the selected frame.

Suffix:

<b> 1..4
Selects the serial data bus.

<fr> *
Selects the frame.

Return values:

<FrameState> OK | SYNC | PULSe | CRC | IRFL | FORM | INSufficient

OK: the frame is valid.
SYNC: Synchronization error occurred.
PULse: Pulse error occurred.

CRC: Cyclic redundancy check failed.
IRFL: Irregular frame length error occurred.
FORM: Format error occurred.
INSufficient: The frame is not completely contained in the acquisition. The acquired part of the frame is valid.

*RST: OK

Usage: Query only

BUS<b>:SENT:FRAMe<fr>:STARt?
BUS<b>:SENT:FRAMe<fr>:STOP?

Returns the start time and stop time of the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<Start>, <Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:SENT:FRAMe<fr>:CSValue?

Returns the CRC sequence value of the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<ChecksumValue> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and reset – are decimal values.
Range: 0 to 63
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:SENT:FRAMe<fr>:DATA?

Returns the data of the specified frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<Data> Comma-separated sequence of integer values (N, D1, D2,…, DN). N is the number of nibbles in the frame, and D1…DN are the values of the nibbles.

Example:

```
BUS:SENT:FRAMe4:DATA?
<-- 4,3,15,11,9
```

Usage: Query only

BUS<b>:SENT:FRAMe<fr>:IDTYpe?

Returns the identifier type of the selected frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<IdentifierType> B4 | B8

B4: standard format, 4 bit
B8: extended format, 8 bit

*RST: B4

Usage: Query only

BUS<b>:SENT:FRAMe<fr>:IDValue?

Returns the identifier value of the selected frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<IdentifierValue> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and reset – are decimal values.

Range: 0 to 255
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:SENT:FRAMe<fr>:NIBBle<o>:STATe?

Returns the state of the specified nibble.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<o> *
Selects the nibble number.

Return values:

<State> OK | UNDF
UNDF: Undefined
*RST: OK

Usage: Query only

BUS<b>:SENT:FRAMe<fr>:NIBBle<o>:VALue?

Returns the value of the specified nibble.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<o> *
Selects the nibble number.

Return values:

<Value> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and reset – are decimal values.
Range: 0 to 15
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:SENT:FRAMe<fr>:PAPTicks?

Returns the number of the pulse pause clock ticks.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<PausePulseTicks> Range: 12 to 768
Increment: 1
*RST: 12

Usage: Query only

BUS<b>:SENT:FRAMe<fr>:SCOM?

Returns the value of the status/communication pulse.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<StatusComm> Range: 0 to 15
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:SENT:FRAMe<fr>:SDATa?

Returns the symbolic data of the frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<SymbolicData> Comma-separated list of values. The first value is the number of bytes, followed by the decoded data bytes.
To set the value format, use `FORMat:BPATtern`.

Usage: Query only

BUS<b>:SENT:FRAMe<fr>:SDEXport?

Returns the symbolic data of the frame in export format.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<SymbolicData>

Usage: Query only

BUS<b>:SENT:FRAMe<fr>:SYMBol?

Returns the symbolic label of the specified frame if the label list is enabled.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the number of the frame in the current acquisition, 1...n.

Return values:
<Translation> String with symbolic label of the identifier.

Example: `BUS:SENT:FRAMe:SYMBol?`
Response: `Air Temperature`

Usage: Query only

BUS<b>:SENT:FRAMe<fr>:SYNCduration?

Returns the time of the synchronization pulse.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<SyncDuration> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:SENT:FRAMe<fr>:TYPE?

Returns the type of SENT message.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<FrameType> TRSQ | SMSG | EMSG
Transmission sequence, short serial message or enhanced serial message.
*RST: TRSQ

Usage: Query only

BUS<b>:SENT:RDSL <RessDispSel>

Selects the results to be displayed.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<RessDispSel> TRSQ | SMSG | ALL
Transmission sequence, serial messages or all.
*RST: ALL

BUS<b>:SENT:FRAMe<fr>:BITRate?

Returns the bit rate of the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<PrimaryBitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

27.18.13.4 SENT search settings

In search setup commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name. The commands are similar to SENT trigger commands.

SEARch:TRIGger:SENT:CALibration....2249
SEARch:TRIGger:SENT:TRANsmission....2249
SEARch:TRIGger:SENT:SMSG....2250
SEARch:TRIGger:SENT:ERRor....2250
SEARch:TRIGger:SENT:TTYPe....2250
SEARch:TRIGger:SENT:STATus....2251
SEARch:TRIGger:SENT:TDCN....2251
SEARch:TRIGger:SENT:TDMN....2252
SEARch:TRIGger:SENT:TDMX....2252
SEARch:TRIGger:SENT:STYPe....2252
SEARch:TRIGger:SENT:SIDType....2253
SEARch:TRIGger:SENT:SICN....2253
SEARch:TRIGger:SENT:SIMN....2254
SEARch:TRIGger:SENT:SIMX....2254
SEARch:TRIGger:SENT:SDCN....2254
SEARch:TRIGger:SENT:SDMN....2255
SEARch:TRIGger:SENT:SDMX....2255
SEARch:TRIGger:SENT:PULSeerror....2255
SEARch:TRIGger:SENT:PPERioderror....2256
SEARch:TRIGger:SENT:IRFLength....2256
SEARch:TRIGger:SENT:FORMerror....2256
SEARch:TRIGger:SENT:CRCerror....2257

SEARch:TRIGger:SENT:CALibration <SearchName>,<CheckCalibSync>
SEARch:TRIGger:SENT:CALibration? <SearchName>

Enables the search for the Calibration/Synchronization pulse.

Parameters:
<CheckCalibSync> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search types" on page 737

SEARch:TRIGger:SENT:TRANsmission <SearchName>,<CheckTransSeq>
SEARch:TRIGger:SENT:TRANsmission? <SearchName>

Enables the search for a transmission sequence, which is combination of status and data conditions.

To set the transmission sequence conditions, use `SEARch:TRIGger:SENT:TTYPe` and `SEARch:TRIGger:SENT:STATus`.

To set the data condition, use `SEARch:TRIGger:SENT:TDCN`, `TRIGger<t>:SENT:TDCN`, `SEARch:TRIGger:SENT:TDMN` and `SEARch:TRIGger:SENT:TDMX`.

Parameters:
<CheckTransSeq> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search types" on page 737

SEARch:TRIGger:SENT:SMSG <SearchName>,<CheckSerialMsg>
SEARch:TRIGger:SENT:SMSG? <SearchName>

Enables the search in a serial message, which is combination of identifier and data conditions.

To select the sequence condition, use `SEARch:TRIGger:SENT:STYPe`.

To set the identifier condition for the serial message, use `SEARch:TRIGger:SENT:SICN`, `SEARch:TRIGger:SENT:SIMN` and `SEARch:TRIGger:SENT:SIMX`.

To set the data condition, use `SEARch:TRIGger:SENT:SDCN`, `SEARch:TRIGger:SENT:SDMN` and `SEARch:TRIGger:SENT:SDMX`.

Parameters:
<CheckSerialMsg> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search types" on page 737

SEARch:TRIGger:SENT:ERRor <SearchName>,<ErrorCondition>
SEARch:TRIGger:SENT:ERRor? <SearchName>

Enables the search for specified errors.

Define the error types with `SEARch:TRIGger:SENT:PULSeerror`, `SEARch:TRIGger:SENT:PPERioderror`, `SEARch:TRIGger:SENT:FORMerror` on page 2256 and `SEARch:TRIGger:SENT:CRCerror`.

Parameters:
<ErrorCondition> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search types" on page 737

SEARch:TRIGger:SENT:TTYPe <SearchName>,<TSFieldType>
SEARch:TRIGger:SENT:TTYPe? <SearchName>

Selects the SENT transmission sequence to be searched for.

To enable the search for the transmission sequence, use `SEARch:TRIGger:SENT:TRANsmission`.

Parameters:

<TSFieldType> STAT | STDA

STAT
Searches on the status nibble.

STDA
Searches for the end of the combination of status and data nibble(s).
Define the data conditions with `SEARch:TRIGger:SENT:STATus`, `SEARch:TRIGger:SENT:TDCN`, `BUS<b>:SENT:DNIBbles`, `SEARch:TRIGger:SENT:TDMN` and `SEARch:TRIGger:SENT:TDMX`.

*RST: STAT

Parameters for setting and query:
<SearchName>

Manual operation: See "Sequence" on page 738

SEARch:TRIGger:SENT:STATus <SearchName>,<StatusBits>
SEARch:TRIGger:SENT:STATus? <SearchName>

Sets the status nibble data.

Parameters:

<StatusBits> Numeric or string pattern, Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Status" on page 738

SEARch:TRIGger:SENT:TDCN <SearchName>,<TSDataOperator>
SEARch:TRIGger:SENT:TDCN? <SearchName>

Sets the operator for a specific data pattern or a data pattern range.

Parameters:

<TSDataOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater than, Greater or equal than. These conditions require one data pattern to be set with `SEARch:TRIGger:SENT:TDMN`.

INRange | OORange
In range / Out of range. To define the range set the minimum and maximum values with `SEARch:TRIGger:SENT:TDMN` and `SEARch:TRIGger:SENT:TDMX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Condition" on page 738

SEARch:TRIGger:SENT:TDMN <SearchName>,<TSDataPattern>
SEARch:TRIGger:SENT:TDMN? <SearchName>

Specifies a data pattern, or sets the start value of a data pattern range.

Parameters:
<TSDataPattern> Numeric or string pattern, Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Data min" on page 739

SEARch:TRIGger:SENT:TDMX <SearchName>,<TSDataPatternTo>
SEARch:TRIGger:SENT:TDMX? <SearchName>

Sets the end value of an identifier range for `SEARch:TRIGger:SENT:DCONdition INRange or OORange`.

Parameters:
<TSDataPatternTo> Numeric or string pattern, Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Data max" on page 739

SEARch:TRIGger:SENT:STYPe <SearchName>,<SMFieldType>
SEARch:TRIGger:SENT:STYPe? <SearchName>

Selects the serial message sequence to be searched for.

To enable the search for one of the serial message types, use `BUS<b>:SENT:SFORmat` and enable with `SEARch:TRIGger:SENT:SMSG`.

Parameters:
<SMFieldType> ID | IDDT

ID
Searches for the identifier.
To set the identifier condition for the serial message, use SEARch:TRIGger:SENT:SICN, SEARch:TRIGger:SENT:SIMN and SEARch:TRIGger:SENT:SIMX.

IDDT
Searches for the combination of identifier and data.
To set the identifier condition, use the commands shown above.
To set the data condition, use SEARch:TRIGger:SENT:SDCN, SEARch:TRIGger:SENT:SDMN and SEARch:TRIGger:SENT:SDMX.

*RST: ID

Parameters for setting and query:
<SearchName>

Manual operation: See "Sequence" on page 739

SEARch:TRIGger:SENT:SIDType <SearchName>,<SMIDType>
SEARch:TRIGger:SENT:SIDType? <SearchName>

Sets the message ID format (4 bit or 8 bit) of the enhanced serial message.

Parameters:
<SMIDType> B4 | B8

*RST: B4

Parameters for setting and query:
<SearchName>

Manual operation: See "ID Type" on page 739

SEARch:TRIGger:SENT:SICN <SearchName>,<SMIDOperator>
SEARch:TRIGger:SENT:SICN? <SearchName>

Sets the operator to set a specific data pattern or a data pattern range.

Parameters:
<SMIDOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater than, Greater or equal than. These conditions require one data pattern to be set with SEARch:TRIGger:SENT:SIMN.

INRange | OORange
In range / Out of range. To define the range set the minimum and maximum values with SEARch:TRIGger:SENT:SIMN and SEARch:TRIGger:SENT:SIMX.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Identifier Condition" on page 739

SEARch:TRIGger:SENT:SIMN <SearchName>,<SMIDPattern>
SEARch:TRIGger:SENT:SIMN? <SearchName>

Specifies a message identifier pattern, or sets the start value of an identifier range.

Parameters:
<SMIDPattern> Numeric or string pattern, Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Identifier min" on page 740

SEARch:TRIGger:SENT:SIMX <SearchName>,<SMIDPatternTo>
SEARch:TRIGger:SENT:SIMX? <SearchName>

Sets the end value of an identifier range for `SEARch:TRIGger:SENT:SICN INRange or OORange`.

Parameters:
<SMIDPatternTo> Numeric or string pattern, Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Identifier max" on page 740

SEARch:TRIGger:SENT:SDCN <SearchName>,<SMDataOperator>
SEARch:TRIGger:SENT:SDCN? <SearchName>

Sets the operator to set a specific data pattern or a data pattern range.

Parameters:
<SMDataOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater than, Greater or equal than. These conditions require one data pattern to be set with `SEARch:TRIGger:SENT:SDMN`.

INRange | OORange
In range / Out of range. To define the range set the minimum and maximum values with `SEARch:TRIGger:SENT:SDMN` and `SEARch:TRIGger:SENT:SDMX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "SSM Data Condition" on page 740

SEARch:TRIGger:SENT:SDMN <SearchName>,<SMDataPattern>
SEARch:TRIGger:SENT:SDMN? <SearchName>

Specifies a data pattern, or sets the start value of a data pattern range.

Parameters:
<SMDataPattern> Numeric or string pattern, Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Data min" on page 740

SEARch:TRIGger:SENT:SDMX <SearchName>,<SMDataPatternTo>
SEARch:TRIGger:SENT:SDMX? <SearchName>

Sets the end value of an identifier range for `SEARch:TRIGger:SENT:SDCN INRange or OORange`.

Parameters:
<SMDataPatternTo> Numeric or string pattern, Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Data max" on page 740

SEARch:TRIGger:SENT:PULSeerror <SearchName>,<CalibPlsErr>
SEARch:TRIGger:SENT:PULSeerror? <SearchName>

Enables the search for calibration pulse errors.

To initially enable the search for an error event, set `SEARch:TRIGger:SENT:ERRor` to ON.

Parameters:
<CalibPlsErr> OFF | ON

*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Error conditions setup" on page 740

SEARch:TRIGger:SENT:PPERioderror <SearchName>,<PulsePeriodErr>
SEARch:TRIGger:SENT:PPERioderror? <SearchName>

Enables the search for pulse period errors.

To initially enable the search for an error event, set `SEARch:TRIGger:SENT:ERRor` to ON.

Parameters:
<PulsePeriodErr> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Error conditions setup" on page 740

SEARch:TRIGger:SENT:IRFLength <SearchName>,<IrregularFrmLen>
SEARch:TRIGger:SENT:IRFLength? <SearchName>

Enables the search for irregular frame length errors in transmission sequences.

This error type is relevant if pause pulse mode is set to constant frame length.

To initially enable the search for an error event, set `SEARch:TRIGger:SENT:ERRor` to ON.

Parameters:
<IrregularFrmLen> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Error conditions setup" on page 740

SEARch:TRIGger:SENT:FORMerror <SearchName>,<FormError>
SEARch:TRIGger:SENT:FORMerror? <SearchName>

Enables the search for format errors in serial messages.

To initially enable the search for an error event, set `SEARch:TRIGger:SENT:ERRor` to ON.

Parameters:
<FormError> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Error conditions setup" on page 740

SEARch:TRIGger:SENT:CRCerror <SearchName>,<CRCError>
SEARch:TRIGger:SENT:CRCerror? <SearchName>

Enables the search for errors in the Cyclic Redundancy Check.

To initially enable the search for an error event, set `SEARch:TRIGger:SENT:ERRor` to ON.

Parameters:
<CRCError> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error conditions setup" on page 740

27.18.13.5 SENT search results

The search on decoded SENT data returns the same results as the queries for decode results.

In search result commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name.

For a description of the returned values, see the corresponding commands in Section 27.18.13.3, "Decode results", on page 2241.

SEARch:RESult:SENT:FCOunt? <SearchName>

Query parameters:
<SearchName>

Return values:
<Count> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:SENT:FRAMe<fr>:CSValue? <SearchName>

Returns the checksum value.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<ChecksumValue> Range: 0 to 63
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:SENT:FRAMe<fr>:DATA? <SearchName>

Returns the data of the specified frame.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Value>

Usage: Query only

SEARch:RESult:SENT:FRAMe<fr>:IDTYpe? <SearchName>

Returns the identifier type of the selected frame.

Suffix:
<fr> *
Selects the frame.

Query parameters:
<SearchName>

Return values:
<IdentifierType> B4 | B8
B4: standard format, 4 bit
B8: extended format, 8 bit
*RST: B4

Usage: Query only

SEARch:RESult:SENT:FRAMe<fr>:IDValue? <SearchName>

Returns the identifier value of the selected frame.

Suffix:
<fr> *
Selects the serial bus.

Query parameters:
<SearchName>

Return values:
<IdtfVal> Range: 0 to 255
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:SENT:FRAMe<fr>:NIBBle<n>:STATe? <SearchName>

Suffix:
<fr> *

<n> *

Query parameters:
<SearchName>

Return values:
<State> OK | UNDF
*RST: OK

Usage: Query only

SEARch:RESult:SENT:FRAMe<fr>:NIBBle<n>:VALue? <SearchName>

Suffix:
<fr> *

<n> *

Query parameters:
<SearchName>

Return values:

<Value>	Range:	0 to 15
	Increment:	1
	*RST:	0

Usage: Query only

SEARch:RESult:SENT:FRAMe<fr>:PAPTicks? <SearchName>

Suffix:

<fr>	*

Query parameters:
<SearchName>

Return values:

<PausePulseTicks>	Range:	12 to 768
	Increment:	1
	*RST:	12

Usage: Query only

SEARch:RESult:SENT:FRAMe<fr>:SCOM? <SearchName>

Suffix:

<fr>	*

Query parameters:
<SearchName>

Return values:

<StatusComm>	Range:	0 to 15
	Increment:	1
	*RST:	0

Usage: Query only

SEARch:RESult:SENT:FRAMe<fr>:SDATa? <SearchName>

Returns the symbolic data of the specified frame.

Suffix:

<fr>	*

Query parameters:
<SearchName>

Return values:

<SymbolicData>	String that contain the symbolic data.

Usage: Query only

SEARch:RESult:SENT:FRAMe<fr>:STARt? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameStart> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:SENT:FRAMe<fr>:STATus? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameState> OK | SYNC | PULSe | CRC | IRFL | FORM | INSufficient
*RST: OK

Usage: Query only

SEARch:RESult:SENT:FRAMe<fr>:STOP? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameStop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:SENT:FRAMe<fr>:SYMBol? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Translation>

Usage: Query only

SEARch:RESult:SENT:FRAMe<fr>:SYNCduration? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<SyncDuration> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:SENT:FRAMe<fr>:TYPE? <SearchName>

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameType> TRSQ | SMSG | EMSG
*RST: TRSQ

Usage: Query only

27.18.14 CXPI (option R&S RTO6-K520)

- Configuration....2262
- Trigger....2266
- Decode results....2275
- Search settings....2279
- Search result settings....2288

27.18.14.1 Configuration

BUS<b>:CXPI:BITRate:ENABle....2263
BUS<b>:CXPI:BITRate:VALue....2263
BUS<b>:CXPI:RESult:BITRate?....2263
BUS<b>:CXPI:DORD....2264
BUS<b>:CXPI:HYSTeresis....2264
BUS<b>:CXPI:POLarity....2264

BUS<b>:CXPI:THReshold 2264
BUS<b>:CXPI:SDATa 2265
BUS<b>:CXPI:IBS:MAX 2265
BUS<b>:CXPI:IBS:MIN 2265
BUS<b>:CXPI:IFS:MAX 2266
BUS<b>:CXPI:IFS:MIN 2266

BUS<b>:CXPI:BITRate:ENABle <BitrateEnable>

Enables the manual setting of a bit rate. You can set the bitrate value with `BUS<b>:CXPI:BITRate:VALue`.

Suffix:
<b> 1..4

Parameters:
<BitrateEnable> OFF | ON
*RST: OFF

Manual operation: See "Enable bit rate/ Average bit rate" on page 746

BUS<b>:CXPI:BITRate:VALue <Bitrate>

Sets the number of transmitted bits per second. To set this value, you have to enable the bitrate first with `BUS<b>:CXPI:BITRate:ENABle`.

Suffix:
<b> 1..4

Parameters:
<Bitrate> Range: 1000 to 100E+3
Increment: 100
*RST: 19.2E+3
Default unit: bps

Manual operation: See "Enable bit rate/ Average bit rate" on page 746

BUS<b>:CXPI:RESult:BITRate?

Queries the measured average bit rate, which is calculated if `BUS<b>:CXPI:BITRate:ENABle` is set to `OFF`.

Suffix:
<b> 1..4

Return values:
<AverageBitrate> Range: 1000 to 100E+3
Increment: 100
*RST: 19.2E+3
Default unit: bps

Usage: Query only

Manual operation: See "Enable bit rate/ Average bit rate" on page 746

BUS<b>:CXPI:DORD <DisplayOrder>

Selects the order in which the signal is displayed in the honeycomb.

If `TRANsmitted` is selected, the signal is displayed in the order it occurs. If `LOGical` is selected, the signal is displayed according to the definition of the standard (MSB bit order).

Suffix:
<b> 1..4

Parameters:
<DisplayOrder> TRANsmitted | LOGical
*RST: TRANsmitted

Manual operation: See "Display order" on page 746

BUS<b>:CXPI:HYSTeresis <ThresHyst>

Sets a value for the hysteresis.

Suffix:
<b> 1..4

Parameters:
<ThresHyst> Range: -12 to 12
Increment: 0.01
*RST: 1
Default unit: V

Manual operation: See "Hysteresis" on page 745

BUS<b>:CXPI:POLarity <Polarity>

Sets the polarity of the transmitted waveform to normal (high = 1) or inverted (low = 1).

Suffix:
<b> 1..4

Parameters:
<Polarity> NORMal | INVert
*RST: NORMal

Manual operation: See "Polarity" on page 744

BUS<b>:CXPI:THReshold <Threshold>

Sets the threshold value for the signal.

Suffix:
<b> 1..4

Parameters:

<Threshold> Range: -15 to 12
Increment: 0.01
*RST: 6
Default unit: V

Manual operation: See "Threshold" on page 745

BUS<b>:CXPI:SDATa <SourceData>

Selects the input channel for the signal.

Usually, the source is one of the analog channels. Reference and math waveforms are available as sources if the trigger source is one of the analog channels but not the serial bus.

Alternatively, digital channels can be used if MSO option R&S RTO6-B1 is installed. Digital and analog channels cannot be used at the same time.

For triggering on a serial bus, analog or digital channel sources are required.

Suffix:

<b> 1..4

Parameters:

<SourceData> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

For triggering on a serial bus, analog or digital channel sources are required.

*RST: C1W1

Manual operation: See "Source" on page 744

BUS<b>:CXPI:IBS:MAX <ExpectedIBSMax>

Sets the maximum for the inter-byte-space range.

Suffix:

<b> 1..4

Parameters:

<ExpectedIBSMax> Range: 0 to 15
Increment: 1
*RST: 10

Manual operation: See "Expected IBS length" on page 745

BUS<b>:CXPI:IBS:MIN <ExpectedIBSMin>

Sets the minimum for the inter-byte-space range.

Suffix:
<b> 1..4

Parameters:
<ExpectedIBSMin> Range: 0 to 15
Increment: 1
*RST: 0

Manual operation: See "Expected IBS length" on page 745

BUS<b>:CXPI:IFS:MAX <ExpectedIFSMax>

Sets the maximum for the inter-frame-space range.

Suffix:
<b> 1..4

Parameters:
<ExpectedIFSMax> Range: 16 to 100E+3
Increment: 1
*RST: 1000

Manual operation: See "Expected IFS length" on page 745

BUS<b>:CXPI:IFS:MIN <ExpectedIFSMin>

Sets the minimum for the inter-frame-space range.

Suffix:
<b> 1..4

Parameters:
<ExpectedIFSMin> Range: 16 to 1000
Increment: 1
*RST: 21

Manual operation: See "Expected IFS length" on page 745

27.18.14.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:CXPI:TYPE....2274

TRIGger<t>:CXPI:CT <CT>

Sets the value of the counter (CT), 2 bits indicating the continuity of the frame.

Suffix:
<t> 1..3

Parameters:
<CT>

Manual operation: See "CT" on page 754

TRIGger<t>:CXPI:DATA:DCONdition <Data_Operator>

Sets the condition for the data pattern. You can define no value, an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<Data_Operator> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

OFF = ANY
Any data pattern is considered

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:CXPI:DATA:DMIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:CXPI:DATA:DMIN` and `TRIGger<t>:CXPI:DATA:DMAX`.

*RST: OFF

Manual operation: See "Data" on page 753

TRIGger<t>:CXPI:DATA:DMAX <Data_Max>

Sets the end value of a data type range if `TRIGger<t>:CXPI:DATA:DCONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<Data_Max>

Manual operation: See "Data" on page 753

TRIGger<t>:CXPI:DATA:DMIN <Data_Min>

Specifies a data bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<Data_Min>

Manual operation: See "Data" on page 753

TRIGger<t>:CXPI:DATA:ICONdition <DataIndexOperator>

Set the condition for the data index value. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<DataIndexOperator> EQUal | LTHan | LETHan | GTHan | GETHan | INRange | RANGe

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `TRIGger<t>:CXPI:DATA:IMIN` command.

INRange = RANGe
In range: Set the minimum and maximum value using `TRIGger<t>:CXPI:DATA:IMIN` and `TRIGger<t>:CXPI:DATA:IMAX`.

*RST: INRange

Manual operation: See "Index" on page 754

TRIGger<t>:CXPI:DATA:IMAX <DataIndex_Max>

Sets the end value of a data index range if `TRIGger<t>:CXPI:DATA:ICONdition` is set to `INRange` or `RANge`.

Suffix:
<t> 1..3

Parameters:
<DataIndex_Max>
Range: 1 to 256
Increment: 1
*RST: 256

Manual operation: See "Index" on page 754

TRIGger<t>:CXPI:DATA:IMIN <DataIndex_Min>

Specifies a data index bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<DataIndex_Min>
Range: 1 to 256
Increment: 1
*RST: 1

Manual operation: See "Index" on page 754

TRIGger<t>:CXPI:DEXTension:CONDition <DLC_EXT_Operator>

Set the condition for the DLC extend value. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<DLC_EXT_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:CXPI:DEXTension:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:CXPI:DEXTension:MIN` and `TRIGger<t>:CXPI:DEXTension:MAX`.

*RST: EQUal

Manual operation: See "DLC Extend" on page 753

TRIGger<t>:CXPI:DEXTension:MAX <DLC_EXT_Max>

Sets the end value of a DLC extend range if `TRIGger<t>:CXPI:DEXTension:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<DLC_EXT_Max>

Manual operation: See "DLC Extend" on page 753

TRIGger<t>:CXPI:DEXTension:MIN <DLC_EXT_Min>

Specifies a data extension bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<DLC_EXT_Min>

Manual operation: See "DLC Extend" on page 753

TRIGger<t>:CXPI:DLC:CONDition <DLC_Operator>

Set the condition for the DLC. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<DLC_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one DLC pattern to be set with the corresponding `TRIGger<t>:CXPI:DLC:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:CXPI:DLC:MIN` and `TRIGger<t>:CXPI:DLC:MAX`.

*RST: EQUal

Manual operation: See "DLC" on page 753

TRIGger<t>:CXPI:DLC:MAX <DLC_Max>

Sets the end value of a data type range if `TRIGger<t>:CXPI:DLC:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<DLC_Max>

Manual operation: See "DLC" on page 753

TRIGger<t>:CXPI:DLC:MIN <DLC_Min>

Specifies a DLC pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<DLC_Min>

Manual operation: See "DLC" on page 753

TRIGger<t>:CXPI:ERRor:CRC <Error_CRC>

Triggers on a cyclic redundancy check error, if `TRIGger<t>:CXPI:TYPE` is set to `ERRor`.

The transmitting node calculates the cyclic redundancy check (CRC) value of a frame and stores it into the CRC field of the frame. CRC error occurs when this CRC field value differs from the value calculated by the receiving node.

Suffix:
<t> 1..3

Parameters:
<Error_CRC> OFF | ON
*RST: ON

TRIGger<t>:CXPI:ERRor:DLC <Error_DLC>

Triggers on a data length code (DLC) error, if `TRIGger<t>:CXPI:TYPE` is set to `ERRor`.

DLC error occurs when the value of the DLC field is different from the data byte field value.

Suffix:
<t> 1..3

Parameters:
<Error_DLC> OFF | ON
*RST: ON

TRIGger<t>:CXPI:ERRor:IBS <Error_IBS>

Triggers on an inter-byte-space (IBS) error, if `TRIGger<t>:CXPI:TYPE` is set to `ERRor`.

Suffix:
<t> 1..3

Parameters:
<Error_IBS> OFF | ON
*RST: ON

TRIGger<t>:CXPI:ERRor:IFS <Error_IFS>

Triggers on an inter-frame-space (IFS) error, if `TRIGger<t>:CXPI:TYPE` is set to `ERRor`.

Suffix:
<t> 1..3

Parameters:
<Error_IFS> OFF | ON
*RST: ON

TRIGger<t>:CXPI:ERRor:LENGth <Error_Length>

Triggers on a length error, if `TRIGger<t>:CXPI:TYPE` is set to `ERRor`.

Suffix:
<t> 1..3

Parameters:
<Error_Length> OFF | ON
*RST: ON

TRIGger<t>:CXPI:ERRor:PARity <Error_Parity>

Triggers on a parity error indicating a transmission error, if `TRIGger<t>:CXPI:TYPE` is set to `ERRor`.

Suffix:
<t> 1..3

Parameters:
<Error_Parity> OFF | ON
*RST: ON

TRIGger<t>:CXPI:ERRor:UART <Error_Uart>

Triggers on an UART error, if `TRIGger<t>:CXPI:TYPE` is set to `ERRor`.

Suffix:
<t> 1..3

Parameters:
<Error_Uart> OFF | ON
*RST: ON

TRIGger<t>:CXPI:FID:CONDition <FrameID_Operator>

Set the condition for the frame ID. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<FrameID_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:CXPI:FID:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:CXPI:FID:MIN` and `TRIGger<t>:CXPI:FID:MAX`.

*RST: EQUal

Manual operation: See "Frame ID" on page 752

TRIGger<t>:CXPI:FID:MAX <FrameID_Max>

Sets the end value of a frame ID range if `TRIGger<t>:CXPI:FID:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<FrameID_Max>

Manual operation: See "Frame ID" on page 752

TRIGger<t>:CXPI:FID:MIN <FrameID_Min>

Specifies a frame ID pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<FrameID_Min>

Manual operation: See "Frame ID" on page 752

TRIGger<t>:CXPI:NM <NM>

Sets the value of the network management (NM) field.

Suffix:
<t> 1..3

Parameters:
<NM>

Manual operation: See "NM" on page 757

TRIGger<t>:CXPI:TYPE <Type>

Selects the trigger type for the CXPI analysis.

Suffix:
<t> 1..3

Parameters:
<Type> STARt | NORMal | NPOLI | SLEEP | LONG | LPOLI | PID | PTYPe | PTPD | ERRor

STARt
Triggers on the STARt of the frame.

NORMal
Triggers on a NORMal frame. Optionally you can define a frame ID condition, an NM, a CT, a DLC condition, a data pattern condition and an index condition.

NPOLl
Triggers on a Normal POLL frame. Optionally you can define a frame ID condition, an NM, a CT, a DLC condition, a data pattern condition and an index condition.

SLEEP
Triggers on a SLEEP frame. Optionally you can define an NM, a CT, a data pattern condition and an index condition.

LONG
Triggers on a Long frame. Optionally you can define a frame ID condition, an NM, a CT, a DLC extend condition, a data pattern condition and an index condition.

LPOLl
Triggers on a Long POLL frame.

PID
Triggers on a Protected ID field. Optionally, you can define the frame ID pattern.

PTYPe
Triggers on a Protected TYPE field.

PTPID
Triggers on a Protected Type field followed by a PID field. Optionally, you can define the frame ID pattern.

ERRor
Trigger on selected error types. Define the error types with:
`TRIGger<t>:CXPI:ERRor:CRC`
`TRIGger<t>:CXPI:ERRor:DLC`
`TRIGger<t>:CXPI:ERRor:IBS`
`TRIGger<t>:CXPI:ERRor:IFS`
`TRIGger<t>:CXPI:ERRor:LENGth`
`TRIGger<t>:CXPI:ERRor:PARity`
`TRIGger<t>:CXPI:ERRor:UART`

*RST: STARt

Manual operation: See "Trigger type" on page 747

27.18.14.3 Decode results

To show the results on the screen, use the following commands:

- `BUS<b>:RESult` on page 1914

BUS<b>:CXPI:RESult:FCOunt? 2276
BUS<b>:CXPI:RESult:FRAMe<fr>:DATA? 2276
BUS<b>:CXPI:RESult:FRAMe<fr>:DLCV? 2276
BUS<b>:CXPI:RESult:FRAMe<fr>:STARt? 2276

BUS<b>:CXPI:RESult:FRAMe<fr>:STATe? 2277
BUS<b>:CXPI:RESult:FRAMe<fr>:STOP? 2277
BUS<b>:CXPI:RESult:FRAMe<fr>:TYPE? 2277
BUS<b>:CXPI:RESult:FRAMe<fr>:WORD<w>:STATus? 2278
BUS<b>:CXPI:RESult:FRAMe<fr>:WORD<w>:TYPE? 2278
BUS<b>:CXPI:RESult:FRAMe<fr>:WORD<w>:VALue? 2279

BUS<b>:CXPI:RESult:FCOunt?

Returns the number of frames in the acquisition.

Suffix:
<b> 1..4

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CXPI:RESult:FRAMe<fr>:DATA?

Returns the data bytes of the specified frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<Data>

Usage: Query only

BUS<b>:CXPI:RESult:FRAMe<fr>:DLCV?

Returns the data length code/ extension data length code field value.

Suffix:
<b> 1..4

<fr> *

Return values:
<DLC> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:CXPI:RESult:FRAMe<fr>:STARt?

Returns the start time of the specified frame.

Suffix:
<b> 1..4
<fr> *

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:CXPI:RESult:FRAMe<fr>:STATe?

Returns the state of the specified frame.

Suffix:
<b> 1..4
<fr> *

Return values:
<State> OK | INComplete | ERR_IBS | ERR_IFS | ERR_LENGTH | ERR_CRC | ERR_PARITY | ERR_DLC | ERR_UART
*RST: OK

Usage: Query only

BUS<b>:CXPI:RESult:FRAMe<fr>:STOP?

Returns the stop time of the specified frame.

Suffix:
<b> 1..4
<fr> *

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:CXPI:RESult:FRAMe<fr>:TYPE?

Returns the type of the specified frame.

Suffix:
<b> 1..4

<fr> *

Return values:

<Type> NORMal | NPOLI | SLEEP | LONG | LPOLI | PID | PTYPe | PTPID | UNKNown | IFS

NPOLI
Normal POLI

LPOLI
Long POLI

PID
Protected ID

PTPID
Protected Type + Protected ID

IFS
Inter-Frame-Space

*RST: NORMal

Usage: Query only

BUS<b>:CXPI:RESult:FRAMe<fr>:WORD<w>:STATus?

Returns the status of the specified field.

Suffix:

<b> 1..4

<fr> *

<w> *

Return values:

<Status> OK | INComplete | ERR_IBS | ERR_IFS | ERR_LENGTH | ERR_CRC | ERR_PARITY | ERR_DLC | ERR_UART

*RST: OK

Usage: Query only

BUS<b>:CXPI:RESult:FRAMe<fr>:WORD<w>:TYPE?

Returns the type (name) of the specified field.

Suffix:

<b> 1..4

<fr> *

<w> *

Return values:

<WordType>

Usage: Query only

BUS<b>:CXPI:RESult:FRAMe<fr>:WORD<w>:VALue?

Returns the numeric value of the specified field.

Suffix:

<b>	1..4
<fr>	*
<w>	*

Return values:

<WordValue>	Range:	0 to 65.535E+3
	Increment:	1
	*RST:	0

Usage: Query only

27.18.14.4 Search settings

In search setup commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name. The commands are similar to CXPI trigger commands.

SEARch:TRIGger:CXPI:CT 2280
SEARch:TRIGger:CXPI:DATA:DCONdition 2280
SEARch:TRIGger:CXPI:DATA:DMAX 2280
SEARch:TRIGger:CXPI:DATA:DMIN 2281
SEARch:TRIGger:CXPI:DATA:ICONdition 2281
SEARch:TRIGger:CXPI:DATA:IMAX 2281
SEARch:TRIGger:CXPI:DATA:IMIN 2282
SEARch:TRIGger:CXPI:DEXTension:CONDition 2282
SEARch:TRIGger:CXPI:DEXTension:MAX 2282
SEARch:TRIGger:CXPI:DEXTension:MIN 2283
SEARch:TRIGger:CXPI:DLC:CONDition 2283
SEARch:TRIGger:CXPI:DLC:MAX 2283
SEARch:TRIGger:CXPI:DLC:MIN 2284
SEARch:TRIGger:CXPI:ERRor:CRC 2284
SEARch:TRIGger:CXPI:ERRor:DLC 2284
SEARch:TRIGger:CXPI:ERRor:IBS 2284
SEARch:TRIGger:CXPI:ERRor:IFS 2285
SEARch:TRIGger:CXPI:ERRor:LENGth 2285
SEARch:TRIGger:CXPI:ERRor:PARity 2285
SEARch:TRIGger:CXPI:ERRor:UART 2285
SEARch:TRIGger:CXPI:FID:CONDition 2286
SEARch:TRIGger:CXPI:FID:MAX 2286
SEARch:TRIGger:CXPI:FID:MIN 2286
SEARch:TRIGger:CXPI:NM 2287
SEARch:TRIGger:CXPI:TYPE 2287

SEARch:TRIGger:CXPI:CT <SearchName>,<CT>
SEARch:TRIGger:CXPI:CT? <SearchName>

Sets the value of the counter (CT), 2 bits indicating the continuity of the frame.

Parameters:
<CT>

Parameters for setting and query:
<SearchName>

Manual operation: See "CT" on page 757

SEARch:TRIGger:CXPI:DATA:DCONdition <SearchName>,<Data_Operator>
SEARch:TRIGger:CXPI:DATA:DCONdition? <SearchName>

Sets the condition for the data pattern. You can define no value, an exact value or a value range.

Parameters:
<Data_Operator> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

OFF = ANY
Any data pattern is considered

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:CXPI:DATA:DMIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:CXPI:DATA:DMIN` and `SEARch:TRIGger:CXPI:DATA:DCONdition`.

*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Data" on page 757

SEARch:TRIGger:CXPI:DATA:DMAX <SearchName>,<Data_Max>
SEARch:TRIGger:CXPI:DATA:DMAX? <SearchName>

Sets the end value of a data type range if `SEARch:TRIGger:CXPI:DATA:DCONdition` is set to `INRange` or `OORange`.

Parameters:
<Data_Max>

Parameters for setting and query:
<SearchName>

Manual operation: See "Data" on page 757

SEARch:TRIGger:CXPI:DATA:DMIN <SearchName>,<Data_Min>
SEARch:TRIGger:CXPI:DATA:DMIN? <SearchName>

Specifies a data bit pattern, or sets the start value of a pattern range.

Parameters:
<Data_Min>

Parameters for setting and query:
<SearchName>

Manual operation: See "Data" on page 757

SEARch:TRIGger:CXPI:DATA:ICONdition <SearchName>,<DataIndexOperator>
SEARch:TRIGger:CXPI:DATA:ICONdition? <SearchName>

Set the condition for the data index value. You can define an exact value or a value range.

Parameters:
<DataIndexOperator> EQUal | LTHan | LETHan | GTHan | GETHan | INRange | RANGe

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `SEARch:TRIGger:CXPI:DATA:IMIN` command.

INRange = RANGe
In range: Set the minimum and maximum value using `SEARch:TRIGger:CXPI:DATA:IMIN` and `SEARch:TRIGger:CXPI:DATA:IMAX`.

*RST: INRange

Parameters for setting and query:
<SearchName>

Manual operation: See "Index" on page 757

SEARch:TRIGger:CXPI:DATA:IMAX <SearchName>,<DataIndex_Max>
SEARch:TRIGger:CXPI:DATA:IMAX? <SearchName>

Sets the end value of a data index range if `SEARch:TRIGger:CXPI:DATA:ICONdition` is set to `INRange` or `RANge`.

Parameters:
<DataIndex_Max> Range: 1 to 256
Increment: 1
*RST: 256

Parameters for setting and query:
<SearchName>

Manual operation: See "Index" on page 757

SEARch:TRIGger:CXPI:DATA:IMIN <SearchName>,<DataIndex_Min>
SEARch:TRIGger:CXPI:DATA:IMIN? <SearchName>

Specifies a data index bit pattern, or sets the start value of a pattern range.

Parameters:
<DataIndex_Min> Range: 1 to 256
Increment: 1
*RST: 1

Parameters for setting and query:
<SearchName>

Manual operation: See "Index" on page 757

SEARch:TRIGger:CXPI:DEXTension:CONDition
<SearchName>,<DLC_EXT_Operator>
SEARch:TRIGger:CXPI:DEXTension:CONDition? <SearchName>

Set the condition for the DLC extend value. You can define an exact value or a value range.

Parameters:
<DLC_EXT_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:CXPI:DEXTension:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:CXPI:DEXTension:MIN` and `SEARch:TRIGger:CXPI:DEXTension:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "DLC Extend" on page 757

SEARch:TRIGger:CXPI:DEXTension:MAX <SearchName>,<DLC_EXT_Max>
SEARch:TRIGger:CXPI:DEXTension:MAX? <SearchName>

Sets the end value of a DLC extend range if `SEARch:TRIGger:CXPI:DEXTension:CONDition` is set to `INRange` or `OORange`.

Parameters:
<DLC_EXT_Max>

Parameters for setting and query:
<SearchName>

Manual operation: See "DLC Extend" on page 757

SEARch:TRIGger:CXPI:DEXTension:MIN <SearchName>,<DLC_EXT_Min>
SEARch:TRIGger:CXPI:DEXTension:MIN? <SearchName>

Specifies a data extension bit pattern, or sets the start value of a pattern range.

Parameters:
<DLC_EXT_Min>

Parameters for setting and query:
<SearchName>

Manual operation: See "DLC Extend" on page 757

SEARch:TRIGger:CXPI:DLC:CONDition <SearchName>,<DLC_Operator>
SEARch:TRIGger:CXPI:DLC:CONDition? <SearchName>

Set the condition for the DLC. You can define an exact value or a value range.

Parameters:
<DLC_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one DLC pattern to be set with the corresponding `SEARch:TRIGger:CXPI:DLC:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:CXPI:DLC:MIN` and `SEARch:TRIGger:CXPI:DLC:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "DLC" on page 756

SEARch:TRIGger:CXPI:DLC:MAX <SearchName>,<DLC_Max>
SEARch:TRIGger:CXPI:DLC:MAX? <SearchName>

Sets the end value of a data type range if `SEARch:TRIGger:CXPI:DLC:CONDition` is set to `INRange` or `OORange`.

Parameters:
<DLC_Max>

Parameters for setting and query:
<SearchName>

Manual operation: See "DLC" on page 756

SEARch:TRIGger:CXPI:DLC:MIN <SearchName>,<DLC_Min>
SEARch:TRIGger:CXPI:DLC:MIN? <SearchName>

Specifies a DLC pattern, or sets the start value of a pattern range.

Parameters:
<DLC_Min>

Parameters for setting and query:
<SearchName>

Manual operation: See "DLC" on page 756

SEARch:TRIGger:CXPI:ERRor:CRC <SearchName>,<Error_CRC>
SEARch:TRIGger:CXPI:ERRor:CRC? <SearchName>

Searches for a cyclic redundancy check error, if `SEARch:TRIGger:CXPI:TYPE` is set to `ERRor`.

Parameters:
<Error_CRC> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

SEARch:TRIGger:CXPI:ERRor:DLC <SearchName>,<Error_DLC>
SEARch:TRIGger:CXPI:ERRor:DLC? <SearchName>

Searches for a data length code error, if `SEARch:TRIGger:CXPI:TYPE` is set to `ERRor`.

Parameters:
<Error_DLC> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

SEARch:TRIGger:CXPI:ERRor:IBS <SearchName>,<Error_IBS>
SEARch:TRIGger:CXPI:ERRor:IBS? <SearchName>

Searches for an inter-byte-space error, if `SEARch:TRIGger:CXPI:TYPE` is set to `ERRor`.

Parameters:
<Error_IBS> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

SEARch:TRIGger:CXPI:ERRor:IFS <SearchName>,<Error_IFS>
SEARch:TRIGger:CXPI:ERRor:IFS? <SearchName>

Searches for an inter-frame-space error, if `SEARch:TRIGger:CXPI:TYPE` is set to `ERRor`.

Parameters:
<Error_IFS> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

SEARch:TRIGger:CXPI:ERRor:LENGth <SearchName>,<Error_Length>
SEARch:TRIGger:CXPI:ERRor:LENGth? <SearchName>

Searches for a length error, if `SEARch:TRIGger:CXPI:TYPE` is set to `ERRor`.

Parameters:
<Error_Length> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

SEARch:TRIGger:CXPI:ERRor:PARity <SearchName>,<Error_Parity>
SEARch:TRIGger:CXPI:ERRor:PARity? <SearchName>

Searches for a parity error, if `SEARch:TRIGger:CXPI:TYPE` is set to `ERRor`.

Parameters:
<Error_Parity> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

SEARch:TRIGger:CXPI:ERRor:UART <SearchName>,<Error_Uart>
SEARch:TRIGger:CXPI:ERRor:UART? <SearchName>

Searches for an UART error, if `SEARch:TRIGger:CXPI:TYPE` is set to `ERRor`.

Parameters:
<Error_Uart> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

SEARch:TRIGger:CXPI:FID:CONDition <SearchName>,<FrameID_Operator>
SEARch:TRIGger:CXPI:FID:CONDition? <SearchName>

Set the condition for the frame ID. You can define an exact value or a value range.

Parameters:
<FrameID_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:CXPI:FID:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:CXPI:FID:MIN` and `SEARch:TRIGger:CXPI:FID:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame ID" on page 756

SEARch:TRIGger:CXPI:FID:MAX <SearchName>,<FrameID_Max>
SEARch:TRIGger:CXPI:FID:MAX? <SearchName>

Sets the end value of a frame ID range if `SEARch:TRIGger:CXPI:FID:CONDition` is set to `INRange` or `OORange`.

Parameters:
<FrameID_Max>

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame ID" on page 756

SEARch:TRIGger:CXPI:FID:MIN <SearchName>,<FrameID_Min>
SEARch:TRIGger:CXPI:FID:MIN? <SearchName>

Specifies a frame ID pattern, or sets the start value of a pattern range.

Parameters:
<FrameID_Min>

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame ID" on page 756

SEARch:TRIGger:CXPI:NM <SearchName>,<NM>
SEARch:TRIGger:CXPI:NM? <SearchName>

Sets the value of the network management (NM) field.

Parameters:
<NM>

Parameters for setting and query:
<SearchName>

Manual operation: See "NM" on page 754

SEARch:TRIGger:CXPI:TYPE <SearchName>,<Type>
SEARch:TRIGger:CXPI:TYPE? <SearchName>

Searches for the selected CXPI frame type.

Parameters:
<Type> STARt | NORMal | NPOLI | SLEEP | LONG | LPOLI | PID | PTYPe | PTPD | ERRor

STARt
Triggers on the STARt of the frame.

NORMal
Triggers on a NORMal frame. Optionally you can define a frame ID condition, a NM, a CT, a DLC condition, a data pattern condition and an index condition.

NPOLI
Triggers on a Normal POLL frame. Optionally you can define a frame ID condition, a NM, a CT, a DLC condition, a data pattern condition and an index condition.

SLEEP
Triggers on a SLEEP frame. Optionally you can define a NM, a CT, a data pattern condition and an index condition.

LONG
Triggers on a Long frame. Optionally you can define a frame ID condition, a NM, a CT, a DLC extend condition, a data pattern condition and an index condition.

LPOLI
Triggers on a Long POLL frame.

PID
Triggers on a Protected ID field. Optionally, you can define the frame ID pattern.

PTYPe
Triggers on a Protected TYPE field.

PTPID
Triggers on a PType field followed by a PID field.Optionally, you can define the frame ID pattern.

ERRor
Trigger on selected error types. Define the error types with:
SEARch:TRIGger:CXPI:ERRor:CRC on page 2284
SEARch:TRIGger:CXPI:ERRor:CRC on page 2284
SEARch:TRIGger:CXPI:ERRor:DLC on page 2284
SEARch:TRIGger:CXPI:ERRor:IBS on page 2284
SEARch:TRIGger:CXPI:ERRor:IFS on page 2285
SEARch:TRIGger:CXPI:ERRor:LENGth on page 2285
SEARch:TRIGger:CXPI:ERRor:PARity on page 2285
SEARch:TRIGger:CXPI:ERRor:UART on page 2285

*RST: STARt

Parameters for setting and query:
<SearchName>

Manual operation: See "Search type" on page 755

27.18.14.5 Search result settings

The search on decoded CXPI data returns the same results as the queries for decode results.

In search result commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name.

For a description of the returned values, see the corresponding commands in Section 27.18.14.3, "Decode results", on page 2275.

SEARch:RESult:CXPI:FCOunt? 2289

27.18.15 MIL-1553 (option R&S RTO6-K530)

- Configuration....2292
- Trigger....2294
- Decode results....2307
- Search settings....2311
- Search results....2318

27.18.15.1 Configuration

BUS<b>:MILStd:SOURce 2292
BUS<b>:MILStd:MAXResponse:BITS 2292
BUS<b>:MILStd:MAXResponse:SELect 2292
BUS<b>:MILStd:MINGap:SELect 2293
BUS<b>:MILStd:MINGap:BITS 2293
BUS<b>:MILStd:POLarity 2293
BUS<b>:MILStd:PRESet 2294
BUS<b>:MILStd:THReshold:HIGH 2294
BUS<b>:MILStd:THReshold:LOW 2294

BUS<b>:MILStd:SOURce <SourceData>

Sets the channel for the signal source.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<SourceData> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
*RST: C1W1

Manual operation: See "Source" on page 764

BUS<b>:MILStd:MAXResponse:BITS <MaxRespTime>

Sets the value for the maximum response time.

See also: `BUS<b>:MILStd:MAXResponse:SELect`.

Suffix:
<b> 1..4

Parameters:
<MaxRespTime> Range: 2E-6 to 262E-6
Increment: 100E-9
*RST: 14E-6
Default unit: s

Manual operation: See "Check max response" on page 765

BUS<b>:MILStd:MAXResponse:SELect <MaxRespSel>

Enables the detection of the maximum response time between the last bit of a word and the following status word sync during decoding.

To specify the maximum response time, use `BUS<b>:MILStd:MAXResponse:BITS` on page 2292.

Suffix:
<b> 1..4

Parameters:
<MaxRespSel> OFF | ON
*RST: ON

Manual operation: See "Check max response" on page 765

BUS<b>:MILStd:MINGap:SELect <MinGapSelect>

Enables the detection of the minimum idle time between the last bit of a message and the following command word sync during decoding.

To specify the minimum gap, use `BUS<b>:MILStd:MINGap:BITS`.

Suffix:
<b> 1..4

Parameters:
<MinGapSelect> OFF | ON
*RST: ON

Manual operation: See "Check min gap" on page 765

BUS<b>:MILStd:MINGap:BITS <MinGapTime>

Sets a value for the minimum gap.

See also: `BUS<b>:MILStd:MINGap:SELect`.

Suffix:
<b> 1..4

Parameters:
<MinGapTime> Range: 2E-6 to 262E-6
Increment: 100E-9
*RST: 4E-6
Default unit: s

Manual operation: See "Check min gap" on page 765

BUS<b>:MILStd:POLarity <Polarity>

Selects the wire on which the bus signal is measured.

Suffix:
<b> 1..4

Parameters:
<Polarity> NORMal | INVerted
*RST: NORMal

Manual operation: See "Polarity" on page 764

BUS<b>:MILStd:PRESet <Preset>

Sets the default threshold voltage.

Suffix:
<b> 1..4

Parameters:
<Preset> V05 | V2 | V5 | V7 | MANual
*RST: V5

Manual operation: See "Thresholds" on page 765

BUS<b>:MILStd:THReshold:HIGH <ThresholdHigh>

Sets the lower threshold level of the signal.

Suffix:
<b> 1..4

Parameters:
<ThresholdHigh> Range: 0 to 14
Increment: 0.1
*RST: 5
Default unit: V

Manual operation: See "Thresholds" on page 765

BUS<b>:MILStd:THReshold:LOW <ThresholdLow>

Sets the lower threshold level of the signal.

Suffix:
<b> 1..4

Parameters:
<ThresholdLow> Range: -14 to 0
Increment: 0.1
*RST: -5
Default unit: V

Manual operation: See "Thresholds" on page 765

27.18.15.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.

- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:MILStd:TPSPecifier....2307

TRIGger<t>:MILStd:TYPE <Type>

Sets the trigger type for MIL-1553 analysis.

Suffix:
<t> 1..3

Parameters:
<Type> STYPe | WTYPe | DATA | CDST | CMD | STATword | ERR

STYPe
SyncTYPe: triggers on a sync impulse.

WTYPe
WordTYPe: triggers on the selected word type.

DATA
Triggers on a data word that can be specified.

CDST
CommanDSTatus word: triggers on a command word or on a status word that can be specified.

CMD
CoMmanD word: triggers on a command word or on a status word that can be specified.

STATword
STATus word: triggers on a status word that can be specified.

ERR
ERRor: triggers on any combination of protocol errors.

*RST: STYPe

Manual operation: See "Trigger Type" on page 767

TRIGger<t>:MILStd:DATA:RCONdition <RTA_Operator>
TRIGger<t>:MILStd:CMD:RCONdition <RTA_Operator>
TRIGger<t>:MILStd:CDST:RCONdition <RTA_Operator>

Sets the operator to define a remote terminal address:

- DATA: for data words
- CMD: for command words
- CDST: for status words

Suffix:
<t> 1..3

Parameters:
<RTA_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with `TRIGger<t>:MILStd:CDST:RMIN`.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:MILStd:CDST:RMIN` and `TRIGger<t>:MILStd:CDST:RMAX`.

*RST: EQUal

Manual operation: See "Remote Terminal Address" on page 769

TRIGger<t>:MILStd:DATA:RMIN <RTA_PatternMin>
TRIGger<t>:MILStd:CMD:RMIN <RTA_PatternMin>
TRIGger<t>:MILStd:CDST:RMIN <RTA_PatternMin>

Specify a remote terminal address or set the the start value of a remote terminal address range:

- DATA: for data words
- CMD: for command words
- CDST: for status words

Suffix:
<t> 1..3

Parameters:
<RTA_PatternMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Remote Terminal Address" on page 769

TRIGger<t>:MILStd:DATA:RMAX <RTA_PatternMax>
TRIGger<t>:MILStd:CMD:RMAX <RTA_PatternMax>
TRIGger<t>:MILStd:CDST:RMAX <RTA_PatternMax>

Set the end value of a data range if `TRIGger<t>:MILStd:CDST:RCONdition` is set to `INRange` or `OORange`:

- DATA: for data words
- CMD: for command words
- CDST: for status words

Suffix:
<t> 1..3

Parameters:
<RTA_PatternMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Remote Terminal Address" on page 769

TRIGger<t>:MILStd:CMD:CCONdition <WordCountOperator>

Sets the operator to set a specific data word count or mode code pattern.

Suffix:
<t> 1..3

Parameters:
<WordCountOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with `TRIGger<t>:MILStd:CMD:CMIN`.

INRange | OORange
In range/Out of range: Set the minimum and maximum value of the range with `TRIGger<t>:MILStd:CMD:CMIN` and `TRIGger<t>:MILStd:CMD:CMAX`.

*RST: EQUal

Manual operation: See "Data Word Count/Mode Code" on page 771

TRIGger<t>:MILStd:CMD:CMAX <WordCount_PattMax>

Sets the end value of a data word count/mode code pattern if `TRIGger<t>:MILStd:CMD:CCONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<WordCount_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data Word Count/Mode Code" on page 771

TRIGger<t>:MILStd:CMD:CMIN <WordCount_PattMin>

Specifies a data word count/mode code pattern or sets the the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<WordCount_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data Word Count/Mode Code" on page 771

TRIGger<t>:MILStd:CMD:SCONdition <SubaddrOperator>

Sets the operator to set a specific subaddress/mode pattern.

Suffix:
<t> 1..3

Parameters:
<SubaddrOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with`TRIGger<t>:MILStd:CMD:SMIN`.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:MILStd:CMD:SMIN` and `TRIGger<t>:MILStd:CMD:SMAX`.

*RST: EQUal

Manual operation: See "Subaddress/ Mode" on page 771

TRIGger<t>:MILStd:CMD:SMAX <Subaddress_PattMax>

Sets the end value of the subaddress range if `TRIGger<t>:MILStd:CMD:SCONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<Subaddress_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Subaddress/ Mode" on page 771

TRIGger<t>:MILStd:CMD:SMIN <Subaddress_PattMin>

Specifies a subaddress or sets the the start value of a subaddress range.

Suffix:
<t> 1..3

Parameters:
<Subaddress_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Subaddress/ Mode" on page 771

TRIGger<t>:MILStd:CMD:TR <TR_Flag>

Triggers on a transmission mode.

Suffix:
<t> 1..3

Parameters:
<TR_Flag> ONE | ZERO | DC

ONE
Transmit direction.

ZERO
Receive direction.

DC
Either directions.

*RST: DC

Manual operation: See "T/R (Transmit/receive)" on page 772

TRIGger<t>:MILStd:CDST:ICONdition <Info_Operator>

Sets the operator to set a specific info for the 9th to 19th bit of a command or status word.

Suffix:
<t> 1..3

Parameters:
<Info_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with `TRIGger<t>:MILStd:CDST:IMIN`.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:MILStd:CDST:IMIN` and `TRIGger<t>:MILStd:CDST:IMAX`.

*RST: EQUal

Manual operation: See "11-Bit Information" on page 771

TRIGger<t>:MILStd:CDST:IMAX <Info_PattMax>

Sets the end value of the info range if `TRIGger<t>:MILStd:CDST:ICONdition` is set to `INRange`.

Suffix:
<t> 1..3

Parameters:
<Info_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "11-Bit Information" on page 771

TRIGger<t>:MILStd:CDST:IMIN <Info_PattMin>

Specifies an info or sets the the start value of an info range.

Suffix:
<t> 1..3

Parameters:
<Info_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "11-Bit Information" on page 771

TRIGger<t>:MILStd:DATA:DCONdition <Data_Operator>

Sets the operator to set a specific data pattern.

Suffix:
<t> 1..3

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with `TRIGger<t>:MILStd:DATA:DMIN`.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:MILStd:DATA:DMIN` and `TRIGger<t>:MILStd:DATA:DMAX`.

*RST: EQUal

Manual operation: See "Data Pattern" on page 770

TRIGger<t>:MILStd:DATA:DMAX <Data_PattMax>

Sets the end value of a data pattern range if `TRIGger<t>:MILStd:DATA:DCONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<Data_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data Pattern" on page 770

TRIGger<t>:MILStd:DATA:DMIN <Data_PattMin>

Specifies a data pattern or sets the the start value of a data pattern range.

Suffix:
<t> 1..3

Parameters:
<Data_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data Pattern" on page 770

TRIGger<t>:MILStd:DATA:ICONdition <DatIndexOperator>

Sets the operator to set a specific range within this series of the data words that is considered for the analysis.

Suffix:
<t> 1..3

Parameters:
<DatIndex_Operator> EQUal | LTHan | LETHan | GTHan | GETHan | INRange | RANGe

EQUal| LTHan | LETHan | GTHan | GETHan
Equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with `TRIGger<t>:MILStd:DATA:IMIN`.

INRange = RANGe
In range: set the minimum and maximum value of the range with `TRIGger<t>:MILStd:DATA:IMIN` and `TRIGger<t>:MILStd:DATA:IMAX`.

*RST: INRange

Manual operation: See "Data Index" on page 770

TRIGger<t>:MILStd:DATA:IMAX <DataIndex_Max>

Sets the end value of a data word series index range if `TRIGger<t>:MILStd:DATA:ICONdition` is set to `INRange`.

Suffix:
<t> 1..3

Parameters:
<DataIndex_Max> Range: 1 to 32
Increment: 1
*RST: 32

Manual operation: See "Data Index" on page 770

TRIGger<t>:MILStd:DATA:IMIN <DataIndex_Min>

Specifies an index or sets the the start value of a data word series index range.

Suffix:
<t> 1..3

Parameters:
<DataIndex_Min> Range: 1 to 32
Increment: 1
*RST: 1

Manual operation: See "Data Index" on page 770

TRIGger<t>:MILStd:ERRor:MANChester <ManCodingError>

Triggers on an error of the manchester coding if `TRIGger<t>:MILStd:TYPE` is set to `ERRor`.

Suffix:
<t> 1..3

Parameters:
<ManCodingError> OFF | ON
*RST: ON

Manual operation: See "Manchester Coding Error" on page 772

TRIGger<t>:MILStd:ERRor:PARity <ParityError>

Triggers on even parity if `TRIGger<t>:MILStd:TYPE` is set to `ERRor`.

Suffix:
<t> 1..3

Parameters:
<ParityError> OFF | ON
*RST: ON

Manual operation: See "Parity Error" on page 772

TRIGger<t>:MILStd:ERRor:SYNC <SyncError>

Triggers on an error of the synchronization if `TRIGger<t>:MILStd:TYPE` is set to `ERRor`.

Suffix:
<t> 1..3

Parameters:
<SyncError> OFF | ON
*RST: ON

Manual operation: See "Synchronization Error" on page 772

TRIGger<t>:MILStd:MAXResponse:BITS <MaxRespTime>

Sets the value for the maximum response time to be triggered on if `TRIGger<t>:MILStd:TYPE` is set to `ERRor`

Enable the error trigger on maximum response time with `TRIGger<t>:MILStd:MAXResponse:SELect`.

Suffix:
<t> 1..3

Parameters:
<MaxRespTime> Range: 2E-6 to 262E-6
Increment: 100E-9
*RST: 14E-6
Default unit: s

Manual operation: See "Check max response" on page 765

TRIGger<t>:MILStd:MAXResponse:SELect <MaxRespSel>

Enables the trigger on exceeding the maximum response time if `TRIGger<t>:MILStd:TYPE` is set to `ERRor`. You can set the maximum time with: `TRIGger<t>:MILStd:MAXResponse:BITS`.

Suffix:
<t> 1..3

Parameters:
<MaxRespSel> OFF | ON
*RST: ON

Manual operation: See "Check max response" on page 765

TRIGger<t>:MILStd:MINGap:BITS <MinGapTime>

Sets the value for the minimum gap to be triggered on if `TRIGger<t>:MILStd:TYPE` is set to `ERRor`.

Suffix:
<t> 1..3

Parameters:
<MinGapTime> Range: 2E-6 to 262E-6
Increment: 100E-9
*RST: 4E-6
Default unit: s

Manual operation: See "Check min gap" on page 765

TRIGger<t>:MILStd:MINGap:SELect <MinGapSelect>

Enables triggering when the minimum gap is out of range if `TRIGger<t>:MILStd:TYPE` is set to `ERRor`. You can set the minimum gap with: `TRIGger<t>:MILStd:MINGap:BITS`.

Suffix:
<t> 1..3

Parameters:
<MinGapSelect> OFF | ON
*RST: ON

Manual operation: See "Check min gap" on page 765

TRIGger<t>:MILStd:STATus:BCReceived <BcstCommand_Flag>

Triggers on the state of the broadcast command received bit of the status word if `TRIGger<t>:MILStd:TYPE` is set to `STATword`.

Suffix:
<t> 1..3

Parameters:
<BcstCommand_Flag> ONE | ZERO | DC
*RST: DC

Manual operation: See "Status Flags" on page 772

TRIGger<t>:MILStd:STATus:BUSY <Busy_Flag>

Triggers on the state of the busy bit of the status word if `TRIGger<t>:MILStd:TYPE` is set to `STATword`.

Suffix:
<t> 1..3

Parameters:
<Busy_Flag> ONE | ZERO | DC
*RST: DC

Manual operation: See "Status Flags" on page 772

TRIGger<t>:MILStd:STATus:DBCaccept <DynBC_Flag>

Triggers on the state of the dynamic bus control accept bit of the status word if `TRIGger<t>:MILStd:TYPE` is set to `STATword`.

Suffix:
<t> 1..3

Parameters:
<DynBC_Flag> ONE | ZERO | DC
*RST: DC

Manual operation: See "Status Flags" on page 772

TRIGger<t>:MILStd:STATus:INSTrument <Inst_Flag>

Triggers on the state of the instrumentation bit of the status word if `TRIGger<t>:MILStd:TYPE` is set to `STATword`.

Suffix:
<t> 1..3

Parameters:
<Inst_Flag> ONE | ZERO | DC
*RST: ZERO

Manual operation: See "Status Flags" on page 772

TRIGger<t>:MILStd:STATus:MERRor <MsgError_Flag>

Triggers on the state of the message error bit of the status word if `TRIGger<t>:MILStd:TYPE` is set to `STATword`.

Suffix:
<t> 1..3

Parameters:
<MsgError_Flag> ONE | ZERO | DC
*RST: DC

Manual operation: See "Status Flags" on page 772

TRIGger<t>:MILStd:STATus:SREQuest <SvcRequest_Flag>

Triggers on the state of the the service request bit of the status word if `TRIGger<t>:MILStd:TYPE` is set to `STATword`.

Suffix:
<t> 1..3

Parameters:
<SvcRequest_Flag> ONE | ZERO | DC
*RST: DC

Manual operation: See "Status Flags" on page 772

TRIGger<t>:MILStd:STATus:SUBSystem <Subsystem_Flag>

Triggers on the state of the subsystem flag bit of the status word if `TRIGger<t>:MILStd:TYPE` is set to `STATword`.

Suffix:
<t> 1..3

Parameters:
<Subsystem_Flag> ONE | ZERO | DC
*RST: DC

Manual operation: See "Status Flags" on page 772

TRIGger<t>:MILStd:STATus:TERMinal <Terminal_Flag>

Triggers on the state of the terminal flag bit of the status word if `TRIGger<t>:MILStd:TYPE` is set to `STATword`.

Suffix:
<t> 1..3

Parameters:
<Terminal_Flag> ONE | ZERO | DC
*RST: DC

Manual operation: See "Status Flags" on page 772

TRIGger<t>:MILStd:TPSPecifier <TypeSpecifier>

Sets the sync impulse/ word type to be triggered on.

Suffix:
<t> 1..3

Parameters:
<TypeSpecifier> CSTatus | DATA | ALL
CSTatus: command/status word
*RST: ALL

Manual operation: See "Sync Type / Word Type" on page 769

27.18.15.3 Decode results

To load and acivate a label list, use:

- `BUS<b>:NEWList` on page 1915
- `BUS<b>:SYMBols` on page 1915

BUS<b>:MILStd:WCOunt?....2308
BUS<b>:MILStd:WORD<w>:DATA?....2308
BUS<b>:MILStd:WORD<w>:INFO?....2308
BUS<b>:MILStd:WORD<w>:RTADdress?....2309
BUS<b>:MILStd:WORD<w>:STARt?....2309
BUS<b>:MILStd:WORD<w>:STATus?....2309

BUS<b>:MILStd:WORD<w>:STOP? 2310
BUS<b>:MILStd:WORD<w>:SYMBol? 2310
BUS<b>:MILStd:WORD<w>:TYPE? 2310

BUS<b>:MILStd:WCOunt?

Returns the number of decoded words.

Suffix:
<b> 1..4

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:MILStd:WORD<w>:DATA?

Return the data bytes of the specified word.

Suffix:
<b> 1..4
Selects the serial bus.

<w> *
Selects the word.

Return values:
<Data> 16-bit data of the specified word as a 2-byte bit pattern (B1, B2). The first byte B1 is the most significant byte.

Example:
```
BUS:MILStd:WORD4:DATA?
<-- #H08,#H49
```

Usage: Query only

BUS<b>:MILStd:WORD<w>:INFO?

Returns the info value for the specified word.

Suffix:
<b> 1..4
Selects the serial bus.

<w> *
Selects the word.

Return values:
<FrameInfo> Range: 0 to 2047
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:MILStd:WORD<w>:RTADdress?

Returns the RT address for the selected word.

Suffix:

<b> 1..4
Selects the serial bus.

<w> *
Selects the word.

Return values:

<FrameRta> Range: 0 to 31
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:MILStd:WORD<w>:STARt?

Return the start time of the selected word.

Suffix:

<b> 1..4
Selects the serial bus.

<w> *
Selects the word.

Return values:

<FrameStart> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:MILStd:WORD<w>:STATus?

Returns the overall state of the selected word.

Suffix:

<b> 1..4
Selects the serial bus.

<w> *
Selects the word.

Return values:

<FrameState> OK | SYNC | MANC | PAR | GAP | RT | INComplete | UNKNown
OK: the word is valid.
SYNC: synchronization error occured.
MANC: manchester coding error occured.
PAR: parity error occured.

GAP: timing gap error occured.
RT: remote terminal error occured.
INComplete: the sequence is not completely contained in the acquisition
UNKNown: unknown frame type

*RST: OK

Usage: Query only

BUS<b>:MILStd:WORD<w>:STOP?

Return the stop time of the selected word.

Suffix:

<b> 1..4
Selects the serial bus.

<w> *
Selects the word.

Return values:

<FrameStop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:MILStd:WORD<w>:SYMBol?

Returns the label name of the word ID.

Suffix:

<b> 1..4
Selects the serial bus.

<w> *
Selects the word.

Return values:

<Translation>

Usage: Query only

BUS<b>:MILStd:WORD<w>:TYPE?

Returns the type of the specified word.

Suffix:

<b> 1..4
Selects the serial bus.

<w> *
Selects the word.

Return values:

<FrameType> UNKNown | DATA | CMD | STAT | CMST | IM

CMD: command word
CMST: command/status word
IM: inter message. Shows if there are gap errors or response timeout.

*RST: DATA

Usage: Query only

27.18.15.4 Search settings

The search remote commands are very similar to the trigger commands. Therefore, search coommands are described in short, for more details, see the corresponding trigger command in Section 27.18.15.2, "Trigger", on page 2294.

SEARch:TRIGger:MILStd:STATus:TERMinal 2317
SEARch:TRIGger:MILStd:TPSPecifier 2317

SEARch:TRIGger:MILStd:TYPE <SearchName>,<Type>
SEARch:TRIGger:MILStd:TYPE? <SearchName>

Sets the event to be searched for.

Parameters:
<Type> STYPe | WTYPe | DATA | CDST | CMD | STATword | ERR

See `TRIGger<t>:MILStd:TYPE` on page 2295

*RST: STYPe

Parameters for setting and query:
<SearchName>

Manual operation: See "Type" on page 775

SEARch:TRIGger:MILStd:DATA:RCONdition <SearchName>,<RTA_Operator>
SEARch:TRIGger:MILStd:DATA:RCONdition? <SearchName>
SEARch:TRIGger:MILStd:CMD:RCONdition <SearchName>,<RTA_Operator>
SEARch:TRIGger:MILStd:CMD:RCONdition? <SearchName>
SEARch:TRIGger:MILStd:CDST:RCONdition <SearchName>,<RTA_Operator>
SEARch:TRIGger:MILStd:CDST:RCONdition? <SearchName>

Set the operator to define a remote terminal address:

- DATA: for data words
- CMD: for command words
- CDST: for status words

Parameters:
<RTA_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with `SEARch:TRIGger:MILStd:CDST:RMIN`.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:MILStd:CDST:RMIN` and `SEARch:TRIGger:MILStd:CDST:RMAX` on page 2313.

*RST: EQUal

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Remote terminal address setup: Condition, RTA " on page 776

SEARch:TRIGger:MILStd:DATA:RMIN <SearchName>,<RTA_PatternMin>
SEARch:TRIGger:MILStd:DATA:RMIN? <SearchName>
SEARch:TRIGger:MILStd:CMD:RMIN <SearchName>,<RTA_PatternMin>
SEARch:TRIGger:MILStd:CMD:RMIN? <SearchName>
SEARch:TRIGger:MILStd:CDST:RMIN <SearchName>,<RTA_PatternMin>
SEARch:TRIGger:MILStd:CDST:RMIN? <SearchName>

Specify a remote terminal address or set the the start value of a remote terminal address range:

- DATA: for data words
- CMD: for command words
- CDST: for status words

Parameters:
<RTA_PatternMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Remote terminal address setup: Condition, RTA " on page 776

SEARch:TRIGger:MILStd:DATA:RMAX <SearchName>,<RTA_PatternMax>
SEARch:TRIGger:MILStd:DATA:RMAX? <SearchName>
SEARch:TRIGger:MILStd:CMD:RMAX <SearchName>,<RTA_PatternMax>
SEARch:TRIGger:MILStd:CMD:RMAX? <SearchName>
SEARch:TRIGger:MILStd:CDST:RMAX <SearchName>,<RTA_PatternMax>
SEARch:TRIGger:MILStd:CDST:RMAX? <SearchName>

Set the end value of a data range if `SEARch:TRIGger:MILStd:CDST:RCONdition` is set to `INRange` or `OORange`:

- DATA: for data words
- CMD: for command words
- CDST: for status words

Parameters:
<RTA_PatternMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Remote terminal address setup: Condition, RTA " on page 776

SEARch:TRIGger:MILStd:CDST:ICONdition <SearchName>,<Info_Operator>
SEARch:TRIGger:MILStd:CDST:ICONdition? <SearchName>
SEARch:TRIGger:MILStd:CMD:CCONdition <SearchName>,<WordCountOperator>
SEARch:TRIGger:MILStd:CMD:CCONdition? <SearchName>
SEARch:TRIGger:MILStd:CMD:SCONdition <SearchName>,<SubaddrOperator>
SEARch:TRIGger:MILStd:CMD:SCONdition? <SearchName>
SEARch:TRIGger:MILStd:DATA:DCONdition <SearchName>,<Data_Operator>
SEARch:TRIGger:MILStd:DATA:DCONdition? <SearchName>

Sets the operator for the corresponding search:

- CDST:ICON - specific info for the 9th to 19th bit of a command or status word.
- CMD:CCON - specific data word count or mode code pattern in a command word
- CMD:SCON - specific subaddress/mode pattern in a command word
- DATA:DCON - data pattern in a data word

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange
*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Data pattern setup: Condition, Data min, Data max" on page 776

SEARch:TRIGger:MILStd:CDST:IMIN <SearchName>,<Info_PattMin>
SEARch:TRIGger:MILStd:CDST:IMIN? <SearchName>
SEARch:TRIGger:MILStd:CMD:CMIN <SearchName>,<WordCount_PattMin>
SEARch:TRIGger:MILStd:CMD:CMIN? <SearchName>
SEARch:TRIGger:MILStd:CMD:SMIN <SearchName>,<Subaddress_PattMin>
SEARch:TRIGger:MILStd:CMD:SMIN? <SearchName>
SEARch:TRIGger:MILStd:DATA:DMIN <SearchName>,<Data_PattMin>
SEARch:TRIGger:MILStd:DATA:DMIN? <SearchName>

Sets the pattern or the start value of a pattern range for the corresponding search:

- CDST:IMIN - specific info for the 9th to 19th bit of a command or status word.
- CMD:CMIN - specific data word count or mode code pattern in a command word
- CMD:SMIN - specific subaddress/mode pattern in a command word
- DATA:DMIN - data pattern in a data word

Parameters:
<Data_PattMin>

Parameters for setting and query:
<SearchName>

Manual operation: See "Data pattern setup: Condition, Data min, Data max" on page 776

SEARch:TRIGger:MILStd:CDST:IMAX <SearchName>,<Info_PattMax>
SEARch:TRIGger:MILStd:CDST:IMAX? <SearchName>
SEARch:TRIGger:MILStd:CMD:CMAX <SearchName>,<WordCount_PattMax>
SEARch:TRIGger:MILStd:CMD:CMAX? <SearchName>
SEARch:TRIGger:MILStd:CMD:SMAX <SearchName>,<Subaddress_PattMax>
SEARch:TRIGger:MILStd:CMD:SMAX? <SearchName>
SEARch:TRIGger:MILStd:DATA:DMAX <SearchName>,<Data_PattMax>
SEARch:TRIGger:MILStd:DATA:DMAX? <SearchName>

Sets the end value of a pattern range for the corresponding search:

- CDST:IMAX - specific info for the 9th to 19th bit of a command or status word.
- CMD:CMAX - specific data word count or mode code pattern in a command word
- CMD:SMAX - specific subaddress/mode pattern in a command word
- DATA:DMAX - data pattern in a data word

Parameters:
<Data_PattMax>

Parameters for setting and query:
<SearchName>

Manual operation: See "Data pattern setup: Condition, Data min, Data max" on page 776

SEARch:TRIGger:MILStd:DATA:ICONdition <SearchName>,<DatIndexOperator>
SEARch:TRIGger:MILStd:DATA:ICONdition? <SearchName>

Sets the operator to set a range within a series of the data words that is considered for the search.

Parameters:
<DatIndex_Operator> EQUal | LTHan | LETHan | GTHan | GETHan | INRange | RANGe

INRange = RANGe

*RST: INRange

Parameters for setting and query:
<SearchName>

Manual operation: See "Data index setup: Condition, Index min, Index max" on page 776

SEARch:TRIGger:MILStd:DATA:IMIN <SearchName>,<DataIndex_Min>
SEARch:TRIGger:MILStd:DATA:IMIN? <SearchName>

Specifies an index or sets the the start value of a data word series index range.

Parameters:
<DataIndex_Min> Range: 1 to 32
Increment: 1
*RST: 1

Parameters for setting and query:
<SearchName>

Manual operation: See "Data index setup: Condition, Index min, Index max" on page 776

SEARch:TRIGger:MILStd:DATA:IMAX <SearchName>,<DataIndex_Max>
SEARch:TRIGger:MILStd:DATA:IMAX? <SearchName>

Sets the end value of a data word series index range if the operator is set to `INRange`.

Parameters:
<DataIndex_Max> Range: 1 to 32
Increment: 1
*RST: 32

Parameters for setting and query:
<SearchName>

Manual operation: See "Data index setup: Condition, Index min, Index max" on page 776

SEARch:TRIGger:MILStd:CMD:TR <SearchName>,<TR_Flag>
SEARch:TRIGger:MILStd:CMD:TR? <SearchName>

Searches for a transmission mode.

Parameters:
<TR_Flag> ONE | ZERO | DC
*RST: DC

Parameters for setting and query:
<SearchName>

Manual operation: See "T/R (Transmit/receive)" on page 777

SEARch:TRIGger:MILStd:ERRor:MANChester <SearchName>,<ManCodingError>
SEARch:TRIGger:MILStd:ERRor:MANChester? <SearchName>
SEARch:TRIGger:MILStd:ERRor:PARity <SearchName>,<ParityError>
SEARch:TRIGger:MILStd:ERRor:PARity? <SearchName>
SEARch:TRIGger:MILStd:ERRor:SYNC <SearchName>,<SyncError>
SEARch:TRIGger:MILStd:ERRor:SYNC? <SearchName>
SEARch:TRIGger:MILStd:ERRor:TIMing <SearchName>,<MinGapSelect>
SEARch:TRIGger:MILStd:ERRor:TIMing? <SearchName>

Enables search for errors if `SEARch:TRIGger:MILStd:TYPE` is set to `ERRor`.

- MANChester: error of the manchester coding
- PARity: even parity (parity error)
- SYNC: error of the synchronization
- TIMing: Minimum gap is out of range

Parameters:
<MinGapSelect> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 777

SEARch:TRIGger:MILStd:STATus:BCReceived
<SearchName>,<BcstCommand_Flag>
SEARch:TRIGger:MILStd:STATus:BCReceived? <SearchName>
SEARch:TRIGger:MILStd:STATus:BUSY <SearchName>,<Busy_Flag>
SEARch:TRIGger:MILStd:STATus:BUSY? <SearchName>
SEARch:TRIGger:MILStd:STATus:DBCaccept <SearchName>,<DynBC_Flag>
SEARch:TRIGger:MILStd:STATus:DBCaccept? <SearchName>
SEARch:TRIGger:MILStd:STATus:INSTrument <SearchName>,<Inst_Flag>
SEARch:TRIGger:MILStd:STATus:INSTrument? <SearchName>
SEARch:TRIGger:MILStd:STATus:MERRor <SearchName>,<MsgError_Flag>
SEARch:TRIGger:MILStd:STATus:MERRor? <SearchName>
SEARch:TRIGger:MILStd:STATus:SREQuest <SearchName>,<SvcRequest_Flag>
SEARch:TRIGger:MILStd:STATus:SREQuest? <SearchName>
SEARch:TRIGger:MILStd:STATus:SUBSystem <SearchName>,<Subsystem_Flag>
SEARch:TRIGger:MILStd:STATus:SUBSystem? <SearchName>
SEARch:TRIGger:MILStd:STATus:TERMinal <SearchName>,<Terminal_Flag>
SEARch:TRIGger:MILStd:STATus:TERMinal? <SearchName>

Specifies the values (0, 1, X) of the status flags if `SEARch:TRIGger:MILStd:TYPE` is set to `STATword`.

Parameters:
<Terminal_Flag> ONE | ZERO | DC
*RST: DC

Parameters for setting and query:
<SearchName>

Manual operation: See "Status flags setup" on page 777

SEARch:TRIGger:MILStd:TPSPecifier <SearchName>,<TypeSpecifier>
SEARch:TRIGger:MILStd:TPSPecifier? <SearchName>

Sets the sync impulse/ word type to be searched for.

Parameters:
<TypeSpecifier> CSTatus | DATA | ALL
CSTatus: command/status word
*RST: ALL

Parameters for setting and query:
<SearchName>

Manual operation: See "Sync Type / Word Type" on page 775

27.18.15.5 Search results

The search on decoded MIL-1553 data returns the same results as the queries for decode results.

In search result commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name.

For a description of the returned values, see the corresponding commands in Section 27.18.15.3, "Decode results", on page 2307.

- Search results....2336

27.18.16.1 Configuration

BUS<b>:ARINc:SOURce....2321
BUS<b>:ARINc:BRValue....2321
BUS<b>:ARINc:BRMode....2322
BUS<b>:ARINc:MAXGap:SELect....2322
BUS<b>:ARINc:MAXGap:BITS....2322
BUS<b>:ARINc:MINGap:SELect....2322
BUS<b>:ARINc:MINGap:BITS....2323
BUS<b>:ARINc:POLarity....2323
BUS<b>:ARINc:PRESet....2323
BUS<b>:ARINc:THReshold:HIGH....2324
BUS<b>:ARINc:THReshold:LOW....2324

BUS<b>:ARINc:SOURce <SourceData>

Sets the channel for the signal source.

Reference and math waveforms are only available if the trigger source is one of the input channels but not the serial bus.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<SourceData> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

*RST: C1W1

Manual operation: See "Data" on page 780

BUS<b>:ARINc:BRValue <BitRateValue>

Sets the number of transmitted bits per second.

Suffix:
<b> 1..4

Parameters:
<BitRateValue> Range: 10000 to 110E+3
Increment: 100
*RST: 100E+3
Default unit: bps

Manual operation: See "Bit Rate" on page 781

BUS<b>:ARINc:BRMode <BitRateMode>

Sets the bit rate mode to high or low speed.

Suffix:
<b> 1..4

Parameters:
<BitRateMode> HIGH | LOW
*RST: HIGH

Manual operation: See "Bit Rate" on page 781

BUS<b>:ARINc:MAXGap:SELect <MaxGapSelect>

Enables the detection of the maximum gap time during decoding.

To specify the maximum gap time `BUS<b>:ARINc:MAXGap:BITS` on page 2322.

Suffix:
<b> 1..4

Parameters:
<MaxGapSelect> OFF | ON
*RST: OFF

Manual operation: See "Timing: Min gap, Max gap" on page 781

BUS<b>:ARINc:MAXGap:BITS <MaxGapBits>

Sets the value for the maximum gap between two words.

See also: `BUS<b>:ARINc:MAXGap:SELect`

Suffix:
<b> 1..4

Parameters:
<MaxGapBits> Range: 0 to 1000
Increment: 1
*RST: 100
Default unit: bit

Manual operation: See "Timing: Min gap, Max gap" on page 781

BUS<b>:ARINc:MINGap:SELect <MinGapSelect>

Enables the detection of the minimum idle time between two words during decoding.

To specify the minimum gap, use`BUS<b>:ARINc:MINGap:BITS`.

Suffix:
<b> 1..4

Parameters:
<MinGapSelect> OFF | ON
*RST: ON

Manual operation: See "Timing: Min gap, Max gap" on page 781

BUS<b>:ARINc:MINGap:BITS <MinGapBits>

Sets a value for the minimum timing gap between two words.

See also: `BUS<b>:ARINc:MINGap:SELect` on page 2322.

Suffix:
<b> 1..4

Parameters:
<MinGapBits> Range: 0 to 100
Increment: 1
*RST: 4
Default unit: bit

Manual operation: See "Timing: Min gap, Max gap" on page 781

BUS<b>:ARINc:POLarity <Polarity>

Sets the wire on which the bus signal is measured.

Suffix:
<b> 1..4

Parameters:
<Polarity> ALEG | BLEG
*RST: ALEG

Manual operation: See "Polarity" on page 780

BUS<b>:ARINc:PRESet <Preset>

Sets the default threshold voltage.

Suffix:
<b> 1..4

Parameters:
<Preset> V25 | V5 | MANual
*RST: V5

Manual operation: See "Thresholds" on page 780

BUS<b>:ARINc:THReshold:HIGH <ThresholdHigh>

Sets the high threshold level of the signal.

Suffix:
<b> 1..4

Parameters:
<ThresholdHigh> Range: 0 to 12
Increment: 0.1
*RST: 5
Default unit: V

Manual operation: See "Thresholds" on page 780

BUS<b>:ARINc:THReshold:LOW <ThresholdLow>

Sets the low threshold level of the signal.

Suffix:
<b> 1..4

Parameters:
<ThresholdLow> Range: -12 to 0
Increment: 0.1
*RST: -5
Default unit: V

Manual operation: See "Thresholds" on page 780

27.18.16.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:ARINc:TYPE....2325
TRIGger<t>:ARINc:DATA:CONDition....2325
TRIGger<t>:ARINc:DATA:MIN....2325
TRIGger<t>:ARINc:DATA:MAX....2326
TRIGger<t>:ARINc:ERRor:CODing....2326
TRIGger<t>:ARINc:ERRor:PARity....2326
TRIGger<t>:ARINc:LABel:CONDition....2326
TRIGger<t>:ARINc:LABel:MIN....2327
TRIGger<t>:ARINc:LABel:MAX....2327
TRIGger<t>:ARINc:MINGap:SELect....2327
TRIGger<t>:ARINc:MINGap:BITS....2328

TRIGger<t>:ARINc:MAXGap:SELect....2328
TRIGger<t>:ARINc:MAXGap:BITS....2328
TRIGger<t>:ARINc:SDI....2328
TRIGger<t>:ARINc:SSM....2329

TRIGger<t>:ARINc:TYPE <Type>

Sets the trigger type for ARINC 429 analysis.

Suffix:
<t> 1..3

Parameters:
<Type> STARt | STOP | LABel | ERRor
*RST: STARt

Manual operation: See "Trigger Type" on page 783

TRIGger<t>:ARINc:DATA:CONDition <Data_Operator>

Sets the condition for the data. You can define an exact data patterm or a data range.

Suffix:
<t> 1..3

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with `TRIGger<t>:ARINc:DATA:MIN`.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:ARINc:DATA:MIN` and `TRIGger<t>:ARINc:DATA:MAX`.

*RST: EQUal

Manual operation: See "Data setup: Condition, Data Min, Data Max" on page 785

TRIGger<t>:ARINc:DATA:MIN <Data_Min>

Defines the minimum bit pattern for the data.

Suffix:
<t> 1..3

Parameters:
<Data_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data setup: Condition, Data Min, Data Max" on page 785

TRIGger<t>:ARINc:DATA:MAX <Data_Max>

Sets the end value of a data pattern if `TRIGger<t>:ARINc:DATA:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<Data_Max>

Manual operation: See "Data setup: Condition, Data Min, Data Max" on page 785

TRIGger<t>:ARINc:ERRor:CODing <Coding_Error>

Enables triggering when a coding error occurs.

Suffix:
<t> 1..3

Parameters:
<Coding_Error> OFF | ON
*RST: ON

Manual operation: See "Coding error" on page 785

TRIGger<t>:ARINc:ERRor:PARity <Parity_Error>

Enables triggering when a parity error occurs.

Suffix:
<t> 1..3

Parameters:
<Parity_Error> OFF | ON
*RST: ON

Manual operation: See "Parity Error" on page 785

TRIGger<t>:ARINc:LABel:CONDition <Label_Operator>

Sets the condition for the label. You can define an exact label or a label range.

Suffix:
<t> 1..3

Parameters:
<Label_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with`TRIGger<t>:ARINc:LABel:MIN`.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with`TRIGger<t>:ARINc:LABel:MIN` and `TRIGger<t>:ARINc:LABel:MAX`.

*RST: EQUal

Manual operation: See "Label setup: Condition, Label Min, Label Max" on page 784

TRIGger<t>:ARINc:LABel:MIN <Label_Min>

Defines the minimum bit pattern for the label.

Suffix:
<t> 1..3

Parameters:
<Label_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Label setup: Condition, Label Min, Label Max" on page 784

TRIGger<t>:ARINc:LABel:MAX <Label_Max>

Sets the end value of a label pattern if `TRIGger<t>:ARINc:LABel:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<Label_Max> Numeric or string pattern, see `TRIGger<t>:ARINc:LABel:MIN`

Manual operation: See "Label setup: Condition, Label Min, Label Max" on page 784

TRIGger<t>:ARINc:MINGap:SELect <MinGapSelect>

Enables triggering when the minimum gap is out of range. You can set the minimum gap with: `TRIGger<t>:ARINc:MINGap:BITS`.

Suffix:
<t> 1..3

Parameters:
<MinGapSelect> OFF | ON

*RST: ON

Manual operation: See "Timing: Min gap, Max gap" on page 781

TRIGger<t>:ARINc:MINGap:BITS <MinGapBits>

Sets the value for the minimum gap to be triggered on.

Suffix:
<t> 1..3

Parameters:
<MinGapBits> Range: 0 to 100
Increment: 1
*RST: 4
Default unit: bit

Manual operation: See "Timing: Min gap, Max gap" on page 781

TRIGger<t>:ARINc:MAXGap:SELect <MaxGapSelect>

Enables triggering when the maximum gap is out of range. You can set the maximum gap with: `TRIGger<t>:ARINc:MAXGap:BITS`.

Suffix:
<t> 1..3

Parameters:
<MaxGapSelect> OFF | ON
*RST: OFF

Manual operation: See "Timing: Min gap, Max gap" on page 781

TRIGger<t>:ARINc:MAXGap:BITS <MaxGapBits>

Sets the value for the maximum gap to be triggered on.

Suffix:
<t> 1..3

Parameters:
<MaxGapBits> Range: 0 to 1000
Increment: 1
*RST: 100
Default unit: bit

Manual operation: See "Timing: Min gap, Max gap" on page 781

TRIGger<t>:ARINc:SDI <SDI>

Sets the source/destination identifier (SDI) bits.

Suffix:
<t> 1..3

Parameters:
<SDI>

Manual operation: See "SDI / SSM" on page 785

TRIGger<t>:ARINc:SSM <SSM>

Sets the sign/status matrix (SSM) bits.

Suffix:
<t> 1..3

Parameters:
<SSM>

Manual operation: See "SDI / SSM" on page 785

27.18.16.3 Decode results

To load and acivate a label list, use:

- `BUS<b>:NEWList` on page 1915
- `BUS<b>:SYMBols` on page 1915

BUS<b>:ARINc:WCOunt? 2329
BUS<b>:ARINc:WORD<w>:BITRate? 2329
BUS<b>:ARINc:WORD<w>:DATA? 2330
BUS<b>:ARINc:WORD<w>:LABel? 2330
BUS<b>:ARINc:WORD<w>:PATTern? 2330
BUS<b>:ARINc:WORD<w>:SDI? 2331
BUS<b>:ARINc:WORD<w>:SSM? 2331
BUS<b>:ARINc:WORD<w>:STARt? 2331
BUS<b>:ARINc:WORD<w>:STATe? 2332
BUS<b>:ARINc:WORD<w>:STOP? 2332
BUS<b>:ARINc:WORD<w>:SYMBol? 2333

BUS<b>:ARINc:WCOunt?

Returns the number of decoded words.

Suffix:
<b> 1..4

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:ARINc:WORD<w>:BITRate?

Retruns the value of the bit rate.

Suffix:
<b> 1..4

<w> *

Return values:
<FrameBitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

BUS<b>:ARINc:WORD<w>:DATA?

Returns the data of the specified word.

Suffix:
<b> 1..4

<w> *

Return values:
<FrameData> 19-bit data field of the word as an integer
Range: 0 to 524287
Increment: 1
*RST: 0

Example:
```
BUS:ARINc:WORD3:DATA?
<-- 148035
```

Usage: Query only

BUS<b>:ARINc:WORD<w>:LABel?

Returns the label of the specified word.

Suffix:
<b> 1..4

<w> *

Return values:
<FrameLabel> Range: 0 to 255
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:ARINc:WORD<w>:PATTern?

Returns all 32 bits of the specified word.

Suffix:
<b> 1..4
Selects the serial bus.

<w> *

Return values:
<Data> Comma-separated list of 4 bytes in big endian order. The format of each byte is defined by `FORMat:BPATtern`.

Example:
```
BUS2:ARINc:WORD3:PATTern?
--> #H75,#H11,#H55,#H82
FORMat:BPATtern DEC
BUS2:ARINc:WORD3:PATTern?
--> 117,17,85,130
```

Usage: Query only

BUS<b>:ARINc:WORD<w>:SDI?

Returns the source/destination identifier (SDI) bits of the specified word.

Suffix:
<b> 1..4

<w> *

Return values:
<SDI> Range: 0 to 3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:ARINc:WORD<w>:SSM?

Returns the sign/status matrix(SSM) bits of the specified word.

Suffix:
<b> 1..4

<w> *

Return values:
<SSM> Range: 0 to 3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:ARINc:WORD<w>:STARt?

Returns the start time of the specified word.

Suffix:
<b> 1..4

<w> *

Return values:
<FrameStart> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:ARINc:WORD<w>:STATe?

Returns the overall state of the specified word.

Suffix:
<b> 1..4
Selects the serial bus.

<w> *
Selects the word.

Return values:
<FrameState> OK | CODE | GAP | PAR | INComplete | UNKNown
CODE: coding error occured.
GAP: timing gap error occured.
PAR: parity error occured.
INComplete: the sequence is not completely contained in the acquisition
UNKNown: unknown frame type
*RST: OK

Usage: Query only

BUS<b>:ARINc:WORD<w>:STOP?

Returns the end time of the specified word.

Suffix:
<b> 1..4

<w> *

Return values:
<FrameStop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:ARINc:WORD<w>:SYMBol?

Returns the label name of the word ID.

Suffix:
<b> 1..4
<w> *

Return values:
<Translation>

Usage: Query only

SEARch:TRIGger:ARINc:DATA:MIN....2334
SEARch:TRIGger:ARINc:LABel:MAX....2334
SEARch:TRIGger:ARINc:DATA:MAX....2334
SEARch:TRIGger:ARINc:SDI....2335
SEARch:TRIGger:ARINc:SSM....2335
SEARch:TRIGger:ARINc:ERRor:CODing....2335
SEARch:TRIGger:ARINc:ERRor:PARity....2335
SEARch:TRIGger:ARINc:ERRor:TIMing....2336

SEARch:TRIGger:ARINc:TYPE <SearchName>,<Type>
SEARch:TRIGger:ARINc:TYPE? <SearchName>

Sets the search type.

Parameters:
<Type> STARt | STOP | LABel | ERRor
*RST: STARt

Parameters for setting and query:
<SearchName>

Manual operation: See "Type" on page 788

SEARch:TRIGger:ARINc:LABel:CONDition <SearchName>,<Label_Operator>
SEARch:TRIGger:ARINc:LABel:CONDition? <SearchName>
SEARch:TRIGger:ARINc:DATA:CONDition <SearchName>,<Data_Operator>
SEARch:TRIGger:ARINc:DATA:CONDition? <SearchName>

Set the condition for the label or data, respectively. You can define an exact value or a value range

Parameters:

<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:ARINc:...:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range. with`TRIGger<t>:ARINc:LABel:MIN` and `TRIGger<t>:ARINc:LABel:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Data setup: Condition, Data min, Data max" on page 788

SEARch:TRIGger:ARINc:LABel:MIN <SearchName>,<Label_Min>
SEARch:TRIGger:ARINc:LABel:MIN? <SearchName>
SEARch:TRIGger:ARINc:DATA:MIN <SearchName>,<Data_Min>
SEARch:TRIGger:ARINc:DATA:MIN? <SearchName>

Specifies a label or data bit pattern, or sets the the start value of a pattern range.

Parameters:

<Data_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:

<SearchName> String parameter

Manual operation: See "Data setup: Condition, Data min, Data max" on page 788

SEARch:TRIGger:ARINc:LABel:MAX <SearchName>,<Label_Max>
SEARch:TRIGger:ARINc:LABel:MAX? <SearchName>
SEARch:TRIGger:ARINc:DATA:MAX <SearchName>,<Data_Max>
SEARch:TRIGger:ARINc:DATA:MAX? <SearchName>

Set the end value of a label or data pattern if the condition is set to `INRange` or `OORange`.

Parameters:
<Data_Max> Numeric or string pattern, see `SEARch:TRIGger:ARINc:LABel:MIN`

Parameters for setting and query:
<SearchName>

Manual operation: See "Data setup: Condition, Data min, Data max" on page 788

SEARch:TRIGger:ARINc:SDI <SearchName>,<SDI>
SEARch:TRIGger:ARINc:SDI? <SearchName>

Sets the source/destination identifier (SDI) bits.

Parameters:
<SDI>

Parameters for setting and query:
<SearchName>

Manual operation: See "SDI / SSM setup: SDI, SSM" on page 789

SEARch:TRIGger:ARINc:SSM <SearchName>,<SSM>
SEARch:TRIGger:ARINc:SSM? <SearchName>

Sets the sign/status matrix (SSM) bits.

Parameters:
<SSM>

Parameters for setting and query:
<SearchName>

Manual operation: See "SDI / SSM setup: SDI, SSM" on page 789

SEARch:TRIGger:ARINc:ERRor:CODing <SearchName>,<Coding_Error>
SEARch:TRIGger:ARINc:ERRor:CODing? <SearchName>

Enables the search for coding errors.

Parameters:
<Coding_Error> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 789

SEARch:TRIGger:ARINc:ERRor:PARity <SearchName>,<Parity_Error>
SEARch:TRIGger:ARINc:ERRor:PARity? <SearchName>

Enables the search for parity errors.

Parameters:
<Parity_Error> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 789

SEARch:TRIGger:ARINc:ERRor:TIMing <SearchName>,<MinGapSelect>
SEARch:TRIGger:ARINc:ERRor:TIMing? <SearchName>

Enables the search for timing errors, when the minimum gap is out of range.

Parameters:
<MinGapSelect> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 789

27.18.16.5 Search results

The search on decoded ARINC 429 data returns the same results as the queries for decode results.

In search result commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name.

For a description of the returned values, see the corresponding commands in Section 27.18.16.3, "Decode results", on page 2329.

BUS<b>:SWIRe:SYSLect 2342
BUS<b>:SWIRe:COUPling 2342
BUS<b>:SWIRe:PRESet 2343

BUS<b>:SWIRe:BPOSition <SyncBitPos>

Sets the bit position, the align position for the manual synchronisation mode. This can be useful when parity errors exist in the signal, and parity check is the main indicator for the decoder to do packet alignment.

Suffix:
<b> 1..4

Parameters:
<SyncBitPos> Range: 0 to 10
Increment: 1
*RST: 0

Manual operation: See "Bit Position" on page 793

BUS<b>:SWIRe:DATA:HYSTeresis <HysteresisData>

Sets a value for the hysteresis of the data signal.

Suffix:
<b> 1..4

Parameters:
<HysteresisData> Range: 0 to 0.8
Increment: 0.01
*RST: 0.2
Default unit: V

Manual operation: See "Hysteresis" on page 793

BUS<b>:SWIRe:DATA:SOURce <SourceData>

Selects the source of the data signal.

Suffix:
<b> 1..4

Parameters:
<SourceData> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15
*RST: C1W1

Manual operation: See "Data" on page 792

BUS<b>:SWIRe:DATA:THReshold <ThresholdData>

Sets the threshold value for the digitization of the data signal.

Suffix:
<b> 1..4

Parameters:
<ThresholdData> Range: -10 to 10
Increment: 0.1
*RST: 1.25
Default unit: V

Manual operation: See "Threshold setup" on page 792

BUS<b>:SWIRe:MINGap <MinGapTime>
BUS<b>:SWIRe:MGAP <MinGapTime>

Sets the minimum duration of a gap. Any inactivity greater than this time will be interpreted as a gap and lead to a resynchronization to the signal.

Suffix:
<b> 1..4

Parameters:
<MinGapTime> Range: 1E-9 to 10E-6
Increment: 100E-9
*RST: 200E-9
Default unit: s

Manual operation: See "Min Gap" on page 793

BUS<b>:SWIRe:STRBe:HYSTeresis <HystStrobe>

Sets a value for the hysteresis of the strobe signal.

Suffix:
<b> 1..4

Parameters:
<HystStrobe> Range: 0 to 0.8
Increment: 0.01
*RST: 0.2
Default unit: V

Manual operation: See "Hysteresis" on page 793

BUS<b>:SWIRe:STRBe:SOURce <SourceStrobe>

Selects the source of the strobe signal.

Suffix:
<b> 1..4

Parameters:

<SourceStrobe> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

*RST: C2W1

Manual operation: See "Strobe" on page 792

BUS<b>:SWIRe:STRBe:THReshold <ThresStrobe>

Sets the threshold value for the digitization of the strobe signal.

Suffix:

<b> 1..4

Parameters:

<ThresStrobe> Range: -10 to 10
Increment: 0.1
*RST: 1.25
Default unit: V

Manual operation: See "Threshold setup" on page 792

BUS<b>:SWIRe:SYSLect <SyncSelector>

Selects the mode for the synchronisation settings, i.e i.e. packet align.

Suffix:

<b> 1..4

Parameters:

<SyncSelector> AUTO | MANual

*RST: AUTO

Manual operation: See "Sync Settings" on page 793

BUS<b>:SWIRe:COUPling <ThresCpl>

Enables coupling, i.e. the same threshold and hysteresis value is used for the strob and the data signal.

Suffix:

<b> 1..4

Parameters:

<ThresCpl> OFF | ON

*RST: ON

Manual operation: See "Threshold setup" on page 792

BUS<b>:SWIRe:PRESet <ThresPreset>

Prests the threshold and hysteresis value of the strobe and data signal.

Suffix:
<b> 1..4

Parameters:
<ThresPreset> V25 | V165 | V125 | V09 | V12 | V0 | MANual

V25: 2.5 V (CMOS 5.0 V)
V165: 1.65 V (CMOS 3.5 V)
V125: 1.25 V (CMOS 1.5 V)
V09: 2.5 V (CMOS 1.8V)
V12: 1.2 V (LVDS single ended)
V0: 0 V (LVDS differential)
MANual: user-defined value

*RST: V12

Manual operation: See "Threshold setup" on page 792

27.18.17.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:SWIRe:CTYPe....2343
TRIGger<t>:SWIRe:DATA:CONDition....2344
TRIGger<t>:SWIRe:DATA:MAX....2344
TRIGger<t>:SWIRe:DATA:MIN....2345
TRIGger<t>:SWIRe:ERRor:LENGth....2345
TRIGger<t>:SWIRe:ERRor:PARity....2345
TRIGger<t>:SWIRe:TIME:CONDition....2345
TRIGger<t>:SWIRe:TIME:MAX....2346
TRIGger<t>:SWIRe:TIME:MIN....2346
TRIGger<t>:SWIRe:TYPE....2346

TRIGger<t>:SWIRe:CTYPe <ControlType>

Triggers on a specific control type character.

Suffix:
<t> 1..3

Parameters:
<ControlType> ANY | FCT | EOP | EEP | BADX

FCT
Flow control token

EOP
Normal end of packet

EEP
Error end of packet

BADX
Illegal escape code

*RST: ANY

Manual operation: See "Trigger control type" on page 796

TRIGger<t>:SWIRe:DATA:CONDition <Data_Operator>

Set the condition for the data value. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:SWIRe:DATA:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:SWIRe:DATA:MIN` and `TRIGger<t>:SWIRe:DATA:MAX`.

*RST: EQUal

Manual operation: See "Data (Data pattern)" on page 796

TRIGger<t>:SWIRe:DATA:MAX <Data_PattMax>

Sets the the end value of a data for the data pattern range if `TRIGger<t>:SWIRe:DATA:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<Data_PattMax>

Manual operation: See "Data (Data pattern)" on page 796

TRIGger<t>:SWIRe:DATA:MIN <Data_PattMin>

Specifies a data for the data pattern, or sets the the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<Data_PattMin>

Manual operation: See "Data (Data pattern)" on page 796

TRIGger<t>:SWIRe:ERRor:LENGth <Error_Length>

Triggers on a length error, which occurs when a frame is missing bits.

Suffix:
<t> 1..3

Parameters:
<Error_Length> OFF | ON
*RST: ON

Manual operation: See "Length error" on page 797

TRIGger<t>:SWIRe:ERRor:PARity <Error_Parity>

Enables triggering on a parity error (even parity).

Suffix:
<t> 1..3

Parameters:
<Error_Parity> OFF | ON
*RST: ON

Manual operation: See "Parity error" on page 797

TRIGger<t>:SWIRe:TIME:CONDition <Time_Operator>

Set the condition for the data value for the time code. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<Time_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:SWIRe:TIME:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:SWIRe:TIME:MIN` and `TRIGger<t>:SWIRe:TIME:MAX`.

*RST: EQUal

Manual operation: See "Data (Time code)" on page 796

TRIGger<t>:SWIRe:TIME:MAX <Time_PattMax>

Sets the the end value of a data value for the time code range if `TRIGger<t>:SWIRe:TIME:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<Time_PattMax>

Manual operation: See "Data (Time code)" on page 796

TRIGger<t>:SWIRe:TIME:MIN <Time_PattMin>

Specifies a pattern for the data value for the time code, or sets the the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<Time_PattMin>

Manual operation: See "Data (Time code)" on page 796

TRIGger<t>:SWIRe:TYPE <Type>

Sets the trigger type for the SpaceWire analysis.

Suffix:
<t> 1..3

Parameters:
<Type> CTRL | DATA | NULL | TIME | ERRor
*RST: CTRL

Manual operation: See "Type" on page 795

27.18.17.3 Decode results

BUS<b>:SWIRe:RESults:FCOunt? 2347
BUS<b>:SWIRe:RESults:FRAMe<fr>:DATA? 2347
BUS<b>:SWIRe:RESults:FRAMe<fr>:STARt? 2347
BUS<b>:SWIRe:RESults:FRAMe<fr>:STATe? 2348
BUS<b>:SWIRe:RESults:FRAMe<fr>:STOP? 2348
BUS<b>:SWIRe:RESults:FRAMe<fr>:TYPE? 2349
BUS<b>:SWIRe:RESults:FRAMe<fr>:FLD<fl>:FVAL? 2349
BUS<b>:SWIRe:RESults:FRAMe<fr>:FLD<fl>:STARt? 2350
BUS<b>:SWIRe:RESults:FRAMe<fr>:FLD<fl>:STATus? 2350
BUS<b>:SWIRe:RESults:FRAMe<fr>:FLD<fl>:STOP? 2350
BUS<b>:SWIRe:RESults:FRAMe<fr>:FLD<fl>:TYPE? 2351
BUS<b>:SWIRe:RESults:FRAMe<fr>:FLD<fl>:VAL? 2351

BUS<b>:SWIRe:RESults:FCOunt?

Returns the number of decoded frames for the selected serial bus.

Suffix:
<b> 1..4

Return values:
<Count>

Usage: Query only

BUS<b>:SWIRe:RESults:FRAMe<fr>:DATA?

Returns the data value.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<Data> 8-bit data value

Example:
```
BUS:SWIRe:RESults:FRAMe2:DATA?
<-- #H12
```

Usage: Query only

BUS<b>:SWIRe:RESults:FRAMe<fr>:STARt?

Returns the start time of the specified frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:SWIRe:RESults:FRAMe<fr>:STATe?

Returns the overall state of the frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the serial bus.

Return values:

<State> OK | PARity | LENGth | AMBiguous | INComplete

OK
The frame is valid.

PARity
Parity error

LENGth
Length error

INComplete
The frame is incomplete

*RST: OK

Usage: Query only

BUS<b>:SWIRe:RESults:FRAMe<fr>:STOP?

Returns the end time of the specified frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:SWIRe:RESults:FRAMe<fr>:TYPE?

Returns the type of frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<Type> DATA | FCT | EOP | EEP | BADX | NULL | TCOD

DATA
Data frame

FCT
Flow control token

EOP
End of packet

EEP
Error end of packet

BADX
Illegal escape code

NULL
Null symbol

TCOD
Time code

*RST: DATA

Usage: Query only

BUS<b>:SWIRe:RESults:FRAMe<fr>:FLD<fl>:FVAL?

Returns the formatted value of the field with the selected field number within the frame with the selected frame number.

Suffix:

<b> 1..4

<fr> *
Selects the frame number.

<fl> *
Selects the field number.

Return values:

<FrameByteValue>

Usage: Query only

BUS<b>:SWIRe:RESults:FRAMe<fr>:FLD<fl>:STARt?

Returns the start time of the field with the selected field number within the frame with the selected frame number.

Suffix:

<b> 1..4

<fr> *
Selects the frame number.

<fl> *
Selects the field number.

Return values:

<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:SWIRe:RESults:FRAMe<fr>:FLD<fl>:STATus?

Returns the status of the field with the selected field number within the frame with the selected frame number.

Suffix:

<b> 1..4

<fr> *
Selects the frame number.

<fl> *
Selects the field number.

Return values:

<State> OK | PARity | LENGth | AMBiguous | INComplete
*RST: OK

Usage: Query only

BUS<b>:SWIRe:RESults:FRAMe<fr>:FLD<fl>:STOP?

Returns the stop time of the field with the selected field number within the frame with the selected frame number.

Suffix:

<b> 1..4

<fr> *
Selects the frame number.

<fl> *
Selects the field number.

Return values:

<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:SWIRe:RESults:FRAMe<fr>:FLD<fl>:TYPE?

Returns the type of the field with the selected field number within the frame with the selected frame number.

Suffix:

<b> 1..4

<fr> *
Selects the frame number.

<fl> *
Selects the field number.

Return values:

<FrameByteValue>

Usage: Query only

BUS<b>:SWIRe:RESults:FRAMe<fr>:FLD<fl>:VAL?

Returns the value of the field with the selected field number within the frame with the selected frame number.

Suffix:

<b> 1..4

<fr> *
Selects the frame number.

<fl> *
Selects the field number.

Return values:

<FrameByteValue> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

27.18.17.4 Search settings

SEARch:TRIGger:SWIRe:CTYPe 2352
SEARch:TRIGger:SWIRe:DATA:CONDition 2352
SEARch:TRIGger:SWIRe:DATA:MAX 2353
SEARch:TRIGger:SWIRe:DATA:MIN 2353

SEARch:TRIGger:SWIRe:ERRor:LENGth 2353
SEARch:TRIGger:SWIRe:ERRor:PARity 2353
SEARch:TRIGger:SWIRe:TIME:CONDition 2354
SEARch:TRIGger:SWIRe:TIME:MAX 2354
SEARch:TRIGger:SWIRe:TIME:MIN 2355
SEARch:TRIGger:SWIRe:TYPE 2355

SEARch:TRIGger:SWIRe:CTYPe <SearchName>,<ControlType>
SEARch:TRIGger:SWIRe:CTYPe? <SearchName>

Searches for a specific control type character.

Parameters:

<ControlType> ANY | FCT | EOP | EEP | BADX

FCT
Flow control token

EOP
Normal end of packet

EEP
Error end of packet

BADX
Illegal escape code

*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "Trigger Control Type" on page 799

SEARch:TRIGger:SWIRe:DATA:CONDition <SearchName>,<Data_Operator>
SEARch:TRIGger:SWIRe:DATA:CONDition? <SearchName>

Set the condition for the data pattern data value. You can define an exact value or a value range.

Parameters:

<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:SWIRe:DATA:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:SWIRe:DATA:MIN` and `SEARch:TRIGger:SWIRe:DATA:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Data (Data Pattern)" on page 800

SEARch:TRIGger:SWIRe:DATA:MAX <SearchName>,<Data_PattMax>
SEARch:TRIGger:SWIRe:DATA:MAX? <SearchName>

Sets the the end value of a data type range if `SEARch:TRIGger:SWIRe:DATA:CONDition` is set to `INRange` or `OORange`.

Parameters:
<Data_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Data (Data Pattern)" on page 800

SEARch:TRIGger:SWIRe:DATA:MIN <SearchName>,<Data_PattMin>
SEARch:TRIGger:SWIRe:DATA:MIN? <SearchName>

Specifies a data bit pattern, or sets the the start value of a pattern range.

Parameters:
<Data_PattMin>

Parameters for setting and query:
<SearchName>

Manual operation: See "Data (Data Pattern)" on page 800

SEARch:TRIGger:SWIRe:ERRor:LENGth <SearchName>,<Error_Length>
SEARch:TRIGger:SWIRe:ERRor:LENGth? <SearchName>

Searches for length errors.

Parameters:
<Error_Length> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Length error" on page 801

SEARch:TRIGger:SWIRe:ERRor:PARity <SearchName>,<Error_Parity>
SEARch:TRIGger:SWIRe:ERRor:PARity? <SearchName>

Enables searching for a parity error (even parity).

Parameters:
<Error_Parity> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Parity Error" on page 800

SEARch:TRIGger:SWIRe:TIME:CONDition <SearchName>,<Time_Operator>
SEARch:TRIGger:SWIRe:TIME:CONDition? <SearchName>

Set the condition for the data value of the time code. You can define an exact value or a value range.

Parameters:
<Time_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:SWIRe:TIME:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:SWIRe:TIME:MIN` and `SEARch:TRIGger:SWIRe:TIME:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Data (Time Code)" on page 800

SEARch:TRIGger:SWIRe:TIME:MAX <SearchName>,<Time_PattMax>
SEARch:TRIGger:SWIRe:TIME:MAX? <SearchName>

Sets the the end value of a data type range for the time code if `SEARch:TRIGger:SWIRe:TIME:CONDition` is set to `INRange` or `OORange`.

Parameters:
<Time_PattMax>

Parameters for setting and query:
<SearchName>

Manual operation: See "Data (Time Code)" on page 800

SEARch:TRIGger:SWIRe:TIME:MIN <SearchName>,<Time_PattMin>
SEARch:TRIGger:SWIRe:TIME:MIN? <SearchName>

Specifies a data bit pattern for the time code, or sets the the start value of a pattern range.

Parameters:
<Time_PattMin>

Parameters for setting and query:
<SearchName>

Manual operation: See "Data (Time Code)" on page 800

SEARch:TRIGger:SWIRe:TYPE <SearchName>,<Type>
SEARch:TRIGger:SWIRe:TYPE? <SearchName>

Sets the search type for the SpaceWire analysis.

Parameters:
<Type> CTRL | DATA | NULL | TIME | ERRor
*RST: CTRL

Parameters for setting and query:
<SearchName>

Manual operation: See "Type" on page 799

27.18.17.5 Search results

In all `SEARch:RESult:DPHY:FRAMe<m>` commands, the suffix <m> selects the frame number in the list of search results.

SEARch:RESult:SWIRe:FCOunt? 2355
SEARch:RESult:SWIRe:FRAMe<fr>:DATA? 2356
SEARch:RESult:SWIRe:FRAMe<fr>:STARt? 2356
SEARch:RESult:SWIRe:FRAMe<fr>:STATe? 2356
SEARch:RESult:SWIRe:FRAMe<fr>:STOP? 2357
SEARch:RESult:SWIRe:FRAMe<fr>:TYPE? 2357

SEARch:RESult:SWIRe:FCOunt? <SearchName>

Returns the number of frames within the search result for the selected serial bus.

Query parameters:
<SearchName>

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:SWIRe:FRAMe<fr>:DATA? <SearchName>

Returns the data value for the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Data>

Usage: Query only

SEARch:RESult:SWIRe:FRAMe<fr>:STARt? <SearchName>

Returns the start time of the specified frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Start>
Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:SWIRe:FRAMe<fr>:STATe? <SearchName>

Returns the overall state of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<State> OK | PARity | LENGth | AMBiguous | INComplete

OK
The frame is valid.

PARity
Parity error

LENGth
Length error

INComplete
The frame is incomplete.

*RST: OK

Usage: Query only

SEARch:RESult:SWIRe:FRAMe<fr>:STOP? <SearchName>

Returns the end time for the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:SWIRe:FRAMe<fr>:TYPE? <SearchName>

Returns the type of frame for the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Type> DATA | FCT | EOP | EEP | BADX | NULL | TCOD

DATA
Data frame

FCT
Flow control token

EOP
End of packet

EEP
Error end of packet

BADX
Illegal escape code

NULL
Null symbol

TCOD
Time code

*RST: DATA

Usage: Query only

27.18.18 Ethernet 10BASE-T and 100BASE-TX (option R&S RTO6-K540)

- Configuration....2358
- Trigger....2360
- Decode results....2366
- Search settings....2372
- Search results....2377

27.18.18.1 Configuration

In all `BUS<b>:ETHernet` commands, the suffix <b> selects the serial bus.

BUS<b>:ETHernet:VARiant....2358
BUS<b>:ETHernet:SOURce....2358
BUS<b>:ETHernet:POLarity....2359
BUS<b>:ETHernet:THReshold:HIGH....2359
BUS<b>:ETHernet:THReshold:LOW....2359
BUS<b>:ETHernet:PRESet....2360

BUS<b>:ETHernet:VARiant <Variant>

Selects the Ethernet protocol variant and transmission speed.

Suffix:
<b> 1..4

Parameters:
<Variant> B10T | B100TX | B100tx

B10T
Ethernet protocol variant 10BASE-T (10 Mbit/s)

B100TX = B100tx
Ethernet protocol variant 100BASE-TX (100 Mbit/s)

*RST: B10T

Manual operation: See "Ethernet Variant" on page 804

BUS<b>:ETHernet:SOURce <SourceData>

Selects the source channel for the data signal.

Usually, the source is one of the analog channels. Reference and math waveforms are available as sources if the trigger source is one of the analog channels but not the serial bus.

Alternatively, digital channels can be used if MSO option R&S RTO6-B1 is installed. Digital and analog channels cannot be used at the same time.

For triggering on a serial bus, analog or digital channel sources are required.

Suffix:
<b> 1..4

Parameters:

<SourceData> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

See Section 27.4.2, "Waveform parameter", on page 1451

*RST: C1W1

Manual operation: See "Source" on page 804

BUS<b>:ETHernet:POLarity <Polarity>

Defines the polarity of the data signal. This setting is only available in 10BASE-T.

Suffix:

<b> 1..4

Parameters:

<Polarity> NORMal | INVert

NORMal
Normal (non-inverted) data signal polarity

INVert
Inverted data signal polarity

*RST: NORMal

Manual operation: See "Polarity" on page 804

BUS<b>:ETHernet:THReshold:HIGH <ThresholdUpper>

Sets the upper threshold value for the signal digitization. If the signal value is higher than the this threshold, the signal state is considered high.

Suffix:

<b> 1..4

Parameters:

<ThresholdUpper>
Range: 0 to 10
Increment: 0.01
*RST: 0.5
Default unit: V

Manual operation: See "Thresholds" on page 804

BUS<b>:ETHernet:THReshold:LOW <ThresholdLower>

Sets the lower threshold value for the signal digitization. If the signal value is below this threshold, the signal state is considered low.

Suffix:

<b> 1..4

Parameters:

<ThresholdLower> Range: -10 to 0
Increment: 0.01
*RST: -0.5
Default unit: V

Manual operation: See "Thresholds" on page 804

BUS<b>:ETHernet:PRESet <ThresPreset>

Sets the thresholds to predefined or individually definable voltage levels.

Suffix:

<b> 1..4

Parameters:

<ThresPreset> T0 | T100 | TX0 | TX100 | MANual

T0
Sets the thresholds to the default values for 10BASE-T (0 meters): upper threshold to 1.25 V, lower threshold to -1.25 V

T100
Sets the thresholds to the default values for 10BASE-T (100 meters): upper threshold to 0.75 V, lower threshold to -0.75 V

TX0
Sets the thresholds to the default values for 100BASE-TX (0 meters): upper threshold to 0.5 V, lower threshold to -0.5 V

TX100
Sets the thresholds to the default values for 100BASE-TX (100 meters): upper threshold to 0.35 V, lower threshold to -0.35 V

MANual
Allows to set individual threshold voltage levels

*RST: T0

Manual operation: See "Thresholds" on page 804

27.18.18.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:ETHernet:TYPE....2361
TRIGger<t>:ETHernet:PATTern....2361
TRIGger<t>:ETHernet:ERRor:CRC....2362
TRIGger<t>:ETHernet:ERRor:LENGth....2362
TRIGger<t>:ETHernet:ERRor:PREamble....2362

TRIGger<t>:ETHernet:TYPE <Type>

Selects the type of frame to be triggered on.

Suffix:
<t> 1..3

Parameters:
<Type> STARt | PATTern | ADVFrame | ADVCerror

STARt
Selects to trigger for the start of frame: search for the preamble and set the trigger instant thereafter.

PATTern
Selects to trigger for a bit pattern (data) to be specified in `TRIGger<t>:ETHernet:PATTern` on page 2361.

ADVFrame
Sets the trigger to the advanced frame. You can further define the values of the frame.

ADVCerror
Sets the trigger to advanced error. You can further enable the error conditions you want to trigger on.

*RST: STARt

Manual operation: See "Type" on page 808

TRIGger<t>:ETHernet:PATTern <DataPattern>

Specifies the bit pattern (or data) that is to be triggered.

Suffix:
<t> 1..3

Parameters:
<DataPattern>

Manual operation: See "Data Pattern" on page 810

TRIGger<t>:ETHernet:ERRor:CRC <Error_CRC>

Enables the trigger on a mismatch of the cyclic redundancy check (CRC) value between the transmitting and receiving device.

Suffix:
<t> 1..3

Parameters:
<Error_CRC> OFF | ON
*RST: ON

Manual operation: See "Error" on page 811

TRIGger<t>:ETHernet:ERRor:LENGth <Error_Length>

Enables the trigger on an incorrect length of the sequence - when additional or missing bits are detected and the sequence of bits is not as expected.

Suffix:
<t> 1..3

Parameters:
<Error_Length> OFF | ON
*RST: ON

Manual operation: See "Error" on page 811

TRIGger<t>:ETHernet:ERRor:PREamble <Error_Preamble>

Enables the trigger on a frame with invalid preamble.

Suffix:
<t> 1..3

Parameters:
<Error_Preamble> OFF | ON
*RST: ON

Manual operation: See "Error" on page 811

TRIGger<t>:ETHernet:FRAMe:CCONdition <CRC_Operator>

Sets the operator to trigger on a specific frame check sequence value.

Suffix:
<t> 1..3

Parameters:
<CRC_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater Than, Greater than or equal. These conditions require a destination address to be set with `TRIGger<t>:ETHernet:FRAMe:CMIN`.

INRange | OORange
In range, Out of range. Set the minimum and maximum value of the range with `TRIGger<t>:ETHernet:FRAMe:CMIN` and `TRIGger<t>:ETHernet:FRAMe:CMAX`.

*RST: EQUal

Manual operation: See "Frame check" on page 811

TRIGger<t>:ETHernet:FRAMe:CMAX <CRC_PatternMax>

Sets the end value of the frame check sequence range, if `TRIGger<t>:ETHernet:FRAMe:CCONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<CRC_PatternMax>

Manual operation: See "Frame check" on page 811

TRIGger<t>:ETHernet:FRAMe:CMIN <CRC_PatternMin>

Specifies a CRC pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<CRC_PatternMin>

Manual operation: See "Frame check" on page 811

TRIGger<t>:ETHernet:FRAMe:DCONdition <DestAddr_Operator>

Sets the destination address operator to trigger on a specific pattern or a range.

Suffix:
<t> 1..3

Parameters:
<DestAddr_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater Than, Greater than or equal. These conditions require a destination address to be set with `TRIGger<t>:ETHernet:FRAMe:DMIN`.

INRange | OORange
In range, Out of range. Set the minimum and maximum value of the range with `TRIGger<t>:ETHernet:FRAMe:DMIN` and `TRIGger<t>:ETHernet:FRAMe:DMAX`.

*RST: EQUal

Manual operation: See "Destination Address" on page 810

TRIGger<t>:ETHernet:FRAMe:DMAX <DestAddr_PattMax>

Sets the end value of a destination address range, if `TRIGger<t>:ETHernet:FRAMe:DMAX` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<DestAddr_PattMax>

Manual operation: See "Destination Address" on page 810

TRIGger<t>:ETHernet:FRAMe:DMIN <DestAddr_PattMin>

Specifies a destination address pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<DestAddr_PattMin>

Manual operation: See "Destination Address" on page 810

TRIGger<t>:ETHernet:FRAMe:SCONdition <SrcAddr_Operator>

Sets source address operator to trigger on a specific pattern or a range.

Suffix:
<t> 1..3

Parameters:
<SrcAddr_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater Than, Greater than or equal. These conditions require a destination address to be set with `TRIGger<t>:ETHernet:FRAMe:SMIN`.

INRange | OORange
In range, Out of range. Set the minimum and maximum value of the range with `TRIGger<t>:ETHernet:FRAMe:SMIN` and `TRIGger<t>:ETHernet:FRAMe:SMAX`.

*RST: EQUal

Manual operation: See "Source Address" on page 810

TRIGger<t>:ETHernet:FRAMe:SMAX <SrcAddr_PattMax>

Sets the end value of a range, if the data condition is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<SrcAddr_PattMax>

Manual operation: See "Source Address" on page 810

TRIGger<t>:ETHernet:FRAMe:SMIN <SrcAddr_PattMin>

Specifies a source address pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<SrcAddr_PattMin>

Manual operation: See "Source Address" on page 810

TRIGger<t>:ETHernet:FRAMe:TCONdition <Type_Operator>

Sets the type operator to trigger on a specific length/type value pattern or a range.

Suffix:
<t> 1..3

Parameters:
<Type_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater Than, Greater than or equal. These conditions require a destination address to be set with `TRIGger<t>:ETHernet:FRAMe:TMIN`.

INRange | OORange
In range, Out of range. Set the minimum and maximum value of the range with `TRIGger<t>:ETHernet:FRAMe:TMIN` and `TRIGger<t>:ETHernet:FRAMe:TMAX`.

*RST: EQUal

Manual operation: See "Length/ Type" on page 810

TRIGger<t>:ETHernet:FRAMe:TMAX <Type_PattMax>

Sets the end value of a length/type range, if `TRIGger<t>:ETHernet:FRAMe:TCONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<Type_PattMax>

Manual operation: See "Length/ Type" on page 810

TRIGger<t>:ETHernet:FRAMe:TMIN <Type_PattMin>

Specifies a length/type value, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<Type_PattMin>

Manual operation: See "Length/ Type" on page 810

27.18.18.3 Decode results

In all `BUS<b>:ETHernet:WORD<n>` commands, the suffix <b> selects the serial bus and the suffix <w> selects the word number in the decode table.

As an example, a set of query commands for bus #1 and word #1 is shown in the following, together with examples for results of these queries:

- `BUS1:ETH:WCOunt?` !2
- `BUS1:ETH:WORD1:STATe?` !OK
- `BUS1:ETH:WORD1:STARt?` !-0.000135
- `BUS1:ETH:WORD1:STOP?` !-6.62e-5
- `BUS1:ETH:WORD1:DEST?` !FF:FF:FF:FF:FF:FF
- `BUS1:ETH:WORD1:SRC?` !0F:0E:0D:0C:0B:0A

- BUS1:ETH:WORD1:DATA? ![60]45003c3e6210...
- BUS1:ETH:WORD1:TYPE? !2048
- BUS1:ETH:WORD1:CRC? !-1821935433
- BUS1:ETH:WORD1:SSYM? !
- BUS1:ETH:WORD1:DSYM? !BroadCast
- BUS1:ETH:WORD1:BYTE1:VAL? !69
- BUS1:ETH:WORD1:BYTE2:VAL? !0

BUS<b>:ETHernet:WCOunt? 2367
BUS<b>:ETHernet:WORD<w>:FTYPe? 2367
BUS<b>:ETHernet:WORD<w>:STATe? 2368
BUS<b>:ETHernet:WORD<w>:STARt? 2368
BUS<b>:ETHernet:WORD<w>:STOP? 2368
BUS<b>:ETHernet:WORD<w>:DESTaddress? 2369
BUS<b>:ETHernet:WORD<w>:SRCaddress? 2369
BUS<b>:ETHernet:WORD<w>:TYPE? 2369
BUS<b>:ETHernet:WORD<w>:DATA? 2370
BUS<b>:ETHernet:WORD<w>:CRC? 2370
BUS<b>:ETHernet:WORD<w>:DSYMbol? 2370
BUS<b>:ETHernet:WORD<w>:SSYMbol? 2371
BUS<b>:ETHernet:WORD<w>:BITRate? 2371
BUS<b>:ETHernet:WORD<w>:BYTE<o>:VALue? 2371
BUS<b>:ETHernet:WORD<w>:NUMWords? 2372

BUS<b>:ETHernet:WCOunt?

Returns the frame count for the selected serial bus, i.e. the number of frames in the current acquisition. The result corresponds to the number of rows in the result table.

Suffix:
<b> 1..4

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:ETHernet:WORD<w>:FTYPe?

Returns the frame type of the selected word in the current acquisition.

Suffix:
<b> 1..4
<w> *

Return values:
<FrameType> MAC | IDLE | SLEep | EOS | UNKNown
*RST: MAC

Usage: Query only

BUS<b>:ETHernet:WORD<w>:STATe?

Returns the frame state of the selected word in the current acquisition.

Suffix:
<b> 1..4

<w> *

Return values:
<State> OK | ERR_PREAMBLE | ERR_LENGTH | UNCorrelated | INComplete

OK
No error detected

ERR_PREAMBLE
Error in the preamble of the selected word

ERR_SFD
Error in the start frame delimiter (SFD). The value of a correct SFD byte is 171. The SFD is transmitted LSB first.

ERR_LENGTH
Error in the number of bits in the selected word

*RST: OK

Usage: Query only

BUS<b>:ETHernet:WORD<w>:STARt?

Returns the frame start time of the selected word in the current acquisition.

Suffix:
<b> 1..4

<w> *

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
Default unit: s

Usage: Query only

BUS<b>:ETHernet:WORD<w>:STOP?

Returns the frame stop time of the selected word in the current acquisition.

Suffix:
<b> 1..4

<w> *

Return values:

<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
Default unit: s

Usage: Query only

BUS<b>:ETHernet:WORD<w>:DESTaddress?

Returns the destination address of the specified word.

Suffix:

<b> 1..4

<w> *

Return values:

<DestAddress> String parameter

Usage: Query only

BUS<b>:ETHernet:WORD<w>:SRCaddress?

Returns the source address of the specified word.

Suffix:

<b> 1..4

<w> *

Return values:

<SrcAddress> String parameter

Usage: Query only

BUS<b>:ETHernet:WORD<w>:TYPE?

The sub-protocol (e.g. HTML, video, etc.) determines what meaning this field has. Since the content of this data area is not decoded, the interpretation of the TYPE field is ambivalent.

Suffix:

<b> 1..4

<w> *

Return values:

<Type> Returns the word type (specific for the sub-protocol), or the length of the selected word.

Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:ETHernet:WORD<w>:DATA?

Returns the number of word bytes in brackets [.] followed by the first six word bytes of data in hexadecimal format.

Use `BUS<b>:ETHernet:WORD<w>:BYTE<o>:VALue?` to access the word bytes.

Suffix:
<b> 1..4

<w> *

Return values:
<Data> String parameter

Example:
```
BUS:ETHernet:WORD3:DATA?
<-- '[60]FF00FFFF1234'
```

Usage: Query only

BUS<b>:ETHernet:WORD<w>:CRC?

Returns the Cyclic Redundancy Code (CRC, or frame check) checksum of the selected word.

Suffix:
<b> 1..4

<w> *

Return values:
<CRC> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:ETHernet:WORD<w>:DSYMbol?

Returns the symbolic label (or translation) of the destination address of the specified word, if the label list is enabled.

Suffix:
<b> 1..4

<w> *

Return values:
<DestTranslation> String parameter

Usage: Query only

BUS<b>:ETHernet:WORD<w>:SSYMbol?

Returns the symbolic label (or translation) of the source address of the specified word, if the label list is enabled.

Suffix:
<b> 1..4

<w> *

Return values:
<SrcTranslation> String parameter

Usage: Query only

BUS<b>:ETHernet:WORD<w>:BITRate?

Returns the primary bit rate.

Suffix:
<b> 1..4

<w> *

Return values:
<PrimaryBitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

BUS<b>:ETHernet:WORD<w>:BYTE<o>:VALue?

BYTE returns all data of up to 1982 bytes (not just the first 5 or 6 bytes). This is also visible in the data table under "Show details".

Suffix:
<b> 1..4

<w> *

<o> *
Selects the byte number.

Return values:
<FrameByteValue> Range: 0 to 255
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:ETHernet:WORD<w>:NUMWords?

Returns the number of words in the selected frame. The result corresponds to the "Number of Words" column in the results table.

Suffix:
<b> 1..4
<w> *
Frame index

Return values:
<NumWords> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

SEARch:TRIGger:ETHernet:TYPE <SearchName>,<Type>
SEARch:TRIGger:ETHernet:TYPE? <SearchName>

Selects, if it searched on a MAC frame or on an error.

Parameters:
<Type> FRAMe | ERRor
*RST: FRAMe

Parameters for setting and query:
<SearchName>

Manual operation: See "Type" on page 814

SEARch:TRIGger:ETHernet:FRAMe:DCONdition
<SearchName>,<DestAddr_Operator>
SEARch:TRIGger:ETHernet:FRAMe:DCONdition? <SearchName>

Defines the operator to search a specific destination address within a frame.

Parameters:
<DestAddr_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater Than, Greater than or equal. These conditions require a destination address to be set with `SEARch:TRIGger:ETHernet:FRAMe:DMIN`.

INRange | OORange
In range, Out of range. Set the minimum and maximum value of the range with `SEARch:TRIGger:ETHernet:FRAMe:DMIN` and `SEARch:TRIGger:ETHernet:FRAMe:DMAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Destination address" on page 814

SEARch:TRIGger:ETHernet:FRAMe:DMIN <SearchName>,<DestAddr_PattMin>
SEARch:TRIGger:ETHernet:FRAMe:DMIN? <SearchName>

Defines a destination address, or sets the start value of a destination address range.

Parameters:
<DestAddr_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Destination address" on page 814

SEARch:TRIGger:ETHernet:FRAMe:DMAX <SearchName>,<DestAddr_PattMax>
SEARch:TRIGger:ETHernet:FRAMe:DMAX? <SearchName>

Sets the end value of a destination address range, if `SEARch:TRIGger:ETHernet:FRAMe:DCONdition` is set to `INRange` or `OORange`.

Parameters:
<DestAddr_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Destination address" on page 814

SEARch:TRIGger:ETHernet:FRAMe:SCONdition
<SearchName>,<SrcAddr_Operator>
SEARch:TRIGger:ETHernet:FRAMe:SCONdition? <SearchName>

Defines the operator to search a specific source address within a frame.

Parameters:
<SrcAddr_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater Than, Greater than or equal. These conditions require a destination address to be set with `SEARch:TRIGger:ETHernet:FRAMe:SMIN`.

INRange | OORange
In range, Out of range. Set the minimum and maximum value of the range with `SEARch:TRIGger:ETHernet:FRAMe:SMIN` and `SEARch:TRIGger:ETHernet:FRAMe:SMAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Source address" on page 814

SEARch:TRIGger:ETHernet:FRAMe:SMIN <SearchName>,<SrcAddr_PattMin>
SEARch:TRIGger:ETHernet:FRAMe:SMIN? <SearchName>

Defines a source address, or sets the start value of a source address range.

Parameters:
<SrcAddr_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Source address" on page 814

SEARch:TRIGger:ETHernet:FRAMe:SMAX <SearchName>,<SrcAddr_PattMax>
SEARch:TRIGger:ETHernet:FRAMe:SMAX? <SearchName>

Sets the end value of a source address range, if `SEARch:TRIGger:ETHernet:FRAMe:SCONdition` is set to `INRange` or `OORange`.

Parameters:
<SrcAddr_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Source address" on page 814

SEARch:TRIGger:ETHernet:FRAMe:TCONdition <SearchName>,<Type_Operator>
SEARch:TRIGger:ETHernet:FRAMe:TCONdition? <SearchName>

Defines the operator to search for a specific frame length or type.

Parameters:
<Type_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater Than, Greater than or equal. These conditions require a pattern to be set with `SEARch:TRIGger:ETHernet:FRAMe:TMIN`.

INRange | OORange
In range, Out of range. Set the minimum and maximum value of the range with `SEARch:TRIGger:ETHernet:FRAMe:TMIN` and `SEARch:TRIGger:ETHernet:FRAMe:TMAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Length/Type" on page 815

SEARch:TRIGger:ETHernet:FRAMe:TMIN <SearchName>,<Type_PattMin>
SEARch:TRIGger:ETHernet:FRAMe:TMIN? <SearchName>

Defines a frame length/type, or sets the start value for a range of frame lengths/types.

Parameters:
<Type_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Length/Type" on page 815

SEARch:TRIGger:ETHernet:FRAMe:TMAX <SearchName>,<Type_PattMax>
SEARch:TRIGger:ETHernet:FRAMe:TMAX? <SearchName>

Sets the end value of a range of frame lengths/types, if `SEARch:TRIGger:ETHernet:FRAMe:TCONdition` is set to `INRange` or `OORange`.

Parameters:
<Type_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Length/Type" on page 815

SEARch:TRIGger:ETHernet:FRAMe:CCONdition <SearchName>,<CRC_Operator>
SEARch:TRIGger:ETHernet:FRAMe:CCONdition? <SearchName>

Defines the operator to search for a Cyclic Redundancy Code (CRC, or frame check) error condition within a frame.

Parameters:
<CRC_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater Than, Greater than or equal. These conditions require a CRC pattern to be set with `SEARch:TRIGger:ETHernet:FRAMe:CMIN`.

INRange | OORange
In range, Out of range. Set the minimum and maximum value of the range with `SEARch:TRIGger:ETHernet:FRAMe:CMIN` and `SEARch:TRIGger:ETHernet:FRAMe:CMAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Frame check" on page 815

SEARch:TRIGger:ETHernet:FRAMe:CMIN <SearchName>,<CRC_PatternMin>
SEARch:TRIGger:ETHernet:FRAMe:CMIN? <SearchName>

Defines a CRC error condition pattern, or sets the start value of such a pattern.

Parameters:
<CRC_PatternMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Frame check" on page 815

SEARch:TRIGger:ETHernet:FRAMe:CMAX <SearchName>,<CRC_PatternMax>
SEARch:TRIGger:ETHernet:FRAMe:CMAX? <SearchName>

Sets the end value of a CRC error condition pattern, if `SEARch:TRIGger:ETHernet:FRAMe:CCONdition` is set to `INRange` or `OORange`.

Parameters:
<CRC_PatternMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Frame check" on page 815

SEARch:TRIGger:ETHernet:ERRor:PREamble <SearchName>,<Error_Preamble>
SEARch:TRIGger:ETHernet:ERRor:PREamble? <SearchName>

Defines, whether a search for any preamble error shall be activated or not.

Parameters:
<Error_Preamble> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Preamble Error" on page 815

SEARch:TRIGger:ETHernet:ERRor:LENGth <SearchName>,<Error_Length>
SEARch:TRIGger:ETHernet:ERRor:LENGth? <SearchName>

Defines, whether a search for any word length error (too few or too many bits per word) shall be activated or not.

Parameters:
<Error_Length> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Length Error" on page 815

27.18.18.5 Search results

To show the results on the screen, use the following commands:

- `BUS<b>:RESult` on page 1914

In all `SEARch:RESult:ETHernet:WORD<m>` commands, the suffix <m> selects the word number in the list of search results.

SEARch:RESult:ETHernet:WCOunt?....2378
SEARch:RESult:ETHernet:WORD<w>:STATe?....2378
SEARch:RESult:ETHernet:WORD<w>:STARt?....2379
SEARch:RESult:ETHernet:WORD<w>:STOP?....2379
SEARch:RESult:ETHernet:WORD<w>:DESTaddress?....2379
SEARch:RESult:ETHernet:WORD<w>:SRCaddress?....2380
SEARch:RESult:ETHernet:WORD<w>:TYPE?....2380
SEARch:RESult:ETHernet:WORD<w>:FTYPe?....2380
SEARch:RESult:ETHernet:WORD<w>:DATA?....2380
SEARch:RESult:ETHernet:WORD<w>:CRC?....2381
SEARch:RESult:ETHernet:WORD<w>:DSYMbol?....2381
SEARch:RESult:ETHernet:WORD<w>:SSYMbol?....2381
SEARch:RESult:ETHernet:WORD<w>:BYTE<n>:VALue?....2382

SEARch:RESult:ETHernet:WCOunt? <SearchName>

Returns the number of decoded words within the search result.

Query parameters:

<SearchName> String parameter

Return values:

<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:ETHernet:WORD<w>:STATe? <SearchName>

Returns the frame state of the selected word within the search result.

Suffix:

<w> *

Query parameters:

<SearchName> String parameter

Return values:

<State> OK | ERR_PREAMBLE | ERR_LENGTH

OK
No error detected

ERR_PREAMBLE
Error in the preamble of the selected word

ERR_SFD
Error in the start frame delimiter (SFD). The value of a correct SFD byte is 171. The SFD is transmitted LSB first.

ERR_LENGTH
Error in the number of bits in the selected word

*RST: OK

Usage: Query only

SEARch:RESult:ETHernet:WORD<w>:STARt? <SearchName>

Returns the frame start time of the selected word within the search result.

Suffix:
<w> *

Query parameters:
<SearchName> String parameter

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:ETHernet:WORD<w>:STOP? <SearchName>

Returns the frame stop time of the selected word within the search result.

Suffix:
<w> *

Query parameters:
<SearchName> String parameter

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:ETHernet:WORD<w>:DESTaddress? <SearchName>

Returns the destination address of the specified word within the search result.

Suffix:
<w> *

Query parameters:
<SearchName> String parameter

Return values:
<DestAddr_str> String parameter

Usage: Query only

SEARch:RESult:ETHernet:WORD<w>:SRCaddress? <SearchName>

Returns the source address of the specified word within the search result.

Suffix:
<w> *

Query parameters:
<SearchName> String parameter

Return values:
<SrcAddr_str> String parameter

Usage: Query only

SEARch:RESult:ETHernet:WORD<w>:TYPE? <SearchName>

The sub-protocol (e.g. HTML, video, etc.) determines what meaning this field has. Since the content of this data area is not decoded, the interpretation of the TYPE field is ambivalent. The query either returns the word type (specific for the sub-protocol), or the length of the selected word within the search result.

Suffix:
<w> *

Query parameters:
<SearchName> String parameter

Return values:
<Type> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:ETHernet:WORD<w>:FTYPe? <SearchName>

Returns the frame type of the specified frame.

Suffix:
<w> *

Query parameters:
<SearchName>

Return values:
<FrameType> MAC | IDLE | SLEep | EOS | UNKNown
*RST: MAC

Usage: Query only

SEARch:RESult:ETHernet:WORD<w>:DATA? <SearchName>

Returns the data bytes of the specified word within the search result.

Suffix:
<w> *

Query parameters:
<SearchName> String parameter

Return values:
<Data> String parameter

Usage: Query only

SEARch:RESult:ETHernet:WORD<w>:CRC? <SearchName>

Returns the Cyclic Redundancy Code (CRC, or frame check) checksum of the selected word within the search result.

Suffix:
<w> *

Query parameters:
<SearchName> String parameter

Return values:
<CRC> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:ETHernet:WORD<w>:DSYMbol? <SearchName>

Returns the symbolic label (or translation) of the destination address of the specified word within the search result, if the label list is enabled.

Suffix:
<w> *

Query parameters:
<SearchName> String parameter

Return values:
<DestTranslation> String parameter

Usage: Query only

SEARch:RESult:ETHernet:WORD<w>:SSYMbol? <SearchName>

Returns the symbolic label (or translation) of the source address of the specified word within the search result, if the label list is enabled.

Suffix:
<w> *

Query parameters:
<SearchName> String parameter

Return values:
<SrcTranslation> String parameter

Usage: Query only

SEARch:RESult:ETHernet:WORD<w>:BYTE<n>:VALue? <SearchName>

BYTE returns all data of up to 1982 bytes (not just the first 5 or 6 bytes). This is also visible in the data table under "Show details".

Suffix:
<w> *

<n> *
Selects the byte number.

Query parameters:
<SearchName> String parameter

Return values:
<FrameByteValue> Range: 0 to 255
Increment: 1
*RST: 0

Usage: Query only

27.18.19 MDIO (option R&S RTO6-K540)

- Configuration....2382
- Trigger....2385
- Decode results....2388
- Search settings....2392
- Search results....2394

27.18.19.1 Configuration

In all `BUS<b>:MDIO` commands, the suffix <b> selects the serial bus.

BUS<b>:MDIO:CLOCk:SOURce....2382
BUS<b>:MDIO:DATA:SOURce....2383
BUS<b>:MDIO:CLOCk:THReshold:HIGH....2383
BUS<b>:MDIO:CLOCk:THReshold:LOW....2384
BUS<b>:MDIO:DATA:THReshold:HIGH....2384
BUS<b>:MDIO:DATA:THReshold:LOW....2384
BUS<b>:MDIO:PRESet....2384
BUS<b>:MDIO:COUPling....2385

BUS<b>:MDIO:CLOCk:SOURce <SourceClock>

Selects the source for the clock line (management data clock, MDC). Permitted selections are the analog channels "C1"–"C4" and the digital channels "D0"–"D15".

Suffix:
<b> 1..4

Parameters:
<SourceClock> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

Digital and analog channels cannot be used at the same time for data and clock lines. For triggering on a serial bus, analog or digital input channels are required.
See Section 27.4.2, "Waveform parameter", on page 1451

*RST: C2W1

Manual operation: See "Source" on page 819

BUS<b>:MDIO:DATA:SOURce <SourceData>

Selects the source for the data signal. Permitted selections are the analog channels "C1"–"C4" and the digital channels "D0"–"D15", but not the same as for "Clock".

Suffix:
<b> 1..4

Parameters:
<SourceData> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

Digital and analog channels cannot be used at the same time for data and clock lines. For triggering on a serial bus, analog or digital input channels are required.
See Section 27.4.2, "Waveform parameter", on page 1451

*RST: C1W1

Manual operation: See "Source" on page 819

BUS<b>:MDIO:CLOCk:THReshold:HIGH <ThresClkHigh>

Defines the upper threshold level for the clock signal.

Suffix:
<b> 1..4

Parameters:
<ThresClkHigh>
Range: -5 to 5
Increment: 0.1
*RST: 2
Default unit: V

Manual operation: See "Thresholds" on page 820

BUS<b>:MDIO:CLOCk:THReshold:LOW <ThresClkLow>

Defines the lower threshold level for the clock signal.

Suffix:
<b> 1..4

Parameters:
<ThresClkLow> Range: -5 to 5
Increment: 0.1
*RST: 0.8
Default unit: V

Manual operation: See "Thresholds" on page 820

BUS<b>:MDIO:DATA:THReshold:HIGH <ThresDatHigh>

Defines the upper threshold level for the data signal.

Suffix:
<b> 1..4

Parameters:
<ThresDatHigh> Range: -5 to 5
Increment: 0.1
*RST: 2
Default unit: V

Manual operation: See "Thresholds" on page 820

BUS<b>:MDIO:DATA:THReshold:LOW <ThresDatLow>

Defines the lower threshold level for the data signal.

Suffix:
<b> 1..4

Parameters:
<ThresDatLow> Range: -5 to 5
Increment: 0.1
*RST: 0.8
Default unit: V

Manual operation: See "Thresholds" on page 820

BUS<b>:MDIO:PRESet <Preset>

Selects the default threshold settings according to the Ethernet standard: 2.0 V and 0.8 V.

Suffix:
<b> 1..4

Parameters:
<Preset> DEFault | MANual
*RST: DEFault

Manual operation: See "Thresholds" on page 820

BUS<b>:MDIO:COUPling <ThresCpl>

Overwrites the data thresholds with the clock thresholds.

Suffix:
<b> 1..4

Parameters:
<ThresCpl> OFF | ON
*RST: ON

Manual operation: See "Thresholds" on page 820

27.18.19.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:MDIO:TYPE 2385
TRIGger<t>:MDIO:ST 2386
TRIGger<t>:MDIO:FRAMetype 2386
TRIGger<t>:MDIO:PHYS 2387
TRIGger<t>:MDIO:REGI 2387
TRIGger<t>:MDIO:DATA 2388

TRIGger<t>:MDIO:TYPE <Type>

Selects the trigger type for MDIO analysis.

Suffix:
<t> 1..3

Parameters:
<Type> STARt | STOP | DATA

STARt
Sets the trigger to the start of frame (SOF) field. The start of frame condition and the trigger instant is the end of the preamble. Trigger pattern: preamble (32 bits "1")

STOP
Sets the trigger to the end of frame (EOF) field. The trigger instant is after the last data bit. Trigger pattern: preamble (32 bits "1") + 32 bits "X"

DATA
Sets the trigger to the data field. For more information on the data condition, see MDIO in the Ethernet standard. The trigger instant is at the end of the frame after the last data bit, as indicated in the GUI. Trigger pattern: preamble (32 bits "1") + 2 bits "ST" (Start of Frame Code) + 2 bits "OP" (Frame Type Code, or "OpCode") + 5 bits "PHYAD/PRTAD" (Physical Layer Entity Address / Port Address) + 5 bits "REGAD/DEVAD" (Register Address / Device Address) + 2 bits "TA" (turnaround time, X bits) + 16 bits "DATA/ADDRESS"

*RST: STARt

Manual operation: See "MDIO Trigger Type" on page 823

TRIGger<t>:MDIO:ST <StartCode>

Selects the start of frame code of the frame pattern; available only in trigger type "Data".

Note that Clause 22 is coded by "01", while Clause 45 is coded by "00", thus the lower Clause number is represented by the higher parameter value.

Suffix:
<t> 1..3

Parameters:
<StartCode> ST00 | ST01 | ST0X

ST00
Clause 45

ST01
Clause 22

ST0X
Any permissible start pattern

*RST: ST0X

Manual operation: See "ST" on page 824

TRIGger<t>:MDIO:FRAMetype <FrameType>

Selects the Type of Frame code (or OP code, OpCode, operation code); available only in trigger type "Data".

Note that the same OpCode may have different meanings in Clause 22 and Clause 45.

Suffix:
<t> 1..3

Parameters:
<FrameType> OP00 | OP01 | OP10 | OP11 | OPXX

OP00
Address frame (in Clause 45, only)

OP01
Write frame (in Clause 22 or Clause 45)

OP10
Read frame (in Clause 22) or Post-Read increment address frame (in Clause 45)

OP11
Read frame (in Clause 45)

OPXX
Any frame type

*RST: OPXX
Note that the user interface shows interpretations of the numerical OpCode values corresponding to Clause 45. Clause 22 is not represented by this interpretation.

Manual operation: See "OP" on page 824

TRIGger<t>:MDIO:PHYS <PhyAddr>

Sets the physical address (in Clause 22) or port address (in Clause 45) of the frame pattern (5 bits); available only in trigger type "Data".

Suffix:
<t> 1..3

Parameters:
<PhyAddr>

Manual operation: See "PHYAD/PRTAD" on page 824

TRIGger<t>:MDIO:REGI <RegAddr>

Sets the register address (in Clause 22) or device address (in Clause 45) of the frame pattern (5 bits); available only in trigger type "Data".

Suffix:
<t> 1..3

Parameters:
<RegAddr>

Manual operation: See "REGAD/DEVAD" on page 825

TRIGger<t>:MDIO:DATA <Data>

Defines the 16-bit payload data pattern (both in Clause 22 or Clause 45) or the address pattern (in Clause 45, only) to trigger for; available only in trigger type "Data".

Suffix:
<t> 1..3

Parameters:
<Data>

Manual operation: See "DATA/ADDRESS" on page 825

27.18.19.3 Decode results

In all `BUS<b>:MDIO:WORD<w>` commands, the suffix <b> selects the serial bus and the suffix <w> selects the word number in the decode table.

BUS<b>:MDIO:WCOunt?....2388
BUS<b>:MDIO:WORD<w>:DATA?....2388
BUS<b>:MDIO:WORD<w>:PHYS?....2389
BUS<b>:MDIO:WORD<w>:REGI?....2389
BUS<b>:MDIO:WORD<w>:ST?....2389
BUS<b>:MDIO:WORD<w>:STARt?....2390
BUS<b>:MDIO:WORD<w>:STATe?....2390
BUS<b>:MDIO:WORD<w>:STOP?....2391
BUS<b>:MDIO:WORD<w>:SYMBol?....2391
BUS<b>:MDIO:WORD<w>:TYPE?....2391

BUS<b>:MDIO:WCOunt?

Returns the word count for the selected serial bus, i.e. the number of words in the present acquisition.

Suffix:
<b> 1..4

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:MDIO:WORD<w>:DATA?

Returns the 16-bit payload data field content (in Clause 22 or Clause 45), or the 16-bit address field content (in Clause 45, only) in the present acquisition of the selected word and the selected serial bus. The most significant bit (MSB) is transmitted first.

Suffix:
<b> 1..4

<w> *

Return values:
<Data> List of comma-separated values

Usage: Query only

BUS<b>:MDIO:WORD<w>:PHYS?

Returns the 5-bit address field content (PHYAD/PRTAD) in the present acquisition of the selected word and the selected serial bus.

Suffix:
<b> 1..4

<w> *

Return values:
<PhyAd> Range: 0 to 32
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:MDIO:WORD<w>:REGI?

Returns the 5-bit register or device address field content (REGAD/DEVAD) in the present acquisition of the selected word and the selected serial bus.

Suffix:
<b> 1..4

<w> *

Return values:
<RegAd> Range: 0 to 32
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:MDIO:WORD<w>:ST?

Returns the Start Code (= start of frame code) in the present acquisition of the selected word and the selected serial bus.

Suffix:
<b> 1..4

<w> *

Return values:

<StartCode> Range: 0 to 3
Increment: 1
*RST: 0
The parameter value "0" represents Clause 45, and "1" stands for Clause 22.
The values "2" and "3" do not correspond with any legal parameters according to the standard, but they can be searched for.

Usage: Query only

BUS<b>:MDIO:WORD<w>:STARt?

Returns the start time of the frame in the selected word of the selected serial bus.

Suffix:

<b> 1..4

<w> *

Return values:

<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:MDIO:WORD<w>:STATe?

Returns the state of the frame in the present acquisition of the selected serial bus.

Suffix:

<b> 1..4

<w> *

Return values:

<State> OK | UNSYN | UNSYncronized | OPCO | TA_ERROR | INComplete | SHORT | SHORt

OK
No error detected

UNSYN = UNSYncronized
UNSYncronized happens when bits are found, but they are not correlated with any synchronization sequence. We don't know what these bits are, but they are there. These bits receive a flag, but they are not decoded.

OPCO
OPcode Error

TA_ERROR
Tirnaround time error

INComplete
Incomplete Frame

SHORT = SHORt
Length Error

*RST: OK

Usage: Query only

BUS<b>:MDIO:WORD<w>:STOP?

Returns the stop time of the frame from the selected word within the search result.

Suffix:
<b> 1..4

<w> *

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:MDIO:WORD<w>:SYMBol?

Returns a textual translation (called Register Name) of the PHY or port address label in the present acquisition of the selected word and the selected serial bus.

The translation is defined in the label list.

Suffix:
<b> 1..4

<w> *

Return values:
<Translation>

Usage: Query only

BUS<b>:MDIO:WORD<w>:TYPE?

Returns the OpCode (= operation code or frame type) in the present acquisition of the selected word and the selected serial bus.

Suffix:
<b> 1..4

<w> *

Return values:

<FrameType> Range: 0 to 3
Increment: 1
*RST: 0
The parameter value "0" represents Clause 45, and "1" stands for Clause 22.
The values "2" and "3" do not correspond with any legal parameters according to the standard, but they can be searched for.

Usage: Query only

27.18.19.4 Search settings

SEARch:TRIGger:MDIO:DATA 2392
SEARch:TRIGger:MDIO:FRAMetype 2392
SEARch:TRIGger:MDIO:PHYS 2393
SEARch:TRIGger:MDIO:REGI 2393
SEARch:TRIGger:MDIO:ST 2394
SEARch:TRIGger:MDIO:TYPE 2394

SEARch:TRIGger:MDIO:DATA <SearchName>,<Data>
SEARch:TRIGger:MDIO:DATA? <SearchName>

Allows to define the 16-bit payload data pattern (both in Clause 22 or Clause 45) or the address pattern (in Clause 45, only) to search for; available only in search criteria type "Data".

Parameters:
<Data>

Parameters for setting and query:
<SearchName>

Manual operation: See "DATA/ADDRESS" on page 828

SEARch:TRIGger:MDIO:FRAMetype <SearchName>,<FrameType>
SEARch:TRIGger:MDIO:FRAMetype? <SearchName>

Allows to select the Type of Frame code (or OP code, OpCode, operation code); available only in search criteria type "Data".

Note that the same OpCode may have different meanings in Clause 22 and Clause 45.

Parameters:

<FrameType> OP00 | OP01 | OP10 | OP11 | OPXX

OP00
Address frame (in Clause 45, only)

OP01
Write frame (in Clause 22 or Clause 45)

OP10
Read frame (in Clause 22) or Post-Read increment address frame (in Clause 45)

OP11
Read frame (in Clause 45)

OPXX
Any frame type

*RST: OPXX
Note that the user interface shows interpretations of the numerical OpCode values corresponding to Clause 45. Clause 22 is not represented by this interpretation.
Also, note that OPXX will never be a result of decoding, but it is still an option for triggering.

Parameters for setting and query:
<SearchName>

Manual operation: See "OP" on page 828

SEARch:TRIGger:MDIO:PHYS <SearchName>,<PhyAddr>
SEARch:TRIGger:MDIO:PHYS? <SearchName>

Allows to set the physical address (in Clause 22) or port address (in Clause 45) of the frame pattern (5 bits); available only in search criteria type "Data".

Parameters:
<PhyAddr>

Parameters for setting and query:
<SearchName>

Manual operation: See "PHYAD/PRTAD" on page 828

SEARch:TRIGger:MDIO:REGI <SearchName>,<RegAddr>
SEARch:TRIGger:MDIO:REGI? <SearchName>

Allows to set the register address (in Clause 22) or device address (in Clause 45) of the frame pattern (5 bits); available only in search criteria type "Data".

Parameters:
<RegAddr>

Parameters for setting and query:
<SearchName>

Manual operation: See "REGAD/DEVAD" on page 828

SEARch:TRIGger:MDIO:ST <SearchName>,<StartCode>
SEARch:TRIGger:MDIO:ST? <SearchName>

Allows to select the start of frame code of the frame pattern; available only in search criteria type "Data".

Parameters:
<StartCode> ST00 | ST01 | ST0X

ST00
Clause 45

ST01
Clause 22

ST0X
Any permissible start pattern

*RST: ST0X

Parameters for setting and query:
<SearchName>

Manual operation: See "ST" on page 828

SEARch:TRIGger:MDIO:TYPE <SearchName>,<Type>
SEARch:TRIGger:MDIO:TYPE? <SearchName>

Selects the event type to search for.

Parameters:
<Type> STARt | STOP | DATA

STARt
Searches for the start of frame (SOF).

STARt
Searches for the end of frame (EOF).

DATA
Allows to specify a payload data pattern (both in Clause 22 or Clause 45) or an address pattern (in Clause 45, only) to search for.

*RST: STARt

Parameters for setting and query:
<SearchName>

Manual operation: See "Search types" on page 827

27.18.19.5 Search results

In all `SEARch:RESult:MDIO:WORD<m>` commands, the suffix <m> selects the packet number in the list of search results.

SEARch:RESult:MDIO:WORD<w>:DATA?....2395
SEARch:RESult:MDIO:WORD<w>:PHYS?....2395
SEARch:RESult:MDIO:WORD<w>:REGI?....2395
SEARch:RESult:MDIO:WORD<w>:ST?....2396
SEARch:RESult:MDIO:WORD<w>:STARt?....2396
SEARch:RESult:MDIO:WORD<w>:STATe?....2396
SEARch:RESult:MDIO:WORD<w>:STOP?....2397
SEARch:RESult:MDIO:WORD<w>:SYMBol?....2397
SEARch:RESult:MDIO:WORD<w>:TYPE?....2398
SEARch:RESult:MDIO:WCOunt?....2398

SEARch:RESult:MDIO:WORD<w>:DATA? <SearchName>

Returns the 16-bit payload data field content (in Clause 22 or Clause 45), or the 16-bit address field content (in Clause 45, only) from the selected word within the search result.

Suffix:
<w> *

Query parameters:
<SearchName>

Return values:
<Data>

Usage: Query only

SEARch:RESult:MDIO:WORD<w>:PHYS? <SearchName>

Returns the 5-bit address field content (PHYAD/PRTAD) from the selected word within the search result.

Suffix:
<w> *

Query parameters:
<SearchName>

Return values:
<PhyAd> Range: 0 to 32
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:MDIO:WORD<w>:REGI? <SearchName>

Returns the 5-bit register or device address field content (REGAD/DEVAD) from the selected word within the search result.

Suffix:
<w> *

Query parameters:
<SearchName>

Return values:
<RegAd> Range: 0 to 32
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:MDIO:WORD<w>:ST? <SearchName>

Returns the start of frame code from the selected word within the search result.

Suffix:
<w> *

Query parameters:
<SearchName>

Return values:
<StartCode> Range: 0 to 3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:MDIO:WORD<w>:STARt? <SearchName>

Returns the start time of the frame from the selected word within the search result.

Suffix:
<w> *

Query parameters:
<SearchName>

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:MDIO:WORD<w>:STATe? <SearchName>

Returns the state of the frame from the selected word within the search result.

Suffix:
<w> *

Query parameters:
<SearchName>

Return values:
<State> OK | UNSYN | UNSYncronized | OPCO | TA_ERROR | INComplete | SHORT | SHORt

OK
No error detected

UNSYN = UNSYncronized
UNSYncronized happens when bits are found, but they are not correlated with any synchronization sequence. We don't know what these bits are, but they are there. These bits receive a flag, but they are not decoded.

OPCO
OPcode error

TA_ERROR
turnaround time error

INComplete
Incomplete Frame

SHORT = SHORt
Length Error

*RST: OK

Usage: Query only

SEARch:RESult:MDIO:WORD<w>:STOP? <SearchName>

Returns the stop time of the frame from the selected word within the search result.

Suffix:
<w> *

Query parameters:
<SearchName>

Return values:
<Stop>
Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:MDIO:WORD<w>:SYMBol? <SearchName>

Returns a textual translation (called Register Name) of the PHY or port address label from the selected word within the search result.

Suffix:
<w> *

Query parameters:
<SearchName>

Return values:
<Translation>

Usage: Query only

SEARch:RESult:MDIO:WORD<w>:TYPE? <SearchName>

Returns the frame type (= operation code or OpCode) for the selected word within the search result.

Suffix:
<w> *

Query parameters:
<SearchName>

Return values:
<FrameType> Range: 0 to 3
Increment: 1
*RST: 0
Note that the user interface shows interpretations of the numerical OpCode values corresponding to Clause 45: "0" (= [bin]00) represents Address, "1" (= [bin]01" represents Write, "2" (= [bin]10) represents Post Read, "3" (= [bin]11) represents Read. Clause 22 is not represented by this interpretation.

Usage: Query only

SEARch:RESult:MDIO:WCOunt? <SearchName>

Returns the word count within the search result.

Query parameters:
<SearchName>

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

27.18.20 RFFE (option R&S RTO6-K550)

For programming examples, see Section 27.3.7.1, "RFFE (option R&S RTO6-K550)", on page 1440.

27.18.20.1 Configuration

In all BUS<b>:RFFE commands, the suffix <b> selects the serial bus.

For programming examples, see "Configuring RFFE bus" on page 1440.

BUS<b>:RFFE:CLOCk:SOURce 2399
BUS<b>:RFFE:DATA:SOURce 2399
BUS<b>:RFFE:PRESet 2400
BUS<b>:RFFE:DATA:THReshold:HIGH 2400
BUS<b>:RFFE:DATA:THReshold:LOW 2400
BUS<b>:RFFE:CLOCk:THReshold:HIGH 2400
BUS<b>:RFFE:CLOCk:THReshold:LOW 2401
BUS<b>:RFFE:GFILter 2401
BUS<b>:RFFE:GFWidth 2401
BUS<b>:RFFE:MINGap:SELect 2402
BUS<b>:RFFE:MINGap:TIME 2402
BUS<b>:RFFE:RDMD 2402
BUS<b>:RFFE:VERSion 2403

BUS<b>:RFFE:CLOCk:SOURce <SourceClock>

Sets the source of the RFFE clock line.

For triggering on a serial bus, analog or digital input channels are required.

Suffix:
<b> 1..4

Parameters:
<SourceClock> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

*RST: C2W1

Manual operation: See "SCLK Source" on page 833

BUS<b>:RFFE:DATA:SOURce <SourceData>

Sets the source of the RFFE data line. For triggering on a serial bus, analog or digital input channels are required.

Suffix:
<b> 1..4

Parameters:
<SourceData> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

*RST: C1W1

Manual operation: See "SDATA Source" on page 833

BUS<b>:RFFE:PRESet <ThresPreset>

Sets default threshold voltages for 1.2 V or 1.8 V bus. Set the value to MAN if you want to define individual thresholds.

Suffix:
<b> 1..4

Parameters:
<ThresPreset> V12 | V18 | MANual
*RST: V12

BUS<b>:RFFE:DATA:THReshold:HIGH <ThresDatPos>

Set the positive going threshold (V_{TP}) for the data signal.

Note that the high and low thresholds and the hysteresis values are dependent, so it is sufficient to define two values for each line.

Suffix:
<b> 1..4

Parameters:
<ThresDatPos> Range: 0 to 2.5
Increment: 0.1
*RST: 0.72
Default unit: V

Manual operation: See "Thresholds" on page 833

BUS<b>:RFFE:DATA:THReshold:LOW <ThresDatNeg>

Set the negative going threshold (V_{TN}) for the data signal.

Note that the high and low thresholds and the hysteresis values are dependent, so it is sufficient to define two values for each line.

Suffix:
<b> 1..4

Parameters:
<ThresDatNeg> Range: 0 to 2.5
Increment: 0.1
*RST: 0.48
Default unit: V

Manual operation: See "Thresholds" on page 833

BUS<b>:RFFE:CLOCk:THReshold:HIGH <ThresClkPos>

Set the positive going threshold (V_{TP}) for the clock signal.

Note that the high and low thresholds and the hysteresis values are dependent, so it is sufficient to define two values for each line.

Suffix:
<b> 1..4

Parameters:
<ThresClkPos> Range: 0 to 2.5
Increment: 0.1
*RST: 0.72
Default unit: V

Manual operation: See "Thresholds" on page 833

BUS<b>:RFFE:CLOCk:THReshold:LOW <ThresClkNeg>

Set the negative going threshold (V_{TN}) for the clock signal.

Note that the high and low thresholds and the hysteresis values are dependent, so it is sufficient to define two values for each line.

Suffix:
<b> 1..4

Parameters:
<ThresClkNeg> Range: 0 to 2.5
Increment: 0.1
*RST: 0.48
Default unit: V

Manual operation: See "Thresholds" on page 833

BUS<b>:RFFE:GFILter <GlitchFilter>

Enables the glitch filter on the SCLK and SDATA lines to improve decode accuracy.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<GlitchFilter> OFF | ON
*RST: OFF

Manual operation: See "Glitch filter" on page 834

BUS<b>:RFFE:GFWidth <GlitchFilterWdt>

Sets the maximum glitch width to be ignored.

Suffix:
<b> 1..4

Parameters:

<GlitchFilterWdt> Range: 10E-12 to 10E-9
Increment: 10E-12
*RST: 1E-9
Default unit: s

Manual operation: See "Glitch filter" on page 834

BUS<b>:RFFE:MINGap:SELect <MinGapSelect>

If the minimum gap is enabled, the instrument detects the specified gap.

Set the minimum gap time using `BUS<b>:RFFE:MINGap:TIME`.

Suffix:

<b> 1..4

Parameters:

<MinGapSelect> OFF | ON
*RST: OFF

Manual operation: See "Timing" on page 834

BUS<b>:RFFE:MINGap:TIME <MinGapTime>

Sets the minimum idle time between the Bus Park Cycle (BP) and Sequence Start Condition (SSC).

The setting is only relevant if `BUS<b>:RFFE:MINGap:SELect` is enabled.

Suffix:

<b> 1..4

Parameters:

<MinGapTime> Range: 1E-9 to 10E-6
Increment: 1E-9
*RST: 10E-9
Default unit: s

Manual operation: See "Timing" on page 834

BUS<b>:RFFE:RDMD <ReadMode>

Selects, if the standard or synchronous read (`SREAD`) mode is used.

Suffix:

<b> 1..4

Parameters:

<ReadMode> STRD | SREAD
*RST: STRD

Manual operation: See "Read mode" on page 832

BUS<b>:RFFE:VERSion <Version>

Selects the RFFE version.

Suffix:
<b> 1..4

Parameters:
<Version> V1DX | V2D0 | V2D1 | V3D0

`V1DX`: 1.x
`V2D0`: 2.0
`V2D1`: 2.1
`V3D0`: 3.0 / 3.1

*RST: V1DX

Manual operation: See "Version" on page 832

27.18.20.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

For programming examples, see "Triggering on RFFE bus" on page 1441.

TRIGger<t>:RFFE:TYPE 2404
TRIGger<t>:RFFE:ADDRess:CONDition 2406
TRIGger<t>:RFFE:ADDRess:MIN 2406
TRIGger<t>:RFFE:ADDRess:MAX 2407
TRIGger<t>:RFFE:BCOunt:CONDition 2407
TRIGger<t>:RFFE:BCOunt:MIN 2407
TRIGger<t>:RFFE:BCOunt:MAX 2408
TRIGger<t>:RFFE:DATA:DCON 2408
TRIGger<t>:RFFE:DATA:DMIN 2408
TRIGger<t>:RFFE:DATA:DMAX 2409
TRIGger<t>:RFFE:DATA:ICONdition 2409
TRIGger<t>:RFFE:DATA:IMIN 2410
TRIGger<t>:RFFE:DATA:IMAX 2410
TRIGger<t>:RFFE:SADDress:CONDition 2410
TRIGger<t>:RFFE:SADDress:MIN 2411
TRIGger<t>:RFFE:SADDress:MAX 2411
TRIGger<t>:RFFE:MASK:CONDition 2411
TRIGger<t>:RFFE:MASK:MAX 2412
TRIGger<t>:RFFE:MASK:MIN 2412
TRIGger<t>:RFFE:INTerrupt 2412
TRIGger<t>:RFFE:ERRor:BP 2412

TRIGger<t>:RFFE:ERRor:LENGth....2413
TRIGger<t>:RFFE:ERRor:NOResponse....2413
TRIGger<t>:RFFE:ERRor:PARity....2413
TRIGger<t>:RFFE:ERRor:SSC....2413
TRIGger<t>:RFFE:ERRor:USEQuence....2414
TRIGger<t>:RFFE:INTerrupt....2414

TRIGger<t>:RFFE:TYPE <Type>

Selects the trigger type for RFFE analysis.

Suffix:
<t> 1..3

Parameters:
<Type> STARt | STOP | RZWR | RWR | RRD | ERWR | ERRD | ERWL | ERRL | IRSUM | MSKW | MOHO | MASOHO | MWR | MASW | MRD | MASR | MCTW | MCTR | ERRor

STARt
Triggers on the beginning of a command sequence, exactly after the sub device address. Optionally, you can specify a sub device address condition.

STOP
Triggers on the end of a command sequence, exactly at the start of the bus park cycle. Optionally, you can specify a sub device address condition.

RZWR
Triggers on Register 0 Write command sequences. Optionally, you can specify a sub device address condition and a data pattern condition.

RWR
Triggers on Register Write command sequences. Optionally, you can specify a sub device address condition, a register address condition, and a data pattern condition.

RRD
Triggers on Register Read command sequences. Optionally, you can specify a sub device address condition, a register address condition, and a data pattern condition.

ERWR
Triggers on Extended Register Write command sequences. Optionally, you can specify a sub device address condition, a register address condition, a byte count condition, a data index condition, and a data pattern condition.

ERRD
Triggers on Extended Register Read command sequences. Optional trigger conditions are the same as for ERWR.

ERWL
Triggers on Extended Register Write Long command sequences. Optional trigger conditions are the same as for ERWR.

ERRL
Triggers on Extended Register Read Long command sequences. Optional trigger conditions are the same as for ERWR.

IRSUM
Triggers on Interrupt Summary and Notification command sequences. Optionally, you can specify a sub device address condition, bit count condition and a data pattern condition.

MSKW
Masked Write command sequence. Optionally, you can specify a sub device address condition, register address condition, mask condition and data pattern condition

MOHO | MASOHO
Triggers onMain Ownership Handover command sequences. Optionally, you can specify a MID condition.

MWR | MASW
Triggers on Main Device Write command sequences. Optionally, you can specify a MID condition, a register address condition, and a data pattern condition.

MRD | MASR
Triggers on Main Device Read command sequences. Optionally, you can specify a MID condition, a register address condition, and a data pattern condition.

MCTW
Main Device Context Transfer Write command sequence. Optional: MID condition, register address condition, byte count condition, data index condition, and data pattern condition.

MCTR
Main Device Context Transfer Read command sequence. Optional search conditions are the same as for `MCTW`.

ERRor
Triggers if one of the enabled errors occurs in a frame.
To enable the error types, use `TRIGger<t>:RFFE:ERRor:BP`, `TRIGger<t>:RFFE:ERRor:LENGth`, `TRIGger<t>:RFFE:ERRor:NOResponse`, `TRIGger<t>:RFFE:ERRor:PARity`, `TRIGger<t>:RFFE:ERRor:SSC`, and `TRIGger<t>:RFFE:ERRor:USEQuence`.

*RST: STARt

Manual operation: See "Type" on page 836

To specify additional trigger cosnditions for command sequences, use the following commands:

Sub device address /MID	TRIGger<t>:RFFE:SADDress:CONDition TRIGger<t>:RFFE:SADDress:MIN TRIGger<t>:RFFE:SADDress:MAX
Register address	TRIGger<t>:RFFE:ADDRess:CONDition TRIGger<t>:RFFE:ADDRess:MIN TRIGger<t>:RFFE:ADDRess:MAX
Data pattern	TRIGger<t>:RFFE:DATA:DCON TRIGger<t>:RFFE:DATA:DMIN TRIGger<t>:RFFE:DATA:DMAX
Mask address	TRIGger<t>:RFFE:MASK:CONDition TRIGger<t>:RFFE:MASK:MAX TRIGger<t>:RFFE:MASK:MIN
Byte count	TRIGger<t>:RFFE:BCOunt:CONDition TRIGger<t>:RFFE:BCOunt:MIN TRIGger<t>:RFFE:BCOunt:MAX
Data index	TRIGger<t>:RFFE:DATA:ICONdition TRIGger<t>:RFFE:DATA:IMIN TRIGger<t>:RFFE:DATA:IMAX

TRIGger<t>:RFFE:ADDRess:CONDition <Address_Operator>

Sets the operator to trigger on a specific address pattern or a range.

Suffix:
<t> 1..3

Parameters:
<Address_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater than, Greater or equal than. These conditions require one pattern to be set with TRIGger<t>:RFFE:ADDRess:MIN.

INRange | OORange
In range / Out of range: Set the minimum and maximum value of the range with TRIGger<t>:RFFE:ADDRess:MIN and TRIGger<t>:RFFE:ADDRess:MAX.

*RST: EQUal

Manual operation: See "Address" on page 840

TRIGger<t>:RFFE:ADDRess:MIN <Address_Min>

Specifies a pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<Address_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Address" on page 840

TRIGger<t>:RFFE:ADDRess:MAX <Address_Max>

Sets the end value of a range, if the data condition is set to `INRange` or `OORange`. See `TRIGger<t>:RFFE:ADDRess:CONDition`.

Suffix:
<t> 1..3

Parameters:
<Address_Max> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Address" on page 840

TRIGger<t>:RFFE:BCOunt:CONDition <ByteCountOperator>

Sets the operator to trigger on a specific byte count or a byte count range.

Suffix:
<t> 1..3

Parameters:
<ByteCountOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater than, Greater or equal than. These conditions require one pattern to be set with `TRIGger<t>:RFFE:BCOunt:MIN` command.

INRange | OORange
In range / Out of range: Set the minimum and maximum value using the corresponding `TRIGger<t>:RFFE:BCOunt:MIN` and `TRIGger<t>:RFFE:BCOunt:MAX`

*RST: EQUal

Manual operation: See "Byte count" on page 841

TRIGger<t>:RFFE:BCOunt:MIN <ByteCount_Min>

Specifies a pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<ByteCount_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Byte count" on page 841

TRIGger<t>:RFFE:BCOunt:MAX <ByteCount_Max>

Sets the end value of a range, if the byte/bit count condition is set to `INRange` or `OORange`. See `TRIGger<t>:RFFE:BCOunt:CONDition`.

Suffix:
<t> 1..3

Parameters:
<ByteCount_Max> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Byte count" on page 841

TRIGger<t>:RFFE:DATA:DCON <DataPattOperator>

Sets the operator to trigger on a specific pattern or a range.

Suffix:
<t> 1..3

Parameters:
<DataPattOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater than, Greater or equal than. These conditions require one pattern to be set with `TRIGger<t>:RFFE:DATA:DMIN`.

INRange | OORange
In range / Out of range: Set the minimum and maximum value of the range with `TRIGger<t>:RFFE:DATA:DMIN` and `TRIGger<t>:RFFE:DATA:DMAX`

*RST: EQUal

Example: See "Triggering on RFFE bus" on page 1441.

Manual operation: See "Data" on page 841

TRIGger<t>:RFFE:DATA:DMIN <DatPattern_Min>

Specifies a pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<DatPattern_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Example: See "Triggering on RFFE bus" on page 1441.

Manual operation: See "Data" on page 841

TRIGger<t>:RFFE:DATA:DMAX <DatPattern_Max>

Sets the end value of a range, if the data condition is set to `INRange` or `OORange`. See `TRIGger<t>:RFFE:DATA:DCON`.

Suffix:
<t> 1..3

Parameters:
<DatPattern_Max> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Example: See "Triggering on RFFE bus" on page 1441.

Manual operation: See "Data" on page 841

TRIGger<t>:RFFE:DATA:ICONdition <DataIndexOperator>

Sets the operator to define the data frames in which the data pattern is expected.

Suffix:
<t> 1..3

Parameters:
<DataIndexOperator> EQUal | LTHan | LETHan | GTHan | GETHan | INRange | RANGe

EQUal | LTHan | LETHan | GTHan | GETHan
Equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set using `TRIGger<t>:RFFE:DATA:IMIN`.

INRange = RANGe
In range: Set the minimum and maximum value using `TRIGger<t>:RFFE:DATA:IMIN` and `TRIGger<t>:RFFE:DATA:IMAX`.

*RST: INRange

Manual operation: See "Index" on page 841

TRIGger<t>:RFFE:DATA:IMIN <DataIndex_Min>

Specifies a pattern, or sets the start value of the index range.

Suffix:
<t> 1..3

Parameters:
<DataIndex_Min> Range: 1 to 32
Increment: 1
*RST: 1

Manual operation: See "Index" on page 841

TRIGger<t>:RFFE:DATA:IMAX <DataIndex_Max>

Sets the end value of a range, if the index condition is set to `INRange` or `OORange`. See `TRIGger<t>:RFFE:DATA:ICONdition`.

Suffix:
<t> 1..3

Parameters:
<DataIndex_Max> Range: 1 to 32
Increment: 1
*RST: 32

Manual operation: See "Index" on page 841

TRIGger<t>:RFFE:SADDress:CONDition <SID_Operator>

Sets the operator to trigger on a specific sub device address/MID pattern or a range.

Suffix:
<t> 1..3

Parameters:
<SID_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater than, Greater or equal than. These conditions require one pattern to be set with `TRIGger<t>:RFFE:SADDress:MIN`.

INRange | OORange
In range / Out of range: Set the minimum and maximum value of the range with `TRIGger<t>:RFFE:SADDress:MIN` and `TRIGger<t>:RFFE:SADDress:MAX` on page 2411.

*RST: EQUal

Manual operation: See "Sub device addr. /MID" on page 840

TRIGger<t>:RFFE:SADDress:MIN <SID_Min>

Specifies a pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<SID_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Sub device addr. /MID" on page 840

TRIGger<t>:RFFE:SADDress:MAX <SID_Max>

Sets the end value of a range, if the sub device address/MID condition is set to `INRange` or `OORange`. See `SEARch:TRIGger:RFFE:SADDress:CONDition`.

Suffix:
<t> 1..3

Parameters:
<SID_Max> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Sub device addr. /MID" on page 840

TRIGger<t>:RFFE:MASK:CONDition <Mask_Operator>

Sets the operator to trigger on a mask pattern or a range.

Suffix:
<t> 1..3

Parameters:
<Mask_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater than, Greater or equal than. These conditions require one pattern to be set with `TRIGger<t>:RFFE:MASK:MIN`.

INRange | OORange
In range / Out of range: Set the minimum and maximum value of the range with `TRIGger<t>:RFFE:MASK:MIN` and `TRIGger<t>:RFFE:MASK:MAX`.

*RST: EQUal

Manual operation: See "Mask" on page 842

TRIGger<t>:RFFE:MASK:MAX <Mask_Max>

Sets the end value of a range, if themask condition is set to `INRange` or `OORange`.
See `TRIGger<t>:RFFE:MASK:CONDition`.

Suffix:
<t> 1..3

Parameters:
<Mask_Max> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Mask" on page 842

TRIGger<t>:RFFE:MASK:MIN <Mask_Min>

Specifies a mask pattern, or sets the start value of a mask pattern range.

Suffix:
<t> 1..3

Parameters:
<Mask_Min>

Manual operation: See "Mask" on page 842

TRIGger<t>:RFFE:INTerrupt <Interrupt>

Sets the interrupt pattern for the interupt summary and notification trigger type.

Suffix:
<t> 1..3

Parameters:
<Interrupt>

TRIGger<t>:RFFE:ERRor:BP <BusPark_Error>

Enables the trigger on a bus park error - when an incorrect bus parlk cycle has been found.

Suffix:
<t> 1..3

Parameters:
<BusPark_Error> OFF | ON
*RST: ON

Manual operation: See "Error conditions" on page 839

TRIGger<t>:RFFE:ERRor:LENGth <Length_Error>

Enables the trigger on a length error - when an incorrect length of the command sequence has been found.

Suffix:
<t> 1..3

Parameters:
<Length_Error> OFF | ON
*RST: ON

Manual operation: See "Error conditions" on page 839

TRIGger<t>:RFFE:ERRor:NOResponse <NoResponse>

Enables the trigger on any No Response Frame.

Suffix:
<t> 1..3

Parameters:
<NoResponse> OFF | ON
*RST: ON

Manual operation: See "Error conditions" on page 839

TRIGger<t>:RFFE:ERRor:PARity <Parity_Error>

Enables the trigger on incorrect parity bits.

Suffix:
<t> 1..3

Parameters:
<Parity_Error> OFF | ON
*RST: ON

Manual operation: See "Error conditions" on page 839

TRIGger<t>:RFFE:ERRor:SSC <SSC_Error>

Enables the trigger on an SSC error - when no valid SSC sequence has been found after the idle time.

Suffix:
<t> 1..3

Parameters:
<SSC_Error> OFF | ON
*RST: ON

Manual operation: See "Error conditions" on page 839

TRIGger<t>:RFFE:ERRor:USEQuence <UnkSequence_Err>

Enables the trigger on an unknown sequence - when the instrument cannot detect any supported command sequence.

Suffix:
<t> 1..3

Parameters:
<UnkSequence_Err> OFF | ON
*RST: ON

Manual operation: See "Error conditions" on page 839

TRIGger<t>:RFFE:INTerrupt <Interrupt>

Sets the interrupt pattern for the interupt summary and notification trigger type.

Suffix:
<t> 1..3

Parameters:
<Interrupt>

27.18.20.3 Decode results

In all BUS<b>:RFFE commands, the suffix <b> selects the serial bus. Suffix <se> selects index of the command sequence.

To load and acivate a label list, use:

- `BUS<b>:NEWList` on page 1915
- `BUS<b>:SYMBols` on page 1915

BUS<b>:RFFE:FCOunt? 2415

BUS<b>:RFFE:SEQuence<se>:BYTE<o>:STATe? 2420
BUS<b>:RFFE:SEQuence<se>:BYTE<o>:VALue? 2421

BUS<b>:RFFE:FCOunt?

Returns the number of command sequences in the current acquisition.

Suffix:
<b> 1..4

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:RFFE:SEQuence<se>:STATe?

Returns the overall state of the selected command sequence.

Suffix:
<b> 1..4

<se> *

Return values:
<FrameState> OK | SSC | VERSion | PARity | LENGth | BPERR | GAP | NORESPONSE | INComplete

`OK`: the sequence is valid.
`SSC`: SSC error.
`VERSion`: RFFE version.
`PARity`: parity error.
`LENGth`: length error.
`BPERR`: bus park error.
`NORESPONSE`: No response.
`INComplete`: The sequence is not completely contained in the acquisition. The acquired part of the sequence is valid.

*RST: OK

Usage: Query only

BUS<b>:RFFE:SEQuence<se>:STARt?
BUS<b>:RFFE:SEQuence<se>:STOP?

Return the start time (SSC) and stop time (BP) of the selected command sequence.

Suffix:
<b> 1..4

<se> *

Return values:

<Start>, <Stop> Time

Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:RFFE:SEQuence<se>:TYPE?

Returns the type of the selected command sequence.

Suffix:

<b> 1..4

<se> *

Return values:

<FrameType> UNDESC | RZWR | RWR | RRD | ERWR | ERRD | ERWL | ERRL | IRSUM | MSKW | MOHO | MWR | MRD | MCTW | MCTR | UNDEF | ERRor

`RZWR`: Register 0 Write
`RWR`: Register Write
`RRD`: Register Read
`ERWR`: Extended Register Write
`ERRD`: Extended Register Read
`ERWL`: Extended Register Write Long
`ERRL`: Extended Register Read Long
`MRD`: Main Device Read, was MASR until FW 5.35
`MWR`: Main Device Write, was MASW until FW 5.35
`MOHO`: Main Device Ownership Handover, was MASOHO until FW 5.35
`IRSUM`: Interrupt Summary and Notification
`MSKW`: Masked Write
`MCTR`: Main Device Context Transfer Read
`MCTW`: Main Device Context Transfer Write
`ERRor`: The bits defining the command sequence are not valid, no supported command sequence

*RST: RZWR

Usage: Query only

BUS<b>:RFFE:SEQuence<se>:SADD?

Returns the sub device address of the selected command sequence.

Suffix:

<b> 1..4

<se> *

Return values:

<FrameSID> Range: 0 to 15
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:RFFE:SEQuence<se>:ADDRess?

Returns the register address of the selected command sequence.

Suffix:

<b> 1..4

<se> *

Return values:

<FrameAddress> Range: Depends on the sequence type, address can have 0, 5, 8, or 16 bits
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:RFFE:SEQuence<se>:BCOunt?

Returns the byte count, the number of data frames in the selected command sequence.

Suffix:

<b> 1..4

<se> *

Return values:

<ByteCount> Decimal value
Range: 15
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:RFFE:SEQuence<se>:DATA?

Returns the data bytes of the specified command sequence.

Use `BUS<b>:RFFE:SEQuence<se>:BYTE<o>:VALue?` to access the sequence bytes.

Suffix:

<b> 1..4

<se> *

Return values:

<Data> Bit pattern (B1, B2, B3, B4…) in variable length up to eight bytes.

Example:
```
BUS:RFFE:SEQuence3:DATA?
<-- #H08,#H49,#H54,#H33,#HFF
```

Usage: Query only

BUS<b>:RFFE:SEQuence<se>:SYMBol?

Returns the symbolic label that belongs to the address of the selected command sequence.

Suffix:

<b> 1..4

<se> *

Return values:

<Translation> String containing the label name

Usage: Query only

BUS<b>:RFFE:SEQuence<se>:PADone?

Returns the address-one parity for the selected command sequence.

Suffix:

<b> 1..4

<se> *

Return values:

<ParityAddr1> OK | PARity

`PARity`: PArrity error

*RST: OK

Usage: Query only

BUS<b>:RFFE:SEQuence<se>:PADZero?

Returns the address-zero parity for the selected command sequence.

Suffix:

<b> 1..4

<se> *

Return values:

<ParityAddr0> OK | PARity

`PARity`: PArrity error

*RST: OK

Usage: Query only

BUS<b>:RFFE:SEQuence<se>:PCTRl?

Returns the control parity for the selected command sequence.

Suffix:
<b> 1..4

<se> *

Return values:
<ParityCtrl> OK | PARity
`PARity`: PArrity error
*RST: OK

Usage: Query only

BUS<b>:RFFE:SEQuence<se>:RBTRate?

Returns the read bit rate of the selected command sequence.

Suffix:
<b> 1..4

<se> *

Return values:
<ReadBitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

BUS<b>:RFFE:SEQuence<se>:WBTRate?

Returns the write bit rate of the selected command sequence.

Suffix:
<b> 1..4

<se> *

Return values:
<WriteBitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

BUS<b>:RFFE:SEQuence<se>:WCOunt?

Returns the number of command sequences in the current acquisition.

Suffix:
<b> 1..4

<se> *

Return values:
<WordCount> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:RFFE:SEQuence<se>:BYTE<o>:NAME?

Returns the name of the specified data byte.

Suffix:
<b> 1..4

<se> *

<o> *
Selects the number of the data byte (1...n).

Return values:
<FrameByteName>

Usage: Query only

BUS<b>:RFFE:SEQuence<se>:BYTE<o>:STATe?

Returns the state of the specified data byte.

Suffix:
<b> 1..4

<se> *

<o> *
Selects the number of the data byte (1...n).

Return values:
<ByteState> OK | PARity
OK: the byte is valid.
PARity: parity error
*RST: OK

Usage: Query only

BUS<b>:RFFE:SEQuence<se>:BYTE<o>:VALue?

Returns the value of the specified byte in the specified command sequence.

Suffix:

<b> 1..4

<se> *

<o> *
Selects the number of the data byte (1...n).

Return values:

<ByteValue> To set the value format, use `FORMat:BPATtern`.
The values below – range, increment and reset – are decimal values.

Range: 0 to 255
Increment: 1
*RST: 0

Usage: Query only

27.18.20.4 Search settings

For programming example, see "Searching RFFE data" on page 1441.

SEARch:TRIGger:RFFE:ERRor:USEQuence....2428

SEARch:TRIGger:RFFE:TYPE <SearchName>,<Type>
SEARch:TRIGger:RFFE:TYPE? <SearchName>

Sets the event to be searched for.

See also: "Type" on page 845

Parameters:

<Type> STARt | STOP | RZWR | RWR | RRD | ERWR | ERRD | ERWL | ERRL | IRSUM | MSKW | MOHO | MASOHO | MWR | MASW | MRD | MASR | MCTW | MCTR | ERRor

STARt
Start of a command sequence (SSC). Optional: sub device address.

STOP
End of a command sequence (start of the bus park cycle). Optional: sub device address condition.

RZWR
Register 0 Write command sequence. Optional: sub device address condition and data pattern condition.

RWR
Register Write command sequence. Optional: sub device address condition, register address condition, and data pattern condition.

RRD
Register Read command sequence. Optional: sub device address condition, register address condition, and data pattern condition.

ERWR
Extended Register Write command sequences. Optional: sub device address condition, register address condition, byte count condition, data index condition, and data pattern condition.

ERRD
Extended Register Read command sequence. Optional search conditions are the same as for `ERWR`.

ERWL
Extended Register Write Long command sequence. Optional search conditions are the same as for `ERWR`.

ERRL
Extended Register Read Long command sequence. Optional search conditions are the same as for `ERWR`.

MRD | MASR
Main Device Read command sequence. Optional: sub device address condition, register address condition, and data pattern condition.

MWR | MASW
Main Device Write command sequence. Optional: sub device address condition, register address condition, and data pattern condition.

MOHO | MASOHO
Main Device Ownership Handover command sequence. Optional: sub device address condition, and data pattern condition.

MSKW
Masked Write command sequence. Optional: sub device address condition, register address condition, mask condition and data pattern condition.

MCTW
Main Device Context Transfer Write command sequence. Optional: MID condition, register address condition, byte count condition, data index condition, and data pattern condition.

MCTR
Main Device Context Transfer Read command sequence. Optional search conditions are the same as for `MCTW`

IRSUM
Interrupt Summary and Notification. Optional: sub device address condition, byte count condition, and data pattern condition.

ERRor
Searches for enabled errors. To enable the error types, use:
`SEARch:TRIGger:RFFE:ERRor:LENGth`
`SEARch:TRIGger:RFFE:ERRor:PARity`
`SEARch:TRIGger:RFFE:ERRor:SSC`

*RST: STARt

Parameters for setting and query:
<SearchName> String parameter

Example: See "Searching RFFE data" on page 1441

Manual operation: See "Type" on page 845

To specify additional search conditions for command sequences, use the following commands:

Sub device address	`SEARch:TRIGger:RFFE:SADDress:CONDition`
	`SEARch:TRIGger:RFFE:SADDress:MIN`
	`SEARch:TRIGger:RFFE:SADDress:MAX`

Register address	`SEARch:TRIGger:RFFE:ADDRess:CONDition`
	`SEARch:TRIGger:RFFE:ADDRess:MIN`
	`SEARch:TRIGger:RFFE:ADDRess:MAX`

Data pattern	SEARch:TRIGger:RFFE:DATA:DCON SEARch:TRIGger:RFFE:DATA:DMIN SEARch:TRIGger:RFFE:DATA:DMAX
Byte count	SEARch:TRIGger:RFFE:BCOunt:CONDition SEARch:TRIGger:RFFE:BCOunt:MIN SEARch:TRIGger:RFFE:BCOunt:MAX
Data index	SEARch:TRIGger:RFFE:DATA:ICONdition SEARch:TRIGger:RFFE:DATA:IMIN SEARch:TRIGger:RFFE:DATA:IMAX

SEARch:TRIGger:RFFE:SADDress:CONDition <SearchName>,<SID_Operator>
SEARch:TRIGger:RFFE:SADDress:CONDition? <SearchName>
SEARch:TRIGger:RFFE:ADDRess:CONDition <SearchName>,<Address_Operator>
SEARch:TRIGger:RFFE:ADDRess:CONDition? <SearchName>
SEARch:TRIGger:RFFE:BCOunt:CONDition <SearchName>,<ByteCountOperator>
SEARch:TRIGger:RFFE:BCOunt:CONDition? <SearchName>
SEARch:TRIGger:RFFE:DATA:DCON <SearchName>,<DataPattOperator>
SEARch:TRIGger:RFFE:DATA:DCON? <SearchName>

Sets the operator to search for a specific pattern or a range

Parameters:

<DataPattOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set using the corresponding SEARch:TRIGger:RFFE:...:MIN command.

INRange | OORange
In range / Out of range: Set the minimum and maximum value using the corresponding SEARch:TRIGger:RFFE:...:MIN and SEARch:TRIGger:RFFE:...:MAX

*RST: EQUal

Parameters for setting and query:

<SearchName> String parameter

Example: See "Searching RFFE data" on page 1441

Manual operation: See "Data" on page 848

SEARch:TRIGger:RFFE:DATA:ICONdition <SearchName>,<DataIndexOperator>
SEARch:TRIGger:RFFE:DATA:ICONdition? <SearchName>

Sets the operator to define the data frames in which the data pattern is searched

Parameters:
<DataIndexOperator> EQUal | LTHan | LETHan | GTHan | GETHan | INRange | RANGe

EQUal | LTHan | LETHan | GTHan | GETHan
Equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set using `SEARch:TRIGger:RFFE:DATA:IMIN`.

INRange = RANGe
In range: Set the minimum and maximum value using `SEARch:TRIGger:RFFE:DATA:IMIN` and `SEARch:TRIGger:RFFE:DATA:IMAX`.

*RST: INRange

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Index" on page 848

SEARch:TRIGger:RFFE:SADDress:MIN <SearchName>,<SID_Min>
SEARch:TRIGger:RFFE:SADDress:MIN? <SearchName>
SEARch:TRIGger:RFFE:ADDRess:MIN <SearchName>,<Address_Min>
SEARch:TRIGger:RFFE:ADDRess:MIN? <SearchName>
SEARch:TRIGger:RFFE:BCOunt:MIN <SearchName>,<ByteCount_Min>
SEARch:TRIGger:RFFE:BCOunt:MIN? <SearchName>
SEARch:TRIGger:RFFE:DATA:IMIN <SearchName>,<DataIndex_Min>
SEARch:TRIGger:RFFE:DATA:IMIN? <SearchName>
SEARch:TRIGger:RFFE:DATA:DMIN <SearchName>,<DatPattern_Min>
SEARch:TRIGger:RFFE:DATA:DMIN? <SearchName>

Specifies a pattern, or sets the the start value of a pattern range.

Parameters:
<DatPattern_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName> String parameter

Example: See "Searching RFFE data" on page 1441

Manual operation: See "Data" on page 848

SEARch:TRIGger:RFFE:SADDress:MAX <SearchName>,<SID_Max>
SEARch:TRIGger:RFFE:SADDress:MAX? <SearchName>
SEARch:TRIGger:RFFE:ADDRess:MAX <SearchName>,<Address_Max>
SEARch:TRIGger:RFFE:ADDRess:MAX? <SearchName>
SEARch:TRIGger:RFFE:BCOunt:MAX <SearchName>,<ByteCount_Max>
SEARch:TRIGger:RFFE:BCOunt:MAX? <SearchName>
SEARch:TRIGger:RFFE:DATA:IMAX <SearchName>,<DataIndex_Max>
SEARch:TRIGger:RFFE:DATA:IMAX? <SearchName>
SEARch:TRIGger:RFFE:DATA:DMAX <SearchName>,<DatPattern_Max>
SEARch:TRIGger:RFFE:DATA:DMAX? <SearchName>

Sets the the end value of an range if the corresponding condition is set to `INRange` or `OORange`. See `SEARch:TRIGger:RFFE:...:CON`

Parameters:
<DatPattern_Max> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Data" on page 848

SEARch:TRIGger:RFFE:INTerrupt <SearchName>,<Interrupt>
SEARch:TRIGger:RFFE:INTerrupt? <SearchName>

Defines the pattern of the interrrupt identification sequence, which consists of interrupt slots 15 to 0.

Parameters:
<Interrupt> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName> String parameter

Firmware/software: FW 3.30

Manual operation: See "Data" on page 848

SEARch:TRIGger:RFFE:ERRor:BP <SearchName>,<BusPark_Error>
SEARch:TRIGger:RFFE:ERRor:BP? <SearchName>

Enables the search for bus park errors - when an incorrect bus parlk cycle has been found.

Parameters:
<BusPark_Error> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Error conditions" on page 848

SEARch:TRIGger:RFFE:ERRor:LENGth <SearchName>,<Length_Error>
SEARch:TRIGger:RFFE:ERRor:LENGth? <SearchName>

Enables the search for length errors - when an incorrect length of the command sequence has been found.

Parameters:
<Length_Error> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Error conditions" on page 848

SEARch:TRIGger:RFFE:ERRor:NOResponse <SearchName>,<NoResponse>
SEARch:TRIGger:RFFE:ERRor:NOResponse? <SearchName>

Enables the search for No Response Frames.

Parameters:
<NoResponse> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Error conditions" on page 848

SEARch:TRIGger:RFFE:ERRor:PARity <SearchName>,<Parity_Error>
SEARch:TRIGger:RFFE:ERRor:PARity? <SearchName>

Enables the search for incorrect parity bits.

Parameters:
<Parity_Error> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Error conditions" on page 848

SEARch:TRIGger:RFFE:ERRor:SSC <SearchName>,<SSC_Error>
SEARch:TRIGger:RFFE:ERRor:SSC? <SearchName>

Enables the search for SSC errors - when no valid SSC sequence has been found after the idle time.

Parameters:
<SSC_Error> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Error conditions" on page 848

SEARch:TRIGger:RFFE:ERRor:USEQuence <SearchName>,<UnkSequence_Err>
SEARch:TRIGger:RFFE:ERRor:USEQuence? <SearchName>

Enables the search for unknown sequences - when the instrument cannot detect any supported command sequence.

Parameters:
<UnkSequence_Err> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName> String parameter

Manual operation: See "Error conditions" on page 848

27.18.20.5 Search results

The search on decoded RFFE data returns the same results as the queries for decode results.

In all SEARch:RESult:RFFE commands, the suffix <m> selects the command sequence. Suffix <n> selects index of byte inside a command sequence.

In search result commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name.

For a description of the returned values, see the corresponding commands in Section 27.18.20.3, "Decode results", on page 2414.

For programming example, see "Searching RFFE data" on page 1441.

SEARch:RESult:RFFE:SEQuence<se>:ADDRess? 2429

BUS<b>:TNOS:THReshold:HYSTeresis....2433

BUS<b>:TNOS:SOURce <Source>

Sets the source channel to which the selected data line is connected. Only analog channels can be used, digital channels are not supported.

Suffix:
<b> 1..4

Parameters:
<Source> C1 | C2 | C3 | C4 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Manual operation: See "SCL" on page 852

BUS<b>:TNOS:THReshold:LOWer <ThresholdLower>

Sets a lower threshold.

Suffix:
<b> 1..4

Parameters:
<ThresholdLower> Range: -3 to 3
Increment: 1E-3
*RST: -0.25
Default unit: V

Manual operation: See "Lower thresholds" on page 852

BUS<b>:TNOS:THReshold:UPPer <ThresholdUpper>

Sets an upper threshold.

Suffix:
<b> 1..4

Parameters:
<ThresholdUpper> Range: -3 to 3
Increment: 1E-3
*RST: 0.25
Default unit: V

Manual operation: See "Upper threshold" on page 852

BUS<b>:TNOS:THReshold:HYSTeresis <Hysteresis>

Sets a value for the hysteresis.

Suffix:
<b> 1..4

Parameters:
<Hysteresis> Range: 0 to 3
Increment: 1E-3
*RST: 0.05
Default unit: V

Manual operation: See "Hysteresis" on page 852

27.18.21.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:TNOS:CHKall 2434
TRIGger<t>:TNOS:CLR 2434
TRIGger<t>:TNOS:FRENable 2435
TRIGger<t>:TNOS:FRAMe<fr>:ENABle 2435
TRIGger<t>:TNOS:BIT 2435
TRIGger<t>:TNOS:FRAMe<fr>:FLD<fl>:BIT 2435
TRIGger<t>:TNOS:DMAX 2435
TRIGger<t>:TNOS:FRAMe<fr>:FLD<fl>:DMAX 2435
TRIGger<t>:TNOS:DMIN 2436
TRIGger<t>:TNOS:FRAMe<fr>:FLD<fl>:DMIN 2436
TRIGger<t>:TNOS:DOPerator 2436

TRIGger<t>:TNOS:FRAMe<fr>:FLD<fl>:IMAX 2437
TRIGger<t>:TNOS:IMIN 2437
TRIGger<t>:TNOS:FRAMe<fr>:FLD<fl>:IMIN 2437
TRIGger<t>:TNOS:IOPerator 2437
TRIGger<t>:TNOS:FRAMe<fr>:FLD<fl>:IOPerator 2437
TRIGger<t>:TNOS:ERENable 2438
TRIGger<t>:TNOS:ERRor<n>:ENABle 2438

TRIGger<t>:TNOS:CHKall

Enables the software trigger for all available frame types.

Suffix:
<t> 1..3

Usage: Event
Asynchronous command

Manual operation: See "Select all, Unselect all" on page 855

TRIGger<t>:TNOS:CLR

Disables the software trigger for all available frame types.

Suffix:
<t> 1..3

Usage: Event
Asynchronous command

Manual operation: See "Select all, Unselect all" on page 855

TRIGger<t>:TNOS:FRENable <Frame>,<Enabler>
TRIGger<t>:TNOS:FRAMe<fr>:ENABle <Enable>

Enables or disables the checking condition for the selected frame for the software trigger.

Suffix:
<t> 1..3

<fr> *

Parameters:
<Enable> OFF | ON
*RST: OFF

Manual operation: See "Frame type" on page 855

TRIGger<t>:TNOS:BIT <Frame>,<Field>,<Bit>
TRIGger<t>:TNOS:FRAMe<fr>:FLD<fl>:BIT <BitState>

Sets the bit state of a field that only consists of one bit for the software trigger.

Suffix:
<t> 1..3

<fr> *

<fl> *

Parameters:
<BitState> ONE | ZERO | DC
*RST: DC

Manual operation: See "Set details" on page 855

TRIGger<t>:TNOS:DMAX <Frame>,<Field>,<Data>
TRIGger<t>:TNOS:FRAMe<fr>:FLD<fl>:DMAX <Data_Max>

Sets the end value of a data pattern range for the trigger, if the operator is set to `INRange` or `OORANGe`.

You can set the operator with `TRIGger<t>:TNOS:FRAMe<fr>:FLD<fl>:DOPerator`.

Suffix:
<t> 1..3

<fr> *

<fl> *

Parameters:
<Data_Max> List of comma-separated values.

Manual operation: See "Set details" on page 855

TRIGger<t>:TNOS:DMIN <Frame>,<Field>,<Data>
TRIGger<t>:TNOS:FRAMe<fr>:FLD<fl>:DMIN <Data_Min>

Specifies the data pattern, or sets the start value of a data pattern range for the trigger.

Suffix:
<t> 1..3

<fr> *

<fl> *

Parameters:
<Data_Min> List of comma-separated values.

Manual operation: See "Set details" on page 855

TRIGger<t>:TNOS:DOPerator <Frame>,<Field>,<Operator>
TRIGger<t>:TNOS:FRAMe<fr>:FLD<fl>:DOPerator <Data_Operator>

Sets the operator for the data pattern of the trigger in the selected field of the selected frame.

Suffix:
<t> 1..3

<fr> *

<fl> *

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

*RST: EQUal

Manual operation: See "Set details" on page 855

TRIGger<t>:TNOS:FIENable <Frame>,<Field>,<Enabler>
TRIGger<t>:TNOS:FRAMe<fr>:FLD<fl>:ENABle <CondEnabler>

Enables or disables the checking condition for the selected field of the selected frame of the software trigger.

Suffix:
<t> 1..3

<fr> *

<fl> *

Parameters:
<CondEnabler> OFF | ON
*RST: OFF

Manual operation: See "Set details" on page 855

TRIGger<t>:TNOS:IMAX <Frame>,<Field>,<Data>
TRIGger<t>:TNOS:FRAMe<fr>:FLD<fl>:IMAX <Index_Max>

Sets the end value of an index range for the trigger if the operator is set to `INRange`.

You can set the operator with `TRIGger<t>:TNOS:FRAMe<fr>:FLD<fl>:IOPerator`.

Suffix:
<t> 1..3
<fr> *
<fl> *

Parameters:
<Index_Max> Range: 1 to 65.534E+3
Increment: 1
*RST: 65.534E+3

Manual operation: See "Set details" on page 855

TRIGger<t>:TNOS:IMIN <Frame>,<Field>,<Data>
TRIGger<t>:TNOS:FRAMe<fr>:FLD<fl>:IMIN <Index_Min>

Specifies the index, or sets the start value of an index range for the trigger.

Suffix:
<t> 1..3
<fr> *
<fl> *

Parameters:
<Index_Min> Range: 1 to 65.534E+3
Increment: 1
*RST: 1

Manual operation: See "Set details" on page 855

TRIGger<t>:TNOS:IOPerator <Frame>,<Field>,<Operator>
TRIGger<t>:TNOS:FRAMe<fr>:FLD<fl>:IOPerator <Index_Operator>

Sets the operator for the index in the selected field of the selected frame for the trigger.

Suffix:
<t> 1..3
<fr> *

<fl> *

Parameters:
<Index_Operator> EQUal | INRange | RANGe
*RST: INRange

Manual operation: See "Set details" on page 855

TRIGger<t>:TNOS:ERENable <ErrorName>,<Enabler>
TRIGger<t>:TNOS:ERRor<n>:ENABle <Enable>

Enables triggering for selected protocol error types.

Suffix:
<t> 1..3

<n> *

Parameters:
<Enable> OFF | ON
*RST: ON

Manual operation: See "Error type" on page 857

27.18.21.3 Decode results

To load and acivate a label list, use:

- `BUS<b>:NEWList` on page 1915
- `BUS<b>:SYMBols` on page 1915

BUS<b>:TNOS:FCOunt? 2439
BUS<b>:TNOS:FRAMe<fr>:FLDCount? 2439
BUS<b>:TNOS:FRAMe<fr>:BITRate? 2439
BUS<b>:TNOS:FRAMe<fr>:FLD<fl>:FVALue? 2439

BUS<b>:TNOS:FRAMe<fr>:TPLength? 2445
BUS<b>:TNOS:FRAMe<fr>:TYPE? 2445

BUS<b>:TNOS:FCOunt?

Returns the number of decoded frames for the 10BASE-T1S protocol analysis.

Suffix:
<b> 1..4

Return values:
<Count> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:FLDCount?

Returns the number of fields in the specified frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<Count> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:BITRate?

Returns the primary bit rate.

Suffix:
<b> 1..4

<fr> *

Return values:
<PrimaryBitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:FLD<fl>:FVALue?

Returns the formatted value of the specified field.

Suffix:
<b> 1..4

<fr> *

<fl> *

Return values:
<FormattedValue>

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:FLD<fl>:LABel?

Returns the label of the specified field in the specified frame.

Suffix:
<b> 1..4

<fr> *

<fl> *

Return values:
<Label>

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:FLD<fl>:STATe?

Returns the state of the specified field in the specified frame.

Suffix:
<b> 1..4

<fr> *

<fl> *

Return values:
<State> OK | EPRMble | ESFD | EESD | ECRC | ELEN | INComplete

OK
The field has no error, it is valid.

EPRMble
Preamble error, the hex value of the preamble field is different from 0x55555555555555 (56 alternating 0's and 1's).

ESFD
SFD error, the hex value of the SFD field is different from 0xD5

EESD
ESD error, the value of the ESD field does not correspond to the symbol pair "ESD, ESDOK"

ECRC
CRC error, the value of the FCS field does not match the calculated CRC.

ELEN
Length error, the number of bits in the specified field is higher or lower than expected.

INComplete
The frame is incomplete
*RST: OK

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:FLD<fl>:VALue?

Returns the value of the specified field in the specified frame.

Suffix:
<b> 1..4
<fr> *
<fl> *

Return values:
<Value> Increment: 1
*RST: 0

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:CRC?

Returns the CRC for the specified frame.

Suffix:
<b> 1..4
<fr> *

Return values:
<CRC> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:DTADdress?

Returns the destination address for the specified frame.

Suffix:
<b> 1..4
<fr> *

Return values:
<DestAddress> Increment: 1
*RST: 0

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:DTSYmbol?

Returns the destination symbol for the specified frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<DestSymbNme>

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:FCRC?

Returns the formatted CRC for the specified frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<FormattedCRC>

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:FDATa?

Returns the formatted data for the specified frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<FormattedData>

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:FDTaddress?

Returns the formatted destination address of the specified frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<FormattedDestAddr>

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:FSRaddress?

Returns the formatted SRC address for the specified frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<FormattedSrcAddr>

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:FTPLength?

Returns the formatted type length for the specified frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<FormattedTypLenth>

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:SRADdress?

Returns the source address for the specified frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<SourceAddress> Increment: 1
*RST: 0

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:SRSYmbol?

Returns the frame of the source symbol.

Suffix:
<b> 1..4

<fr> *

Return values:
<SrcSymbNme>

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:STARt?

Returns the start time of the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<FrameStart> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:STATus?

Returns the state of the frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<FrameState> OK | EPRMble | ESFD | EESD | ECRC | ELEN | INComplete

OK
The frame has no error, it is valid.

EPRMble
Preamble error, the hex value of the preamble field is different from 0x55555555555555 (56 alternating 0's and 1's).

ESFD
SFD error, the hex value of the SFD field is different from 0xD5.

EESD
ESD error, the value of the ESD field does not correspond to the symbol pair "ESD, ESDOK"

ECRC
CRC error, the value of the FCS field does not match the calculated CRC.

ELEN
Length error, the number of bits in the specified frame is higher or lower than expected.

INComplete
The frame is incomplete.

*RST: OK

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:STOP?

Returns the stop time of the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<FrameStop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:TPLength?

Returns the type length for the specified frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<TypeLenth> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:TNOS:FRAMe<fr>:TYPE?

Returns the type of the frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<FrameType> MAC | COMMit | BEACon | UNKN

MAC
Media access control frame for data transmission

COMMit
Commit frame

BEACon
Beacon frame

UNKN
Unknown frame

*RST: MAC

Usage: Query only

27.18.21.4 10BASE-T1S search settings

In search setup commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name. The commands are similar to I3C trigger commands.

SEARch:TRIGger:TNOS:CHKall <SearchName>

Enables the search for all available frame types.

Setting parameters:
<SearchName>

Usage: Event
Asynchronous command

Manual operation: See "Select all, Unselect all" on page 861

SEARch:TRIGger:TNOS:CLR <SearchName>

Disables the search for all available frames and error types.

Setting parameters:
<SearchName>

Usage: Event
Asynchronous command

Manual operation: See "Select all, Unselect all" on page 861

SEARch:TRIGger:TNOS:FRENable <SearchName>,<Frame>,<Enabler>
SEARch:TRIGger:TNOS:FRAMe<fr>:ENABle <SearchName>,<Enable>
SEARch:TRIGger:TNOS:FRAMe<fr>:ENABle? <SearchName>

Enables searching on 10BASE-T1S frames. Only the frames that match the selected search conditions are displayed.

Suffix:
<fr> *

Parameters:
<Enable> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

SEARch:TRIGger:TNOS:DMAX <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:DMAX <SearchName>,<Data_Max>
SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:DMAX? <SearchName>

Sets the end value of a data pattern range if the operator is set to `INRange` or `OORANGe`.

You can set the operator with `SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:DOPerator`.

Suffix:
<fr> *

<fl> *

Parameters:
<Data_Max> List of comma-separated values.

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 861

SEARch:TRIGger:TNOS:DMIN <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:DMIN <SearchName>,<Data_Min>
SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:DMIN? <SearchName>

Specifies the data pattern, or sets the start value of a data pattern range.

Suffix:
<fr> *

<fl> *

Parameters:
<Data_Min> List of comma-separated values.

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 861

SEARch:TRIGger:TNOS:DOPerator <SearchName>,<Frame>,<Field>,<Operator>
SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:DOPerator
<SearchName>,<Data_Operator>
SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:DOPerator? <SearchName>

Sets the operator for the data pattern to be searched in the selected field of the selected frame.

Suffix:
<fr> *

<fl> *

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal, In range, Out of range.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 861

SEARch:TRIGger:TNOS:IMAX <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:IMAX <SearchName>,<Index_Max>
SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:IMAX? <SearchName>

Sets the end value of an index range if the operator is set to `INRange`.

You can set the operator with `SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:IOPerator`.

Suffix:
<fr> *

<fl> *

Parameters:
<Index_Max> Range: 1 to 65.534E+3
Increment: 1
*RST: 65.534E+3

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 861

SEARch:TRIGger:TNOS:IMIN <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:IMIN <SearchName>,<Index_Min>
SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:IMIN? <SearchName>

Specifies the index, or sets the start value of an index range.

Suffix:
<fr> *

<fl> *

Parameters:
<Index_Min> Range: 1 to 65.534E+3
Increment: 1
*RST: 1

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 861

SEARch:TRIGger:TNOS:IOPerator <SearchName>,<Frame>,<Field>,<Operator>
SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:IOPerator
<SearchName>,<Index_Operator>
SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:IOPerator? <SearchName>

Sets the operator for the index in the selected field of the selected frame.

Suffix:
<fr> *

<fl> *

Parameters:
<Index_Operator> EQUal | INRange | RANGe
*RST: INRange

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 861

SEARch:TRIGger:TNOS:BIT <SearchName>,<Frame>,<Field>,<Bit>
SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:BIT <SearchName>,<BitState>
SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:BIT? <SearchName>

Sets the bit state of a field to be searched that only consists of one bit.

Suffix:
<fr> *

<fl> *

Parameters:
<BitState> ONE | ZERO | DC
*RST: DC

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 861

SEARch:TRIGger:TNOS:FIENable <SearchName>,<Frame>,<Field>,<Enabler>
SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:ENABle
<SearchName>,<CondEnabler>
SEARch:TRIGger:TNOS:FRAMe<fr>:FLD<fl>:ENABle? <SearchName>

Enables or disables the checking condition for the selected field of the selected frame.

Suffix:
<fr> *

<fl> *

Parameters:
<CondEnabler> OFF | ON

*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame type" on page 861

SEARch:TRIGger:TNOS:ERENable <SearchName>,<ErrorName>,<Enabler>
SEARch:TRIGger:TNOS:ERRor<m>:ENABle <SearchName>,<Enable>
SEARch:TRIGger:TNOS:ERRor<m>:ENABle? <SearchName>

Enables or disables the checking condition for the selected error type to be searched.

Suffix:
<m> *

Parameters:
<Enable> OFF | ON

*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Error type" on page 863

27.18.21.5 10BASE-T1S search results

The search on decoded 10BASE-T1S data returns the same results as the queries for decode results.

In search result commands, you have to specify the <SearchName> parameter. It is a string parameter that contains the search definition name.

For a description of the returned values, see the corresponding commands in Section 27.18.21.3, "Decode results", on page 2438.

27.18.22 Ethernet 100BASE-T1 (option R&S RTO6-K560)

- Configuration....2457
- Trigger....2460
- Decode results....2469
- Search settings....2475
- Search results....2483

27.18.22.1 Configuration

In all `BUS<b>:HBTO` commands, the suffix <b> selects the serial bus.

BUS<b>:HBTO:ATTN....2457
BUS<b>:HBTO:FDAM....2458
BUS<b>:HBTO:FDAP....2458
BUS<b>:HBTO:FDIF....2458
BUS<b>:HBTO:FTYP....2459
BUS<b>:HBTO:RDAM....2459
BUS<b>:HBTO:RDAP....2459
BUS<b>:HBTO:RDIF....2459
BUS<b>:HBTO:RTYP....2460
BUS<b>:HBTO:POLarity....2460
BUS<b>:HBTO:MODE....2460

BUS<b>:HBTO:ATTN <Attenuation>

Sets the attenuation factor. It is used to de-amplify the reverse signal before subtracting it from the forward signal.

Suffix:
<b> 1..4

Parameters:
<Attenuation> Range: -100 to 0
Increment: 0.1
*RST: -26
Default unit: dB

Manual operation: See "Reverse attenuation" on page 867

BUS<b>:HBTO:FDAM <SourceDAminus>

Selects the DA- source of the provided forward single ended signal, if `BUS<b>:HBTO:FTYP` is set to `SINGle`.

Suffix:
<b> 1..4

Parameters:
<SourceDAminus> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
*RST: C2W1

Manual operation: See "Forward" on page 866

BUS<b>:HBTO:FDAP <SourceDAplus>

Selects the DA+ source of the provided forward single ended signal, if `BUS<b>:HBTO:FTYP` is set to `SINGle`.

Suffix:
<b> 1..4

Parameters:
<SourceDAplus> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
*RST: C1W1

Manual operation: See "Forward" on page 866

BUS<b>:HBTO:FDIF <SrcDiff>

Sets the source of the provided forward differential signal, if `BUS<b>:HBTO:FTYP` is set to `DIFFerential`.

Suffix:
<b> 1..4

Parameters:
<SrcDiff> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
*RST: C1W1

Manual operation: See "Forward" on page 866

BUS<b>:HBTO:FTYP <SignalType>

Sets the type of forward signal measurement.

Suffix:
<b> 1..4

Parameters:
<SignalType> DIFFerential | SINGle
*RST: DIFFerential

Manual operation: See "Forward" on page 866

BUS<b>:HBTO:RDAM <SrcRevDAminus>

Selects the DA- source of the provided reversed single ended signal, if `BUS<b>:HBTO:RTYP` is set to `SINGle`.

Suffix:
<b> 1..4

Parameters:
<SrcRevDAminus> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Manual operation: See "Reverse" on page 866

BUS<b>:HBTO:RDAP <SrcRevDAplus>

Selects the DA+ source of the provided reversed single ended signal, if `BUS<b>:HBTO:RTYP` is set to `SINGle`.

Suffix:
<b> 1..4

Parameters:
<SrcRevDAplus> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Manual operation: See "Reverse" on page 866

BUS<b>:HBTO:RDIF <SrcRevDiff>

Sets the source of the provided reversed differential signal, if `BUS<b>:HBTO:RTYP` is set to `DIFFerential`.

Suffix:
<b> 1..4

Parameters:
<SrcRevDiff> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Manual operation: See "Reverse" on page 866

BUS<b>:HBTO:RTYP <SignalRevType>

Sets the type of reverse signal measurement.

Suffix:
<b> 1..4

Parameters:
<SignalRevType> DISabled | DIFFerential | SINGle
*RST: DISabled

Manual operation: See "Reverse" on page 866

BUS<b>:HBTO:POLarity <Polarity>

Selects the polarity of the data signal.

Suffix:
<b> 1..4

Parameters:
<Polarity> NORMal | INVert
*RST: NORMal

Manual operation: See "Polarity" on page 867

BUS<b>:HBTO:MODE <Mode>

Selects the direction of the full-duplex signal you want to look at.

Suffix:
<b> 1..4

Parameters:
<Mode> MASTer | SLAVe | AUTO
*RST: AUTO

Manual operation: See "Operation mode" on page 867

27.18.22.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:HBTO:TYPE....2461
TRIGger<t>:HBTO:DADDress:CONDition....2462
TRIGger<t>:HBTO:DADDress:MIN....2462
TRIGger<t>:HBTO:DADDress:MAX....2462
TRIGger<t>:HBTO:SADDress:CONDition....2463
TRIGger<t>:HBTO:SADDress:MIN....2463
TRIGger<t>:HBTO:SADDress:MAX....2463
TRIGger<t>:HBTO:LENGth:CONDition....2464
TRIGger<t>:HBTO:LENGth:MIN....2464
TRIGger<t>:HBTO:LENGth:MAX....2464
TRIGger<t>:HBTO:CRC:CONDition....2465

TRIGger<t>:HBTO:DATA:DCONdition....2466
TRIGger<t>:HBTO:DATA:DMIN....2466
TRIGger<t>:HBTO:DATA:DMAX....2466
TRIGger<t>:HBTO:DATA:ICONdition....2467
TRIGger<t>:HBTO:DATA:IMIN....2467
TRIGger<t>:HBTO:DATA:IMAX....2467
TRIGger<t>:HBTO:ERRor:PREamble....2468
TRIGger<t>:HBTO:ERRor:CRC....2468
TRIGger<t>:HBTO:ERRor:SFD....2468
TRIGger<t>:HBTO:TRGLevel....2468

TRIGger<t>:HBTO:TYPE <Type>

Selects the type of frame to be triggered on.

Suffix:
<t> 1..3

Parameters:
<Type> STARt | MAC | IDLE | ERRor

STARt
Start of frame.

MAC
MAC frame. This frame contains information that define how to go about transmitting and receiving frames.

IDLE
IDLE frame. This frame is used for clock synchronization.

ERRor
Error frame. Thi frame contains erroneous bits.

*RST: STARt

Manual operation: See "Type" on page 870

TRIGger<t>:HBTO:DADDress:CONDition <DestAddr_Operator>

Sets the condition for the destination address. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<DestAddr_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:HBTO:DADDress:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:HBTO:DADDress:MIN` and `TRIGger<t>:HBTO:DADDress:MAX`.

*RST: EQUal

Manual operation: See "Destination address" on page 872

TRIGger<t>:HBTO:DADDress:MIN <DestAddr_PattMin>

Specifies the destination address bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<DestAddr_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Destination address" on page 872

TRIGger<t>:HBTO:DADDress:MAX <DestAddr_PattMax>

Sets the end value of the destination address range if `TRIGger<t>:HBTO:DADDress:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:

<DestAddr_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Destination address" on page 872

TRIGger<t>:HBTO:SADDress:CONDition <SrcAddr_Operator>

Sets the condition for the source address. You can define an exact value or a value range.

Suffix:

<t> 1..3

Parameters:

<SrcAddr_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:HBTO:SADDress:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:HBTO:SADDress:MIN` and `TRIGger<t>:HBTO:SADDress:MAX`.

*RST: EQUal

Manual operation: See "Source address" on page 872

TRIGger<t>:HBTO:SADDress:MIN <SrcAddr_PattMin>

Specifies the source address bit pattern, or sets the start value of a pattern range.

Suffix:

<t> 1..3

Parameters:

<SrcAddr_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Source address" on page 872

TRIGger<t>:HBTO:SADDress:MAX <SrcAddr_PattMax>

Sets the end value of the source address range if `TRIGger<t>:HBTO:SADDress:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<SrcAddr_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Source address" on page 872

TRIGger<t>:HBTO:LENGth:CONDition <Type_Operator>

Sets the condition for the length / type. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<Type_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:HBTO:LENGth:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:HBTO:LENGth:MIN` and `TRIGger<t>:HBTO:LENGth:MAX`.

*RST: EQUal

Manual operation: See "Length/Type" on page 872

TRIGger<t>:HBTO:LENGth:MIN <Type_PattMin>

Specifies the length / type bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<Type_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Length/Type" on page 872

TRIGger<t>:HBTO:LENGth:MAX <Type_PattMax>

Sets the end value of the length / type range if `TRIGger<t>:HBTO:LENGth:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<Type_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Length/Type" on page 872

TRIGger<t>:HBTO:CRC:CONDition <CRC_Operator>

Sets the condition for the frame check. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<CRC_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:HBTO:CRC:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:HBTO:CRC:MIN` and `TRIGger<t>:HBTO:CRC:MAX`.

*RST: EQUal

Manual operation: See "Frame check" on page 873

TRIGger<t>:HBTO:CRC:MIN <CRC_PatternMin>

Specifies the frame check bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<CRC_PatternMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Frame check" on page 873

TRIGger<t>:HBTO:CRC:MAX <CRC_PatternMax>

Sets the end value of the frame check range if `TRIGger<t>:HBTO:CRC:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<CRC_PatternMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Frame check" on page 873

TRIGger<t>:HBTO:DATA:DCONdition <Data_Operator>

Sets the condition for the data. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:HBTO:DATA:DMIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:HBTO:DATA:DMIN` and `TRIGger<t>:HBTO:DATA:DMAX`.

*RST: EQUal

Manual operation: See "Data" on page 873

TRIGger<t>:HBTO:DATA:DMIN <Data_Min>

Specifies the data bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<Data_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data" on page 873

TRIGger<t>:HBTO:DATA:DMAX <Data_Max>

Sets the end value of the data range if `TRIGger<t>:HBTO:DATA:DCONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<Data_Max> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data" on page 873

TRIGger<t>:HBTO:DATA:ICONdition <DataIndexOperator>

Sets the condition for the index. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<DataIndexOperator> EQUal | LTHan | LETHan | GTHan | GETHan | INRange | RANGe

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:HBTO:DATA:IMIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:HBTO:DATA:IMIN` and `TRIGger<t>:HBTO:DATA:IMAX`.

*RST: INRange

Manual operation: See "Index" on page 874

TRIGger<t>:HBTO:DATA:IMIN <DataIndex_Min>

Specifies the index bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<DataIndex_Min> Range: 1 to 65535
Increment: 1
*RST: 1

Manual operation: See "Index" on page 874

TRIGger<t>:HBTO:DATA:IMAX <DataIndex_Max>

Sets the end value of the index range if `TRIGger<t>:HBTO:DATA:ICONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<DataIndex_Max> Range: 1 to 65535
Increment: 1
*RST: 65535

Manual operation: See "Index" on page 874

TRIGger<t>:HBTO:ERRor:PREamble <Error_Preamble>

Enables / disables trigger on preamble error.

Suffix:
<t> 1..3

Parameters:
<Error_Preamble> OFF | ON
*RST: ON

Manual operation: See "Preamble Error" on page 874

TRIGger<t>:HBTO:ERRor:CRC <Error_CRC>

Enables / disables trigger on Cyclic Redundancy Check (CRC) error.

Suffix:
<t> 1..3

Parameters:
<Error_CRC> OFF | ON
*RST: ON

Manual operation: See "CRC Error" on page 874

TRIGger<t>:HBTO:ERRor:SFD <Error_SFD>

Enables / disables trigger on start frame delimiter (SFD) error.

Suffix:
<t> 1..3

Parameters:
<Error_SFD> OFF | ON
*RST: ON

Manual operation: See "SFD Error" on page 874

TRIGger<t>:HBTO:TRGLevel <TriggerLevel>

Sets a trigger level.

Suffix:
<t> 1..3

Parameters:
<TriggerLevel> Range: 0 to 1
Increment: 1E-3
*RST: 0.03
Default unit: V

Manual operation: See "Trigger level" on page 871

27.18.22.3 Decode results

To show the results on the screen, use the following commands:

- `BUS<b>:RESult` on page 1914

In all `BUS<b>:HBTO:RESult:FRAMe<n>:WORD<o>` commands, the suffix <b> selects the serial bus, suffix <fr> selects the frame in the decode table and suffix <w> selects the word in the selected frame.

BUS<b>:HBTO:RESult:FCOunt? 2469
BUS<b>:HBTO:RESult:FRAMe<fr>:FTYPe? 2470

BUS<b>:HBTO:RESult:FCOunt?

Returns the number of decoded frames.

Suffix:
<b> 1..4

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:HBTO:RESult:FRAMe<fr>:FTYPe?

Returns the type of frame for the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<FrameType> IDLE | MAC | FILLer | UNKNown

IDLE
IDLE frame. This frame is used for clock synchronization.

MAC
MAC frame. This frame contains information that define how to go about transmitting and receiving frames.

FILLer
Filler frame. The frame is used to maintain transmission activity.

UNKNown
No meaningful frame can be determined.

*RST: MAC

Usage: Query only

BUS<b>:HBTO:RESult:FRAMe<fr>:STATe?

Returns the state of the frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<State> OK | ERR_PREAMBLE | ERR_SFD | ERR_LENGTH | ERR_CRC | UNCorrelated | INComplete

OK
Valid frame.

ERR_PREAMBLE
Erroneous frame due to preamble error.

ERR_SFD
Erroneous frame due to SFD error.

ERR_LENGTH
Erroneous frame due to length / type error.

ERR_CRC
Erroneous frame due to CRC error.

*RST: OK

Usage: Query only

BUS<b>:HBTO:RESult:FRAMe<fr>:STARt?

Returns the start time of the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:HBTO:RESult:FRAMe<fr>:STOP?

Returns the end time of the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:HBTO:RESult:FRAMe<fr>:DESTaddress?

Returns the destination address of the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<DestAddress>

Usage: Query only

BUS<b>:HBTO:RESult:FRAMe<fr>:SRCaddress?

Returns the source address of the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<SrcAddress>

Usage: Query only

BUS<b>:HBTO:RESult:FRAMe<fr>:TYPE?

Returns the value of length / type field of the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<TypeLen> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:HBTO:RESult:FRAMe<fr>:DATA?

Returns the data for the selected frame, corresponds to the Data column in the decode results table.

Suffix:
<b> 1..4

<fr> *

Return values:
<Data>

Usage: Query only

BUS<b>:HBTO:RESult:FRAMe<fr>:CRC?

Returns the CRC (frame check) checksum of the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<CRC> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:HBTO:RESult:FRAMe<fr>:NUMWords?

Returns the number of decoded words for the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<NumWords> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:HBTO:RESult:FRAMe<fr>:DSYMbol?

Returns the destination symbols of the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<DestTranslation>

Usage: Query only

BUS<b>:HBTO:RESult:FRAMe<fr>:SSYMbol?

Returns the source symbols of the selected frame.

Suffix:
<b> 1..4

<fr> *

Return values:
<SrcTranslation>

Usage: Query only

BUS<b>:HBTO:RESult:FRAMe<fr>:BITRate?

Returns the primary bit rate.

Suffix:
<b> 1..4

<fr> *

Return values:

<PrimaryBitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

BUS<b>:HBTO:RESult:FRAMe<fr>:WORD<w>:TYPE?

Returns the data type for the selected word.

Suffix:

<b> 1..4

<fr> *

<w> *

Return values:

<WordType>

Usage: Query only

BUS<b>:HBTO:RESult:FRAMe<fr>:WORD<w>:VALue?

Returns the data value for the selected word.

Suffix:

<b> 1..4

<fr> *

<w> *

Return values:

<WordValue> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:HBTO:RESult:FRAMe<fr>:WORD<w>:VSTR?

Returns the string equivalent of data value for the selected cell.

Suffix:

<b> 1..4

<fr> *

<w> *

Return values:

<WordValString> String parameter

Usage: Query only

SEARch:TRIGger:HBTO:ERRor:SFD 2483

SEARch:TRIGger:HBTO:TYPE <SearchName>,<Type>
SEARch:TRIGger:HBTO:TYPE? <SearchName>

Selects the type of frame to be searched for.

Parameters:

<Type> STARt | MAC | IDLE | ERRor

STARt
Start of frame.

MAC
MAC frame. This frame contains information that define how to go about transmitting and receiving frames.

IDLE
IDLE frame. This frame is used for clock synchronization.

ERRor
Error frame. Thi frame contains erroneous bits.

*RST: STARt

Parameters for setting and query:
<SearchName>

Manual operation: See "Type" on page 877

SEARch:TRIGger:HBTO:DADDress:CONDition
<SearchName>,<DestAddr_Operator>
SEARch:TRIGger:HBTO:DADDress:CONDition? <SearchName>

Sets the condition for the destination address. You can define an exact value or a value range.

Parameters:
<DestAddr_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:HBTO:DADDress:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:HBTO:DADDress:MIN` and `SEARch:TRIGger:HBTO:DADDress:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Destination address" on page 878

SEARch:TRIGger:HBTO:DADDress:MIN <SearchName>,<DestAddr_PattMin>
SEARch:TRIGger:HBTO:DADDress:MIN? <SearchName>

Specifies the destination address bit pattern, or sets the start value of a pattern range.

Parameters:
<DestAddr_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Destination address" on page 878

SEARch:TRIGger:HBTO:DADDress:MAX <SearchName>,<DestAddr_PattMax>
SEARch:TRIGger:HBTO:DADDress:MAX? <SearchName>

Sets the end value of the destination address range if `SEARch:TRIGger:HBTO:DADDress:CONDition` is set to `INRange` or `OORange`.

Parameters:
<DestAddr_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Destination address" on page 878

SEARch:TRIGger:HBTO:SADDress:CONDition
<SearchName>,<SrcAddr_Operator>
SEARch:TRIGger:HBTO:SADDress:CONDition? <SearchName>

Sets the condition for the source address. You can define an exact value or a value range.

Parameters:
<SrcAddr_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:HBTO:SADDress:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:HBTO:SADDress:MIN` and `SEARch:TRIGger:HBTO:SADDress:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Source address" on page 878

SEARch:TRIGger:HBTO:SADDress:MIN <SearchName>,<SrcAddr_PattMin>
SEARch:TRIGger:HBTO:SADDress:MIN? <SearchName>

Specifies the source address bit pattern, or sets the start value of a pattern range.

Parameters:
<SrcAddr_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Source address" on page 878

SEARch:TRIGger:HBTO:SADDress:MAX <SearchName>,<SrcAddr_PattMax>
SEARch:TRIGger:HBTO:SADDress:MAX? <SearchName>

Sets the end value of the source address range if `SEARch:TRIGger:HBTO:SADDress:CONDition` is set to `INRange` or `OORange`.

Parameters:
<SrcAddr_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Source address" on page 878

SEARch:TRIGger:HBTO:LENGth:CONDition <SearchName>,<Type_Operator>
SEARch:TRIGger:HBTO:LENGth:CONDition? <SearchName>

Sets the condition for the length / type. You can define an exact value or a value range.

Parameters:
<Type_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:HBTO:LENGth:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:HBTO:LENGth:MIN` and `SEARch:TRIGger:HBTO:LENGth:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Length/Type" on page 878

SEARch:TRIGger:HBTO:LENGth:MIN <SearchName>,<Type_PattMin>
SEARch:TRIGger:HBTO:LENGth:MIN? <SearchName>

Specifies the length / type bit pattern, or sets the start value of a pattern range.

Parameters:
<Type_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Length/Type" on page 878

SEARch:TRIGger:HBTO:LENGth:MAX <SearchName>,<Type_PattMax>
SEARch:TRIGger:HBTO:LENGth:MAX? <SearchName>

Sets the end value of the length / type range if `SEARch:TRIGger:HBTO:LENGth:CONDition` is set to `INRange` or `OORange`.

Parameters:
<Type_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Length/Type" on page 878

SEARch:TRIGger:HBTO:CRC:CONDition <SearchName>,<CRC_Operator>
SEARch:TRIGger:HBTO:CRC:CONDition? <SearchName>

Sets the condition for the frame check. You can define an exact value or a value range.

Parameters:
<CRC_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:HBTO:CRC:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:HBTO:CRC:MIN` and `SEARch:TRIGger:HBTO:CRC:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame check" on page 879

SEARch:TRIGger:HBTO:CRC:MIN <SearchName>,<CRC_PatternMin>
SEARch:TRIGger:HBTO:CRC:MIN? <SearchName>

Specifies the frame check bit pattern, or sets the start value of a pattern range.

Parameters:
<CRC_PatternMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame check" on page 879

SEARch:TRIGger:HBTO:CRC:MAX <SearchName>,<CRC_PatternMax>
SEARch:TRIGger:HBTO:CRC:MAX? <SearchName>

Sets the end value of the frame check range if `SEARch:TRIGger:HBTO:CRC:CONDition` is set to `INRange` or `OORange`.

Parameters:
<CRC_PatternMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame check" on page 879

SEARch:TRIGger:HBTO:DATA:DCONdition <SearchName>,<Data_Operator>
SEARch:TRIGger:HBTO:DATA:DCONdition? <SearchName>

Sets the condition for the data. You can define an exact value or a value range.

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:HBTO:DATA:DMIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:HBTO:DATA:DMIN` and `SEARch:TRIGger:HBTO:DATA:DMAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Data" on page 879

SEARch:TRIGger:HBTO:DATA:DMIN <SearchName>,<Data_Min>
SEARch:TRIGger:HBTO:DATA:DMIN? <SearchName>

Specifies the data bit pattern, or sets the start value of a pattern range.

Parameters:
<Data_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Data" on page 879

SEARch:TRIGger:HBTO:DATA:DMAX <SearchName>,<Data_Max>
SEARch:TRIGger:HBTO:DATA:DMAX? <SearchName>

Sets the end value of the data range if `SEARch:TRIGger:HBTO:DATA:DCONdition` is set to `INRange` or `OORange`.

Parameters:
<Data_Max> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Data" on page 879

SEARch:TRIGger:HBTO:DATA:ICONdition <SearchName>,<DataIndexOperator>
SEARch:TRIGger:HBTO:DATA:ICONdition? <SearchName>

Sets the condition for the index. You can define an exact value or a value range.

Parameters:
<DataIndexOperator> EQUal | LTHan | LETHan | GTHan | GETHan | INRange | RANGe

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:HBTO:DATA:IMIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:HBTO:DATA:IMIN` and `SEARch:TRIGger:HBTO:DATA:IMAX`.

*RST: INRange

Parameters for setting and query:
<SearchName>

Manual operation: See "Index" on page 880

SEARch:TRIGger:HBTO:DATA:IMIN <SearchName>,<DataIndex_Min>
SEARch:TRIGger:HBTO:DATA:IMIN? <SearchName>

Specifies the index bit pattern, or sets the start value of a pattern range.

Parameters:
<DataIndex_Min> Range: 1 to 65535
Increment: 1
*RST: 1

Parameters for setting and query:
<SearchName>

Manual operation: See "Index" on page 880

SEARch:TRIGger:HBTO:DATA:IMAX <SearchName>,<DataIndex_Max>
SEARch:TRIGger:HBTO:DATA:IMAX? <SearchName>

Sets the end value of the index range if `SEARch:TRIGger:HBTO:DATA:ICONdition` is set to `INRange` or `OORange`.

Parameters:
<DataIndex_Max> Range: 1 to 65535
Increment: 1
*RST: 65535

Parameters for setting and query:
<SearchName>

Manual operation: See "Index" on page 880

SEARch:TRIGger:HBTO:ERRor:PREamble <SearchName>,<Error_Preamble>
SEARch:TRIGger:HBTO:ERRor:PREamble? <SearchName>

Enables / disables search for preamble error.

Parameters:
<Error_Preamble> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Preamble Error" on page 880

SEARch:TRIGger:HBTO:ERRor:CRC <SearchName>,<Error_CRC>
SEARch:TRIGger:HBTO:ERRor:CRC? <SearchName>

Enables / disables trigger on Cyclic Redundancy Check (CRC) error.

Parameters:
<Error_CRC> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "CRC Error" on page 880

SEARch:TRIGger:HBTO:ERRor:SFD <SearchName>,<Error_SFD>
SEARch:TRIGger:HBTO:ERRor:SFD? <SearchName>

Enables / disables search for start frame delimiter (SFD) error.

Parameters:
<Error_SFD> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "SFD Error" on page 880

27.18.22.5 Search results

In all `SEARch:RESult:HBTO:FRAMe<m>` commands, the suffix <m> selects the frame number in the list of search results.

SEARch:RESult:HBTO:FCOunt? 2483
SEARch:RESult:HBTO:FRAMe<fr>:TYPE? 2483
SEARch:RESult:HBTO:FRAMe<fr>:STATe? 2484
SEARch:RESult:HBTO:FRAMe<fr>:STARt? 2484

SEARch:RESult:HBTO:FRAMe<fr>:DESTaddress? 2485
SEARch:RESult:HBTO:FRAMe<fr>:SRCaddress? 2485
SEARch:RESult:HBTO:FRAMe<fr>:DATA? 2486
SEARch:RESult:HBTO:FRAMe<fr>:CRC? 2486
SEARch:RESult:HBTO:FRAMe<fr>:NUMWords? 2486
SEARch:RESult:HBTO:FRAMe<fr>:FTYPe? 2486
SEARch:RESult:HBTO:FRAMe<fr>:DSYMbol? 2487
SEARch:RESult:HBTO:FRAMe<fr>:SSYMbol? 2487
SEARch:RESult:HBTO:FRAMe<fr>:WORD<w>:TYPE? 2488
SEARch:RESult:HBTO:FRAMe<fr>:WORD<w>:VALue? 2488

SEARch:RESult:HBTO:FCOunt? <SearchName>

Returns the number of decoded frames within the search result.

Query parameters:
<SearchName>

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:HBTO:FRAMe<fr>:TYPE? <SearchName>

Returns the value of length / type field of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<TypeLen> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:HBTO:FRAMe<fr>:STATe? <SearchName>

Returns the state of the frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<State> OK | ERR_PREAMBLE | ERR_SFD | ERR_LENGTH | ERR_CRC | UNCorrelated | INComplete

OK
Valid frame.

ERR_PREAMBLE
Erroneous frame due to preamble error.

ERR_SFD
Erroneous frame due to SFD error.

ERR_LENGTH
Erroneous frame due to length / type error.

ERR_CRC
Erroneous frame due to CRC error.

*RST: OK

Usage: Query only

SEARch:RESult:HBTO:FRAMe<fr>:STARt? <SearchName>

Returns the start time of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:HBTO:FRAMe<fr>:STOP? <SearchName>

Returns the end time of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:HBTO:FRAMe<fr>:DESTaddress? <SearchName>

Returns the destination address of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<DestAddress> String parameter

Usage: Query only

SEARch:RESult:HBTO:FRAMe<fr>:SRCaddress? <SearchName>

Returns the source address of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<SourceAddress> String parameter

Usage: Query only

SEARch:RESult:HBTO:FRAMe<fr>:DATA? <SearchName>

Returns the data for the selected frame, corresponds to the Data column in the decode results table.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Data>

Usage: Query only

SEARch:RESult:HBTO:FRAMe<fr>:CRC? <SearchName>

Returns the CRC checksum of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<CRC> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:HBTO:FRAMe<fr>:NUMWords? <SearchName>

Returns the number of decoded words for the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<NumWords> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:HBTO:FRAMe<fr>:FTYPe? <SearchName>

Returns the type of frame for the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameType> IDLE | MAC | FILLer | UNKNown

IDLE
IDLE frame. This frame is used for clock synchronization.

MAC
MAC frame. This frame contains information that define how to go about transmitting and receiving frames.

FILLer
Filler frame. The frame is used to maintain transmission activity.

UNKNown
No meaningful frame can be determined.

*RST: MAC

Usage: Query only

SEARch:RESult:HBTO:FRAMe<fr>:DSYMbol? <SearchName>

Returns the destination symbols of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<DestTranslation>

Usage: Query only

SEARch:RESult:HBTO:FRAMe<fr>:SSYMbol? <SearchName>

Returns the source symbols of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<SrcTranslation>

Usage: Query only

SEARch:RESult:HBTO:FRAMe<fr>:WORD<w>:TYPE? <SearchName>

Returns the data type of the selected word within the search result.

Suffix:
<fr> *

<w> *

Query parameters:
<SearchName>

Return values:
<WordType> String parameter

Usage: Query only

SEARch:RESult:HBTO:FRAMe<fr>:WORD<w>:VALue? <SearchName>

Returns the data value of the selected word within the search result.

Suffix:
<fr> *

<w> *

Query parameters:
<SearchName>

Return values:
<WordValue> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

27.18.23 Ethernet 1000BASE-T1 (option R&S RTO6-K560)

- Configuration....2488
- Decode results....2491
- Trigger....2498
- Search settings....2507
- Search results....2515

27.18.23.1 Configuration

In all `BUS<b>:TBTO` commands, the suffix <b> selects the serial bus.

BUS<b>:TBTO:ATTN <Attenuation>

Sets the attenuation factor. It is used to de-amplify the reverse signal before subtracting it from the forward signal.

Suffix:
<b> 1..4

Parameters:
<Attenuation> Range: -100 to 0
Increment: 0.1
*RST: -26
Default unit: dB

Manual operation: See "Reverse attenuation" on page 884

BUS<b>:TBTO:FDAM <SourceDAminus>

Selects the DA- source of the provided forward single ended signal, if `BUS<b>:TBTO:FTYP` is set to `SINGle`.

Suffix:
<b> 1..4

Parameters:
<SourceDAminus> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Manual operation: See "Forward" on page 883

BUS<b>:TBTO:FDAP <SourceDAplus>

Selects the DA+ source of the provided forward single ended signal, if `BUS<b>:TBTO:FTYP` is set to `SINGle`.

Suffix:
<b> 1..4

Parameters:
<SourceDAplus> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Manual operation: See "Forward" on page 883

BUS<b>:TBTO:FDIF <SrcDiff>

Sets the source of the provided forward differential signal, if `BUS<b>:TBTO:FTYP` is set to `DIFFerential`.

Suffix:
<b> 1..4

Parameters:
<SrcDiff> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Manual operation: See "Forward" on page 883

BUS<b>:TBTO:FTYP <SignalType>

Sets the type of forward signal measurement.

Suffix:
<b> 1..4

Parameters:
<SignalType> DIFFerential | SINGle
*RST: DIFFerential

Manual operation: See "Forward" on page 883

BUS<b>:TBTO:RDAM <SrcRevDAminus>

Selects the DA- source of the provided reversed single ended signal, if `BUS<b>:TBTO:RTYP` is set to `SINGle`.

Suffix:
<b> 1..4

Parameters:
<SrcRevDAminus> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Manual operation: See "Reverse" on page 883

BUS<b>:TBTO:RDAP <SrcRevDAplus>

Selects the DA+ source of the provided reversed single ended signal, if `BUS<b>:TBTO:RTYP` is set to `SINGle`.

Suffix:
<b> 1..4

Parameters:
<SrcRevDAplus> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Manual operation: See "Reverse" on page 883

BUS<b>:TBTO:RDIF <SrcRevDiff>

Sets the source of the provided reversed differential signal, if `BUS<b>:TBTO:RTYP` is set to `DIFFerential`.

Suffix:
<b> 1..4

Parameters:
<SrcRevDiff> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Manual operation: See "Reverse" on page 883

BUS<b>:TBTO:RTYP <SignalRevType>

Sets the type of reverse signal measurement.

Suffix:
<b> 1..4

Parameters:
<SignalRevType> DISabled | DIFFerential | SINGle
*RST: DISabled

Manual operation: See "Reverse" on page 883

BUS<b>:TBTO:MODE <Mode>

Selects the direction of the full-duplex signal you want to look at.

Suffix:
<b> 1..4

Parameters:
<Mode> MASTer | SLAVe | AUTO
*RST: AUTO

Manual operation: See "Operation mode" on page 884

BUS<b>:TBTO:POLarity <Polarity>

Selects the polarity of the data signal.

Suffix:
<b> 1..4

Parameters:
<Polarity> NORMal | INVert
*RST: NORMal

Manual operation: See "Polarity" on page 884

27.18.23.2 Decode results

To show the results on the screen, use the following commands:

- `BUS<b>:RESult` on page 1914

BUS<b>:TBTO:RESult:FCOunt? 2492
BUS<b>:TBTO:RESult:FRAMe<fr>:BITRate? 2492
BUS<b>:TBTO:RESult:FRAMe<fr>:CRC? 2492
BUS<b>:TBTO:RESult:FRAMe<fr>:DATA? 2493
BUS<b>:TBTO:RESult:FRAMe<fr>:DESTaddress? 2493
BUS<b>:TBTO:RESult:FRAMe<fr>:DSYMbol? 2493
BUS<b>:TBTO:RESult:FRAMe<fr>:FTYPe? 2494
BUS<b>:TBTO:RESult:FRAMe<fr>:NUMWords? 2494

BUS<b>:TBTO:RESult:FRAMe<fr>:SRCaddress?....2495
BUS<b>:TBTO:RESult:FRAMe<fr>:SSYMbol?....2495
BUS<b>:TBTO:RESult:FRAMe<fr>:STARt?....2495
BUS<b>:TBTO:RESult:FRAMe<fr>:STATe?....2495
BUS<b>:TBTO:RESult:FRAMe<fr>:STOP?....2496
BUS<b>:TBTO:RESult:FRAMe<fr>:TYPE?....2496
BUS<b>:TBTO:RESult:FRAMe<fr>:WORD<w>:TYPE?....2497
BUS<b>:TBTO:RESult:FRAMe<fr>:WORD<w>:VALue?....2497
BUS<b>:TBTO:RESult:FRAMe<fr>:WORD<w>:VSTR?....2497

BUS<b>:TBTO:RESult:FCOunt?

Returns the number of decoded frames.

Suffix:
<b> 1..4
Selects the serial bus.

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:TBTO:RESult:FRAMe<fr>:BITRate?

Returns the primary bit rate.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<PrimaryBitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

BUS<b>:TBTO:RESult:FRAMe<fr>:CRC?

Returns the CRC (frame check) checksum of the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<CRC> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:TBTO:RESult:FRAMe<fr>:DATA?

Returns the data for the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<Data>

Usage: Query only

BUS<b>:TBTO:RESult:FRAMe<fr>:DESTaddress?

Returns the destination address of the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<DestAddress>

Usage: Query only

BUS<b>:TBTO:RESult:FRAMe<fr>:DSYMbol?

Returns the destination symbols of the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<DestTranslation>

Usage: Query only

BUS<b>:TBTO:RESult:FRAMe<fr>:FTYPe?

Returns the type of the selected frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<FrameType> IDLE | MAC | OAM | RSFEC | BH | CTLADDR | CTLCODE | ZEROTSYM | UNKNown

IDLE
IDLE frame. This frame is used for clock synchronization.

MAC
MAC frame. This frame contains information that define how to go about transmitting and receiving frames.

OAM
Operations, administration, and maintenance frame.

RSFEC
Reed Solomon forward error correction check frame.

ZEROTSYM
Zero terrnary symbol.

UNKNown
No meaningful frame can be determined.

*RST: MAC

Usage: Query only

BUS<b>:TBTO:RESult:FRAMe<fr>:NUMWords?

Returns the number of decoded words for the selected frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<NumWords> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:TBTO:RESult:FRAMe<fr>:SRCaddress?

Returns the source address of the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<SrcAddress>

Usage: Query only

BUS<b>:TBTO:RESult:FRAMe<fr>:SSYMbol?

Returns the source symbols of the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<SrcTranslation>

Usage: Query only

BUS<b>:TBTO:RESult:FRAMe<fr>:STARt?

Returns the start time of the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:TBTO:RESult:FRAMe<fr>:STATe?

Returns the state of the frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<State> OK | ERRFEC | ERRZERO | ERROOR | ERRCRC | INComplete

OK
Valid frame.

ERRFEC
Reed-Solomon forward error correction.

ERRZERO
Zero ternary symbol pair error.

ERROOR
Values are out of range error.

ERR_CRC
Erroneous frame due to CRC error.

INComplete
Incomplete frame.

*RST: OK

Usage: Query only

BUS<b>:TBTO:RESult:FRAMe<fr>:STOP?

Returns the end time of the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:TBTO:RESult:FRAMe<fr>:TYPE?

Returns the value of length / type field of the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<TypeLen> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:TBTO:RESult:FRAMe<fr>:WORD<w>:TYPE?

Returns the data type for the selected word.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<w> *
Selects the word.

Return values:
<WordType>

Usage: Query only

BUS<b>:TBTO:RESult:FRAMe<fr>:WORD<w>:VALue?

Returns the data value for the selected word.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<w> *
Selects the word.

Return values:
<WordValue> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:TBTO:RESult:FRAMe<fr>:WORD<w>:VSTR?

Returns the string equivalent of the data value for the selected word.

Suffix:

<b>	1..4
<fr>	*
<w>	*

Return values:
<WordValString>

Usage: Query only

27.18.23.3 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:TBTO:TRGLevel 2498
TRIGger<t>:TBTO:TYPE 2499
TRIGger<t>:TBTO:CRC:CONDition 2499
TRIGger<t>:TBTO:CRC:MAX 2500
TRIGger<t>:TBTO:CRC:MIN 2500
TRIGger<t>:TBTO:DADDress:CONDition 2500
TRIGger<t>:TBTO:DADDress:MAX 2501
TRIGger<t>:TBTO:DADDress:MIN 2501
TRIGger<t>:TBTO:DATA:DCONdition 2501
TRIGger<t>:TBTO:DATA:DMAX 2502
TRIGger<t>:TBTO:DATA:DMIN 2502
TRIGger<t>:TBTO:DATA:ICONdition 2502
TRIGger<t>:TBTO:DATA:IMAX 2503
TRIGger<t>:TBTO:DATA:IMIN 2503
TRIGger<t>:TBTO:ERRor:CRC 2503
TRIGger<t>:TBTO:ERRor:FEC 2504
TRIGger<t>:TBTO:ERRor:OOR 2504
TRIGger<t>:TBTO:ERRor:ZERO 2504
TRIGger<t>:TBTO:LENGth:CONDition 2504
TRIGger<t>:TBTO:LENGth:MAX 2505
TRIGger<t>:TBTO:LENGth:MIN 2505
TRIGger<t>:TBTO:SADDress:CONDition 2506
TRIGger<t>:TBTO:SADDress:MAX 2506
TRIGger<t>:TBTO:SADDress:MIN 2506

TRIGger<t>:TBTO:TRGLevel <TriggerLevel>

Sets the trigger level.

Suffix:
<t> 1..3

Parameters:
<TriggerLevel> Range: -0.5 to 0.5
Increment: 1E-3
*RST: 0.01
Default unit: V

Manual operation: See "Trigger level" on page 888

TRIGger<t>:TBTO:TYPE <Type>

Selects the type of frame to be triggered on.

Suffix:
<t> 1..3

Parameters:
<Type> STARt | MAC | IDLE | ERRor

STARt
Start of frame.

MAC
MAC frame. This frame contains information that define how to go about transmitting and receiving frames.

IDLE
IDLE frame. This frame is used for clock synchronization.

ERRor
Error frame. You can enable the error to be triggered on:
`TRIGger<t>:TBTO:ERRor:CRC`
`TRIGger<t>:TBTO:ERRor:FEC`
`TRIGger<t>:TBTO:ERRor:OOR`
`TRIGger<t>:TBTO:ERRor:ZERO`

*RST: STARt

Manual operation: See "Type" on page 887

TRIGger<t>:TBTO:CRC:CONDition <CRC_Operator>

Sets the condition for the frame check. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<CRC_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:TBTO:CRC:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:TBTO:CRC:MIN` and `TRIGger<t>:TBTO:CRC:MAX` .

*RST: EQUal

Manual operation: See "Frame check" on page 890

TRIGger<t>:TBTO:CRC:MAX <CRC_PatternMax>

Sets the end value of the frame check range if `TRIGger<t>:TBTO:CRC:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<CRC_PatternMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Frame check" on page 890

TRIGger<t>:TBTO:CRC:MIN <CRC_PatternMin>

Specifies the frame check bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<CRC_PatternMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Frame check" on page 890

TRIGger<t>:TBTO:DADDress:CONDition <DestAddr_Operator>

Sets the condition for the destination address. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<DestAddr_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:TBTO:DADDress:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:TBTO:DADDress:MIN` and `TRIGger<t>:TBTO:DADDress:MAX`.

*RST: EQUal

Manual operation: See "Destination address" on page 888

TRIGger<t>:TBTO:DADDress:MAX <DestAddr_PattMax>

Sets the end value of the destination address range if `TRIGger<t>:TBTO:DADDress:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<DestAddr_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Destination address" on page 888

TRIGger<t>:TBTO:DADDress:MIN <DestAddr_PattMin>

Specifies the destination address bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<DestAddr_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Destination address" on page 888

TRIGger<t>:TBTO:DATA:DCONdition <Data_Operator>

Sets the condition for the data. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:TBTO:DATA:DMIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:TBTO:DATA:DMIN` and `TRIGger<t>:TBTO:DATA:DMAX`.

*RST: EQUal

Manual operation: See "Data" on page 890

TRIGger<t>:TBTO:DATA:DMAX <Data_Max>

Sets the end value of the data range if `TRIGger<t>:TBTO:DATA:DCONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<Data_Max> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Data" on page 890

TRIGger<t>:TBTO:DATA:DMIN <Data_Min>

Specifies the data bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<Data_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Data" on page 890

TRIGger<t>:TBTO:DATA:ICONdition <DataIndexOperator>

Sets the condition for the index. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<DataIndexOperator> EQUal | LTHan | LETHan | GTHan | GETHan | INRange | RANGe

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:TBTO:DATA:IMIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:TBTO:DATA:IMIN` and `TRIGger<t>:TBTO:DATA:IMAX`.

*RST: INRange

Manual operation: See "Index" on page 890

TRIGger<t>:TBTO:DATA:IMAX <DataIndex_Max>

Sets the end value of the index range if `TRIGger<t>:TBTO:DATA:ICONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<DataIndex_Max> Range: 1 to 65535
Increment: 1
*RST: 65535

Manual operation: See "Index" on page 890

TRIGger<t>:TBTO:DATA:IMIN <DataIndex_Min>

Specifies the index bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<DataIndex_Min> Range: 1 to 65535
Increment: 1
*RST: 1

Manual operation: See "Index" on page 890

TRIGger<t>:TBTO:ERRor:CRC <Error_CRC>

Enables triggering on cyclic redundancy check (CRC) error.

Suffix:
<t> 1..3

Parameters:
<Error_CRC> OFF | ON
*RST: ON

Manual operation: See "CRC error" on page 891

TRIGger<t>:TBTO:ERRor:FEC <Error_FEC>

Enables triggering, if more than 22 RS-FEC errors are detected.

Suffix:
<t> 1..3

Parameters:
<Error_FEC> OFF | ON
*RST: ON

Manual operation: See "RS-FEC error" on page 891

TRIGger<t>:TBTO:ERRor:OOR <Error_OOR>

Enables triggering if values are out of range (OOR). For example, a preamble error, or invalid symbols in control blocks.

Suffix:
<t> 1..3

Parameters:
<Error_OOR> OFF | ON
*RST: ON

Manual operation: See "Out of range error" on page 891

TRIGger<t>:TBTO:ERRor:ZERO <Error_ZERO>

Enables triggering, if a zero ternary symbol pair (0-0) is detected.

Suffix:
<t> 1..3

Parameters:
<Error_ZERO> OFF | ON
*RST: ON

Manual operation: See "Zero terrnary symbol" on page 891

TRIGger<t>:TBTO:LENGth:CONDition <Type_Operator>

Sets the condition for the length / type. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<Type_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:TBTO:LENGth:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:TBTO:LENGth:MIN` and `TRIGger<t>:TBTO:LENGth:MAX`.

*RST: EQUal

Manual operation: See "Length/Type" on page 889

TRIGger<t>:TBTO:LENGth:MAX <Type_PattMax>

Sets the end value of the length / type range if `TRIGger<t>:TBTO:LENGth:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<Type_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Length/Type" on page 889

TRIGger<t>:TBTO:LENGth:MIN <Type_PattMin>

Specifies the length / type bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<Type_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Length/Type" on page 889

TRIGger<t>:TBTO:SADDress:CONDition <SrcAddr_Operator>

Sets the condition for the source address. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<SrcAddr_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:TBTO:SADDress:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:TBTO:SADDress:MIN` and `TRIGger<t>:TBTO:SADDress:MAX`.

*RST: EQUal

Manual operation: See "Source address" on page 889

TRIGger<t>:TBTO:SADDress:MAX <SrcAddr_PattMax>

Sets the end value of the source address range, if `TRIGger<t>:TBTO:SADDress:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<SrcAddr_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Source address" on page 889

TRIGger<t>:TBTO:SADDress:MIN <SrcAddr_PattMin>

Specifies the source address bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<SrcAddr_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Source address" on page 889

SEARch:TRIGger:TBTO:CRC:CONDition <SearchName>,<CRC_Operator>
SEARch:TRIGger:TBTO:CRC:CONDition? <SearchName>

Sets the condition for the frame check. You can define an exact value or a value range.

Parameters:

<CRC_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:TBTO:CRC:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:TBTO:CRC:MIN` and `SEARch:TRIGger:TBTO:CRC:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame check" on page 897

SEARch:TRIGger:TBTO:CRC:MAX <SearchName>,<CRC_PatternMax>
SEARch:TRIGger:TBTO:CRC:MAX? <SearchName>

Sets the end value of the frame check range if `SEARch:TRIGger:TBTO:CRC:CONDition` is set to `INRange` or `OORange`.

Parameters:
<CRC_PatternMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame check" on page 897

SEARch:TRIGger:TBTO:CRC:MIN <SearchName>,<CRC_PatternMin>
SEARch:TRIGger:TBTO:CRC:MIN? <SearchName>

Specifies the frame check bit pattern, or sets the start value of a pattern range.

Parameters:
<CRC_PatternMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame check" on page 897

SEARch:TRIGger:TBTO:DADDress:CONDition
<SearchName>,<DestAddr_Operator>
SEARch:TRIGger:TBTO:DADDress:CONDition? <SearchName>

Sets the condition for the destination address. You can define an exact value or a value range.

Parameters:
<DestAddr_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:TBTO:DADDress:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:TBTO:DADDress:MIN` and `SEARch:TRIGger:TBTO:DADDress:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Destination address" on page 896

SEARch:TRIGger:TBTO:DADDress:MAX <SearchName>,<DestAddr_PattMax>
SEARch:TRIGger:TBTO:DADDress:MAX? <SearchName>

Sets the end value of the destination address range if `SEARch:TRIGger:TBTO:DADDress:CONDition` is set to `INRange` or `OORange`.

Parameters:
<DestAddr_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Destination address" on page 896

SEARch:TRIGger:TBTO:DADDress:MIN <SearchName>,<DestAddr_PattMin>
SEARch:TRIGger:TBTO:DADDress:MIN? <SearchName>

Specifies the destination address bit pattern, or sets the start value of a pattern range.

Parameters:
<DestAddr_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Destination address" on page 896

SEARch:TRIGger:TBTO:DATA:DCONdition <SearchName>,<Data_Operator>
SEARch:TRIGger:TBTO:DATA:DCONdition? <SearchName>

Sets the condition for the data. You can define an exact value or a value range.

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:TBTO:DATA:DMIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:TBTO:DATA:DMIN` and `SEARch:TRIGger:TBTO:DATA:DMAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Data" on page 897

SEARch:TRIGger:TBTO:DATA:DMAX <SearchName>,<Data_Max>
SEARch:TRIGger:TBTO:DATA:DMAX? <SearchName>

Sets the end value of the data range if `SEARch:TRIGger:TBTO:DATA:DCONdition` is set to `INRange` or `OORange`.

Parameters:
<Data_Max> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Data" on page 897

SEARch:TRIGger:TBTO:DATA:DMIN <SearchName>,<Data_Min>
SEARch:TRIGger:TBTO:DATA:DMIN? <SearchName>

Specifies the data bit pattern, or sets the start value of a pattern range.

Parameters:
<Data_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Data" on page 897

SEARch:TRIGger:TBTO:DATA:ICONdition <SearchName>,<DataIndexOperator>
SEARch:TRIGger:TBTO:DATA:ICONdition? <SearchName>

Sets the search condition for the index. You can define an exact value or a value range.

Parameters:
<DataIndexOperator> EQUal | LTHan | LETHan | GTHan | GETHan | INRange | RANGe

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:TBTO:DATA:IMIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:TBTO:DATA:IMIN` and `SEARch:TRIGger:TBTO:DATA:IMAX`.

*RST: INRange

Parameters for setting and query:
<SearchName>

Manual operation: See "Index" on page 898

SEARch:TRIGger:TBTO:DATA:IMAX <SearchName>,<DataIndex_Max>
SEARch:TRIGger:TBTO:DATA:IMAX? <SearchName>

Sets the end value of the index range to be searched for, if `SEARch:TRIGger:TBTO:DATA:IMAX` is set to `INRange` or `OORange`.

Parameters:
<DataIndex_Max> Range: 1 to 65535
Increment: 1
*RST: 65535

Parameters for setting and query:
<SearchName>

Manual operation: See "Index" on page 898

SEARch:TRIGger:TBTO:DATA:IMIN <SearchName>,<DataIndex_Min>
SEARch:TRIGger:TBTO:DATA:IMIN? <SearchName>

Specifies the index bit pattern, or sets the start value of a pattern range.

Parameters:
<DataIndex_Min> Range: 1 to 65535
Increment: 1
*RST: 1

Parameters for setting and query:
<SearchName>

Manual operation: See "Index" on page 898

SEARch:TRIGger:TBTO:ERRor:CRC <SearchName>,<Error_CRC>
SEARch:TRIGger:TBTO:ERRor:CRC? <SearchName>

Enables search for cyclic redundancy check (CRC) error.

Parameters:
<Error_CRC> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "CRC error" on page 899

SEARch:TRIGger:TBTO:ERRor:FEC <SearchName>,<Error_FEC>
SEARch:TRIGger:TBTO:ERRor:FEC? <SearchName>

Enables search for RS-FEC errors.

Parameters:
<Error_FEC> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "RS-FEC error" on page 898

SEARch:TRIGger:TBTO:ERRor:OOR <SearchName>,<Error_OOR>
SEARch:TRIGger:TBTO:ERRor:OOR? <SearchName>

Enables search for values that are out of range.

Parameters:
<Error_OOR> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Out of range error" on page 899

SEARch:TRIGger:TBTO:ERRor:ZERO <SearchName>,<Error_ZERO>
SEARch:TRIGger:TBTO:ERRor:ZERO? <SearchName>

Enables search for zero ternary symbol pairs error.

Parameters:
<Error_ZERO> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Zero terrnary symbol" on page 899

SEARch:TRIGger:TBTO:LENGth:CONDition <SearchName>,<Type_Operator>
SEARch:TRIGger:TBTO:LENGth:CONDition? <SearchName>

Sets the condition for the length/ type. You can define an exact value or a value range.

Parameters:
<Type_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, not equal, less than, less or equal than, greater than, greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:TBTO:LENGth:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:TBTO:LENGth:MIN` and `SEARch:TRIGger:TBTO:LENGth:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Length/Type" on page 896

SEARch:TRIGger:TBTO:LENGth:MAX <SearchName>,<Type_PattMax>
SEARch:TRIGger:TBTO:LENGth:MAX? <SearchName>

Sets the end value of the length / type range if `SEARch:TRIGger:TBTO:LENGth:CONDition` is set to `INRange` or `OORange`.

Parameters:
<Type_PattMax>

Parameters for setting and query:
<SearchName> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Manual operation: See "Length/Type" on page 896

SEARch:TRIGger:TBTO:LENGth:MIN <SearchName>,<Type_PattMin>
SEARch:TRIGger:TBTO:LENGth:MIN? <SearchName>

Specifies the length/ type bit pattern, or sets the start value of a pattern range.

Parameters:
<Type_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Length/Type" on page 896

SEARch:TRIGger:TBTO:SADDress:CONDition
<SearchName>,<SrcAddr_Operator>
SEARch:TRIGger:TBTO:SADDress:CONDition? <SearchName>

Sets the condition for the source address. You can define an exact value or a value range.

Parameters:
<SrcAddr_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, not equal, less than, less or equal than, greater than, greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:TBTO:SADDress:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:TBTO:SADDress:MIN` and`SEARch:TRIGger:TBTO:SADDress:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Source address" on page 896

SEARch:TRIGger:TBTO:SADDress:MAX <SearchName>,<SrcAddr_PattMax>
SEARch:TRIGger:TBTO:SADDress:MAX? <SearchName>

Sets the end value of the source address range if `SEARch:TRIGger:TBTO:SADDress:CONDition` is set to `INRange` or `OORange`.

Parameters:
<SrcAddr_PattMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Source address" on page 896

SEARch:TRIGger:TBTO:SADDress:MIN <SearchName>,<SrcAddr_PattMin>
SEARch:TRIGger:TBTO:SADDress:MIN? <SearchName>

Specifies the source address bit pattern, or sets the start value of a pattern range.

Parameters:
<SrcAddr_PattMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (do not care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Source address" on page 896

SEARch:TRIGger:TBTO:TYPE <SearchName>,<Type>
SEARch:TRIGger:TBTO:TYPE? <SearchName>

Selects the type of frame to be searched for.

Parameters:
<Type> STARt | MAC | IDLE | ERRor

STARt
Start of frame.

MAC
MAC frame. This frame contains information that define how to go about transmitting and receiving frames.

IDLE
IDLE frame. This frame is used for clock synchronization.

ERRor
Error frame. This frame contains erroneous bits.

*RST: STARt

Parameters for setting and query:
<SearchName>

Manual operation: See "Type" on page 895

SEARch:RESult:TBTO:FRAMe<fr>:WORD<w>:VALue? 2520
SEARch:RESult:TBTO:FRAMe<fr>:WORD<w>:VSTR? 2521

SEARch:RESult:TBTO:FCOunt? <SearchName>

Returns the number of decoded frames within the search result.

Query parameters:
<SearchName>

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:TBTO:FRAMe<fr>:CRC? <SearchName>

Returns the CRC checksum of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<CRC> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:TBTO:FRAMe<fr>:DATA? <SearchName>

Returns the data for the selected frame.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Data>

Usage: Query only

SEARch:RESult:TBTO:FRAMe<fr>:DESTaddress? <SearchName>

Returns the destination address of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<DestAddress> String parameter

Usage: Query only

SEARch:RESult:TBTO:FRAMe<fr>:DSYMbol? <SearchName>

Returns the destination symbols of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<DestTranslation>

Usage: Query only

SEARch:RESult:TBTO:FRAMe<fr>:FTYPe? <SearchName>

Returns the type of frame for the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameType> IDLE | MAC | OAM | RSFEC | BH | CTLADDR | CTLCODE | ZEROTSYM | UNKNown

IDLE
IDLE frame. This frame is used for clock synchronization.

MAC
MAC frame. This frame contains information that define how to go about transmitting and receiving frames.

OAM
Operations, administration and maintenance (OAM) frame.

RSFEC
Reed Solomon forward error correction check frame.

BH
BASE-H fame.

CTLADDR
Control address frame.

CTLCODE
Control code frame.

ZEROTSYM
Zero terrnary symbol frame.

UNKNown
No meaningful frame can be determined.

*RST: MAC

Usage: Query only

SEARch:RESult:TBTO:FRAMe<fr>:NUMWords? <SearchName>

Returns the number of decoded words for the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<NumWords> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:TBTO:FRAMe<fr>:SRCaddress? <SearchName>

Returns the source address of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<SourceAddress> String parameter

Usage: Query only

SEARch:RESult:TBTO:FRAMe<fr>:SSYMbol? <SearchName>

Returns the source symbols of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<SrcTranslation>

Usage: Query only

SEARch:RESult:TBTO:FRAMe<fr>:STARt? <SearchName>

Returns the start time of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:TBTO:FRAMe<fr>:STATe? <SearchName>

Returns the state of the frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<State> OK | ERRFEC | ERRZERO | ERROOR | ERRCRC | INComplete

OK
Valid frame.

ERRFEC
Reed-Solomon forward error correction.

ERRZERO
Zero ternary symbol pair error.

ERROOR
Values are out of range error.

ERR_CRC
Erroneous frame due to CRC error.

INComplete
Incomplete frame.

*RST: OK

Usage: Query only

SEARch:RESult:TBTO:FRAMe<fr>:STOP? <SearchName>

Returns the end time of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:TBTO:FRAMe<fr>:TYPE? <SearchName>

Returns the value of length / type field of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<TypeLen> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:TBTO:FRAMe<fr>:WORD<w>:TYPE? <SearchName>

Returns the data type of the selected word within the search result.

Suffix:
<fr> *
Selects the frame.

<w> *
Selects the word.

Query parameters:
<SearchName>

Return values:
<WordType>

Usage: Query only

SEARch:RESult:TBTO:FRAMe<fr>:WORD<w>:VALue? <SearchName>

Returns the data value of the selected word within the search result.

Suffix:
<fr> *
Selects the frame.

<w> *
Selects the word.

Query parameters:
<SearchName>

Return values:
<WordValue> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:TBTO:FRAMe<fr>:WORD<w>:VSTR? <SearchName>

Returns the string equivalent of data value for the selected cell.

Suffix:
<fr> *

<w> *

Query parameters:
<SearchName>

Return values:
<WordValString>

Usage: Query only

27.18.24 USB (option R&S RTO6-K570)

- Configuration....2521
- Trigger....2525
- Decode results....2540
- Search settings....2546
- Search results....2562

27.18.24.1 Configuration

In all `BUS<b>:USB` commands, the suffix <b> selects the serial bus.

BUS<b>:USB:TECHnology....2522
BUS<b>:USB:DPLus:SOURce....2522
BUS<b>:USB:DMINus:SOURce....2522
BUS<b>:USB:DIFFerential:SOURce....2523
BUS<b>:USB:DATA:SOURce....2523
BUS<b>:USB:STRobe:SOURce....2523
BUS<b>:USB:DPLus:THReshold....2524

BUS<b>:USB:DMINus:THReshold....2524
BUS<b>:USB:DIFFerential:THReshold....2524
BUS<b>:USB:DATA:THReshold....2524
BUS<b>:USB:STRobe:THReshold....2525

BUS<b>:USB:TECHnology <ProtocolType>

Defines the USB protocol technology and transmission speed.

Suffix:
<b> 1..4

Parameters:
<ProtocolType> LOW | FULL | HIGH | HSIC

LOW
USB low speed protocol (1.5 Mbit/s)

FULL
USB full speed protocol (12 Mbit/s)

HIGH
USB high speed protocol (480 Mbit/s)

HSIC
USB high speed inter-chip (HSIC) protocol (480 Mbit/s)

*RST: LOW

Manual operation: See "Protocol type" on page 907

BUS<b>:USB:DPLus:SOURce <SourceDplus>

Selects the source for the D+ data signal (in USB low speed and USB full speed protocol, only).

Suffix:
<b> 1..4

Parameters:
<SourceDplus> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

*RST: C1W1

Usage: Asynchronous command

Manual operation: See "D+, D-" on page 910

BUS<b>:USB:DMINus:SOURce <SourceDminus>

Selects the source for the D- data signal (in USB low speed and USB full speed protocol, only).

Suffix:
<b> 1..4

Parameters:
<SourceDminus> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
*RST: C2W1

Usage: Asynchronous command

Manual operation: See "D+, D-" on page 910

BUS<b>:USB:DIFFerential:SOURce <SrcDiff>

Selects the source for the differential signal in the USB high speed protocol.

Suffix:
<b> 1..4

Parameters:
<SrcDiff> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
*RST: C1W1

Usage: Asynchronous command

Manual operation: See "Differential" on page 910

BUS<b>:USB:DATA:SOURce <SourceData>

Selects the source for the data signal in the USB HSIC protocol.

Suffix:
<b> 1..4

Parameters:
<SourceData> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
*RST: C1W1

Usage: Asynchronous command

Manual operation: See "Data, Strobe" on page 911

BUS<b>:USB:STRobe:SOURce <SourceStrobe>

Selects the source for the strobe signal in the USB HSIC protocol.

Suffix:
<b> 1..4

Parameters:
<SourceStrobe> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
*RST: C2W1

Usage: Asynchronous command

Manual operation: See "Data, Strobe" on page 911

BUS<b>:USB:DPLus:THReshold <ThresholdDplus>

Defines the threshold level for the D+ data signal (in USB low speed and USB full speed protocol, only).

Suffix:
<b> 1..4

Parameters:
<ThresholdDplus> Range: -5 to 5
Increment: 0.01
*RST: 1.55
Default unit: V

Manual operation: See "Thresholds" on page 911

BUS<b>:USB:DMINus:THReshold <ThresDminus>

Defines the threshold level for the D- data signal (in USB low speed and USB full speed protocol, only).

Suffix:
<b> 1..4

Parameters:
<ThresDminus> Range: -5 to 5
Increment: 0.01
*RST: 1.55
Default unit: V

Manual operation: See "Thresholds" on page 911

BUS<b>:USB:DIFFerential:THReshold <ThresDiff>

Defines the threshold level for the differential signal in the USB high speed protocol.

Suffix:
<b> 1..4

Parameters:
<ThresDiff> Range: -2 to 2
Increment: 0.01
*RST: 0
Default unit: V

Manual operation: See "Thresholds" on page 911

BUS<b>:USB:DATA:THReshold <ThresholdData>

Defines the threshold level for the data signal in the USB HSIC protocol.

Suffix:
<b> 1..4

Parameters:
<ThresholdData> Range: -2 to 2
Increment: 0.01
*RST: 0.65
Default unit: V

Manual operation: See "Thresholds" on page 911

BUS<b>:USB:STRobe:THReshold <ThresStrobe>

Defines the threshold level for the strobe signal in the USB HSIC protocol.

Suffix:
<b> 1..4

Parameters:
<ThresStrobe> Range: -2 to 2
Increment: 0.01
*RST: 0.65
Default unit: V

Manual operation: See "Thresholds" on page 911

27.18.24.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:USB:WSTC....2540

TRIGger<t>:USB:TYPE <Type>

Selects the trigger type for USB analysis. The available trigger types depend on the activated USB protocol type.

Suffix:

<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:

<Type> SOP | EOP | RST | SUSPend | RESume | TOKen | DATA | HANDshake | SPECial | ERRCond

SOP
Sets the trigger to the SOP (start of packet) field. The start of packet condition is the end of the SYNC field. The trigger instant is the end of the SOP field.

EOP
Sets the trigger to the EOP (end of packet) field. Not available for USB High Speed and USB HSIC protocol types. The trigger instant is the beginning of the EOP field.

RST
Sets the trigger to the Reset field. Not available for USB High Speed and USB HSIC protocol types. For more information on the reset condition, see the USB standard. The trigger instant is the end of the 10 ms period after the SE0 field.

SUSPend
Sets the trigger to the Suspend field. Not available for USB High Speed and USB HSIC protocol types. For more information on the suspend condition, see the USB standard. The trigger instant will be declared after the defined 3 ms timeout.

RESume
Sets the trigger to the Resume field. Not available for USB High Speed and USB HSIC protocol types. For more information on the resume condition, see the USB standard. The trigger instant will be declared after the defined 20 ms timeout.

TOKen
Sets the trigger to one out of four different token trigger types: OUT, IN, SOF, or SETUP.

DATA
Sets the trigger to one out of four different data trigger types: DATA0, DATA1, DATA2, or MDATA.

HANDshake
Sets the trigger to one out of four different handshake trigger types: ACK, NAK, STALL, or NYET.

SPECial
Sets the trigger to one out of four different Special PID trigger types: PREamble, ERR, SPLIT, or PING.

ERRCond
Sets the trigger to one out of seven different error condition trigger types: PID error, CRC5 error, CRC16 error, Bitstuffing error, Unexpected PID error, SE1 error, or Glitching error.

*RST: SOP

Manual operation: See "Trigger type USB" on page 912

TRIGger<t>:USB:ACONdition <AddressOperator>

Sets the operator to set a specific address or an address range. The address values are set with `TRIGger<t>:USB:AMIN` and `TRIGger<t>:USB:AMAX`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<AddressOperator> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one address value to be set using `TRIGger<t>:USB:AMIN`.

INRange | OORange
In range, out of range. These conditions require an address range to be set using `TRIGger<t>:USB:AMIN` and `TRIGger<t>:USB:AMAX`.

*RST: OFF

Manual operation: See "Address" on page 917

TRIGger<t>:USB:AMIN <Address>

Specifies the address, or sets the the start value of an address range. The string parameter does not accept the bit value X (don't care).

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<Address>

Manual operation: See "Address" on page 917

TRIGger<t>:USB:AMAX <AddressTo>

Sets the the end value of an address range if `TRIGger<t>:USB:ACONdition` is set to `INRange` or `OORange`. The string parameter does not accept the bit value X (don't care).

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<AddressTo>

Manual operation: See "Address" on page 917

TRIGger<t>:USB:DATA <USBDataType>

Sets the trigger to one out of four different payload data types: DATA0, DATA1, DATA2, or MDATA.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<USBDataType> D0 | D1 | D2 | MD

D0
Sets the trigger to the DATA0 field (even PID).

D1
Sets the trigger to the DATA1 field (odd PID).

D2
Sets the trigger to the DATA2 field (data packet PID for high-speed, high bandwidth isochronous transaction in a microframe).

MD
Sets the trigger to the MDATA field (high-speed data packet PID for split and high bandwidth isochronous transactions).

*RST: D0

Manual operation: See "Data" on page 914

TRIGger<t>:USB:DCONdition <OperatorData>

Sets the operator (equal or unequal) to set a specific payload data pattern.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<OperatorData> OFF | ANY | EQUal | NEQual
*RST: EQUal

Manual operation: See "Payload" on page 917

TRIGger<t>:USB:DPOPerator <DataPosOperator>

Sets the operator (any or equal) for the payload data index position.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<DataPosOperator> ANY | OFF | EQUal

ANY = OFF
The position of the bit pattern within the payload data is not relevant.

EQUal
Sets the operator for specifying a special start position for the bit pattern within the payload data.

*RST: ANY

Manual operation: See "Payload" on page 917

TRIGger<t>:USB:DPOSition <DataPosition>

Specifies the position within a payload data packet, in which a special data pattern is to be searched.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<DataPosition> Range: 0 to 1024
Increment: 1
*RST: 0

Manual operation: See "Payload" on page 917

TRIGger<t>:USB:ECONdition <EndpointOperator>

Sets the operator to set a specific endpoint or an endpoint range. The endpoint values are set with `TRIGger<t>:USB:EMIN` and `TRIGger<t>:USB:EMAX`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<EndpointOperator> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one endpoint value to be set using `TRIGger<t>:USB:EMIN`.

INRange | OORange
In range, out of range. These conditions require a range of endpoint values to be set using `TRIGger<t>:USB:EMIN` and `TRIGger<t>:USB:EMAX`.

*RST: OFF

Manual operation: See "End Point" on page 917

TRIGger<t>:USB:EMIN <Endp>

Specifies the endpoint, or sets the the start value of an endpoint range.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<Endp>

Manual operation: See "End Point" on page 917

TRIGger<t>:USB:EMAX <EndpTo>

Sets the the end value of an endpoint range if `TRIGger<t>:USB:ECONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<EndpTo>

Manual operation: See "End Point" on page 917

TRIGger<t>:USB:ERRC <ErrorType>

Sets the trigger to an error condition type.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<ErrorType> ANY | PIDerror | CRC5error | CRC16error | BTST | UNEXpid | SE1error | GLITcherr

ANY
Triggers on any of the errors listed below.

PIDerror
Triggers on any packet identifier error.

CRC5error
Triggers on any CRC5 error event.

CRC16error
Triggers on any CRC16 error event.

BTST
Triggers on any bitstuffing error event (erroneous or missing bit stuffing sequence, see USB standard).

UNEXpid
Triggers on any unexpected PID error (illegal PID, that is not allowed in USB low speed and USB full speed protocols, especially PID's announcing packets such as SPLIT, DATA2, MDATA, or other noncompliant packets).

SE1error
Triggers on the illegal bus state Single Ended 1 (SE1 = both lines high).

GLITcherr
Triggers on any glitching error (illegal bit period, see USB standard for the definition of glitching).

*RST: ANY

Manual operation: See "Error condition" on page 916

TRIGger<t>:USB:FCONdition <FrameOperator>

Sets the operator to set a specific frame number or a frame number range. The frame number values are set with `TRIGger<t>:USB:FMIN` and `TRIGger<t>:USB:FMAX`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<FrameOperator> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one frame number value to be set using `TRIGger<t>:USB:FMIN`.

INRange | OORange
In range, out of range. These conditions require a range of frame number values to be set using `TRIGger<t>:USB:FMIN` and `TRIGger<t>:USB:FMAX`.

*RST: OFF

Manual operation: See "Frame number" on page 918

TRIGger<t>:USB:FMIN <FrameNumber>

Specifies the frame number, or sets the the start value of a frame number range.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<FrameNumber>

Manual operation: See "Frame number" on page 918

TRIGger<t>:USB:FMAX <FrameNumberTo>

Sets the the end value of a frame number range if `TRIGger<t>:USB:FCONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<FrameNumberTo>

Manual operation: See "Frame number" on page 918

TRIGger<t>:USB:HAND <HandshakeType>

Sets the trigger to one out of four different handshake types: ACK, NAK, STALI, or NYET.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<HandshakeType> ACK | NAK | STALI | NYET

ACK
Sets the trigger to the ACK field (acknowledgment of error-free data packet).

NAK
Sets the trigger to the NAK field (non-acknowledgment, no successful data transmission).

STALI
Sets the trigger to the STALL field (endpoint is halted or a control pipe request is not supported).

NYET
Sets the trigger to the NYET field (no response yet from receiver).

*RST: ACK

Manual operation: See "Handshake" on page 915

TRIGger<t>:USB:PATT <PayloadMuster>

Specifies the payload data pattern that is to be searched.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<PayloadMuster>

Manual operation: See "Payload" on page 917

TRIGger<t>:USB:PCONdition <OperatorPort>

Sets the operator to set a specific port number or a port number range. The port number values are set with `TRIGger<t>:USB:PMIN` and `TRIGger<t>:USB:PMAX`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<OperatorPort> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one port number to be set using `TRIGger<t>:USB:PMIN`.

INRange | OORange
In range, out of range. These conditions require a port number range to be set using `TRIGger<t>:USB:PMIN` and `TRIGger<t>:USB:PMAX`.

*RST: OFF

Manual operation: See "Port" on page 918

TRIGger<t>:USB:PMIN <Port>

Specifies the port number, or sets the the start value of a port number range.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<Port>

Manual operation: See "Port" on page 918

TRIGger<t>:USB:PMAX <PortTo>

Sets the the end value of a port number range if `TRIGger<t>:USB:PCONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<PortTo>

Manual operation: See "Port" on page 918

TRIGger<t>:USB:SCONdition <OperatorSEU>

Sets the operator to set a specific SEU or an SEU range. The SEU values are set with `TRIGger<t>:USB:SMIN` and `TRIGger<t>:USB:SMAX`.

For SEU, see "SEU" on page 919.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<OperatorSEU> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one SEU value to be set using `TRIGger<t>:USB:SMIN`.

INRange | OORange
In range, out of range. These conditions require a range of SEU values to be set using `TRIGger<t>:USB:SMIN` and `TRIGger<t>:USB:SMAX`.

*RST: OFF

Manual operation: See "SEU" on page 919

TRIGger<t>:USB:SMIN <SEU>

Specifies the SEU, or sets the the start value of an SEU range.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<SEU>

Manual operation: See "SEU" on page 919

TRIGger<t>:USB:SMAX <SEUTo>

Sets the the end value of an SEU range if `TRIGger<t>:USB:SCONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<SEUTo>

Manual operation: See "SEU" on page 919

TRIGger<t>:USB:SPEC <USBSpecialType>

Sets the trigger to one out of four different Special PID types: PREamble, ERR, SPLit, or PING.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<USBSpecialType> PREamble | ERR | SPLit | PING

PREamble
Sets the trigger to the PREamble PID

ERR
Sets the trigger to the ERRor PID

SPLit
Sets the trigger to the SPLIT PID (in USB high speed transactions)

PING
Sets the trigger to the PING PID (in USB high speed transactions, flow control probe for a bulk/control endpoint)

*RST: PREamble

Manual operation: See "Special PID" on page 915

TRIGger<t>:USB:STCO <SC>

Sets the trigger to a specific start-split or complete-split transaction endpoint.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<SC> ONE | ZERO | DC

ONE
SC = 1 represents a complete-split (CSPLIT) transaction.

ZERO
SC = 0 represents a start-split (SSPLIT) transaction.

DC
SC = X represents "don't care" (DC)

*RST: DC

Manual operation: See "SC" on page 918

TRIGger<t>:USB:TCONdition <OperatorET>

Sets the operator to set a specific endpoint type (ET) or an ET range. The ET values are set with `TRIGger<t>:USB:TMIN` and `TRIGger<t>:USB:TMAX`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<OperatorET> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

OFF = ANY
The position of the endpoint type is not relevant.

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one ET value to be set using `TRIGger<t>:USB:TMIN`.

INRange | OORange
In range, out of range. These conditions require a range of ET values to be set using `TRIGger<t>:USB:SMIN` and `TRIGger<t>:USB:SMAX`.

*RST: OFF

Manual operation: See "ET" on page 919

TRIGger<t>:USB:TMIN <ET>

Specifies the endpoint type, or sets the the start value of an endpoint type range.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<ET>

Manual operation: See "ET" on page 919

TRIGger<t>:USB:TMAX <ETTo>

Sets the the end value of an endpoint type range if `TRIGger<t>:USB:TCONdition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<ETTo>

Manual operation: See "ET" on page 919

TRIGger<t>:USB:TOKen <USBTokenType>

Sets the trigger to one out of four different token types: OUT, IN, SOF, or SETup.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<USBTokenType> OUT | IN | SOF | SETup

OUT
Sets the trigger to the OUT token (OUT packet from host to device).

IN
Sets the trigger to the IN token (IN packet from device to host).

SOF
Sets the trigger to the SOF token (start of frame marker and frame number).

SETup
Sets the trigger to the SETUP token (address and endpoint number in OUT transaction for setup to a control pipe).

*RST: OUT

Manual operation: See "Token" on page 914

TRIGger<t>:USB:WADD <AddressCheck>

Defines, whether the address check shall be activated or not.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<AddressCheck> OFF | ON
*RST: OFF

Manual operation: See "Address" on page 917

TRIGger<t>:USB:WEND <EndpointCheck>

Defines, whether the endpoint check shall be activated or not.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<EndpointCheck> OFF | ON
*RST: OFF

Manual operation: See "End Point" on page 917

TRIGger<t>:USB:WETCheck <WithETCheck>

Defines, whether the Endpoint Type (ET) check shall be activated or not.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<WithETCheck> OFF | ON
*RST: OFF

Manual operation: See "ET" on page 919

TRIGger<t>:USB:WFRN <FrameCheck>

Defines, whether the frame number check shall be activated or not.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<FrameCheck> OFF | ON
*RST: OFF

Manual operation: See "Frame number" on page 918

TRIGger<t>:USB:WPAY <PayloadCheck>

Defines, whether the payload data check shall be activated or not.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<PayloadCheck> OFF | ON
*RST: OFF

Manual operation: See "Payload" on page 917

TRIGger<t>:USB:WPID <WithPIDCheck>

Defines, whether the packet ID error check shall be activated or not.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<WithPIDCheck> OFF | ON
*RST: OFF

Manual operation: See "PID error" on page 917

TRIGger<t>:USB:WPOR <WithPortCheck>

Defines, whether the port check shall be activated or not.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<WithPortCheck> OFF | ON
*RST: OFF

Manual operation: See "Port" on page 918

TRIGger<t>:USB:WSEU <WithSEUCheck>

Defines, whether the SEU check shall be activated or not.

For SEU, see "SEU" on page 919.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<WithSEUCheck> OFF | ON
*RST: OFF

Manual operation: See "SEU" on page 919

TRIGger<t>:USB:WSTC <WithSCCheck>

Defines, whether the Start / Complete (SC) check shall be activated or not.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<WithSCCheck> OFF | ON
*RST: OFF

Manual operation: See "SC" on page 918

27.18.24.3 Decode results

In all `BUS<b>:USB:PACKet<pa>` commands, the suffix <b> selects the serial bus and the suffix <pa> selects the packet number in the decode table.

► Query the status of packet #19: `BUS:USB:PACKet19:STAT?`

The result of this remote command query should be "OK".

BUS<b>:USB:PACKet<pa>:PID? 2541
BUS<b>:USB:PACKet<pa>:ADDRess? 2542
BUS<b>:USB:PACKet<pa>:CRC? 2542
BUS<b>:USB:PACKet<pa>:DATA? 2542
BUS<b>:USB:PACKet<pa>:ENDPoint? 2543
BUS<b>:USB:PACKet<pa>:ET? 2543
BUS<b>:USB:PACKet<pa>:FRAMe? 2543
BUS<b>:USB:PACKet<pa>:PORT? 2544
BUS<b>:USB:PACKet<pa>:SC? 2544
BUS<b>:USB:PACKet<pa>:SEU? 2544
BUS<b>:USB:PACKet<pa>:STARt? 2545

BUS<b>:USB:PACKet<pa>:STATus? 2545
BUS<b>:USB:PACKet<pa>:STOP? 2545
BUS<b>:USB:PCOunt? 2546

BUS<b>:USB:PACKet<pa>:PID?

Returns the packet PID for the selected serial bus and packet number.

Suffix:

<b> 1..4

<pa> *

Return values:

<PID> RES | OUT | ACK | DATA0 | DATa0 | PING | SOF | NYET | DATA2 | DATa2 | SPLIT | SPLit | IN | NAK | DATA1 | DATa1 | PRE | SETUP | SETup | STALL | STALI | MDATA | MDATa | UNK

RES
RES = Reserved

OUT
OUT Token PID

IN
IN Token PID

SOF
Start Of Frame PID

SETUP = SETup
SETUP PID

DATA0 = DATa0
DATA0 PID, even PID

DATA1 = DATa1
DATA1 PID, odd PID

DATA2 = DATa2
DATA2 PID (only valid in USB high speed and USB HSIC protocols)

MDATA = MDATa
MDATA PID (only valid in USB high speed and USB HSIC protocols)

ACK
ACKnowledgment PID

NAK
Non-AcKnowledgment PID

STALL = STALI
STALL PID

NYET
Not ready YET (only valid in USB high speed and USB HSIC protocols)

PRE
PREamble PID (only valid in USB high speed and USB HSIC protocols)

SPLIT = SPLit
SPLIT PID (only valid in USB high speed and USB HSIC protocols)

PING
PING PID (only valid in USB high speed and USB HSIC protocols)

UNK
UNK = Unknown PID

*RST: RES

Usage: Query only

BUS<b>:USB:PACKet<pa>:ADDRess?

Returns the packet address for the selected serial bus and packet number.

Suffix:
<b> 1..4

<pa> *

Return values:
<Addr> Range: 0 to 127
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:USB:PACKet<pa>:CRC?

Returns the packet CRC (Cyclic Redundancy Code) for the selected serial bus and packet number.

Suffix:
<b> 1..4

<pa> *

Return values:
<CRC> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:USB:PACKet<pa>:DATA?

Returns the payload data from the packet with the selected packet number (for the selected serial bus).

Suffix:
<b> 1..4

<pa> *

Return values:
<Data> Comma-separated sequence of integer values (N, D1, D2,…, DN). N is the number of bytes in the packet. and D1…DN are the values of the bytes.

Example:
```
BUS:USB:PACKet4:DATA?
<-- 6,18,52,86,120,154,188
```

Usage: Query only

BUS<b>:USB:PACKet<pa>:ENDPoint?

Returns the endpoint for the selected serial bus and packet number.

Suffix:
<b> 1..4

<pa> *

Return values:
<Endp> Range: 0 to 15
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:USB:PACKet<pa>:ET?

Returns the endpoint type (ET) for the selected serial bus and packet number.

Suffix:
<b> 1..4

<pa> *

Return values:
<ET> Range: 0 to 3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:USB:PACKet<pa>:FRAMe?

Returns the frame number for the selected serial bus and packet number.

Suffix:
<b> 1..4

<pa> *

Return values:
<FrameNo> Range: 0 to 2047
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:USB:PACKet<pa>:PORT?

Returns the port number for the selected serial bus and packet number.

Suffix:
<b> 1..4

<pa> *

Return values:
<Port> Range: 0 to 127
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:USB:PACKet<pa>:SC?

Returns the Start- / Complete-split transaction (SSPLIT / CSPLIT) flag bits for the selected serial bus and packet number.

Suffix:
<b> 1..4

<pa> *

Return values:
<SC>

Usage: Query only

BUS<b>:USB:PACKet<pa>:SEU?

Returns the SEU values for the selected serial bus and packet number.

For SEU, see "SEU" on page 919.

Suffix:
<b> 1..4

<pa> *

Return values:
<SEU> Range: 0 to 3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:USB:PACKet<pa>:STARt?

Returns the start position of the packet with the selected packet number (for the selected serial bus).

Suffix:
<b> 1..4

<pa> *

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:USB:PACKet<pa>:STATus?

Returns the status of the packet with the selected packet number (for the selected serial bus).

Suffix:
<b> 1..4

<pa> *

Return values:
<State> OK | PID | CRC | BTST | GLITCH | GLITch | BYTE
*RST: OK

Usage: Query only

BUS<b>:USB:PACKet<pa>:STOP?

Returns the stop time of the packet with the selected packet number (for the selected serial bus).

Suffix:
<b> 1..4

<pa> *

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:USB:PCOunt?

Returns the packet count for the selected serial bus, i.e. the number of packets in the present acquisition.

Suffix:
<b> 1..4

Return values:
<Count> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:TRIGger:USB:ACONdition <SearchName>,<AddressOperator>
SEARch:TRIGger:USB:ACONdition? <SearchName>

Sets the operator to set a specific address or an address range.

Parameters:

<AddressOperator> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one address value to be set using `SEARch:TRIGger:USB:AMIN`.

INRange | OORange
In range, out of range. These conditions require an address range to be set using `SEARch:TRIGger:USB:AMIN` and `SEARch:TRIGger:USB:AMAX`.

*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Address check" on page 924

SEARch:TRIGger:USB:AMIN <SearchName>,<Address>
SEARch:TRIGger:USB:AMIN? <SearchName>

Specifies an address, or sets the start value of an address range. The string parameter does not accept the bit value X (don't care).

Parameters:
<Address>

Parameters for setting and query:
<SearchName>

Manual operation: See "Address check" on page 924

SEARch:TRIGger:USB:AMAX <SearchName>,<AddressTo>
SEARch:TRIGger:USB:AMAX? <SearchName>

Sets the the end value of an address range if `TRIGger<t>:USB:ACONdition` is set to `INRange` or `OORange`. The string parameter does not accept the bit value X (don't care).

Parameters:
<AddressTo>

Parameters for setting and query:
<SearchName>

Manual operation: See "Address check" on page 924

SEARch:TRIGger:USB:BITSterror <SearchName>,<BitstuffError>
SEARch:TRIGger:USB:BITSterror? <SearchName>

Defines, whether a search for any bitstuffing error shall be activated or not.

Parameters:
<BitstuffError> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Error condition" on page 924

SEARch:TRIGger:USB:CRC16error <SearchName>,<CRC16Error>
SEARch:TRIGger:USB:CRC16error? <SearchName>

Defines, whether a search for any CRC16 error shall be activated or not.

Parameters:
<CRC16Error> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Error condition" on page 924

SEARch:TRIGger:USB:CRC5error <SearchName>,<CRC5Error>
SEARch:TRIGger:USB:CRC5error? <SearchName>

Defines, whether a search for any CRC5 error shall be activated or not.

Parameters:
<CRC5Error> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Error condition" on page 924

SEARch:TRIGger:USB:DATA <SearchName>,<USBDataType>
SEARch:TRIGger:USB:DATA? <SearchName>

Defines, which data packet type is searched for: "DATA0", "DATA1", "DATA2", or "MDATA", as well as "Any" data packet.

Parameters:
<USBDataType> ANY | D0 | D1 | D2 | MD

ANY
Searches for any of the data packet types listed below

D0
Searches for a DATA0 packet (even PID)

D1
Searches for a DATA1 packet (odd PID)

D2
Searches for a DATA2 packet (high-speed data packet for high bandwidth isochronous transaction in a microframe)

MD
Searches for an MDATA packet (high-speed data packet for split and high bandwidth isochronous transactions)

*RST: D0

Parameters for setting and query:
<SearchName>

Manual operation: See "Data" on page 923

SEARch:TRIGger:USB:DCONdition <SearchName>,<OperatorData>
SEARch:TRIGger:USB:DCONdition? <SearchName>

Sets the operator (equal or unequal) to set a specific payload data pattern.

Parameters:
<OperatorData> OFF | ANY | EQUal | NEQual

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Payload check" on page 925

SEARch:TRIGger:USB:DPOPerator <SearchName>,<DataPosOperator>
SEARch:TRIGger:USB:DPOPerator? <SearchName>

Sets the operator (any or equal) for the payload data index position.

Parameters:
<DataPosOperator> ANY | OFF | EQUal

ANY = OFF
The position of payload data is not relevant for the search condition.

*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "Payload check" on page 925

SEARch:TRIGger:USB:DPOSition <SearchName>,<DataPosition>
SEARch:TRIGger:USB:DPOSition? <SearchName>

Specifies the position within a payload data packet, in which a special data pattern is to be searched.

Parameters:
<DataPosition> Range: 0 to 1024
Increment: 1
*RST: 0

Parameters for setting and query:
<SearchName>

Manual operation: See "Payload check" on page 925

SEARch:TRIGger:USB:ECONdition <SearchName>,<EndpointOperator>
SEARch:TRIGger:USB:ECONdition? <SearchName>

Sets the operator to set a specific endpoint or an endpoint range. The endpoint values are set with `SEARch:TRIGger:USB:EMIN` and `SEARch:TRIGger:USB:EMAX`.

Parameters:
<EndpointOperator> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one endpoint value to be set using `SEARch:TRIGger:USB:EMIN`.

INRange | OORange
In range, out of range. These conditions require a range of endpoint values to be set using `SEARch:TRIGger:USB:EMIN` and `SEARch:TRIGger:USB:EMAX`.

*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "End Point check" on page 924

SEARch:TRIGger:USB:EMIN <SearchName>,<Endp>
SEARch:TRIGger:USB:EMIN? <SearchName>

Specifies an endpoint, or sets the start value of an endpoint range.

Parameters:
<Endp>

Parameters for setting and query:
<SearchName>

Manual operation: See "End Point check" on page 924

SEARch:TRIGger:USB:EMAX <SearchName>,<EndpTo>
SEARch:TRIGger:USB:EMAX? <SearchName>

Sets the the end value of an endpoint range if `TRIGger<t>:USB:ECONdition` is set to `INRange` or `OORange`.

Parameters:
<EndpTo>

Parameters for setting and query:
<SearchName>

Manual operation: See "End Point check" on page 924

SEARch:TRIGger:USB:FCONdition <SearchName>,<FrameOperator>
SEARch:TRIGger:USB:FCONdition? <SearchName>

Sets the operator to set a specific frame number or a frame number range. The frame number values are set with `SEARch:TRIGger:USB:FMIN` and `SEARch:TRIGger:USB:FMAX`.

Parameters:
<FrameOperator> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one frame number value to be set using `SEARch:TRIGger:USB:FMIN`.

INRange | OORange
In range, out of range. These conditions require a range of frame number values to be set using `SEARch:TRIGger:USB:FMIN` and `SEARch:TRIGger:USB:FMAX`.

*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame number check" on page 925

SEARch:TRIGger:USB:FMIN <SearchName>,<FrameNumber>
SEARch:TRIGger:USB:FMIN? <SearchName>

Specifies a frame number, or sets the start value of a frame number range.

Parameters:
<FrameNumber>

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame number check" on page 925

SEARch:TRIGger:USB:FMAX <SearchName>,<FrameNumberTo>
SEARch:TRIGger:USB:FMAX? <SearchName>

Sets the the end value of a frame number range if `TRIGger<t>:USB:FCONdition` is set to `INRange` or `OORange`.

Parameters:
<FrameNumberTo>

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame number check" on page 925

SEARch:TRIGger:USB:GLITcherror <SearchName>,<GlitchError>
SEARch:TRIGger:USB:GLITcherror? <SearchName>

Defines, whether a search for any glitch error shall be activated or not.

Parameters:
<GlitchError> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Error condition" on page 924

SEARch:TRIGger:USB:HAND <SearchName>,<HandshakeType>
SEARch:TRIGger:USB:HAND? <SearchName>

Defines, which handshake type is searched for.

Parameters:
<HandshakeType> ANY | ACK | NAK | STALl | NYET
*RST: ACK

Parameters for setting and query:
<SearchName>

Manual operation: See "Handshake" on page 923

SEARch:TRIGger:USB:PATT <SearchName>,<PayloadMuster>
SEARch:TRIGger:USB:PATT? <SearchName>

Defines the payload data pattern to search for.

Parameters:
<PayloadMuster>

Parameters for setting and query:
<SearchName>

Manual operation: See "Payload check" on page 925

SEARch:TRIGger:USB:PCONdition <SearchName>,<OperatorPort>
SEARch:TRIGger:USB:PCONdition? <SearchName>

Sets the operator to set a specific port number or a port number range. The port number values are set with `SEARch:TRIGger:USB:PMIN` and `SEARch:TRIGger:USB:PMAX`.

Parameters:

<OperatorPort> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one port number to be set using `SEARch:TRIGger:USB:PMIN`.

INRange | OORange
In range, out of range. These conditions require a port number range to be set using `SEARch:TRIGger:USB:PMIN` and `SEARch:TRIGger:USB:PMAX`.

*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Port check" on page 926

SEARch:TRIGger:USB:PMIN <SearchName>,<Port>
SEARch:TRIGger:USB:PMIN? <SearchName>

Specifies a port number, or sets the start value of a port number range.

Parameters:
<Port>

Parameters for setting and query:
<SearchName>

Manual operation: See "Port check" on page 926

SEARch:TRIGger:USB:PMAX <SearchName>,<PortTo>
SEARch:TRIGger:USB:PMAX? <SearchName>

Sets the the end value of a port number range if `TRIGger<t>:USB:PCONdition` is set to `INRange` or `OORange`.

Parameters:
<PortTo>

Parameters for setting and query:
<SearchName>

Manual operation: See "Port check" on page 926

SEARch:TRIGger:USB:PIDerror <SearchName>,<PIDError>
SEARch:TRIGger:USB:PIDerror? <SearchName>

Defines, whether a search for any PID error shall be activated or not.

Parameters:
<PIDError> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Error condition" on page 924

SEARch:TRIGger:USB:SCONdition <SearchName>,<OperatorSEU>
SEARch:TRIGger:USB:SCONdition? <SearchName>

Sets the operator to set a specific SEU or an SEU range. The SEU values are set with `SEARch:TRIGger:USB:SMIN` and `SEARch:TRIGger:USB:SMAX`.

For SEU, see "SEU" on page 919.

Parameters:
<OperatorSEU> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one SEU value to be set using `SEARch:TRIGger:USB:SMIN`.

INRange | OORange
In range, out of range. These conditions require a range of SEU values to be set using `SEARch:TRIGger:USB:SMIN` and `SEARch:TRIGger:USB:SMAX`.

*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "SEU check" on page 926

SEARch:TRIGger:USB:SMIN <SearchName>,<SEU>
SEARch:TRIGger:USB:SMIN? <SearchName>

Specifies an SEU, or sets the start value of an SEU range.

Parameters:
<SEU>

Parameters for setting and query:
<SearchName>

Manual operation: See "SEU check" on page 926

SEARch:TRIGger:USB:SMAX <SearchName>,<SEUTo>
SEARch:TRIGger:USB:SMAX? <SearchName>

Sets the the end value of an SEU range if `TRIGger<t>:USB:SCONdition` is set to `INRange` or `OORange`.

Parameters:
<SEUTo>

Parameters for setting and query:
<SearchName>

Manual operation: See "SEU check" on page 926

SEARch:TRIGger:USB:SDATa <SearchName>,<DataPacket>
SEARch:TRIGger:USB:SDATa? <SearchName>

Enables the search for any data packet.

Parameters:
<DataPacket> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search types" on page 922

SEARch:TRIGger:USB:SERRor <SearchName>,<ErrorCondition>
SEARch:TRIGger:USB:SERRor? <SearchName>

Enables the search for various errors.

Parameters:
<ErrorCondition> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search types" on page 922

SEARch:TRIGger:USB:SHANdshake <SearchName>,<HandshakePacket>
SEARch:TRIGger:USB:SHANdshake? <SearchName>

Defines, whether the search for any handshake packet shall be activated or not.

Parameters:
<HandshakePacket> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search types" on page 922

SEARch:TRIGger:USB:SSOP <SearchName>,<StartofPacket>
SEARch:TRIGger:USB:SSOP? <SearchName>

Defines, whether a start of packet (SOP) search shall be activated or not.

Parameters:
<StartofPacket> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search types" on page 922

SEARch:TRIGger:USB:SSPE <SearchName>,<SpecialPacket>
SEARch:TRIGger:USB:SSPE? <SearchName>

Defines, whether the search for any special PID packet shall be activated or not.

Parameters:
<SpecialPacket> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search types" on page 922

SEARch:TRIGger:USB:SPEC <SearchName>,<USBSpecialType>
SEARch:TRIGger:USB:SPEC? <SearchName>

Defines, which special PID packet type is searched for: "PREamble", "ERR", "SPLit", "PING", or "Any" special PID packet.

Parameters:
<USBSpecialType> ANY | PREamble | ERR | SPLit | PING
ANY
Searches for any of the special PID packet types listed below

PREamble
Searches for any host-issued preamble token (enables downstream bus traffic to low speed USB devices)

ERR
Searches for any SPLIT transaction error handshake token (reuses PRE value)

SPLit
Searches for any high speed SPLIT transaction token

PING
Searches for any high speed flow control probe for a bulk/control endpoint

*RST: PREamble

Parameters for setting and query:
<SearchName>

Manual operation: See "Special PID" on page 923

SEARch:TRIGger:USB:STCO <SearchName>,<SC>
SEARch:TRIGger:USB:STCO? <SearchName>

Defines, which Start- / Complete- (SC) split transaction type is searched for: SSPLIT or CSPLIT.

Parameters:
<SC> ONE | ZERO | DC

ONE
SC = 1 represents a complete-split (CSPLIT) transaction

ZERO
SC = 0 represents a start-split (SSPLIT) transaction

DC
SC = X represents "don't care" (DC)

*RST: DC

Parameters for setting and query:
<SearchName>

Manual operation: See "SC check" on page 926

SEARch:TRIGger:USB:STOKen <SearchName>,<TokenPacket>
SEARch:TRIGger:USB:STOKen? <SearchName>

Defines, whether a search for any token packet shall be activated or not.

Parameters:
<TokenPacket> OFF | ON

*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Search types" on page 922

SEARch:TRIGger:USB:TCONdition <SearchName>,<OperatorET>
SEARch:TRIGger:USB:TCONdition? <SearchName>

Sets the operator to set a specific endpoint type (ET) or an ET range. The ET values are set with `SEARch:TRIGger:USB:TMIN` and `SEARch:TRIGger:USB:TMAX`.

Parameters:
<OperatorET> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

OFF = ANY
The endpoint type is not relevant for the search condition.

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one ET value to be set using `SEARch:TRIGger:USB:TMIN`.

INRange | OORange
In range, out of range. These conditions require a range of ET values to be set using `SEARch:TRIGger:USB:TMIN` and `SEARch:TRIGger:USB:TMAX`.

*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "ET check" on page 926

SEARch:TRIGger:USB:TMIN <SearchName>,<ET>
SEARch:TRIGger:USB:TMIN? <SearchName>

Specifies an endpoint type (ET), or sets the start value of an ET range.

Parameters:
<ET>

Parameters for setting and query:
<SearchName>

Manual operation: See "ET check" on page 926

SEARch:TRIGger:USB:TMAX <SearchName>,<ETTo>
SEARch:TRIGger:USB:TMAX? <SearchName>

Sets the the end value of an endpoint type (ET) range if `TRIGger<t>:USB:TCONdition` is set to `INRange` or `OORange`.

Parameters:
<ETTo>

Parameters for setting and query:
<SearchName>

Manual operation: See "ET check" on page 926

SEARch:TRIGger:USB:TOKen <SearchName>,<USBTokenType>
SEARch:TRIGger:USB:TOKen? <SearchName>

Defines, which token packet type is searched for: "OUT", "IN", "SOF", "SETUP", or "Any" token packet.

Parameters:
<USBTokenType> ANY | OUT | IN | SOF | SETup

ANY
Searches for any of the token packet types listed below.

OUT
Searches for an OUT token.

IN
Searches for an IN token.

SOF
Searches for a start of frame (SOF) token.

SETup
Searches for a SETup token.

*RST: OUT

Parameters for setting and query:
<SearchName>

Manual operation: See "Token" on page 923

SEARch:TRIGger:USB:WADD <SearchName>,<AddressCheck>
SEARch:TRIGger:USB:WADD? <SearchName>

Defines, whether a search for any address field shall be activated or not.

Parameters:
<AddressCheck> OFF | ON

*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Address check" on page 924

SEARch:TRIGger:USB:WEND <SearchName>,<EndpointCheck>
SEARch:TRIGger:USB:WEND? <SearchName>

Defines, whether a search for any endpoint shall be activated or not.

Parameters:
<EndpointCheck> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "End Point check" on page 924

SEARch:TRIGger:USB:WETCheck <SearchName>,<WithETCheck>
SEARch:TRIGger:USB:WETCheck? <SearchName>

Defines, whether a search for any Endpoint Type (ET) shall be activated or not.

Parameters:
<WithETCheck> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "ET check" on page 926

SEARch:TRIGger:USB:WFRN <SearchName>,<FrameCheck>
SEARch:TRIGger:USB:WFRN? <SearchName>

Defines, whether a search for any frame number shall be activated or not.

Parameters:
<FrameCheck> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Frame number check" on page 925

SEARch:TRIGger:USB:WPAY <SearchName>,<PayloadCheck>
SEARch:TRIGger:USB:WPAY? <SearchName>

Defines, whether a search for any payload data shall be activated or not.

Parameters:
<PayloadCheck> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Payload check" on page 925

SEARch:TRIGger:USB:WPID <SearchName>,<WithPIDCheck>
SEARch:TRIGger:USB:WPID? <SearchName>

Defines, whether a search for any packet ID error shall be activated or not.

Parameters:
<WithPIDCheck> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

SEARch:TRIGger:USB:WPOR <SearchName>,<WithPortCheck>
SEARch:TRIGger:USB:WPOR? <SearchName>

Defines, whether a search for any port shall be activated or not.

Parameters:
<WithPortCheck> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Port check" on page 926

SEARch:TRIGger:USB:WSEU <SearchName>,<WithSEUCheck>
SEARch:TRIGger:USB:WSEU? <SearchName>

Defines, whether a search for any SEU shall be activated or not.

For SEU, see "SEU" on page 919.

Parameters:
<WithSEUCheck> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "SEU check" on page 926

SEARch:TRIGger:USB:WSTC <SearchName>,<WithSCCheck>
SEARch:TRIGger:USB:WSTC? <SearchName>

Defines, whether a search for any Start / Complete (SC) shall be activated or not.

Parameters:
<WithSCCheck> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "SC check" on page 926

27.18.24.5 Search results

In all `SEARch:RESult:USB:PACKet<m>` commands, the suffix <m> selects the packet number in the list of search results.

SEARch:RESult:USB:PACKet<pa>:ADDRess? 2562
SEARch:RESult:USB:PACKet<pa>:CRC? 2562
SEARch:RESult:USB:PACKet<pa>:DATA? 2563
SEARch:RESult:USB:PACKet<pa>:ENDPoint? 2563
SEARch:RESult:USB:PACKet<pa>:ET? 2563
SEARch:RESult:USB:PACKet<pa>:FRAMe? 2564
SEARch:RESult:USB:PACKet<pa>:PID? 2564
SEARch:RESult:USB:PACKet<pa>:PORT? 2564
SEARch:RESult:USB:PACKet<pa>:SC? 2565
SEARch:RESult:USB:PACKet<pa>:SEU? 2565
SEARch:RESult:USB:PACKet<pa>:STARt? 2565
SEARch:RESult:USB:PACKet<pa>:STATus? 2566
SEARch:RESult:USB:PACKet<pa>:STOP? 2566
SEARch:RESult:USB:PCOunt? 2566

SEARch:RESult:USB:PACKet<pa>:ADDRess? <SearchName>

Returns the packet address for the selected packet number within the search result.

Suffix:
<pa> *

Query parameters:
<SearchName>

Return values:
<Addr> Range: 0 to 127
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:USB:PACKet<pa>:CRC? <SearchName>

Returns the packet CRC (Cyclic Redundancy Code) for the selected packet number within the search result.

Suffix:
<pa> *

Query parameters:
<SearchName>

Return values:

<CRC> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:USB:PACKet<pa>:DATA? <SearchName>

Returns the payload data from the packet with the selected packet number within the search result.

Suffix:

<pa> *

Query parameters:

<SearchName>

Return values:

<Value>

Usage: Query only

SEARch:RESult:USB:PACKet<pa>:ENDPoint? <SearchName>

Returns the endpoint for the selected packet number within the search result.

Suffix:

<pa> *

Query parameters:

<SearchName>

Return values:

<Endp> Range: 0 to 15
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:USB:PACKet<pa>:ET? <SearchName>

Returns the endpoint type (ET) for the selected packet number within the search result.

Suffix:

<pa> *

Query parameters:

<SearchName>

Return values:

<ET> Range: 0 to 3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:USB:PACKet<pa>:FRAMe? <SearchName>

Returns the frame number for the selected packet number within the search result.

Suffix:
<pa> *

Query parameters:
<SearchName>

Return values:
<FrameNo> Range: 0 to 2047
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:USB:PACKet<pa>:PID? <SearchName>

Returns the packet PID for the selected packet number within the search result.

Suffix:
<pa> *

Query parameters:
<SearchName>

Return values:
<PID> RES | OUT | ACK | DATA0 | DATa0 | PING | SOF | NYET | DATA2 | DATa2 | SPLIT | SPLit | IN | NAK | DATA1 | DATa1 | PRE | SETUP | SETup | STALL | STALI | MDATA | MDATa | UNK

For a description of the return values, see BUS<b>:USB:PACKet<pa>:PID? on page 2541.

*RST: RES

Usage: Query only

SEARch:RESult:USB:PACKet<pa>:PORT? <SearchName>

Returns the port number for the selected packet number within the search result.

Suffix:
<pa> *

Query parameters:
<SearchName>

Return values:
<Port> Range: 0 to 127
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:USB:PACKet<pa>:SC? <SearchName>

Returns the Start- / Complete-split transaction (SSPLIT / CSPLIT) flag bits for the selected packet number within the search result.

Suffix:
<pa> *

Query parameters:
<SearchName>

Return values:
<SC>

Usage: Query only

SEARch:RESult:USB:PACKet<pa>:SEU? <SearchName>

Returns the SEU values for the selected packet number within the search result.

For SEU, see "SEU" on page 919.

Suffix:
<pa> *

Query parameters:
<SearchName>

Return values:
<SEU> Range: 0 to 3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:USB:PACKet<pa>:STARt? <SearchName>

Returns the start time of the packet with the selected packet number within the search result.

Suffix:
<pa> *

Query parameters:
<SearchName>

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:USB:PACKet<pa>:STATus? <SearchName>

Returns the status of the packet with the selected packet number within the search result.

Suffix:
<pa> *

Query parameters:
<SearchName>

Return values:
<State> OK | PID | CRC | BTST | GLITCH | GLITch | BYTE
*RST: OK

Usage: Query only

SEARch:RESult:USB:PACKet<pa>:STOP? <SearchName>

Returns the stop time of the packet with the selected packet number within the search result.

Suffix:
<pa> *

Query parameters:
<SearchName>

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:USB:PCOunt? <SearchName>

Returns the search result's packet count, i.e. the number of packets found in the search result.

Query parameters:
<SearchName>

Return values:
<Count> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

27.18.25 USB 3.1 (option R&S RTO6-K570)

- Configuration....2567
- Digital signal processing (DSP)....2569
- Trigger....2571
- Decode results....2583
- Search settings....2588
- Search results....2595

27.18.25.1 Configuration

In all `BUS<b>:USBT` commands, the suffix <b> selects the serial bus.

BUS<b>:USBThree:SOURce....2567
BUS<b>:USBThree:POLarity....2567
BUS<b>:USBThree:THRHigh....2568
BUS<b>:USBThree:THRLow....2568
BUS<b>:USBThree:SCRMode....2568
BUS<b>:USBThree:TYPE....2569

BUS<b>:USBThree:SOURce <SourceData>

Selects the source for the data signal in the USB 3.1 protocol.

Suffix:
<b> 1..4

Parameters:
<SourceData> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

*RST: C1W1

Usage: Asynchronous command

Manual operation: See "Source" on page 937

BUS<b>:USBThree:POLarity <Polarity>

Defines the polarity of the data signal for the active (U0) state of the port.

Suffix:
<b> 1..4

Parameters:
<Polarity> NORMal | INVert

NORMal
Normal (non-inverted) data signal polarity

INVert
Inverted data signal polarity

*RST: NORMal

Manual operation: See "Polarity" on page 938

BUS<b>:USBThree:THRHigh <ThresholdUpper>

Defines the upper threshold level for digitization of the data signal in the USB 3.1 protocol.

Suffix:
<b> 1..4

Parameters:
<ThresholdUpper> Range: -2 to 2
Increment: 0.01
*RST: 0.05
Default unit: V

Manual operation: See "Thresholds" on page 938

BUS<b>:USBThree:THRLow <ThresholdLower>

Defines the lower threshold level for digitization of the data signal in the USB 3.1 protocol.

Suffix:
<b> 1..4

Parameters:
<ThresholdLower> Range: -2 to 2
Increment: 0.01
*RST: -0.05
Default unit: V

Manual operation: See "Thresholds" on page 938

BUS<b>:USBThree:SCRMode <ScrambleMode>

Selects if the data pattern is scrambled or unscambled.

Suffix:
<b> 1..4

Parameters:
<ScrambleMode> SCRM | NSCR

SCRM
Scrambling is enabled as specified in the standard, to minimize EMI emissions.

NSCR
No scrambling: To simplify testing and debugging, scrambling is disabled.

*RST: SCRM

Manual operation: See "Scramble Mode" on page 938

BUS<b>:USBThree:TYPE <Protocol>

Selects the USB 3.1 protocol type.

Suffix:
<b> 1..4

Parameters:
<Protocol> SS
*RST: SS

Usage: Asynchronous command

Manual operation: See "Protocol type" on page 937

27.18.25.2 Digital signal processing (DSP)

BUS<b>:CTLE:DCGain 2569
BUS<b>:CTLE:ENBLe 2569
BUS<b>:CTLE:P1FReq 2570
BUS<b>:CTLE:P2FReq 2570
BUS<b>:CTLE:Z1FReq 2570
BUS<b>:USBThree:DFE:COEFficient 2570
BUS<b>:USBThree:DFE:ENBLe 2571
BUS<b>:USBThree:DFE:ESTCoeff 2571
BUS<b>:USBThree:DFE:TCONt 2571

BUS<b>:CTLE:DCGain <DCGain>

Sets the adjustable DC gain. This value can be chosen according to the channel loss characteristics. For low-loss channels, you can set a value close to 0 dB.

Suffix:
<b> 1..4

Parameters:
<DCGain> Range: -100 to 100
Increment: 0.01
*RST: 0
Default unit: dB

Manual operation: See "DC Gain (A_{DC})" on page 939

BUS<b>:CTLE:ENBLe <EnableCTLE>

Enables the continuous time linear equalization (CTLE) equalization.

Suffix:
<b> 1..4

Parameters:
<EnableCTLE> OFF | ON
*RST: OFF

Manual operation: See "Enable" on page 939

BUS<b>:CTLE:P1FReq <PoleOneFreq>

Sets the pole 1 frequency for the transfer function of the CTLE algorithm.

Suffix:
<b> 1..4

Parameters:
<PoleOneFreq> Range: 1 to 40E+9
Increment: 1
*RST: 0
Default unit: Hz

Manual operation: See "Pole frequency (fp1)/(fp2)" on page 939

BUS<b>:CTLE:P2FReq <PoleTwoFreq>

Sets the pole 2 frequency for the transfer function of the CTLE algorithm.

Suffix:
<b> 1..4

Parameters:
<PoleTwoFreq> Range: 1 to 40E+9
Increment: 1
*RST: 0
Default unit: Hz

Manual operation: See "Pole frequency (fp1)/(fp2)" on page 939

BUS<b>:CTLE:Z1FReq <ZroOneFreq>

Sets the zero frequency for the transfer function of the CTLE algorithm.

Suffix:
<b> 1..4

Parameters:
<ZroOneFreq> Range: 1 to 40E+9
Increment: 1
*RST: 0
Default unit: Hz

Manual operation: See "Zero frequency (fz)" on page 939

BUS<b>:USBThree:DFE:COEFficient <DFE_coeff>

Sets the value of the coefficient for the DFE .

Suffix:
<b> 1..4

Parameters:

<DFE_coeff>
Range: -1 to 1
Increment: 1E-3
*RST: 0
Default unit: V

Manual operation: See "Coefficient" on page 940

BUS<b>:USBThree:DFE:ENBLe <EnableDFE>

Enables the use of the decision feedback equalization for USB 3.1.

Suffix:

<b> 1..4

Parameters:

<EnableDFE>
OFF | ON
*RST: ON

Manual operation: See "Enable" on page 940

BUS<b>:USBThree:DFE:ESTCoeff <AutoChEstimate>

Enables the use of estimate coefficients for the decision feedback equalization.

Suffix:

<b> 1..4

Parameters:

<AutoChEstimate>
OFF | ON
*RST: ON

Manual operation: See "Estimate coefficients" on page 940

BUS<b>:USBThree:DFE:TCONt <CIRLength>

Sets a number of taps for the decision feedback filter.

Suffix:

<b> 1..4

Parameters:

<CIRLength>
Range: 1 to 20
Increment: 1
*RST: 5

Manual operation: See "Number of Taps" on page 940

27.18.25.3 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

There are two commands for each parameter, that you can use for defining the USB 3.1 settings.

For example, to set the *Frame type =ACK > Field =Route String >Data* value you can use one of the following commands:

- `TRIGger:USBThree:FRAMe13:FLD1:DMIN 01100`
  Defines the parameter by using the index <m> for the frame number and <n> for the field number.
- `TRIGger:USBThree:DMIN "ACK", "Route String", 01100`
  Defines the parameter by using the frame and field name.

Table 27-10: Overview of frame and field numbers for USB 3.1, Protocol Type > Super Speed

Frame number	Frame name	Field number	Field name
1	TSEQ	1	Symbol
2	TS1	1	Train
		2	Loop
		3	Scramble
		4	LL
		5	Retimer

TRIGger<t>:USBThree:ERENable <ErrorName>,<Enabler>
TRIGger<t>:USBThree:ERRor<n>:ENABle <Enable>

Defines the error type to be triggered on. You can trigger on all error types in parallel.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<n> *
Specifies the error number.

Parameters:
<Enable> OFF | ON
*RST: ON

Example: Trigger on CRC and length errors:
`TRIGger:USBThree:ERRor1:ENABle ON`
Enables CRC Error.
`TRIGger:USBThree:ERENable "Length Error",ON`
Enables Length Error.

Manual operation: See "Error types: Item name, Enable" on page 942

TRIGger<t>:USBThree:FRENable <Frame>,<Enabler>
TRIGger<t>:USBThree:FRAMe<fr>:ENABle <Enable>

Enables or disables the checking condition for the selected frame.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the frame number.

Parameters:
<Enable> OFF | ON
*RST: OFF

Example:
`TRIGger:USBThree:FRAMe1:ENABle ON`
Enables the checking condition for the TSEQ frame.
`TRIGger:USBThree:FRENable "TS1" ON`
Enables the checking condition for the TS1 frame.

Manual operation: See "Frame type" on page 942

TRIGger<t>:USBThree:FIENable <Frame>,<Field>,<Enabler>
TRIGger<t>:USBThree:FRAMe<fr>:FIELd<o>:ENABle <CondEnabler>
TRIGger<t>:USBThree:FRAMe<fr>:FLD<fl>:ENABle <CondEnabler>

Enables or disables the checking condition for the selected field of the selected frame.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the frame number.

<fl> *
Specifies the field number within the frame.

Parameters:

<CondEnabler> OFF | ON

ON
Checking condition enabled

OFF
Checking condition disabled

*RST: OFF

Example: `TRIGger:USBThree:FRAMe1:FLD1:ENABle ON`
Enables the checking condition for the Symbol field of the TSEQ frame.
`TRIGger:USBThree:FRENable "TS1", "Loop" ON`
Enables the checking condition for the Loop field of the TS1 frame.

Manual operation: See "Field name / Condition Summary / Enable" on page 942

TRIGger<t>:USBThree:BIT <Frame>,<Field>,<Bit>
TRIGger<t>:USBThree:FRAMe<fr>:FIELd<o>:BIT <BitState>
TRIGger<t>:USBThree:FRAMe<fr>:FLD<fl>:BIT <BitState>

Sets the bit state of a field that only consists of one bit.

Suffix:

<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:

<BitState> ONE | ZERO | DC

ONE
1

ZERO
0

DC
"Don't care" (DC) = X

*RST: DC

Manual operation: See "Data BitState" on page 943

TRIGger<t>:USBThree:DMAX <Frame>,<Field>,<Data>
TRIGger<t>:USBThree:FRAMe<fr>:FIELd<o>:DMAX <DataMax>
TRIGger<t>:USBThree:FRAMe<fr>:FLD<fl>:DMAX <Data_Max>

Sets the end value of a data pattern range if `TRIGger<t>:USBThree:FRAMe<fr>:FLD<fl>:DOPerator` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:
<Data_Max>

Manual operation: See "Data" on page 943

TRIGger<t>:USBThree:DMIN <Frame>,<Field>,<Data>
TRIGger<t>:USBThree:FRAMe<fr>:FIELd<o>:DMIN <DataMin>
TRIGger<t>:USBThree:FRAMe<fr>:FLD<fl>:DMIN <Data_Min>

Specifies the data pattern, or sets the start value of a data pattern range.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:
<Data_Min>

Manual operation: See "Data" on page 943

TRIGger<t>:USBThree:DOPerator <Frame>,<Field>,<Operator>
TRIGger<t>:USBThree:FRAMe<fr>:FIELd<o>:DOPerator <DataOperator>
TRIGger<t>:USBThree:FRAMe<fr>:FLD<fl>:DOPerator <Data_Operator>

Sets the operator for the data pattern in the selected field of the selected frame.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:

<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one endpoint value to be set using `TRIGger<t>:USBThree:FRAMe<fr>:FLD<fl>:DMIN`.

INRange | OORange
In range, out of range. These conditions require a range of endpoint values to be set using `TRIGger<t>:USBThree:FRAMe<fr>:FLD<fl>:DMIN` and `TRIGger<t>:USBThree:FRAMe<fr>:FLD<fl>:DMAX`.

*RST: EQUal

Manual operation: See "Data" on page 943

TRIGger<t>:USBThree:IMAX <Frame>,<Field>,<IndexMax>
TRIGger<t>:USBThree:FRAMe<fr>:FIELd<o>:IMAX <IndexMax>
TRIGger<t>:USBThree:FRAMe<fr>:FLD<fl>:IMAX <Index_Max>

Sets the end value of an index range if `TRIGger<t>:USBThree:FRAMe<fr>:FLD<fl>:IOPerator` is set to `INRange` or `RANGe`.

Suffix:

<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:

<Index_Max> Specifies the end value for the index range within the field. The index range, increment and *RST values depend on the field type.

Manual operation: See "Index" on page 943

TRIGger<t>:USBThree:IMIN <Frame>,<Field>,<IndexMin>
TRIGger<t>:USBThree:FRAMe<fr>:FIELd<o>:IMIN <IndexMin>
TRIGger<t>:USBThree:FRAMe<fr>:FLD<fl>:IMIN <Index_Min>

Specifies the index, or sets the start value of an index range.

Suffix:

<t> 1..3

<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:

<Index_Min> Specifies the index value or index start value within the field. The index range, increment and *RST values depend on the field type.

Manual operation: See "Index" on page 943

TRIGger<t>:USBThree:IOPerator <Frame>,<Field>,<IndexOperator>
TRIGger<t>:USBThree:FRAMe<fr>:FIELd<o>:IOPerator <IndexOperator>
TRIGger<t>:USBThree:FRAMe<fr>:FLD<fl>:IOPerator <Index_Operator>

Sets the operator for the index in the selected field of the selected frame.

Suffix:

<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:

<Index_Operator> EQUal | INRange | RANGe

EQUal
This condition requires one endpoint value to be set using `TRIGger<t>:USBThree:FRAMe<fr>:FLD<fl>:IMIN`.

INRange | RANGe
This condition requires a range of endpoint values to be set using `TRIGger<t>:USBThree:FRAMe<fr>:FLD<fl>:IMIN` and `TRIGger<t>:USBThree:FRAMe<fr>:FLD<fl>:IMAX`.

*RST: INRange

Manual operation: See "Index" on page 943

27.18.25.4 Decode results

In all `BUS<b>:USBThree:RESult:FRAMe<fr>` commands, the suffix <b> selects the serial bus and the suffix <fr> selects the frame number in the decode table.

BUS<b>:USBThree:RESult:FCOunt? 2584
BUS<b>:USBThree:RESult:FRAMe<fr>:INFO? 2584
BUS<b>:USBThree:RESult:FRAMe<fr>:TYPE? 2584
BUS<b>:USBThree:RESult:FRAMe<fr>:STATe? 2585
BUS<b>:USBThree:RESult:FRAMe<fr>:STARt? 2585
BUS<b>:USBThree:RESult:FRAMe<fr>:STOP? 2585
BUS<b>:USBThree:RESult:FRAMe<fr>:FLD<fl>:TYPE? 2586
BUS<b>:USBThree:RESult:FRAMe<fr>:FLD<fl>:STATus? 2586
BUS<b>:USBThree:RESult:FRAMe<fr>:FLD<fl>:STARt? 2586

BUS<b>:USBThree:RESult:FRAMe<fr>:FLD<fl>:STOP? 2587
BUS<b>:USBThree:RESult:FRAMe<fr>:FLD<fl>:VAL? 2587
BUS<b>:USBThree:RESult:FRAMe<fr>:FLD<fl>:FVAL? 2587

BUS<b>:USBThree:RESult:FCOunt?

Returns the number of decoded frames in the selected serial bus.

Suffix:
<b> 1..4

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1

Usage: Query only

BUS<b>:USBThree:RESult:FRAMe<fr>:INFO?

Returns specific frame information details of the selected frame. This information is also shown in the "Info" column of the decode results table.

Suffix:
<b> 1..4

<fr> *
Specifies the frame number.

Return values:
<Info>

Usage: Query only

BUS<b>:USBThree:RESult:FRAMe<fr>:TYPE?

Returns the frame type for the selected serial bus and frame number.

Suffix:
<b> 1..4

<fr> *
Selects the frame number.

Return values:
<FrameType> TSEQ | TS1 | TS1A | TS1B | TS2 | SLF | U2IT | VDT | PCAP | PCNF | PCNR | LDM | ACK | NRDY | ERDY | STATus | STALl | FWAKe | LTM | BIAM | HRR | SSPD | PING | PNGR | DPH | DPHN | DPP | DPPA | ITP | LC | SKIP | BRST | BDAT | BERC | BCNT | IDLE | CP0 | CP1 | CP2 | CP3 | CP5or6 | UHP | ULMP | UTP | UDVN | UDEF | ERRor | CTLB | DATB | SYNC | SDS

For a description of the frame types, see "Frame types" on page 930.

*RST: UDEF

Usage: Query only

BUS<b>:USBThree:RESult:FRAMe<fr>:STATe?

Returns the status of the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4

<fr> *
Selects the frame number.

Return values:
<State> OK | INComplete | UNCorrelated | UNKNown | AMB | CRC | LENGth | VOOR | SYMB

VOOR
Value out of range

Usage: Query only

BUS<b>:USBThree:RESult:FRAMe<fr>:STARt?

Returns the start time of the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4

<fr> *
Selects the frame number.

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
Default unit: s

Usage: Query only

BUS<b>:USBThree:RESult:FRAMe<fr>:STOP?

Returns the stop time of the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4

<fr> *
Selects the frame number.

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
Default unit: s

Usage: Query only

BUS<b>:USBThree:RESult:FRAMe<fr>:FLD<fl>:TYPE?

Returns the type of the field with the selected field number within the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4

<fr> *
Selects the frame number.

<fl> *
Selects the field number.

Return values:
<FieldType>

Usage: Query only

BUS<b>:USBThree:RESult:FRAMe<fr>:FLD<fl>:STATus?

Returns the status of the field with the selected field number within the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4

<fr> *
Selects the frame number.

<fl> *
Selects the field number.

Return values:
<FieldState> OK | INComplete | UNCorrelated | UNKNown | AMB | CRC | LENGth | VOOR | SYMB

VOOR
Value out of range

Usage: Query only

BUS<b>:USBThree:RESult:FRAMe<fr>:FLD<fl>:STARt?

Returns the start time of the field with the selected field number within the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4

<fr> *

<fl> *

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:USBThree:RESult:FRAMe<fr>:FLD<fl>:STOP?

Returns the stop time of the field with the selected field number within the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4

<fr> *

<fl> *

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:USBThree:RESult:FRAMe<fr>:FLD<fl>:VAL?

Returns the value of the field with the selected field number within the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4

<fr> *
Selects the frame number.

<fl> *
Selects the field number.

Return values:
<FieldValue>

Usage: Query only

BUS<b>:USBThree:RESult:FRAMe<fr>:FLD<fl>:FVAL?

Returns the formatted value of the field with the selected field number within the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4

<fr> *
Selects the frame number.

<fl> *
Selects the field number.

Return values:
<ValueFormatted>

Usage: Query only

27.18.25.5 Search settings

There are two commands for each parameter, that you can use for defining the SSIC search settings.

For example, to set the *Frame type =ACK > Field =Route String >Data* value you can use one of the following commands:

- `SEARch:TRIGger:USBThree:FRAMe13:FLD1:DMIN 01100`
  Defines the parameter by using the index <m> for the frame number and <n> for the field number. For an overview, see Table 27-10.
- `SEARch:TRIGger:USBThree:DMIN "ACK", "Route String", 01100`
  Defines the parameter by using the frame and field name.

SEARch:TRIGger:USBThree:ERENable....2589
SEARch:TRIGger:USBThree:ERRor<m>:ENABle....2589
SEARch:TRIGger:USBThree:FRENable....2589
SEARch:TRIGger:USBThree:FRAMe<fr>:ENABle....2589
SEARch:TRIGger:USBThree:FIENable....2590
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:ENABle....2590
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:ENABle....2590
SEARch:TRIGger:USBThree:BIT....2590
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:BIT....2590
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:BIT....2590
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:BIT....2590
SEARch:TRIGger:USBThree:DMAX....2591
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:DMAX....2591
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:DMAX....2591
SEARch:TRIGger:USBThree:DMIN....2592
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:DMIN....2592
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:DMIN....2592
SEARch:TRIGger:USBThree:DOPerator....2592
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:DOPerator....2592
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:DOPerator....2592
SEARch:TRIGger:USBThree:IMAX....2593
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:IMAX....2593
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:IMAX....2593
SEARch:TRIGger:USBThree:IMIN....2593
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:IMIN....2593
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:IMIN....2593

SEARch:TRIGger:USBThree:IOPerator....2594
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:IOPerator....2594
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:IOPerator....2594

SEARch:TRIGger:USBThree:ERENable <SearchName>,<ErrorName>,<Enabler>
SEARch:TRIGger:USBThree:ERRor<m>:ENABle <SearchName>,<Enable>
SEARch:TRIGger:USBThree:ERRor<m>:ENABle? <SearchName>

Enables the search for errors. You can search for all error types in parallel.

Suffix:
<m> *
Specifies the error.

Parameters:
<Enable> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName> String with the name of the search.

Example: Searches for CRC and length errors:
```
SEARch:TRIGger:USBThree:ERRor1:ENABle ON
```
Enables searching for CRC Error.
```
SEARch:TRIGger:USBThree:ERENable "Length Error",ON
```
Enables searching for Length Error.

Manual operation: See "Search criteria" on page 946

SEARch:TRIGger:USBThree:FRENable <SearchName>,<Frame>,<Enabler>
SEARch:TRIGger:USBThree:FRAMe<fr>:ENABle <SearchName>,<Enable>
SEARch:TRIGger:USBThree:FRAMe<fr>:ENABle? <SearchName>

Defines the frame type to be searched for.

Suffix:
<fr> *

Parameters:
<Enable> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Example:
```
SEARch:TRIGger:USBThree:FRAMe1:ENABle ON
```
Enables searching for the TSEQ frame.
```
SEARch:TRIGger:USBThree:FRENable "TS1" ON
```
Enables searching for the TS1 frame.

Manual operation: See "Search criteria" on page 946

SEARch:TRIGger:USBThree:FIENable <SearchName>,<Frame>,<Field>,<Enabler>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:ENABle
<SearchName>,<CondEnabler>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:ENABle? <SearchName>
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:ENABle
<SearchName>,<CondEnabler>
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:ENABle? <SearchName>

Enables or disables the checking condition for searching a specific field of the selected frame.

Suffix:
<fr> *
Specifies the frame.

<fl> *
Specifies the field number within the frame.

Parameters:
<CondEnabler> OFF | ON

ON
Checking condition enabled

OFF
Checking condition disabled

*RST: OFF

Parameters for setting and query:
<SearchName> String with the name of the search.

Example: `SEARch:TRIGger:USBThree:FRAMe1:FLD1:ENABle ON`
Enables searching for the Symbol field of the TSEQ frame.
`SEARch:TRIGger:USBThree:FRENable "TS1", "Loop" ON`
Enables searching for the Loop field of the TS1 frame.

Manual operation: See "Search criteria" on page 946

SEARch:TRIGger:USBThree:BIT <SearchName>,<Frame>,<Field>,<Bit>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:BIT <SearchName>,<BitState>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:BIT? <SearchName>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:BIT <SearchName>,<BitState>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:BIT? <SearchName>
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:BIT <SearchName>,<BitState>
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:BIT? <SearchName>

Sets the bit state of a field to be searched that only consists of one bit.

Suffix:
<fr> *
Specifies the frame.

<fl> *
Specifies the field number within the frame.

Parameters:
<BitState> ONE | ZERO | DC
ONE
1
ZERO
0
DC
"Don't care" (DC) = X
*RST: DC

Parameters for setting and query:
<SearchName> String with the name of the search.

Manual operation: See "Search criteria" on page 946

SEARch:TRIGger:USBThree:DMAX <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:DMAX
<SearchName>,<DataMax>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:DMAX? <SearchName>
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:DMAX
<SearchName>,<Data_Max>
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:DMAX? <SearchName>

Sets the end value of a data pattern range if `SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:DOPerator` is set to `INRange` or `OORange`.

Suffix:
<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:
<Data_Max> Specifies the name of the generic trigger setting frame, see `SEARch:RESult:USBThree:FRAMe<fr>:TYPE?` on page 2595.

Parameters for setting and query:
<SearchName> String with the name of the search.

Manual operation: See "Search criteria" on page 946

SEARch:TRIGger:USBThree:DMIN <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:DMIN
<SearchName>,<DataMin>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:DMIN? <SearchName>
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:DMIN
<SearchName>,<Data_Min>
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:DMIN? <SearchName>

Specifies the data pattern to be searched, or sets the start value of a data pattern range to be searched.

Suffix:
<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:
<Data_Min> Specifies the name of the generic trigger setting frame, see `SEARch:RESult:USBThree:FRAMe<fr>:TYPE?` on page 2595.

Parameters for setting and query:
<SearchName> String with the name of the search.

Manual operation: See "Search criteria" on page 946

SEARch:TRIGger:USBThree:DOPerator
<SearchName>,<Frame>,<Field>,<Operator>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:DOPerator
<SearchName>,<DataOperator>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:DOPerator? <SearchName>
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:DOPerator
<SearchName>,<Data_Operator>
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:DOPerator? <SearchName>

Sets the operator to set a specific data pattern to be searched in the selected field of the selected frame.

Suffix:
<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one endpoint value to be set using `SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:IMIN`.

INRange | OORange
In range, out of range. These conditions require a range of endpoint values to be set using `SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:IMIN` and `SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:IMAX` on page 2593.

*RST: EQUal

Parameters for setting and query:
<SearchName> String with the name of the search.

Manual operation: See "Search criteria" on page 946

SEARch:TRIGger:USBThree:IMAX <SearchName>,<Frame>,<Field>,<IndexMax>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:IMAX
<SearchName>,<IndexMax>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:IMAX? <SearchName>
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:IMAX
<SearchName>,<Index_Max>
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:IMAX? <SearchName>

Sets the end value of an index range if `SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:IOPerator` is set to `INRange` or `RANGe`.

Suffix:
<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:
<Index_Max> Specifies the end value for the index range within the field. The index range, increment and *RST values depend on the field type.

Parameters for setting and query:
<SearchName> String with the name of the search.

Manual operation: See "Search criteria" on page 946

SEARch:TRIGger:USBThree:IMIN <SearchName>,<Frame>,<Field>,<IndexMin>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:IMIN
<SearchName>,<IndexMin>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:IMIN? <SearchName>
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:IMIN
<SearchName>,<Index_Min>
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:IMIN? <SearchName>

Specifies the index at which the data is to be searched, or sets the start value of an index range in which the data is to be searched.

Suffix:
<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:
<Index_Min> Specifies the index value or the start value of an index range within the field.
The index range, increment and *RST values depend on the field type.

Parameters for setting and query:
<SearchName> String with the name of the search.

Manual operation: See "Search criteria" on page 946

SEARch:TRIGger:USBThree:IOPerator
<SearchName>,<Frame>,<Field>,<Operator>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:IOPerator
<SearchName>,<IndexOperator>
SEARch:TRIGger:USBThree:FRAMe<fr>:FIELd<n>:IOPerator? <SearchName>
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:IOPerator
<SearchName>,<Index_Operator>
SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:IOPerator? <SearchName>

Sets the operator for the index for searching in the selected field of the selected frame.

Suffix:
<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:
<Index_Operator> EQUal | INRange | RANGe

EQUal
This condition requires one endpoint value to be set using `SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:IMIN`.

INRange | RANGe
This condition requires a range of endpoint values to be set using `SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:IMIN` and `SEARch:TRIGger:USBThree:FRAMe<fr>:FLD<fl>:IMAX`.

*RST: INRange

Parameters for setting and query:
<SearchName> String with the name of the search.

Manual operation: See "Search criteria" on page 946

27.18.25.6 Search results

In all `SEARch:RESult:USBThree:FRAMe<m>` commands, the suffix <m> selects the frame number in the list of search results.

SEARch:RESult:USBThree:FRAMe<fr>:TYPE? 2595
SEARch:RESult:USBThree:FRAMe<fr>:INFO? 2595
SEARch:RESult:USBThree:FCOunt? 2596
SEARch:RESult:USBThree:FRAMe<fr>:STATe? 2596
SEARch:RESult:USBThree:FRAMe<fr>:STARt? 2596
SEARch:RESult:USBThree:FRAMe<fr>:STOP? 2597
SEARch:RESult:USBThree:FRAMe<fr>:FLD<fl>:TYPE? 2597
SEARch:RESult:USBThree:FRAMe<fr>:FLD<fl>:STATus? 2597
SEARch:RESult:USBThree:FRAMe<fr>:FLD<fl>:STARt? 2598
SEARch:RESult:USBThree:FRAMe<fr>:FLD<fl>:STOP? 2598
SEARch:RESult:USBThree:FRAMe<fr>:FLD<fl>:VAL? 2598
SEARch:RESult:USBThree:FRAMe<fr>:FLD<fl>:FVAL? 2599

SEARch:RESult:USBThree:FRAMe<fr>:TYPE? <SearchName>

Returns the frame type for the selected frame number within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameType> TSEQ | TS1T | TS2T | SLF | U2IT | VDT | PCAP | PCNF | PCNR | LDM | ACK | NRDY | ERDY | STATus | STALl | FWAKe | LTM | BIAM | HRR | SSPD | PING | PNGR | DPH | DPP | DPPA | ITP | LC | SKIP | BRST | BDAT | BERC | BCNT | IDLE | UHP | ULMP | UTP | UDVN | UDEF | ERRor

For a description of the frame types, see "Frame types" on page 930.

Usage: Query only

SEARch:RESult:USBThree:FRAMe<fr>:INFO? <SearchName>

Returns specific frame information details of the selected frame in the search result. This information is also shown in the "Info" column of the decode results table.

Suffix:
<fr> *

Specifies the frame number.

Query parameters:
<SearchName>

Return values:
<Info>

Usage: Query only

SEARch:RESult:USBThree:FCOunt? <SearchName>

Returns the number of decoded frames in the search result.

Query parameters:
<SearchName>

Return values:
<FrameCount>

Usage: Query only

SEARch:RESult:USBThree:FRAMe<fr>:STATe? <SearchName>

Returns the status of the frame with the selected frame number within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<State> OK | INComplete | UNCorrelated | UNKNown | AMB | CRC | LENGth | VOOR | SYMB

VOOR
Value out of range

Usage: Query only

SEARch:RESult:USBThree:FRAMe<fr>:STARt? <SearchName>

Returns the start time of the frame with the selected frame number within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
Default unit: s

Usage: Query only

SEARch:RESult:USBThree:FRAMe<fr>:STOP? <SearchName>

Returns the stop time of the frame with the selected frame number within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
Default unit: s

Usage: Query only

SEARch:RESult:USBThree:FRAMe<fr>:FLD<fl>:TYPE? <SearchName>

Returns the field name of the field with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<fl> *
Selects the field number.

Query parameters:
<SearchName>

Return values:
<FieldType>

Usage: Query only

SEARch:RESult:USBThree:FRAMe<fr>:FLD<fl>:STATus? <SearchName>

Returns the field status of the field with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<fl> *
Selects the field number.

Query parameters:
<SearchName>

Return values:
<FieldState> OK | INComplete | UNCorrelated | UNKNown | AMB | CRC | LENGth | VOOR | SYMB

VOOR
Value out of range

Usage: Query only

SEARch:RESult:USBThree:FRAMe<fr>:FLD<fl>:STARt? <SearchName>

Returns the start time of the field with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<fl> *

Query parameters:
<SearchName>

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:USBThree:FRAMe<fr>:FLD<fl>:STOP? <SearchName>

Returns the stop time of the field with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<fl> *

Query parameters:
<SearchName>

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:USBThree:FRAMe<fr>:FLD<fl>:VAL? <SearchName>

Returns the value of the field with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<fl> *
Selects the field number.

Query parameters:
<SearchName>

Return values:
<ByteValue>

Usage: Query only

SEARch:RESult:USBThree:FRAMe<fr>:FLD<fl>:FVAL? <SearchName>

Returns the formatted value of the field with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<fl> *
Selects the field number.

Query parameters:
<SearchName>

Return values:
<ValueFormatted>

Usage: Query only

27.18.26 USBPD (option R&S RTO6-K570)

- Configuration....2599
- Trigger....2602
- Decode results....2608
- Search settings....2613
- Search results....2620

27.18.26.1 Configuration

In all `BUS<b>:USBPd` commands, the suffix <b> selects the serial bus.

BUS<b>:USBPd:DETail....2600
BUS<b>:USBPd:HYSTeresis....2600
BUS<b>:USBPd:SOURce....2600
BUS<b>:USBPd:THReshold....2600
BUS<b>:USBPd:THRBottom....2601
BUS<b>:USBPd:THRMid....2601
BUS<b>:USBPd:THRTop....2601

BUS<b>:USBPd:DETail <Detail>

If enabled, the data words are broken down into subframes. If not enabled the data words are displayed as 32-bit data words.

Suffix:
<b> 1..4

Parameters:
<Detail> OFF | ON
*RST: OFF

Manual operation: See "Show decode detail" on page 953

BUS<b>:USBPd:HYSTeresis <Hysteresis>

Sets a value for the hysteresis of the data.

Suffix:
<b> 1..4

Parameters:
<Hysteresis> Range: -10 to 10
Increment: 0.01
*RST: 0.05
Default unit: V

Manual operation: See "Hysteresis" on page 952

BUS<b>:USBPd:SOURce <SourceData>

Selects the source for the data signal in the USBPD protocol.

For triggering on a serial bus, analog input channels are required.

Suffix:
<b> 1..4

Parameters:
<SourceData> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
*RST: C1W1

Usage: Asynchronous command

Manual operation: See "Data" on page 952

BUS<b>:USBPd:THReshold <Threshold>

Sets the threshold value of the data.

Suffix:
<b> 1..4

Parameters:

<Threshold>
Range: -10 to 10
Increment: 0.01
*RST: 0.6
Default unit: V

Manual operation: See "vData" on page 952

BUS<b>:USBPd:THRBottom <ThresholdBot>

Sets the bottom threshold (for the low current) for the current advertisment mode.

Suffix:

<b> 1..4

Parameters:

<ThresholdBot>
Range: -10 to 10
Increment: 0.01
*RST: 0.2
Default unit: V

Manual operation: See "Current advertisment thresholds" on page 952

BUS<b>:USBPd:THRMid <ThresholdMid>

Sets the middle threshold (at default USB Type-C currnet) for the current advertisment mode.

Suffix:

<b> 1..4

Parameters:

<ThresholdMid>
Range: -10 to 10
Increment: 0.01
*RST: 0.66
Default unit: V

Manual operation: See "Current advertisment thresholds" on page 952

BUS<b>:USBPd:THRTop <ThresholdTop>

Sets the top threshold (at USB Type-C currnet of 1.5 A) for the current advertisment mode.

Suffix:

<b> 1..4

Parameters:

<ThresholdTop>
Range: -10 to 10
Increment: 0.01
*RST: 1.23
Default unit: V

Manual operation: See "Current advertisment thresholds" on page 952

27.18.26.2 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

There are two commands for each parameter, that you can use for defining the USBPD settings.

For example, to set the *Frame type =Control Frame > Field =MsgID >Data* value you can use one of the following commands:

- `TRIGger:USBPD:FRAMe3:FLD3:DMIN 01100`
  Defines the parameter by using the index <m> for the frame number and <n> for the field number. For an overview, see Overview of frame and field numbers for USBPD.
- `TRIGger:USBPD:DMIN "Control", "MsgID", 01100`
  Defines the parameter by using the frame and field name.

Table 27-11 gives an overview of the available frame and field numbers. Those numbers follow the GUI numbers.

Table 27-11: Overview of frame and field numbers for USBPD

Frame number	Frame name	Field number	Field name
1	Test Frame	-	-
2	Reset	-	-
3	Control frame	1	Extended
		2	NumDataObjs
		3	MsgID
		4	PwrRole/Plug
		5	Rev
		6	DataRole
		7	MsgType
4	Data Frame	1	Extended
		2	NumDataObjs
		3	MsgID
		4	PwrRole/Plug

Frame number	Frame name	Field number	Field name
		5	Rev
		6	DataRole
		7	MsgType
		8	DATA
5	Extended	1	Extended
		2	NumDataObjs
		3	MsgID
		4	PwrRole/Plug
		5	Rev
		6	DataRole
		7	MsgType
		8	Chunked
		9	Chunk Num
		10	Req Chunk
		11	Data Size
		12	DATA

TRIGger<t>:USBPd:IMIN....2607

TRIGger<t>:USBPd:FRAMe<fr>:FIELd<o>:IMIN....2607
TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:IMIN....2607
TRIGger<t>:USBPd:IOPerator....2608
TRIGger<t>:USBPd:FRAMe<fr>:FIELd<o>:IOPerator....2608
TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:IOPerator....2608

TRIGger<t>:USBPd:ERENable <ErrorName>,<Enabler>
TRIGger<t>:USBPd:ERRor<n>:ENABle <Enable>

Enables or disables the checking condition for a specific error in the selected field of the selected frame.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<n> *
Specifies the error number.

Parameters:
<Enable> OFF | ON
*RST: ON

Example: `TRIGger:USBPd:ERRor1:ENABle ON`
Enables CRC Error.
`TRIGger:USBPd:ERENable "Length Error",ON`
Enables Length Error.

Manual operation: See "Error > Enable /Item" on page 956

TRIGger<t>:USBPd:FRENable <Frame>,<Enabler>
TRIGger<t>:USBPd:FRAMe<fr>:ENABle <Enable>

Enables or disables the checking condition for the selected frame.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the frame number.

Parameters:
<Enable> OFF | ON
*RST: OFF

Example: `TRIGger:USBPd:FRAMe1:ENABle ON`
Enables searching for for the Test frame.
`TRIGger:USBPd:FRENable "Control Frame" ON`
Enables searching for the Control frame.

Manual operation: See "Frame Type" on page 955

TRIGger<t>:USBPd:FIENable <Frame>,<Field>,<Enabler>
TRIGger<t>:USBPd:FRAMe<fr>:FIELd<o>:ENABle <CondEnabler>
TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:ENABle <CondEnabler>

Enables or disables the checking condition for a specific data pattern in the selected field of the selected frame.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the frame.

<fl> *
Specifies the field number within the frame.

Parameters:
<CondEnabler> OFF | ON

ON
Checking condition enabled

OFF
Checking condition disabled

*RST: OFF

Example: `TRIGger:USBPd:FRAMe3:FLD1:ENABle ON`
Enables the checking condition for the Extended field of the Control frame.
`TRIGger:USBPd:FRENable "Data Frame", "Data Role" ON`
Enables the checking condition for the Data Role field of the Data frame.

Manual operation: See "Enable/ Field name/ Condition" on page 956

TRIGger<t>:USBPd:BIT <Frame>,<Field>,<Bit>
TRIGger<t>:USBPd:FRAMe<fr>:FIELd<o>:BIT <BitState>
TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:BIT <BitState>

Sets the bit state of a field that only consists of one bit.

Suffix:
<t> 1..3

<fr> *

<fl> *
Specifies the field number within the frame.

Parameters:
<BitState> ONE | ZERO | DC

ONE
1

ZERO
0

DC
"Don't care" (DC) = X

*RST: DC

Manual operation: See "Data BitState" on page 957

TRIGger<t>:USBPd:DMAX <Frame>,<Field>,<Data>
TRIGger<t>:USBPd:FRAMe<fr>:FIELd<o>:DMAX <DataMax>
TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:DMAX <Data_Max>

Sets the end value of a data pattern range if `TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:DMAX` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:
<Data_Max> Specifies the name of the generic trigger setting frame, see `BUS<b>:USBPd:RESult:FRAMe<fr>:TYPE?` on page 2613.

Manual operation: See "Data" on page 956

TRIGger<t>:USBPd:DMIN <Frame>,<Field>,<Data>
TRIGger<t>:USBPd:FRAMe<fr>:FIELd<o>:DMIN <DataMin>
TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:DMIN <Data_Min>

Specifies the data pattern, or sets the start value of a data pattern range.

Suffix:
<t> 1..3

<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:
<Data_Min>

Manual operation: See "Data" on page 956

TRIGger<t>:USBPd:DOPerator <Frame>,<Field>,<Operator>
TRIGger<t>:USBPd:FRAMe<fr>:FIELd<o>:DOPerator <DataOperator>
TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:DOPerator <Data_Operator>

Sets the operator for the data pattern in the selected field of the selected frame.

Suffix:
<t> 1..3

<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one end-point value to be set using `TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:DMIN`.

INRange | OORange
In range, out of range. These conditions require a range of end-point values to be set using `TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:DMIN` and `TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:DMAX`.

*RST: EQUal

Manual operation: See "Data" on page 956

TRIGger<t>:USBPd:IMAX <Frame>,<Field>,<IndexMax>
TRIGger<t>:USBPd:FRAMe<fr>:FIELd<o>:IMAX <IndexMax>
TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:IMAX <Index_Max>

Sets the end value of an index range if `TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:IOPerator` on page 2608 is set to `INRange` or `RANGe`.

Suffix:
<t> 1..3

<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:
<Index_Max> Specifies the end value for the index range within the field. The index range, increment and *RST values depend on the field type.

Manual operation: See "Index" on page 957

TRIGger<t>:USBPd:IMIN <Frame>,<Field>,<IndexMin>
TRIGger<t>:USBPd:FRAMe<fr>:FIELd<o>:IMIN <IndexMin>
TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:IMIN <Index_Min>

Specifies the index, or sets the start value of an index range.

Suffix:
<t> 1..3
<fr> *
Specifies the field number within the frame.
<fl> *

Parameters:
<Index_Min> Specifies the index value or index start value within the field. The index range, increment and *RST values depend on the field type.

Manual operation: See "Index" on page 957

TRIGger<t>:USBPd:IOPerator <Frame>,<Field>,<IndexOperator>
TRIGger<t>:USBPd:FRAMe<fr>:FIELd<o>:IOPerator <IndexOperator>
TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:IOPerator <Index_Operator>

Sets the operator for the index in the selected field of the selected frame.

Suffix:
<t> 1..3
<fr> *
<fl> *

Parameters:
<Index_Operator> EQUal | INRange | RANGe

EQUal
This condition requires one endpoint value to be set using `TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:IMIN`.

INRange | RANGe
This condition requires a range of endpoint values to be set using `TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:IMIN` and `TRIGger<t>:USBPd:FRAMe<fr>:FLD<fl>:IMAX`.

*RST: INRange

Manual operation: See "Index" on page 957

27.18.26.3 Decode results

In all `BUS<b>:USBPd:RESult:FRAMe<fr>` commands, the suffix <b> selects the serial bus and the suffix <fr> selects the frame number in the decode table.

BUS<b>:USBPd:RESult:FCOunt? 2609
BUS<b>:USBPd:RESult:FRAMe<fr>:DATA? 2609
BUS<b>:USBPd:RESult:FRAMe<fr>:FLD<fl>:FVAL? 2609
BUS<b>:USBPd:RESult:FRAMe<fr>:FLD<fl>:STATus? 2610
BUS<b>:USBPd:RESult:FRAMe<fr>:FLD<fl>:STARt? 2610
BUS<b>:USBPd:RESult:FRAMe<fr>:FLD<fl>:STOP? 2610
BUS<b>:USBPd:RESult:FRAMe<fr>:FLD<fl>:TYPE? 2611

BUS<b>:USBPd:RESult:FRAMe<fr>:FLD<fl>:VAL? 2611
BUS<b>:USBPd:RESult:FRAMe<fr>:INFO? 2612
BUS<b>:USBPd:RESult:FRAMe<fr>:STARt? 2612
BUS<b>:USBPd:RESult:FRAMe<fr>:STATe? 2612
BUS<b>:USBPd:RESult:FRAMe<fr>:STOP? 2613
BUS<b>:USBPd:RESult:FRAMe<fr>:TYPE? 2613

BUS<b>:USBPd:RESult:FCOunt?

Returns the number of decoded frames in the selected serial bus.

Suffix:
<b> 1..4

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1

Usage: Query only

BUS<b>:USBPd:RESult:FRAMe<fr>:DATA?

Returns the data from the frame with the selected frame number (for the selected serial bus). This is the hex value of the first four bytes of data fields, prefixed by the total number of data fields (in square brackets), e.g. `[5]FF008041`.

Suffix:
<b> 1..4

<fr> *

Return values:
<Data>

Usage: Query only

BUS<b>:USBPd:RESult:FRAMe<fr>:FLD<fl>:FVAL?

Returns the formatted value of the field with the selected field number within the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4

<fr> *
Selects the frame number.

<fl> *
Selects the field number.

Return values:
<FrameByteValue>

Usage: Query only

BUS<b>:USBPd:RESult:FRAMe<fr>:FLD<fl>:STATus?

Returns the status of the field with the selected field number within the frame with the selected frame number (for the selected serial bus).

Suffix:

<b> 1..4

<fr> *

Selects the frame number.

<fl> *

Selects the field number.

Return values:

<FieldState> OK | UNKNown | INComplete | PREamble | SOP | CRC | LENGth | FBFB

SOP
Start of packet warning

CRC
Cyclic redundancy check error

FBFB
4b5b error

*RST: OK

Usage: Query only

BUS<b>:USBPd:RESult:FRAMe<fr>:FLD<fl>:STARt?

Returns the start time of the field with the selected field number within the frame with the selected frame number (for the selected serial bus).

Suffix:

<b> 1..4

<fr> *

<fl> *

Return values:

<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:USBPd:RESult:FRAMe<fr>:FLD<fl>:STOP?

Returns the stop time of the field with the selected field number within the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4
<fr> *
<fl> *

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:USBPd:RESult:FRAMe<fr>:FLD<fl>:TYPE?

Returns the type of the field with the selected field number within the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4
<fr> *
Selects the frame number.
<fl> *
Selects the field number.

Return values:
<FieldType>

Usage: Query only

BUS<b>:USBPd:RESult:FRAMe<fr>:FLD<fl>:VAL?

Returns the value of the field with the selected field number within the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4
<fr> *
Selects the frame number.
<fl> *
Selects the field number.

Return values:
<FrameByteValue>

Usage: Query only

BUS<b>:USBPd:RESult:FRAMe<fr>:INFO?

Returns information on the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4

<fr> *

Return values:
<Info>

Usage: Query only

BUS<b>:USBPd:RESult:FRAMe<fr>:STARt?

Returns the start time of the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4

<fr> *

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:USBPd:RESult:FRAMe<fr>:STATe?

Returns the status of the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4

<fr> *

Return values:
<State> OK | UNKNown | INComplete | PREamble | SOP | CRC | LENGth | FBFB

SOP
Start of packet warning

CRC
Cyclic redundancy check error

FBFB
4b5b error

*RST: OK

Usage: Query only

BUS<b>:USBPd:RESult:FRAMe<fr>:STOP?

Returns the stop time of the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4

<fr> *

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:USBPd:RESult:FRAMe<fr>:TYPE?

Returns the frame type for the selected serial bus and frame number.

Suffix:
<b> 1..4

<fr> *

Return values:
<FrameType> STARt | RESet | CTRL | DATA | BIST | RQST | SINK | SRC | VEND | BATT | ALRT | XMSG | XSRC | XSTA | XGBC | XGBS | XBAC | XGMI | XMFI | XSRQ | XSRS | XFRQ | XFRS | TEST | LOWP | UNKNown

For a description of the frame types, see "Frame packet types" on page 950.

*RST: UNKNown

Usage: Query only

27.18.26.4 Search settings

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

There are two commands for each parameter, that you can use for defining the USBPD settings.

For example, to set the *Frame type =Control Frame* > *Field =MsgID* >*Data* value you can use one of the following commands:

- `SEARch:TRIGger:USBPD:FRAMe3:FLD3:DMIN 01100`
  Defines the parameter by using the index <m> for the frame number and <n> for the field number. For an overview, see Table 27-11.
- `SEARch:TRIGger:USBPD:DMIN "Control", "MsgID", 01100`
  Defines the parameter by using the frame and field name.

SEARch:TRIGger:USBPd:ERENable....2614
SEARch:TRIGger:USBPd:ERRor<m>:ENABle....2614

SEARch:TRIGger:USBPd:ERENable <SearchName>,<ErrorName>,<Enabler>
SEARch:TRIGger:USBPd:ERRor<m>:ENABle <SearchName>,<Enable>
SEARch:TRIGger:USBPd:ERRor<m>:ENABle? <SearchName>

Enables or disables the checking condition for searching a specific error in the selected field of the selected frame.

Suffix:
<m> *
Specifies the error number.

Parameters:
<Enable> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Example: `SEARch:TRIGger:USBPd:ERRor1:ENABle ON`
Enables searching for CRC Error.
`SEARch:TRIGger:USBPd:ERENable "Length Error",ON`
Enables searching for Length Error.

Manual operation: See "Search" on page 960

SEARch:TRIGger:USBPd:FRENable <SearchName>,<Frame>,<Enabler>
SEARch:TRIGger:USBPd:FRAMe<fr>:ENABle <SearchName>,<Enable>
SEARch:TRIGger:USBPd:FRAMe<fr>:ENABle? <SearchName>
Suffix:
<fr> *
Specifies the frame number.

Parameters:
<Enable> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Example: `SEARch:TRIGger:USBPd:FRAMe1:ENABle ON`
Enables the checking condition for the Test frame.
`SEARch:TRIGger:USBPd:FRENable "Control Frame" ON`
Enables the checking condition for the Control frame.

SEARch:TRIGger:USBPd:FIENable <SearchName>,<Frame>,<Field>,<Enabler>
SEARch:TRIGger:USBPd:FRAMe<fr>:FIELd<n>:ENABle
<SearchName>,<CondEnabler>
SEARch:TRIGger:USBPd:FRAMe<fr>:FIELd<n>:ENABle? <SearchName>
SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:ENABle
<SearchName>,<CondEnabler>
SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:ENABle? <SearchName>

Enables or disables the checking condition for searching a specific data pattern in the selected field of the selected frame.

Suffix:
<fr> *
Specifies the frame.

<fl> *
Specifies the field number within the frame.

Parameters:
<CondEnabler> OFF | ON
ON
Checking condition enabled
OFF
Checking condition disabled
*RST: OFF

Parameters for setting and query:
<SearchName> String with the name of the search.

Example: `SEARch:TRIGger:USBPd:FRAMe3:FLD1:ENABle ON`
Enables searching for the Extended field of the Control frame.
`SEARch:TRIGger:USBPd:FRENable "Data Frame", "Data Role" ON`
Enables searching for the Data Role field of the Data frame.

Manual operation: See "Frame" on page 640

SEARch:TRIGger:USBPd:BIT <SearchName>,<Frame>,<Field>,<Bit>
SEARch:TRIGger:USBPd:FRAMe<fr>:FIELd<n>:BIT <SearchName>,<BitState>
SEARch:TRIGger:USBPd:FRAMe<fr>:FIELd<n>:BIT? <SearchName>
SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:BIT <SearchName>,<BitState>
SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:BIT? <SearchName>

Sets the bit state of a field to be searched that only consists of one bit.

Suffix:
<fr> *
Specifies the frame.

<fl> *
Specifies the field number within the frame.

Parameters:
<BitState> ONE | ZERO | DC
ONE
1
ZERO
0
DC
"Don't care" = X
*RST: DC

Parameters for setting and query:
<SearchName> String with the name of the search.

Manual operation: See "Search" on page 960

SEARch:TRIGger:USBPd:DMAX <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:USBPd:FRAMe<fr>:FIELd<n>:DMAX <SearchName>,<DataMax>
SEARch:TRIGger:USBPd:FRAMe<fr>:FIELd<n>:DMAX? <SearchName>
SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:DMAX <SearchName>,<Data_Max>
SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:DMAX? <SearchName>

Sets the end value of a data pattern range if `SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:DOPerator` is set to `INRange` or `OORange`.

Suffix:
<fr> *
Specifies the frame.

<fl> *
Specifies the field number within the frame.

Parameters:
<Data_Max> Specifies the name of the generic trigger setting frame, see `SEARch:RESult:USBPd:FRAMe<fr>:TYPE?` on page 2625.

Parameters for setting and query:
<SearchName> String with the name of the search.

Manual operation: See "Search" on page 960

SEARch:TRIGger:USBPd:DMIN <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:USBPd:FRAMe<fr>:FIELd<n>:DMIN <SearchName>,<DataMin>
SEARch:TRIGger:USBPd:FRAMe<fr>:FIELd<n>:DMIN? <SearchName>
SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:DMIN <SearchName>,<Data_Min>
SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:DMIN? <SearchName>

Specifies the data pattern to be searched, or sets the start value of a data pattern range to be searched.

Suffix:
<fr> *
Specifies the frame.

<fl> *
Specifies the field number within the frame.

Parameters:
<Data_Min> Specifies the name of the generic trigger setting frame, see `SEARch:RESult:USBPd:FRAMe<fr>:TYPE?` on page 2625.

Parameters for setting and query:
<SearchName> String with the name of the search.

Manual operation: See "Search" on page 960

SEARch:TRIGger:USBPd:DOPerator <SearchName>,<Frame>,<Field>,<Operator>
SEARch:TRIGger:USBPd:FRAMe<fr>:FIELd<n>:DOPerator
<SearchName>,<DataOperator>
SEARch:TRIGger:USBPd:FRAMe<fr>:FIELd<n>:DOPerator? <SearchName>
SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:DOPerator
<SearchName>,<Data_Operator>
SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:DOPerator? <SearchName>

Sets the operator to set a specific data pattern to be searched in the selected field of the selected frame.

Suffix:
<fr> *
Specifies the frame.

<fl> *
Specifies the field number within the frame.

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one endpoint value to be set using `SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:DMIN`.

INRange | OORange
In range, out of range. These conditions require a range of endpoint values to be set using `SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:DMIN` and `SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:DMAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName> String with the name of the search.

Manual operation: See "Search" on page 960

SEARch:TRIGger:USBPd:IMAX <SearchName>,<Frame>,<Field>,<IndexMax>
SEARch:TRIGger:USBPd:FRAMe<fr>:FIELd<n>:IMAX <SearchName>,<IndexMax>
SEARch:TRIGger:USBPd:FRAMe<fr>:FIELd<n>:IMAX? <SearchName>
SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:IMAX <SearchName>,<Index_Max>
SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:IMAX? <SearchName>

Sets the end value of an index range if `SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:IOPerator` is set to `INRange` or `RANGe`.

Suffix:
<fr> *
Specifies the frame.

<fl> *
Specifies the field number within the frame.

Parameters:
<Index_Max> Specifies the end value for the index range within the field.
The index range, increment and *RST values depend on the field type.

Parameters for setting and query:
<SearchName> String with the name of the search.

Manual operation: See "Search" on page 960

SEARch:TRIGger:USBPd:IMIN <SearchName>,<Frame>,<Field>,<IndexMin>
SEARch:TRIGger:USBPd:FRAMe<fr>:FIELd<n>:IMIN <SearchName>,<IndexMin>
SEARch:TRIGger:USBPd:FRAMe<fr>:FIELd<n>:IMIN? <SearchName>
SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:IMIN <SearchName>,<Index_Min>
SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:IMIN? <SearchName>

Specifies the index at which the data is to be searched, or sets the start value of an index range in which the data is to be searched.

Suffix:
<fr> *
Specifies the frame.

<fl> *
Specifies the field number within the frame.

Parameters:
<Index_Min> Specifies the index value or the start value of an index range within the field.
The index range, increment and *RST values depend on the field type.

Parameters for setting and query:
<SearchName> String with the name of the search.

Manual operation: See "Search" on page 960

SEARch:TRIGger:USBPd:IOPerator <SearchName>,<Frame>,<Field>,<Operator>
SEARch:TRIGger:USBPd:FRAMe<fr>:FIELd<n>:IOPerator
<SearchName>,<IndexOperator>
SEARch:TRIGger:USBPd:FRAMe<fr>:FIELd<n>:IOPerator? <SearchName>
SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:IOPerator
<SearchName>,<Index_Operator>
SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:IOPerator? <SearchName>

Sets the operator for the index for searching in the selected field of the selected frame.

Suffix:
<fr> *
Specifies the frame.

<fl> *
Specifies the field number within the frame.

Parameters:
<Index_Operator> EQUal | INRange | RANGe

EQUal
This condition requires one endpoint value to be set using SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:IMIN.

INRange | RANGe
This condition requires a range of endpoint values to be set using SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:IMIN and SEARch:TRIGger:USBPd:FRAMe<fr>:FLD<fl>:IMAX.

*RST: INRange

Parameters for setting and query:
<SearchName> String with the name of the search.

Manual operation: See "Search" on page 960

27.18.26.5 Search results

In all SEARch:RESult:USBPd:FRAMe<m> commands, the suffix <m> selects the frame number in the list of search results.

SEARch:RESult:USBPd:FCOunt? 2620
SEARch:RESult:USBPd:FRAMe<fr>:DATA? 2621
SEARch:RESult:USBPd:FRAMe<fr>:FLD<fl>:FVAL? 2621
SEARch:RESult:USBPd:FRAMe<fr>:FLD<fl>:STATus? 2621
SEARch:RESult:USBPd:FRAMe<fr>:FLD<fl>:STARt? 2622
SEARch:RESult:USBPd:FRAMe<fr>:FLD<fl>:STOP? 2622
SEARch:RESult:USBPd:FRAMe<fr>:FLD<fl>:TYPE? 2623
SEARch:RESult:USBPd:FRAMe<fr>:FLD<fl>:VAL? 2623
SEARch:RESult:USBPd:FRAMe<fr>:INFO? 2623
SEARch:RESult:USBPd:FRAMe<fr>:STARt? 2624
SEARch:RESult:USBPd:FRAMe<fr>:STATe? 2624
SEARch:RESult:USBPd:FRAMe<fr>:STOP? 2624
SEARch:RESult:USBPd:FRAMe<fr>:TYPE? 2625

SEARch:RESult:USBPd:FCOunt? <SearchName>

Returns the number of decoded frames in the search result.

Query parameters:
<SearchName>

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:USBPd:FRAMe<fr>:DATA? <SearchName>

Searches for data from the frame with the selected frame number (for the selected serial bus). This is the hex value of the first four bytes of data fields, prefixed by the total number of data fields (in square brackets), e.g. `[5]FF008041`.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Data>

Usage: Query only

SEARch:RESult:USBPd:FRAMe<fr>:FLD<fl>:FVAL? <SearchName>

Returns the formatted value of the field with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<fl> *
Selects the field number.

Query parameters:
<SearchName>

Return values:
<ValueFormatted>

Usage: Query only

SEARch:RESult:USBPd:FRAMe<fr>:FLD<fl>:STATus? <SearchName>

Returns the field status of the field with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<fl> *
Selects the field number.

Query parameters:
<SearchName>

Return values:
<FieldState> OK | UNKNown | INComplete | PREamble | SOP | CRC | LENGth | FBFB

SOP
Start of packet warning

CRC
Cyclic redundancy check error

FBFB
4b5b error

*RST: OK

Usage: Query only

SEARch:RESult:USBPd:FRAMe<fr>:FLD<fl>:STARt? <SearchName>

Returns the start time of the field with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<fl> *

Query parameters:
<SearchName>

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:USBPd:FRAMe<fr>:FLD<fl>:STOP? <SearchName>

Returns the stop time of the field with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<fl> *

Query parameters:
<SearchName>

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:USBPd:FRAMe<fr>:FLD<fl>:TYPE? <SearchName>

Returns the field name of the field with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<fl> *
Selects the field number.

Query parameters:
<SearchName>

Return values:
<FieldType>

Usage: Query only

SEARch:RESult:USBPd:FRAMe<fr>:FLD<fl>:VAL? <SearchName>

Returns the value of the field with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<fl> *
Selects the field number.

Query parameters:
<SearchName>

Return values:
<ByteValue>

Usage: Query only

SEARch:RESult:USBPd:FRAMe<fr>:INFO? <SearchName>

Returns specific frame information details of the selected frame in the search result. This information is also shown in the "Info" column of the decode results table.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Info>

Usage: Query only

SEARch:RESult:USBPd:FRAMe<fr>:STARt? <SearchName>

Returns the start time of the frame with the selected frame number within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
Default unit: s

Usage: Query only

SEARch:RESult:USBPd:FRAMe<fr>:STATe? <SearchName>

Returns the status of the frame with the selected frame number within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<State> OK | UNKNown | INComplete | PREamble | SOP | CRC | LENGth | FBFB

SOP
Start of packet warning

CRC
Cyclic redundancy check error

FBFB
4b5b error

*RST: OK

Usage: Query only

SEARch:RESult:USBPd:FRAMe<fr>:STOP? <SearchName>

Returns the stop time of the frame with the selected frame number within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:

<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
Default unit: s

Usage: Query only

SEARch:RESult:USBPd:FRAMe<fr>:TYPE? <SearchName>

Returns the frame type for the selected frame number within the search result.

Suffix:

<fr> *

Query parameters:

<SearchName>

Return values:

<FrameType> STARt | RESet | CTRL | DATA | BIST | RQST | SINK | SRC | VEND | BATT | ALRT | XMSG | XSRC | XSTA | XGBC | XGBS | XBAC | XGMI | XMFI | XSRQ | XSRS | XFRQ | XFRS | TEST | LOWP | UNKNown

For a description of the frame types, see "Frame packet types" on page 950.

*RST: UNKNown

Usage: Query only

BUS<b>:DPHY:CONFig <Configuration>

Sets the number of data lanes and if the clock lane and low power are available.

Suffix:
<b> 1..4

Parameters:
<Configuration> D1CN | D1CL | D2CN | D2CL | D3CN | D3NL | D4NN

`D1CN`: 1 data lane, clock lane
`D1CL`: 1 data lane, clock lane, low power
`D2CN`: 2 data lanes, clock lane
`D2CL`: 2 data lanes, clock lane, low power
`D3CN`: 3 data lanes, clock lane
`D3NL`: 3 data lanes, no clock, low power
`D4NN`: 4 data lanes and no clock

*RST: D4NN

Manual operation: See "Physical configuration" on page 964

BUS<b>:DPHY:CP:PROBe <Probe_CP>

Selects the type of probe used for the clock lane.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Probe_CP> DIFFerential | SINGle
*RST: SINGle

BUS<b>:DPHY:CP:SOURce <ClockSource>

Selects the source of the clock lane.

Usually, the source is one of the analog channels. Reference and math waveforms are available as sources if the trigger source is one of the analog channels but not the serial bus.

Alternatively, digital channels can be used if MSO option R&S RTO6-B1 is installed. Digital and analog channels cannot be used at the same time.

For triggering on a serial bus, analog or digital channel sources are required.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<ClockSource> NONE | C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
*RST: NONE

Manual operation: See "CP" on page 964

BUS<b>:DPHY:DRATe <DataRate>

Sets a data rate.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<DataRate> Range: 1E+6 to 2.5E+9
Increment: 1E+6
*RST: 800E+6
Default unit: bps

Manual operation: See "Clock rate" on page 966

BUS<b>:DPHY:DSPData <DispDatVect>

Enables the display of the data vector, which means that the whole frame will be decoded.

When the display vector is disabled only the packet header will be decoded and not the actual data payload of the frame. This will speed up the decoding.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<DispDatVect> OFF | ON
*RST: OFF

Manual operation: See "Clock rate" on page 966

BUS<b>:DPHY:THCoupling <ThresCpl>

Enables coupling, i.e. the same threshold and hysteresis value is used for all lanes.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<ThresCpl> OFF | ON
*RST: ON

Manual operation: See "Couple thresholds" on page 966

BUS<b>:DPHY:THPReset <ThresPreset>

Prests the threshold and hysteresis values of the high speed data lanes. A preset sets the low power threshold to 1.20V and high speed threshold to 200 mV.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<ThresPreset> LPHS | MANual
*RST: LPHS

BUS<b>:DPHY:VARiant <ProtSel>

Selects the protocol running on the interface.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<ProtSel> DSI | CSI2
*RST: CSI2

Manual operation: See "Variant" on page 966

BUS<b>:DPHY:DNZero:LPOWer:THUPper <ThreshDN0High>
BUS<b>:DPHY:DPZero:LPOWer:THUPper <ThreshDP0High>

Sets the upper threshold value for the respective lane used for the low power mode.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<ThreshDP0High> Range: -1.5 to 1.5
Increment: 0.01
*RST: 0.88
Default unit: V

Manual operation: See "LP upper" on page 966

BUS<b>:DPHY:DNZero:LPOWer:THLower <ThreshDN0Low>
BUS<b>:DPZero:LPOWer:THLower <ThreshDP0Low>

Sets the lower threshold value for the respective lane used for the low power mode.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<ThreshDP0Low> Range: -1.5 to 1.5
Increment: 0.01
*RST: 0.55
Default unit: V

Manual operation: See "LP lower" on page 965

BUS<b>:DPHY:DPZero:SOURce <DataSource>

Selects the source of the DP0 data line.

Suffix:
<b> 1..4

Parameters:
<DataSource> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
*RST: C1W1

Manual operation: See "DP0/DN0" on page 964

BUS<b>:DPHY:DNZero:SOURce <DataSource>
BUS<b>:DPHY:DPONe:SOURce <DataSource>

BUS<b>:DPHY:DPTWo:SOURce <DataSource>
BUS<b>:DPHY:DPTHree:SOURce <DataSource>

Selects the source of the corresponding data line.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<DataSource> NONE | C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
*RST: DNZero: NONE, DPONe: C2W1, DPTWo: C3W1, DPTHree: C4W1

Manual operation: See "DP1/DP2/DP3" on page 964

BUS<b>:DPHY:DNZero:PROBe <Probe_DN0>
BUS<b>:DPHY:DPZero:PROBe <Probe_DP0>
BUS<b>:DPHY:DPONe:PROBe <Probe_DP1>
BUS<b>:DPHY:DPTWo:PROBe <Probe_DP2>
BUS<b>:DPHY:DPTHree:PROBe <Probe_DP3>

Selects the type of probe used for the corresponding data lane.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Probe_DP3> DIFFerential | SINGle
*RST: SINGle

BUS<b>:DPHY:CP:HSPeed:HYSTeresis <Hysteresis_HS_CP>
BUS<b>:DPHY:DPZero:HSPeed:HYSTeresis <Hysteresis_HS_DP0>
BUS<b>:DPHY:DPONe:HSPeed:HYSTeresis <Hysteresis_HS_DP1>
BUS<b>:DPHY:DPTWo:HSPeed:HYSTeresis <Hysteresis_HS_DP2>
BUS<b>:DPHY:DPTHree:HSPeed:HYSTeresis <Hysteresis_HS_DP3>

Sets a value for the hysteresis of the respective lane.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Hysteresis_HS_DP3> Range: 0 to 0.5
Increment: 0.01
*RST: 0.2
Default unit: V

Manual operation: See "HS Hysteresis" on page 965

BUS<b>:DPHY:CP:HSPeed:THReshold <Threshold_HS_CP>
BUS<b>:DPHY:DPZero:HSPeed:THReshold <Threshold_HS_DP0>
BUS<b>:DPHY:DPONe:HSPeed:THReshold <Threshold_HS_DP1>
BUS<b>:DPHY:DPTWo:HSPeed:THReshold <Threshold_HS_DP2>
BUS<b>:DPHY:DPTHree:HSPeed:THReshold <Threshold_HS_DP3>

Sets the threshold value for the digitization of the respective high speed data line.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Threshold_HS_DP3> Range: -1 to 1
Increment: 0.01
*RST: 0.2
Default unit: V

Manual operation: See "High speed threshold" on page 965

BUS<b>:DPHY:SMLanes <Active>

Enables the display of the results in multiple lanes.

Suffix:
<b> 1..4

Parameters:
<Active> OFF | ON
*RST: ON

Manual operation: See "Show multiple lanes" on page 968

27.18.27.2 D-PHY trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:DPHY:TYPE....2632
TRIGger<t>:DPHY:DATA:CONDition....2632
TRIGger<t>:DPHY:DATA:MAX....2633
TRIGger<t>:DPHY:DATA:MIN....2633
TRIGger<t>:DPHY:DIDX:CONDition....2633
TRIGger<t>:DPHY:DIDX:MAX....2634
TRIGger<t>:DPHY:DIDX:MIN....2634
TRIGger<t>:DPHY:DTYPe:CONDition....2634

TRIGger<t>:DPHY:DTYPe:MAX 2635
TRIGger<t>:DPHY:DTYPe:MIN 2635
TRIGger<t>:DPHY:ESCMode:CONDition 2635
TRIGger<t>:DPHY:ESCMode:MAX 2636
TRIGger<t>:DPHY:ESCMode:MIN 2636
TRIGger<t>:DPHY:ESDTa:CONDition 2637
TRIGger<t>:DPHY:ESDTa:MAX 2637
TRIGger<t>:DPHY:ESDTa:MIN 2637
TRIGger<t>:DPHY:ESINdex:CONDition 2638
TRIGger<t>:DPHY:ESINdex:MAX 2638
TRIGger<t>:DPHY:ESINdex:MIN 2638
TRIGger<t>:DPHY:HSVC 2639
TRIGger<t>:DPHY:WCOunt:CONDition 2639
TRIGger<t>:DPHY:WCOunt:MAX 2639
TRIGger<t>:DPHY:WCOunt:MIN 2640

TRIGger<t>:DPHY:TYPE <Type>

Sets the type of frame to be triggered on.

Suffix:
<t> 1..3

Parameters:
<Type> HS_SOP | HS_EOP | HS_PH | HS_DATA | LP_ESC | LP_TURN | LP_HSRQ

HS_SOP
High speed start of packet

HS_EOP
High speed end of packet

HS_PH
High speed packet header

HS_DATA
High speed data

LP_ESC
Low power escape mode frame

LP_TURN
Low power lane turnaround

LP_HSRQ
Low power high speed request

*RST: HS_SOP

Manual operation: See "Type" on page 969

TRIGger<t>:DPHY:DATA:CONDition <Format>

Set the condition for the data value. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<Format> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:DPHY:DATA:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:DPHY:DATA:MIN` and `TRIGger<t>:DPHY:DATA:MAX`.

*RST: EQUal

Manual operation: See "Data Value" on page 972

TRIGger<t>:DPHY:DATA:MAX <DataMax>

Sets the the end value of a data type range if `TRIGger<t>:DPHY:DATA:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<DataMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data Value" on page 972

TRIGger<t>:DPHY:DATA:MIN <DataMin>

Specifies a data bit pattern, or sets the the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<DataMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data Value" on page 972

TRIGger<t>:DPHY:DIDX:CONDition <Format>

Sets the condition for the data index. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<Format> EQUal | LTHan | LETHan | GTHan | GETHan | INRange | RANGe

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `TRIGger<t>:DPHY:DIDX:MIN` command.

INRange = RANGe
In range: Set the minimum and maximum value using `TRIGger<t>:DPHY:DIDX:MIN` and `TRIGger<t>:DPHY:DIDX:MAX`.

*RST: INRange

Manual operation: See "Data Index" on page 973

TRIGger<t>:DPHY:DIDX:MAX <DXSymbol>

Sets the the end value of a data index range if `TRIGger<t>:DPHY:DIDX:CONDition` is set to `INRange` or `RANge`.

Suffix:
<t> 1..3

Parameters:
<DXSymbol> Range: 0 to 65.535E+3
Increment: 1
*RST: 65535

Manual operation: See "Data Index" on page 973

TRIGger<t>:DPHY:DIDX:MIN <SymbolType>

Specifies a data index minimum, or sets the the start value of a range.

Suffix:
<t> 1..3

Parameters:
<SymbolType> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Manual operation: See "Data Index" on page 973

TRIGger<t>:DPHY:DTYPe:CONDition <Format>

Set the condition for the data type. You can define an exact value or a value range

Suffix:
<t> 1..3

Parameters:
<Format> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `TRIGger<t>:DPHY:DTYPe:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:DPHY:DTYPe:MIN` and `TRIGger<t>:DPHY:DTYPe:MAX`.

*RST: EQUal

Manual operation: See "Data Type" on page 972

TRIGger<t>:DPHY:DTYPe:MAX <DataTypeMax>

Sets the the end value of a data type range if `TRIGger<t>:DPHY:DTYPe:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<DataTypeMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data Type" on page 972

TRIGger<t>:DPHY:DTYPe:MIN <DataTypeMin>

Specifies a data type pattern, or sets the the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<DataTypeMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data Type" on page 972

TRIGger<t>:DPHY:ESCMode:CONDition <Format>

Set the condition for the escape mode. You can define an exact value or a value range

Suffix:
<t> 1..3

Parameters:
<Format> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `TRIGger<t>:DPHY:ESCMode:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:DPHY:ESCMode:MIN` and `TRIGger<t>:DPHY:ESCMode:MAX`.

*RST: EQUal

Manual operation: See "Escape mode" on page 973

TRIGger<t>:DPHY:ESCMode:MAX <EscapeModeMax>

Sets the the end value of an escape mode range if `TRIGger<t>:DPHY:ESCMode:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<EscapeModeMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Escape mode" on page 973

TRIGger<t>:DPHY:ESCMode:MIN <EscapeModeMin>

Specifies a escape mode bit pattern, or sets the the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<EscapeModeMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Escape mode" on page 973

TRIGger<t>:DPHY:ESDTa:CONDition <Format>

Set the condition for the escape mode data value. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<Format> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:DPHY:ESDTa:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:DPHY:ESDTa:MIN` and `TRIGger<t>:DPHY:ESDTa:MAX`.

OFF | ANY
Any pattern is detected.

*RST: EQUal

Manual operation: See "Data Value" on page 972

TRIGger<t>:DPHY:ESDTa:MAX <LPEscapeDataMax>

Sets the the end value of a escape mode data type range if `TRIGger<t>:DPHY:ESDTa:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<LPEscapeDataMax>

Manual operation: See "Data Value" on page 972

TRIGger<t>:DPHY:ESDTa:MIN <LPEscapeDataMin>

Specifies an escape mode data bit pattern, or sets the the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<LPEscapeDataMin>

Manual operation: See "Data Value" on page 972

TRIGger<t>:DPHY:ESINdex:CONDition <Format>

Sets the condition for the escape mode data index. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<Format> EQUal | LTHan | LETHan | GTHan | GETHan | INRange | RANGe

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `TRIGger<t>:DPHY:ESINdex:MIN` command.

INRange = RANGe
In range: Set the minimum and maximum value using `TRIGger<t>:DPHY:ESINdex:MIN` and `TRIGger<t>:DPHY:ESINdex:MAX`.

*RST: INRange

Manual operation: See "Data Index" on page 973

TRIGger<t>:DPHY:ESINdex:MAX <DXSymbol>

Sets the the end value of a data index range if `TRIGger<t>:DPHY:ESINdex:CONDition` is set to `INRange` or `RANge`.

Suffix:
<t> 1..3

Parameters:
<DXSymbol> Range: 0 to 255
Increment: 1
*RST: 255

Manual operation: See "Data Index" on page 973

TRIGger<t>:DPHY:ESINdex:MIN <SymbolType>

Specifies an escape mode data index minimum, or sets the the start value of a range.

Suffix:
<t> 1..3

Parameters:
<SymbolType> Range: 0 to 255
Increment: 1
*RST: 0

Manual operation: See "Data Index" on page 973

TRIGger<t>:DPHY:HSVC <SymbolType>

Sets the virtual channel to be triggered on.

Suffix:
<t> 1..3

Parameters:
<SymbolType>

Manual operation: See "Virtual Channel" on page 972

TRIGger<t>:DPHY:WCOunt:CONDition <Format>

Set the condition for the word count. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<Format> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `TRIGger<t>:DPHY:WCOunt:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:DPHY:WCOunt:MIN` and `TRIGger<t>:DPHY:WCOunt:MAX`.

*RST: EQUal

Manual operation: See "Word Count" on page 972

TRIGger<t>:DPHY:WCOunt:MAX <WordCountMax>

Sets the the end value of a data type range if `TRIGger<t>:DPHY:WCOunt:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<WordCountMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Word Count" on page 972

TRIGger<t>:DPHY:WCOunt:MIN <WordCountMin>

Specifies a word bit pattern, or sets the the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<WordCountMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Word Count" on page 972

27.18.27.3 D-PHY decode results

To show the results on the screen, use the following commands:

- `BUS<b>:RESult` on page 1914

BUS<b>:DPHY:RESult:FCOunt? 2640
BUS<b>:DPHY:RESult:FRAMe<fr>:CS? 2640
BUS<b>:DPHY:RESult:FRAMe<fr>:DATA? 2641
BUS<b>:DPHY:RESult:FRAMe<fr>:DTName? 2641
BUS<b>:DPHY:RESult:FRAMe<fr>:DTYPe? 2642
BUS<b>:DPHY:RESult:FRAMe<fr>:ECC? 2642
BUS<b>:DPHY:RESult:FRAMe<fr>:PACKet<pa>:IDX? 2642
BUS<b>:DPHY:RESult:FRAMe<fr>:PACKet<pa>:VALue? 2643
BUS<b>:DPHY:RESult:FRAMe<fr>:STARt? 2643
BUS<b>:DPHY:RESult:FRAMe<fr>:STATe? 2643
BUS<b>:DPHY:RESult:FRAMe<fr>:STOP? 2644
BUS<b>:DPHY:RESult:FRAMe<fr>:TYPE? 2644
BUS<b>:DPHY:RESult:FRAMe<fr>:NUMPackets? 2645
BUS<b>:DPHY:RESult:FRAMe<fr>:VCHannel? 2645

BUS<b>:DPHY:RESult:FCOunt?

Returns the number of decoded frames for the selected serial bus.

Suffix:
<b> 1..4

Return values:
<Count> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:DPHY:RESult:FRAMe<fr>:CS?

Returns the checksum of the specified frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<CS> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:DPHY:RESult:FRAMe<fr>:DATA?

Returns the data or word count value.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<WordCntOrDat> 16 bit integer value
Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Example:
```
BUS:DPHY:RESult:FRAMe2:DATA?
<-- 13245
```

Usage: Query only

BUS<b>:DPHY:RESult:FRAMe<fr>:DTName?

Returns the data type name for the specified frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<DataTypeName>

Usage: Query only

BUS<b>:DPHY:RESult:FRAMe<fr>:DTYPe?

Returns the data type for the specified frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<DataType> Range: 0 to 255
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:DPHY:RESult:FRAMe<fr>:ECC?

Returns the error correction code (ECC) of the specified frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<ECC> Range: 0 to 255
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:DPHY:RESult:FRAMe<fr>:PACKet<pa>:IDX?

Returns the index of the data payload.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<pa> *
Selects the packet number.

Return values:

<PacketIndex> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:DPHY:RESult:FRAMe<fr>:PACKet<pa>:VALue?

Returns the byte value of the data payload.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<pa> *
Selects the packet number.

Return values:
<PacketValue> Range: 0 to 9.22337E+18
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:DPHY:RESult:FRAMe<fr>:STARt?

Returns the start time of the specified frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:DPHY:RESult:FRAMe<fr>:STATe?

Returns the overall state of the frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<State> OK | CS | ECC | ECCWarning | LENGth | FORMat | UNKNOWN_FRAME | INComplete

OK
The frame is valid.

LENGth
Length error.

UNKNOWN_FRAME
Unknown frame type

INComplete
The sequence is not completely contained in the acquisition

*RST: OK

Usage: Query only

BUS<b>:DPHY:RESult:FRAMe<fr>:STOP?

Returns the end time of the specified frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:DPHY:RESult:FRAMe<fr>:TYPE?

Returns the type of frame.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:

<FrameType> HS_SP | HS_LP | HS_INCOMPLETE | LP_HSREQ | LP_TA | LP_ESC

HS_SP
High speed short packet frame

HS_LP
High speed long packet frame

HS_INCOMPLETE
Incomplete high speed frame

LP_HSREQ
High speed request frame

LP_TA
Low power lane turnaround frame

LP_ESC
Low power escape mode frame

*RST: HS_SP

Usage: Query only

BUS<b>:DPHY:RESult:FRAMe<fr>:NUMPackets?

Returns the number of packets in the indicated frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<NumPackets> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:DPHY:RESult:FRAMe<fr>:VCHannel?

Returns the number of virtual channels.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<VirtualChannel> Range: 0 to 3
Increment: 1
*RST: 0

Usage: Query only

SEARch:TRIGger:DPHY:TYPE <SearchName>,<Type>
SEARch:TRIGger:DPHY:TYPE? <SearchName>

Sets the type of frame to be searched for.

Parameters:

<Type> HS_SOP | HS_EOP | HS_PH | HS_DATA | LP_ESC | LP_TURN | LP_HSRQ

HS_SOP
High speed start of packet

HS_EOP
High speed end of packet

HS_PH
High speed packet header

HS_DATA
High speed data

LP_ESC
Low power escape mode frame

LP_TURN
Low power lane turnaround

LP_HSRQ
Low power high speed request

*RST: HS_SOP

Parameters for setting and query:
<SearchName>

Manual operation: See "Type" on page 976

SEARch:TRIGger:DPHY:DATA:CONDition <SearchName>,<Format>
SEARch:TRIGger:DPHY:DATA:CONDition? <SearchName>

Set the condition for the data value. You can define an exact value or a value range.

Parameters:
<Format> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:DPHY:DATA:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:DPHY:DATA:MIN` and `SEARch:TRIGger:DPHY:DATA:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Data Value" on page 977

SEARch:TRIGger:DPHY:DATA:MAX <SearchName>,<DataMax>
SEARch:TRIGger:DPHY:DATA:MAX? <SearchName>

Sets the the end value of a data type range if `SEARch:TRIGger:DPHY:DATA:CONDition` is set to `INRange` or `OORange`.

Parameters:
<DataMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Data Value" on page 977

SEARch:TRIGger:DPHY:DATA:MIN <SearchName>,<DataMin>
SEARch:TRIGger:DPHY:DATA:MIN? <SearchName>

Specifies a data bit pattern, or sets the the start value of a pattern range.

Parameters:
<DataMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Data Value" on page 977

SEARch:TRIGger:DPHY:DIDX:CONDition <SearchName>,<Format>
SEARch:TRIGger:DPHY:DIDX:CONDition? <SearchName>

Sets the condition for the data index. You can define an exact value or a value range.

Parameters:
<Format> EQUal | LTHan | LETHan | GTHan | GETHan | INRange | RANGe

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `SEARch:TRIGger:DPHY:DIDX:MIN` command.

INRange = RANGe
In range: Set the minimum and maximum value using `SEARch:TRIGger:DPHY:DIDX:MIN` and `SEARch:TRIGger:DPHY:DIDX:MAX`.

*RST: INRange

Parameters for setting and query:
<SearchName>

Manual operation: See "Data Index" on page 978

SEARch:TRIGger:DPHY:DIDX:MAX <SearchName>,<IndexMax>
SEARch:TRIGger:DPHY:DIDX:MAX? <SearchName>

Sets the the end value of a data index range if `SEARch:TRIGger:DPHY:DIDX:CONDition` is set to `INRange` or `RANge`.

Parameters:
<IndexMax> Range: 0 to 65.535E+3
Increment: 1
*RST: 65535

Parameters for setting and query:
<SearchName>

Manual operation: See "Data Index" on page 978

SEARch:TRIGger:DPHY:DIDX:MIN <SearchName>,<IndexMin>
SEARch:TRIGger:DPHY:DIDX:MIN? <SearchName>

Specifies a data index minimum, or sets the the start value of a range.

Parameters:
<IndexMin> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Parameters for setting and query:
<SearchName>

Manual operation: See "Data Index" on page 978

SEARch:TRIGger:DPHY:DTYPe:CONDition <SearchName>,<Format>
SEARch:TRIGger:DPHY:DTYPe:CONDition? <SearchName>

Set the condition for the data type. You can define an exact value or a value range

Parameters:
<Format> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `SEARch:TRIGger:DPHY:DTYPe:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:DPHY:DATA:MIN` and `SEARch:TRIGger:DPHY:DATA:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Data Type" on page 977

SEARch:TRIGger:DPHY:DTYPe:MAX <SearchName>,<DataTypeMax>
SEARch:TRIGger:DPHY:DTYPe:MAX? <SearchName>

Sets the the end value of a data type range if `SEARch:TRIGger:DPHY:DTYPe:CONDition` is set to `INRange` or `OORange`.

Parameters:
<DataTypeMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Data Type" on page 977

SEARch:TRIGger:DPHY:DTYPe:MIN <SearchName>,<DataTypeMin>
SEARch:TRIGger:DPHY:DTYPe:MIN? <SearchName>

Specifies a data type pattern, or sets the the start value of a pattern range.

Parameters:
<DataTypeMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Data Type" on page 977

SEARch:TRIGger:DPHY:ESCMode:CONDition <SearchName>,<Format>
SEARch:TRIGger:DPHY:ESCMode:CONDition? <SearchName>

Set the condition for the escape mode. You can define an exact value or a value range

Parameters:
<Format> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `SEARch:TRIGger:DPHY:ESCMode:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:DPHY:ESCMode:MIN` and `SEARch:TRIGger:DPHY:ESCMode:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Escape mode" on page 978

SEARch:TRIGger:DPHY:ESCMode:MAX <SearchName>,<EscapeModeMax>
SEARch:TRIGger:DPHY:ESCMode:MAX? <SearchName>

Sets the the end value of an escape mode range if `SEARch:TRIGger:DPHY:ESCMode:CONDition` is set to `INRange` or `OORange`.

Parameters:
<EscapeModeMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Escape mode" on page 978

SEARch:TRIGger:DPHY:ESCMode:MIN <SearchName>,<EscapeModeMin>
SEARch:TRIGger:DPHY:ESCMode:MIN? <SearchName>

Specifies a escape mode bit pattern, or sets the the start value of a pattern range.

Parameters:
<EscapeModeMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Escape mode" on page 978

SEARch:TRIGger:DPHY:ESDTa:CONDition <SearchName>,<Format>
SEARch:TRIGger:DPHY:ESDTa:CONDition? <SearchName>

Set the condition for the escape mode data value. You can define an exact value or a value range.

Parameters:
<Format> OFF | ANY | EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:DPHY:ESDTa:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:DPHY:ESDTa:MIN` and `SEARch:TRIGger:DPHY:ESDTa:MAX`.

OFF | ANY
Any pattern is detected.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Data Value" on page 977

SEARch:TRIGger:DPHY:ESDTa:MAX <SearchName>,<LPEscpDatMax>
SEARch:TRIGger:DPHY:ESDTa:MAX? <SearchName>

Sets the the end value of a escape mode data type range if `SEARch:TRIGger:DPHY:ESDTa:CONDition` is set to `INRange` or `OORange`.

Parameters:
<LPEscpDatMax>

Parameters for setting and query:
<SearchName>

Manual operation: See "Data Value" on page 977

SEARch:TRIGger:DPHY:ESDTa:MIN <SearchName>,<LPEscpDatMin>
SEARch:TRIGger:DPHY:ESDTa:MIN? <SearchName>

Specifies an escape mode data bit pattern, or sets the the start value of a pattern range.

Parameters:
<LPEscpDatMin>

Parameters for setting and query:
<SearchName>

Manual operation: See "Data Value" on page 977

SEARch:TRIGger:DPHY:ESINdex:CONDition <SearchName>,<Format>
SEARch:TRIGger:DPHY:ESINdex:CONDition? <SearchName>

Sets the condition for the escape mode data index. You can define an exact value or a value range.

Parameters:
<Format> EQUal | LTHan | LETHan | GTHan | GETHan | INRange | RANGe

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `SEARch:TRIGger:DPHY:ESINdex:MIN` command.

INRange = RANGe
In range: Set the minimum and maximum value using `SEARch:TRIGger:DPHY:ESINdex:MIN` and `SEARch:TRIGger:DPHY:ESINdex:MAX`.

*RST: INRange

Parameters for setting and query:
<SearchName>

Manual operation: See "Data Index" on page 978

SEARch:TRIGger:DPHY:ESINdex:MAX <SearchName>,<DXSymbol>
SEARch:TRIGger:DPHY:ESINdex:MAX? <SearchName>

Sets the the end value of a data index range if `SEARch:TRIGger:DPHY:ESINdex:CONDition` is set to `INRange` or `RANge`.

Parameters:
<DXSymbol> Range: 0 to 255
Increment: 1
*RST: 255

Parameters for setting and query:
<SearchName>

Manual operation: See "Data Index" on page 978

SEARch:TRIGger:DPHY:ESINdex:MIN <SearchName>,<SymbolType>
SEARch:TRIGger:DPHY:ESINdex:MIN? <SearchName>

Specifies an escape mode data index minimum, or sets the the start value of a range.

Parameters:
<SymbolType> Range: 0 to 255
Increment: 1
*RST: 0

Parameters for setting and query:
<SearchName>

Manual operation: See "Data Index" on page 978

SEARch:TRIGger:DPHY:HSVC <SearchName>,<SymbolType>
SEARch:TRIGger:DPHY:HSVC? <SearchName>

Sets the virtual channel to be searched for.

Parameters:
<SymbolType>

Parameters for setting and query:
<SearchName>

Manual operation: See "Virtual Channel" on page 976

SEARch:TRIGger:DPHY:WCOunt:CONDition <SearchName>,<Format>
SEARch:TRIGger:DPHY:WCOunt:CONDition? <SearchName>

Set the condition for the word count. You can define an exact value or a value range.

Parameters:
<Format> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `SEARch:TRIGger:DPHY:WCOunt:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:DPHY:WCOunt:MIN` and `SEARch:TRIGger:DPHY:WCOunt:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Word Count/ Data" on page 977

SEARch:TRIGger:DPHY:WCOunt:MAX <SearchName>,<WordCountMax>
SEARch:TRIGger:DPHY:WCOunt:MAX? <SearchName>

Sets the the end value of a data type range if `SEARch:TRIGger:DPHY:WCOunt:CONDition` is set to `INRange` or `OORange`.

Parameters:
<WordCountMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Word Count/ Data" on page 977

SEARch:TRIGger:DPHY:WCOunt:MIN <SearchName>,<WordCountMin>
SEARch:TRIGger:DPHY:WCOunt:MIN? <SearchName>

Specifies a word bit pattern, or sets the the start value of a pattern range.

Parameters:
<WordCountMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Word Count/ Data" on page 977

27.18.27.5 D-PHY search results

In all `SEARch:RESult:DPHY:FRAMe<m>` commands, the suffix <m> selects the frame number in the list of search results.

SEARch:RESult:DPHY:FCOunt? 2655
SEARch:RESult:DPHY:FRAMe<fr>:CS? 2655
SEARch:RESult:DPHY:FRAMe<fr>:DATA? 2655
SEARch:RESult:DPHY:FRAMe<fr>:DTName? 2656
SEARch:RESult:DPHY:FRAMe<fr>:DTYPe? 2656
SEARch:RESult:DPHY:FRAMe<fr>:ECC? 2656
SEARch:RESult:DPHY:FRAMe<fr>:PACKet<pa>:IDX? 2657
SEARch:RESult:DPHY:FRAMe<fr>:PACKet<pa>:VALue? 2657
SEARch:RESult:DPHY:FRAMe<fr>:STARt? 2657
SEARch:RESult:DPHY:FRAMe<fr>:STATe? 2658
SEARch:RESult:DPHY:FRAMe<fr>:STOP? 2658
SEARch:RESult:DPHY:FRAMe<fr>:TYPE? 2658
SEARch:RESult:DPHY:FRAMe<fr>:VCHannel? 2659

SEARch:RESult:DPHY:FCOunt? <SearchName>

Returns the number of frames within the search result for the selected serial bus.

Query parameters:
<SearchName>

Return values:

<FrameCount>	Range:	0 to 100E+3
	Increment:	1
	*RST:	0

Usage: Query only

SEARch:RESult:DPHY:FRAMe<fr>:CS? <SearchName>

Returns the checksum for the selected frame within the search result.

Suffix:

<fr>	*

Query parameters:
<SearchName>

Return values:

<CS>	Range:	0 to 65.535E+3
	Increment:	1
	*RST:	0

Usage: Query only

SEARch:RESult:DPHY:FRAMe<fr>:DATA? <SearchName>

Returns the data or word count value for the selected frame within the search result.

Suffix:

<fr>	*

Query parameters:
<SearchName>

Return values:
<WordCntOrDat> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:DPHY:FRAMe<fr>:DTName? <SearchName>

Returns the data type name for the specified frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<DataTypeName>

Usage: Query only

SEARch:RESult:DPHY:FRAMe<fr>:DTYPe? <SearchName>

Returns the data type for the specified frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<DataType> Range: 0 to 255
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:DPHY:FRAMe<fr>:ECC? <SearchName>

Returns the error correction code (ECC) of the specified frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:

<ECC> Range: 0 to 255
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:DPHY:FRAMe<fr>:PACKet<pa>:IDX? <SearchName>

Returns the index of the data payload for the selected frame within the search result.

Suffix:

<fr> *

<pa> *

Query parameters:

<SearchName>

Return values:

<PacketIndex> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:DPHY:FRAMe<fr>:PACKet<pa>:VALue? <SearchName>

Returns the byte value of the data payload for the selected frame within the search result.

Suffix:

<fr> *

<pa> *

Query parameters:

<SearchName>

Return values:

<PacketValue> Range: 0 to 9.22337E+18
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:DPHY:FRAMe<fr>:STARt? <SearchName>

Returns the start time of the specified frame within the search result.

Suffix:

<fr> *

Query parameters:

<SearchName>

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:DPHY:FRAMe<fr>:STATe? <SearchName>

Returns the overall state of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<State> OK | CS | ECC | ECCWarning | LENGth | FORMat | UNKNOWN_FRAME | INComplete

OK
The frame is valid.

LENGth
Length error.

UNKNOWN_FRAME
Unknown frame type

*RST: OK

Usage: Query only

SEARch:RESult:DPHY:FRAMe<fr>:STOP? <SearchName>

Returns the end time for the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:DPHY:FRAMe<fr>:TYPE? <SearchName>

Returns the type of frame for the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<FrameType> HS_SP | HS_LP | HS_INCOMPLETE | LP_HSREQ | LP_TA | LP_ESC

HS_SP
High speed short packet frame

HS_LP
High speed long packet frame

HS_INCOMPLETE
Incomplete high speed frame

LP_HSREQ
High speed request frame

LP_TA
Low power lane turnaround frame

LP_ESC
Low power escape mode frame

*RST: HS_SP

Usage: Query only

SEARch:RESult:DPHY:FRAMe<fr>:VCHannel? <SearchName>

Returns the number of virtual channels for the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<VirtualChannel> Range: 0 to 3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:MPHY:THPReset....2662
BUS<b>:MPHY:SCRMode....2662
BUS<b>:MPHY:SMLanes....2662

BUS<b>:MPHY:VARiant <Protocol>

Selects the protocol running on the interface.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Protocol> MPHY | UNIPRO | SSIC
*RST: MPHY

Manual operation: See "Variant" on page 982

BUS<b>:MPHY:DLANes <DataLaneCount>

Sets the number of data lanes.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<DataLaneCount> Range: 1 to 4
Increment: 1
*RST: 4

Manual operation: See "Lanes" on page 983

BUS<b>:MPHY:DZERo:SOURce <DataSource>

Sets the source for the lane.

Suffix:
<b> 1..4

Parameters:
<DataSource> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
*RST: C1W1

Manual operation: See "Lane 0 / Lane 1 / Lane 2 / Lane 3: Channel" on page 983

BUS<b>:MPHY:DONE:SOURce <DataSource>
BUS<b>:MPHY:DTWO:SOURce <DataSource>
BUS<b>:MPHY:DTHRee:SOURce <DataSource>

Selects the source of the corresponding data lane.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<DataSource> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | NONE
*RST: DONe: C2W1, DTWo: C3W1, DTHree: C4W1

Manual operation: See "Lane 0 / Lane 1 / Lane 2 / Lane 3: Channel" on page 983

BUS<b>:MPHY:DZERo:THReshold <Threshold>
BUS<b>:MPHY:DONE:THReshold <Threshold>
BUS<b>:MPHY:DTWO:THReshold <Threshold>
BUS<b>:MPHY:DTHRee:THReshold <Threshold>

Sets the threshold value for the respective lane.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Threshold> Range: 0 to 1
Increment: 0.01
*RST: 0.1
Default unit: V

Manual operation: See "Threshold setup " on page 983

BUS<b>:MPHY:THCoupling <Coupling>

Enables the same threshold value to be used for all lanes.

When the threshold coupling is disabled, changes to the threshold value only affect the respective lane.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<Coupling> OFF | ON
*RST: ON

Manual operation: See "Threshold setup " on page 983

BUS<b>:MPHY:THPReset <ThresPreset>

Selects the predefined value to preset the threshold value of the data lanes.

Suffix:
<b> 1..4
Selects the serial bus.

Parameters:
<ThresPreset> THRES_60MV | THRES_120MV | THRES_240MV | MANual

THRES_60MV | THRES_120MV | THRES_240MV
Sets the threshold value of the data lane to the selected predefined value.

MANual
Automatically switches to this option if you edit the threshold text box manually.

*RST: MANual

BUS<b>:MPHY:SCRMode <SSICScrambleMd>

Sets if the SSIC data is scrambled or unscrambled.

Suffix:
<b> 1..4

Parameters:
<SSICScrambleMd> SCRM | NSCR

`SCRM`: scrambled
`NSCR`: unscrambled

*RST: SCRM

Manual operation: See "Scrambled Mode" on page 984

BUS<b>:MPHY:SMLanes <Active>

Enables the display of the results in multiple lanes.

Suffix:
<b> 1..4

Parameters:
<Active> OFF | ON
*RST: ON

Manual operation: See "Show multiple lanes" on page 984

27.18.28.2 Trigger M-PHY

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:MPHY:TYPE <Type>

Selects the type of frame to be triggered on.

Suffix:
<t> 1..3

Parameters:
<Type> START | BURST | ADAPT | LCC | DLPDUSOF | DLPDUCOF | DLPDUEOF | DLPDUNAC | DLPDUAFC | PACP | TRIGUPR0 | TRIGUPR1 | TRIGUPR2 | ERRor

START
M-PHY or UniPro start of frame.

BURST
M-PHY burst frame.

ADAPT
M-PHY Adapt frame. This control frame is used for clock/bit synchronization.

LCC
M-PHY LCC frame. This control frame is used for line configuration depending on the `LCC Type`.

DLPDUSOF | DLPDUCOF | DLPDUEOF | DLPDUNAC | DLPDUAFC
UniPro DL PDU frame.

PACP
UniPro PACP frame. This control frame is used mainly for power mode change and L1.5 link management.

TRIGUPR0 | TRIGUPR1 | TRIGUPR2
UniPro Trigger Upper frame. This control frame is used for link startup sequence.

ERRor
M-PHY or UniPro error frame.

*RST: START

Manual operation: See "Type" on page 985

TRIGger<t>:MPHY:LCCType <LCC_Type>

Selects the type of LCC frame to be triggered on.

Suffix:
<t> 1..3

Parameters:
<LCC_Type> ANY | SLEEP | STALL | READCAP | READMFG | READVEND | WRITEATTR | PWMG0 | PWMG1 | PWMG2 | PWMG3 | PWMG4 | PWMG5 | PWMG6 | PWMG7 | HSG1A | HSG2A | HSG3A | HSG4A | HSG1B | HSG2B | HSG3B | HSG4B | RESERVED

ANY
All the available LCC commands.

SLEEP
Switches the power-saving state to ultra-low power. In this state, up to 90% power saving is achieved.

STALL
Switches the power-saving state to ultra-low power. In this state, up to 75% power saving is achieved.

READCAP
Recovers data about the OMC's capabilities.

READMFG
Retrieves manufacturing ID and vendor-specific information.

READVEND
Retrieves the additional four delimited bytes containing vendor-specific information.

WRITEATTR
Sets the configuration parameters required for lane operation.

PWMG0 | PWMG1 | PWMG2 | PWMG3 | PWMG4 | PWMG5 | PWMG6 | PWMG7
Switches the transmission mode to the selected low-power gear.

HSG1A | HSG2A | HSG3A | HSG4A | HSG1B | HSG2B | HSG3B | HSG4B
Switches the transmission mode to the selected high-speed gear.

RESERVED
Reserved bit command. These bits are reserved for future use.

*RST: ANY

Manual operation: See "LCC Type" on page 991

TRIGger<t>:MPHY:LWONe:CONDition <CondOperator>

Sets the condition for WORD 1. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<CondOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `TRIGger<t>:MPHY:LWONe:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:MPHY:LWONe:MIN` and `TRIGger<t>:MPHY:LWONe:MAX`.

*RST: EQUal

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 992

TRIGger<t>:MPHY:LWONe:MIN <WordMin>

Specifies the WORD 1 pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<WordMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 992

TRIGger<t>:MPHY:LWONe:MAX <WordMax>

Sets the end value of the WORD 1 range if `TRIGger<t>:MPHY:LWONe:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<WordMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 992

TRIGger<t>:MPHY:LWTWo:CONDition <CondOperator>

Sets the condition for WORD 2. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<CondOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `TRIGger<t>:MPHY:LWTWo:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:MPHY:LWTWo:MIN` and `TRIGger<t>:MPHY:LWTWo:MAX`.

*RST: EQUal

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 992

TRIGger<t>:MPHY:LWTWo:MIN <WordMin>

Specifies the WORD 2 pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<WordMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 992

TRIGger<t>:MPHY:LWTWo:MAX <WordMax>

Sets the end value of the WORD 2 range if `TRIGger<t>:MPHY:LWTWo:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<WordMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 992

TRIGger<t>:MPHY:LWTHree:CONDition <CondOperator>

Sets the condition for WORD 3. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<CondOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `TRIGger<t>:MPHY:LWTHree:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:MPHY:LWTHree:MIN` and `TRIGger<t>:MPHY:LWTHree:MAX`.

*RST: EQUal

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 992

TRIGger<t>:MPHY:LWTHree:MIN <WordMin>

Specifies the WORD 3 pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<WordMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 992

TRIGger<t>:MPHY:LWTHree:MAX <WordMax>

Sets the end value of the WORD 3 range if `TRIGger<t>:MPHY:LWTHree:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<WordMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 992

TRIGger<t>:MPHY:LWFour:CONDition <CondOperator>

Sets the condition for WORD 4. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<CondOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `TRIGger<t>:MPHY:LWFour:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:MPHY:LWFour:MIN` and `TRIGger<t>:MPHY:LWFour:MAX`.

*RST: EQUal

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 992

TRIGger<t>:MPHY:LWFour:MIN <WordMin>

Specifies the WORD 4 pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<WordMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 992

TRIGger<t>:MPHY:LWFour:MAX <WordMax>

Sets the end value of the WORD 4 range if `TRIGger<t>:MPHY:LWFour:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<WordMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 992

TRIGger<t>:MPHY:TC <TC>

Specifies the TC bit pattern.

Suffix:
<t> 1..3

Parameters:
<TC> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "TC" on page 992

TRIGger<t>:MPHY:DATA:DCON <Data_Operator>

Sets the condition for the data. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:MPHY:DATA:DMIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:MPHY:DATA:DMIN` and `TRIGger<t>:MPHY:DATA:DMAX`.

*RST: EQUal

Manual operation: See "Data" on page 993

TRIGger<t>:MPHY:DATA:DMIN <Data_Min>

Specifies the data bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<Data_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data" on page 993

TRIGger<t>:MPHY:DATA:DMAX <Data_Max>

Sets the end value of the data range if `TRIGger<t>:MPHY:DATA:DCON` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<Data_Max> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Data" on page 993

TRIGger<t>:MPHY:DATA:ICONdition <IndexOperator>

Sets the condition for the index. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<IndexOperator> EQUal | LTHan | LETHan | GTHan | GETHan | INRange | RANGe

EQUal | LTHan | LETHan | GTHan | GETHan
Equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `TRIGger<t>:MPHY:DATA:IMIN` command.

INRange = RANGe
In range: Set the minimum and maximum value using `TRIGger<t>:MPHY:DATA:IMIN` and `TRIGger<t>:MPHY:DATA:IMAX`.

*RST: INRange

Manual operation: See "Index" on page 993

TRIGger<t>:MPHY:DATA:IMIN <DataIndex_Min>

Specifies the index minimum, or sets the start value of a range.

Suffix:
<t> 1..3

Parameters:
<DataIndex_Min> Range: 1 to 65535
Increment: 1
*RST: 1

Manual operation: See "Index" on page 993

TRIGger<t>:MPHY:DATA:IMAX <DataIndex_Max>

Sets the end value of the index range if `TRIGger<t>:MPHY:DATA:ICONdition` is set to `INRange` or `RANge`.

Suffix:
<t> 1..3

Parameters:
<DataIndex_Max> Range: 1 to 65535
Increment: 1
*RST: 65535

Manual operation: See "Index" on page 993

TRIGger<t>:MPHY:FSNumber:CONDition <FSNOperator>

Sets the condition for FSN. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<FSNOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:MPHY:FSNumber:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:MPHY:FSNumber:MIN` and `TRIGger<t>:MPHY:FSNumber:MAX`.

*RST: EQUal

Manual operation: See "FSN" on page 993

TRIGger<t>:MPHY:FSNumber:MIN <FSNMin>

Specifies the FSN bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<FSNMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "FSN" on page 993

TRIGger<t>:MPHY:FSNumber:MAX <FSNMax>

Sets the end value of the FSN range if `TRIGger<t>:MPHY:FSNumber:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<FSNMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "FSN" on page 993

TRIGger<t>:MPHY:CRC:CONDition <CRC_Operator>

Sets the condition for CRC. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<CRC_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:MPHY:CRC:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:MPHY:CRC:MIN` and `TRIGger<t>:MPHY:CRC:MAX`.

*RST: EQUal

Manual operation: See "CRC" on page 994

TRIGger<t>:MPHY:CRC:MIN <CRC_Min>

Specifies the CRC bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<CRC_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "CRC" on page 994

TRIGger<t>:MPHY:CRC:MAX <CRC_Max>

Sets the end value of the CRC range if `TRIGger<t>:MPHY:CRC:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<CRC_Max> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "CRC" on page 994

TRIGger<t>:MPHY:CREQ <REQ>

Specifies the CREQ bit pattern.

Suffix:
<t> 1..3

Parameters:
<REQ> ONE | ZERO | DC

ONE
Sets the trigger condition to binary 1.

ZERO
Sets the trigger condition to binary 0.

DC
Sets the trigger condition to any CREQ value (don't care).

*RST: DC

Manual operation: See "Req" on page 994

TRIGger<t>:MPHY:RREQ <REQ>

Specifies the RREQ bit pattern.

Suffix:
<t> 1..3

Parameters:
<REQ> ONE | ZERO | DC

ONE
Sets the trigger condition to binary 1.

ZERO
Sets the trigger condition to binary 0.

DC
Sets the trigger condition to any RREQ value (don't care).

*RST: DC

Manual operation: See "Req" on page 994

TRIGger<t>:MPHY:CREDit:CONDition <CreditOperator>

Sets the condition for Credit. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<CreditOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:MPHY:CREDit:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:MPHY:CREDit:MIN` and `TRIGger<t>:MPHY:CREDit:MAX`.

*RST: EQUal

Manual operation: See "Credit" on page 994

TRIGger<t>:MPHY:CREDit:MIN <Credit_Min>

Specifies the Credit bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<Credit_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Credit" on page 994

TRIGger<t>:MPHY:CREDit:MAX <Credit_Max>

Sets the end value of the Credit range if `TRIGger<t>:MPHY:CREDit:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<Credit_Max> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Credit" on page 994

TRIGger<t>:MPHY:PBEGin:CONDition <CondPACPBegin>

Sets the condition for PACP Begin. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<CondPACPBegin> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:MPHY:PBEGin:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:MPHY:PBEGin:MIN` and `TRIGger<t>:MPHY:PBEGin:MAX`.

*RST: EQUal

Manual operation: See "PACP Begin" on page 995

TRIGger<t>:MPHY:PBEGin:MIN <PACPBeginMin>

Specifies the PACP Begin bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<PACPBeginMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "PACP Begin" on page 995

TRIGger<t>:MPHY:PBEGin:MAX <PACPBeginMax>

Sets the end value of the PACP Begin range if `TRIGger<t>:MPHY:PBEGin:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<PACPBeginMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "PACP Begin" on page 995

TRIGger<t>:MPHY:PFID:CONDition <CondPACPFunc>

Sets the condition for PACP Function ID. You can define an exact value or a value range.

Suffix:
<t> 1..3

Parameters:
<CondPACPFunc> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `TRIGger<t>:MPHY:PFID:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `TRIGger<t>:MPHY:PFID:MIN` and `TRIGger<t>:MPHY:PFID:MAX`.

*RST: EQUal

Manual operation: See "PACP Function ID" on page 995

TRIGger<t>:MPHY:PFID:MIN <PACPFuncMin>

Specifies the PACP Function ID bit pattern, or sets the start value of a pattern range.

Suffix:
<t> 1..3

Parameters:
<PACPFuncMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "PACP Function ID" on page 995

TRIGger<t>:MPHY:PFID:MAX <PACPFuncMax>

Sets the end value of the PACP Function ID range if `TRIGger<t>:MPHY:PFID:CONDition` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3

Parameters:
<PACPFuncMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "PACP Function ID" on page 995

TRIGger<t>:MPHY:PRPLength <Width>

Sets the width for the width trigger based upon the data rate.

Suffix:
<t> 1..3

Parameters:
<Width> Range: 100E-12 to 10000
Increment: 100E-9
*RST: 5E-9
Default unit: s

TRIGger<t>:MPHY:ERRor:LCMD <LCCError>

Enables/disables trigger on LCC error.

Suffix:
<t> 1..3

Parameters:
<LCCError> OFF | ON
*RST: ON

Manual operation: See "LCC Command Error" on page 996

TRIGger<t>:MPHY:ERRor:LENGth <Error_Length>

Enables/disables trigger on length error.

Suffix:
<t> 1..3

Parameters:
<Error_Length> OFF | ON
*RST: ON

Manual operation: See "Length Error" on page 996

TRIGger<t>:MPHY:ERRor:REServed <Error_Reserved>

Enables/disables trigger on reserved bit error.

Suffix:
<t> 1..3

Parameters:
<Error_Reserved> OFF | ON
*RST: ON

Manual operation: See "Reserved Bit Error" on page 996

TRIGger<t>:MPHY:ERRor:SYMBol <Error_Symbol>

Enables/disables trigger on 8b10b symbol error.

Suffix:
<t> 1..3

Parameters:
<Error_Symbol> OFF | ON
*RST: ON

Manual operation: See "8b10b Symbol Error" on page 996

TRIGger<t>:MPHY:ERRor:UNKNown <Error_Unknown>

Enables/disables trigger on unidentified UniPro frame error.

Suffix:
<t> 1..3

Parameters:
<Error_Unknown> OFF | ON
*RST: ON

Manual operation: See "Unknown Unipro Frame" on page 996

27.18.28.3 Decode results M-PHY

To show the results on the screen, use the following commands:

- `BUS<b>:RESult` on page 1914

BUS<b>:MPHY:RESult:FRAMe<fr>:NAME? 2679
BUS<b>:MPHY:RESult:FRAMe<fr>:FTYPe? 2680
BUS<b>:MPHY:RESult:FRAMe<fr>:STATe? 2681
BUS<b>:MPHY:RESult:FCOunt? 2682
BUS<b>:MPHY:RESult:FRAMe<fr>:CCOunt? 2682
BUS<b>:MPHY:RESult:FRAMe<fr>:CELL<ce>:DATA? 2682
BUS<b>:MPHY:RESult:FRAMe<fr>:CELL<ce>:STARt? 2683
BUS<b>:MPHY:RESult:FRAMe<fr>:CELL<ce>:STOP? 2683
BUS<b>:MPHY:RESult:FRAMe<fr>:CELL<ce>:STATe? 2683
BUS<b>:MPHY:RESult:FRAMe<fr>:CELL<ce>:TYPE? 2684
BUS<b>:MPHY:RESult:FRAMe<fr>:CELL<ce>:FVAL? 2684
BUS<b>:MPHY:RESult:FRAMe<fr>:DATA? 2684
BUS<b>:MPHY:RESult:FRAMe<fr>:INFO? 2685
BUS<b>:MPHY:RESult:FRAMe<fr>:SSFT? 2685
BUS<b>:MPHY:RESult:FRAMe<fr>:STARt? 2685
BUS<b>:MPHY:RESult:FRAMe<fr>:STOP? 2686

BUS<b>:MPHY:RESult:FRAMe<fr>:NAME?

Returns the name of the specified frame. Frame names are not necessarily unique.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<Name>

Usage: Query only

BUS<b>:MPHY:RESult:FRAMe<fr>:FTYPe?

Returns the type of frame for the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<Frame_Type> BURST | ADAPT | LCC | DLPDUSOF | DLPDUCOF | DLPDUEOF | DLPDUNAC | DLPDUAFC | PACP | TRIGUPR0 | TRIGUPR1 | TRIGUPR2 | SKIP | FILLER | SPACER | UNKNOWN

BURST
M-PHY burst frame.

ADAPT
M-PHY Adapt frame. This control frame is used for clock/bit synchronization.

LCC
M-PHY LCC frame. This control frame is used for line configuration depending on the `LCC Type`.

DLPDUSOF | DLPDUCOF | DLPDUEOF | DLPDUNAC | DLPDUAFC
UniPro DL PDU frame.

PACP
UniPro frame. This control frame is used mainly for power mode change and L1.5 link management.

TRIGUPR0 | TRIGUPR1 | TRIGUPR2
UniPro frame. This control frame is used for link startup sequence.

SKIP
UniPro frame with Skip symbols for reducing protocol payload bandwidth.

FILLER
M-PHY or UniPro frame with filler words to maintain transmission activity.

SPACER
Scrambled UniPro frame with filler words.

UNKNOWN
No meaningful frame can be determined.

*RST: UNKNOWN

Usage: Query only

BUS<b>:MPHY:RESult:FRAMe<fr>:STATe?

Returns the state of the frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<State> OK | RSVDERROR | CMDERROR | SYMBOLERROR | UNKNOWNERROR | INVALID | INCOMPLETE | UNCorrelated | CRCERROR | VOOR | LENGTHERROR

OK
Valid frame.

RSVDERROR
Erroneous frame due to reserved bit error.

CMDERROR
Erroneous frame due to LCC error.

SYMBOLERROR
Erroneous frame due to 8b10b symbol error.

UNKNOWNERROR
Erroneous frame due to unidentified UniPro frame error.

INVALID
Invalid frame.

INCOMPLETE
The frame is not complete.

LENGTHERROR
Erroneous frame due to length error.

*RST: OK

Usage: Query only

BUS<b>:MPHY:RESult:FCOunt?

Returns the number of decoded frames.

Suffix:
<b> 1..4
Selects the serial bus.

Return values:
<Count> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:MPHY:RESult:FRAMe<fr>:CCOunt?

Returns the number of decoded cells for the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<NumWords> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:MPHY:RESult:FRAMe<fr>:CELL<ce>:DATA?

Returns the data value for the selected cell.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<ce> *
Selects the cell.

Return values:
<WordValue> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:MPHY:RESult:FRAMe<fr>:CELL<ce>:STARt?

Returns the start time for the selected cell.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<ce> *
Selects the cell.

Return values:

<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:MPHY:RESult:FRAMe<fr>:CELL<ce>:STOP?

Returns the stop time for the selected cell.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<ce> *
Selects the cell.

Return values:

<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:MPHY:RESult:FRAMe<fr>:CELL<ce>:STATe?

Returns the state for the selected cell.

Suffix:

<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<ce> *
Selects the cell.

Return values:
<State> OK | RSVDERROR | CMDERROR | SYMBOLERROR | UNKNOWNERROR | INVALID | INCOMPLETE | UNCorrelated | CRCERROR | VOOR | LENGTHERROR
*RST: OK

Usage: Query only

BUS<b>:MPHY:RESult:FRAMe<fr>:CELL<ce>:TYPE?

Returns the data type for the selected cell.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<ce> *
Selects the cell.

Return values:
<WordType>

Usage: Query only

BUS<b>:MPHY:RESult:FRAMe<fr>:CELL<ce>:FVAL?

Returns the formatted value of the cell with the selected cell number within the frame with the selected number (for the selected serial bus).

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

<ce> *
Selects the cell number.

Return values:
<WordValString>

Usage: Query only

BUS<b>:MPHY:RESult:FRAMe<fr>:DATA?

Returns the data for the selected frame, corresponds to the Data column in the decode results table.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<Data>

Usage: Query only

BUS<b>:MPHY:RESult:FRAMe<fr>:INFO?

Returns the selected frame label. This label is on top of the frame as seen in the honeycomb display, also corresponds to the Info column in the decode results table.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<Info>

Usage: Query only

BUS<b>:MPHY:RESult:FRAMe<fr>:SSFT?

Returns the type of frame for the selected SSIC frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<SSIC_FrameType> TSEQ | TS1 | TS1A | TS1B | TS2 | SLF | U2IT | VDT | PCAP | PCNF | PCNR | LDM | ACK | NRDY | ERDY | STATus | STALI | FWAKe | LTM | BIAM | HRR | SSPD | PING | PNGR | DPH | DPHN | DPP | DPPA | ITP | LC | SKIP | BRST | BDAT | BERC | BCNT | IDLE | CP0 | CP1 | CP2 | CP3 | CP5or6 | UHP | ULMP | UTP | UDVN | UDEF | ERRor | CTLB | DATB | SYNC | SDS
*RST: UDEF

Usage: Query only

BUS<b>:MPHY:RESult:FRAMe<fr>:STARt?

Returns the start time of the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:MPHY:RESult:FRAMe<fr>:STOP?

Returns the end time of the selected frame.

Suffix:
<b> 1..4
Selects the serial bus.

<fr> *
Selects the frame.

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:TRIGger:MPHY:TYPE <SearchName>,<Type>
SEARch:TRIGger:MPHY:TYPE? <SearchName>

Selects the type of frame to be searched for.

Parameters:

<Type>

START | BURST | ADAPT | LCC | DLPDUSOF | DLPDUCOF | DLPDUEOF | DLPDUNAC | DLPDUAFC | PACP | TRIGUPR0 | TRIGUPR1 | TRIGUPR2 | ERRor

START
M-PHY or UniPro start of frame.

BURST
M-PHY burst frame.

ADAPT
M-PHY Adapt frame. This control frame is used for clock/bit synchronization.

LCC
M-PHY LCC frame. This control frame is used for line configuration depending on the `LCC Type`.

DLPDUSOF | DLPDUCOF | DLPDUEOF | DLPDUNAC | DLPDUAFC
UniPro DL PDU frame.

PACP
UniPro PACP frame. This control frame is used mainly for power mode change and L1.5 link management.

TRIGUPR0 | TRIGUPR1 | TRIGUPR2
UniPro Trigger Upper frame. This control frame is used for link startup sequence.

ERRor
M-PHY or UniPro error frame.

*RST: START

Parameters for setting and query:
<SearchName>

Manual operation: See "Type" on page 1001

SEARch:TRIGger:MPHY:LCCType <SearchName>,<LCC_Type>
SEARch:TRIGger:MPHY:LCCType? <SearchName>

Selects the type of LCC frame to be searched for.

Parameters:
<LCC_Type> ANY | SLEEP | STALL | READCAP | READMFG | READVEND | WRITEATTR | PWMG0 | PWMG1 | PWMG2 | PWMG3 | PWMG4 | PWMG5 | PWMG6 | PWMG7 | HSG1A | HSG2A | HSG3A | HSG4A | HSG1B | HSG2B | HSG3B | HSG4B | RESERVED

ANY
All the available LCC commands.

SLEEP
Switches the power-saving state to ultra-low power. In this state, up to 90% power saving is achieved.

STALL
Switches the power-saving state to ultra-low power. In this state, up to 75% power saving is achieved.

READCAP
Recovers data about the OMC's capabilities.

READMFG
Retrieves manufacturing ID and vendor-specific information.

READVEND
Retrieves the additional four delimited bytes containing vendor-specific information.

WRITEATTR
Sets the configuration parameters required for lane operation.

PWMG0 | PWMG1 | PWMG2 | PWMG3 | PWMG4 | PWMG5 | PWMG6 | PWMG7
Switches the transmission mode to the selected low-power gear.

HSG1A | HSG2A | HSG3A | HSG4A | HSG1B | HSG2B | HSG3B | HSG4B
Switches the transmission mode to the selected high-speed gear.

RESERVED
Reserved bit command. These bits are reserved for future use.

*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "LCC Type" on page 1003

SEARch:TRIGger:MPHY:LWONe:CONDition <SearchName>,<CondOperator>
SEARch:TRIGger:MPHY:LWONe:CONDition? <SearchName>

Sets the condition for WORD 1. You can define an exact value or a value range.

Parameters:
<CondOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `SEARch:TRIGger:MPHY:LWONe:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:MPHY:LWONe:MIN` and `SEARch:TRIGger:MPHY:LWONe:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 1003

SEARch:TRIGger:MPHY:LWONe:MIN <SearchName>,<WordMin>
SEARch:TRIGger:MPHY:LWONe:MIN? <SearchName>

Specifies the WORD 1 pattern, or sets the the start value of a pattern range.

Parameters:
<WordMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 1003

SEARch:TRIGger:MPHY:LWONe:MAX <SearchName>,<WordMax>
SEARch:TRIGger:MPHY:LWONe:MAX? <SearchName>

Sets the end value of the WORD 1 range if `SEARch:TRIGger:MPHY:LWONe:CONDition` is set to `INRange` or `OORange`.

Parameters:
<WordMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 1003

SEARch:TRIGger:MPHY:LWTWo:CONDition <SearchName>,<CondOperator>
SEARch:TRIGger:MPHY:LWTWo:CONDition? <SearchName>

Sets the condition for WORD 2. You can define an exact value or a value range.

Parameters:
<CondOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `SEARch:TRIGger:MPHY:LWTWo:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:MPHY:LWTWo:MIN` and `SEARch:TRIGger:MPHY:LWTWo:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 1003

SEARch:TRIGger:MPHY:LWTWo:MIN <SearchName>,<WordMin>
SEARch:TRIGger:MPHY:LWTWo:MIN? <SearchName>

Specifies the WORD 2 pattern, or sets the the start value of a pattern range.

Parameters:
<WordMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 1003

SEARch:TRIGger:MPHY:LWTWo:MAX <SearchName>,<WordMax>
SEARch:TRIGger:MPHY:LWTWo:MAX? <SearchName>

Sets the end value of the WORD 2 range if `SEARch:TRIGger:MPHY:LWTWo:CONDition` is set to `INRange` or `OORange`.

Parameters:
<WordMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 1003

SEARch:TRIGger:MPHY:LWTHree:CONDition <SearchName>,<CondOperator>
SEARch:TRIGger:MPHY:LWTHree:CONDition? <SearchName>

Sets the condition for WORD 3. You can define an exact value or a value range.

Parameters:
<CondOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `SEARch:TRIGger:MPHY:LWTHree:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:MPHY:LWTHree:MIN` and `SEARch:TRIGger:MPHY:LWTHree:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 1003

SEARch:TRIGger:MPHY:LWTHree:MIN <SearchName>,<WordMin>
SEARch:TRIGger:MPHY:LWTHree:MIN? <SearchName>

Specifies the WORD 3 pattern, or sets the the start value of a pattern range.

Parameters:
<WordMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 1003

SEARch:TRIGger:MPHY:LWTHree:MAX <SearchName>,<WordMax>
SEARch:TRIGger:MPHY:LWTHree:MAX? <SearchName>

Sets the end value of the WORD 3 range if `SEARch:TRIGger:MPHY:LWTHree:CONDition` is set to `INRange` or `OORange`.

Parameters:
<WordMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 1003

SEARch:TRIGger:MPHY:LWFour:CONDition <SearchName>,<CondOperator>
SEARch:TRIGger:MPHY:LWFour:CONDition? <SearchName>

Sets the condition for WORD 4. You can define an exact value or a value range.

Parameters:
<CondOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `SEARch:TRIGger:MPHY:LWFour:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:MPHY:LWFour:MIN` and `SEARch:TRIGger:MPHY:LWFour:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 1003

SEARch:TRIGger:MPHY:LWFour:MIN <SearchName>,<WordMin>
SEARch:TRIGger:MPHY:LWFour:MIN? <SearchName>

Specifies the WORD 4 pattern, or sets the the start value of a pattern range.

Parameters:
<WordMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 1003

SEARch:TRIGger:MPHY:LWFour:MAX <SearchName>,<WordMax>
SEARch:TRIGger:MPHY:LWFour:MAX? <SearchName>

Sets the end value of the WORD 4 range if `SEARch:TRIGger:MPHY:LWFour:CONDition` is set to `INRange` or `OORange`.

Parameters:
<WordMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "WORD 1/WORD 2/WORD 3/WORD 4" on page 1003

SEARch:TRIGger:MPHY:TC <SearchName>,<TC>
SEARch:TRIGger:MPHY:TC? <SearchName>

Specifies the TC bit pattern.

Parameters:
<TC> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "TC" on page 1004

SEARch:TRIGger:MPHY:DATA:DCONdition <SearchName>,<Data_Operator>
SEARch:TRIGger:MPHY:DATA:DCONdition? <SearchName>

Sets the condition for the data. You can define an exact value or a value range.

Parameters:

<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:MPHY:DATA:DMIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:MPHY:DATA:DMIN` and `SEARch:TRIGger:MPHY:DATA:DMAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Data" on page 1004

SEARch:TRIGger:MPHY:DATA:DMIN <SearchName>,<Data_Min>
SEARch:TRIGger:MPHY:DATA:DMIN? <SearchName>

Specifies the data bit pattern, or sets the the start value of a pattern range.

Parameters:

<Data_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Data" on page 1004

SEARch:TRIGger:MPHY:DATA:DMAX <SearchName>,<Data_Max>
SEARch:TRIGger:MPHY:DATA:DMAX? <SearchName>

Sets the end value of the data range if `SEARch:TRIGger:MPHY:DATA:DCONdition` is set to `INRange` or `OORange`.

Parameters:

<Data_Max> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Data" on page 1004

SEARch:TRIGger:MPHY:DATA:ICONdition <SearchName>,<IndexOperator>
SEARch:TRIGger:MPHY:DATA:ICONdition? <SearchName>

Sets the condition for the index. You can define an exact value or a value range.

Parameters:
<IndexOperator> EQUal | LTHan | LETHan | GTHan | GETHan | INRange | RANGe

EQUal | LTHan | LETHan | GTHan | GETHan
Equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one pattern to be set with the corresponding `SEARch:TRIGger:MPHY:DATA:IMIN` command.

INRange = RANGe
In range: Set the minimum and maximum value using `SEARch:TRIGger:MPHY:DATA:IMIN` and `SEARch:TRIGger:MPHY:DATA:IMAX`.

*RST: INRange

Parameters for setting and query:
<SearchName>

Manual operation: See "Index" on page 1005

SEARch:TRIGger:MPHY:DATA:IMIN <SearchName>,<DataIndex_Min>
SEARch:TRIGger:MPHY:DATA:IMIN? <SearchName>

Specifies the index minimum, or sets the start value of a range.

Parameters:
<DataIndex_Min> Range: 1 to 65535
Increment: 1
*RST: 1

Parameters for setting and query:
<SearchName>

Manual operation: See "Index" on page 1005

SEARch:TRIGger:MPHY:DATA:IMAX <SearchName>,<DataIndex_Max>
SEARch:TRIGger:MPHY:DATA:IMAX? <SearchName>

Sets the end value of the index range if `SEARch:TRIGger:MPHY:DATA:ICONdition` is set to `INRange` or `RANge`.

Parameters:
<DataIndex_Max> Range: 1 to 65535
Increment: 1
*RST: 65535

Parameters for setting and query:
<SearchName>

Manual operation: See "Index" on page 1005

SEARch:TRIGger:MPHY:FSNumber:CONDition <SearchName>,<FSNOperator>
SEARch:TRIGger:MPHY:FSNumber:CONDition? <SearchName>

Sets the condition for FSN. You can define an exact value or a value range.

Parameters:
<FSNOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:MPHY:FSNumber:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:MPHY:FSNumber:MIN` and `SEARch:TRIGger:MPHY:FSNumber:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "FSN" on page 1005

SEARch:TRIGger:MPHY:FSNumber:MIN <SearchName>,<FSNMin>
SEARch:TRIGger:MPHY:FSNumber:MIN? <SearchName>

Specifies the FSN bit pattern, or sets the start value of a pattern range.

Parameters:
<FSNMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "FSN" on page 1005

SEARch:TRIGger:MPHY:FSNumber:MAX <SearchName>,<FSNMax>
SEARch:TRIGger:MPHY:FSNumber:MAX? <SearchName>

Sets the end value of the FSN range if `SEARch:TRIGger:MPHY:FSNumber:CONDition` is set to `INRange` or `OORange`.

Parameters:
<FSNMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "FSN" on page 1005

SEARch:TRIGger:MPHY:CRC:CONDition <SearchName>,<CRC_Operator>
SEARch:TRIGger:MPHY:CRC:CONDition? <SearchName>

Sets the condition for CRC. You can define an exact value or a value range.

Parameters:
<CRC_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:MPHY:CRC:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:MPHY:CRC:MIN` and `SEARch:TRIGger:MPHY:CRC:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "CRC" on page 1005

SEARch:TRIGger:MPHY:CRC:MIN <SearchName>,<CRC_Min>
SEARch:TRIGger:MPHY:CRC:MIN? <SearchName>

Specifies the CRC bit pattern, or sets the start value of a pattern range.

Parameters:
<CRC_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "CRC" on page 1005

SEARch:TRIGger:MPHY:CRC:MAX <SearchName>,<CRC_Max>
SEARch:TRIGger:MPHY:CRC:MAX? <SearchName>

Sets the end value of the CRC range if `SEARch:TRIGger:MPHY:CRC:CONDition` is set to `INRange` or `OORange`.

Parameters:
<CRC_Max> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "CRC" on page 1005

SEARch:TRIGger:MPHY:CREQ <SearchName>,<REQ>
SEARch:TRIGger:MPHY:CREQ? <SearchName>

Specifies the CREQ bit pattern.

Parameters:
<REQ> ONE | ZERO | DC

ONE
Sets the trigger condition to binary 1.

ZERO
Sets the trigger condition to binary 0.

DC
Sets the trigger condition to any CREQ value (don't care).

*RST: DC

Parameters for setting and query:
<SearchName>

Manual operation: See "Req" on page 1006

SEARch:TRIGger:MPHY:RREQ <SearchName>,<REQ>
SEARch:TRIGger:MPHY:RREQ? <SearchName>

Specifies the RREQ bit pattern.

Parameters:
<REQ> ONE | ZERO | DC

ONE
Sets the trigger condition to binary 1.

ZERO
Sets the trigger condition to binary 0.

DC
Sets the trigger condition to any RREQ value (don't care).

*RST: DC

Parameters for setting and query:
<SearchName>

Manual operation: See "Req" on page 1006

SEARch:TRIGger:MPHY:CREDit:CONDition <SearchName>,<CreditOperator>
SEARch:TRIGger:MPHY:CREDit:CONDition? <SearchName>

Sets the condition for Credit. You can define an exact value or a value range.

Parameters:
<CreditOperator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:MPHY:CREDit:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:MPHY:CREDit:MIN` and `SEARch:TRIGger:MPHY:CREDit:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Credit" on page 1006

SEARch:TRIGger:MPHY:CREDit:MIN <SearchName>,<Credit_Min>
SEARch:TRIGger:MPHY:CREDit:MIN? <SearchName>

Specifies the Credit bit pattern, or sets the start value of a pattern range.

Parameters:
<Credit_Min> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Credit" on page 1006

SEARch:TRIGger:MPHY:CREDit:MAX <SearchName>,<Credit_Max>
SEARch:TRIGger:MPHY:CREDit:MAX? <SearchName>

Sets the end value of the Credit range if `SEARch:TRIGger:MPHY:CREDit:CONDition` is set to `INRange` or `OORange`.

Parameters:
<Credit_Max> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Credit" on page 1006

SEARch:TRIGger:MPHY:PBEGin:CONDition <SearchName>,<CondPACPBegin>
SEARch:TRIGger:MPHY:PBEGin:CONDition? <SearchName>

Sets the condition for PACP Begin. You can define an exact value or a value range.

Parameters:
<CondPACPBegin> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:MPHY:PBEGin:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:MPHY:PBEGin:MIN` and `SEARch:TRIGger:MPHY:PBEGin:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "PACP Begin" on page 1007

SEARch:TRIGger:MPHY:PBEGin:MIN <SearchName>,<PACPBeginMin>
SEARch:TRIGger:MPHY:PBEGin:MIN? <SearchName>

Specifies the PACP Begin bit pattern, or sets the start value of a pattern range.

Parameters:
<PACPBeginMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "PACP Begin" on page 1007

SEARch:TRIGger:MPHY:PBEGin:MAX <SearchName>,<PACPBeginMax>
SEARch:TRIGger:MPHY:PBEGin:MAX? <SearchName>

Sets the end value of the PACP Begin range if `SEARch:TRIGger:MPHY:PBEGin:CONDition` is set to `INRange` or `OORange`.

Parameters:
<PACPBeginMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "PACP Begin" on page 1007

SEARch:TRIGger:MPHY:PFID:CONDition <SearchName>,<CondPACPFunc>
SEARch:TRIGger:MPHY:PFID:CONDition? <SearchName>

Sets the condition for PACP Function ID. You can define an exact value or a value range.

Parameters:
<CondPACPFunc> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less or equal than, Greater Than, Greater or equal than. These conditions require one data pattern to be set with the corresponding `SEARch:TRIGger:MPHY:PFID:MIN` command.

INRange | OORange
In range/Out of range: set the minimum and maximum value of the range with `SEARch:TRIGger:MPHY:PFID:MIN` and `SEARch:TRIGger:MPHY:PFID:MAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "PACP Function ID" on page 1007

SEARch:TRIGger:MPHY:PFID:MIN <SearchName>,<PACPFuncMin>
SEARch:TRIGger:MPHY:PFID:MIN? <SearchName>

Specifies the PACP Function ID bit pattern, or sets the start value of a pattern range.

Parameters:
<PACPFuncMin> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "PACP Function ID" on page 1007

SEARch:TRIGger:MPHY:PFID:MAX <SearchName>,<PACPFuncMax>
SEARch:TRIGger:MPHY:PFID:MAX? <SearchName>

Sets the end value of the PACP Function ID range if `SEARch:TRIGger:MPHY:PFID:CONDition` is set to `INRange` or `OORange`.

Parameters:
<PACPFuncMax> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "PACP Function ID" on page 1007

SEARch:TRIGger:MPHY:ERRor:REServed <SearchName>,<Error_Reserved>
SEARch:TRIGger:MPHY:ERRor:REServed? <SearchName>

Enables/disables search for reserved bit error.

Parameters:
<Error_Reserved> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Reserved Bit Error" on page 1007

SEARch:TRIGger:MPHY:ERRor:LCMD <SearchName>,<LCCError>
SEARch:TRIGger:MPHY:ERRor:LCMD? <SearchName>

Enables/disables search for LCC error.

Parameters:
<LCCError> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "LCC Command Error" on page 1008

SEARch:TRIGger:MPHY:ERRor:SYMBol <SearchName>,<Error_Symbol>
SEARch:TRIGger:MPHY:ERRor:SYMBol? <SearchName>

Enables/disables search for 8b10b symbol error.

Parameters:
<Error_Symbol> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "8b10b Symbol Error" on page 1008

SEARch:TRIGger:MPHY:ERRor:UNKNown <SearchName>,<Error_Unknown>
SEARch:TRIGger:MPHY:ERRor:UNKNown? <SearchName>

Enables/disables search for unidentified UniPro frame error.

Parameters:
<Error_Unknown> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Unknown Unipro Frame" on page 1008

SEARch:TRIGger:MPHY:ERRor:LENGth <SearchName>,<Error_Length>
SEARch:TRIGger:MPHY:ERRor:LENGth? <SearchName>

Enables/disables search for length error.

Parameters:
<Error_Length> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName>

Manual operation: See "Length Error" on page 1008

27.18.28.5 Search results M-PHY

In all `SEARch:RESult:MPHY:FRAMe<m>` commands, the suffix <m> selects the frame number and suffix <n> selects the cell number in the list of search results.

SEARch:RESult:MPHY:FCOunt? 2704
SEARch:RESult:MPHY:FRAMe<fr>:CCOunt? 2704
SEARch:RESult:MPHY:FRAMe<fr>:CELL<ce>:DATA? 2704
SEARch:RESult:MPHY:FRAMe<fr>:CELL<ce>:TYPE? 2705
SEARch:RESult:MPHY:FRAMe<fr>:CELL<ce>:STARt? 2705
SEARch:RESult:MPHY:FRAMe<fr>:CELL<ce>:STOP? 2705

SEARch:RESult:MPHY:FRAMe<fr>:CELL<ce>:STATe? 2706
SEARch:RESult:MPHY:FRAMe<fr>:DATA? 2706
SEARch:RESult:MPHY:FRAMe<fr>:FTYPe? 2706
SEARch:RESult:MPHY:FRAMe<fr>:STATe? 2707
SEARch:RESult:MPHY:FRAMe<fr>:STARt? 2708
SEARch:RESult:MPHY:FRAMe<fr>:STOP? 2708

SEARch:RESult:MPHY:FCOunt? <SearchName>

Returns the number of frames within the search result.

Query parameters:
<SearchName>

Return values:

<Count>	Range:	0 to 100E+3
	Increment:	1
	*RST:	0

Usage: Query only

SEARch:RESult:MPHY:FRAMe<fr>:CCOunt? <SearchName>

Returns the number of cells within the search result for the selected frame.

Suffix:

<fr>	*

Query parameters:
<SearchName>

Return values:

<NumWords>	Range:	0 to 4.29497E+9
	Increment:	1
	*RST:	0

Usage: Query only

SEARch:RESult:MPHY:FRAMe<fr>:CELL<ce>:DATA? <SearchName>

Returns the data value within the search result for the selected cell.

Suffix:

<fr>	*
<ce>	*

Query parameters:
<SearchName>

Return values:

<WordValue>	Range:	0 to 4.29497E+9
	Increment:	1
	*RST:	0

Usage: Query only

SEARch:RESult:MPHY:FRAMe<fr>:CELL<ce>:TYPE? <SearchName>

Returns the data type within the search result for the selected cell.

Suffix:
<fr> *

<ce> *

Query parameters:
<SearchName>

Return values:
<WordType>

Usage: Query only

SEARch:RESult:MPHY:FRAMe<fr>:CELL<ce>:STARt? <SearchName>

Returns the start time of the cell with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<ce> *

Query parameters:
<SearchName>

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:MPHY:FRAMe<fr>:CELL<ce>:STOP? <SearchName>

Returns the stop time of the cell with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<ce> *

Query parameters:
<SearchName>

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:MPHY:FRAMe<fr>:CELL<ce>:STATe? <SearchName>

Returns the state type within the search result for the selected cell.

Suffix:
<fr> *

<ce> *

Query parameters:
<SearchName>

Return values:
<State> OK | RSVDERROR | CMDERROR | SYMBOLERROR | UNKNOWNERROR | INVALID | INCOMPLETE | UNCorrelated | CRCERROR | VOOR | LENGTHERROR
*RST: OK

Usage: Query only

SEARch:RESult:MPHY:FRAMe<fr>:DATA? <SearchName>

Returns the data for the selected frame within the search result, corresponds to the Data column in the search results table.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Data>

Usage: Query only

SEARch:RESult:MPHY:FRAMe<fr>:FTYPe? <SearchName>

Returns the type of frame for the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Frame_Type> BURST | ADAPT | LCC | DLPDUSOF | DLPDUCOF | DLPDUEOF | DLPDUNAC | DLPDUAFC | PACP | TRIGUPR0 | TRIGUPR1 | TRIGUPR2 | SKIP | FILLER | SPACER | UNKNOWN

BURST
M-PHY burst frame.

ADAPT
M-PHY Adapt frame. This control frame is used for clock/bit synchronization.

LCC
M-PHY LCC frame. This control frame is used for line configuration depending on the `LCC Type`.

DLPDUSOF | DLPDUCOF | DLPDUEOF | DLPDUNAC | DLPDUAFC
UniPro DL PDU frame.

PACP
UniPro frame. This control frame is used mainly for power mode change and L1.5 link management.

TRIGUPR0 | TRIGUPR1 | TRIGUPR2
UniPro frame. This control frame is used for link startup sequence.

SKIP
UniPro frame with Skip symbols for reducing protocol payload bandwidth.

FILLER
M-PHY or UniPro frame with filler words to maintain transmission activity.

SPACER
Scrambled UniPro frame with filler words.

UNKNOWN
No meaningful frame can be determined.

*RST: UNKNOWN

Usage: Query only

SEARch:RESult:MPHY:FRAMe<fr>:STATe? <SearchName>

Returns the state of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<State> OK | RSVDERROR | CMDERROR | SYMBOLERROR | UNKNOWNERROR | INVALID | INCOMPLETE | UNCorrelated | CRCERROR | VOOR | LENGTHERROR

OK
Valid frame.

RSVDERROR
Erroneous frame due to reserved bit error.

CMDERROR
Erroneous frame due to LCC error.

LENGTHERROR
Erroneous frame due to length error.

SYMBOLERROR
Erroneous frame due to 8b10b symbol error.

UNKNOWNERROR
Erroneous frame due to unidentified UniPro frame error.

INVALID
Invalid frame.

INCOMPLETE
The frame is not complete.

*RST: OK

Usage: Query only

SEARch:RESult:MPHY:FRAMe<fr>:STARt? <SearchName>

Returns the start time of the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Start>
Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:MPHY:FRAMe<fr>:STOP? <SearchName>

Returns the end time for the selected frame within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

27.18.28.6 Trigger USB SSIC (Option R&S RTO6-K570)

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

There are two commands for each parameter, that you can use for defining the SSIC trigger settings.

For example, to set the *Frame type =ACK > Field =Route String >Data* value you can use one of the following commands:

- `TRIGger:MPHY:SSIC:FRAMe13:FLD1:DMIN 01100`
  Defines the parameter by using the index <m> for the frame number and <n> for the field number.
- `TRIGger:MPHY:SSIC:DMIN "ACK", "Route String", 01100`
  Defines the parameter by using the frame and field name.

TRIGger<t>:MPHY:SSIC:ERENable....2710
TRIGger<t>:MPHY:SSIC:ERRor<n>:ENABle....2710
TRIGger<t>:MPHY:SSIC:FRENable....2710
TRIGger<t>:MPHY:SSIC:FRAMe<fr>:ENABle....2710
TRIGger<t>:MPHY:SSIC:FIENable....2710
TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:ENABle....2710
TRIGger<t>:MPHY:SSIC:BIT....2711
TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:BIT....2711
TRIGger<t>:MPHY:SSIC:DMAX....2711
TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DMAX....2711
TRIGger<t>:MPHY:SSIC:DMIN....2712
TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DMIN....2712
TRIGger<t>:MPHY:SSIC:DOPerator....2712
TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DOPerator....2712
TRIGger<t>:MPHY:SSIC:IMAX....2713

TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IMAX....2713
TRIGger<t>:MPHY:SSIC:IMIN....2713
TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IMIN....2713
TRIGger<t>:MPHY:SSIC:IOPerator....2714
TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IOPerator....2714

TRIGger<t>:MPHY:SSIC:ERENable <ErrorName>,<Enabler>
TRIGger<t>:MPHY:SSIC:ERRor<n>:ENABle <Enable>

Enables or disables the trigger on an error condition.

Suffix:
<t> 1..3

<n> *

Parameters:
<Enable> OFF | ON

*RST: ON

Example: Trigger on CRC and length errors:
```
TRIGger:MPHY:SSIC:ERRor1:ENABle ON
```
Enables CRC Error.
```
TRIGger:MPHY:SSIC:ERENable "Length Error",ON
```
Enables Length Error.

Manual operation: See "Error types, Enable" on page 997

TRIGger<t>:MPHY:SSIC:FRENable <Frame>,<Enabler>
TRIGger<t>:MPHY:SSIC:FRAMe<fr>:ENABle <Enable>

Enables or disables the checking condition for the selected frame.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the field number within the frame.

Parameters:
<Enable> OFF | ON

*RST: OFF

Example:
```
TRIGger:MPHY:SSIC:FRAMe1:ENABle ON
```
Enables the checking condition for the TSEQ frame.
```
TRIGger:MPHY:SSIC:FRENable "TS1" ON
```
Enables the checking condition for the TS1 frame.

TRIGger<t>:MPHY:SSIC:FIENable <Frame>,<Field>,<Enabler>
TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:ENABle <CondEnabler>

Enables or disables the checking condition for the selected field of the selected frame.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the field number within the frame.

<fl> *
Specifies the field number within the frame.

Parameters:
<CondEnabler> OFF | ON
*RST: OFF

Example: `TRIGger:MPHY:SSIC:FRAMe1:FLD1:ENABle ON`
Enables the checking condition for the Symbol field of the TSEQ frame.
`TRIGger:MPHY:SSIC:FRENable "TS1", "Loop" ON`
Enables the checking condition for the Loop field of the TS1 frame.

Manual operation: See "AND / Field name / Condition" on page 998

TRIGger<t>:MPHY:SSIC:BIT <Frame>,<Field>,<Bit>
TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:BIT <BitState>

Sets the bit state of a field that only consists of one bit.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the frame number.

<fl> *
Specifies the field number within the frame.

Parameters:
<BitState> ONE | ZERO | DC
*RST: DC

Manual operation: See "BitState" on page 999

TRIGger<t>:MPHY:SSIC:DMAX <Frame>,<Field>,<Data>
TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DMAX <Data_Max>

Sets the end value of a data pattern range if `TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DOPerator` is set to `INRange` or `OORange`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the frame number.

<fl> *
Specifies the field number within the frame.

Parameters:
<Data_Max>

Manual operation: See "Data" on page 998

TRIGger<t>:MPHY:SSIC:DMIN <Frame>,<Field>,<Data>
TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DMIN <Data_Min>

Specifies the data pattern, or sets the start value of a data pattern range.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the frame number.

<fl> *
Specifies the field number within the frame.

Parameters:
<Data_Min>

Manual operation: See "Data" on page 998

TRIGger<t>:MPHY:SSIC:DOPerator <Frame>,<Field>,<Operator>
TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DOPerator <Data_Operator>

Sets the operator for the data pattern in the selected field of the selected frame.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one endpoint value to be set using `TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DMIN`.

INRange | OORange
In range, out of range. These conditions require a range of endpoint values to be set using `TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DMIN` and `TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DMAX`.

*RST: EQUal

Manual operation: See "Data" on page 998

TRIGger<t>:MPHY:SSIC:IMAX <Frame>,<Field>,<Index>
TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IMAX <Index_Max>

Sets the end value of an index range if `TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IOPerator` is set to `INRange` or `RANGe`.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:
<Index_Max> Specifies the end value for the index range within the field. The index range, increment and *RST values depend on the field type.

Manual operation: See "Index" on page 999

TRIGger<t>:MPHY:SSIC:IMIN <Frame>,<Field>,<Index>
TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IMIN <Index_Min>

Specifies the index, or sets the start value of an index range.

Suffix:
<t> 1..3

<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:
<Index_Min> Specifies the index value or index start value within the field. The index range, increment and *RST values depend on the field type.

Range: 1 to 65.534E+3
Increment: 1
*RST: 1

Manual operation: See "Index" on page 999

TRIGger<t>:MPHY:SSIC:IOPerator <Frame>,<Field>,<IndexOperator>
TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IOPerator <Index_Operator>

Sets the operator for the index in the selected field of the selected frame.

Suffix:

<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:

<Index_Operator> EQUal | INRange | RANGe

EQUal
This condition requires one endpoint value to be set using `TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IMIN`.

INRange | RANGe
This condition requires a range of endpoint values to be set using `TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IMIN` and `TRIGger<t>:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IMAX`.

*RST: INRange

Manual operation: See "Index" on page 999

27.18.28.7 Search settings USB SSIC (Option R&S RTO6-K570)

There are two commands for each parameter, that you can use for defining the SSIC search settings.

For example, to set the *Frame type =ACK > Field =Route String >Data* value you can use one of the following commands:

- `SEARch:TRIGger:MPHY:SSIC:FRAMe13:FLD1:DMIN 01100`
  Defines the parameter by using the index <m> for the frame number and <n> for the field number.
- `SEARch:TRIGger:MPHY:SSIC:DMIN "ACK", "Route String", 01100`
  Defines the parameter by using the frame and field name.

SEARch:TRIGger:MPHY:SSIC:ERENable <SearchName>,<ErrorName>,<Enabler>
SEARch:TRIGger:MPHY:SSIC:ERRor<m>:ENABle <SearchName>,<Enable>
SEARch:TRIGger:MPHY:SSIC:ERRor<m>:ENABle? <SearchName>

Enables or disables the searching for an error condition.

Suffix:

<m> *

Parameters:

<Enable> OFF | ON

*RST: ON

Parameters for setting and query:
<SearchName>

Example: Searches for CRC and length errors:
`SEARch:TRIGger:MPHY:SSIC:ERRor1:ENABle ON`
Enables searching for CRC Error.
`SEARch:TRIGger:MPHY:SSIC:ERENable "Length Error",ON`
Enables searching for Length Error.

Manual operation: See "Search criteria" on page 1009

SEARch:TRIGger:MPHY:SSIC:FRENable <SearchName>,<Frame>,<Enabler>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:ENABle <SearchName>,<Enable>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:ENABle? <SearchName>

Defines the frame type to be searched for.

Suffix:
<fr> *
Specifies the frame number.

Parameters:
<Enable> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName> String with the name of the search.

Example: `SEARch:TRIGger:MPHY:SSIC:FRAMe1:ENABle ON`
Enables searching for the TSEQ frame.
`SEARch:TRIGger:MPHY:SSIC:FRENable "TS1" ON`
Enables searching for the TS1 frame.

Manual operation: See "Search criteria" on page 1009

SEARch:TRIGger:MPHY:SSIC:FIENable
<SearchName>,<Frame>,<Field>,<Enabler>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:ENABle
<SearchName>,<CondEnabler>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:ENABle? <SearchName>

Enables or disables the checking condition for searching a specific data pattern in the selected field of the selected frame.

Suffix:
<fr> *
Specifies the frame number.

<fl> *
Specifies the field number within the frame.

Parameters:
<CondEnabler> OFF | ON

ON
Checking condition enabled

OFF
Checking condition disabled

*RST: OFF

Parameters for setting and query:
<SearchName>

Example: `SEARch:TRIGger:MPHY:SSIC:FRAMe1:FLD1:ENABle ON`
Enables searching for the Symbol field of the TSEQ frame.
`SEARch:TRIGger:MPHY:SSIC:FRENable "TS1", "Loop" ON`
Enables searching for the Loop field of the TS1 frame.

Manual operation: See "Search criteria" on page 1009

SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:ENABle
<SearchName>,<CondEnabler>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:ENABle? <SearchName>

Enables or disables the checking condition for searching a specific data pattern in the selected field of the selected frame.

Suffix:
<fr> *
Specifies the frame number.

<fl> *
Specifies the field number within the frame.

Parameters:
<CondEnabler> OFF | ON

ON
Checking condition enabled

OFF
Checking condition disabled

*RST: OFF

Parameters for setting and query:
<SearchName>

Example: `SEARch:TRIGger:MPHY:SSIC:FRAMe1:FLD1:ENABle ON`
Enables searching for the Symbol field of the TSEQ frame.
`SEARch:TRIGger:MPHY:SSIC:FRENable "TS1", "Loop" ON`
Enables searching for the Loop field of the TS1 frame.

Manual operation: See "Search criteria" on page 1009

SEARch:TRIGger:MPHY:SSIC:BIT <SearchName>,<Frame>,<Field>,<Bit>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:BIT <SearchName>,<BitState>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:BIT? <SearchName>

Sets the bit state of a field to be searched that only consists of one bit.

Suffix:
<fr> *
Specifies the frame number.

<fl> *
Specifies the field number within the frame.

Parameters:
<BitState> ONE | ZERO | DC

ONE
1

ZERO
0

DC
"Don't care" (DC) = X

*RST: DC

Parameters for setting and query:
<SearchName> String with the name of the search.

Manual operation: See "Search criteria" on page 1009

SEARch:TRIGger:MPHY:SSIC:DMAX <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DMAX
<SearchName>,<Data_Max>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DMAX? <SearchName>

Sets the end value of a data pattern range if `SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DOPerator` is set to `INRange` or `OORange`.

Suffix:
<fr> *
Specifies the frame number.

<fl> *
Specifies the field number within the frame.

Parameters:
<Data_Max> Specifies the name of the generic trigger setting frame.

Parameters for setting and query:
<SearchName> String with the name of the search.

Manual operation: See "Search criteria" on page 1009

SEARch:TRIGger:MPHY:SSIC:DMIN <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DMIN
<SearchName>,<Data_Min>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DMIN? <SearchName>

Specifies the data pattern to be searched, or sets the start value of a data pattern range to be searched.

Suffix:
<fr> *
Specifies the frame number.

<fl> *
Specifies the field number within the frame.

Parameters:
<Data_Min> Specifies the name of the generic trigger setting frame.

Parameters for setting and query:
<SearchName>

Manual operation: See "Search criteria" on page 1009

SEARch:TRIGger:MPHY:SSIC:DOPerator
<SearchName>,<Frame>,<Field>,<Operator>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DOPerator
<SearchName>,<Data_Operator>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DOPerator? <SearchName>

Sets the operator to set a specific data pattern to be searched in the selected field of the selected frame.

Suffix:
<fr> *
Specifies the frame number.

<fl> *
Specifies the field number within the frame.

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one end-point value to be set using `SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DMIN`.

INRange | OORange
In range, out of range. These conditions require a range of end-point values to be set using `SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DMIN` and `SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:DMAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Search criteria" on page 1009

SEARch:TRIGger:MPHY:SSIC:FRENable <SearchName>,<Frame>,<Enabler>
Setting parameters:
<SearchName>

<Frame>

<Enabler> OFF | ON

Usage: Setting only

Manual operation: See "Search criteria" on page 1009

SEARch:TRIGger:MPHY:SSIC:IMAX <SearchName>,<Frame>,<Field>,<Index>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IMAX
<SearchName>,<Index_Max>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IMAX? <SearchName>

Sets the end value of an index range if `SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IOPerator` is set to `INRange` or `RANGe`.

Suffix:
<fr> *
Specifies the frame number.

<fl> *
Specifies the field number within the frame.

Parameters:
<Index_Max> Specifies the end value for the index range within the field. The index range, increment and *RST values depend on the field type.

Parameters for setting and query:
<SearchName>

Manual operation: See "Search criteria" on page 1009

SEARch:TRIGger:MPHY:SSIC:IMIN <SearchName>,<Frame>,<Field>,<Index>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IMIN
<SearchName>,<Index_Min>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IMIN? <SearchName>

Specifies the index at which the data is to be searched, or sets the start value of an index range in which the data is to be searched.

Suffix:
<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:

<Index_Min> Specifies the index value or the start value of an index range within the field.
The index range, increment and *RST values depend on the field type.

Parameters for setting and query:

<SearchName> String with the name of the search.

Manual operation: See "Search criteria" on page 1009

SEARch:TRIGger:MPHY:SSIC:IOPerator
<SearchName>,<Frame>,<Field>,<IndexOperator>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IOPerator
<SearchName>,<Index_Operator>
SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IOPerator? <SearchName>

Sets the operator for the index for searching in the selected field of the selected frame.

Suffix:

<fr> *
Specifies the field number within the frame.

<fl> *

Parameters:

<Index_Operator> EQUal | INRange | RANGe

EQUal
This condition requires one endpoint value to be set using `SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IMIN`.

INRange | RANGe
This condition requires a range of endpoint values to be set using `SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IMIN` and `SEARch:TRIGger:MPHY:SSIC:FRAMe<fr>:FLD<fl>:IMAX`.

*RST: INRange

Parameters for setting and query:

<SearchName>

Manual operation: See "Search criteria" on page 1009

27.18.29 8B/10B (option R&S RTO6-K590)

27.18.29.1 Configuration

In all `BUS<b>:EBTB` commands, the suffix <b> selects the serial bus.

BUS<b>:EBTB:ACTestimate 2721
BUS<b>:EBTB:BITRate 2721
BUS<b>:EBTB:EBTRate? 2721
BUS<b>:EBTB:DIFFerential:SOURce 2722
BUS<b>:EBTB:DIFFerential:THRHigh 2722
BUS<b>:EBTB:DIFFerential:THRLow 2722
BUS<b>:EBTB:DISF 2723
BUS<b>:EBTB:DMINus:SOURce 2723
BUS<b>:EBTB:DMINus:THReshold 2723
BUS<b>:EBTB:DPLus:SOURce 2724
BUS<b>:EBTB:DPLus:THReshold 2724
BUS<b>:EBTB:FCSY 2724
BUS<b>:EBTB:SCOunt? 2724
BUS<b>:EBTB:SCSY 2725
BUS<b>:EBTB:SYNC 2725
BUS<b>:EBTB:TYPE 2725
BUS<b>:EBTB:USCS 2725
BUS<b>:EBTB:BITDetermi 2726
BUS<b>:EBTB:FAUToscale 2726

BUS<b>:EBTB:ACTestimate <Estimation>

Enables the automatic software bitrate determination.

Suffix:
<b> 1..4

Parameters:
<Estimation> OFF | ON
*RST: OFF

BUS<b>:EBTB:BITRate <Bitrate>

Sets the number of transmitted bits per second.

Suffix:
<b> 1..4

Parameters:
<Bitrate> Range: 100 to 200E+9
Increment: 10
*RST: 1.25E+9
Default unit: bps

Manual operation: See "Bitrate" on page 1013

BUS<b>:EBTB:EBTRate?

Queries the estimated bitrate value.

Suffix:
<b> 1..4

Return values:
<EstimatedBitrate> Range: 100 to 100E+9
Increment: 10
*RST: 1.25E+9
Default unit: bps

Usage: Query only

Manual operation: See "Estimate Bitrate" on page 1013

BUS<b>:EBTB:DIFFerential:SOURce <SrcDiff>

Selects the source of the provided differential signal, if `BUS<b>:EBTB:TYPE DIFFerential` is set.

Suffix:
<b> 1..4

Parameters:
<SrcDiff> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
*RST: C1W1

Usage: Asynchronous command

Manual operation: See "Source" on page 1012

BUS<b>:EBTB:DIFFerential:THRHigh <ThresholdHigh>

Sets the high threshold of the signal, if `BUS<b>:EBTB:TYPE DIFFerential`.

Suffix:
<b> 1..4

Parameters:
<ThresholdHigh> Range: -10 to 10
Increment: 1E-3
*RST: 0.15
Default unit: V

Manual operation: See "Threshold High" on page 1013

BUS<b>:EBTB:DIFFerential:THRLow <ThresholdLow>

Sets the low threshold of the signal, if `BUS<b>:EBTB:TYPE DIFFerential`.

Suffix:
<b> 1..4

Parameters:

<ThresholdLow> Range: -10 to 10
Increment: 1E-3
*RST: -0.15
Default unit: V

Manual operation: See "Threshold Low" on page 1013

BUS<b>:EBTB:DISF <DisplayFormat>

Selects the display format for the results in the decode table and for the results of `BUS<b>:EBTB:SYMBol<n>:DATA?`.

Suffix:

<b> 1..4

Parameters:

<DisplayFormat> KD | EB | TB

KD: K/D codes
EB: 8-bit pattern
TB: 10-bit pattern

*RST: KD

Manual operation: See "Display Format" on page 1015

BUS<b>:EBTB:DMINus:SOURce <SourceDminus>

Selects the D- source of the provided single ended signal, if `BUS<b>:EBTB:TYPE SINGle` is set.

Suffix:

<b> 1..4

Parameters:

<SourceDminus> NONE | C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Usage: Asynchronous command

Manual operation: See "Source D-" on page 1012

BUS<b>:EBTB:DMINus:THReshold <ThresDminus>

Sets the low threshold (D-) of the signal, if `BUS<b>:EBTB:TYPE SINGle`.

Suffix:

<b> 1..4

Parameters:

<ThresDminus> Range: -10 to 10
Increment: 1E-3
*RST: 0
Default unit: V

Manual operation: See "Threshold D-" on page 1013

BUS<b>:EBTB:DPLus:SOURce <SourceDplus>

Selects the D+ source of the provided single-ended signal, if `BUS<b>:EBTB:TYPE SINGle` is set.

Suffix:
<b> 1..4

Parameters:
<SourceDplus> NONE | C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
*RST: C1W1

Usage: Asynchronous command

Manual operation: See "Source D+" on page 1012

BUS<b>:EBTB:DPLus:THReshold <ThresholdDplus>

Sets the high threshold (D +) of the signal, if `BUS<b>:EBTB:TYPE SINGle`.

Suffix:
<b> 1..4

Parameters:
<ThresholdDplus> Range: -10 to 10
Increment: 1E-3
*RST: 0
Default unit: V

Manual operation: See "Threshold D+" on page 1013

BUS<b>:EBTB:FCSY <CustSync>

Sets a pattern value, if `BUS<b>:EBTB:SYNC CUS`.

Suffix:
<b> 1..4

Parameters:
<CustSync>

Manual operation: See "Pattern" on page 1014

BUS<b>:EBTB:SCOunt?

Returns the symbol count for the selected serial bus, i.e. the number of symbols in the present acquisition.

Suffix:
<b> 1..4

Return values:
<Count> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:EBTB:SCSY <CustSync2>

Sets the value for the second pattern, if `BUS<b>:EBTB:SYNC CUS` and `BUS<b>:EBTB:USCS ON`.

Suffix:
<b> 1..4

Parameters:
<CustSync2>

Manual operation: See "Pattern 2" on page 1014

BUS<b>:EBTB:SYNC <CommaSymbol>

Sets the sync symbol, a control symbol used for low level control functions.

Suffix:
<b> 1..4

Parameters:
<CommaSymbol> K285 | K281 | K287 | CUS
*RST: K285

Manual operation: See "Sync symbol" on page 1014

BUS<b>:EBTB:TYPE <SignalType>

Selects the signal type that is used for the decoding. You can choose between a differential and single-ended signal.

Suffix:
<b> 1..4

Parameters:
<SignalType> DIFFerential | SINGle
*RST: DIFFerential

Manual operation: See "Signal type" on page 1012

BUS<b>:EBTB:USCS <IsSecondSync>

Selects whether the second pattern is enabled, if `BUS<b>:EBTB:SYNC CUS`.

Suffix:
<b> 1..4

Parameters:
<IsSecondSync> OFF | ON
*RST: OFF

Manual operation: See "Pattern 2" on page 1014

BUS<b>:EBTB:BITDetermi

Starts a software algorithm for the automatic determination of the bitrate.

Suffix:
<b> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Estimate Bitrate" on page 1013

BUS<b>:EBTB:FAUToscale

Starts software algorithms for determining the signal threshold levels and bitrate.

Suffix:
<b> 1..4

Usage: Event
Asynchronous command

27.18.29.2 Trigger settings

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:EBTB:DISParityerr 2727
TRIGger<t>:EBTB:DX 2727
TRIGger<t>:EBTB:DY 2727
TRIGger<t>:EBTB:EBPA 2727
TRIGger<t>:EBTB:GLITcherror 2728
TRIGger<t>:EBTB:SYME 2728
TRIGger<t>:EBTB:SYMType 2728
TRIGger<t>:EBTB:TBPA 2728
TRIGger<t>:EBTB:STYPe 2729
TRIGger<t>:EBTB:UNK 2729

TRIGger<t>:EBTB:DISParityerr <DispError>

Defines, if a trigger on a disparity error is activated or not.

Suffix:
<t> 1..3

Parameters:
<DispError> OFF | ON
*RST: OFF

Manual operation: See "Disparity error" on page 1018

TRIGger<t>:EBTB:DX <DXSymbol>

Sets thex value of the data character Dx.y to be triggered on, if `TRIGger<t>:EBTB:SYMType` is set to `Dxy`.

Suffix:
<t> 1..3

Parameters:
<DXSymbol> Range: 0 to 31
Increment: 1
*RST: 0

Manual operation: See "x value" on page 1017

TRIGger<t>:EBTB:DY <DYSymbol>

Sets the y value of the data character Dx.y to be triggered on, if `TRIGger<t>:EBTB:SYMType` is set to `Dxy`.

Suffix:
<t> 1..3

Parameters:
<DYSymbol> Range: 0 to 7
Increment: 1
*RST: 0

Manual operation: See "y value" on page 1017

TRIGger<t>:EBTB:EBPA <Pattern>

Sets the 8-bit pattern to be triggered on, if `TRIGger<t>:EBTB:STYPe` is set to `EB`.

Suffix:
<t> 1..3

Parameters:
<Pattern>

Manual operation: See "8 bit pattern" on page 1017

TRIGger<t>:EBTB:GLITcherror <GlitchError>

Defines, if a trigger on a glitch error is activated or not.

Suffix:
<t> 1..3

Parameters:
<GlitchError> OFF | ON
*RST: OFF

Manual operation: See "Glitching error" on page 1018

TRIGger<t>:EBTB:SYME <Expression>

Selects the format of the symbol to be triggered on.

Suffix:
<t> 1..3

Parameters:
<Expression>

Manual operation: See "Expression" on page 1017

TRIGger<t>:EBTB:SYMType <SymbolType>

Selects the data character (Dx.y) or control character to bea triggered on. You can specify he value of the data character to be triggered on with `TRIGger<t>:EBTB:DX` and `TRIGger<t>:EBTB:DY`.

Suffix:
<t> 1..3

Parameters:
<SymbolType> DXY | K280 | K281 | K282 | K283 | K284 | K285 | K286 | K287 | K237 | K277 | K297 | K307
*RST: K285

Manual operation: See "K/D Codes Symbol" on page 1017

TRIGger<t>:EBTB:TBPA <Pattern>

Sets the 10-bit pattern to be triggered on, if `TRIGger<t>:EBTB:STYPe` is set to `TB`.

Suffix:
<t> 1..3

Parameters:
<Pattern>

Manual operation: See "10 bit pattern" on page 1017

TRIGger<t>:EBTB:STYPe <Type>

Selects the type of condition to be triggered on for 8b10b.

Suffix:
<t> 1..3

Parameters:
<Type> KD | EB | TB | EXPRession | ERRor
KD: K/D symbol
EB: 8-bit pattern
TB: 10-bit pattern
*RST: KD

Manual operation: See "Type 8b/10b" on page 1016

TRIGger<t>:EBTB:UNK <UnkError>

Defines, if a trigger on a unknown symbol error is activated or not.

Suffix:
<t> 1..3

Parameters:
<UnkError> OFF | ON
*RST: OFF

Manual operation: See "Unknown symbol error" on page 1018

27.18.29.3 Decode results

In all BUS<b>:EBTB:SYMBol<n> commands, the suffix <b> selects the serial bus and the suffix <n> selects the symbol in the decode table.

BUS<b>:EBTB:SYMBol<n>:DATA? 2729
BUS<b>:EBTB:SYMBol<n>:STARt? 2730
BUS<b>:EBTB:SYMBol<n>:STATus? 2730
BUS<b>:EBTB:SYMBol<n>:STOP? 2731
BUS<b>:EBTB:SYMBol<n>:BYTE? 2731
BUS<b>:EBTB:SYMBol<n>:KDCode? 2731
BUS<b>:EBTB:SYMBol<n>:TENBit? 2732

BUS<b>:EBTB:SYMBol<n>:DATA?

Returns the data of the specified symbol.

The format is determined by the remote command BUS<b>:EBTB:DISF.

Suffix:
<b> 1..4
<n> *

Return values:
<Data>

Example:
```
BUS<b>:EBTB:DISF EB
BUS:EBTB:SYMBol5:DATA?
<-- BC+
```

Example:
```
BUS<b>:EBTB:DISF KD
BUS:EBTB:SYMBol5:DATA?
<-- K28.5+
```

Example:
```
BUS<b>:EBTB:DISF TB
BUS:EBTB:SYMBol5:DATA?
<-- 305
```

Usage: Query only

BUS<b>:EBTB:SYMBol<n>:STARt?

Returns the start time of the specified symbol.

Suffix:
<b> 1..4

<n> *

Return values:
<Start>
Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:EBTB:SYMBol<n>:STATus?

Returns the status of the specified symbol. It can show what kind of error was detected or no error.

Suffix:
<b> 1..4

<n> *

Return values:
<State> OK | UNK | DISPARITY | DISParity | GLITCH | GLITch

OK
There are no errors in the state of the specified symbol.

UNK
An unknown error was detected for the specified symbol.

DISPARITY = DISParity
A disparity error was detected for the specified symbol.

GLITCH = GLITch
A glitch error was detected for the specified symbol.
*RST: OK

Usage: Query only

BUS<b>:EBTB:SYMBol<n>:STOP?

Returns the stop time of the specified symbol.

Suffix:
<b> 1..4
<n> *

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:EBTB:SYMBol<n>:BYTE?

Returns the symbol byte value.

Suffix:
<b> 1..4
<n> *

Return values:
<Byte> Range: 0 to 255
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:EBTB:SYMBol<n>:KDCode?

Returns the K/D code.

Suffix:
<b> 1..4
<n> *

Return values:
<KDCode>

Usage: Query only

BUS<b>:EBTB:SYMBol<n>:TENBit?

Returns the 10-bit symbol.

Suffix:
<b> 1..4
<n> *

Return values:
<TenBit>

Usage: Query only

27.18.29.4 Search settings

SEARch:TRIGger:EBTB:DISParityerr....2732
SEARch:TRIGger:EBTB:DX....2732
SEARch:TRIGger:EBTB:DY....2733
SEARch:TRIGger:EBTB:EBPA....2733
SEARch:TRIGger:EBTB:GLITcherror....2733
SEARch:TRIGger:EBTB:STYPe....2733
SEARch:TRIGger:EBTB:SYME....2734
SEARch:TRIGger:EBTB:SYMType....2734
SEARch:TRIGger:EBTB:TBPA....2734
SEARch:TRIGger:EBTB:UNK....2735

SEARch:TRIGger:EBTB:DISParityerr <SearchName>,<DispError>
SEARch:TRIGger:EBTB:DISParityerr? <SearchName>

Defines, if a search for any disparity error is activated or not.

Parameters:
<DispError> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Disparity error" on page 1022

SEARch:TRIGger:EBTB:DX <SearchName>,<DXSymbol>
SEARch:TRIGger:EBTB:DX? <SearchName>

Sets the x value of the data character Dx.y to be searched for, if `SEARch:TRIGger:EBTB:SYMType` is set to `Dxy`.

Parameters:
<DXSymbol> Range: 0 to 31
Increment: 1
*RST: 0

Parameters for setting and query:
<SearchName>

Manual operation: See "x value" on page 1021

SEARch:TRIGger:EBTB:DY <SearchName>,<DYSymbol>
SEARch:TRIGger:EBTB:DY? <SearchName>

Sets the y value of the data character Dx.y to be searched for, if `SEARch:TRIGger:EBTB:SYMType` is set to `Dxy`.

Parameters:
<DYSymbol> Range: 0 to 7
Increment: 1
*RST: 0

Parameters for setting and query:
<SearchName>

Manual operation: See "y value" on page 1021

SEARch:TRIGger:EBTB:EBPA <SearchName>,<Pattern>
SEARch:TRIGger:EBTB:EBPA? <SearchName>

Sets the 8-bit pattern to be searched for.

Parameters:
<Pattern>

Parameters for setting and query:
<SearchName>

Manual operation: See "8b Pattern" on page 1022

SEARch:TRIGger:EBTB:GLITcherror <SearchName>,<GlitchError>
SEARch:TRIGger:EBTB:GLITcherror? <SearchName>

Defines, if a search for any glitch error is activated or not.

Parameters:
<GlitchError> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Glitching error" on page 1022

SEARch:TRIGger:EBTB:STYPe <SearchName>,<Type>
SEARch:TRIGger:EBTB:STYPe? <SearchName>

Selects the search type.

Parameters:
<Type> KD | EB | TB | EXPRession | ERRor
`KD`: K/D symbol
`EB`: 8-bit pattern
`TB`: 10-bit pattern
*RST: KD

Parameters for setting and query:
<SearchName>

SEARch:TRIGger:EBTB:SYME <SearchName>,<Expression>
SEARch:TRIGger:EBTB:SYME? <SearchName>

Selects the format of the symbol to be searched for, if `SEARch:TRIGger:EBTB:STYPe` is set to `EXPRession`.

Parameters:
<Expression>

Parameters for setting and query:
<SearchName>

Manual operation: See "Expression" on page 1022

SEARch:TRIGger:EBTB:SYMType <SearchName>,<SymbolType>
SEARch:TRIGger:EBTB:SYMType? <SearchName>

Selects the data character (Dx.y) or control character to bea searched for. You can specify he value of the data character to be searched for with `SEARch:TRIGger:EBTB:DX` and `SEARch:TRIGger:EBTB:DY`.

Parameters:
<SymbolType> DXY | K280 | K281 | K282 | K283 | K284 | K285 | K286 | K287 | K237 | K277 | K297 | K307
*RST: K285

Parameters for setting and query:
<SearchName>

Manual operation: See "K/D Codes Symbol" on page 1021

SEARch:TRIGger:EBTB:TBPA <SearchName>,<Pattern>
SEARch:TRIGger:EBTB:TBPA? <SearchName>

Sets the 10-bit pattern to be searched for, if `SEARch:TRIGger:EBTB:STYPe` is set to `TB`.

Parameters:
<Pattern>

Parameters for setting and query:
<SearchName>

Manual operation: See "10b Pattern" on page 1022

SEARch:TRIGger:EBTB:UNK <SearchName>,<UnkError>
SEARch:TRIGger:EBTB:UNK? <SearchName>

Defines, if a search for any unknown symbol error is activated or not.

Parameters:
<UnkError> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Unknown symbol error" on page 1022

27.18.29.5 Search results

In all `SEARch:RESult:EBTB:SYMBol<m>` commands, the suffix <m> selects the frame number in the list of search results.

SEARch:RESult:EBTB:SCOunt? 2735
SEARch:RESult:EBTB:SYMBol<m>:DATA? 2735
SEARch:RESult:EBTB:SYMBol<m>:STARt? 2736
SEARch:RESult:EBTB:SYMBol<m>:STATus? 2736
SEARch:RESult:EBTB:SYMBol<m>:STOP? 2736

SEARch:RESult:EBTB:SCOunt? <SearchName>

Returns the symbol count, i.e. the number of symbols found in the specified search result.

Query parameters:
<SearchName>

Return values:
<Count> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:EBTB:SYMBol<m>:DATA? <SearchName>

Returns the data of the specified symbol.

Suffix:
<m> *

Query parameters:
<SearchName>

Return values:
<Data>

Usage: Query only

SEARch:RESult:EBTB:SYMBol<m>:STARt? <SearchName>

Returns the start time of the specified symbolwithin the search result.

Suffix:
<m> *

Query parameters:
<SearchName>

Return values:
<Start>
Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:EBTB:SYMBol<m>:STATus? <SearchName>

Returns the status of the specified symbol within the search result. It can show what kind of error was detected or no error.

Suffix:
<m> *

Query parameters:
<SearchName>

Return values:
<State> OK | UNK | DISPARITY | DISParity | GLITCH | GLITch

OK
There are no errors in the state of the specified symbol.

UNK
An unknown error was detected for the specified symbol.

DISPARITY = DISParity
A disparity error was detected for the specified symbol.

GLITCH = GLITch
A glitch error was detected for the specified symbol.

*RST: OK

Usage: Query only

SEARch:RESult:EBTB:SYMBol<m>:STOP? <SearchName>

Returns the stop time of the specified symbol within the search result.

Suffix:
<m> *

Query parameters:
<SearchName>

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

27.18.30 PCIe (option R&S RTO6K72)

- Configuration....2737
- Clock data recovery....2740
- Trigger....2742
- Decode results....2754
- Search settings....2762
- Search results....2775

27.18.30.1 Configuration

In all `BUS<b>:PCIE` commands, the suffix <b> selects the serial bus.

BUS<b>:PCIE:DSCRambling....2737
BUS<b>:PCIE:FIDLe....2738
BUS<b>:PCIE:GEN....2738
BUS<b>:PCIE:LNKW....2738
BUS<b>:PCIE:LZER:SOURce....2739
BUS<b>:PCIE:LONE:SOURce....2739
BUS<b>:PCIE:LTWO:SOURce....2739
BUS<b>:PCIE:LTHRee:SOURce....2739
BUS<b>:PCIE:LZER:THRHigh....2739
BUS<b>:PCIE:LONE:THRHigh....2739
BUS<b>:PCIE:LTWO:THRHigh....2739
BUS<b>:PCIE:LTHRee:THRHigh....2739
BUS<b>:PCIE:LZER:THRLow....2739
BUS<b>:PCIE:LONE:THRLow....2739
BUS<b>:PCIE:LTWO:THRLow....2739
BUS<b>:PCIE:LTHRee:THRLow....2740
BUS<b>:PCIE:SMLanes....2740

BUS<b>:PCIE:DSCRambling <Active>

Enables descrambling of the data.

Suffix:
<b> 1..4

Parameters:
<Active> OFF | ON
*RST: ON

Manual operation: See "Descrambling" on page 1027

BUS<b>:PCIE:FIDLe <Active>

Enables the filtering of idle packets.

Suffix:
<b> 1..4

Parameters:
<Active> OFF | ON
*RST: ON

Manual operation: See "Filter Idle" on page 1029

BUS<b>:PCIE:GEN <Generation>

Sets the generation of the PCIe technology.

Suffix:
<b> 1..4

Parameters:
<Generation> V1 | V2 | V3
V1
PCIe Gen1 (2.5 Gbit/s)
V2
PCIe Gen2 (5 Gbit/s)
*RST: V1

Manual operation: See "Generation" on page 1026

BUS<b>:PCIE:LNKW <LinkWidth>

Sets the link width, the number of lanes that are used for the transmission of the data.

Suffix:
<b> 1..4

Parameters:
<LinkWidth> X1 | X2 | X4
*RST: X1

Manual operation: See "Link" on page 1027

BUS<b>:PCIE:LZER:SOURce <SourceL0>

Sets the signal sources for Lane 0.

Suffix:
<b> 1..4

Parameters:
<SourceL0> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4
*RST: C1W1

Manual operation: See "Lane 0/1/2/3" on page 1027

BUS<b>:PCIE:LONE:SOURce <SourceL1>
BUS<b>:PCIE:LTWO:SOURce <SourceL2>
BUS<b>:PCIE:LTHRee:SOURce <SourceL3>

Sets the signal sources for the corresponding logical lane.

Suffix:
<b> 1..4

Parameters:
<SourceL3> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | NONE
*RST: LONe: C2W1, LTWo: C3W1, LTHree: C4W1

Manual operation: See "Lane 0/1/2/3" on page 1027

BUS<b>:PCIE:LZER:THRHigh <ThresL0High>
BUS<b>:PCIE:LONE:THRHigh <ThresL1High>
BUS<b>:PCIE:LTWO:THRHigh <ThresL2High>
BUS<b>:PCIE:LTHRee:THRHigh <ThresL3High>

Sets the high threshold value for the respective lane.

Suffix:
<b> 1..4

Parameters:
<ThresL3High> Range: -5 to 5
Increment: 1E-3
*RST: 0.02
Default unit: V

Manual operation: See "High threshold" on page 1028

BUS<b>:PCIE:LZER:THRLow <ThresholdL0Low>
BUS<b>:PCIE:LONE:THRLow <ThresholdL1Low>
BUS<b>:PCIE:LTWO:THRLow <ThresholdL2Low>

BUS<b>:PCIE:LTHRee:THRLow <ThresholdL3Low>
BUS<b>:PCIE:SMLanes <Active>

Enables the display of the result in multiple lanes.

Suffix:
<b> 1..4

Parameters:
<Active> OFF | ON
*RST: ON

Manual operation: See "Show multiple lanes" on page 1029

27.18.30.2 Clock data recovery

BUS<b>:CDR:BITRate 2740
BUS<b>:CDR:PLL:BWIDth 2740
BUS<b>:CDR:PLL:DAMPing 2741
BUS<b>:CDR:PLL:ORDer 2741
BUS<b>:CDR:PLL:RELBwidth 2741
BUS<b>:CDR:RESults 2742
BUS<b>:CDR:SYNC 2742

BUS<b>:CDR:BITRate <Bitrate>

For NRZ signals, you can set a "Nominal bit rate".

For signals with a "PAM order" > 2, you can do a "Nominal symbol rate".

Sets the quiescent frequency of the PLL. It corresponds to the data rate of the data stream from which the clock is to be recovered.

Suffix:
<b> 1..4

Parameters:
<Bitrate> Range: 100 to 5E+9
Increment: 10
*RST: 1E+9
Default unit: bps

Manual operation: See "Nominal bit rate" on page 1030

BUS<b>:CDR:PLL:BWIDth <PLLBandwidth>

Sets the PLL bandwidth. It defines the part of the spectrum that the PLL can follow during synchronization. The PLL bandwidth is usually defined by the transmission standard.

Suffix:
<b> 1..4

Parameters:

<PLLBandwidth> Range: 20E+3 to 10E+6
Increment: 10
*RST: 599.88E+3
Default unit: Hz

Manual operation: See "PLL settings" on page 1030

BUS<b>:CDR:PLL:DAMPing <DampingFactor>

Sets the damping factor, which is only relevant for second order PLL.

Suffix:

<b> 1..4

Parameters:

<DampingFactor> Range: 0.5 to 2
Increment: 0.01
*RST: 0.7

Manual operation: See "PLL settings" on page 1030

BUS<b>:CDR:PLL:ORDer <PLLOrder>

Sets the order of the PLL: first or second order. PLL of higher order can compensate for more complex jitter behavior.

Suffix:

<b> 1..4

Parameters:

<PLLOrder> FIRSt | SECond
*RST: SECond

Manual operation: See "PLL settings" on page 1030

BUS<b>:CDR:PLL:RELBwidth <PLLRelBw>

Sets the relative bandwidth, which is the ratio of the nominal bit rate to the PLL bandwidth.

Suffix:

<b> 1..4

Parameters:

<PLLRelBw> Range: 10 to 10000
Increment: 1
*RST: 1667

Manual operation: See "PLL settings" on page 1030

BUS<b>:CDR:RESults <Results>

The PLL requires some time to synchronize to the phase of the data stream. You can select when the CDR algorithm returns clock edges.

Suffix:
<b> 1..4

Parameters:
<Results> ALL | AISYnc
*RST: ALL

Manual operation: See "Selected results" on page 1031

BUS<b>:CDR:SYNC <InitialSync>

Defines the phase reference for the first clock edge.

Suffix:
<b> 1..4

Parameters:
<InitialSync> SAMPle | DATaedge

SAMPle
The first clock edge matches the first sample of the waveform at the left border of the display.

DATaedge
The first clock edge matches the first edge of the data signal.

*RST: DATaedge

Manual operation: See "Initial phase sync." on page 1031

27.18.30.3 Trigger

The trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on serial buses.

To trigger on a serial bus, make sure that:

- `TRIGger<t>:SOURce[:SELect]` is set to `SBUS`.
- The sources of the serial bus are channel signals: use `BUS<b>:...:SOURce` commands.
- Decoding is enabled: `BUS<b>[:STATe]` is set to `ON`.

TRIGger<t>:PCIE:TYPE....2753

TRIGger<t>:PCIE:DLLP:FCTL:CRET <CreditType>

Sets credit type value to be triggered on for the data link layer trigger.

Suffix:
<t> 1..3

Parameters:
<CreditType> ANY | P | NP | CPL
*RST: ANY

Manual operation: See "Credit Type" on page 1038

TRIGger<t>:PCIE:DLLP:FCTL:VCID <VirtualChnID>

Sets the virtual channel ID to be triggered on for the data link layer trigger.

Suffix:
<t> 1..3

Parameters:
<VirtualChnID> ANY | ZERO | ONE | TWO | THREE | FOUR | FIVE | SIX | SEVEN
*RST: ANY

Manual operation: See "VC ID" on page 1038

TRIGger<t>:PCIE:DLLP:MULT:AUTH <Authorized>

Sets the authorized presence state to be triggered on for the data link layer trigger.

Suffix:
<t> 1..3

Parameters:
<Authorized> ANY | YES | NO
*RST: ANY

Manual operation: See "Authorized" on page 1036

TRIGger<t>:PCIE:DLLP:MULT:CRET <CreditType>

Sets the credit type to be triggered on for the multi-root data link layer trigger.

Suffix:
<t> 1..3

Parameters:
<CreditType> ANY | DATA | HEADER
*RST: ANY

Manual operation: See "Credit Type" on page 1037

TRIGger<t>:PCIE:DLLP:MULT:DVPT <DevicePortType>

Sets the device/port type to be triggered on for the data link layer trigger.

Suffix:
<t> 1..3

Parameters:
<DevicePortType> ANY | ZERO | ONE | TWO | THREE | FOUR | FIVE | SIX | SEVEN | EIGHT | NINE | TEN | ELEVEN | TWELVE | THIRTEEN | FOURTEEN | FIFTEEN
*RST: ANY

Manual operation: See "Device/Port Type" on page 1036

TRIGger<t>:PCIE:DLLP:MULT:HABS <VHAbsent>

Sets the state of the absent virtual hieararchies (VH) to be triggered on for the data link layer trigger.

Suffix:
<t> 1..3

Parameters:
<VHAbsent> ANY | YES | NO
*RST: ANY

Manual operation: See "VH Absent" on page 1037

TRIGger<t>:PCIE:DLLP:MULT:MIXT <MixedType>

Sets the mixed type presence state to be triggered on for the data link layer trigger.

Suffix:
<t> 1..3

Parameters:
<MixedType> ANY | YES | NO
*RST: ANY

Manual operation: See "Mixed Type" on page 1036

TRIGger<t>:PCIE:DLLP:MULT:PHAS <Phase>

Sets the phase state to be triggered on for the data link layer trigger.

Suffix:
<t> 1..3

Parameters:
<Phase> ANY | YES | NO
*RST: ANY

Manual operation: See "Phase" on page 1036

TRIGger<t>:PCIE:DLLP:MULT:RESA <ResetA>

Sets the on the value of the A bit to be triggered on for the data link layer trigger.

Suffix:
<t> 1..3

Parameters:
<ResetA> ANY | ACK | REQUEST
*RST: ANY

Manual operation: See "A" on page 1038

TRIGger<t>:PCIE:DLLP:MULT:TLPT <TLPType>

Sets the multi-root type to be triggered on for the data link layer trigger.

Suffix:
<t> 1..3

Parameters:
<TLPType> ANY | P | NP | CPL

P
Posted credit.

NP
Non posted credit.

CL
Completion credit.

*RST: ANY

Manual operation: See "TLP Type" on page 1037

TRIGger<t>:PCIE:DLLP:MULT:TYPE <Type>

Sets the multi-root type for the data link layer to be triggered on.

Suffix:
<t> 1..3

Parameters:
<Type> MRINIT | MRRESET | MRUPDATEFC | MRINITFC1 | MRINITFC2

*RST: MRINIT

Manual operation: See "MR DLLP" on page 1035

TRIGger<t>:PCIE:DLLP:MULT:VHFC <InitVHFC>

Sets the virtual hierarchies flow control presence state to be triggered on for the data link layer trigger.

Suffix:
<t> 1..3

Parameters:
<InitVHFC> ANY | YES | NO

*RST: ANY

Manual operation: See "VH FC" on page 1036

TRIGger<t>:PCIE:DLLP:MULT:VHGR <ResetVHGroup>

Sets the virtual hierarchies group to be triggered on for the data link layer trigger.

Suffix:
<t> 1..3

Parameters:
<ResetVHGroup> ANY | ZERO | ONE | TWO | THREE | FOUR | FIVE | SIX | SEVEN | EIGHT | NINE | TEN | ELEVEN | TWELVE | THIRTEEN | FOURTEEN | FIFTEEN

*RST: ANY

Manual operation: See "VH Group" on page 1038

TRIGger<t>:PCIE:DLLP:MULT:VLNR <VirtualLink>

Sets the virtual link (VL) number to be triggered on for the data link layer trigger.

Suffix:
<t> 1..3

Parameters:
<VirtualLink> ANY | ZERO | ONE | TWO | THREE | FOUR | FIVE | SIX | SEVEN

*RST: ANY

Manual operation: See "VL Number" on page 1037

TRIGger<t>:PCIE:DLLP:POWM <PowerMngtType>

Sets the power management type to be triggered on for the data link layer trigger.

Suffix:
<t> 1..3

Parameters:
<PowerMngtType> ANY | ENTERL1 | ENTERL23 | ACTREQL1 | REQUESTACK

*RST: ANY

Manual operation: See "PM Type" on page 1039

TRIGger<t>:PCIE:DLLP:SEQ <Sequence>

Sets the sequence field, indicating what TLPs are affected by the ACK/NAK, to be triggered on for the data link layer trigger.

Suffix:
<t> 1..3

Parameters:
<Sequence>

Manual operation: See "Sequence" on page 1038

TRIGger<t>:PCIE:DLLP:TYPE <Type>

Sets the DLLP t type to be triggered on for the data link layer trigger.

Suffix:
<t> 1..3

Parameters:
<Type> ANY | MRDLLP | ACK | NAK | INITFC1 | INITFC2 | UPDATEFC | PM | VENDOR
*RST: ANY

Manual operation: See "DLLP Type" on page 1035

TRIGger<t>:PCIE:DLLP:VPAT <VendorPattern>

Sets the vendor pattern to be triggered on for the data link layer trigger.

Suffix:
<t> 1..3

Parameters:
<VendorPattern> 24-bit pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Vendor Pattern" on page 1039

TRIGger<t>:PCIE:ERRC:CRC <CRC16>

Enables triggering on 16-bit cyclic redundancy check (CRC) errors.

Suffix:
<t> 1..3

Parameters:
<CRC16> OFF | ON
*RST: OFF

Manual operation: See "Error Condition PCIe Gen 1/2" on page 1039

TRIGger<t>:PCIE:ERRC:DISP <Disparity>

Enables triggering on disparity errors.

Suffix:
<t> 1..3

Parameters:
<Disparity> OFF | ON
*RST: OFF

Manual operation: See "Error Condition PCIe Gen 1/2" on page 1039

TRIGger<t>:PCIE:ERRC:ECRC <ECRC>

Enables triggering on end-to-end cyclic redundancy checksum (ECRC) errors.

Suffix:
<t> 1..3

Parameters:
<ECRC> OFF | ON
*RST: OFF

Manual operation: See "Error Condition PCIe Gen 1/2" on page 1039

TRIGger<t>:PCIE:ERRC:INVP <InvalidSymbol>

Enables triggering on invalid symbol errors.

Suffix:
<t> 1..3

Parameters:
<InvalidSymbol> OFF | ON
*RST: OFF

Manual operation: See "Error Condition PCIe Gen 1/2" on page 1039

TRIGger<t>:PCIE:ERRC:LCRC <LCRC>

Enables triggering on link cyclic redundancy check (LCRC) errors.

Suffix:
<t> 1..3

Parameters:
<LCRC> OFF | ON
*RST: OFF

Manual operation: See "Error Condition PCIe Gen 1/2" on page 1039

TRIGger<t>:PCIE:OSET:TYPE <Type>

Sets the ordered set to be triggered on.

Suffix:
<t> 1..3

Parameters:
<Type> SKP | TS1 | TS2 | FTS | EIOS | EIEOS | COMP

SKP
SKP ordered sets

TS1
Training sequence 1

TS2
Training sequence 2

FTS
Fast training sequence

EIOS
Electrical idle ordered set

EIEOS
Electrical idle exit ordered set

COMP
Compliance pattern

*RST: SKP

Manual operation: See "Ordered set condition" on page 1039

TRIGger<t>:PCIE:TLP:ADRT <AddressType>

Sets the address type to be triggered on for the transaction layer type trigger.

Suffix:
<t> 1..3

Parameters:
<AddressType> ANY | X32 | X64

*RST: ANY

Manual operation: See "Address Type" on page 1034

TRIGger<t>:PCIE:TLP:CFGT <ConfigType>

Sets the configuration type to be triggered on for the transaction layer type trigger.

Suffix:
<t> 1..3

Parameters:
<ConfigType> ANY | TYPE0 | TYPE1

*RST: ANY

Manual operation: See "Type" on page 1034

TRIGger<t>:PCIE:TLP:CPID <CompleterID>

Sets the completer ID to be triggered on for the transaction layer type trigger.

Suffix:
<t> 1..3

Parameters:
<CompleterID> 16-bit pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Completer ID" on page 1035

TRIGger<t>:PCIE:TLP:CPLS <CplStatus>

Sets the completion status to be triggered on for the transaction layer type trigger.

Suffix:
<t> 1..3

Parameters:
<CplStatus> ANY | SUCCESS | UNSUPPORTED | RETRY | ABORT
*RST: ANY

Manual operation: See "Status" on page 1034

TRIGger<t>:PCIE:TLP:DEID <DeviceID>

Sets the device ID to be triggered on for the transaction layer type trigger.

Suffix:
<t> 1..3

Parameters:
<DeviceID> 16-bit pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Device ID" on page 1034

TRIGger<t>:PCIE:TLP:MERW <MemRW>

Sets the read/ write type to be triggered on for the transaction layer type trigger.

Suffix:
<t> 1..3

Parameters:
<MemRW> ANY | READ | WRITE
*RST: ANY

Manual operation: See "Read/Write" on page 1034

TRIGger<t>:PCIE:TLP:MSGC <TLPMessageCode>

Sets the message code to be triggered on for the transaction layer type trigger.

Suffix:
<t> 1..3

Parameters:
<TLPMessageCode> 8-bit pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Message Code" on page 1034

TRIGger<t>:PCIE:TLP:MSGR <MsgRouting>

Sets the message routing type to be triggered on for the transaction layer type trigger.

Suffix:
<t> 1..3

Parameters:
<MsgRouting> ANY | ROOTCOMPLEX | ADDRESS | DEVICEID | DEViceid | BROADCAST | LOCAL | GATHERED

DEVICEID = DEViceid

*RST: ANY

Manual operation: See "Routing" on page 1034

TRIGger<t>:PCIE:TLP:ORDE <Ordering>

Sets the ordering type to be triggered on for the transaction layer type trigger.

Suffix:
<t> 1..3

Parameters:
<Ordering> ANY | STRONG | RELAX

*RST: ANY

Manual operation: See "Ordering" on page 1033

TRIGger<t>:PCIE:TLP:REID <RequesterID>

Sets the requester ID to be triggered on for the transaction layer type trigger.

Suffix:
<t> 1..3

Parameters:
<RequesterID> 16-bit pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Requester ID" on page 1034

TRIGger<t>:PCIE:TLP:SNOO <Snoop>

Sets the snoop state to be triggered on for the transaction layer type trigger.

Suffix:
<t> 1..3

Parameters:
<Snoop> ANY | YES | NO

*RST: ANY

Manual operation: See "Snoop" on page 1033

TRIGger<t>:PCIE:TLP:SNUM <SequenceNumber>

Sets the sequence numbe to be triggered on for the transaction layer type trigger.

Suffix:
<t> 1..3

Parameters:
<SequenceNumber> 12-bit pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Manual operation: See "Sequence Number" on page 1033

TRIGger<t>:PCIE:TLP:TCHN <TrafficClass>

Sets the traffic class to be triggered on for the transaction layer type trigger.

Suffix:
<t> 1..3

Parameters:
<TrafficClass> ANY | ZERO | ONE | TWO | THREE | FOUR | FIVE | SIX | SEVEN
*RST: ANY

Manual operation: See "TC" on page 1033

TRIGger<t>:PCIE:TLP:TYPE <Type>

Sets the transaction type to be triggered on for the transaction layer type trigger.

Suffix:
<t> 1..3

Parameters:
<Type> ANY | MEM | IO | CFG | MSG | CPL | FETCH | SWAP | CAS
*RST: ANY

Manual operation: See "TLP" on page 1032

TRIGger<t>:PCIE:TYPE <Type>

Sets the trigger type for the PCI express analysis..

Suffix:
<t> 1..3

Parameters:
<Type> TLP | DLLP | ORD | ERR
*RST: TLP

Manual operation: See "Trigger type PCI express" on page 1032

27.18.30.4 Decode results

In all `BUS<b>:PCIE:RESult:PACKet<pa>` commands, the suffix <b> selects the serial bus and the suffix <pa> selects the packet number in the decode table.

BUS<b>:PCIE:RESult:PACKet<pa>:ADDR? 2754
BUS<b>:PCIE:RESult:PACKet<pa>:CPID? 2754
BUS<b>:PCIE:RESult:PACKet<pa>:CPS? 2755
BUS<b>:PCIE:RESult:PACKet<pa>:DATA? 2755

BUS<b>:PCIE:RESult:PCOunt? 2761
BUS<b>:PCIE:RESult:PACKet<pa>:BITRate? 2761

BUS<b>:PCIE:RESult:PACKet<pa>:ADDR?

Returns the packet address for the specified packet.

Suffix:

<b> 1..4

<pa> *

Return values:

<Address> Range: 0 to 18446744073709551615
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:CPID?

Returns the completer ID of the specified packet.

Suffix:

<b> 1..4

<pa> *

Return values:
<CompleterID> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:CPS?

Returns the completion status field value of the specified packet.

Suffix:
<b> 1..4

<pa> *

Return values:
<CplStatus> RESERVED | SC | UR | CRS | CA

RESERVED
Others

SC
Successful Completion

UR
Unsupported Request

CRS
Configuration Request Retry Status

CA
Completer Abort

*RST: RESERVED

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:DATA?

Returns the data value of the specified packet.

Suffix:
<b> 1..4

<pa> *

Return values:
<Data>

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:DFC?

Returns the credit value of the payload data of the specified packet.

Suffix:
<b> 1..4

<pa> *

Return values:

<DataFC> Range: 0 to 4095
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:FCOunt?

Returns the number of decoded fields in the selected packet.

Suffix:

<b> 1..4

<pa> *

Return values:

<FieldCount> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:FLD<fl>:FVAL?

Returns the formatted value of the field with the selected field number within the frame with the selected packet number (for the selected serial bus).

Suffix:

<b> 1..4

<pa> *

<fl> *
Selects the field number.

Return values:

<ValueFormatted> String parameter

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:FLD<fl>:STATus?

Returns the status of the frame with the selected field number within the packet with the selected packet number (for the selected serial bus).

Suffix:

<b> 1..4

<pa> *

<fl> *
Selects the field number.

Return values:
<State> OK | MALF | CRC16 | ECRC | LCRC | LEN | POE | MEE | UNCorrelated | FCRC | FPERror | UNKNown | OUTRange | INComplete | SYNCerror

MALF
Malformed packet

CRC16
CRC16 error

ECRC
ECRC error

LCRC
Link CRC error

LEN
Length error

POE
TLP prefix error

MEE
Max end-end TLP prefix error

*RST: OK

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:FLD<fl>:TYPE?

Returns the type of the field with the selected field number within the frame with the selected packet number (for the selected serial bus).

Suffix:
<b> 1..4

<pa> *

<fl> *
Selects the field number.

Return values:
<Type>

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:FLD<fl>:VAL?

Returns the value of the field with the selected field number within the packet with the selected packet number (for the selected serial bus).

Suffix:
<b> 1..4

<pa> *

<fl> *
Selects the field number.

Return values:
<FieldValue> Range: 0 to 4294967295
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:HFC?

Returns the credit value of the header of the specified packet.

Suffix:
<b> 1..4

<pa> *

Return values:
<HeaderFC> Range: 0 to 255
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:LEN?

Returns the length of the specified packet.

Suffix:
<b> 1..4

<pa> *

Return values:
<Length> Range: 0 to 1023
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:RQID?

Returns the requester ID of the specified packet.

Suffix:
<b> 1..4

<pa> *

Return values:

<RequesterID> Range: 0 to 65.535E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:SEQN?

Returns the sequence number of the specified packet.

Suffix:

<b> 1..4

<pa> *

Return values:

<SequenceNumber> Range: 0 to 4095
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:STARt?

Returns the start time of the specified packet.

Suffix:

<b> 1..4

<pa> *

Return values:

<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:STATe?

Returns the state of the specified packet.

Suffix:

<b> 1..4

<pa> *

Return values:

<State> OK | MALF | CRC16 | ECRC | LCRC | LEN | POE | MEE | UNCorrelated | FCRC | FPERror | UNKNown | OUTRange | INComplete | SYNCerror

MALF
Mal formated packet

CRC16
CRC16 error

ECRC
ECRC error

LCRC
LCRC error

LEN
Length error

POE
TLP prefix error

MEE
Max end-end TLP prefix error

*RST: OK

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:STOP?

Returns the stop time of the specified packet.

Suffix:
<b> 1..4

<pa> *

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:TAG?

Returns the tag of the specified packet.

Suffix:
<b> 1..4

<pa> *

Return values:
<Tag> Range: 0 to 255
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:TYPE?

Returns the type of the specified packet. For a description of the packet types, see Section 14.29.1, "The PCIe protocol", on page 1024.

Suffix:
<b> 1..4

<pa> *

Return values:
<Type> MRD32 | MRD64 | MRDLK32 | MRDLK64 | MWR32 | MWR64 | IORD | IOWR | CFGRD0 | CFGWR0 | CFGRD1 | CFGWR1 | MSG | MSGD | CPL | CPLD | CPLLK | CPLDLK | FA32 | FA64 | SWP32 | SWP64 | CAS32 | CAS64 | LPRFX | EPRFX | ACK | NAK | PMEL1 | PMEL23 | PMASRL1 | PMRA | VENDS | IFC1P | IFC1NP | IFC1CPL | IFC2P | IFC2NP | IFC2CPL | UPDFCP | UPDFCNP | UPDFCCPL | MRUPDFC | MRIFC1 | MRIFC2 | MRINIT | MRRESET | UNK | SKPOS | EIOS | FTSOS | TS1OS | TS2OS | EIEOS | COMPL | MCOMPL | DCOMPL | UDEF | IDLE | SDS | EDB | EDS | SDAT | SCTR | PMUX | UNKTlp | UNKDllp | SINV

*RST: UNK

Usage: Query only

BUS<b>:PCIE:RESult:PCOunt?

Returns the packet count for the selected serial bus, i.e. the number of packets in the present acquisition.

Suffix:
<b> 1..4

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:PCIE:RESult:PACKet<pa>:BITRate?

Returns the bit rate of the selected packet.

Suffix:
<b> 1..4

<pa> *

Return values:

<PrimaryBitRate> Range: 0 to 100E+9
Increment: 1
*RST: 0
Default unit: bps

Usage: Query only

SEARch:TRIGger:PCIE:DLLP:FCTL:CRET <SearchName>,<CreditType>
SEARch:TRIGger:PCIE:DLLP:FCTL:CRET? <SearchName>

Sets credit type value to be searched for, for the data link layer.

Parameters:
<CreditType> ANY | P | NP | CPL
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "Credit Type" on page 1048

SEARch:TRIGger:PCIE:DLLP:FCTL:VCID <SearchName>,<VirtualChnID>
SEARch:TRIGger:PCIE:DLLP:FCTL:VCID? <SearchName>

Sets the virtual channel ID to be searched for, for the data link layer.

Parameters:
<VirtualChnID> ANY | ZERO | ONE | TWO | THREE | FOUR | FIVE | SIX | SEVEN
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "VC ID" on page 1049

SEARch:TRIGger:PCIE:DLLP:MULT:AUTH <SearchName>,<Authorized>
SEARch:TRIGger:PCIE:DLLP:MULT:AUTH? <SearchName>

Sets the authorized presence state to be searched for, for the data link layer.

Parameters:
<Authorized> ANY | YES | NO
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "Authorized" on page 1047

SEARch:TRIGger:PCIE:DLLP:MULT:CRET <SearchName>,<CreditType>
SEARch:TRIGger:PCIE:DLLP:MULT:CRET? <SearchName>

Sets the credit type to be searched for, for the data link layer.

Parameters:
<CreditType> ANY | DATA | HEADER
*RST: ANY

Parameters for setting and query:
<SearchName>

SEARch:TRIGger:PCIE:DLLP:MULT:DVPT <SearchName>,<DevicePortType>
SEARch:TRIGger:PCIE:DLLP:MULT:DVPT? <SearchName>

Sets the device/port type to be searched for, for the data link layer.

Parameters:
<DevicePortType> ANY | ZERO | ONE | TWO | THREE | FOUR | FIVE | SIX | SEVEN | EIGHT | NINE | TEN | ELEVEN | TWELVE | THIRTEEN | FOURTEEN | FIFTEEN
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "Device/Port Type" on page 1047

SEARch:TRIGger:PCIE:DLLP:MULT:HABS <SearchName>,<VHAbsent>
SEARch:TRIGger:PCIE:DLLP:MULT:HABS? <SearchName>

Sets the state of the absent virtual hieararchies (VH) to be searched for, for the data link layer.

Parameters:
<VHAbsent> ANY | YES | NO
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "VH Absent" on page 1048

SEARch:TRIGger:PCIE:DLLP:MULT:MIXT <SearchName>,<MixedType>
SEARch:TRIGger:PCIE:DLLP:MULT:MIXT? <SearchName>

Sets the mixed type presence state to be searched for, for the data link layer.

Parameters:
<MixedType> ANY | YES | NO
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "Mixed Type" on page 1047

SEARch:TRIGger:PCIE:DLLP:MULT:PHAS <SearchName>,<Phase>
SEARch:TRIGger:PCIE:DLLP:MULT:PHAS? <SearchName>

Sets the phase state to be searched for, for the data link layer.

Parameters:
<Phase> ANY | YES | NO
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "Phase" on page 1047

SEARch:TRIGger:PCIE:DLLP:MULT:RESA <SearchName>,<ResetA>
SEARch:TRIGger:PCIE:DLLP:MULT:RESA? <SearchName>

Sets the on the value of the A bit to be searched for, for the data link layer.

Parameters:
<ResetA> ANY | ACK | REQUEST
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "A" on page 1049

SEARch:TRIGger:PCIE:DLLP:MULT:TLPT <SearchName>,<Type>
SEARch:TRIGger:PCIE:DLLP:MULT:TLPT? <SearchName>

Sets the multi-root type to be searched for, for the data link layer.

Parameters:
<Type> ANY | P | NP | CPL

P
Posted credit.

NP
Non posted credit.

CL
Completion credit.

*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "TLP Type" on page 1048

SEARch:TRIGger:PCIE:DLLP:MULT:TYPE <SearchName>,<MRType>
SEARch:TRIGger:PCIE:DLLP:MULT:TYPE? <SearchName>

Sets the multi-root type to be searched for, for the data link layer.

Parameters:
<MRType> MRINIT | MRRESET | MRUPDATEFC | MRINITFC1 | MRINITFC2
*RST: MRINIT

Parameters for setting and query:
<SearchName>

Manual operation: See "MR DLLP" on page 1046

SEARch:TRIGger:PCIE:DLLP:MULT:VHFC <SearchName>,<InitVHFC>
SEARch:TRIGger:PCIE:DLLP:MULT:VHFC? <SearchName>

Sets the virtual hierarchies flow control presence state to be searched for, for the data link layer.

Parameters:
<InitVHFC> ANY | YES | NO
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "VH FC" on page 1047

SEARch:TRIGger:PCIE:DLLP:MULT:VHGR <SearchName>,<ResetVHGroup>
SEARch:TRIGger:PCIE:DLLP:MULT:VHGR? <SearchName>

Sets the virtual hierarchies group to be searched for, for the data link layer.

Parameters:
<ResetVHGroup> ANY | ZERO | ONE | TWO | THREE | FOUR | FIVE | SIX | SEVEN | EIGHT | NINE | TEN | ELEVEN | TWELVE | THIRTEEN | FOURTEEN | FIFTEEN
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "VH Group" on page 1049

SEARch:TRIGger:PCIE:DLLP:MULT:VLNR <SearchName>,<VirtualLink>
SEARch:TRIGger:PCIE:DLLP:MULT:VLNR? <SearchName>

Sets the virtual link (VL) number to be searched for, for the data link layer.

Parameters:
<VirtualLink> ANY | ZERO | ONE | TWO | THREE | FOUR | FIVE | SIX | SEVEN
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "VL Number" on page 1048

SEARch:TRIGger:PCIE:DLLP:POWM <SearchName>,<PowerMngtType>
SEARch:TRIGger:PCIE:DLLP:POWM? <SearchName>

Sets the power management type to be searched for, for the data link layer.

Parameters:
<PowerMngtType> ANY | ENTERL1 | ENTERL23 | ACTREQL1 | REQUESTACK
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "PM Type" on page 1050

SEARch:TRIGger:PCIE:DLLP:SEQ <SearchName>,<Sequence>
SEARch:TRIGger:PCIE:DLLP:SEQ? <SearchName>

Sets the sequence field, indicating what TLPs are affected by the ACK/NAK, to be searched for, for the data link layer.

Parameters:
<Sequence>

Parameters for setting and query:
<SearchName>

Manual operation: See "Sequence" on page 1049

SEARch:TRIGger:PCIE:DLLP:TYPE <SearchName>,<Type>
SEARch:TRIGger:PCIE:DLLP:TYPE? <SearchName>

Sets the DLLP t type to be searched for, for the data link layer.

Parameters:
<Type> ANY | MRDLLP | ACK | NAK | INITFC1 | INITFC2 | UPDATEFC | PM | VENDOR
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "DLLP Type" on page 1046

SEARch:TRIGger:PCIE:DLLP:VPAT <SearchName>,<VendorPattern>
SEARch:TRIGger:PCIE:DLLP:VPAT? <SearchName>

Sets the vendor pattern to be searched for, for the data link layer.

Parameters:
<VendorPattern> 24-bit pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Vendor Pattern" on page 1050

SEARch:TRIGger:PCIE:ERRC:CRC <SearchName>,<CRC16>
SEARch:TRIGger:PCIE:ERRC:CRC? <SearchName>

Enables searching for 16-bit cyclic redundancy check (CRC) errors.

Parameters:
<CRC16> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 1050

SEARch:TRIGger:PCIE:ERRC:DISP <SearchName>,<Disparity>
SEARch:TRIGger:PCIE:ERRC:DISP? <SearchName>

Enables searching for disparity errors.

Parameters:
<Disparity> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 1050

SEARch:TRIGger:PCIE:ERRC:ECRC <SearchName>,<ECRC>
SEARch:TRIGger:PCIE:ERRC:ECRC? <SearchName>

Enables searching for end-to-end cyclic redundancy checksum (ECRC) errors.

Parameters:
<ECRC> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 1050

SEARch:TRIGger:PCIE:ERRC:INVP <SearchName>,<InvalidSymbol>
SEARch:TRIGger:PCIE:ERRC:INVP? <SearchName>

Enables searching for invalid symbol errors.

Parameters:
<InvalidSymbol> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 1050

SEARch:TRIGger:PCIE:ERRC:LCRC <SearchName>,<LCRC>
SEARch:TRIGger:PCIE:ERRC:LCRC? <SearchName>

Enables searching for link cyclic redundancy check (LCRC) errors.

Parameters:
<LCRC> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Error Condition" on page 1050

SEARch:TRIGger:PCIE:OSET:COMP <SearchName>,<Format>
SEARch:TRIGger:PCIE:OSET:COMP? <SearchName>

Enables searching forcompliance pattern ordered sets.

Parameters:
<Format> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Ordered set condition" on page 1050

SEARch:TRIGger:PCIE:OSET:EIDE <SearchName>,<Format>
SEARch:TRIGger:PCIE:OSET:EIDE? <SearchName>

Enables searching for electrical idle exit ordered sets.

Parameters:
<Format> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Ordered set condition" on page 1050

SEARch:TRIGger:PCIE:OSET:EIDL <SearchName>,<Format>
SEARch:TRIGger:PCIE:OSET:EIDL? <SearchName>

Enables searching for electrical idle ordered sets.

Parameters:
<Format> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Ordered set condition" on page 1050

SEARch:TRIGger:PCIE:OSET:FTS <SearchName>,<Format>
SEARch:TRIGger:PCIE:OSET:FTS? <SearchName>

Enables searching for fast training sequence ordered sets.

Parameters:
<Format> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Ordered set condition" on page 1050

SEARch:TRIGger:PCIE:OSET:SKIP <SearchName>,<Format>
SEARch:TRIGger:PCIE:OSET:SKIP? <SearchName>

Enables searching for SKP ordered sets.

Parameters:
<Format> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Ordered set condition" on page 1050

SEARch:TRIGger:PCIE:OSET:TSONe <SearchName>,<Format>
SEARch:TRIGger:PCIE:OSET:TSONe? <SearchName>

Enables searching for training sequence 1 ordered sets.

Parameters:
<Format> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Ordered set condition" on page 1050

SEARch:TRIGger:PCIE:OSET:TSTWo <SearchName>,<Format>
SEARch:TRIGger:PCIE:OSET:TSTWo? <SearchName>

Enables searching for training sequence 2 ordered sets.

Parameters:
<Format> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Ordered set condition" on page 1050

SEARch:TRIGger:PCIE:TLP:ADRT <SearchName>,<AddressType>
SEARch:TRIGger:PCIE:TLP:ADRT? <SearchName>

Sets the address type to be searched for in the transaction layer type.

Parameters:
<AddressType> ANY | X32 | X64
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "Address Type" on page 1045

SEARch:TRIGger:PCIE:TLP:CFGT <SearchName>,<CfgType>
SEARch:TRIGger:PCIE:TLP:CFGT? <SearchName>

Sets the configuration type to be searched for in the transaction layer type.

Parameters:
<CfgType> ANY | TYPE0 | TYPE1
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "Type" on page 1045

SEARch:TRIGger:PCIE:TLP:CPID <SearchName>,<CompleterID>
SEARch:TRIGger:PCIE:TLP:CPID? <SearchName>

Sets the completer ID to be searched for in the transaction layer type.

Parameters:
<CompleterID> 16-bit pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Completer ID" on page 1046

SEARch:TRIGger:PCIE:TLP:CPLS <SearchName>,<CplStatus>
SEARch:TRIGger:PCIE:TLP:CPLS? <SearchName>

Sets the completion status to be searched for in the transaction layer type.

Parameters:
<CplStatus> ANY | SUCCESS | UNSUPPORTED | RETRY | ABORT
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "Status" on page 1045

SEARch:TRIGger:PCIE:TLP:DEID <SearchName>,<DeviceID>
SEARch:TRIGger:PCIE:TLP:DEID? <SearchName>

Sets the device ID to be searched for in the transaction layer type.

Parameters:
<DeviceID> 16-bit pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Device ID" on page 1045

SEARch:TRIGger:PCIE:TLP:MERW <SearchName>,<MemRW>
SEARch:TRIGger:PCIE:TLP:MERW? <SearchName>

Sets the read/ write type to be searched for in the transaction layer type.

Parameters:
<MemRW> ANY | READ | WRITE
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "Read/Write" on page 1045

SEARch:TRIGger:PCIE:TLP:MSGC <SearchName>,<MessageCode>
SEARch:TRIGger:PCIE:TLP:MSGC? <SearchName>

Sets the message code to be searched for in the transaction layer type.

Parameters:
<MessageCode> 8-bit pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Message Code" on page 1045

SEARch:TRIGger:PCIE:TLP:MSGR <SearchName>,<MsgRouting>
SEARch:TRIGger:PCIE:TLP:MSGR? <SearchName>

Sets the message routing type to be searched for in the transaction layer type.

Parameters:
<MsgRouting> ANY | ROOTCOMPLEX | ADDRESS | DEVICEID | DEViceid | BROADCAST | LOCAL | GATHERED
DEVICEID = DEViceid
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "Routing" on page 1045

SEARch:TRIGger:PCIE:TLP:ORDE <SearchName>,<Ordering>
SEARch:TRIGger:PCIE:TLP:ORDE? <SearchName>

Sets the ordering type to be searched for in the transaction layer type.

Parameters:
<Ordering> ANY | STRONG | RELAX
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "Ordering" on page 1044

SEARch:TRIGger:PCIE:TLP:REID <SearchName>,<RequesterID>
SEARch:TRIGger:PCIE:TLP:REID? <SearchName>

Sets the requester ID to be searched for in the transaction layer type.

Parameters:
<RequesterID> 16-bit pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Requester ID" on page 1045

SEARch:TRIGger:PCIE:TLP:SNOO <SearchName>,<Snoop>
SEARch:TRIGger:PCIE:TLP:SNOO? <SearchName>

Sets the snoop state to be searched for in the transaction layer type.

Parameters:
<Snoop> ANY | YES | NO
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "Snoop" on page 1044

SEARch:TRIGger:PCIE:TLP:SNUM <SearchName>,<SequenceNumber>
SEARch:TRIGger:PCIE:TLP:SNUM? <SearchName>

Sets the sequence numbe to be searched for in the transaction layer type.

Parameters:
<SequenceNumber> 12-bit pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The string parameter accepts the bit value X (don't care).

Parameters for setting and query:
<SearchName>

Manual operation: See "Sequence Number" on page 1044

SEARch:TRIGger:PCIE:TLP:TCHN <SearchName>,<TrafficClass>
SEARch:TRIGger:PCIE:TLP:TCHN? <SearchName>

Sets the traffic class to be searched for in the transaction layer type.

Parameters:
<TrafficClass> ANY | ZERO | ONE | TWO | THREE | FOUR | FIVE | SIX | SEVEN
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "TC" on page 1044

SEARch:TRIGger:PCIE:TLP:TYPE <SearchName>,<Type>
SEARch:TRIGger:PCIE:TLP:TYPE? <SearchName>

Sets the transaction type to be searched for in the transaction layer type.

Parameters:
<Type> ANY | MEM | IO | CFG | MSG | CPL | FETCH | SWAP | CAS
*RST: ANY

Parameters for setting and query:
<SearchName>

Manual operation: See "TLP" on page 1043

SEARch:TRIGger:PCIE:TYPE <SearchName>,<Type>
SEARch:TRIGger:PCIE:TYPE? <SearchName>

Parameters:
<Type> TLP | DLLP | ORD | ERR
*RST: TLP

Parameters for setting and query:
<SearchName>

Manual operation: See "Searches for PCI express" on page 1043

27.18.30.6 Search results

In all `SEARch:RESult:PCIE:PACKet<m>` commands, the suffix <m> selects the frame number in the list of search results.

In search result commands, you have to specify the `<SearchName>` parameter. It is a string parameter that contains the search definition name.

For a description of the returned values, see the corresponding commands in Section 27.18.30.4, "Decode results", on page 2754.

SEARch:RESult:PCIE:PACKet<pa>:ADDR? 2776

27.18.31 DDR (option R&S RTO6-K91)

- Configuration....2782
- Decode results....2787
- Search settings....2791
- Search results....2796
- Eye diagram analysis....2800

27.18.31.1 Configuration

In all `BUS<b>:DDR` commands, the suffix <b> selects the serial bus.

BUS<b>:DDR:STANdard....2782
BUS<b>:DDR:DATA:HYSTeresis....2782
BUS<b>:DDR:DATA:SOURce....2783
BUS<b>:DDR:DATA:THReshold....2783
BUS<b>:DDR:STRBe:HYSTeresis....2783
BUS<b>:DDR:STRBe:SOURce....2784
BUS<b>:DDR:STRBe:THReshold....2784
BUS<b>:DDR:RDQS:HYSTeresis....2784
BUS<b>:DDR:RDQS:SOURce....2785
BUS<b>:DDR:RDQS:THReshold....2785
BUS<b>:DDR:WCK:HYSTeresis....2785
BUS<b>:DDR:WCK:SOURce....2786
BUS<b>:DDR:WCK:THReshold....2786
BUS<b>:DDR:BITRate....2786

BUS<b>:DDR:STANdard <Standard>

Selects the DDR standard.

Suffix:
<b> 1..4

Parameters:
<Standard> DDR3

`DDR3`: requires option R&S RTO6-K91.

*RST: DDR3

Usage: Asynchronous command

Manual operation: See "Variant" on page 1054

BUS<b>:DDR:DATA:HYSTeresis <DataHysteresis>

Sets a value for the hysteresis of the data.

Suffix:
<b> 1..4

Parameters:

<DataHysteresis>
Range: 0 to 10
Increment: 0.01
*RST: 0.15
Default unit: V

Usage: Asynchronous command

Manual operation: See "Hysteresis" on page 1055

BUS<b>:DDR:DATA:SOURce <DataSource>

Selects the source for the data output signal.

Suffix:

<b> 1..4

Parameters:

<DataSource>
C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15
*RST: C1W1

Usage: Asynchronous command

Manual operation: See "DQ" on page 1054

BUS<b>:DDR:DATA:THReshold <DataThreshold>

Sets the threshold value for the digitization of the data line.

Suffix:

<b> 1..4

Parameters:

<DataThreshold>
Range: -10 to 10
Increment: 0.01
*RST: 0.75
Default unit: V

Usage: Asynchronous command

Manual operation: See "DQ threshold, DQS threshold" on page 1055

BUS<b>:DDR:STRBe:HYSTeresis <StrobeHyst>

Sets a value for the hysteresis of the strobe.

Suffix:

<b> 1..4

Parameters:

<StrobeHyst>
Range: 0 to 10
Increment: 0.01
*RST: 0.35
Default unit: V

Usage: Asynchronous command

Manual operation: See "Hysteresis" on page 1055

BUS<b>:DDR:STRBe:SOURce <StrobeSource>

Selects the source for the strobe signal.

Suffix:

<b> 1..4

Parameters:

<StrobeSource>
C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15
*RST: C2W1

Usage: Asynchronous command

Manual operation: See "DQS" on page 1054

BUS<b>:DDR:STRBe:THReshold <StrobeThres>

Sets the threshold value for the digitization of the strobe line.

Suffix:

<b> 1..4

Parameters:

<StrobeThres>
Range: -10 to 10
Increment: 0.01
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "DQ threshold, DQS threshold" on page 1055

BUS<b>:DDR:RDQS:HYSTeresis <RDQSHysteresis>

Sets a value for the hysteresis of the read strobe signal.

Suffix:

<b> 1..4

Parameters:

<RDQSHysteresis> Range: 0 to 10
Increment: 0.01
*RST: 0.1
Default unit: V

Usage: Asynchronous command

Manual operation: See "Hysteresis" on page 1055

BUS<b>:DDR:RDQS:SOURce <RDQSSource>

Selects the source for the read strobe signal.

Suffix:

<b> 1..4

Parameters:

<RDQSSource> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

Usage: Asynchronous command

BUS<b>:DDR:RDQS:THReshold <RDQSThreshold>

Sets the threshold value for the digitization of the read strobe line.

Suffix:

<b> 1..4

Parameters:

<RDQSThreshold> Range: -10 to 10
Increment: 0.01
*RST: -0.3
Default unit: V

Usage: Asynchronous command

Manual operation: See "DQ threshold, DQS threshold" on page 1055

BUS<b>:DDR:WCK:HYSTeresis <WCKHysteresis>

Sets a value for the hysteresis of the write clock signal.

Suffix:

<b> 1..4

Parameters:

<WCKHysteresis> Range: 0 to 10
Increment: 0.01
*RST: 0.01
Default unit: V

Usage: Asynchronous command

Manual operation: See "Hysteresis" on page 1055

BUS<b>:DDR:WCK:SOURce <WCKSource>

Selects the source for the write clock signal.

Suffix:
<b> 1..4

Parameters:
<WCKSource> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

Usage: Asynchronous command

BUS<b>:DDR:WCK:THReshold <WCKThreshold>

Sets the threshold value for the digitization of the write clock line.

Suffix:
<b> 1..4

Parameters:
<WCKThreshold>
Range: -10 to 10
Increment: 0.01
*RST: 0.25
Default unit: V

Usage: Asynchronous command

Manual operation: See "DQ threshold, DQS threshold" on page 1055

BUS<b>:DDR:BITRate <Bitrate>

Declares the nominal bit rate of the data signal for the DDR eye diagram analysis.

Suffix:
<b> 1..4

Parameters:
<Bitrate>
Range: 1000 to 10E+9
Increment: 100E+3
*RST: 800E+6
Default unit: bps

Usage: Asynchronous command

Manual operation: See "Bit rate (for eye diagram)" on page 1057

27.18.31.2 Decode results

In all `BUS<b>:DDR:RESult:FRAMe<fr>` commands, the suffix <b> selects the serial bus and the suffix <fr> selects the frame number in the decode table.

BUS<b>:DDR:RESult:FCOunt? 2787
BUS<b>:DDR:RESult:FRAMe<fr>:FLD<fl>:FVAL? 2787
BUS<b>:DDR:RESult:FRAMe<fr>:FLD<fl>:STARt? 2788
BUS<b>:DDR:RESult:FRAMe<fr>:FLD<fl>:STATus? 2788
BUS<b>:DDR:RESult:FRAMe<fr>:FLD<fl>:STOP? 2788
BUS<b>:DDR:RESult:FRAMe<fr>:FLD<fl>:VAL? 2789
BUS<b>:DDR:RESult:FRAMe<fr>:NWRDs? 2789
BUS<b>:DDR:RESult:FRAMe<fr>:STARt? 2789
BUS<b>:DDR:RESult:FRAMe<fr>:STATe? 2790
BUS<b>:DDR:RESult:FRAMe<fr>:STOP? 2790
BUS<b>:DDR:RESult:FRAMe<fr>:TYPE? 2790

BUS<b>:DDR:RESult:FCOunt?

Returns the number of decoded frames in the selected serial bus.

Suffix:
<b> 1..4

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:DDR:RESult:FRAMe<fr>:FLD<fl>:FVAL?

Returns the formatted value of the field with the selected field number within the frame with the selected frame number (for the selected serial bus).

Suffix:
<b> 1..4

<fr> *
Selects the frame number.

<fl> *
Selects the field number.

Return values:
<FrameByteValue>

Usage: Query only

BUS<b>:DDR:RESult:FRAMe<fr>:FLD<fl>:STARt?

Returns the start time of the field with the selected field number within the frame with the selected frame number (for the selected serial bus).

Suffix:

<b> 1..4

<fr> *

Selects the frame number.

<fl> *

Selects the field number.

Return values:

<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:DDR:RESult:FRAMe<fr>:FLD<fl>:STATus?

Returns the status of the field with the selected field number within the frame with the selected frame number (for the selected serial bus).

Suffix:

<b> 1..4

<fr> *

Selects the frame number.

<fl> *

Selects the field number.

Return values:

<State> OK | UNKNown | INComplete | LENGth
*RST: OK

Usage: Query only

BUS<b>:DDR:RESult:FRAMe<fr>:FLD<fl>:STOP?

Returns the stop time of the field with the selected field number within the frame with the selected frame number (for the selected serial bus).

Suffix:

<b> 1..4

<fr> *

Selects the frame number.

<fl> *

Selects the field number.

Return values:

<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:DDR:RESult:FRAMe<fr>:FLD<fl>:VAL?

Returns the value of the field with the selected field number within the frame with the selected frame number (for the selected serial bus).

Suffix:

<b> 1..4

<fr> *
Selects the frame number.

<fl> *
Selects the field number.

Return values:

<FrameByteValue> Range: 0 to 4294967295
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:DDR:RESult:FRAMe<fr>:NWRDs?

Returns the number of words for the selected serial bus and frame number.

Suffix:

<b> 1..4

<fr> *

Return values:

<NumWords> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

BUS<b>:DDR:RESult:FRAMe<fr>:STARt?

Returns the start time of the frame with the selected frame number (for the selected serial bus).

Suffix:

<b> 1..4

<fr> *

Return values:

<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:DDR:RESult:FRAMe<fr>:STATe?

Returns the status of the frame with the selected frame number (for the selected serial bus).

Suffix:

<b> 1..4

<fr> *

Return values:

<State> OK | UNKNown | INComplete | LENGth
*RST: OK

Usage: Query only

BUS<b>:DDR:RESult:FRAMe<fr>:STOP?

Returns the stop time of the frame with the selected frame number (for the selected serial bus).

Suffix:

<b> 1..4

<fr> *

Return values:

<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

BUS<b>:DDR:RESult:FRAMe<fr>:TYPE?

Returns the frame type for the selected serial bus and frame number.

Suffix:

<b> 1..4

<fr> *

Return values:

<FrameType> READ | WRITe | RDNC | WRNC | UNKNown

`RDNC`: read data not continue
`WRNC`: write data not continue

*RST: UNKNown

Usage: Query only

27.18.31.3 Search settings

There are two commands for each parameter, that you can use for defining the DDR search settings.

For example, to set the *Frame type =Read* > *Field =Data* >*Data* value you can use one of the following commands:

- `SEARch:TRIGger:DDR:FRAMe1:ENABle:DMIN 01100`
  Defines the parameter by using the index <m> for the frame number and <n> for the field number.
- `SEARch:TRIGger:DDR:DMIN "Read", "Data", 01100`
  Defines the parameter by using the frame and field name.

SEARch:TRIGger:DDR:ERENable....2791
SEARch:TRIGger:DDR:ERRor<m>:ENABle....2791
SEARch:TRIGger:DDR:FIENable....2792
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:ENABle....2792
SEARch:TRIGger:DDR:FRENable....2792
SEARch:TRIGger:DDR:DMAX....2793
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:DMAX....2793
SEARch:TRIGger:DDR:DMIN....2793
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:DMIN....2793
SEARch:TRIGger:DDR:DOPerator....2793
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:DOPerator....2793
SEARch:TRIGger:DDR:FRENable....2794
SEARch:TRIGger:DDR:FRAMe<fr>:ENABle....2794
SEARch:TRIGger:DDR:IMAX....2794
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:IMAX....2794
SEARch:TRIGger:DDR:IMIN....2795
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:IMIN....2795
SEARch:TRIGger:DDR:IOPerator....2795
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:IOPerator....2795

SEARch:TRIGger:DDR:ERENable <SearchName>,<ErrorName>,<Enabler>
SEARch:TRIGger:DDR:ERRor<m>:ENABle <SearchName>,<Enable>
SEARch:TRIGger:DDR:ERRor<m>:ENABle? <SearchName>

Defines the error type to be searched for. You can search for all error types in parallel.

Suffix:

<m> *
Specifies the error.

Parameters:
<Enable> OFF | ON
*RST: ON

Parameters for setting and query:
<SearchName> The following errors are available:
`Frame Incomplete`
`Length Error`

Example: `SEARch:TRIGger:DDR:ERRor1:ENABle ON`
Enables searching for Frame Incomplete error.
`SEARch:TRIGger:DDR:ERENable "Length Error",ON`
Enables searching for Length Error.

Manual operation: See "Error type" on page 1058

SEARch:TRIGger:DDR:FIENable <SearchName>,<Frame>,<Field>,<Enabler>
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:ENABle
<SearchName>,<CondEnabler>
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:ENABle? <SearchName>

Enables or disables the specific field within the defined frame to be filtered.

Suffix:
<fr> *

<fl> *

Parameters:
<CondEnabler> OFF | ON
*RST: OFF

Parameters for setting and query:
<SearchName>

Manual operation: See "Set details" on page 1059

SEARch:TRIGger:DDR:FRENable <SearchName>,<Frame>,<Enabler>

Setting parameters:
<SearchName>

<Frame>

<Enabler> OFF | ON

Usage: Setting only

Manual operation: See "Frame type" on page 1058

SEARch:TRIGger:DDR:DMAX <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:DMAX <SearchName>,<Data_Max>
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:DMAX? <SearchName>

Sets the end value of a data pattern range if `SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:DOPerator` is set to `INRange` or `OORange`.

Suffix:
<fr> *

<fl> *

Parameters:
<Data_Max>

Parameters for setting and query:
<SearchName>

Manual operation: See "Value" on page 1059

SEARch:TRIGger:DDR:DMIN <SearchName>,<Frame>,<Field>,<Data>
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:DMIN <SearchName>,<Data_Min>
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:DMIN? <SearchName>

Specifies the data pattern to be searched, or sets the start value of a data pattern range to be searched.

Suffix:
<fr> *

<fl> *

Parameters:
<Data_Min> Specifies the name of the generic trigger setting frame.

Parameters for setting and query:
<SearchName>

Manual operation: See "Value" on page 1059

SEARch:TRIGger:DDR:DOPerator <SearchName>,<Frame>,<Field>,<Operator>
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:DOPerator
<SearchName>,<Data_Operator>
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:DOPerator? <SearchName>

Sets the operator to set a specific data pattern to be searched in the selected field of the selected frame.

Suffix:
<fr> *

<fl> *

Parameters:
<Data_Operator> EQUal | NEQual | LTHan | LETHan | GTHan | GETHan | INRange | OORange

EQUal | NEQual | LTHan | LETHan | GTHan | GETHan
Equal, Not equal, Less than, Less than or equal, Greater than, Greater than or equal. These conditions require one endpoint value to be set using `SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:DMIN`.

INRange | OORange
In range, out of range. These conditions require a range of endpoint values to be set using `SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:DMIN` and `SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:DMAX`.

*RST: EQUal

Parameters for setting and query:
<SearchName>

Manual operation: See "Value" on page 1059

SEARch:TRIGger:DDR:FRENable <SearchName>,<Frame>,<Enabler>
SEARch:TRIGger:DDR:FRAMe<fr>:ENABle <SearchName>,<Enable>
SEARch:TRIGger:DDR:FRAMe<fr>:ENABle? <SearchName>

Enables or disables the specific frame to be searched for.

Suffix:
<fr> *

Parameters:
<Enable> OFF | ON

*RST: OFF

Parameters for setting and query:
<SearchName> The following frames are available:
`Read`
`Write`
`Read NC`
`Write NC`

Manual operation: See "Frame type" on page 1058

SEARch:TRIGger:DDR:IMAX <SearchName>,<Frame>,<Field>,<Index>
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:IMAX <SearchName>,<Index_Max>
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:IMAX? <SearchName>

Sets the end value of the bit index range (data position range), if `SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:IOPerator` is set to `INRange` or `RANGe`.

Suffix:
<fr> *

<fl> *

Parameters:
<Index_Max> Range: 1 to 65.534E+3
Increment: 1
*RST: 65.534E+3

Parameters for setting and query:
<SearchName>

Manual operation: See "Index" on page 1060

SEARch:TRIGger:DDR:IMIN <SearchName>,<Frame>,<Field>,<Index>
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:IMIN <SearchName>,<Index_Min>
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:IMIN? <SearchName>

Sets the index at which the data is to be searched, or sets the start value of an index range in which the data is to be searched.

Suffix:
<fr> *

<fl> *

Parameters:
<Index_Min> Specifies the index value or the start value of an index range within the field.
The index range, increment and *RST values depend on the field type.
Range: 1 to 65.534E+3
Increment: 1
*RST: 1

Parameters for setting and query:
<SearchName>

Manual operation: See "Index" on page 1060

SEARch:TRIGger:DDR:IOPerator <SearchName>,<Frame>,<Field>,<Operator>
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:IOPerator
<SearchName>,<Index_Operator>
SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:IOPerator? <SearchName>

Sets the operator for the index for searching in the selected field of the selected frame.

Suffix:
<fr> *

<fl> *

Parameters:
<Index_Operator> EQUal | INRange | RANGe

EQUal
This condition requires one endpoint value to be set using `SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:IMIN`.

INRange | RANGe
This condition requires a range of endpoint values to be set using `SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:IMIN` and `SEARch:TRIGger:DDR:FRAMe<fr>:FLD<fl>:IMAX`.

*RST: INRange

Parameters for setting and query:
<SearchName>

Manual operation: See "Index" on page 1060

27.18.31.4 Search results

In all `SEARch:RESult:DDR:FRAMe<m>` commands, the suffix <m> selects the frame number in the list of search results.

SEARch:RESult:DDR:FCOunt? 2796
SEARch:RESult:DDR:FRAMe<fr>:FLD<fl>:FVAL? 2796
SEARch:RESult:DDR:FRAMe<fr>:FLD<fl>:STARt? 2797
SEARch:RESult:DDR:FRAMe<fr>:FLD<fl>:STATus? 2797
SEARch:RESult:DDR:FRAMe<fr>:FLD<fl>:STOP? 2798
SEARch:RESult:DDR:FRAMe<fr>:FLD<fl>:VAL? 2798
SEARch:RESult:DDR:FRAMe<fr>:NWRDs? 2798
SEARch:RESult:DDR:FRAMe<fr>:STARt? 2799
SEARch:RESult:DDR:FRAMe<fr>:STATe? 2799
SEARch:RESult:DDR:FRAMe<fr>:STOP? 2799
SEARch:RESult:DDR:FRAMe<fr>:TYPE? 2800

SEARch:RESult:DDR:FCOunt? <SearchName>

Returns the number of decoded frames in the search result.

Query parameters:
<SearchName>

Return values:
<FrameCount> Range: 0 to 100E+3
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:DDR:FRAMe<fr>:FLD<fl>:FVAL? <SearchName>

Returns the formatted value of the field with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<fl> *
Selects the field number.

Query parameters:
<SearchName>

Return values:
<BteFormattedVal>

Usage: Query only

SEARch:RESult:DDR:FRAMe<fr>:FLD<fl>:STARt? <SearchName>

Returns the start time of the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<fl> *
Selects the field number.

Query parameters:
<SearchName>

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:DDR:FRAMe<fr>:FLD<fl>:STATus? <SearchName>

Returns the field status of the field with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<fl> *

Query parameters:
<SearchName>

Return values:
<State> OK | UNKNown | INComplete | LENGth
*RST: OK

Usage: Query only

SEARch:RESult:DDR:FRAMe<fr>:FLD<fl>:STOP? <SearchName>

Returns the stop time of the field with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<fl> *
Selects the field number.

Query parameters:
<SearchName>

Return values:
<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:DDR:FRAMe<fr>:FLD<fl>:VAL? <SearchName>

Returns the value of the field with the selected field number within the frame with the selected frame number within the search result.

Suffix:
<fr> *

<fl> *
Selects the field number.

Query parameters:
<SearchName>

Return values:
<ByteValue> Range: 0 to 4294967295
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:DDR:FRAMe<fr>:NWRDs? <SearchName>

Returns the number of words of the selected frame in the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<NumWords> Range: 0 to 4.29497E+9
Increment: 1
*RST: 0

Usage: Query only

SEARch:RESult:DDR:FRAMe<fr>:STARt? <SearchName>

Returns the start time of the frame with the selected frame number within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<Start> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:DDR:FRAMe<fr>:STATe? <SearchName>

Returns the status of the frame with the selected frame number within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:
<State> OK | UNKNown | INComplete | LENGth
*RST: OK

Usage: Query only

SEARch:RESult:DDR:FRAMe<fr>:STOP? <SearchName>

Returns the stop time of the frame with the selected frame number within the search result.

Suffix:
<fr> *

Query parameters:
<SearchName>

Return values:

<Stop> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

SEARch:RESult:DDR:FRAMe<fr>:TYPE? <SearchName>

Returns the frame type for the selected frame number within the search result.

Suffix:

<fr> *

Query parameters:

<SearchName>

Return values:

<FrameType> READ | WRITe | UNKNown
Read, write or unknown data
*RST: UNKNown

Usage: Query only

27.18.31.5 Eye diagram analysis

The suffix EYE<e> selects the eye diagram to which the command applies. You can configure and analyze 1 to 4 eye diagrams in parallel.

There are two ways to generate eye diagrams on the R&S RTO6:

- Standard eye diagrams, which are a superposition of repetitively sampled digital data.
- To use advanced eye diagrams, option R&S RTO6-K136 or R&S RTO6-K91 is required.

Basic setup

EYE<e>[:STATe] 2801
EYE<e>:SOURce 2801
EYE<e>:HORizontal[:UNIT] 2801
EYE<e>:HORizontal:ABSolute:RANGe 2802
EYE<e>:HORizontal:ABSolute:POSition 2802
EYE<e>:HORizontal:UINTerval:RANGe 2802
EYE<e>:HORizontal:UINTerval:POSition 2803
EYE<e>:TIMReference:CLOCk:EDGE 2803
EYE<e>:TIMReference:CLOCk:FACTor 2803
EYE<e>:TIMReference:CLOCk:FREQuency 2804
EYE<e>:TIMReference:CLOCk:FREStimation 2804
EYE<e>:TIMReference:CLOCk:LEVel 2804
EYE<e>:TIMReference:CLOCk:OFEStimation 2805

EYE<e>:TIMReference:CLOCk:OFFSet....2805
EYE<e>:TIMReference:CLOCk:SOURce....2805
EYE<e>:TIMReference:PROTocol:SELect....2806
EYE<e>:TIMReference[:SOURce]....2806
EYE<m>:TIMReference:CDR:SOFTware....2806
EYE<e>:TIMReference:CDR[:SELect]....2806
EYE<e>:MEASurement:MAXPrecision....2807
EYE<e>:VERTical:OFFSet....2807
EYE<e>:VERTical:POSition....2807
EYE<e>:VERTical:SCALe....2808
EYE<e>:VERTical:COUPle....2808
EYE<e>:TIMReference:CDR:SOFTware:SAMTime....2808
EYE<e>:SYMBolrate?....2809

EYE<e>[:STATe] <State>

Activates or deactivates the eye diagram.

Suffix:
<e> 1..4

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "State" on page 1214

EYE<e>:SOURce <MainSource>

Selects the waveform from which the eye diagram is generated (data source). For analog channels, peak detect, envelope, and average waveforms are not supported.

Suffix:
<e> 1..4

Parameters:
<MainSource> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Usage: Asynchronous command

Manual operation: See "Source" on page 1214

EYE<e>:HORizontal[:UNIT] <TimeUnits>

Sets the method to define the horizontal scale of the eye diagram.

Suffix:
<e> 1..4

Parameters:
<TimeUnits> ATIMe | UINTerval

ATIMe
Absolute time

UINTerval
Unit intervals. You can use unit interval, if the nominal frequency of the clock signal is known.

*RST: ATIMe

Usage: Asynchronous command

Manual operation: See "Time units" on page 1219

EYE<e>:HORizontal:ABSolute:RANGe <HorizRg>

Sets the time range that is covered by the eye diagram.

Suffix:
<e> 1..4

Parameters:
<HorizRg> Range: 1E-12 to 100
Increment: 1E-9
*RST: 2E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Range, Position" on page 1219

EYE<e>:HORizontal:ABSolute:POSition <HorizPosition>

Sets the place of the zero point in the diagram, in seconds. The zero point is the alignment point on which the slice timestamps are superimposed.

Suffix:
<e> 1..4

Parameters:
<HorizPosition> Range: -100 to 100
Increment: 1E-9
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "Range, Position" on page 1219

EYE<e>:HORizontal:UINTerval:RANGe <RangeUI>

Sets the number of unit intervals that are visible in the eye diagram.

Suffix:
<e> 1..4

Parameters:

<RangeUI>
Range: 100E-12 to 100E+9
Increment: 0.01
*RST: 2
Default unit: UI

Usage: Asynchronous command

Manual operation: See "Range UI, Position UI" on page 1219

EYE<e>:HORizontal:UINTerval:POSition <PositionUI>

Sets the zero point in the diagram, in unit intervals. The zero point is the alignment point on which the segment timestamps are superimposed.

Suffix:

<e> 1..4

Parameters:

<PositionUI>
Range: -100E+9 to 100E+9
Increment: 0.01
*RST: 0
Default unit: UI

Usage: Asynchronous command

Manual operation: See "Range UI, Position UI" on page 1219

EYE<e>:TIMReference:CLOCk:EDGE <EdgeType>

The clock edge sets the point in time when the state of the data signal is checked.

Suffix:

<e> 1..4

Parameters:

<EdgeType>
POSitive | NEGative | EITHer
*RST: EITHer

Usage: Asynchronous command

Manual operation: See "Clock edge" on page 1217

EYE<e>:TIMReference:CLOCk:FACTor <Factor>

Sets a clock multiplier factor.

Available if `EYE<e>:TIMReference[:SOURce]` is set to `CLOCk`.

Suffix:

<e> 1..4

Parameters:

<Factor> Range: 1 to 100
Increment: 1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Clock multiplier" on page 1217

EYE<e>:TIMReference:CLOCk:FREQuency <Frequency>

Sets the clock frequency for the explicit clock signal.

Available if `EYE<e>:TIMReference[:SOURce]` is set to `CLOCk`.

Suffix:

<e> 1..4

Parameters:

<Frequency> Range: 1000 to 10E+9
Increment: 10
*RST: 500E+6
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Clock frequency" on page 1217

EYE<e>:TIMReference:CLOCk:FREStimation

Executes an estimation of the signal for the clock frequency.

Available if `EYE<e>:TIMReference[:SOURce]` is set to `CLOCk`.

Suffix:

<e> 1..4

Usage: Event

Manual operation: See "Estimate clock frequency" on page 1217

EYE<e>:TIMReference:CLOCk:LEVel <Level>

Sets the vertical reference level of the timing reference source.

Available if `EYE<e>:TIMReference[:SOURce]` is set to `CLOCk`.

Suffix:

<e> 1..4

Parameters:

<Level> UPPer | MIDDle | LOWer
*RST: MIDDle

Usage: Asynchronous command

Manual operation: See "Vertical reference level" on page 1217

EYE<e>:TIMReference:CLOCk:OFEStimation

Executes an estimation of the signal for the clock offset.

Available if `EYE<e>:TIMReference[:SOURce]` is set to `CLOCk`.

Suffix:
<e> 1..4

Usage: Event

Manual operation: See "Estimate clock offset" on page 1218

EYE<e>:TIMReference:CLOCk:OFFSet <Offset>

Sets a clock offset for the explicit clock signal.

Available if `EYE<e>:TIMReference[:SOURce]` is set to `CLOCk`.

Suffix:
<e> 1..4

Parameters:
<Offset>
Range: -1000 to 1000
Increment: 0.01
*RST: 0
Default unit: UI

Usage: Asynchronous command

Manual operation: See "Clock offset" on page 1217

EYE<e>:TIMReference:CLOCk:SOURce <SourceType>

Selects the source of the clock channel, if `EYE<e>:TIMReference[:SOURce]` is set to `CLOCk`.

Suffix:
<e> 1..4

Parameters:
<SourceType> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

Usage: Asynchronous command

Manual operation: See "Clock" on page 1214

EYE<e>:TIMReference:PROTocol:SELect <SerialBusIndex>

Selects the active bus for the eye analysis, if `EYE<e>:TIMReference[:SOURce]` is set to `PROTocol`.

Suffix:
<e> 1..4

Parameters:
<SerialBusIndex> SBUS1 | SBUS2 | SBUS3 | SBUS4
*RST: SBUS1

Usage: Asynchronous command

Manual operation: See "Protocol" on page 1216

EYE<e>:TIMReference[:SOURce] <RefSrc>

Selects the source of the reference signal used for the eye diagram.

Suffix:
<e> 1..4

Parameters:
<RefSrc> CLOCk | CDR | PROTocol
*RST: CDR

Usage: Asynchronous command

Manual operation: See "Clock / CDR / Protocol" on page 1214

EYE<m>:TIMReference:CDR:SOFTware <SoftwareCDRIdx>

Selects the software CDR used for the reference signal of the the eye diagram.

Suffix:
<m> 1..4

Parameters:
<SoftwareCDRIdx> SW1 | SW2 | SW3 | SW4
*RST: SW1

Usage: Asynchronous command

Manual operation: See "CDR" on page 1215

EYE<e>:TIMReference:CDR[:SELect] <CDRType>

Selects hardware or software clock data recovery.

Available, if `EYE<e>:TIMReference[:SOURce]` is set to `CDR`.

Suffix:
<e> 1..4

Parameters:
<CDRType> SW | HW
*RST: SW

Usage: Asynchronous command

Manual operation: See "CDR" on page 1215

EYE<e>:MEASurement:MAXPrecision <EnabClassifier>

If this function is enabled, the rising and falling transitions for the eye measurmens "Eye rise time", "Eye fall time" and "Duty cycle distortion" are separated.

Suffix:
<e> 1..4

Parameters:
<EnabClassifier> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Maximum precision" on page 1235

EYE<e>:VERTical:OFFSet <VerticalOffset>

The offset voltage is subtracted to correct an offset-affected signal.

Suffix:
<e> 1..4

Parameters:
<VerticalOffset> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "Offset" on page 1220

EYE<e>:VERTical:POSition <VertPosi>

Sets the vertical position of the indicated eye as a graphical value.

Suffix:
<e> 1..4

Parameters:
<VertPosi> Range: -100E+24 to 100E+24
Increment: 0.1
*RST: 0
Default unit: div

Usage: Asynchronous command

Manual operation: See "Position" on page 1220

EYE<e>:VERTical:SCALe <VerticalScale>

Sets the vertical scale for the indicated eye.

Suffix:
<e> 1..4

Parameters:
<VerticalScale> Range: 1E-12 to 100
Increment: 1E-3
*RST: 0.05
Default unit: V/div

Usage: Asynchronous command

Manual operation: See "Scale" on page 1220

EYE<e>:VERTical:COUPle <VertCpl>

If enabled, the vertical position and scale of the source are used.

Suffix:
<e> 1..4

Parameters:
<VertCpl> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Couple to source" on page 1219

EYE<e>:TIMReference:CDR:SOFTware:SAMTime <SamplingTime>

Sets the sampling time for the software CDR.

Available, if `EYE<e>:TIMReference[:SOURce]` is set to `CDR` and `EYE<e>:TIMReference:CDR[:SELect]` is set to `SW`.

Suffix:
<e> 1..4

Parameters:
<SamplingTime> Range: 0 to 1
Increment: 0.01
*RST: 0.5
Default unit: UI

Usage: Asynchronous command

Manual operation: See "CDR" on page 1215

EYE<e>:SYMBolrate?

Queries the symbol rate of the selected eye source.

Suffix:
<e> 1..4

Return values:
<Bitrate> Range: 1000 to 16E+9
Increment: 1
*RST: 2E+9
Default unit: bps

Usage: Query only
Asynchronous command

Display

EYE<e>:MSLices....2809
EYE<e>:DISPlay:MODE....2809
EYE<e>:DISPlay:PERSistence:INFinite....2810
EYE<e>:DISPlay:PERSistence:RESet....2810
EYE<e>:DISPlay:PERSistence:STATe....2810
EYE<e>:DISPlay:PERSistence:TIME....2811

EYE<e>:MSLices <MaxSliceCount>

Sets the number of waveform slices for a single acquisition.

Suffix:
<e> 1..4

Parameters:
<MaxSliceCount> Range: 1 to 2.5E+6
Increment: 1
*RST: 2000

Usage: Asynchronous command

Manual operation: See "Slices per acquisition (Upper limit)" on page 1218

EYE<e>:DISPlay:MODE <Eyestripe_Mode>

Defines when the eye stripe is shown: always, never, or during mask tests.

Suffix:
<e> 1..4

Parameters:
<Eyestripe_Mode> ALWays | MTONly | NEVer
MTONly: Mask test only
*RST: MTONly

Usage: Asynchronous command

Manual operation: See "Display mode" on page 1222

EYE<e>:DISPlay:PERSistence:INFinite <State>

If persistence is enabled (`EYE<e>:DISPlay:PERSistence:STATe`), each new data point in the diagram area remains on the screen infinitely until this command is set to `OFF`.

Suffix:
<e> 1..4

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Infinite persistence" on page 1222

EYE<e>:DISPlay:PERSistence:RESet

Resets the display, removing persistent values.

Suffix:
<e> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Reset" on page 1222

EYE<e>:DISPlay:PERSistence:STATe <State>

If enabled, each new data point in the diagram area remains on the screen for the duration defined using `EYE<e>:DISPlay:PERSistence:TIME`, or as long as `EYE<e>:DISPlay:PERSistence:INFinite` is enabled.

If disabled, the signal value is only displayed as long as it actually occurs.

Suffix:
<e> 1..4

Parameters:
<State> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Enable" on page 1222

EYE<e>:DISPlay:PERSistence:TIME <Time>

If persistence is enabled (`EYE<e>:DISPlay:PERSistence:STATe`), each new data point in the diagram area remains on the screen for the duration defined here.

Suffix:
<e> 1..4

Parameters:
<Time> Range: 0.05 to 50
Increment: 0.05
*RST: 0.05
Default unit: s

Usage: Asynchronous command

Manual operation: See "Time" on page 1222

Qualify: gate settings

EYE<e>:QUALify:GATE[:STATe] 2811
EYE<e>:QUALify:GATE:COUPling 2811
EYE<e>:QUALify:GATE:MODE 2812
EYE<e>:QUALify:GATE:ABSolute:STARt 2812
EYE<e>:QUALify:GATE:ABSolute:STOP 2812
EYE<e>:QUALify:GATE:RELative:STARt 2812
EYE<e>:QUALify:GATE:RELative:STOP 2812
EYE<e>:QUALify:GATE:CURSor 2813
EYE<e>:QUALify:GATE:ZDIagram 2813

EYE<e>:QUALify:GATE[:STATe] <State>

Enables the gate.

Suffix:
<e> 1..4

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Gate" on page 1223

EYE<e>:QUALify:GATE:COUPling <CouplingMode>

Sets the gate coupling. To use cursor lines or zoom areas as gate limits, the cursor or zoom must be defined before.

Suffix:
<e> 1..4

Parameters:
<CouplingMode> NONE | CURSor | ZOOM
*RST: NONE

Usage: Asynchronous command

Manual operation: See "Gate" on page 1223

EYE<e>:QUALify:GATE:MODE <Mode>

Defines whether the gate limit is defined in absolute or relative values when no gate coupling is set.

Suffix:
<e> 1..4

Parameters:
<Mode> ABS | REL
*RST: ABS

Usage: Asynchronous command

Manual operation: See "Gate" on page 1223

EYE<e>:QUALify:GATE:ABSolute:STARt <Start>
EYE<e>:QUALify:GATE:ABSolute:STOP <Stop>

Set the absolute time values for gate start and gate end.

Suffix:
<e> 1..4

Parameters:
<Start>, <Stop> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0.01

Example: Gate definition for eye diagram 2 in absolute time values:

```
EYE2:QUALify:GATE:COUPling NONE
EYE2:QUALify:GATE:MODE ABS
EYE2:QUALify:GATE:ABSolute:STARt -0.0002
EYE2:QUALify:GATE:ABSolute:STOP 0.0002
```

Usage: Asynchronous command

Manual operation: See "Gate" on page 1223

EYE<e>:QUALify:GATE:RELative:STARt <RelativeStart>
EYE<e>:QUALify:GATE:RELative:STOP <RelativeStop>

Set the relative values for gate start and gate end.

Suffix:
<e> 1..4

Parameters:

<RelativeStart>, <RelativeStop>
Range: 0 to 100
Increment: 0.1
*RST: 100
Default unit: %

Example: Gate definition for eye diagram 2 in relative values:

```
EYE2:QUALify:GATE:COUPling NONE
EYE2:QUALify:GATE:MODE REL
EYE2:QUALify:GATE:RELative:STARt 10
EYE2:QUALify:GATE:RElative:STOP 90
```

Usage: Asynchronous command

Manual operation: See "Gate" on page 1223

EYE<e>:QUALify:GATE:CURSor <Cursorset>

Selects the cursor set to be used for eye gating. The gate area is defined by the cursor lines.

Suffix:

<e> 1..4

Parameters:

<Cursorset> CURSOR1 | CURSor1 | CURSOR2 | CURSor2 | CURSOR3 | CURSor3 | CURSOR4 | CURSor4

CURSOR1 = CURSor1, CURSOR2 = CURSor2, CURSOR3 = CURSor3, CURSOR4 = CURSor4

*RST: CURSOR1

Example: Gate definition for eye diagram 2 with cursor coupling:

```
EYE2:QUALify:GATE:COUPling CURSor
EYE2:QUALify:GATE:CURSor CURSor1
```

Usage: Asynchronous command

Manual operation: See "Gate" on page 1223

EYE<e>:QUALify:GATE:ZDIagram <ZoomDiagram>

Selects the zoom diagram to be used for eye gating. The zoom area is is used as gate.

Suffix:

<e> 1..4

Parameters:

<ZoomDiagram> String with the name of the zoom diagram

Example: Gate definition for eye diagram 2 with zoom coupling:

```
EYE2:QUALify:GATE:COUPling ZOOM
EYE2:QUALify:GATE:ZDIagram "Zoom1"
```

Usage: Asynchronous command

Manual operation: See "Gate" on page 1223

Qualify: signal settings

EYE<e>:QUALify:SIGNal[:STATe] 2814
EYE<e>:QUALify:SIGNal:SOURce 2814
EYE<e>:QUALify:SIGNal:CONDition 2814
EYE<e>:QUALify:SIGNal:LSELect 2815
EYE<e>:QUALify:SIGNal:LSLTo 2815

EYE<e>:QUALify:SIGNal[:STATe] <State>

Enables the waveform-based qualification for the eye generation.

Suffix:
<e> 1..4

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "State" on page 1224

EYE<e>:QUALify:SIGNal:SOURce <Source>

Selects the waveform to be compared.

Suffix:
<e> 1..4

Parameters:
<Source> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Usage: Asynchronous command

Manual operation: See "Source" on page 1224

EYE<e>:QUALify:SIGNal:CONDition <Condition>

Selects the comparison condition for the the waveform level.

Suffix:
<e> 1..4

Parameters:
<Condition> LTHan | GTHan | INRange | OORange
*RST: GTHan

Usage: Asynchronous command

Manual operation: See "Condition" on page 1224

EYE<e>:QUALify:SIGNal:LSELect <LevelSelection>

Selects the threshold for `EYE<e>:QUALify:SIGNal:CONDition LTHan | GTHan`, and the start threshold for the range settings `INRange | OORange`.

You can use the lower, middle, or upper reference level. These levels are the reference levels that are defined for measurements.

Suffix:
<e> 1..4

Parameters:
<LevelSelection> UPPer | MIDDle | LOWer
*RST: MIDDle

Example: The slices of the channel 1 signal only contribute to the eye generation if the voltage level of the signal on channel 2 is higher than the upper reference level.

```
EYE:SOURce C1W1
EYE:QUALify:SIGNal:SOURce C2W1
EYE:QUALify:SIGNal:CONDition GTHan
EYE:QUALify:SIGNal:LSELect UPPer
EYE:QUALify:SIGNal ON
```

Usage: Asynchronous command

Manual operation: See "Vertical reference levels" on page 1224

EYE<e>:QUALify:SIGNal:LSLTo <LevelSelectionTo>

Selects the end threshold for `EYE<e>:QUALify:SIGNal:CONDition INRange | OORange`.

You can use the lower, middle, or upper reference level. These levels are the reference levels that are defined for measurements.

Suffix:
<e> 1..4

Parameters:
<LevelSelectionTo> UPPer | MIDDle | LOWer
*RST: UPPer

Usage: Asynchronous command

Manual operation: See "Vertical reference levels" on page 1224

Filter

EYE<e>:FILTer:STATe 2816
EYE<e>:FILTer:BPATtern:MODE 2816
EYE<e>:FILTer:BPATtern:PREFix<n> 2817
EYE<e>:FILTer:BPATtern:CENTer 2817
EYE<e>:FILTer:BPATtern:SUFFix<n> 2817

EYE<e>:FILTer:BPATtern:SLEFt....2817
EYE<e>:FILTer:BPATtern:SRIGht....2817
EYE<e>:FILTer:BPATtern:RESet....2817
EYE<e>:FILTer:DDR:FTYPe....2818
EYE<e>:FILTer:DDR:LENerror....2818
EYE<e>:FILTer:RESet....2818
EYE<e>:FILTer:PAMN:BLEVel....2818
EYE<e>:FILTer:PAMN:EMODe....2819
EYE<e>:FILTer:PAMN:SEYE....2819
EYE<e>:FILTer:PAMN:TLEVel....2820

EYE<e>:FILTer:STATe <State>

Applies the filter settings to the data signal.

Suffix:
<e> 1..4

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 1225

EYE<e>:FILTer:BPATtern:MODE <Mode>

Selects which bits contribute to the eye generation.

Suffix:
<e> 1..4

Parameters:
<Mode> ABITs | TBITs | LTRansition | NTBits | CLEVel | BPATtern

ABITs
All bits contribute to the eye diagram, same as `EYE<e>:FILTer:STATe` is OFF.

TBITs=LTRansition
Transition bits, only bits after a signal transition contribute (0 to 1, or 1 to 0).

NTBits =CLEVel
Non-transition bits, only bits without a preceding signal transition contribute (0 to 0, or 1 to 1).

BPATtern
Only available for signals with "PAM order" = "NRZ"
Only bits contribute that match the defined pattern before and after the center eye.

*RST: ABITs

Usage: Asynchronous command

Manual operation: See "Mode" on page 1225

EYE<e>:FILTer:BPATtern:PREFix<n> <Bit>
EYE<e>:FILTer:BPATtern:CENTer <BitValue>
EYE<e>:FILTer:BPATtern:SUFFix<n> <Bit>

Set the values of the indicated prefix, center, and suffix bits.

Suffix:
<e> 1..4

<n> 1..5

Parameters:
<Bit> ONE | ZERO | DC
DC: don't care

Manual operation: See "Pattern" on page 1226

EYE<e>:FILTer:BPATtern:SLEFt

Shifts the pattern one bit to the left.

Suffix:
<e> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Pattern control" on page 1226

EYE<e>:FILTer:BPATtern:SRIGht

Shifts the pattern one bit to the right.

Suffix:
<e> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Pattern control" on page 1226

EYE<e>:FILTer:BPATtern:RESet

Resets the bit sequence filter to the default (DC for all bits).

Suffix:
<e> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Pattern control" on page 1226

EYE<e>:FILTer:DDR:FTYPe <CommTyp>

Sets which frame types contribute to the eye diagram.

Suffix:
<e> 1..4

Parameters:
<CommTyp> ANY | ANYC | READ | WRITe | RDNC | WRNC
ANYC: any consecutive
RDNC: read non-consecutive
WRNC: write non-consecutive
*RST: ANY

Usage: Asynchronous command

Manual operation: See "Frame Type" on page 1227

EYE<e>:FILTer:DDR:LENerror <CommTyp>

If enabled, the length errors contribute to the eye diagram.

Suffix:
<e> 1..4

Parameters:
<CommTyp> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Length Error" on page 1227

EYE<e>:FILTer:RESet

Resets the current settings of a protocol filter.

Suffix:
<e> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Reset settings" on page 1226

EYE<e>:FILTer:PAMN:BLEVel <BaseLevel>

Selects the base level for the PAM-N signal eye, if `EYE<e>:FILTer:PAMN:EMODe` is set to `SELected`.

Suffix:
<e> 1..4

Parameters:
<BaseLevel> LEVEL0 | LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6
*RST: LEVEL0

Usage: Asynchronous command

Manual operation: See "PAM-N diagram filter mode" on page 1228

EYE<e>:FILTer:PAMN:EMODe <PAMNEyeSel>

Selects the filter mode for PAM-N signals. It defines which part of the signal is used to build the eye.

Suffix:
<e> 1..4

Parameters:
<PAMNEyeSel> WHOLe | SPECific | SELected

WHOLe
Displays all level transitions of the selected source.

SPECific
Displays an explicit eye opening (e.g. for level transition 1-2) with all involved level transitions. You can select the eye with `EYE<e>:FILTer:PAMN:SEYE`.

SELected
Displays an explicit eye opening (e.g. for level transition 1-2) with only its own level transitions. You can select the base level (`EYE<e>:FILTer:PAMN:BLEVel`) and target level (`EYE<e>:FILTer:PAMN:TLEVel`).

*RST: WHOLe

Usage: Asynchronous command

Manual operation: See "PAM-N diagram filter mode" on page 1228

EYE<e>:FILTer:PAMN:SEYE <PAMNSpecificEye>

Selects the specific eye for the PAM-N signal eye, if `EYE<e>:FILTer:PAMN:EMODe` is set to `SPECific`.

Suffix:
<e> 1..4

Parameters:
<PAMNSpecificEye> EYE1 | EYE2 | EYE3 | EYE4 | EYE5 | EYE6 | EYE7

`EYE1`: level transition 0-1
`EYE2`: level transition 1-2
`EYE3`: level transition 2 -3
`EYE4`: level transition 3-4
`EYE5`: level transition 4-5

EYE6: level transition 5-6
EYE7: level transition 6-7

*RST: EYE1

Usage: Asynchronous command

Manual operation: See "PAM-N diagram filter mode" on page 1228

EYE<e>:FILTer:PAMN:TLEVel <PAMNSelcEyeTargetLev>

Selects the target level for the PAM-N signal eye, if EYE<e>:FILTer:PAMN:EMODe is set to SELected.

Suffix:
<e> 1..4

Parameters:
<PAMNSelcEyeTargetLev> LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6 | LEVEL7

*RST: LEVEL1

Usage: Asynchronous command

Manual operation: See "PAM-N diagram filter mode" on page 1228

Results of eye

EYE<e>:RESult:SLICe<n>:COUNt? 2820
EYE<e>:RESult:SLICe<n>:LPOSition? 2820
EYE<e>:RESult:SLICe<n>[:POSition]? 2821
EYE<e>:RESult:TACQs? 2821
EYE<e>:RESult:TSLices? 2821

EYE<e>:RESult:SLICe<n>:COUNt?

Returns the number of filtered bits.

Suffix:
<e> 1..4
<n> *
Not relevant

Return values:
<Count>

Usage: Query only

EYE<e>:RESult:SLICe<n>:LPOSition?

Returns the position of the last slice in the acquistion.

Suffix:
<e> 1..4

<n> *

Return values:
<LastPosition>

Usage: Query only

EYE<e>:RESult:SLICe<n>[:POSition]?

Returns the position of the filtered bit in the acquisition.

Suffix:
<e> 1..4

<n> *

Return values:
<Position> Range: -100 to 100
Increment: 1E-3
*RST: 0
Default unit: s

Usage: Query only
Asynchronous command

EYE<e>:RESult:TACQs?

Returns the total number of acquisitions accumulated into the eye.

Suffix:
<e> 1..4

Return values:
<Acquisitions> Range: 0 to 1E+9
Increment: 1
*RST: 0

Usage: Query only
Asynchronous command

EYE<e>:RESult:TSLices?

Returns the total number of slices accumulated into the eye.

Suffix:
<e> 1..4

Return values:
<Slices> Range: 0 to 1E+9
Increment: 1
*RST: 0

Usage: Query only
Asynchronous command

Results of mask tests on eye diagrams

MTESt:RESult:COUNt:SLICes?....2822
MTESt:RESult:COUNt:FSLices?....2822
MTESt:RESult:VIOLation<m>:COUNt?....2822
MTESt:RESult:VIOLation<m>[:SLICe]?....2823
MTESt:RESult:VIOLation<m>:STARt?....2823
MTESt:RESult:VIOLation<m>:STOP?....2823
EYE<e>:ZCOupling....2823
EYE<e>:ZDIagram....2824

MTESt:RESult:COUNt:SLICes? <MaskTestName>

Returns the number of slices that contributed to the eye diagram.

Query parameters:
<MaskTestName> String parameter

Return values:
<SlicesCompleted> Range: 0 to 100E+24
Increment: 1
*RST: 0

Usage: Query only
Asynchronous command

MTESt:RESult:COUNt:FSLices? <MaskTestName>

Returns the number of slices that violated the mask.

Query parameters:
<MaskTestName> String parameter

Return values:
<SliceHits> Range: 0 to 100E+24
Increment: 1
*RST: 0

Usage: Query only
Asynchronous command

MTESt:RESult:VIOLation<m>:COUNt? <MaskTestName>

Suffix:
<m> *
Violation index, corresponds to the number in the "Violation" column of mask test result.

Query parameters:
<MaskTestName> String parameter

Return values:
<Count>

Usage: Query only

MTESt:RESult:VIOLation<m>[:SLICe]? <MaskTestName>

Returns the number of the slices that violated the mask at the given violation index.

Suffix:
<m> *
Violation index, corresponds to the number in the "Violation" column of mask test result.

Query parameters:
<MaskTestName> String parameter

Return values:
<Slice> Range: 0 to 4294967295
Increment: 1
*RST: 0

Usage: Query only
Asynchronous command

MTESt:RESult:VIOLation<m>:STARt? <MaskTestName>
MTESt:RESult:VIOLation<m>:STOP? <MaskTestName>

Return the start and stop time of the slice with the indicated violation.

Suffix:
<m> *
Violation index, corresponds to the number in the "Violation" column of mask test result.

Query parameters:
<MaskTestName>

Return values:
<Time> Range: -100 to 100
Increment: 1E-3
*RST: 0
Default unit: s

Usage: Query only
Asynchronous command

EYE<e>:ZCOupling <ZoomCoupling>

If enabled, the mask eye area is set to the limits of a zoom area.

The zoom diagram is selected using `EYE<e>:ZDIagram`.

Suffix:
<e> 1..4

Parameters:
<ZoomCoupling> OFF | ON
*RST: OFF

Usage: Asynchronous command

EYE<e>:ZDIagram <ZoomDiagram>

Selects the zoom to which the eye mask area is set if `EYE<e>:ZCOupling` is enabled.

Suffix:
<e> 1..4

Parameters:
<ZoomDiagram> String with the name of the diagram on which the zoom is based

Usage: Asynchronous command

27.19 Mixed signal option (MSO, R&S RTO6-B1)

This chaptes decribes the remote commands of MSO option R&S RTO6-B1.

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

- www.rohde-schwarz.com/rc-via-scpi, section "Command sequence and synchronization"
- Section 27.3, "Programming examples", on page 1425

- Digital channels....2824
- Parallel bus configuration....2828
- Digital resolution....2836
- Trigger settings for digital signals and parallel buses....2836
- MSO data....2848

27.19.1 Digital channels

All `DIGital:` commands affect only the settings of the first MSO bus (Bus1). The settings of all other parallel buses (Bus 2, 3,4) remain unchanged.

DIGital<m>:DESKew....2825
DIGital<m>:DISPlay....2825
DIGital<m>:HYSTeresis....2825
DIGital<m>:LABel....2826

DIGital<m>:SIZE....2826
DIGital<m>:TECHnology....2827
DIGital<m>:THReshold....2827
DIGital<m>:THCoupling....2827

DIGital<m>:DESKew <Deskew>

Sets an individual delay for each digital channel to time-align it with other digital channels. The deskew value compensates delays that are known from the circuit specifics or caused by the different length of cables.

The setting affects only the settings of the first MSO bus (Bus1). You can set the deskew for all buses with `BUS<b>:PARallel:BIT<n>:DESKew`.

Suffix:
<m> 0..15
Number of the digital channel

Parameters:
<Deskew> Range: -200.0E-09 to 200.0E-09
Increment: 200.0E-12
*RST: 0
Default unit: s

Manual operation: See "Skew" on page 1070

DIGital<m>:DISPlay <Display>

Enables or disables the indicated digital channel, displays it, and enables the parallel Bus1 if the bus was disabled. That is, `BUS<b>:PARallel:DISPlay:SHDI` and `BUS<b>:PARallel:STATe` are set to ON automatically.

If another active bus already uses the selected digital channel, the instrument disables the other bus to avoid conflicts.

For Bus1, the `DIG:DISP` command has the same effect as `BUS<b>:PARallel:BIT<n>[:STATe]`. To enable digital channels for buses 2, 3 and 4, use the `BUS:PAR:BIT[:STAT]` command.

Suffix:
<m> 0..15
Number of the digital channel

Parameters:
<Display> ON | OFF

DIGital<m>:HYSTeresis <Hysteresis>

Defines the size of the hysteresis to avoid the change of signal states due to noise for the channel group to which the indicated digital channel belongs.

The setting affects only the settings of the first MSO bus (Bus1). You can set the hysteresis for all buses with `BUS<b>:PARallel:HYSTeresis<n>`.

See also: DIGital<m>:THCoupling

Suffix:
<m> 0..15
Number of the digital channel
Channel groups: 0..3; 4..7; 8..11; 12..15

Parameters:
<Hysteresis> MAXIMUM | MAXimum | ROBUST | ROBust | NORMAL | NORMal

MAXIMUM = MAXimum
Maximum value that is possible and useful for the signal and its settings

ROBUST = ROBust
Different hysteresis values for falling and rising edges to avoid an undefined state of the trigger system.

NORMAL = NORMal
The instrument sets a value suitable for the signal and its settings.

Manual operation: See "Hysteresis" on page 1067

DIGital<m>:LABel <Label>

Sets a name for the indicated digital channel. The name is displayed in the diagram.

The setting affects only the settings of the first MSO bus (Bus1). You can set the label for all buses with BUS<b>:PARallel:BIT<n>:LABel.

Suffix:
<m> 0..15
Number of the digital channel

Parameters:
<Label> String containing the channel name

DIGital<m>:SIZE <Size>

Sets the height of the line display for all digital channels.

Suffix:
<m> 0..15
The suffix is not relevant.

Parameters:
<Size> Signal height in percent of the diagram height

Range: 2 to 24
Default unit: %

DIGital<m>:TECHnology <Technology>

Selects the threshold voltage for various types of integrated circuits and applies it to all digital channels.

The setting affects only the settings of the first MSO bus (Bus1). You can set the technology value for all buses with `BUS<b>:PARallel:TECHnology`.

Suffix:
<m> 0..15
The suffix is irrelevant.

Parameters:
<Technology> V15 | V25 | V165 | V125 | V09 | VM13 | V38 | V20 | V0 | MANual
See `BUS<b>:PARallel:TECHnology`

Manual operation: See "Technology, Threshold" on page 1065

DIGital<m>:THReshold <Value>

Sets the logical threshold for the channel group to which the indicated digital channel belongs. The setting affects only the settings of the first MSO bus (Bus1).

The setting affects only the settings of the first MSO bus (Bus1). You can set the threshold for all buses with `BUS<b>:PARallel:TECHnology` or `BUS<b>:PARallel:THReshold<n>`.

See also: `DIGital<m>:THCoupling`

Suffix:
<m> 0..15
Number of the digital channel.
Channel groups: 0..3; 4..7; 8..11; 12..15

Parameters:
<Value> Range: -8.0 to 8.0
Increment: 200.0e-12
*RST: 0
Default unit: V

Manual operation: See "Technology, Threshold" on page 1065

DIGital<m>:THCoupling <State>

Sets the threshold and the hysteresis for all digital channels of parallel bus 1 to the same value.

The command `BUS<b>:PARallel:THCoupling` is used to set all buses.

Suffix:
<m> 0..15
The suffix is irrelevant.

Parameters:
<State> ON | OFF

Manual operation: See "Couple thresholds" on page 1066

27.19.2 Parallel bus configuration

The following commands configure the four parallel buses of R&S RTO6-B1.

BUS<b>:PARallel:STATe....2828
BUS<b>:PARallel:BIT<n>[:STATe]....2829
BUS<b>:PARallel:THReshold<n>....2829
BUS<b>:PARallel:TECHnology....2830
BUS<b>:PARallel:THCoupling....2830
BUS<b>:PARallel:HYSTeresis<n>....2830
BUS<b>:PARallel:BIT<n>:DESKew....2831
BUS<b>:PARallel:DESoffset....2831
BUS<b>:PARallel:BIT<n>:LABel....2832
BUS<b>:PARallel:DATA:FORMat....2832
BUS<b>:PARallel:DISPlay:SHDI....2833
BUS<b>:PARallel:DISPlay:SHBU....2833
BUS<b>:PARallel:DISPlay:BTYP....2833
BUS<b>:PARallel:CLON....2834
BUS<b>:PARallel:CLOCk....2834
BUS<b>:PARallel:CLSLope....2834
BUS<b>:PARallel:CLEar....2834
BUS<b>:PARallel:DECTable:SHOW....2835
BUS<b>:PARallel:DECTable:COUNt?....2835
BUS<b>:PARallel:DECTable:DATA?....2835

BUS<b>:PARallel:STATe <Enable>

Enables or disables the indicated parallel bus. The threshold settings of the bus take effect for all *active* parallel buses.

Dependencies: At least one digital channel must be enabled for the selected bus, otherwise the command does not work. The bus is enabled automatically if the first digital channel is enabled with `BUS<b>:PARallel:BIT<n>[:STATe]` or `DIGital<m>:DISPlay`.

Suffix:
<b> 1..4
Selects the parallel bus.

Parameters:
<Enable> OFF | ON
*RST: OFF

Manual operation: See "Enable bus" on page 1065

BUS<b>:PARallel:BIT<n>[:STATe] <Assigned>

Assigns the selected digital channel to the indicated bus, displays it, and enables the bus if the bus was disabled. That is, `BUS<b>:PARallel:DISPlay:SHDI` and `BUS<b>:PARallel:STATe` are set to ON automatically.

If another active bus already uses the selected digital channel, the instrument disables the other bus to avoid conflicts.

For parallel bus 1, the `BUS:PAR:BIT[:STATe]` command has the same effect as `DIGital<m>:DISPlay`.

Suffix:

<b> 1..4
Selects the parallel bus.

<n> 0..15
Selects the bit of the bus word. Each bit corresponds to a digital channel.

Parameters:

<Assigned> OFF | ON
*RST: OFF

BUS<b>:PARallel:THReshold<n> <Threshold>

Sets the logical threshold for the indicated channel group.

Alternatively, you can set the threshold with `BUS<b>:PARallel:TECHnology`. For the parallel bus 1, you can also use `DIGital<m>:THReshold`.

See also: `DIGital<m>:THCoupling`

Suffix:

<b> 1..4
Selects the parallel bus.

<n> 1..4
Selects the channel group:
1 = dig. channels 0..3;
2 = dig. channels 4..7
3 = dig. channels 8..11
4 = dig. channels 12..15

Parameters:

<Threshold> Range: -8.0 to 8.0
Increment: 200.0e-12
*RST: 0
Default unit: V

Manual operation: See "Technology, Threshold" on page 1065

BUS<b>:PARallel:TECHnology <Technology>

Selects the threshold voltage for various types of integrated circuits and applies it to all digital channels.

Suffix:
<b> 1..4
Selects the parallel bus.

Parameters:
<Technology> V15 | V25 | V165 | V125 | V09 | VM13 | V38 | V20 | V0 | MANual
V15: TTL
V25: CMOS 5.0 V
V165: CMOS 3.3 V
V125: CMOS 2.5 V
V09: CMOS 1.85 V
VM13: ECL, -1.3 V
V38: PECL
V20: LVPECL
V0: Ground
MANual: Set a user-defined threshold value with `DIGital<m>:THReshold`
*RST: V165

Manual operation: See "Technology, Threshold" on page 1065

BUS<b>:PARallel:THCoupling <LevelCoupling>

Sets the threshold for all digital channels of the selected bus to the same value. Also the hysteresis value is applied to all digital channels.

Tor parallel bus 1, the command `DIGital<m>:THCoupling` has the same effect.

Suffix:
<b> 1..4
The suffix is irrelevant.

Parameters:
<LevelCoupling> OFF | ON
*RST: ON

Manual operation: See "Couple thresholds" on page 1066

BUS<b>:PARallel:HYSTeresis<n> <Hysteresis>

Defines the size of the hysteresis for the channel group to avoid the change of signal states due to noise.

For the parallel bus 1, you can also use `DIGital<m>:HYSTeresis`.

Suffix:
<b> 1..4
Selects the parallel bus.

<n> 1..4
Selects the channel group:
1 = dig. channels 0..3;
2 = dig. channels 4..7
3 = dig. channels 8..11
4 = dig. channels 12..15

Parameters:

<Hysteresis> MAXIMUM | MAXimum | ROBUST | ROBust | NORMAL | NORMal

MAXIMUM = MAXimum
Maximum value that is possible and useful for the signal and its settings

ROBUST = ROBust
Different hysteresis values for falling and rising edges to avoid an undefined state of the trigger system.

NORMAL = NORMal
The instrument sets a value suitable for the signal and its settings.

Manual operation: See "Hysteresis" on page 1067

BUS<b>:PARallel:BIT<n>:DESKew <Deskew>

Sets an individual delay for each digital channel to time-align it with other digital channels. The deskew value compensates delays that are known from the circuit specifics or caused by the different length of cables.

For the parallel bus 1, you can also use `DIGital<m>:DESKew`.

Suffix:

<b> 1..4
Selects the parallel bus.

<n> 0..15
Selects the bit of the bus word. Each bit corresponds to a digital channel.

Parameters:

<Deskew>
Range: -200E-9 to 200E-9
Increment: 200E-12
*RST: 0
Default unit: s

Manual operation: See "Skew" on page 1070

BUS<b>:PARallel:DESoffset <DeskewOffset>

Sets a general delay for all digital channels. The resulting deskew of a digital channel is the sum of this general value and the individual value set with `BUS<b>:PARallel:BIT<n>:DESKew`.

Suffix:
<b> 1..4
Selects the parallel bus.

Parameters:
<DeskewOffset> Range: -200E-9 to 200E-9
Increment: 200E-12
*RST: 0
Default unit: s

Manual operation: See "Global skew" on page 1070

BUS<b>:PARallel:BIT<n>:LABel <Label>

Sets a name for the indicated digital channel. The name is displayed in the diagram.

For the parallel bus 1, you can also use `DIGital<m>:LABel`.

Suffix:
<b> 1..4
Selects the parallel bus.

<n> 0..15
Selects the bit of the bus word. Each bit corresponds to a digital channel.

Parameters:
<Label> String containing the channel name

BUS<b>:PARallel:DATA:FORMat <DataFormat>

Sets the number format for decoded data values on the display for the indicated parallel bus.

It sets also the number representation for remote data transfer with `BUS<b>:PARallel:DATA[:VALues]?`.

Suffix:
<b> 1..4
Selects the parallel bus.

Parameters:
<DataFormat> HEX | OCT | BIN | ASCII | ASCii | SIGN | USIG
For `BUS<b>:PARallel:DISPlay:BTYP COMB`: HEX | OCT | BIN | ASCII | ASCii | SIGN | USIG
For `BUS<b>:PARallel:DISPlay:BTYP ANALog`: SIGN | USIG
*RST: HEX

Manual operation: See "Data format" on page 1068

BUS<b>:PARallel:DISPlay:SHDI <ShwDigSigns>

If enabled, the selected digital signals are shown in the diagram. Each channel is displayed as a logic signal.

See also: `DIGital<m>:DISPlay`

Suffix:
<b> 1..4
Selects the parallel bus.

Parameters:
<ShwDigSigns> OFF | ON
*RST: OFF

Manual operation: See "Show channels" on page 1065

BUS<b>:PARallel:DISPlay:SHBU <ShowBus>

Shows or hides the indicated parallel bus. If enabled, the resulting bus signal and bus values are displayed in the diagram.

Suffix:
<b> 1..4
Selects the parallel bus.

Parameters:
<ShowBus> OFF | ON
*RST: OFF

Manual operation: See "Show bus" on page 1068

BUS<b>:PARallel:DISPlay:BTYP <BusRepres>

Selects the display type of the indicated parallel bus.

Suffix:
<b> 1..4
Selects the parallel bus.

Parameters:
<BusRepres> COMB | ANALog

COMB
Displays the decoded bus signal with bus values.

ANALog
Displays the bus value as amplitude, similar to an analog waveform.

*RST: COMB

Manual operation: See "Bus display" on page 1068

BUS<b>:PARallel:CLON <Clocked>

Defines if the bus is a clocked bus - one of the digital channels serves as clock of the bus.

Suffix:
<b> 1 | 2
Selects the parallel bus. The clocked bus is available on parallel buses 1 and 2.

Parameters:
<Clocked> OFF | ON
*RST: OFF

Manual operation: See "Enable" on page 1068

BUS<b>:PARallel:CLOCk <ClockSource>

Selects the digital channel used as clock of the indicated parallel bus.

Suffix:
<b> 1 | 2
Selects the parallel bus. The clocked bus is available on parallel buses 1 and 2.

Parameters:
<ClockSource> D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15
Clock channel
*RST: D1

Manual operation: See "Clock source" on page 1069

BUS<b>:PARallel:CLSLope <ClockSlope>

Selects the slope of the clock signal at which all digital channels of the bus are analyzed.

Suffix:
<b> 1 | 2
Selects the parallel bus. The clocked bus is available on parallel buses 1 and 2.

Parameters:
<ClockSlope> POSitive | NEGative | EITHer
*RST: POSitive

Manual operation: See "Clock slope" on page 1069

BUS<b>:PARallel:CLEar

Removes all assigned digital channels from the bus

Suffix:
<b> 1..4
Selects the parallel bus.

Usage: Setting only

BUS<b>:PARallel:DECTable:SHOW <ShwDecodeTbl>

Available only if `BUS<b>:PARallel:CLON` is set to `ON`.

If enabled, a results box opens with decoded values of the bus signal and its time. You can query the number of values (`BUS<b>:PARallel:DECTable:COUNt?`) and their data value (`BUS<b>:PARallel:DECTable:DATA?`).

Suffix:
<b> 1..4

Parameters:
<ShwDecodeTbl> OFF | ON
*RST: OFF

Manual operation: See "Show table" on page 1069

BUS<b>:PARallel:DECTable:COUNt?

Returns the number of clock edges in the decode table.

Suffix:
<b> 1..4
Selects the parallel bus.

Return values:
<Data> Number of clock edges

Usage: Query only

Manual operation: See "Show table" on page 1069

BUS<b>:PARallel:DECTable:DATA?

Returns the data of the decoded values of the bus signal and its time.

Suffix:
<b> 1..4
Selects the parallel bus.

Return values:
<Data> List of comma-separated values according to the format setting.

Usage: Query only

Manual operation: See "Show table" on page 1069

27.19.3 Digital resolution

ACQuire:DRESolution?....2836
ACQuire:POINts:DVALue?....2836

ACQuire:DRESolution?

Returns the current digital resolution of the digital channels.

Return values:
<DigRes> Default unit: s

Usage: Query only
Asynchronous command

Manual operation: See "Dig. resolution" on page 1071

ACQuire:POINts:DVALue?

Returns the current digital record length used by each digital channel.

Return values:
<DigReclgth> Range: 1000 to 200E+6
Increment: 2
*RST: 1000
Default unit: pts

Usage: Query only
Asynchronous command

27.19.4 Trigger settings for digital signals and parallel buses

In all `TRIGger<t>:PARallel` commands, the trigger suffix <t> is always 1 and can be omitted. It selects the trigger event: Only the A-trigger is available for triggering on digital signals and parallel buses.

- General commands....2836
- Edge trigger....2839
- Width trigger....2839
- Timeout trigger....2841
- Setup & Hold trigger....2842
- State trigger....2843
- Pattern trigger....2844
- Serial pattern trigger....2848

27.19.4.1 General commands

TRIGger<t>:SOURce[:SELect]....2837
TRIGger<t>:PARallel:TYPE....2838
TRIGger<t>:PARallel:SETHold:CSOurce[:VALue]....2838
TRIGger<t>:PARallel:STATe:CSOurce:VALue....2838

TRIGger<t>:PARallel:SPATtern:CSOurce[:VALue] 2838
TRIGger<t>:PARallel:EDGE:EXPRession[:DEFine] 2838
TRIGger<t>:PARallel:WIDTh:EXPRession[:DEFine] 2838
TRIGger<t>:PARallel:TIMeout:EXPRession[:DEFine] 2838
TRIGger<t>:PARallel:STATe:EXPRession[:DEFine] 2838
TRIGger<t>:PARallel:PATTern:EXPRession[:DEFine] 2839
TRIGger<t>:PARallel:SPATtern:EXPRession[:DEFine] 2839

TRIGger<t>:SOURce[:SELect] <SourceDetailed>

Selects the source of the trigger signal.

Suffix:

<t> 1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger
Available values depend on the selected trigger source. For input channels CHAN1...4, a trigger sequence can be configured.
For all other trigger sources, only suffix 1 is allowed.

Parameters:

<SourceDetailed> CHAN1 | CHANnel1 | CHAN2 | CHANnel2 | CHAN3 | CHANnel3 | CHAN4 | CHANnel4 | EXTernanalog | SBUS | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15 | LOGIC | MSOB1 | MSOB2 | MSOB3 | MSOB4 | Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4 | DIFF1 | DIFF2 | COMMON1 | COMMON2

CHAN1 = CHANnel1, CHAN2 = CHANnel2, CHAN3 = CHANnel3, CHAN4 = CHANnel4
Input channels

EXTernanalog
External analog signal connected to the External Trigger Input. For this source, only the analog edge trigger is available.

SBUS
Serial bus

D0...D15
Digital channels (option R&S RTO6-B1)
See also: Section 27.19.4, "Trigger settings for digital signals and parallel buses", on page 2836

LOGIc
Logic combination of digital channels, used as trigger source (option R&S RTO6-B1)

MSOB1 | MSOB2 | MSOB3 | MSOB4
Parallel bus (option R&S RTO6-B1)

Z1V1 | Z1V2 | Z1V3 | Z1V4 | Z1I1 | Z1I2 | Z1I3 | Z1I4 | Z2V1 | Z2V2 | Z2V3 | Z2V4 | Z2I1 | Z2I2 | Z2I3 | Z2I4
Input channels of R&S RT-ZVCmulti-channel power probe. Only available in the A-trigger with trigger type EDGE.

DIFF1 | DIFF2 | COMMON1 | COMMON2
Differential signals

*RST: CHAN1

Usage: Asynchronous command

Manual operation: See "[Source]" on page 36

TRIGger<t>:PARallel:TYPE <Type>

Selects the trigger type to trigger on digital channels and parallel buses.

To trigger on analog channels or the external trigger input, use `TRIGger<t>:TYPE`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<Type> EDGE | WIDTh | TIMeout | SETHold | STATe | PATTern | SERPattern |

SERPattern = serial pattern trigger

*RST: EDGE

Usage: Asynchronous command

Manual operation: See "Type" on page 1077

TRIGger<t>:PARallel:SETHold:CSOurce[:VALue] <ClockSource>
TRIGger<t>:PARallel:STATe:CSOurce:VALue <ClockSource>
TRIGger<t>:PARallel:SPATtern:CSOurce[:VALue] <ClockSource>

Selects the digital channel of the clock signal.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<ClockSource> D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

*RST: D0

Usage: Asynchronous command

Manual operation: See "Clock source" on page 1082

TRIGger<t>:PARallel:EDGE:EXPRession[:DEFine] <LogicalExpr>
TRIGger<t>:PARallel:WIDTh:EXPRession[:DEFine] <LogicalExpr>
TRIGger<t>:PARallel:TIMeout:EXPRession[:DEFine] <LogicalExpr>
TRIGger<t>:PARallel:STATe:EXPRession[:DEFine] <LogicalExpr>

TRIGger<t>:PARallel:PATTern:EXPRession[:DEFine] <LogicalExpr>
TRIGger<t>:PARallel:SPATtern:EXPRession[:DEFine] <LogicalExpr>

Defines a logical combination of several digital channels as trigger condition if `TRIGger<t>:SOURce[:SELect]` is set to LOGIC.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<LogicalExpr> String with logical expression

Example: `TRIGger:PARallel:EDGE:EXPRession 'D1 and D2'`

Usage: Asynchronous command

Manual operation: See "Logical expression" on page 1081

27.19.4.2 Edge trigger

See also:

- `TRIGger<t>:PARallel:EDGE:EXPRession[:DEFine]` on page 2838

TRIGger<t>:PARallel:EDGE:SLOPe....2839

TRIGger<t>:PARallel:EDGE:SLOPe <Slope>

Defines the edge - the state transition - of the signal to trigger on a single digital channel (a logic bit), or a logical combination of digital channels.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<Slope> POSitive | NEGative | EITHer
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Slope" on page 1078

27.19.4.3 Width trigger

See also:

- `TRIGger<t>:PARallel:WIDTh:EXPRession[:DEFine]` on page 2838

TRIGger<t>:PARallel:WIDTh:POLarity....2840
TRIGger<t>:PARallel:WIDTh:RANGe....2840
TRIGger<t>:PARallel:WIDTh:WIDTh....2840
TRIGger<t>:PARallel:WIDTh:DELTa....2841

TRIGger<t>:PARallel:WIDTh:POLarity <Polarity>

Sets the polarity of a pulse. When triggering on a positive pulse, the trigger event occurs on the high to low transition of the pulse if the timing condition is true. When triggering on a negative pulse, the trigger event occurs on the low to high transition of the pulse if the timing condition is true.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<Polarity> POSitive | NEGative | EITHer
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Polarity" on page 1079

TRIGger<t>:PARallel:WIDTh:RANGe <RangeMode>

Selects how the range of a pulse width is defined:

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<RangeMode> WITHin | OUTSide | SHORter | LONGer

WITHin | OUTSide
Pulses inside or outside a given time range. The time range *Width ± Delta* is defined by `TRIGger<t>:PARallel:WIDTh:WIDTh` and `TRIGger<t>:PARallel:WIDTh:DELTa`.

SHORter | LONGer
Pulses shorter or longer than a given width defined by `TRIGger<t>:PARallel:WIDTh:WIDTh`

*RST: WITHin

Usage: Asynchronous command

Manual operation: See "Range" on page 1079

TRIGger<t>:PARallel:WIDTh:WIDTh <Width>

Sets the limit for the pulse width.

The effect depends on `TRIGger<t>:PARallel:WIDTh:RANGe`.

- For the ranges SHORter and LONGer, the width defines the maximum and minimum pulse width, respectively.
- For the ranges WITHin and OUTSide, the width defines the center of a range which is defined by the limits `TRIGger<t>:PARallel:WIDTh:DELTa`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<Width> Range: 200E-12 to 10000
Increment: 200E-9
*RST: 5E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Width" on page 1080

TRIGger<t>:PARallel:WIDTh:DELTa <WidthDelta>

Defines a range around the given width value. the setting is relevant if `TRIGger<t>:PARallel:WIDTh:RANGe` is set to WITHin or OUTSide. The width is set with `TRIGger<t>:PARallel:WIDTh:WIDTh`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<WidthDelta> Range: 0 to 432
Increment: 600E-12
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "±Delta" on page 1080

27.19.4.4 Timeout trigger

See also:

- `TRIGger<t>:PARallel:TIMeout:EXPRession[:DEFine]` on page 2838

TRIGger<t>:PARallel:TIMeout:RANGe 2841
TRIGger<t>:PARallel:TIMeout:TIME 2842

TRIGger<t>:PARallel:TIMeout:RANGe <TimeoutMode>

Sets the state condition.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<TimeoutMode> HIGH | LOW | EITHer

HIGH
The level of a digital channel stays above the threshold, or the logical expression for LOGic trigger source is true.

LOW
The level of a digital channel stays below the threshold, or the logical expression for LOGic trigger source is false.

EITHer
The signal state remains unchanged.

*RST: HIGH

Usage: Asynchronous command

Manual operation: See "Range" on page 1080

TRIGger<t>:PARallel:TIMeout:TIME <Time>

Defines the time limit for the timeout at which the instrument triggers.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<Time> Range: 100E-12 to 10000
Increment: 100E-9
*RST: 100E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Time" on page 1081

27.19.4.5 Setup & Hold trigger

See also:

- `TRIGger<t>:PARallel:SETHold:CSOurce[:VALue]` on page 2838

TRIGger<t>:PARallel:SETHold:CSOurce:EDGE....2842
TRIGger<t>:PARallel:SETHold:HTIMe....2843
TRIGger<t>:PARallel:SETHold:STIMe....2843

TRIGger<t>:PARallel:SETHold:CSOurce:EDGE <ClockEdge>

Sets the edge of the clock signal. The crossing of the clock edge and the logical threshold defines the time reference point for the setup and hold time measurement.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<ClockEdge> POSitive | NEGative | EITHer
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Clock edge" on page 1082

TRIGger<t>:PARallel:SETHold:HTIMe <HoldTime>

Sets the minimum time *after* the clock edge while data should be stable and not change its state.

See also: "Hold time" on page 1082

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<HoldTime> Range: -99.8E-9 to 100E-9
Increment: 1E-9
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "Hold time" on page 1082

TRIGger<t>:PARallel:SETHold:STIMe <SetupTime>

Sets the minimum time *before* the clock edge while data should be stable and not change its state.

See also: "Setup time" on page 1082

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<SetupTime> Range: -99.8E-9 to 100E-9
Increment: 1E-9
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "Setup time" on page 1082

27.19.4.6 State trigger

See also:

- `TRIGger<t>:PARallel:STATe:CSOurce:VALue` on page 2838

- TRIGger<t>:PARallel:STATe:EXPRession[:DEFine] on page 2838

TRIGger<t>:PARallel:STATe:CSOurce:EDGE....2844
TRIGger<t>:PARallel:STATe:BIT<n>....2844

TRIGger<t>:PARallel:STATe:CSOurce:EDGE <Slope>

Sets the edge of the clock signal. The crossing of the clock edge and the logical threshold defines the time at which the logical states and the bus value are analyzed.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<Slope> POSitive | NEGative | EITHer
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Clock edge" on page 1083

TRIGger<t>:PARallel:STATe:BIT<n> <Bit>

Sets the required state for each digital channel that is used in the bus.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

<n> 0..15

Parameters:
<Bit> HIGH | LOW | DONTCARE | DONTcare
Bit value: 1 (HIGH), 0 (LOW), or X (DONTCARE = DONTcare)

Usage: Asynchronous command

Manual operation: See "Channel states" on page 1083

27.19.4.7 Pattern trigger

TRIGger<t>:PARallel:PATTern:BIT<n> <Bit>

Sets the required state for each digital channel that is used in the bus.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

<n> 0..15

Parameters:
<Bit> HIGH | LOW | DONTCARE | DONTcare
Bit value: 1 (HIGH), 0 (LOW), or X (DONTCARE = DONTcare)

Usage: Asynchronous command

Manual operation: See "Channel states" on page 1084

TRIGger<t>:PARallel:PATTern:MODE <Mode>

Sets the mode of the timing condition.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<Mode> OFF | TIMeout | WIDTh

OFF
No timing condition, only the logical pattern condition is relevant.

TIMeout
Defines a minimum time qualification to avoid triggering on unstable or transitional conditions. Use `TRIGger<t>:PARallel:PATTern:TIMeout:MODE` and `TRIGger<t>:PARallel:PATTern:TIMeout[:TIME]` to specify the timeout.

WIDTh
Sets a pulse width as timing condition. The pulse starts when the pattern comes true, and the trigger event occurs when the pattern comes false during the specified time limit. Use `TRIGger<t>:PARallel:PATTern:WIDTh:RANGe`, `TRIGger<t>:PARallel:PATTern:WIDTh[:WIDTh]`, and `TRIGger<t>:PARallel:PATTern:WIDTh:DELTa` to specify the width.

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Mode: Off, Timeout, Width" on page 1085

TRIGger<t>:PARallel:PATTern:TIMeout:MODE <TimeoutMode>

Sets the state condition for the timeout qualification if `TRIGger<t>:PARallel:PATTern:MODE` is set to TIMeout. To set the time limit, use `TRIGger<t>:PARallel:PATTern:TIMeout[:TIME]`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<TimeoutMode> HIGH | LOW | EITHer

HIGH: The pattern stays true for the specified time.
LOW: The pattern stays false for the specified time.
EITHER: The pattern remains unchanged for the specified time.

*RST: HIGH

Usage: Asynchronous command

Manual operation: See "Range" on page 1085

TRIGger<t>:PARallel:PATTern:TIMeout[:TIME] <Time>

Defines the time limit for the timeout at which the instrument triggers.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<Time> Range: 100E-12 to 10000
Increment: 100E-9
*RST: 100E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Time" on page 1085

TRIGger<t>:PARallel:PATTern:WIDTh:RANGe <WidthRangeMode>

Selects how the range of a pulse width is defined if `TRIGger<t>:PARallel:PATTern:MODE` is set to WIDTh.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<WidthRangeMode> WITHin | OUTSide | SHORter | LONGer

WITHin
Triggers when the pattern comes false inside a given time range. The time limit is defined by `TRIGger<t>:PARallel:PATTern:WIDTh[:WIDTh]` and `TRIGger<t>:PARallel:PATTern:WIDTh:DELTa` (*Width ± Delta*).

OUTSide
Triggers when the pattern comes false before or after the given time range. The time limit definition is the same as for WITHin range.

SHORter | LONGer
Triggers when the pattern comes false before or after the given width has expired. Width is set with `TRIGger<t>:PARallel:PATTern:WIDTh[:WIDTh]`.

*RST: WITHin

Usage: Asynchronous command

Manual operation: See "Range" on page 1086

TRIGger<t>:PARallel:PATTern:WIDTh[:WIDTh] <Width>

The effect depend on the setting of the `TRIGger<t>:PARallel:PATTern:WIDTh:RANGe`command.

For the ranges SHOrter and LONGer, the width defines the maximum and minimum time limit, respectively.

For the ranges WITHin and OUTSide, the width defines the center of a range which is defined by the limits "±Delta".

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<Width>
Range: 100E-12 to 10000
Increment: 100E-9
*RST: 5E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Width" on page 1086

TRIGger<t>:PARallel:PATTern:WIDTh:DELTa <WidthDelta>

Defines a range around the width value set with `TRIGger<t>:PARallel:PATTern:WIDTh[:WIDTh]`.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<WidthDelta>
Range: 0 to 432
Increment: 500E-12
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "±Delta" on page 1086

27.19.4.8 Serial pattern trigger

See also:

- TRIGger<t>:PARallel:SPATtern:CSOurce[:VALue] on page 2838
- TRIGger<t>:PARallel:SPATtern:EXPRession[:DEFine] on page 2839

TRIGger<t>:PARallel:SPATtern:CSOurce:EDGE <ClockEdge>

Sets the edge of the clock signal. The bit value is determined at the crossing of the clock edge and the logical threshold.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<ClockEdge> POSitive | NEGative | EITHer
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Clock edge" on page 1087

TRIGger<t>:PARallel:SPATtern:PATTern <Pattern>

Defines the serial bit string on which to trigger.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<Pattern> Numeric or string pattern, see Section 27.4.6, "Bit pattern parameter", on page 1453. The bit value X (don't care) is not allowed.

Usage: Asynchronous command

Manual operation: See "Pattern" on page 1087

27.19.5 MSO data

To export data of digital channels and parallel buses to file, use the following commands:

- EXPort:WAVeform:SOURce on page 1863
- EXPort:WAVeform:NAME on page 1865
- EXPort:WAVeform:SAVE on page 1866

The remote data transfer from the instrument to the controlling computer is performed using the following commands:

DIGital<m>:DATA:HEADer? 2849
DIGital<m>:DATA[:VALues]? 2849
BUS<b>:PARallel:DATA:FORMat 2849
BUS<b>:PARallel:DATA:HEADer? 2850
BUS<b>:PARallel:DATA[:VALues]? 2850

DIGital<m>:DATA:HEADer?

Returns the header data of a digital channel.

Suffix:
<m> 0..15
Index of the digital channel

Return values:
<Start> 1. header value: acquisition time before trigger, time of the first sample in s

<Stop> 2. header value: acquisition time after trigger, time of the last sample in s

<RecordLength> 3. header value: record length of the waveform in samples

<ValuesPerSample> 4. header value: Number of values per sample interval. For digital data the result is 1.

Example:
```
DIG3:DATA:HEAD?
-1E-07,9.980000000000001E-08,1000,1
```
The start time of the data is -1E-07 = -100 ns, and the end time of the data is 9.980000000000001E-08= 99.8 ns. The data stream has 1000 values with one value per sample.

Usage: Query only

DIGital<m>:DATA[:VALues]?

Returns the data of the indicated digital channel for transmission from the instrument to the controlling computer. The data can be used in MATLAB, for example.

Suffix:
<m> 0..15
Selects the digital channel.

Return values:
<Data> Comma-separated list of data (0 and 1)

Usage: Query only

BUS<b>:PARallel:DATA:FORMat <DataFormat>

Sets the number format for decoded data values on the display for the indicated parallel bus.

It sets also the number representation for remote data transfer with `BUS<b>:PARallel:DATA[:VALues]?`.

Suffix:
<b> 1..4
Selects the parallel bus.

Parameters:
<DataFormat> HEX | OCT | BIN | ASCII | ASCii | SIGN | USIG
For `BUS<b>:PARallel:DISPlay:BTYP COMB`: HEX | OCT | BIN | ASCII | ASCii | SIGN | USIG
For `BUS<b>:PARallel:DISPlay:BTYP ANALog`: SIGN | USIG
*RST: HEX

Manual operation: See "Data format" on page 1068

BUS<b>:PARallel:DATA:HEADer?

Returns the header data of the indicated bus.

See also: `DIGital<m>:DATA:HEADer?`.

Suffix:
<b> 1..4
Selects the parallel bus.

Return values:
<Start> 1. header value: acquisition time before trigger, time of the first sample in s

<Stop> 2. header value: acquisition time after trigger, time of the last sample in s

<RecordLength> 3. header value: record length of the waveform in samples

<ValuesPerSample> 4. header value: Number of values per sample interval. For digital data the result is 1.

Usage: Query only

BUS<b>:PARallel:DATA[:VALues]?

Returns the data of the indicated parallel bus.

Requirements:

- `BUS<b>:PARallel:STATe` is set to `ON`.
- `BUS<b>:PARallel:DISPlay:SHBU` is set to `ON`.
- Number format is set with `BUS<b>:PARallel:DATA:FORMat`.

Suffix:
<b> 1..4
Selects the parallel bus.

Return values:
<Data> List of comma-separated values according to the format setting.

Example:
```
BUS:PAR:STAT ON
BUS:PAR:DISP:SHBU ON
BUS:PAR:DISP:BTYP COMB
BUS:PAR:DATA:FORMat HEX
BUS:PAR:DATA:VAL?
```

Usage: Query only

27.20 Waveform generator (option R&S RTO6-B6)

27.20.1 Waveform generator setup

27.20.1.1 General

WGENerator<wg>:ACOPy 2851
WGENerator<wg>[:ENABle] 2851
WGENerator<wg>:SOURce 2852
WGENerator<wg>:PRESet 2852
GENType:STATus[:OPERation]? 2852

WGENerator<wg>:ACOPy

Copies all settings from Gen1/Gen2 and applies them to Gen2/Gen1.

Suffix:
<wg> 1..2

Usage: Event

Manual operation: See "Copy settings from Gen1/Gen2" on page 1094

WGENerator<wg>[:ENABle] <State>

Enables the waveform generator and outputs the waveform.

Suffix:
<wg> 1..2

Parameters:
<State> OFF | ON

Manual operation: See "Enable" on page 1093

WGENerator<wg>:SOURce <OperationMode>

Sets the operation mode for the the waveform generator.

Suffix:
<wg> 1..2

Parameters:
<OperationMode> FUNCgen | MODulation | SWEep | ARBGenerator
*RST: FUNCgen

Manual operation: See "Operation mode" on page 1093

WGENerator<wg>:PRESet

Sets the parameters of the waveform generator to their default values.

Suffix:
<wg> 1..2

Usage: Setting only

Manual operation: See "Preset Gen1/Gen2/Patt Gen" on page 1094

GENType:STATus[:OPERation]?

Returns information on the current actions of the waveform and pattern generators.

Return values:
<Status> Register value with the following bits, see table.

Usage: Query only

Bit number	Bit name	Description
0	ALIGnment	The bit is set while the generators run an alignment.
1	SLFTest	The bit is set while the generators run a self-test.
2 3 4	GRUN1 (waveform generator Gen1) GRUN2 (waveform generator Gen2) GRUN3 (pattern generator PattGen)	The bit is set as long as the corresponding generator is running (not idle).
5 6 7	WTR1 (waveform generator Gen1) WTR2 (waveform generator Gen2) WTR3 (pattern generator PattGen)	The bit is set as long as the corresponding generator is waiting for a trigger event.
8 9 10	TRIG1 (waveform generator Gen1) TRIG2 (waveform generator Gen2) TRIG3 (pattern generator PattGen)	The bit is set when the corresponding generator has triggered.
11 12	OVER1 (waveform generator Gen1) OVER2 (waveform generator Gen2)	The bit is set when an overload occurred on the corresponding waveform generator.
13, 14, 15		Not used

27.20.1.2 Function generator

WGENerator<wg>:FUNCtion[:SELect] 2853
WGENerator<wg>:FREQuency 2853
WGENerator<wg>:PERiod 2853
WGENerator<wg>:FUNCtion:PULSe[:WIDTh] 2854
WGENerator<wg>:FUNCtion:RAMP[:SYMMetry] 2854
WGENerator<wg>:FUNCtion[:SQUare]:DCYCle 2854

WGENerator<wg>:FUNCtion[:SELect] <FunctionType>

Sets the type of waveform to be generated for the function generator.

Suffix:
<wg> 1..2

Parameters:
<FunctionType> SINusoid | SQUare | RAMP | DC | PULSe | SINC | CARDiac | GAUSs | LORNtz | EXPRise | EXPFall

SINC: Cardial sine

*RST: SINusoid

Manual operation: See "Function type" on page 1094

WGENerator<wg>:FREQuency <Frequency>

Sets the frequency of the waveform. The available frequency range depends on the selected function type, see Table 16-1.

Suffix:
<wg> 1..2

Parameters:
<Frequency> Range: 1E-3 to 100E+6
Increment: 1
*RST: 1E+6
Default unit: Hz

Manual operation: See "Frequency" on page 1098

WGENerator<wg>:PERiod <Period>

Sets the period of the waveform. The available period range depends on the selected function type.

Suffix:
<wg> 1..2

Parameters:

<Period>
Range: 8E-9 to 1000
Increment: 1
*RST: 1E-6
Default unit: s

Manual operation: See "Period" on page 1099

WGENerator<wg>:FUNCtion:PULSe[:WIDTh] <PulseWidth>

Sets the pulse duration for a pulse waveform.

Suffix:

<wg> 1..2

Parameters:

<PulseWidth>
Range: 16.5E-9 to 1000, actual range depends on the selected frequency
Increment: 1
*RST: 500E-9
Default unit: s

Manual operation: See "Pulse width" on page 1099

WGENerator<wg>:FUNCtion:RAMP[:SYMMetry] <RampSymmetry>

Sets the symmetry for a ramp waveform.

Suffix:

<wg> 1..2

Parameters:

<RampSymmetry>
Range: 0 to 100
Increment: 1
*RST: 50
Default unit: %

Manual operation: See "Symmetry" on page 1099

WGENerator<wg>:FUNCtion[:SQUare]:DCYCle <SquareDutyCycle>

Sets the duty cycle for the generated square waveform.

Suffix:

<wg> 1..2

Parameters:

<SquareDutyCycle>
Range: 0.01 to 99.99 at minimum frequency, actual range depends on the selected frequency
Increment: 1
*RST: 50
Default unit: %

Manual operation: See "Duty cycle" on page 1099

27.20.1.3 Modulation

WGENerator<wg>:MODulation:TYPE 2855
WGENerator<wg>:MODulation:AM:DCYCle 2855
WGENerator<wg>:MODulation:AM:DEPTh 2856
WGENerator<wg>:MODulation:AM:FREQuency 2856
WGENerator<wg>:MODulation:AM:SYMMetry 2856
WGENerator<wg>:MODulation:CARRier:FREQuency 2857
WGENerator<wg>:MODulation:CARRier:PERiod 2857
WGENerator<wg>:MODulation:AM[:FUNCtion] 2857
WGENerator<wg>:MODulation:FM:DCYCle 2857
WGENerator<wg>:MODulation:FM:DEViation 2858
WGENerator<wg>:MODulation:FM:FREQuency 2858
WGENerator<wg>:MODulation:FM:SYMMetry 2858
WGENerator<wg>:MODulation:FM[:FUNCtion] 2859
WGENerator<wg>:MODulation:FSK:FONE 2859
WGENerator<wg>:MODulation:FSK:FTWO 2859
WGENerator<wg>:MODulation:FSK[:RATE] 2860
WGENerator<wg>:MODulation:PWM:DCYCle 2860
WGENerator<wg>:MODulation:PWM:DEPTh 2860
WGENerator<wg>:MODulation:PWM:FREQuency 2860
WGENerator<wg>:MODulation:PWM:SYMMetry 2861
WGENerator<wg>:MODulation:PWM[:FUNCtion] 2861

WGENerator<wg>:MODulation:TYPE <ModulationType>

Sets the modulation type.

Suffix:
<wg> 1..2

Parameters:
<ModulationType> AM | FM | PWM | FSK
*RST: AM

Manual operation: See "Modulation type" on page 1100

WGENerator<wg>:MODulation:AM:DCYCle <SquareDutyCycle>

Sets the duty cycle of a square waveform for amplitude modulation, if `WGENerator<wg>:MODulation:TYPE` is set to `AM`.

Suffix:
<wg> 1..2

Parameters:

<SquareDutyCycle>
Range: 10 to 90
Increment: 1
*RST: 50
Default unit: %

Manual operation: See "Duty cycle" on page 1102

WGENerator<wg>:MODulation:AM:DEPTh <Depth>

Sets the amplitude modulation depth.

Suffix:

<wg> 1..2

Parameters:

<Depth>
Range: 0 to 100
Increment: 1
*RST: 50
Default unit: %

Manual operation: See "Modulation depth" on page 1101

WGENerator<wg>:MODulation:AM:FREQuency <Frequency>

Sets the frequency of the modulation waveform for amplitude modulation, if `WGENerator<wg>:MODulation:TYPE` is set to `AM`.

Suffix:

<wg> 1..2

Parameters:

<Frequency>
Range: 1E-3 to 1E+6
Increment: 1
*RST: 1000
Default unit: Hz

Manual operation: See "Modulation freq" on page 1101

WGENerator<wg>:MODulation:AM:SYMMetry <RampSymmetry>

Sets the symmetry, the percentage of time the ramp modulation waveform is rising, for amplitude modulation, if `WGENerator<wg>:MODulation:TYPE` is set to `AM`.

Suffix:

<wg> 1..2

Parameters:

<RampSymmetry>
Range: 0 to 100
Increment: 1
*RST: 50
Default unit: %

Manual operation: See "Symmetry" on page 1102

WGENerator<wg>:MODulation:CARRier:FREQuency <CarrierFreq>

Sets the frequency of the carrier signal for a modulation waveform.

Suffix:
<wg> 1..2

Parameters:
<CarrierFreq>
Range: 1E-3 to 100E+6
Increment: 10
*RST: 1E+6
Default unit: Hz

Manual operation: See "Carrier frequency" on page 1100

WGENerator<wg>:MODulation:CARRier:PERiod <CarrierPeriod>

Sets the period of the carrier signal for a modulation waveform.

Suffix:
<wg> 1..2

Parameters:
<CarrierPeriod>
Range: 8E-9 to 1000
Increment: 10
*RST: 1E-6
Default unit: s

Manual operation: See "Carrier period" on page 1101

WGENerator<wg>:MODulation:AM[:FUNCtion] <SignalType>

Sets the type of the modulation signal for the amplitude modulation, if `WGENerator<wg>:MODulation:TYPE` is set to `AM`.

Suffix:
<wg> 1..2

Parameters:
<SignalType> SINusoid | SQUare | RAMP
*RST: SINusoid

Manual operation: See "Modulation signal" on page 1101

WGENerator<wg>:MODulation:FM:DCYCle <SquareDutyCycle>

Sets the duty cycle of a square waveform for frequency modulation, if `WGENerator<wg>:MODulation:TYPE` is set to `FM`.

Suffix:
<wg> 1..2

Parameters:

<SquareDutyCycle>
Range: 10 to 90
Increment: 1
*RST: 50
Default unit: %

Manual operation: See "Duty cycle" on page 1105

WGENerator<wg>:MODulation:FM:DEViation <Deviation>

Sets the frequency modulation deviation.

Suffix:

<wg> 1..2

Parameters:

<Deviation>
Range: 1E-3 to 10E+6
Increment: 1
*RST: 1000
Default unit: Hz

Manual operation: See "Freq deviation" on page 1104

WGENerator<wg>:MODulation:FM:FREQuency <Frequency>

Sets the frequency of the modulation waveform for frequency modulation, if `WGENerator<wg>:MODulation:TYPE` is set to `FM`.

Suffix:

<wg> 1..2

Parameters:

<Frequency>
Range: 1E-3 to 1E+6
Increment: 1
*RST: 1000
Default unit: Hz

Manual operation: See "Modulation freq" on page 1104

WGENerator<wg>:MODulation:FM:SYMMetry <RampSymmetry>

Sets the symmetry, the percentage of time the ramp modulation waveform is rising, for frequency modulation, if `WGENerator<wg>:MODulation:TYPE` is set to `FM`.

Suffix:

<wg> 1..2

Parameters:

<RampSymmetry>
Range: 0 to 100
Increment: 1
*RST: 50
Default unit: %

Manual operation: See "Symmetry" on page 1104

WGENerator<wg>:MODulation:FM[:FUNCtion] <SignalType>

Sets the type of the modulation signal for the frequency modulation, if `WGENerator<wg>:MODulation:TYPE` is set to `FM`.

Suffix:
<wg> 1..2

Parameters:
<SignalType> SINusoid | SQUare | RAMP
*RST: SINusoid

Manual operation: See "Modulation signal" on page 1104

WGENerator<wg>:MODulation:FSK:FONE <Frequency1>

Sets the frequency of the carrier waveform, if `WGENerator<wg>:MODulation:TYPE` is set to `FSK`.

Suffix:
<wg> 1..2

Parameters:
<Frequency1> Range: 1E-3 to 100E+6
Increment: 1
*RST: 1E+6
Default unit: Hz

Manual operation: See "Frequency 1" on page 1105

WGENerator<wg>:MODulation:FSK:FTWO <Frequency2>

Sets the frequency of the modulated waveform, if `WGENerator<wg>:MODulation:TYPE` is set to `FSK`.

Suffix:
<wg> 1..2

Parameters:
<Frequency2> Range: 1E-3 to 100E+6
Increment: 1
*RST: 1000
Default unit: Hz

Manual operation: See "Frequency 2" on page 1105

WGENerator<wg>:MODulation:FSK[:RATE] <Rate>

Sets the hop rate, the time before a switch from the carrier frequency set with `WGENerator<wg>:MODulation:FSK:FONE` and the modulation frequency set with `WGENerator<wg>:MODulation:FSK:FTWO`.

Suffix:
<wg> 1..2

Parameters:
<Rate>
Range: 1E-3 to 1E+6
Increment: 1
*RST: 1000
Default unit: Hz

Manual operation: See "Hop rate" on page 1105

WGENerator<wg>:MODulation:PWM:DCYCle <SquareDutyCycle>

Sets the duty cycle of a square waveform for pulse width modulation, if `WGENerator<wg>:MODulation:TYPE` is set to `PWM`.

Suffix:
<wg> 1..2

Parameters:
<SquareDutyCycle>
Range: 10 to 90
Increment: 1
*RST: 50
Default unit: %

Manual operation: See "Duty cycle" on page 1103

WGENerator<wg>:MODulation:PWM:DEPTh <Depth>

Sets the modulation depth for pulse width modulation.

Suffix:
<wg> 1..2

Parameters:
<Depth>
Range: 0 to 100
Increment: 1
*RST: 50
Default unit: %

Manual operation: See "Modulation depth" on page 1103

WGENerator<wg>:MODulation:PWM:FREQuency <Frequency>

Sets the frequency of the modulation waveform for pulse width modulation, if `WGENerator<wg>:MODulation:TYPE` is set to `PWM`.

Suffix:
<wg> 1..2

Parameters:
<Frequency> Range: 1E-3 to 1E+6
Increment: 1
*RST: 1000
Default unit: Hz

Manual operation: See "Modulation freq" on page 1103

WGENerator<wg>:MODulation:PWM:SYMMetry <RampSymmetry>

Sets the symmetry, the percentage of time the ramp modulation waveform is rising, for pulse width modulation, if `WGENerator<wg>:MODulation:TYPE` is set to `PWM`.

Suffix:
<wg> 1..2

Parameters:
<RampSymmetry> Range: 0 to 100
Increment: 1
*RST: 50
Default unit: %

Manual operation: See "Symmetry" on page 1103

WGENerator<wg>:MODulation:PWM[:FUNCtion] <SignalType>

Sets the type of the modulation signal for the pulse width modulation, if `WGENerator<wg>:MODulation:TYPE` is set to `PWM`.

Suffix:
<wg> 1..2

Parameters:
<SignalType> SINusoid | SQUare | RAMP
*RST: SINusoid

Manual operation: See "Modulation signal" on page 1102

27.20.1.4 Sweep

WGENerator<wg>:SWEep:FSTart 2861
WGENerator<wg>:SWEep:TIME 2862
WGENerator<wg>:SWEep[:FEND] 2862

WGENerator<wg>:SWEep:FSTart <StartFrequency>

Sets the start frequency of the sweep range.

Suffix:
<wg> 1..2

Parameters:

<StartFrequency>
Range: 1E-3 to 100E+6
Increment: 1
*RST: 1000
Default unit: Hz

Manual operation: See "Start frequency" on page 1106

WGENerator<wg>:SWEep:TIME <Time>

Sets the duration of the sweep.

Suffix:

<wg> 1..2

Parameters:

<Time>
Range: 1E-3 to 500
Increment: 1
*RST: 1E-3
Default unit: s

Manual operation: See "Sweep time" on page 1106

WGENerator<wg>:SWEep[:FEND] <StopFrequency>

Sets the stop frequency of the sweep range.

Suffix:

<wg> 1..2

Parameters:

<StopFrequency>
Range: 1E-3 to 100E+6
Increment: 1
*RST: 1E+6
Default unit: Hz

Manual operation: See "Stop freuqency" on page 1106

27.20.1.5 ARB

WGENerator<wg>:ARBGen:COPY 2863
WGENerator<wg>:ARBGen:MULTichannel:IMPort 2863
WGENerator<wg>:ARBGen:MULTichannel:NAME 2863
WGENerator<wg>:ARBGen:MULTichannel:OPEN 2863
WGENerator<wg>:ARBGen:NAME 2864
WGENerator<wg>:ARBGen:OPEN 2864
WGENerator<wg>:ARBGen:RUNMode 2864
WGENerator<wg>:ARBGen:SAMPles? 2865
WGENerator<wg>:ARBGen:SELect 2865
WGENerator<wg>:ARBGen:SRATe 2865
WGENerator<wg>:ARBGen[:SOURce] 2865
WGENerator<wg>:ARBGen:RUNSingle 2866

WGENerator<wg>:ARBGen:COPY

Loads the waveform from the selected signal source (`WGENerator<wg>:ARBGen:SELect`).

Suffix:
<wg> 1..2

Usage: Event

Manual operation: See "Load" on page 1111

WGENerator<wg>:ARBGen:MULTichannel:IMPort <SavedWfmSrc>

Assigns a waveform from the multichannel file to the arbitrary waveform generator.

Suffix:
<wg> 1..2

Parameters:
<SavedWfmSrc> WFM1 | WFM2 | WFM3 | WFM4
*RST: WFM1

Example:
```
WGENerator1:ARBGen:MULTichannel:NAME
ArbMultichannelCurve_2017-02-16_01.bin
WGENerator1:ARBGen:MULTichannel:IMPort WF1
WGENerator1:ARBGen:MULTichannel:OPEN
```

Manual operation: See "Select waveform" on page 1110

WGENerator<wg>:ARBGen:MULTichannel:NAME <FilePath>

Defines the path and the multichannel arbitrary waveform file to be imported. If not path is given, the default path `C:\Users\Public\Public Documents\Rohde-Schwarz\RTx\RefWaveforms` is used.

Suffix:
<wg> 1..2

Parameters:
<FilePath>

Example: See `WGENerator<wg>:ARBGen:MULTichannel:IMPort` on page 2863.

Manual operation: See "Select waveform" on page 1110

WGENerator<wg>:ARBGen:MULTichannel:OPEN

Loads the arbitrary waveform.

Suffix:
<wg> 1..2

Example: See WGENerator<wg>:ARBGen:MULTichannel:IMPort on page 2863.

Usage: Event

Manual operation: See "Select waveform" on page 1110

WGENerator<wg>:ARBGen:NAME <FilePath>

Sets the file path and the file for an arbitrary waveform, if WGENerator<wg>:ARBGen[:SOURce] on page 2865 is set to ARBitrary.

If not path is given, the default path C:\Users\Public\Public Documents\Rohde-Schwarz\RTx\RefWaveforms is used.

This command is only relevant for files with one waveform defined. For multichannel arbitrary waveform files, see WGENerator<wg>:ARBGen:MULTichannel:OPEN.

Suffix:
<wg> 1..2

Parameters:
<FilePath>

Manual operation: See "Load arbitrary waveform" on page 1109

WGENerator<wg>:ARBGen:OPEN

Loads the arbitrary waveform, that is selected with the WGENerator<wg>:ARBGen:NAME command.

This command is only relevant for files with one waveform defined. For multichannel arbitrary waveform files, see WGENerator<wg>:ARBGen:MULTichannel:OPEN.

Suffix:
<wg> 1..2

Usage: Setting only

Manual operation: See "Load arbitrary waveform" on page 1109

WGENerator<wg>:ARBGen:RUNMode <RunMode>

Sets the duration for which the signal of the arbitrary generator will be output after the trigger event.

Suffix:
<wg> 1..2

Parameters:
<RunMode> SINGle | CONTinuous
*RST: CONTinuous

Manual operation: See "Run mode" on page 1108

WGENerator<wg>:ARBGen:SAMPles?

Displays the number of samples for the arbitrary waveform.

Suffix:
<wg> 1..2

Return values:
<NumSamples> Range: 0 to 128E+6
Increment: 10
*RST: 0
Default unit: pts

Usage: Query only

Manual operation: See "Samples" on page 1109

WGENerator<wg>:ARBGen:SELect <ScopeSignSrc>

Selects the oscilloscope source, from which the arbitrary signal is loaded, if `WGENerator<wg>:ARBGen[:SOURce]` is set to `SCOPe`.

Suffix:
<wg> 1..2

Parameters:
<ScopeSignSrc> NONE | C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | R1 | R2 | R3 | R4 | DIFF1 | DIFF2 | COMMON1 | COMMON2
*RST: NONE

Manual operation: See "Signal source" on page 1110

WGENerator<wg>:ARBGen:SRATe <SampleRate>

Sets the sample rate for the arbitrary waveform.

Suffix:
<wg> 1..2

Parameters:
<SampleRate> Range: 1 to 250E+6
Increment: 10
*RST: 1E+6
Default unit: Sa/s

Manual operation: See "Sample rate" on page 1109

WGENerator<wg>:ARBGen[:SOURce] <WaveformSource>

Sets the arbitrary waveform source.

Suffix:
<wg> 1..2

Parameters:
<WaveformSource> ARBitrary | SCOPe

ARBitrary
Enables you to load an existing arbitrary file.

SCOPe
Enables you to load a scope waveform.

*RST: ARBitrary

Manual operation: See "Waveform source" on page 1108

WGENerator<wg>:ARBGen:RUNSingle

Executes a single period of the arbitrary signal generator, for `WGENerator<wg>:ARBGen:RUNModeSINGle`.

Suffix:
<wg> 1..2

Usage: Event

Manual operation: See "Run single" on page 1109

27.20.2 Pattern generator setup

PGENerator:BITRate....2866
PGENerator:ENABle....2866
PGENerator:FILE:OPEN....2867
PGENerator:FILE[:NAME]....2867
PGENerator:HLEVel....2867
PGENerator:PRESet....2867
PGENerator:RUNMode....2867
PGENerator:RUNSingle....2868

PGENerator:BITRate <BitRate>

Sets the number of transmitted bits per second for the pattern generator.

Parameters:
<BitRate> Range: 1 to 40E+6
Increment: 10
*RST: 1E+6
Default unit: bps

Manual operation: See "Bit rate" on page 1113

PGENerator:ENABle <State>

Enables the pattern generator and outputs the waveform.

Parameters:
<State> OFF | ON

Manual operation: See "Enable" on page 1093

PGENerator:FILE:OPEN

Loads the specified pattern file to the instrument.

Usage: Setting only

Manual operation: See "Load pattern file" on page 1113

PGENerator:FILE[:NAME] <FilePath>

Specifies a file path to open a pattern generator file.

Parameters:
<FilePath> String with the name of the file.

Manual operation: See "Load pattern file" on page 1113

PGENerator:HLEVel <HighLevel>

Sets the high level of the pattern generator signal.

Parameters:
<HighLevel>
Range: 1.2 to 5
Increment: 0.1
*RST: 1.2
Default unit: V

PGENerator:PRESet

Sets the default pattern generator settings.

Usage: Setting only

Manual operation: See "Preset Gen1/Gen2/Patt Gen" on page 1094

PGENerator:RUNMode <RunMode>

Sets the duration for which the signal of the pattern generator will be output after the trigger event.

Parameters:
<RunMode> SINGle | CONTinuous
*RST: CONTinuous

Manual operation: See "Run mode" on page 1113

PGENerator:RUNSingle

Executes a single period of the pattern generator, for `PGENerator:RUNModeSINGle`.

Usage: Event

Manual operation: See "Run single" on page 1113

27.20.3 Output setup

WGENerator<wg>:OUTPut[:LOAD] 2868
WGENerator<wg>:VOLTage[:VPP] 2868
WGENerator<wg>:VOLTage:DCLevel 2869
WGENerator<wg>:VOLTage:HIGH 2869
WGENerator<wg>:VOLTage:INVersion 2869
WGENerator<wg>:VOLTage:LOW 2869
WGENerator<wg>:VOLTage:OFFSet 2870

WGENerator<wg>:OUTPut[:LOAD] <Load>

Sets the load of the DUT at its connection.

Suffix:
<wg> 1..2

Parameters:
<Load> FIFTy | HIZ
HIZ: high input impedance
*RST: HIZ

Manual operation: See "User Load" on page 1115

WGENerator<wg>:VOLTage[:VPP] <Amplitude>

Sets the amplitude, peak to peak voltage, of the output waveform. This is defined as the voltage difference between the maximum (`WGENerator<wg>:VOLTage:HIGH`) and the minimum (`WGENerator<wg>:VOLTage:LOW`) voltage levels.

The value is set for the currently selected load (`WGENerator<wg>:OUTPut[:LOAD]`). If the load is changed, the value of the amplitude is adapted to this new setting.

Suffix:
<wg> 1..2

Parameters:
<Amplitude> Range: 0.01 to 12
Increment: 0.1
*RST: 1
Default unit: V

Manual operation: See "Amplitude" on page 1115

WGENerator<wg>:VOLTage:DCLevel <DCLevel>

Sets the DC level of the generated DC signal.

Suffix:
<wg> 1..2

Parameters:
<DCLevel> Range: -5.995 to 5.995
Increment: 0.1
*RST: 0
Default unit: V

Manual operation: See "DC Level" on page 1115

WGENerator<wg>:VOLTage:HIGH <High>

Sets the high signal level of the output waveform.

Suffix:
<wg> 1..2

Parameters:
<High> Range: -5.99 to 6
Increment: 0.1
*RST: 0.5
Default unit: V

Manual operation: See "High" on page 1115

WGENerator<wg>:VOLTage:INVersion <Inversion>

Enables inversion, which swaps the two poles of the waveform.

Suffix:
<wg> 1..2

Parameters:
<Inversion> OFF | ON
*RST: OFF

Manual operation: See "Invert" on page 1115

WGENerator<wg>:VOLTage:LOW <Low>

Sets the low signal level of the output waveform.

Suffix:
<wg> 1..2

Parameters:

<Low>
Range: -6 to 5.99
Increment: 0.1
*RST: -0.5
Default unit: V

Manual operation: See "Low" on page 1115

WGENerator<wg>:VOLTage:OFFSet <Offset>

Sets a voltage offset.

Suffix:

<wg> 1..2

Parameters:

<Offset>
Range: -5.995 to 5.995
Increment: 0.1
*RST: 0
Default unit: V

Manual operation: See "Offset" on page 1115

27.20.4 Noise setup

WGENerator<wg>:MODulation:NDCLevel 2870
WGENerator<wg>:MODulation:NLABsolute? 2870
WGENerator<wg>:MODulation:NLPCent 2871
WGENerator<wg>:MODulation:NOISe 2871

WGENerator<wg>:MODulation:NDCLevel <LevelDC>

Sets the DC noise level.

Suffix:

<wg> 1..2

Parameters:

<LevelDC>
Range: 0 to 12
Increment: 0.1
*RST: 0.01
Default unit: V

Manual operation: See "Absolute level" on page 1116

WGENerator<wg>:MODulation:NLABsolute?

Queries the level of the noise in volts.

Suffix:

<wg> 1..2

Return values:
<LevelAbs> Range: 0 to 12
Increment: 0.1
*RST: 0
Default unit: V

Usage: Query only

Manual operation: See "Absolute level" on page 1116

WGENerator<wg>:MODulation:NLPCent <LevelPct>

Sets the noise level in percentage of the amplitude.

Suffix:
<wg> 1..2

Parameters:
<LevelPct> Range: 0 to 100
Increment: 1
*RST: 0
Default unit: %

Manual operation: See "Relative level" on page 1116

WGENerator<wg>:MODulation:NOISe <State>

Enables the adding of noise to the waveform.

Suffix:
<wg> 1..2

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "Enable" on page 1116

27.20.5 DC offset alignment

GENerator:ALIGnment:DC:ABORt....2871
GENerator:ALIGnment:DC:RESult:DATE?....2872
GENerator:ALIGnment:DC:RESult:TIME?....2872
GENerator:ALIGnment:DC:RESult[:STATe]?....2872
GENerator:ALIGnment:DC[:STARt]....2872

GENerator:ALIGnment:DC:ABORt

Aborts a DC offset alignment.

Usage: Event

GENerator:ALIGnment:DC:RESult:DATE?

Queries the date of the last performed DC offset alignment.

Return values:
<Date>

Usage: Query only

Manual operation: See "Date" on page 1117

GENerator:ALIGnment:DC:RESult:TIME?

Queries the time of the last performed DC offset alignment.

Return values:
<Time>

Usage: Query only

Manual operation: See "Time" on page 1117

GENerator:ALIGnment:DC:RESult[:STATe]?

Queries the result of a DC offset alignment.

Return values:
<State> PASSed | FAILed | NOALigndata
*RST: NOALigndata

Usage: Query only

Manual operation: See "Overall alignment state" on page 1117

GENerator:ALIGnment:DC[:STARt]

Starts a DC offset alignment.

Usage: Event

Manual operation: See "Start Alignement" on page 1116

27.20.6 Coupling & sync

WGENerator<wg>:COUPling:STATe 2873
WGENerator<wg>:COUPling:AMPLitude 2873
WGENerator<wg>:COUPling:PHASeshift 2873
WGENerator<wg>:COUPling[:FREQuency] 2873
WGENerator<wg>:COUPling:NOISe 2874
WGENerator<wg>:COUPling:AWForm 2874
GENerator:SYNC[:COMBination] 2874

WGENerator<wg>:COUPling:STATe <Enable>

Enables the coupling of the generators, with the selected set of parameters: amplitude, frequency and noise.

Suffix:
<wg> 1..2

Parameters:
<Enable> OFF | ON
*RST: OFF

Manual operation: See "Generator enable" on page 1117

WGENerator<wg>:COUPling:AMPLitude <CoupleAmplitude>

Enables the coupling of all amplitude parameters of the generators.

Suffix:
<wg> 1..2
Specifies the master generator.

Parameters:
<CoupleAmplitude> OFF | ON
*RST: OFF

Manual operation: See "Frequency parameters" on page 1118

WGENerator<wg>:COUPling:PHASeshift <PhaseShift>

Sets the phase shift between the waveform of Gen1 and Gen2 when the frequency parameters of the two waveforms are coupled.

Suffix:
<wg> 1..2
Specifies the master generator.

Parameters:
<PhaseShift> Range: -180 to 180
Increment: 1
*RST: 0
Default unit: °

Manual operation: See "Phase shift" on page 1118

WGENerator<wg>:COUPling[:FREQuency] <CoupleFrequency>

Enables the coupling of all frequency parameters of the generators.

Suffix:
<wg> 1..2
Specifies the master generator.

Parameters:
<CoupleFrequency> OFF | ON
*RST: OFF

Manual operation: See "Amplitude parameters" on page 1118

WGENerator<wg>:COUPling:NOISe <CoupleNoise>

Couples all noise parameters of the generators.

Suffix:
<wg> 1..2

Parameters:
<CoupleNoise> OFF | ON
*RST: OFF

Manual operation: See "Noise parameters" on page 1118

WGENerator<wg>:COUPling:AWForm <CoupleArbitrary>

Enables the coupling of the arbitrary waveform of the generators.

Suffix:
<wg> 1..2

Parameters:
<CoupleArbitrary> OFF | ON
*RST: OFF

GENerator:SYNC[:COMBination] <Combination>

Sets which signals generated from the waveform generator are synchronized.

Parameters:
<Combination> NONE | GEN12 | G1PG | G2PG | G12PG
GEN12: Gen1 and Gen 2
GEN1PG/GEN2PG: Gen1/Gen 2 and Patt Gen
GEN12PG: Gen1,Gen 2 and Patt Gen
*RST: NONE

Manual operation: See "Sync start" on page 1119

27.21 Pulse Source and TDR/TDT Analysis (options R&S RTO6-B7/K130)

27.21.1 Pulse source (option R&S RTO6-B7)

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

- www.rohde-schwarz.com/rc-via-scpi, section "Command sequence and synchronization"
- Section 27.3, "Programming examples", on page 1425

PSRC[:STATe] 2875
PSRC:OUTPutlow 2875
PSRC:REPRate 2876
PSRC:DUTYcycle 2876
PSRC:CLOCkmode 2876
PSRC:RST 2877

PSRC[:STATe] <State>

Switches the pulse output on and off.

Parameters:

<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 1124

PSRC:OUTPutlow <OutputLowLevel>

Sets the low level of the output pulse.

Parameters:

<OutputLowLevel> Range: -0.2 to -0.05
Increment: 0.01
*RST: -0.05
Default unit: V

Usage: Asynchronous command

Manual operation: See "Output level" on page 1125

PSRC:REPRate <RepetitionRate>

Sets the pulse frequency, the repetition rate of the pulse.

Parameters:

<RepetitionRate> Available values depend on the selected clock mode:
Locked: 5/10/20/50/100/200/500 Hz, 1/5/10/25/50/100/250 MHz
Free running: 5/10/20/50/100/200/500 Hz, 1/5/10/25/50 MHz

*RST: 1E+6
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Repetition rate" on page 1125

PSRC:DUTYcycle <DutyCycle>

Sets the duty cycle of the pulse, which is the ratio of the positive pulse width to the period of the signal.

Parameters:

<DutyCycle> For repetition rates > 5 MHz, the value is fixed at 50 %.

Range: 10 to 90
Increment: 10
*RST: 50
Default unit: %

Usage: Asynchronous command

Manual operation: See "Duty cycle" on page 1125

PSRC:CLOCkmode <ClockMode>

Sets the dependency of the pulse clock on the instrument's reference clock.

Parameters:

<ClockMode> LOCKed | FREerunning

LOCKed
The pulse source is locked to the reference clock of the instrument.

FREerunning
The clock of the pulse source is independent. Deviations of the system do not affect the pulse clock, and deterministic conditions are avoided.

*RST: FREerunning

Usage: Asynchronous command

Manual operation: See "Clock mode" on page 1125

PSRC:RST

Resets the pulse source to the default state.

Usage: Event
Asynchronous command

Manual operation: See "Preset" on page 1125

27.21.2 TDR/TDT analysis

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

- www.rohde-schwarz.com/rc-via-scpi, section "Command sequence and synchronization"
- Section 27.3, "Programming examples", on page 1425

27.21.2.1 Calibration

TDRT:DEFault 2877
TDRT:CALibration:OPEN:NAME 2877
TDRT:CALibration:OPEN[:EXECute] 2878
TDRT:TYPE 2878
TDRT:PULSe:OUT 2878
TDRT:PULSe:REFerence 2878
TDRT:SLENgth 2879
TDRT:CALibration:SAVE:NAME 2879
TDRT:CALibration:SAVE[:EXECute] 2879

TDRT:DEFault

Starts the measurement with default correction values instead of calibrating the setup. Default values are rough values without time reference.

Usage: Event
Asynchronous command

Manual operation: See "Measure with default values" on page 1130

TDRT:CALibration:OPEN:NAME <Path>

Sets the file name, file format and path of the TDR/TDT calibration file to be opened. The file format is always `.xml`.

Parameters:
<Path> String with path and file name with extension `.xml`

Usage: Asynchronous command

Manual operation: See "Open" on page 1130

TDRT:CALibration:OPEN[:EXECute]

Opens and loads the TDR/TDT calibration from the file specified with `TDRT:CALibration:OPEN:NAME`.

Usage: Setting only
Asynchronous command

Manual operation: See "Open" on page 1130

TDRT:TYPE <Type>

Selects the analysis type: TDR (time domain reflectometry), TDT (time domain transmission), or TDR/TDT (both TDR and TDT).

Parameters:
<Type> TDR | TDRTdt | TDT
*RST: TDR

Usage: Asynchronous command

Manual operation: See "Measurement type" on page 1130

TDRT:PULSe:OUT <Channel>

Sets the channel to which the "Out" connector of the pulse source is connected via calibration standard or DUT.

Parameters:
<Channel> C1W1 | C2W1 | C3W1 | C4W1
*RST: C2W1

Usage: Asynchronous command

Manual operation: See "Channel" on page 1131

TDRT:PULSe:REFerence <Channel>

Sets the channel to which the "Ref" connector of the pulse source is connected.

Parameters:
<Channel> C1W1 | C2W1 | C3W1 | C4W1
*RST: C1W1

Usage: Asynchronous command

Manual operation: See "Channel" on page 1131

TDRT:SLENgth <ShortLength>

Sets the electrical length of a user-defined short.

The reset value is the electrical length of the short hat is delivered with the pulse source R&S RTO6-B7.

Parameters:

<ShortLength>
Range: 0 to 2E-9
Increment: 1E-12
*RST: 26.5E-12
Default unit: s

Usage: Asynchronous command

Manual operation: See "Short type" on page 1132

TDRT:CALibration:SAVE:NAME <Path>

Sets the file name, file format and path of the TDR/TDT calibration file to be saved. The file format is always `.xml`.

Parameters:

<Path> String with path and file name with extension `.xml`

Usage: Asynchronous command

Manual operation: See "Save calibration" on page 1134

TDRT:CALibration:SAVE[:EXECute]

Saves the TDR/TDT calibration results to the file that is specified with `TDRT:CALibration:SAVE:NAME`.

Usage: Setting only
Asynchronous command

Manual operation: See "Save calibration" on page 1134

27.21.2.2 Measurements

TDRT:STATe....2880
TDRT:CALibration:USECaldata....2880
TDRT:BW....2880
TDRT:DOMain....2880
TDRT:PERMittivity....2881
TDRT:SIGNal<m>:STATe....2881
TDRT:SIGNal<m>:SCALe....2881
TDRT:SIGNal<m>:OFFSet....2882
TDRT:SIGNal<m>:POSition....2882
TDRT:SIGNal<m>:DATA:HEADer?....2882
TDRT:SIGNal<m>:DATA:VALues?....2883

TDRT:STATe <State>

Activates or deactivates the TDR/TDT measurements.

Parameters:

<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 1135

TDRT:CALibration:USECaldata <UseCalibrationDat>

Disables or enables the frequency response calibration. Without calibration, the measured signals are only rescaled, and you can see the impact of the frequency response calibration on the time domain waveform.

The command is not relevant when measuring with default values.

Parameters:

<UseCalibrationDat> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Use frequency response calibration" on page 1135

TDRT:BW <Bandwidth>

Sets the bandwidth of the DUT.

Parameters:

<Bandwidth> Range: 2E+9 to 16E+9
Increment: 10
*RST: 4E+9
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Bandwidth" on page 1135

TDRT:DOMain <OutputDomain>

Sets the domain of the x-axis: time or distance (in m or inch). If you select distance, enter also the permittivity with `TDRT:PERMittivity`.

Parameters:

<OutputDomain> TIME | MDIStance | INDistance
MDIStance = distance in m
IDIStance = distance in inch
*RST: TIME

Usage: Asynchronous command

Manual operation: See "Domain, ε_r" on page 1136

TDRT:PERMittivity <Permittivity>

Sets the permittivity "ε_r" of the used DUT.

Parameters:

<Permittivity>
Range: 1 to 100
Increment: 0.1
*RST: 3.3

Usage: Asynchronous command

Manual operation: See "Domain, ε_r" on page 1136

TDRT:SIGNal<m>:STATe <State>

Enables the indicated TDR/TDT signal.

Suffix:

<m>
1..3
1 = impedance Z (result of TDR measurement)
2 = step response H (result of TDT measurement)
3 = reflection coefficient ρ (result of TDR measurement)

Parameters:

<State>
OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "State" on page 1136

TDRT:SIGNal<m>:SCALe <VerticalScale>

Set the vertical scale of the indicated TDR/TDT signal.

Suffix:

<m>
1..3
See TDRT:SIGNal<m>:STATe on page 2881.

Parameters:

<VerticalScale>
Range: 1E-12 to 100E+12
Increment: 1E-3
*RST: 0.05
Default unit: /div

Usage: Asynchronous command

Manual operation: See "Vertical scale" on page 1136

TDRT:SIGNal<m>:OFFSet <Offset>

Set the offset of the indicated TDR/TDT signal.

Suffix:
<m> 1..3
See TDRT:SIGNal<m>:STATe on page 2881.

Parameters:
<Offset> Range: 1E-12 to 100E+12
Increment: 0.01
*RST: 0

Usage: Asynchronous command

Manual operation: See "Offset" on page 1136

TDRT:SIGNal<m>:POSition <Position>

Set the vertical position of the indicated TDR/TDT signal.

Suffix:
<m> 1..3
See TDRT:SIGNal<m>:STATe on page 2881.

Parameters:
<Position> Range: 1E-12 to 100E+12
Increment: 0.02
*RST: 0
Default unit: div

Usage: Asynchronous command

Manual operation: See "Offset" on page 1136

TDRT:SIGNal<m>:DATA:HEADer?

Returns the header of channel waveform data.

Table 27-12: Header data

Position	Meaning	Example
1	XStart in s	-9.477E-008 = - 94,77 ns
2	XStop in s	9.477E-008 = 94,77 ns
3	Record length of one waveform	200000
4	Number of values per sample interval, is 1	1

Suffix:
<m> 1..3
See TDRT:SIGNal<m>:STATe on page 2881.

Return values:
<Start> 1. header value: time of the first sample in s

<Stop> 2. header value: time of the last sample in s

<RecordLength> 3. header value: record length of the waveform in samples

<ValuesPerSample> 4. header value: number of values per sample, is 1.

Example: `TDRT:SIGNal1:DATA:HEAD?`
`-9.477E-008,9.477E-008,20000,1`
The start time of the data is -9.477E-008 = - 94,77 ns, and the end time of the data is 9.477E-008 = 94,77 ns. The data stream has 20000 values with one value per sample.

Usage: Query only

TDRT:SIGNal<m>:DATA:VALues? [<Offset>][,<Length>]

Returns the data of the waveform points for transmission from the instrument to the controlling computer. The data can be used in MATLAB, for example.

Without parameters, the complete waveform is retrieved. Using the offset and length parameters, data can be retrieved in smaller portions, which makes the command faster.

To set the export format, use `FORMat[:DATA]`. Supported formats are: ASCii | REAL,32 | INT,8 | INT,16.

Suffix:
<m> 1..3
See `TDRT:SIGNal<m>:STATe` on page 2881.

Query parameters:
[<Offset>] Number of offset waveform points.
Range: 0 to m. Limit: n + m >= record length

[<Length>] Number of waveform points to be retrieved.
Range: 1 to n. Limit: n + m >= record length

Return values:
<Data> List of comma-separated values

Usage: Query only

27.22 I/Q software interface (option R&S RTO6-K11)

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

- www.rohde-schwarz.com/rc-via-scpi, section "Command sequence and synchronization"
- Section 27.3, "Programming examples", on page 1425

- I/Q sampling settings....2884
- I/Q data output....2889
- NFC trigger....2890

27.22.1 I/Q sampling settings

To switch on the input channels, use `CHANnel<ch>:STATe`.

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

- www.rohde-schwarz.com/rc-via-scpi, section "Command sequence and synchronization"
- Section 27.3, "Programming examples", on page 1425

IQ:BWIDth?....2884
CHANnel<ch>:IQ:INPMode....2885
CHANnel<ch>:IQ:INPType....2885
IQ:INSRate....2885
IQ:RBWidth....2886
IQ:RLENgth....2886
IQ:SRATe....2886
IQ:STATe....2886
CHANnel<ch>:IQ:CFRequency....2887
CHANnel<ch>:IQ:SBRF....2887
CHANnel<ch>:IQ:SBIF....2888
CHANnel<ch>:IQ:WARNing[:STATe]?....2888
CHANnel<ch>:IQ:WARNing:MESSage?....2888

IQ:BWIDth?

Returns the filter bandwidth.

See also: `IQ:RBWidth` on page 2886

Return values:

<AbsBw> Range: 40 to 8E+9
*RST: 4E+9
Default unit: Hz

Usage: Query only
Asynchronous command

Manual operation: See "Rel. BW, Filter BW" on page 1141

CHANnel<ch>:IQ:INPMode <IQInputMode>

Selects the frequency band of a complex input signal.

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<IQInputMode> BASeband | RFIF
Baseband or intermediate frequency (RFIF)
*RST: BASeband

Usage: Asynchronous command

Manual operation: See "Input type, Input mode" on page 1140

CHANnel<ch>:IQ:INPType <IQInputType>

Sets the type of the input signal.

Suffix:
<ch> 1..4

Parameters:
<IQInputType> REAL | COMPlex
REAL
Real RF signal. One real RF signal requires one input channel, thus up to four real signals can be recorded in parallel.
COMPlex
Complex I/Q signal in baseband or low IF range. One complex input signal requires two input channels. The In-Phase component must be connected to channel 1 or 3, and the Quadrature component must be connected to channel 2 or 4. Thus up to two complex input signals can be recorded in parallel.
*RST: REAL

Usage: Asynchronous command

Manual operation: See "Input type, Input mode" on page 1140

IQ:INSRate <InputSmpRate>

Shows the sample rate of capturing the input data in I/Q mode: 10 Gsample/s.

Return values:
<InputSmpRate> SR10G

Usage: Asynchronous command

Manual operation: See "Input sample rate" on page 1140

IQ:RBWidth <RelBw>

Sets the bandwidth factor to define the filter bandwidth.

*Filter BW = Relative BW * Sample rate*

Parameters:

<RelBw>
Range: 0.04 to 0.8
Increment: 0.01
*RST: 0.8

Usage: Asynchronous command

Manual operation: See "Rel. BW, Filter BW" on page 1141

IQ:RLENgth <RecordLength>

Sets the required record length of the output I/Q data. The resulting acquisition time of the I/Q data is:

Acquisition time = Record length / Sample rate

Parameters:

<RecordLength>
Range: 1 to 10E+6
Increment: 2
*RST: 100E+3
Default unit: pts

Usage: Asynchronous command

Manual operation: See "Record length" on page 1142

IQ:SRATe <SampleRate>

Sets the required sample rate of the output I/Q data.

Parameters:

<SampleRate>
Range: 1000 to 10E+9
Increment: 1
*RST: 10E+9
Default unit: Sa/s

Usage: Asynchronous command

Manual operation: See "Sample rate" on page 1142

IQ:STATe <IQMode>

Activates the I/Q mode of the instrument.

Parameters:

<IQMode> OFF | ON

ON: I/Q mode
OFF: normal oscilloscope mode

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 1140

CHANnel<ch>:IQ:CFRequency <IQCarrierFreqInput>

Sets the carrier frequency of the modulated RF signal or of the complex signal in IF range.

Prerequisites:

- `CHANnel<ch>:IQ:INPType` on page 2885 is set to `REAL`
  or:
- `CHANnel<ch>:IQ:INPType` on page 2885 is set to `COMPlex` and `CHANnel<ch>:IQ:INPMode` on page 2885 is set to `RFIF`

Suffix:

<ch> 1..4
Selects the input channel.

Parameters:

<IQCarrierFreqInput> Range: 10E-3 to 10E+9
Increment: 100
*RST: 1E+6
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Carrier frequency" on page 1142

CHANnel<ch>:IQ:SBRF <IQSidebandRF>

Defines the frequency position of the RF spectrum in the input signal: normal or inverse. The position is important for correct down-conversion and filtering.

Prerequisite: `CHANnel<ch>:IQ:INPType` on page 2885 is set to `REAL`

For details, see "Sideband (real input)" on page 1142

Suffix:

<ch> 1..4
Selects the input channel.

Parameters:

<IQSidebandRF> INVerse | NORMal

*RST: NORMal

Usage: Asynchronous command

Manual operation: See "Sideband (real input)" on page 1142

CHANnel<ch>:IQ:SBIF <IQSidebandIF>

Defines the sideband and the frequency position of complex modulated input signal in IF range.

Prerequisites: `CHANnel<ch>:IQ:INPType` on page 2885 is set to `COMPlex` and `CHANnel<ch>:IQ:INPMode` on page 2885 is set to `RFIF`

For details, see "Sideband (complex IF input)" on page 1143

Suffix:
<ch> 1..4
Selects the input channel.

Parameters:
<IQSidebandIF> NUPPer | NLOWer | IUPPer | ILOWer

NUPPer: Upper sideband in normal position
NLOWer: Lower sideband in normal position
IUPPer: Upper sideband in inverse position
ILOWer: Lower sideband in inverse position

*RST: NUPPer

Usage: Asynchronous command

Manual operation: See "Sideband (complex IF input)" on page 1143

CHANnel<ch>:IQ:WARNing[:STATe]?

Returns ON if the sampling setup results in an unfavorable combination.

To get the message, use `CHANnel<ch>:IQ:WARNing:MESSage?`.

Suffix:
<ch> 1..4

Return values:
<WarningState> OFF | ON

*RST: OFF

Usage: Query only

CHANnel<ch>:IQ:WARNing:MESSage?

Returns the message string if `CHANnel<ch>:IQ:WARNing[:STATe]?` is true.

Suffix:
<ch> 1..4

Return values:

<WarningMessage> The string is:
"Undersampling" if the carrier frequency is too fast.
"CF + BW/2 > DevBW" if bandwidth serttings do not fit. CF is the carrier frequency, BW is the filter bandwidth, and DevBW is the maximum instrument bandwidth.

Usage: Query only

27.22.2 I/Q data output

CHANnel<ch>:IQ:DATA[:VALues]?.....2889
CHANnel<ch>:IQ:DATA:HEADer?.....2889

CHANnel<ch>:IQ:DATA[:VALues]?

Returns the recorded I/Q data.

Suffix:

<ch> 1..4
Selects the input channel.
In case of a complex input signal that requires two input channels, the results of sources Ch1 and Ch2 are identical, as well as the results of Ch3 and Ch4.

Return values:

<Data> Comma-separated list of in-phase and and quadrature floating values in interleaved order.

Example:

```
CHAN1:IQ:DATA?
-9.6296054835E-005, -1.5046258568E-006,
0.0001013283545, 1.5832555391E-006,
-0.00014297277085, -2.233616442E-006,
0.000192677413, 3.0105845781E-006,
-0.00020517286612, -3.2058260331E-006,
-0.002648930531, -4.1546467401E-005,
-0.0028401580639, -4.4135249482E-005,
-0.0028636774514, -4.4877564505E-005, ...
```

Usage: Query only

Manual operation: See "Save IQ data to file" on page 1144

CHANnel<ch>:IQ:DATA:HEADer?

Returns the header of I/Q data.

Suffix:

<ch> 1..4
Selects the input channel.

Return values:

<Start> 1. header value: acquisition time before trigger, in s

<Stop> 2. header value: acquisition time after trigger, in s

<RecordLength> 3. header value: record length of the waveform in samples

<ValuesPerSample> 4. header value: number of values per sample. 2 values per sample means the I and Q values are in the data.

Example:
```
CHAN1:IQ:DATA:HEAD?
-5E-008,5E-008,1000,1
```
The start time of the data is -5E-008 = - 50 ns, and the end time of the data is 5E-008 = 50 ns. The data stream has 1000 values with 2 values per sample (I and Q values are in the data).

Usage: Query only

Manual operation: See "Save IQ data to file" on page 1144

27.22.3 NFC trigger

TRIGger<t>:NFC:TECHnology 2890
TRIGger<t>:NFC:BITRate 2890
TRIGger<t>:NFC:EVENt 2891

TRIGger<t>:NFC:TECHnology <Technology>

Selects the NFC technology, the communication protocol used by the input signal.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<Technology> NFCA | NFCB | NFCF

*RST: NFCA

Usage: Asynchronous command

Manual operation: See "Technology" on page 1146

TRIGger<t>:NFC:BITRate <Bitrate>

Sets the bit rate of the signal. For NFC-A and NFC-B, the bit rate is always 106 kBit per second. For NFC-F, the bit rate can be either 212 or 424 kBit per second.

Suffix:

<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:

<Bitrate> KBPS106 | KBPS212 | KBPS424

*RST: KBPS106

Usage: Asynchronous command

Manual operation: See "Bit rate" on page 1146

TRIGger<t>:NFC:EVENt <Event>

Sets the event to be triggered on.

Suffix:
<t> 1..3
Event in a trigger sequence: 1 = A-event only

Parameters:
<Event> ALL | SEN | ALLB | SENB | SOS48 | SOS96

ALL | SEN
ALL_REQ and SENS_REQ commands (polling requests), only with NFC-A technology

ALLB | SENB
ALLB_REQ and SENSB_REQ commands, only with NFC-B technology

SOS48 | SOS96
Start of sequence, 48 bit 96 bit land length, only with NFC-F technology

*RST: SEN

Usage: Asynchronous command

Manual operation: See "Event" on page 1146

27.23 Jitter analysis and clock data recovery

This chaptes decribes the remote commands of jitter option R&S RTO6-K12/K133 and CDR option R&S RTO6-K13.

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

- www.rohde-schwarz.com/rc-via-scpi, section "Command sequence and synchronization"
- Section 27.3, "Programming examples", on page 1425

- Jitter measurements (option R&S RTO6-K12)....2892
- Advanced jitter and noise (option R&S RTO6-K133/K134)....2898
- Clock data recovery (software-based, option R&S RTO6-K12)....2942

- Clock data recovery (hardware-based, option R&S RTO6-K13)....2948
- Serial pattern trigger using CDR....2951
- Eye mask testing....2951

27.23.1 Jitter measurements (option R&S RTO6-K12)

The following table lists the measurement suffixes and the <MeasType> parameter value with a short description.

For a detailed description, see Section 19.1.1, "Jitter measurements", on page 1148.

Table 27-13: Jitter measurements

<n> suffix for limit checks	<MeasType> parameter value	Meas. type	Description/Result
37	CCJitter	Cycle-cycle jitter	Difference between the periods of two adjacent cycles. The measurement is based on the period measurement.
38	NCJitter	N-cycle jitter	Difference between the time of two adjacent groups of N cycles (periods) each.
39	CCWidth	Cycle-cycle width	Difference between the pulse width of two adjacent cycles. The measurement is based on the pulse width measurement.
40	CCDutycycle	Cycle-cycle duty cycle	Difference between the duty cycle of two adjacent cycles. The measurement is based on the duty cycle measurement.
41	TIE	Time interval error	Time difference between the slope of the input signal and the slope of a reference signal. The reference signal can be a captured clock waveform, or a clock generated by clock data recovery (CDR, software algorithm or hardware generation). Also available for PAM-N signals with PAM order > 2.
42	UINTerval	Unit interval	Period of the clock signal. If no clock signal is available, it is recovered by CDR. The period is calculated as the time difference between two consecutive clock edges of the same polarity. Also available for PAM-N signals with PAM order > 2.
43	DRATe	Data rate	Frequency of the clock signal. If no clock signal is available, it is recovered by CDR. The measurement is based on the unit interval measurement. Also available for PAM-N signals with PAM order > 2.
44	SKWDelay	Skew delay	Delay between the edges of two interdependent waveforms.
45	SKWPhase	Skew phase	Phase difference between the edges of two waveforms.
1 to 36; 46	Used for limit checks on amplitude/time measurements.		

For margin and limit checks, use the amplitude/time commands with the limit check suffixes given in Table 27-13. For commands, see Section 27.12.2, "Amplitude/time measurements", on page 1683.

MEASurement<mg>:JITTer:CCSLope....2893
MEASurement<mg>:JITTer:CDRMode....2893
MEASurement<mg>:JITTer:CLOCk:FACTor....2894
MEASurement<mg>:JITTer:CLOCk:FREQuency....2894
MEASurement<mg>:JITTer:CLOCk:FREStimation....2895
MEASurement<mg>:JITTer:DRUNit....2895
MEASurement<mg>:JITTer:NCYCles....2895
MEASurement<mg>:JITTer:PULSe....2896
MEASurement<mg>:JITTer:SKWSlope....2896
MEASurement<mg>:JITTer:SKWRelation....2897
MEASurement<mg>:JITTer:SOURce<n>:TIESlope....2897

MEASurement<mg>:JITTer:CCSLope <Jitter_CCSlope>

Selects the slope at which the periods and thus the jitter is measured.

The command is available for the following measurements: cycle-cycle jitter, N-cycle jitter, and cycle-cycle duty cycle (`MEASurement<mg>:MAIN` and/or `MEASurement<mg>:ADDitional` are set to measurements CCJitter | NCJitter | CCDutycycle).

Suffix:

<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:

<Jitter_CCSlope> FIRSt | POSitive | NEGative | EITHer

FIRSt
Measures the period from the first edge that is found, no matter of its direction.

POSitive
Measures the period at positive going edges.

NEGative
Measures the period at negative going edges.

EITHer
Measures the period at both positive and negative going edges. This option is useful, for example, to check the clock stability of a double data rate clock.

*RST: FIRSt

Usage: Asynchronous command

Manual operation: See "Cycle begin" on page 1152

MEASurement<mg>:JITTer:CDRMode <Jitter_CDRMode>

Defines the origin of the clock signal - wether a real clock signal or a clock generated using one of the CDR methods.

The command is available for the following measurements: time-interval error, unit interval and data rate (`MEASurement<mg>:MAIN` and/or `MEASurement<mg>:ADDitional` are set to measurements TIE | UINTerval | DRATe).

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Jitter_CDRMode> SIGNal | SW1 | SW2 | SW3 | SW4 | | HW

SIGNal
The clock is a real clock signal.

SW1 | SW2 | SW3 | SW4
The clock is generated by a software algorithm. You can define two software algorithms for CDR. To configure the CDR, use the `CDR:SOFTware` commands.

HW
The clock is generated from the source signal by the integrated CDR circuitry. The HW CDR must be active to acquire the jitter data (trigger type = CDR or serial pattern with CDR)

*RST: SW1

Usage: Asynchronous command

Manual operation: See "Mode (clock)" on page 1154

MEASurement<mg>:JITTer:CLOCk:FACTor <ClockMultiplier>

Sets a value for the clock multiplier, the number of samples per clock interval. The setting is relevant if the clock is an explicit clock signal.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<ClockMultiplier> Range: 1 to 100
Increment: 1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Multiplier" on page 1155

MEASurement<mg>:JITTer:CLOCk:FREQuency <Frequency>

Sets the clock frequency for the explicit clock signal. The setting is relevant if the clock is an explicit clock signal and the data signal has a PAM order > 2.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Frequency> Range: 1000 to 10E+9
Increment: 10
*RST: 500E+6
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Frequency" on page 1156

MEASurement<mg>:JITTer:CLOCk:FREStimation

Calculates an estimate value for the clock frequency. The setting is relevant if the clock is an explicit clock signal and the data signal has a PAM order > 2.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Usage: Event

Manual operation: See "Estimate frequency" on page 1156

MEASurement<mg>:JITTer:DRUNit <DataRateUnit>

Sets the unit for data rate measurements.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<DataRateUnit> BIT_S | Hz
*RST: BIT_S

Usage: Asynchronous command

Manual operation: See "Unit" on page 1156

MEASurement<mg>:JITTer:NCYCles <Jitter_NofCycles>

Sets the number of periods (cycles) that are accumulated to measure the N-cycle jitter.

See also: Table 19-1

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<Jitter_NofCycles> Range: 1 to 2.14748E+9
Increment: 1
*RST: 2

Usage: Asynchronous command

Firmware/software: FW 2.60. The algorithm of N-cycle measurement has been changed and `MEASurement:JITTer:COFFset` has been removed.

Manual operation: See "Number of cycles" on page 1152

MEASurement<mg>:JITTer:PULSe <JitterPulsePolarity>

Sets the polarity of pulses for which the pulse width is measured to obtain the cycle-cycle width and the cycle-cycle duty cycle.

The command is available for the following measurements: cycle-cycle width and cycle-cycle duty cycle (`MEASurement<mg>:MAIN` and/or `MEASurement<mg>:ADDitional` are set to measurements CCWidth | CCDutycycle).

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<JitterPulsePolarity> POSitive | NEGative
Pulse width of positive or negative pulses is measured, respectively.
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Pulse polarity" on page 1152

MEASurement<mg>:JITTer:SKWSlope <JitterSkewSlope>

Sets the edge of the first waveform from which the skew delay or phase is measured: positive, negative or both.

The command is available for the following measurement: skew delay and skew phase (`MEASurement<mg>:MAIN` and/or `MEASurement<mg>:ADDitional` are set to measurements SKWDelay | SKWPhase).

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<JitterSkewSlope> POSitive | NEGative | EITHer
*RST: POSitive

Usage: Asynchronous command

Manual operation: See "Edge polarity" on page 1157

MEASurement<mg>:JITTer:SKWRelation <JitterSkewRelation>

Sets the edge of the second waveform relative to the first waveform.

The command is available for the following measurements: skew delay and skew phase (`MEASurement<mg>:MAIN` and/or `MEASurement<mg>:ADDitional` are set to measurements SKWDelay | SKWPhase).

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

Parameters:
<JitterSkewRelation> MATChing | INVerse

MATChing
Measures from positive to positive edge or from negative to negative edge.

INVerse
Measures from positive to negative edge or from negative to positive edge.

*RST: MATChing

Usage: Asynchronous command

Manual operation: See "Relative polarity" on page 1157

MEASurement<mg>:JITTer:SOURce<n>:TIESlope <Jitter_TIESlope>

Sets the clock and data edges that are used for measurements. Clock or data is defined by the SOURce suffix <n>.

The command is available for the following measurements: time-interval error, unit interval and data rate (`MEASurement<mg>:MAIN` and/or `MEASurement<mg>:ADDitional` are set to measurements TIE | UINTerval | DRATe.

Suffix:
<mg> 1..10
See "Selection of the measurement group: MEASurement<mg>" on page 1676.

<n> 1..2
1 = data slope (only relevant for time interval error measurements with explicit clock signal)
2 = clock slope

Parameters:

<Jitter_TIESlope> POSitive | NEGative | EITHer

POSitive
The positive clock slope can be used, for example, for single data rate (SDR) signals with bit start at the positive clock edge.

NEGative
The negative clock slope can be used, for example, for SDR signals with bit start at the negative clock edge.

EITHer
For clock edges, this option can be used for double data rate (DDR) signals.
For data edges, it is the most common setting.

*RST: EITHer

Usage: Asynchronous command

Manual operation: See "Slope" on page 1155

27.23.2 Advanced jitter and noise (option R&S RTO6-K133/K134)

This chapter contains all remote commands to set up the advanced jitter and advanced noise analysis.

Selection of the advanced jitter measurement: ADVJitter<m>

With R&S RTO6, you can configure up to two simultaneous advanced jitter measurements. In manual operation, they are represented by subtabs "JA1" and "JA2" in the "Advanced Jitter" dialog box. For remote operation, they are indicated by the suffix `ADVJitter<m>`.

Remote control: ADVJitter suffix <m>	Manual operation: "JA" subtab
1 to 2 correspond to	"JA1" to "JA2"

ADVJitter<m>:SIGNal:TYPE <SignalType>

Select, if the analyzed signal is a data or clock signal.

Suffix:
<m> 1..2

Parameters:
<SignalType> CLOCk | DATNrz
*RST: DATNrz

Manual operation: See "Signal Type" on page 1162

ADVJitter<m>:SIGNal:SOURce <SourceType>

Selects the source for the advanced jitter analysis.

Suffix:
<m> 1..2

Parameters:
<SourceType> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | DIFF1 | DIFF2 | COMMON1 | COMMON2

Manual operation: See "Analyzed source" on page 1162

ADVJitter<m>:SIGNal:QUICkmeas

Starts a quick advanced jitter analysis.

Suffix:
<m> 1..2

Usage: Event

Manual operation: See "Quick start analysis" on page 1162

ADVJitter<m>:SIGNal:SYMBolrate?

Sets/ displays the symbol rate.

Suffix:
<m> 1..2

Return values:
<SymbolrateVal> Range: 1000 to 10E+9
Increment: 10
*RST: 1E+9
Default unit: bps

Usage: Query only

ADVJitter<m>:SIGNal:CDRMode <MethodType>

Selects the reference source for the CDR signal, if `ADVJitter<m>:SIGNal:REFSource` is set to `CDR`.

Suffix:
<m> 1..2

Parameters:
<MethodType> SW1 | SW2 | SW3 | SW4
*RST: SW1

Manual operation: See "Software CDR" on page 1164

ADVJitter<m>:SIGNal:REFSource <SourceType>

Selects if an explicit clock or a CDR signal is used as a reference signal.

Suffix:
<m> 1..2

Parameters:
<SourceType> CLOCk | CDR
*RST: CDR

Manual operation: See "Clock / CDR" on page 1164

ADVJitter<m>:SIGNal:CLKSource <SourceType>

Selects the reference source for the clock signal, if `ADVJitter<m>:SIGNal:REFSource` is set to `CLOCk`.

Suffix:
<m> 1..2

Parameters:
<SourceType> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | DIFF1 | DIFF2 | COMMON1 | COMMON2

Manual operation: See "Reference source" on page 1165

ADVJitter<m>:SIGNal:EDGE <EdgeType>

The clock edge sets the point in time when the state of the data signal is checked.

Suffix:
<m> 1..2

Parameters:
<EdgeType> POSitive | NEGative | EITHer
*RST: EITHer

Manual operation: See "Clock edge" on page 1165

ADVJitter<m>:SIGNal:CLFFactor <Factor>

Sets a clock multiplier factor.

Suffix:
<m> 1..2

Parameters:
<Factor> Range: 1 to 100
Increment: 1
*RST: 1

Manual operation: See "Clock multiplier" on page 1165

ADVJitter<m>:SIGNal:CLFRequency <Frequency>

Sets the clock frequency for the explicit clock signal.

Suffix:
<m> 1..2

Parameters:
<Frequency> Range: 1000 to 10E+9
Increment: 10
*RST: 1E+9
Default unit: Hz

Manual operation: See "Clock frequency" on page 1165

ADVJitter<m>:SIGNal:CLOFfset <Offset>

Sets a clock offset for the explicit clock signal.

Suffix:
<m> 1..2

Parameters:
<Offset> Range: -1000 to 1000
Increment: 0.01
*RST: 0
Default unit: UI

Manual operation: See "Clock offset" on page 1166

ADVJitter<m>:SIGNal:DATRate?

Displays the calculated data rate of the explicit clock signal.

Suffix:
<m> 1..2

Return values:
<DatarateValue> Range: 1000 to 10E+9
Increment: 10
*RST: 1E+9
Default unit: bps

Usage: Query only

Manual operation: See "Data rate" on page 1166

ADVJitter<m>:SIGNal:GATE:COUPling <ModeType>

Sets if the gate is coupled to the zoom or cursor.

Suffix:
<m> 1..2

Parameters:
<ModeType> NONE | CURSor | ZOOM
*RST: NONE

Manual operation: See "Coupling mode" on page 1163

ADVJitter<m>:SIGNal:GATE:CURSor <CursorType>

Sets the cursor the gate is coupled to, if `ADVJitter<m>:SIGNal:GATE:COUPling` is set to `CURSor`.

Suffix:
<m> 1..2

Parameters:

<CursorType> CURSOR1 | CURSor1 | CURSOR2 | CURSor2 | CURSOR3 | CURSor3 | CURSOR4 | CURSor4

*RST: CURSOR1

Manual operation: See "Cursor / Zoom" on page 1164

ADVJitter<m>:SIGNal:GATE:RANGe:ABSolute:STARt <StartValue>

Sets the start time of the gate area in percent, if `ADVJitter<m>:SIGNal:GATE:RANGe:MODE` is set to `ABS`.

Suffix:

<m> 1..2

Parameters:

<StartValue> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0

Manual operation: See "Start / Stop" on page 1164

ADVJitter<m>:SIGNal:GATE:RANGe:ABSolute:STOP <StopValue>

Sets the stop time of the gate area in percent, if `ADVJitter<m>:SIGNal:GATE:RANGe:MODE` is set to `ABS`.

Suffix:

<m> 1..2

Parameters:

<StopValue> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0.01

Manual operation: See "Start / Stop" on page 1164

ADVJitter<m>:SIGNal:GATE:RANGe:MODE <ModeType>

Selects if the gate area is defined in relative values (percent) or absolute.

Suffix:

<m> 1..2

Parameters:

<ModeType> ABS | REL

*RST: ABS

Manual operation: See "Mode" on page 1164

ADVJitter<m>:SIGNal:GATE:RANGe:RELative:STARt <StartValue>

Sets the relative start of the gate area in percent, if `ADVJitter<m>:SIGNal:GATE:RANGe:MODE` is set to `REL`.

Suffix:
<m> 1..2

Parameters:
<StartValue>
Range: 0 to 100
Increment: 0.1
*RST: 0
Default unit: %

Manual operation: See "Relative start / stop" on page 1164

ADVJitter<m>:SIGNal:GATE:RANGe:RELative:STOP <StopValue>

Sets the relative stop of the gate area in percent, if `ADVJitter<m>:SIGNal:GATE:RANGe:MODE` is set to `REL`.

Suffix:
<m> 1..2

Parameters:
<StopValue>
Range: 0 to 100
Increment: 0.1
*RST: 100
Default unit: %

Manual operation: See "Relative start / stop" on page 1164

ADVJitter<m>:SIGNal:GATE:ZDIagram <ZoomDiagram>

Sets the zoom the gate is coupled to, if `ADVJitter<m>:SIGNal:GATE:COUPling` is set to `ZOOM`.

Suffix:
<m> 1..2

Parameters:
<ZoomDiagram>

Manual operation: See "Cursor / Zoom" on page 1164

ADVJitter<m>:SIGNal:GATE:STATe <State>

Enables the gating setup for the advanced jitter analysis.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "Use gate" on page 1163

ADVJitter<m>:SIGNal:FREStimation

Executes an estimation of the signal frequency.

Suffix:
<m> 1..2

Usage: Event
Asynchronous command

Manual operation: See "Estimate clock frequency" on page 1165

ADVJitter<m>:SIGNal:OFEStimation

Executes an estimationon of the clock offset frequency.

Suffix:
<m> 1..2

Usage: Event
Asynchronous command

Manual operation: See "Estimate clock offset" on page 1166

27.23.2.2 Results

For remote operation, the component is indicated by the suffix `COMPonents<n>`.

Table 27-14: Advanced jitter components

Suffix <n>	Component	Description/Result
Basic components		
1	Symbol rate	Number of data symbols per second of the analyzed signal. It is equivalent to the baud rate. For binary signals, the signal rate is equal to the bit rate.
2	Symbol duration	The length of time to transfer one signal symbol. Equals the inverse value of the symbol rate.
3	Event Count	Number of analyzed data transitions.
Jitter components (option R&S RTO6-K133)		
4	TJ@BER	The eye closure at the user-defined target BER.

Suffix <n>	Component	Description/Result
5	RJ+(O)BUJ	Consists of any influence that cannot be predicted with model parameters. Usually, this jitter component follows a Gaussian probability distribution. Other Bounded Uncorrelated Jitter (OBUJ) is included here. OBUJ refers to any jitter that is bounded, uncorrelated time interval error (TIE) distribution, for example from unobserved data signals.
6	DJ (δ-δ)	Industry standard approximation to the deterministic jitter measurement, calculated by fitting a model of two overlapping, equally large Gaussian distributions to the observed DJ histogram. The calculated value is the time difference between the two distributions center points.
7	TJ	Measures the total Time Interval Error (TIE) of the input signal. It is defined as the time between each transition of the input signal and its corresponding reference clock transition.
8	DJ	The reproducible portion of the overall TIE of the input signal. It consists of the Data Dependent Jitter (DDJ) and Periodic Jitter (PJ) components.
9	DDJ	Consists of Inter-symbol Interference (ISI) and Duty Cycle Distortion (DCD). It depends on the symbol sequence. ISI is an effect commonly caused by limited signal bandwidth in the transmitter and transmission line, which forces influence from past symbols onto future symbols. DCD is a mismatch between rising and falling signal transitions due to reference level mismatch or other imbalances between transitions.
10	DCD	Measure of imbalance between rising and falling data transitions. It is defined as the time difference between the average rising and average falling edge.
11	PJ	Caused by crosstalk from periodic signal sources to the transmitter or transmission line. It represents the harmonic portion of the overall time interval error (TIE).
12	ISI	The time between the earliest and the latest signal transition of a single transition type, i.e.rising and falling edges. The measurement result is the largest value across all transition types.
13	DDJ +PJ	Composite impact of all unknown but deterministic portions of the overall time interval error of the input signal. It consists of any disturbance that comes from a deterministic source but cannot be reproduced from the input signal. Often it is caused by crosstalk from other data signals.
14	(O)BUJ	Composite impact of all unknown but deterministic portions of the overall time interval error of the input signal. It consists of any disturbance that comes from a deterministic source but cannot be reproduced from the input signal. Often it is caused by crosstalk from other data signals.
15	(O)BUJ (δ-δ)	Other bounded uncorrelated Dual-Dirac jitter (O)BUJ (δ- δ) is an industry standard approximation to the other bounded uncorrelated jitter measurement. It is calculated by fitting a model of two overlapping, equally large Gaussian distributions to the observed RJ+(O)BUJ histogram. The calculated value is the amplitude difference between the two distributions center points.
16	RJ	Consists of any influence that cannot be predicted with model parameters. Usually, this jitter component follows a Gaussian probability distribution. The algorithm computes the standard deviation and the peak-peak value of the TIE caused by RJ within the analyzed waveform.

Suffix <n>	Component	Description/Result
Noise components (option R&S RTO6-K134)		
17	EH@BER	Returns the vertical eye opening at the user-defined BER.
18	RN+(O)BUN	Random noise plus (other) bounded uncorrelated noise or (other) bounded uncorrelated noise is the combined effect of both noise types. If periodic components are activated RN + OBUN are displayed, otherwise RN + BUN. RN + (O)BUN is typically used, if track or spectrum plots are desired. Both plots are not available for RN only or (O)BUN only components as the time dependencies of these noise types are unknown. RN + (O)BUN spectrum is a useful approximation of the RN spectrum for negligible small (O)BUN.
20	TN	Measures the total level error of the input signal. It is defined as the amplitude deviation between the amplitude of the input signal at the decision time point and its corresponding reference level.
21	DN	The reproducible portion of the overall level error of the input signal. It consists of the data-dependent noise, the periodic noise components and the other bounded uncorrelated jitter components.
22	DDN	Consists of inter-symbol interface noise and level distortion. It depends on the symbol sequence. ISIN is an effect whereby past symbols have an influence on future symbols. LD is a mismatch between rising and falling signal transitions due to reference level mismatch or other imbalances between transitions.
23	LD	A measure of imbalance between different symbol levels. It is defined as the difference between the average level errors of the symbols one and zero.
24	PN	Periodic noise is typically caused by crosstalk from periodic signal sources to the transmitter or transmission line. It represents the harmonic portion of the overall level error.
25	ISIN	The level difference between the highest and the lowest level error of a symbol, i.e. one or zero.The largest value across all symbols is the measurement result.
26	DDN + PN	Data-dependent noise plus periodic noise is the combined effect of both jitter types. Note that DDN+PN equals deterministic noise minus other bounded uncorrelated noise. DDN+PN spectrum is a useful approximation of the deterministic noise spectrum fot negligible small other bounded uncorrelated noise.
27	(O)BUN	Composite impact of all unknown but deterministic portions of the overall time interval error of the input signal. It consists of any disturbance that comes from a deterministic source but cannot be reproduced from the input signal. Often it is caused by crosstalk from other data signals.

Suffix <n>	Component	Description/Result
28	(O)BUN (δ-δ	Other bounded uncorrelated Dual-Dirac noise (O)BUN (δ- δ) is an industry standard approximation to the other bounded uncorrelated jitter measurement. It is calculated by fitting a model of two overlapping, equally large Gaussian distributions to the observed RN+(O)BUN histogram. The calculated value is the amplitude difference between the two distributions center points.
29	RN	Consists of any influence that cannot be predicted with model parameters. Usually, this noise component follows a Gaussian probability distribution. The algorithm computes the standard deviation and the peak-peak value of the level error (LE) caused by RN within the analyzed waveform.

ADVJitter<m>:RESult:ENABle <State>

Enables the advanced jitter analysis. It displays all enabled diagrams and displays a table with the results for the component measurements.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "Enable" on page 1169

ADVJitter<m>:DCOMposition:COMPonents<n>[:ENABle] <State>

Enables the measurement for the specified jitter component.

Suffix:
<m> 1..2
<n> 1..29
See Table 27-14

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "Basic components" on page 1174

ADVJitter<m>:RESult:STATistics <State>

Enables statistics measurements for the advanced jitter analysis.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "Statistics" on page 1170

ADVJitter<m>:RESult:STEPresponse <State>

Enables a step response diagram for the advanced jitter measurements..

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "Step response" on page 1170

ADVJitter<m>:RESult:COMPonents<n>:HISTogram <State>

Enables a histogram for the selected measurement component.

Suffix:
<m> 1..2
<n> 1..29
See Table 27-14

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "Component specific results" on page 1171

ADVJitter<m>:RESult:COMPonents<n>:PEAKpeak?

Queries the absolute/peak to peak value of the specified jitter component.

Suffix:
<m> 1..2

<n> 1..29
See Table 27-14

Return values:
<PeakValue> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0

Usage: Query only

ADVJitter<m>:RESult:COMPonents<n>:SPECtrum <State>

Enables a spectrum diagram for the selected measurement component.

Suffix:
<m> 1..2

<n> 1..29
See Table 27-14

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "Component specific results" on page 1171

ADVJitter<m>:RESult:COMPonents<n>:STDDev?

Queries the standard deviation value of the selected component.

Suffix:
<m> 1..2

<n> 1..29
See Table 27-14

Return values:
<StdDevValue> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0

Usage: Query only

ADVJitter<m>:RESult:COMPonents<n>:TRACk <State>

Enables a track for the advanced jitter measurements.

Suffix:
<m> 1..2
<n> 1..29
See Table 27-14

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "Component specific results" on page 1171

ADVJitter<m>:RESult:UNIT <UnitType>

Selects between the absolute and relative unit for the displayed results.

Suffix:
<m> 1..2

Parameters:
<UnitType> ABS | REL
*RST: ABS

Manual operation: See "Unit" on page 1173

ADVJitter<m>:RESult:COMPonents<n>:STATistics:MAXPeakpeak?
ADVJitter<m>:RESult:COMPonents<n>:STATistics:MAXStddev?
ADVJitter<m>:RESult:COMPonents<n>:STATistics[:MINStddev]?
ADVJitter<m>:RESult:COMPonents<n>:STATistics:MINPeakpeak?
ADVJitter<m>:RESult:COMPonents<n>:STATistics:WFMCount?

Return the statistic results of the specified measurement.

- `MAXPeakpeak`: absolute maximum value of the component.
- `MAXStddev`: standard deviation of the maximum value.
- `MINPeakpeak`: absolute minimum value of the component.
- `MINStddev`: standard deviation of the minimum value.
- `WFMCount`: number of waveforms (acquisitions) the measurement is based on.

Suffix:
<m> 1..2
<n> 1..29
See Table 27-14

Return values:
<Value> Range: 0 to 4E+9
Increment: 1
*RST: 0

Usage: Query only

ADVJitter<m>:RESult:PERiodic<n>:COUNt?

Returns the number of periodic components.

Suffix:
<m> 1..2

<n> *
Not relevant

Return values:
<Count>

Usage: Query only

ADVJitter<m>:RESult:PERiodic<n>:DIRection?

Returns the direction of the selected periodic component.

Suffix:
<m> 1..2

<n> *
Number of periodic components.

Return values:
<CompDirection> UNDefined | VERTical | HOEXtrinsic | HOINtrinsic
`HOEXtrinsic`: horizontal extrinsic
`HOINtrinsic`: horizontal intrinsic
*RST: UNDefined

Usage: Query only

ADVJitter<m>:RESult:PERiodic<n>:VALue?

Returns the value of the selected periodic component.

Suffix:
<m> 1..2

<n> *
Number of periodic components.

Return values:
<CompValue> Range: -1000 to 1000
Increment: 0
*RST: 0

Usage: Query only

ADVJitter<m>:RESult:PERiodic<n>[:FREQuency]?

Returns the frequency of the selected periodic component.

Suffix:
<m> 1..2
<n> *
Number of periodic components.

Return values:
<FreqValue> Range: 0 to 1E+15
Increment: 0
*RST: 0
Default unit: Hz

Usage: Query only

Measurements

ADVJitter<m>:DCOMposition:CLEBasicmeas 2913
ADVJitter<m>:DCOMposition:SELBasicmeas 2913
ADVJitter<m>:DCOMposition:CLEJitcomp 2913
ADVJitter<m>:DCOMposition:SELJitcomp 2914
ADVJitter<m>:DCOMposition:CLENoisecomp 2914
ADVJitter<m>:DCOMposition:SELNoisecomp 2914
ADVJitter<m>:RESult:TRANsitions 2914
ADVJitter<m>:RESult:LEVels 2915

ADVJitter<m>:DCOMposition:CLEBasicmeas

Clears all selected basic jitter components.

Suffix:
<m> 1..2

Usage: Event
Asynchronous command

Manual operation: See "Select all /Clear" on page 1175

ADVJitter<m>:DCOMposition:SELBasicmeas

Selects all basic jitter components.

Suffix:
<m> 1..2

Usage: Event
Asynchronous command

Manual operation: See "Select all /Clear" on page 1175

ADVJitter<m>:DCOMposition:CLEJitcomp

Clears all selected jitter components.

Suffix:
<m> 1..2

Usage: Event
Asynchronous command

Manual operation: See "Select all /Clear" on page 1179

ADVJitter<m>:DCOMposition:SELJitcomp

Selects all jitter components.

Suffix:
<m> 1..2

Usage: Event
Asynchronous command

Manual operation: See "Select all /Clear" on page 1179

ADVJitter<m>:DCOMposition:CLENoisecomp

Clears all selected noise components.

Suffix:
<m> 1..2

Usage: Event
Asynchronous command

Manual operation: See "Select all /Clear" on page 1183

ADVJitter<m>:DCOMposition:SELNoisecomp

Selects all noise components.

Suffix:
<m> 1..2

Usage: Event
Asynchronous command

Manual operation: See "Select all /Clear" on page 1183

ADVJitter<m>:RESult:TRANsitions <TransitionType>

Sets the measurements for which transitions are displayed in the diagram.

Suffix:
<m> 1..2

Parameters:
<TransitionType> RISing | FALLing | BOTH
*RST: BOTH

Manual operation: See "Transitions" on page 1179

ADVJitter<m>:RESult:LEVels <LevelType>

Sets which levels are considered for the display of the diagrams, rising, falling or both. This setting is mostly relevant for histograms.

Suffix:
<m> 1..2

Parameters:
<LevelType> HIGH | LOW | BOTH
*RST: BOTH

Manual operation: See "Levels" on page 1184

Bathtub

ADVJitter<m>:DCOMposition:TARBer....2915
ADVJitter<m>:RESult:BATHtub....2915
ADVJitter<m>:RESult:PJ....2916
ADVJitter<m>:RESult:OBUJ....2916
ADVJitter<m>:RESult:NBAThtub....2916
ADVJitter<m>:RESult:PN....2916
ADVJitter<m>:RESult:OBUN....2917

ADVJitter<m>:DCOMposition:TARBer <TargetBtErrRate>

Sets the target bit error rate for total jitter at BER components.

Suffix:
<m> 1..2

Parameters:
<TargetBtErrRate> Range: 1 to 32
Increment: 1
*RST: 12

Manual operation: See "Target BER 10" on page 1184

ADVJitter<m>:RESult:BATHtub <State>

Enables a bathtub plot for the advanced jitter measurements.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "DDJ bathtub" on page 1184

ADVJitter<m>:RESult:PJ <State>

If enabled, the periodic jitter components are considered for the jitter bathtub.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: ON

Manual operation: See "PJ / (O)BUJ components" on page 1185

ADVJitter<m>:RESult:OBUJ <State>

If enabled, the other bounded uncorrelated jitter components are considered for the jitter bathtub.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: ON

Manual operation: See "PJ / (O)BUJ components" on page 1185

ADVJitter<m>:RESult:NBAThtub <State>

Enables a noise bathtub plot, a graph of BER in a log scale versus data-dependent jitter (DDN).

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "DDN bathtub" on page 1185

ADVJitter<m>:RESult:PN <State>

If enabled, the periodic noise components are considered for the noise bathtub.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: ON

Manual operation: See "PN / (O)BUN components" on page 1187

ADVJitter<m>:RESult:OBUN <State>

If enabled, the other bounded uncorrelated noise components are considered for the noise bathtub.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: ON

Manual operation: See "PN / (O)BUN components" on page 1187

Eye

ADVJitter<m>:RESult:PHORizontal 2917
ADVJitter<m>:RESult:PVERtical 2917
ADVJitter<m>:RESult:SYNTheticeye 2917

ADVJitter<m>:RESult:PHORizontal <State>

If enabled, adds horizontal periodic components to the data-dependent synthetic eye.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "Add periodic components to DD synthetic eye" on page 1188

ADVJitter<m>:RESult:PVERtical <State>

If enabled, adds vertical periodic components to the data-dependent synthetic eye.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "Add periodic components to DD synthetic eye" on page 1188

ADVJitter<m>:RESult:SYNTheticeye <State>

Selects if you want to display synthetic eye results only for the deterministic jitter (DJ) components or the data-dependent jitter (DDJ) components.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "Synthetic eye" on page 1187

Quality

ADVJitter<m>:DCOMposition:ERRSignal 2918
ADVJitter<m>:DCOMposition:RECSignal 2918

ADVJitter<m>:DCOMposition:ERRSignal <ShwErrSign>

If enabled, shows the error signal.

Suffix:
<m> 1..2

Parameters:
<ShwErrSign> OFF | ON
*RST: OFF

Manual operation: See "Error signal" on page 1189

ADVJitter<m>:DCOMposition:RECSignal <ShwReconstructedSign>

If enabled, shows the reconstructed signal.

Suffix:
<m> 1..2

Parameters:
<ShwReconstructedSign> OFF | ON
*RST: OFF

Manual operation: See "Reconstructed signal" on page 1189

Diagram

ADVJitter<m>:RESult:VERTical:HBINs 2919
ADVJitter<m>:RESult:VERTical:CONTinuous 2919
ADVJitter<m>:RESult:VERTical:BMTYpe 2919
ADVJitter<m>:RESult:VERTical:BHContinuous 2920
ADVJitter<m>:RESult:VERTical:JSContinuous 2920
ADVJitter<m>:RESult:VERTical:NHContinuous 2920
ADVJitter<m>:RESult:VERTical:NSContinuous 2921
ADVJitter<m>:DCOMposition:SPJTable 2921
ADVJitter<m>:DCOMposition:SPJLabels 2921
ADVJitter<m>:DCOMposition:SPNLabels 2922
ADVJitter<m>:DCOMposition:JINTerleaved 2922

ADVJitter<m>:RESult:COMPonents<n>:HOFFset 2922
ADVJitter<m>:RESult:COMPonents<n>:HSCale 2922
ADVJitter<m>:RESult:COMPonents<n>:NOFFset 2923
ADVJitter<m>:RESult:COMPonents<n>:NSCale 2923
ADVJitter<m>:RESult:COMPonents<n>:NSPoffset 2923
ADVJitter<m>:RESult:COMPonents<n>:NSPScale 2924
ADVJitter<m>:RESult:COMPonents<n>:SDOFfset 2924
ADVJitter<m>:RESult:COMPonents<n>:SDSCale 2924
ADVJitter<m>:RESult:COMPonents<n>:SOFFset 2925
ADVJitter<m>:RESult:COMPonents<n>:SROFfset 2925
ADVJitter<m>:RESult:COMPonents<n>:SRSCale 2925
ADVJitter<m>:RESult:COMPonents<n>:SSCale 2926

ADVJitter<m>:RESult:VERTical:HBINs <MaxBinNumber>

Sets the number of bins, the number of data intervals, of the histogram.

Suffix:
<m> 1..2

Parameters:
<MaxBinNumber> Range: 2 to 1000
Increment: 10
*RST: 200

Manual operation: See "Max. numb of bins" on page 1189

ADVJitter<m>:RESult:VERTical:CONTinuous <State>

If enabled, the measurement scale is set automatically.

If disabled you can manually set a scale and an offset.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: ON

Manual operation: See "Continuous auto scale" on page 1190

ADVJitter<m>:RESult:VERTical:BMTYpe <MeasType>

Selects the basic measurement type to apply the vertical scale to.

Suffix:
<m> 1..2

Parameters:

<MeasType> SBRate | SBDuration

`SBRate`: Symbol rate

`SBDuration`: Symbol duration

*RST: SBRate

Manual operation: See "Measurement type" on page 1190

ADVJitter<m>:RESult:VERTical:BHContinuous <State>

If enabled, the measurement scale of the basic jitter measurement histogram and track is set automatically.

If disabled you can manually set a scale and an offset.

Suffix:

<m> 1..2

Parameters:

<State> OFF | ON

*RST: ON

Manual operation: See "Continuous auto scale" on page 1190

ADVJitter<m>:RESult:VERTical:JSContinuous <State>

If enabled, the measurement scale of the jitter spectrum is set automatically.

If disabled you can manually set a scale (`ADVJitter<m>:RESult:COMPonents<n>:SSCale`) and an offset (`ADVJitter<m>:RESult:COMPonents<n>:SOFFset`).

Suffix:

<m> 1..2

Parameters:

<State> OFF | ON

*RST: ON

Manual operation: See "Continuous auto scale" on page 1190

ADVJitter<m>:RESult:VERTical:NHContinuous <State>

If enabled, the measurement scale of the noise histogram and track is set automatically.

If disabled you can manually set a scale (`ADVJitter<m>:RESult:COMPonents<n>:NSCale`) and an offset (`ADVJitter<m>:RESult:COMPonents<n>:NOFFset`

) .

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: ON

Manual operation: See "Continuous auto scale" on page 1190

ADVJitter<m>:RESult:VERTical:NSContinuous <State>

If enabled, the measurement scale for the noise spectrum is set automatically.

If disabled you can manually set a scale (`ADVJitter<m>:RESult:COMPonents<n>:NSPScale`) and an offest (`ADVJitter<m>:RESult:COMPonents<n>:NSPoffset`).

.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: ON

Manual operation: See "Continuous auto scale" on page 1190

ADVJitter<m>:DCOMposition:SPJTable <State>

Enables the display of the periodic jitter components table.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: ON

Manual operation: See "PJ periodic component table" on page 1191

ADVJitter<m>:DCOMposition:SPJLabels <State>

Enables the display of the periodic jitter components labels.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "PJ periodic component labels" on page 1191

ADVJitter<m>:DCOMposition:SPNLabels <State>

Enables the display of the periodic noise components labels.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "PJ periodic component labels" on page 1191

ADVJitter<m>:DCOMposition:JINTerleaved <State>

Displays interleaved histogram values.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "Interleaved" on page 1189

ADVJitter<m>:RESult:COMPonents<n>:HOFFset <Offset>

Sets the offset for the jitter track.

Suffix:
<m> 1..2
<n> 1..29

Parameters:
<Offset> Range: -1E+15 to 1E+15
Increment: 1E-6
*RST: 0
Default unit: s

Manual operation: See "Offset" on page 1190

ADVJitter<m>:RESult:COMPonents<n>:HSCale <Scale>

Sets the vertical scaling per division for the jitter track.

Suffix:
<m> 1..2
<n> 1..29

Parameters:

<Scale>
Range: 1E-15 to 1E+15
Increment: 10E-6
*RST: 0.5
Default unit: s/div

Manual operation: See "Scale" on page 1190

ADVJitter<m>:RESult:COMPonents<n>:NOFFset <Offset>

Sets the offset for the noise track.

Suffix:

<m> 1..2

<n> 1..29

Parameters:

<Offset>
Range: -1E+15 to 1E+15
Increment: 1E-6
*RST: 0
Default unit: V

Manual operation: See "Offset" on page 1190

ADVJitter<m>:RESult:COMPonents<n>:NSCale <Scale>

Sets the vertical scaling per division for the noise track.

Suffix:

<m> 1..2

<n> 1..29

Parameters:

<Scale>
Range: 1E-15 to 1E+15
Increment: 10E-6
*RST: 0.5
Default unit: V/div

Manual operation: See "Scale" on page 1190

ADVJitter<m>:RESult:COMPonents<n>:NSPoffset <Offset>

Sets the offset for the noise spectrum.

Suffix:

<m> 1..2

<n> 1..29

Parameters:

<Offset>
Range: -500 to 500
Increment: 1
*RST: 0
Default unit: dBV

Manual operation: See "Offset" on page 1191

ADVJitter<m>:RESult:COMPonents<n>:NSPScale <Scale>

Sets the vertical scaling per division for the spectrum noise.

Suffix:

<m> 1..2

<n> 1..29

Parameters:

<Scale>
Range: 0.1 to 500
Increment: 10E-6
*RST: 100
Default unit: dBV

Manual operation: See "Scale" on page 1191

ADVJitter<m>:RESult:COMPonents<n>:SDOFfset <Offset>

Sets the offset for the symbol duration.

Suffix:

<m> 1..2

<n> 1..29

Parameters:

<Offset>
Range: -1E+15 to 1E+15
Increment: 1E-6
*RST: 0
Default unit: s

Manual operation: See "Offset" on page 1190

ADVJitter<m>:RESult:COMPonents<n>:SDSCale <Scale>

Sets the scale for the symbol duration.

Suffix:

<m> 1..2

<n> 1..29

Parameters:

<Scale>
Range: 1E-15 to 1E+15
Increment: 10E-6
*RST: 0.5
Default unit: s/div

Manual operation: See "Scale" on page 1190

ADVJitter<m>:RESult:COMPonents<n>:SOFFset <Offset>

Sets the offset for the spectrum jitter.

Suffix:

<m> 1..2

<n> 1..29

Parameters:

<Offset>
Range: -500 to 500
Increment: 1
*RST: 0
Default unit: dBs

Manual operation: See "Offset" on page 1191

ADVJitter<m>:RESult:COMPonents<n>:SROFfset <Offset>

Sets the offset for the symbol rate.

Suffix:

<m> 1..2

<n> 1..29

Parameters:

<Offset>
Range: -1E+15 to 1E+15
Increment: 1E-6
*RST: 0
Default unit: Baud

Manual operation: See "Offset" on page 1190

ADVJitter<m>:RESult:COMPonents<n>:SRSCale <Scale>

Sets the scale for the symbol rate.

Suffix:

<m> 1..2

<n> 1

Parameters:

<Scale>
Range: 1E-15 to 1E+15
Increment: 10E-6
*RST: 0.5
Default unit: Baud

Manual operation: See "Scale" on page 1190

ADVJitter<m>:RESult:COMPonents<n>:SSCale <Scale>

Sets the vertical scaling per division for the spectrum jitter.

Suffix:

<m> 1..2

<n> 1..29

Parameters:

<Scale>
Range: 0.1 to 500
Increment: 10E-6
*RST: 100
Default unit: dBs

Manual operation: See "Scale" on page 1191

PAM-N Jitter

Requires option R&S RTO6-K135.

ADVJitter<m>:RESult:PAMJitter:RESult<n>:MEASurement<mg>:STDDev?.....2933

ADVJitter<m>:RESult:PAMJitter:CONFig:BASE <BaseLevel>

Selects the base level, the lowest amplitude level used in the modulation.

Suffix:
<m> 1..2

Parameters:
<BaseLevel> LEVEL0 | LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6

*RST: LEVEL0

ADVJitter<m>:RESult:PAMJitter:CONFig:CATegory<n>:ACTive?

Returns a list the number of active components.

Suffix:
<m> 1..2

<n> 1..3
Selects the component category
1: Numeric results
2: Histogram
3: Track

Return values:
<ActComponents> Range: 0 to 20
Increment: 1
*RST: 0

Usage: Query only

ADVJitter<m>:RESult:PAMJitter:CONFig:CATegory<n>:ADD
<Measurement>,<BaseLevel>,<TargetLevel>,[<Edge>],[<Color>]

Adds a new jitter result measurement.

Suffix:
<m> 1..2

<n> 1..3
Selects the component category
1: Numeric results
2: Histogram
3: Track

Setting parameters:
<Measurement> TJBER | RJOBuj | DJDD | TJ | DJ | DDJ | DCDJ | PJ | ISI | DDPJ | OBUJ | BUJDd | RJ | ALL

<BaseLevel>

<TargetLevel>

<Edge> RISing | FALLing | BOTH

<Color>

Example: `ADVJitter:RESult:PAMJitter:CONFig:CATegory:ADD TJBer,0,1,FALL,523454`
Adds a TJ@BER measurement with a Base level=0, Target level=1, Falling edge and Color = Hex #523454

Usage: Setting only

Manual operation: See "Add" on page 1194

ADVJitter<m>:RESult:PAMJitter:CONFig:CATegory<n>:MEASurement<mg>:BASE <BaseLevel>

Selects the base level. This is the lowest amplitude level used in the modulation. It sets the reference point for the least amount of energy a pulse can carry in the system.

Suffix:
<m> 1..2

<n> 1..3
Selects the component category
1: Numeric results
2: Histogram
3: Track

<mg> 1..13
Selects the index of the active component

Parameters:
<BaseLevel> LEVEL0 | LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6 | LEVEL7

Manual operation: See "Base" on page 1193

ADVJitter<m>:RESult:PAMJitter:CONFig:CATegory<n>:MEASurement<mg>:COLor <Color>

Selects the color of the active component.

Suffix:
<m> 1..2

<n> 1..3
Selects the component category
1: Numeric results
2: Histogram
3: Track

<mg> 1..13
Selects the active component

Parameters:
<Color>

Manual operation: See "Color" on page 1194

ADVJitter<m>:RESult:PAMJitter:CONFig:CATegory<n>:MEASurement<mg>:COMPonent <Component>

Selects the component type.

Suffix:
<m> 1..2

<n> 1..3
Selects the component category
1: Numeric results
2: Histogram
3: Track

<mg> 1..13
Selects the index of the active component

Parameters:
<Component> AMPLitude | MAXimum | MINimum | PDELta | MEAN | RTIMe | FTIMe | PROBemeter | SLERising | SLEFalling | SIGNallevel | ERATio | ERPercent | ERDB | EHEight | EWIDth | ETOP | EBASe | CPOints | CPPercent | QFACtor | SDNoise | BER | PPNoise | RMSNoise | SNRatio | DCDistortion | ERTime | EFTime | EBRate | EAMPlitude | EOFactor | EPWidth | EDCYcle | ECRatio | PJITter | CJITter | TIERror | PPJitter | STDJitter | RMSJitter | TJBER | RJOBuj | DJDD | TJ | DJ | DDJ | DCDJ | PJ | ISI | DDPJ | OBUJ | BUJDd | RJ | EHBER | ROBN | DNDD | TN | DN | DDN | LDN | PN | ISIN | DDPN | OBUN | BUNDd | RN | ALL

Manual operation: See "Component" on page 1193

ADVJitter<m>:RESult:PAMJitter:CONFig:CATegory<n>:MEASurement<mg>:TARGet <TargetLevel>

Selects the target level.

Suffix:
<m> 1..2

<n> 1..3
Selects the component category
1: Numeric results
2: Histogram
3: Track

<mg> 1..13
Selects the index of the active component

Parameters:
<TargetLevel> LEVEL0 | LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6 | LEVEL7

Manual operation: See "Target" on page 1194

ADVJitter<m>:RESult:PAMJitter:CONFig:CATegory<n>:MEASurement<mg>:TRANsition <Transition>

Selects which transitions are considered for the display of the diagrams, rising or falling.

Suffix:
<m> 1..2

<n> 1..3
Selects the component category
1: Numeric results
2: Histogram
3: Track

<mg> 1..13

Parameters:
<Transition> RISing | FALLing

Manual operation: See "Transition" on page 1194

ADVJitter<m>:RESult:PAMJitter:CONFig:CATegory<n>:REMove [<Index>]

Removes the last component added to the category.

Suffix:
<m> 1..2

<n> 1..3
Selects the component category
1: Numeric results
2: Histogram
3: Track

Setting parameters:
<Index>

Usage: Setting only

ADVJitter<m>:RESult:PAMJitter:CONFig:COMPonent <Component>

Selects the component type.

Suffix:
<m> 1..2

Parameters:
<Component> AMPLitude | MAXimum | MINimum | PDELta | MEAN | RTIMe | FTIMe | PROBemeter | SLERising | SLEFalling | SIGNallevel | ERATio | ERPercent | ERDB | EHEight | EWIDth | ETOP | EBASe | CPOints | CPPercent | QFACtor | SDNoise | BER | PPNoise | RMSNoise | SNRatio | DCDistortion | ERTime | EFTime | EBRate | EAMPlitude | EOFactor | EPWidth | EDCYcle | ECRatio | PJITter | CJITter | TIERror | PPJitter | STDJitter | RMSJitter | TJBER | RJOBuj | DJDD | TJ | DJ | DDJ | DCDJ | PJ | ISI | DDPJ | OBUJ | BUJDd | RJ | EHBER | ROBN | DNDD | TN | DN | DDN | LDN | PN | ISIN | DDPN | OBUN | BUNDd | RN | ALL

See Table 27-14.

*RST: ALL

Manual operation: See "Component" on page 1193

ADVJitter<m>:RESult:PAMJitter:CONFig:ENABle <Enable>

Enables the jitter measurements for PAM-N signals.

Suffix:
<m> 1..2

Parameters:
<Enable> OFF | ON

*RST: OFF

Manual operation: See "PAM-N results" on page 1192

ADVJitter<m>:RESult:PAMJitter:CONFig:EXPLicit <ExplicitLevel>

Sets an explicit level to be set for all active jitter components.

Suffix:
<m> 1..2

Parameters:
<ExplicitLevel> LEVEL0 | LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6 | LEVEL7

*RST: LEVEL1

Manual operation: See "Selection mode" on page 1193

ADVJitter<m>:RESult:PAMJitter:CONFig:LVLHeight <LevelHeight>

Sets a level height, level difference between the base and target level for all active components.

Suffix:
<m> 1..2

Parameters:
<LevelHeight> LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6 | LEVEL7
*RST: LEVEL1

Manual operation: See "Selection mode" on page 1193

ADVJitter<m>:RESult:PAMJitter:CONFig:MODE <Mode>

Selects if you want to add pre-defined user configurations to the active components or define your own user-defined settings.

Suffix:
<m> 1..2

Parameters:
<Mode> PREDefined | USERdefined
*RST: PREDefined

Manual operation: See "Mode" on page 1193

ADVJitter<m>:RESult:PAMJitter:CONFig:PRESet

Adds a pre-defined preset configuration for the selected component to the active components.

Suffix:
<m> 1..2

Usage: Event

Manual operation: See "Preset" on page 1193

ADVJitter<m>:RESult:PAMJitter:CONFig:SELMode <SelectionMode>

Selects how the level difference between the base and target level of the PAM-N signal is defined.

Suffix:
<m> 1..2

Parameters:
<SelectionMode> HEIGht | EXPLicit
*RST: HEIGht

Manual operation: See "Selection mode" on page 1193

ADVJitter<m>:RESult:PAMJitter:CONFig:TARGet <TargetLevel>

Selects the target level.

Suffix:
<m> 1..2

Parameters:
<TargetLevel> LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6 | LEVEL7
*RST: LEVEL1

ADVJitter<m>:RESult:PAMJitter:RESult<n>:MEASurement<mg>:MAXPeakpeak?
ADVJitter<m>:RESult:PAMJitter:RESult<n>:MEASurement<mg>:MAXStddev?
ADVJitter<m>:RESult:PAMJitter:RESult<n>:MEASurement<mg>:MINPeakpeak?
ADVJitter<m>:RESult:PAMJitter:RESult<n>:MEASurement<mg>:MINStddev?
ADVJitter<m>:RESult:PAMJitter:RESult<n>:MEASurement<mg>:PEAKpeak?
ADVJitter<m>:RESult:PAMJitter:RESult<n>:MEASurement<mg>:WFMCount?
ADVJitter<m>:RESult:PAMJitter:RESult<n>:MEASurement<mg>:STDDev?

Return the statistic results of the specified jitter measurement for PAM-N signals.

- `MAXPeakpeak`: absolute maximum value of the component.
- `MAXStddev`: standard deviation of the maximum value.
- `MINPeakpeak`: absolute minimum value of the component.
- `MINStddev`: standard deviation of the minimum value.
- `PEAKpeak`: peak to peak value of the long-term measurement results.
- `WFMCount`: number of waveforms (acquisitions) the measurement is based on.
- `STDDev`: standard deviation of the long-term measurement results.

Suffix:
<m> 1..2
<n> 1
<mg> 1..13
Selects the active component

Return values:
<Value> Numeric result

Usage: Query only

ADVJitter<m>:RESult:PAMNoise:RESult<n>:MEASurement<mg>:STDDev?....2939

ADVJitter<m>:RESult:PAMNoise:CONFig:BASE <BaseLevel>

Selects the base level. This is the lowest amplitude level used in the modulation.

Suffix:
<m> 1..2

Parameters:
<BaseLevel> LEVEL0 | LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6

*RST: LEVEL0

Manual operation: See "Level" on page 1195

ADVJitter<m>:RESult:PAMNoise:CONFig:CATegory<n>:ACTive?

Returns a list of the active components.

Suffix:
<m> 1..2

<n> 1..3
Selects the component category
1: Numeric results
2: Histogram
3: Track

Return values:
<ActComponents> Range: 0 to 20
Increment: 1
*RST: 0

Usage: Query only

Manual operation: See "Active components" on page 1196

ADVJitter<m>:RESult:PAMNoise:CONFig:CATegory<n>:ADD
<Measurement>,<Level>,[<Color>]

Adds a new noise result measurement to the active components table of the selected category.

Suffix:
<m> 1..2

<n> 1..3
Selects the component category
1: Numeric results
2: Histogram
3: Track

Setting parameters:
<Measurement> EHBER | ROBN | DNDD | TN | DN | DDN | LDN | PN | ISIN | DDPN | OBUN | BUNDd | RN | ALL

<Level>

<Color>

Example: `:ADVJitter:RESult:PAMNoise:CONFig:CATegory:ADD EHBer,1,523454`
Adds a EH@BER measurement with a Level=1 and Color = Hex #523454

Usage: Setting only

Manual operation: See "Add" on page 1196

ADVJitter<m>:RESult:PAMNoise:CONFig:CATegory<n>:MEASurement<mg>:BASE <BaseLevel>

Selects the base level. This is the lowest amplitude level used in the modulation. It sets the reference point for the least amount of energy a pulse can carry in the system.

Suffix:
<m> 1..2

<n> 1..3
Selects the component category
1: Numeric results
2: Histogram
3: Track

<mg> 1..13
Selects the index of the active component

Parameters:
<BaseLevel> LEVEL0 | LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6 | LEVEL7

Manual operation: See "Level" on page 1196

ADVJitter<m>:RESult:PAMNoise:CONFig:CATegory<n>:MEASurement<mg>:COLor <Color>

Selects the color of the active component.

Suffix:
<m> 1..2

<n> 1..3
Selects the component category
1: Numeric results
2: Histogram
3: Track

<mg> 1..13
Selects the active component

Parameters:
<Color>

Manual operation: See "Color" on page 1196

ADVJitter<m>:RESult:PAMNoise:CONFig:CATegory<n>:MEASurement<mg>:
COMPonent <Component>

Selects the component type.

Suffix:
<m> 1..2

<n> 1..3
Selects the component category
1: Numeric results
2: Histogram
3: Track

<mg> 1..13
Selects the index of the active component

Parameters:
<Component> AMPLitude | MAXimum | MINimum | PDELta | MEAN | RTIMe | FTIMe | PROBemeter | SLERising | SLEFalling | SIGNallevel | ERATio | ERPercent | ERDB | EHEight | EWIDth | ETOP | EBASe | CPOints | CPPercent | QFACtor | SDNoise | BER | PPNoise | RMSNoise | SNRatio | DCDistortion | ERTime | EFTime | EBRate | EAMPlitude | EOFactor | EPWidth | EDCYcle | ECRatio | PJITter | CJITter | TIERror | PPJitter | STDJitter | RMSJitter | TJBER | RJOBuj | DJDD | TJ | DJ | DDJ | DCDJ | PJ | ISI | DDPJ | OBUJ | BUJDd | RJ | EHBER | ROBN | DNDD | TN | DN | DDN | LDN | PN | ISIN | DDPN | OBUN | BUNDd | RN | ALL

Manual operation: See "Component" on page 1196

ADVJitter<m>:RESult:PAMNoise:CONFig:CATegory<n>:MEASurement<o>:
DIAGram <ShowDiagram>

Enables the display of the dieagram for the selected measurement.

Suffix:
<m> 1..2

<n> 1..3
Selects the component category
1: Numeric results
2: Histogram
3: Track

<o> 1..13
Selects the index of the active component

Parameters:
<ShowDiagram> ON | OFF
*RST: OFF

ADVJitter<m>:RESult:PAMNoise:CONFig:CATegory<n>:REMove [<Index>]

Removes the last added line in the active components table of the selected category.

Suffix:
<m> 1..2

<n> 1..3
Selects the component category
1: Numeric results
2: Histogram
3: Track

Setting parameters:
<Index>

Example: `ADVJitter1:RESult:PAMNoise:CONFig:CATegory1:REMove`

Usage: Setting only

Manual operation: See "Remove" on page 1194

ADVJitter<m>:RESult:PAMNoise:CONFig:COMPonent <Component>

Selects the component type.

Suffix:
<m> 1..2

Parameters:

<Component> AMPLitude | MAXimum | MINimum | PDELta | MEAN | RTIMe | FTIMe | PROBemeter | SLERising | SLEFalling | SIGNallevel | ERATio | ERPercent | ERDB | EHEight | EWIDth | ETOP | EBASe | CPOints | CPPercent | QFACtor | SDNoise | BER | PPNoise | RMSNoise | SNRatio | DCDistortion | ERTime | EFTime | EBRate | EAMPlitude | EOFactor | EPWidth | EDCYcle | ECRatio | PJITter | CJITter | TIERror | PPJitter | STDJitter | RMSJitter | TJBER | RJOBuj | DJDD | TJ | DJ | DDJ | DCDJ | PJ | ISI | DDPJ | OBUJ | BUJDd | RJ | EHBER | ROBN | DNDD | TN | DN | DDN | LDN | PN | ISIN | DDPN | OBUN | BUNDd | RN | ALL

See Table 27-14

*RST: ALL

Manual operation: See "Component" on page 1195

ADVJitter<m>:RESult:PAMNoise:CONFig:ENABle <Enable>

Enables the noise measurements for PAM-N signals.

Suffix:

<m> 1..2

Parameters:

<Enable> OFF | ON

*RST: OFF

Manual operation: See "PAM-N results" on page 1195

ADVJitter<m>:RESult:PAMNoise:CONFig:MODE <Mode>

Selects if you want to add pre-defined user configurations to the active components or define your own user-defined settings.

Suffix:

<m> 1..2

Parameters:

<Mode> PREDefined | USERdefined

*RST: PREDefined

Manual operation: See "Mode" on page 1195

ADVJitter<m>:RESult:PAMNoise:CONFig:PRESet

Adds a pre-defined preset configuration for the selected component to the active components.

Suffix:

<m> 1..2

Usage: Event

Manual operation: See "Preset" on page 1196

ADVJitter<m>:RESult:PAMNoise:RESult<n>:MEASurement<mg>:MAXPeakpeak?
ADVJitter<m>:RESult:PAMNoise:RESult<n>:MEASurement<mg>:MAXStddev?
ADVJitter<m>:RESult:PAMNoise:RESult<n>:MEASurement<mg>:MINPeakpeak?
ADVJitter<m>:RESult:PAMNoise:RESult<n>:MEASurement<mg>:MINStddev?
ADVJitter<m>:RESult:PAMNoise:RESult<n>:MEASurement<mg>:PEAKpeak?
ADVJitter<m>:RESult:PAMNoise:RESult<n>:MEASurement<mg>:WFMCount?
ADVJitter<m>:RESult:PAMNoise:RESult<n>:MEASurement<mg>:STDDev?

Return the statistic results of the specified noise measurement for PAM-N signals.

- `MAXPeakpeak`: absolute maximum value of the component.
- `MAXStddev`: standard deviation of the maximum value.
- `MINPeakpeak`: absolute minimum value of the component.
- `MINStddev`: standard deviation of the minimum value.
- `PEAKpeak`: peak to peak value of the long-term measurement results.
- `WFMCount`: number of waveforms (acquisitions) the measurement is based on.
- `STDDev`: standard deviation of the long-term measurement results.

Suffix:

<m> 1..2

<n> 1

<mg> 1..13
Selects the active component

Return values:

<Value> Numeric result value

Usage: Query only

27.23.2.3 Advanced settings

ADVJitter<m>:DCOMposition:MRESplength? 2939
ADVJitter<m>:DCOMposition:RLEStimate 2940
ADVJitter<m>:DCOMposition:POSStep 2940
ADVJitter<m>:DCOMposition:RESPlength 2940
ADVJitter<m>:DCOMposition:ENP 2941
ADVJitter<m>:DCOMposition:NHORizontal 2941
ADVJitter<m>:DCOMposition:NVERtical 2941
ADVJitter<m>:DCOMposition:ENOBu 2941
ADVJitter<m>:DCOMposition:STEPresponse 2942

ADVJitter<m>:DCOMposition:MRESplength?

Queries the estimated maximum step length response.

Suffix:
<m> 1..2

Return values:
<MaxLength> Range: 1 to 200
Increment: 1
*RST: 20
Default unit: UI

Usage: Query only

Manual operation: See "Length" on page 1198

ADVJitter<m>:DCOMposition:RLEStimate

Runs an estimate of the step response for the advanced jitter analysis measurements.

Suffix:
<m> 1..2

Usage: Event
Asynchronous command

Manual operation: See "Length" on page 1198

ADVJitter<m>:DCOMposition:POSStep <Position>

Sets the steps position.

Suffix:
<m> 1..2

Parameters:
<Position> Range: 0 to 100
Increment: 1
*RST: 50
Default unit: %

Manual operation: See "Step position" on page 1198

ADVJitter<m>:DCOMposition:RESPlength <Length>

Set the step response length in unit intervals.

Suffix:
<m> 1..2

Parameters:
<Length> Range: 1 to 200
Increment: 1
*RST: 20
Default unit: UI

Manual operation: See "Length" on page 1198

ADVJitter<m>:DCOMposition:ENP <State>

Enables the display of the periodic jitter components table.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: ON

Manual operation: See "Enable" on page 1198

ADVJitter<m>:DCOMposition:NHORizontal <MaxNumber>

Sets the maximum number of periodic components in the horizontal direction that are considered for the measurement. If the actual number of periodic components is higher than the set value, they are considered for the random jitter component.

Suffix:
<m> 1..2

Parameters:
<MaxNumber> Range: 0 to 10
Increment: 1
*RST: 5

Manual operation: See "Horizonta (h) direction" on page 1199

ADVJitter<m>:DCOMposition:NVERtical <MaxNumber>

Sets the maximum number of periodic components in the vertical direction that are considered for the measurement. If the actual number of periodic components is higher than the set value, they are considered for the random jitter component.

Suffix:
<m> 1..2

Parameters:
<MaxNumber> Range: 0 to 10
Increment: 1
*RST: 5

Manual operation: See "Vertical (v) direction" on page 1199

ADVJitter<m>:DCOMposition:ENOBu <State>

Enables the selection of the (other) bounded uncorrelated jitter/noise: (O)BUJ, (O)BUJ(δ -δ), RJ, (O)BUN, (O)BUN(δ -δ), RN.

Suffix:
<m> 1..2

Parameters:
<State> OFF | ON
*RST: OFF

Manual operation: See "(Other) bounded uncorrelated" on page 1199

ADVJitter<m>:DCOMposition:STEPresponse <StepResponse>

Selects if separated edges or combined edges are used for the step response calculation.

Suffix:
<m> 1..2

Parameters:
<StepResponse> COMBined | SEParated
*RST: COMBined

Manual operation: See "Step response variant" on page 1197

27.23.3 Clock data recovery (software-based, option R&S RTO6-K12)

CDR:SOFTware<sw>:ALGorithm....2942
CDR:SOFTware<sw>:BITRate....2943
CDR:SOFTware<sw>:CFRequency:CRSYnc[:ENABle]....2943
CDR:SOFTware<sw>:ESLope....2944
CDR:SOFTware<m>:ESSRate:CONTinuous....2944
CDR:SOFTware<sw>:ESSRate:SOURce....2944
CDR:SOFTware<sw>:ESSRate:SREStimate....2945
CDR:SOFTware<sw>:PLL:ORDer....2945
CDR:SOFTware<sw>:PLL:BWIDth....2945
CDR:SOFTware<sw>:PLL:RELBwidth....2946
CDR:SOFTware<sw>:PLL:DAMPing....2946
CDR:SOFTware<sw>:PRSStandard....2946
CDR:SOFTware<sw>:RESults....2947
CDR:SOFTware<sw>:SYMRate....2947
CDR:SOFTware<sw>:SYNC....2947

CDR:SOFTware<sw>:ALGorithm <Algorithm>

Sets the software algorithm that is used for clock data recovery.

Suffix:
<sw> 1..4
Number of the software CDR setup

Parameters:
<Algorithm> CFRequency | PLL | FF | PLLStart | FFSTart

CFRequency
Constant frequency. CDR uses the nominal bit rate to generate the clock signal. The method assumes that the frequency of the signal is constant during the complete acquisition.

PLL
Phase-locked loop control system. It can follow slow deviations in the frequency of the data stream.

FF
Feed forward algorithm, a mathematical optimization method. Feed forward is available if none of the listed serial standards is used (`SIGNalconfig:SETup:SETTing<m>:SERStandard` is set to `CUSTOM`). It is faster than PLL, i.e., the settling time is shorter. Feed forward is also more precise than PLL. To set up the algorithm, set the bandwidth and the relative bandwith.

PLLStart
PLL is the phase-locked loop control system which is locked at the acquisition start.

FFSTart
Feed forward algorithm locked at the acquisition start.

*RST: PLLStart

Usage: Asynchronous command

Manual operation: See "Algorithm" on page 1204

CDR:SOFTware<sw>:BITRate <Bitrate>

Sets the quiescent frequency of the PLL. It corresponds to the data rate of the data stream from which the clock is to be recovered.

Suffix:
<sw> 1..4
Number of the software CDR setup

Parameters:
<Bitrate>
Range: 100 to max {5 Gbps, <available instrument bandwidth}
Increment: 10
*RST: 1E+9
Default unit: bps

Usage: Asynchronous command

Manual operation: See "Nominal bit rate/ Nominal symbol rate" on page 1204

CDR:SOFTware<sw>:CFRequency:CRSYnc[:ENABle] <Sync>

Enables continuous synchronization of the clock with the data signal.

Suffix:
<sw> 1..4
Number of the software CDR setup

Parameters:
<Sync> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Clock resync" on page 1205

CDR:SOFTware<sw>:ESLope <Edge>

Selects the edges of the data stream that are used for the clock recovery.

- "Either": Both positive and negative edges are used.
- "Positive" or "Negative": Only one edge direction is used. Use one of these settings if the other edge delivers unreliable results.

Suffix:
<sw> 1..4
Number of the software CDR setup

Parameters:
<Edge> POSitive | NEGative | EITHer
*RST: EITHer

Usage: Asynchronous command

Manual operation: See "Data edges" on page 1204

CDR:SOFTware<m>:ESSRate:CONTinuous <ContBitrateestim>

Enables ongoing correction of the nominal bit rate.

Suffix:
<m> 1..4
Number of the software CDR setup

Parameters:
<ContBitrateestim> ON | OFF
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Bit rate estimation/Symbol rate estimation" on page 1204

CDR:SOFTware<sw>:ESSRate:SOURce <BitrateSource>

Selects the source of the data stream, which is analized to recover the clock.

Suffix:
<sw> 1..4
Number of the software CDR setup

Parameters:
<BitrateSource> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | DIFF1 | DIFF2 | COMMON1 | COMMON2 | LPDFE1 | LPDFE2 | LPDFE3 | LPDFE4 | LANE1 | LANE2 | LANE3 | LANE4

Usage: Asynchronous command

Manual operation: See "Source" on page 1203

CDR:SOFTware<sw>:ESSRate:SREStimate

Estimates the nominal bit rate once, for the current acquisition.

Suffix:
<sw> 1..4
Number of the software CDR setup

Usage: Event
Asynchronous command

Manual operation: See "Bit rate estimation/Symbol rate estimation" on page 1204

CDR:SOFTware<sw>:PLL:ORDer <PLLOrder>

Sets the order of the PLL: first or second order. PLL of higher order can compensate for more complex jitter behavior.

Suffix:
<sw> 1..4
Number of the software CDR setup

Parameters:
<PLLOrder> FIRSt | SECond
*RST: SECond

Usage: Asynchronous command

Manual operation: See "Algorithm settings" on page 1205

CDR:SOFTware<sw>:PLL:BWIDth <PLLBandwidth>

Sets the PLL bandwidth. It defines the part of the spectrum that the PLL can follow during synchronization. The PLL bandwidth is usually defined by the transmission standard.

Suffix:
<sw> 1..4
Number of the software CDR setup

Parameters:

<PLLBandwidth>
Range: Nominal BITRate * Range of RELBwidth (dependent range)
Increment: 10
*RST: 599.88E+3
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Algorithm settings" on page 1205

CDR:SOFTware<sw>:PLL:RELBwidth <PLLRelBw>

Sets the relative bandwidth, which is the ratio of the nominal bit rate to the PLL bandwidth.

Suffix:

<sw>
1..4
Number of the software CDR setup

Parameters:

<PLLRelBw>
Range: 10 to 10000
Increment: 1
*RST: 1667

Usage: Asynchronous command

Manual operation: See "Algorithm settings" on page 1205

CDR:SOFTware<sw>:PLL:DAMPing <DampingFactor>

Sets the damping factor, which is only relevant for second order PLL.

Suffix:

<sw>
1..4
Number of the software CDR setup

Parameters:

<DampingFactor>
Range: 0.5 to 2
Increment: 0.01
*RST: 0.7

Usage: Asynchronous command

Manual operation: See "Algorithm settings" on page 1205

CDR:SOFTware<sw>:PRSStandard

Sets the settings of the specified software CDR to the serial standard that is selected for the source.

Suffix:

<sw>
1..4
Number of the software CDR setup

Usage: Event
Asynchronous command

Manual operation: See "Source settings" on page 1203

CDR:SOFTware<sw>:RESults <Results>

The PLL requires some time to synchronize to the phase of the data stream. You can select when the CDR algorithm returns clock edges.

Suffix:
<sw> 1..4
Number of the software CDR setup

Parameters:
<Results> ALL | AISYnc

ALL
All clock edges are used.

AISYnc
The clock edges of the synchronization time are discarded; results are gathered after initial synchronization of the CDR. Thus, meaningful TIE measurement results can be obtained.

*RST: ALL

Usage: Asynchronous command

Manual operation: See "Selected results" on page 1205

CDR:SOFTware<sw>:SYMRate <Bitrate>

Sets the quiescent frequency of the PLL. It corresponds to the data rate of the data stream from which the clock is to be recovered.

Suffix:
<sw> 1..4
Number of the software CDR setup

Parameters:
<Bitrate> Range: 100 to 5E+9
Increment: 10
*RST: 1E+9
Default unit: bps

Usage: Asynchronous command

Manual operation: See "Nominal bit rate/ Nominal symbol rate" on page 1204

CDR:SOFTware<sw>:SYNC <InitialSync>

Defines the phase reference for the first clock edge.

Suffix:
<sw> 1..4
Number of the software CDR setup

Parameters:
<InitialSync> SAMPle | DATaedge

SAMPle
The first clock edge matches the first sample of the waveform at the left border of the display.

DATaedge
The first clock edge matches the first edge of the data signal.

*RST: DATaedge

Usage: Asynchronous command

Manual operation: See "Initial phase" on page 1205

CDR:HARDware:PLL:DAMPing....2950
TRIGger<t>:LEVel<n>[:VALue]....2950

CDR:HARDware:BREStimate

Estimates the bite rate once, for the current acquisition.

Usage: Event
Asynchronous command

Manual operation: See "Estimate" on page 1207

CDR:HARDware:BITRate <Bitrate>

Parameters:
<Bitrate> Range: 200E+3 to 2.5E+9 for 10 GSa/s; range depends on sample rate
Increment: 10
*RST: 1E+9
Default unit: bps

Usage: Asynchronous command

Manual operation: See "Nominal bit rate" on page 1207

CDR:HARDware:ESLope <Edge>

Selects the edges of the data stream that are used for the clock recovery.

- "Either": Both positive and negative edges are used.
- "Positive" or "Negative": Only one edge direction is used. Use one of these settings if the other edge delivers unreliable results.

Parameters:

<Edge> POSitive | NEGative | EITHer
*RST: EITHer

Usage: Asynchronous command

Manual operation: See "Data edges" on page 1207

CDR:HARDware:PLL:ORDer <PLLOrder>

Sets the order of the PLL: first or second order. PLL of higher order can compensate for more complex jitter behavior.

Parameters:

<PLLOrder> FIRSt | SECond
*RST: FIRSt

Usage: Asynchronous command

Manual operation: See "PLL settings" on page 1208

CDR:HARDware:PLL:BWIDth <PLLBandwidth>

Sets the PLL bandwidth. It defines the part of the spectrum that the PLL can follow during synchronization. The PLL bandwidth is usually defined by the transmission standard.

Parameters:

<PLLBandwidth> Range: Nominal BITRate * Range of RELBwidth (dependent range)
Increment: 10
*RST: 599.88E+3
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "PLL settings" on page 1208

CDR:HARDware:PLL:RELBwidth <PLLRelBw>

Sets the relative bandwidth, which is the ratio of the nominal bit rate to the PLL bandwidth.

Parameters:

<PLLRelBw>
Range: 500 to 3000
Increment: 1
*RST: 1667

Usage: Asynchronous command

Manual operation: See "PLL settings" on page 1208

CDR:HARDware:PLL:DAMPing <DampingFactor>

Sets the damping factor, which is only relevant for second order PLL.

Parameters:

<DampingFactor>
Range: 0.5 to 1
Increment: 0.01
*RST: 0.7

Usage: Asynchronous command

Manual operation: See "PLL settings" on page 1208

TRIGger<t>:LEVel<n>[:VALue] <Level>

Sets the trigger level for the specified event and source.

If the trigger source is serial bus, the trigger level is set by the thresholds in the protocol configuration.

Suffix:

<t>
1..3
1 = A-trigger, 2 = B-trigger, 3 = R-trigger

<n>
1..31
Indicates the trigger source:
1...4 = channel 1 to 4
5 = external trigger input
6...11 = not available
12...27 = R&S RT-ZVC input channels
28...31 = differential signals Diff1, Diff2 and Common1, Common2

Parameters:

<Level>
Voltage for the trigger level.
Range: Depends on vertical scale, channel offset and other settings. The trigger level must be within the current display range.
Increment: 1E-3
*RST: 0
Default unit: V

Example: `TRIG:LEV5 0.01`
Sets the trigger level for the external trigger signal to 10 mV.
`TRIG2:LEV3 0.2`
Sets the trigger level for the B-event and B-trigger source channel 3 to 200 mV.

Usage: Asynchronous command

Manual operation: See "Level" on page 202

27.23.5 Serial pattern trigger using CDR

TRIGger<t>:SPATtern:CDR....2951
CDR:HARDware:SAMTime....2951

TRIGger<t>:SPATtern:CDR <CdrInUse>

Disables the clock source and enables the recovered clock signal generated by hardware CDR.

Suffix:
<t> 1..3
Only 1 = A-trigger, 2 | 3 = not available. Can be omitted.

Parameters:
<CdrInUse> OFF | ON
*RST: OFF

Usage: Asynchronous command

CDR:HARDware:SAMTime <UntIntvlOffs>

Sets a sampling time for the clock signal, an offset for the clock edge in relation to the bit start. The clock edge sets the beginning of the unit interval. The sampling time is a number between 0 and 1. Value 0 sets the clock edge to the beginning of the bit period; value 0.5 sets the clock edge to the middle of the bit period.

Parameters:
<UntIntvlOffs> Range: 0 to 1
Increment: 0.01
*RST: 0.5
Default unit: UI

Usage: Asynchronous command

27.23.6 Eye mask testing

The eye mask testing is available if the option R&S RTO6-K12 is activated on the instrument.

The commands for eye mask testing are described in Section 27.14.6, "Eye mask testing", on page 1806.

27.24 Eye diagram analysis

The suffix EYE<e> selects the eye diagram to which the command applies. You can configure and analyze 1 to 4 eye diagrams in parallel.

There are two ways to generate eye diagrams on the R&S RTO6:

- Standard eye diagrams, which are a superposition of repetitively sampled digital data.
- To use advanced eye diagrams, option R&S RTO6-K136 or R&S RTO6-K91 is required.

27.24.1 Basic setup

EYE<e>[:STATe] 2952
EYE<e>:SOURce 2953
EYE<e>:HORizontal[:UNIT] 2953
EYE<e>:HORizontal:ABSolute:RANGe 2953
EYE<e>:HORizontal:ABSolute:POSition 2954
EYE<e>:HORizontal:UINTerval:RANGe 2954
EYE<e>:HORizontal:UINTerval:POSition 2954
EYE<e>:TIMReference:CLOCk:EDGE 2955
EYE<e>:TIMReference:CLOCk:FACTor 2955
EYE<e>:TIMReference:CLOCk:FREQuency 2955
EYE<e>:TIMReference:CLOCk:FREStimation 2956
EYE<e>:TIMReference:CLOCk:LEVel 2956
EYE<e>:TIMReference:CLOCk:OFEStimation 2956
EYE<e>:TIMReference:CLOCk:OFFSet 2957
EYE<e>:TIMReference:CLOCk:SOURce 2957
EYE<e>:TIMReference:PROTocol:SELect 2957
EYE<e>:TIMReference[:SOURce] 2958
EYE<m>:TIMReference:CDR:SOFTware 2958
EYE<e>:TIMReference:CDR[:SELect] 2958
EYE<e>:MEASurement:MAXPrecision 2958
EYE<e>:VERTical:OFFSet 2959
EYE<e>:VERTical:POSition 2959
EYE<e>:VERTical:SCALe 2959
EYE<e>:VERTical:COUPle 2960
EYE<e>:TIMReference:CDR:SOFTware:SAMTime 2960
EYE<e>:SYMBolrate? 2960

EYE<e>[:STATe] <State>

Activates or deactivates the eye diagram.

Suffix:
<e> 1..4

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "State" on page 1214

EYE<e>:SOURce <MainSource>

Selects the waveform from which the eye diagram is generated (data source). For analog channels, peak detect, envelope, and average waveforms are not supported.

Suffix:
<e> 1..4

Parameters:
<MainSource> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Usage: Asynchronous command

Manual operation: See "Source" on page 1214

EYE<e>:HORizontal[:UNIT] <TimeUnits>

Sets the method to define the horizontal scale of the eye diagram.

Suffix:
<e> 1..4

Parameters:
<TimeUnits> ATIMe | UINTerval

ATIMe
Absolute time

UINTerval
Unit intervals. You can use unit interval, if the nominal frequency of the clock signal is known.

*RST: ATIMe

Usage: Asynchronous command

Manual operation: See "Time units" on page 1219

EYE<e>:HORizontal:ABSolute:RANGe <HorizRg>

Sets the time range that is covered by the eye diagram.

Suffix:
<e> 1..4

Parameters:

<HorizRg>
Range: 1E-12 to 100
Increment: 1E-9
*RST: 2E-9
Default unit: s

Usage: Asynchronous command

Manual operation: See "Range, Position" on page 1219

EYE<e>:HORizontal:ABSolute:POSition <HorizPosition>

Sets the place of the zero point in the diagram, in seconds. The zero point is the alignment point on which the slice timestamps are superimposed.

Suffix:

<e> 1..4

Parameters:

<HorizPosition>
Range: -100 to 100
Increment: 1E-9
*RST: 0
Default unit: s

Usage: Asynchronous command

Manual operation: See "Range, Position" on page 1219

EYE<e>:HORizontal:UINTerval:RANGe <RangeUI>

Sets the number of unit intervals that are visible in the eye diagram.

Suffix:

<e> 1..4

Parameters:

<RangeUI>
Range: 100E-12 to 100E+9
Increment: 0.01
*RST: 2
Default unit: UI

Usage: Asynchronous command

Manual operation: See "Range UI, Position UI" on page 1219

EYE<e>:HORizontal:UINTerval:POSition <PositionUI>

Sets the zero point in the diagram, in unit intervals. The zero point is the alignment point on which the segment timestamps are superimposed.

Suffix:

<e> 1..4

Parameters:

<PositionUI>
Range: -100E+9 to 100E+9
Increment: 0.01
*RST: 0
Default unit: UI

Usage: Asynchronous command

Manual operation: See "Range UI, Position UI" on page 1219

EYE<e>:TIMReference:CLOCk:EDGE <EdgeType>

The clock edge sets the point in time when the state of the data signal is checked.

Suffix:

<e> 1..4

Parameters:

<EdgeType> POSitive | NEGative | EITHer
*RST: EITHer

Usage: Asynchronous command

Manual operation: See "Clock edge" on page 1217

EYE<e>:TIMReference:CLOCk:FACTor <Factor>

Sets a clock multiplier factor.

Available if `EYE<e>:TIMReference[:SOURce]` is set to `CLOCk`.

Suffix:

<e> 1..4

Parameters:

<Factor>
Range: 1 to 100
Increment: 1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Clock multiplier" on page 1217

EYE<e>:TIMReference:CLOCk:FREQuency <Frequency>

Sets the clock frequency for the explicit clock signal.

Available if `EYE<e>:TIMReference[:SOURce]` is set to `CLOCk`.

Suffix:

<e> 1..4

Parameters:

<Frequency> Range: 1000 to 10E+9
Increment: 10
*RST: 500E+6
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Clock frequency" on page 1217

EYE<e>:TIMReference:CLOCk:FREStimation

Executes an estimation of the signal for the clock frequency.

Available if `EYE<e>:TIMReference[:SOURce]` is set to `CLOCk`.

Suffix:

<e> 1..4

Usage: Event

Manual operation: See "Estimate clock frequency" on page 1217

EYE<e>:TIMReference:CLOCk:LEVel <Level>

Sets the vertical reference level of the timing reference source.

Available if `EYE<e>:TIMReference[:SOURce]` is set to `CLOCk`.

Suffix:

<e> 1..4

Parameters:

<Level> UPPer | MIDDle | LOWer
*RST: MIDDle

Usage: Asynchronous command

Manual operation: See "Vertical reference level" on page 1217

EYE<e>:TIMReference:CLOCk:OFEStimation

Executes an estimation of the signal for the clock offset.

Available if `EYE<e>:TIMReference[:SOURce]` is set to `CLOCk`.

Suffix:

<e> 1..4

Usage: Event

Manual operation: See "Estimate clock offset" on page 1218

EYE<e>:TIMReference:CLOCk:OFFSet <Offset>

Sets a clock offset for the explicit clock signal.

Available if `EYE<e>:TIMReference[:SOURce]` is set to `CLOCk`.

Suffix:
<e> 1..4

Parameters:
<Offset> Range: -1000 to 1000
Increment: 0.01
*RST: 0
Default unit: UI

Usage: Asynchronous command

Manual operation: See "Clock offset" on page 1217

EYE<e>:TIMReference:CLOCk:SOURce <SourceType>

Selects the source of the clock channel, if `EYE<e>:TIMReference[:SOURce]` is set to `CLOCk`.

Suffix:
<e> 1..4

Parameters:
<SourceType> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4 | D0 | D1 | D2 | D3 | D4 | D5 | D6 | D7 | D8 | D9 | D10 | D11 | D12 | D13 | D14 | D15

Usage: Asynchronous command

Manual operation: See "Clock" on page 1214

EYE<e>:TIMReference:PROTocol:SELect <SerialBusIndex>

Selects the active bus for the eye analysis, if `EYE<e>:TIMReference[:SOURce]` is set to `PROTocol`.

Suffix:
<e> 1..4

Parameters:
<SerialBusIndex> SBUS1 | SBUS2 | SBUS3 | SBUS4
*RST: SBUS1

Usage: Asynchronous command

Manual operation: See "Protocol" on page 1216

EYE<e>:TIMReference[:SOURce] <RefSrc>

Selects the source of the reference signal used for the eye diagram.

Suffix:
<e> 1..4

Parameters:
<RefSrc> CLOCk | CDR | PROTocol
*RST: CDR

Usage: Asynchronous command

Manual operation: See "Clock / CDR / Protocol" on page 1214

EYE<m>:TIMReference:CDR:SOFTware <SoftwareCDRIdx>

Selects the software CDR used for the reference signal of the the eye diagram.

Suffix:
<m> 1..4

Parameters:
<SoftwareCDRIdx> SW1 | SW2 | SW3 | SW4
*RST: SW1

Usage: Asynchronous command

Manual operation: See "CDR" on page 1215

EYE<e>:TIMReference:CDR[:SELect] <CDRType>

Selects hardware or software clock data recovery.

Available, if `EYE<e>:TIMReference[:SOURce]` is set to `CDR`.

Suffix:
<e> 1..4

Parameters:
<CDRType> SW | HW
*RST: SW

Usage: Asynchronous command

Manual operation: See "CDR" on page 1215

EYE<e>:MEASurement:MAXPrecision <EnabClassifier>

If this function is enabled, the rising and falling transitions for the eye measurmens "Eye rise time", "Eye fall time" and "Duty cycle distortion" are separated.

Suffix:
<e> 1..4

Parameters:
<EnabClassifier> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Maximum precision" on page 1235

EYE<e>:VERTical:OFFSet <VerticalOffset>

The offset voltage is subtracted to correct an offset-affected signal.

Suffix:
<e> 1..4

Parameters:
<VerticalOffset> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "Offset" on page 1220

EYE<e>:VERTical:POSition <VertPosi>

Sets the vertical position of the indicated eye as a graphical value.

Suffix:
<e> 1..4

Parameters:
<VertPosi> Range: -100E+24 to 100E+24
Increment: 0.1
*RST: 0
Default unit: div

Usage: Asynchronous command

Manual operation: See "Position" on page 1220

EYE<e>:VERTical:SCALe <VerticalScale>

Sets the vertical scale for the indicated eye.

Suffix:
<e> 1..4

Parameters:
<VerticalScale> Range: 1E-12 to 100
Increment: 1E-3
*RST: 0.05
Default unit: V/div

Usage: Asynchronous command

Manual operation: See "Scale" on page 1220

EYE<e>:VERTical:COUPle <VertCpl>

If enabled, the vertical position and scale of the source are used.

Suffix:
<e> 1..4

Parameters:
<VertCpl> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Couple to source" on page 1219

EYE<e>:TIMReference:CDR:SOFTware:SAMTime <SamplingTime>

Sets the sampling time for the software CDR.

Available, if `EYE<e>:TIMReference[:SOURce]` is set to `CDR` and `EYE<e>:TIMReference:CDR[:SELect]` is set to `SW`.

Suffix:
<e> 1..4

Parameters:
<SamplingTime> Range: 0 to 1
Increment: 0.01
*RST: 0.5
Default unit: UI

Usage: Asynchronous command

Manual operation: See "CDR" on page 1215

EYE<e>:SYMBolrate?

Queries the symbol rate of the selected eye source.

Suffix:
<e> 1..4

Return values:
<Bitrate> Range: 1000 to 16E+9
Increment: 1
*RST: 2E+9
Default unit: bps

Usage: Query only
Asynchronous command

27.24.2 Display

EYE<e>:MSLices....2961
EYE<e>:DISPlay:MODE....2961
EYE<e>:DISPlay:PERSistence:INFinite....2961
EYE<e>:DISPlay:PERSistence:RESet....2962
EYE<e>:DISPlay:PERSistence:STATe....2962
EYE<e>:DISPlay:PERSistence:TIME....2962

EYE<e>:MSLices <MaxSliceCount>

Sets the number of waveform slices for a single acquisition.

Suffix:
<e> 1..4

Parameters:
<MaxSliceCount> Range: 1 to 2.5E+6
Increment: 1
*RST: 2000

Usage: Asynchronous command

Manual operation: See "Slices per acquisition (Upper limit)" on page 1218

EYE<e>:DISPlay:MODE <Eyestripe_Mode>

Defines when the eye stripe is shown: always, never, or during mask tests.

Suffix:
<e> 1..4

Parameters:
<Eyestripe_Mode> ALWays | MTONly | NEVer
MTONly: Mask test only
*RST: MTONly

Usage: Asynchronous command

Manual operation: See "Display mode" on page 1222

EYE<e>:DISPlay:PERSistence:INFinite <State>

If persistence is enabled (`EYE<e>:DISPlay:PERSistence:STATe`), each new data point in the diagram area remains on the screen infinitely until this command is set to `OFF`.

Suffix:
<e> 1..4

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Infinite persistence" on page 1222

EYE<e>:DISPlay:PERSistence:RESet

Resets the display, removing persistent values.

Suffix:
<e> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Reset" on page 1222

EYE<e>:DISPlay:PERSistence:STATe <State>

If enabled, each new data point in the diagram area remains on the screen for the duration defined using `EYE<e>:DISPlay:PERSistence:TIME`, or as long as `EYE<e>:DISPlay:PERSistence:INFinite` is enabled.

If disabled, the signal value is only displayed as long as it actually occurs.

Suffix:
<e> 1..4

Parameters:
<State> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Enable" on page 1222

EYE<e>:DISPlay:PERSistence:TIME <Time>

If persistence is enabled (`EYE<e>:DISPlay:PERSistence:STATe`), each new data point in the diagram area remains on the screen for the duration defined here.

Suffix:
<e> 1..4

Parameters:
<Time> Range: 0.05 to 50
Increment: 0.05
*RST: 0.05
Default unit: s

Usage: Asynchronous command

Manual operation: See "Time" on page 1222

27.24.3 Qualify: gate settings

EYE<e>:QUALify:GATE[:STATe] 2963
EYE<e>:QUALify:GATE:COUPling 2963
EYE<e>:QUALify:GATE:MODE 2963
EYE<e>:QUALify:GATE:ABSolute:STARt 2964
EYE<e>:QUALify:GATE:ABSolute:STOP 2964
EYE<e>:QUALify:GATE:RELative:STARt 2964
EYE<e>:QUALify:GATE:RELative:STOP 2964
EYE<e>:QUALify:GATE:CURSor 2965
EYE<e>:QUALify:GATE:ZDIagram 2965

EYE<e>:QUALify:GATE[:STATe] <State>

Enables the gate.

Suffix:
<e> 1..4

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Gate" on page 1223

EYE<e>:QUALify:GATE:COUPling <CouplingMode>

Sets the gate coupling. To use cursor lines or zoom areas as gate limits, the cursor or zoom must be defined before.

Suffix:
<e> 1..4

Parameters:
<CouplingMode> NONE | CURSor | ZOOM
*RST: NONE

Usage: Asynchronous command

Manual operation: See "Gate" on page 1223

EYE<e>:QUALify:GATE:MODE <Mode>

Defines whether the gate limit is defined in absolute or relative values when no gate coupling is set.

Suffix:
<e> 1..4

Parameters:
<Mode> ABS | REL
*RST: ABS

Usage: Asynchronous command

Manual operation: See "Gate" on page 1223

EYE<e>:QUALify:GATE:ABSolute:STARt <Start>
EYE<e>:QUALify:GATE:ABSolute:STOP <Stop>

Set the absolute time values for gate start and gate end.

Suffix:
<e> 1..4

Parameters:
<Start>, <Stop>
Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0.01

Example: Gate definition for eye diagram 2 in absolute time values:

```
EYE2:QUALify:GATE:COUPling NONE
EYE2:QUALify:GATE:MODE ABS
EYE2:QUALify:GATE:ABSolute:STARt -0.0002
EYE2:QUALify:GATE:ABSolute:STOP 0.0002
```

Usage: Asynchronous command

Manual operation: See "Gate" on page 1223

EYE<e>:QUALify:GATE:RELative:STARt <RelativeStart>
EYE<e>:QUALify:GATE:RELative:STOP <RelativeStop>

Set the relative values for gate start and gate end.

Suffix:
<e> 1..4

Parameters:
<RelativeStart>, <RelativeStop>
Range: 0 to 100
Increment: 0.1
*RST: 100
Default unit: %

Example: Gate definition for eye diagram 2 in relative values:

```
EYE2:QUALify:GATE:COUPling NONE
EYE2:QUALify:GATE:MODE REL
EYE2:QUALify:GATE:RELative:STARt 10
EYE2:QUALify:GATE:RElative:STOP 90
```

Usage: Asynchronous command

Manual operation: See "Gate" on page 1223

EYE<e>:QUALify:GATE:CURSor <Cursorset>

Selects the cursor set to be used for eye gating. The gate area is defined by the cursor lines.

Suffix:
<e> 1..4

Parameters:
<Cursorset> CURSOR1 | CURSor1 | CURSOR2 | CURSor2 | CURSOR3 | CURSor3 | CURSOR4 | CURSor4

CURSOR1 = CURSor1, CURSOR2 = CURSor2, CURSOR3 = CURSor3, CURSOR4 = CURSor4

*RST: CURSOR1

Example: Gate definition for eye diagram 2 with cursor coupling:

```
EYE2:QUALify:GATE:COUPling CURSor
EYE2:QUALify:GATE:CURSor CURSor1
```

Usage: Asynchronous command

Manual operation: See "Gate" on page 1223

EYE<e>:QUALify:GATE:ZDIagram <ZoomDiagram>

Selects the zoom diagram to be used for eye gating. The zoom area is is used as gate.

Suffix:
<e> 1..4

Parameters:
<ZoomDiagram> String with the name of the zoom diagram

Example: Gate definition for eye diagram 2 with zoom coupling:

```
EYE2:QUALify:GATE:COUPling ZOOM
EYE2:QUALify:GATE:ZDIagram "Zoom1"
```

Usage: Asynchronous command

Manual operation: See "Gate" on page 1223

27.24.4 Qualify: signal settings

EYE<e>:QUALify:SIGNal[:STATe] 2965
EYE<e>:QUALify:SIGNal:SOURce 2966
EYE<e>:QUALify:SIGNal:CONDition 2966
EYE<e>:QUALify:SIGNal:LSELect 2966
EYE<e>:QUALify:SIGNal:LSLTo 2967

EYE<e>:QUALify:SIGNal[:STATe] <State>

Enables the waveform-based qualification for the eye generation.

Suffix:
<e> 1..4

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "State" on page 1224

EYE<e>:QUALify:SIGNal:SOURce <Source>

Selects the waveform to be compared.

Suffix:
<e> 1..4

Parameters:
<Source> C1W1 | C2W1 | C3W1 | C4W1 | M1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | R1 | R2 | R3 | R4

Usage: Asynchronous command

Manual operation: See "Source" on page 1224

EYE<e>:QUALify:SIGNal:CONDition <Condition>

Selects the comparison condition for the the waveform level.

Suffix:
<e> 1..4

Parameters:
<Condition> LTHan | GTHan | INRange | OORange
*RST: GTHan

Usage: Asynchronous command

Manual operation: See "Condition" on page 1224

EYE<e>:QUALify:SIGNal:LSELect <LevelSelection>

Selects the threshold for `EYE<e>:QUALify:SIGNal:CONDition LTHan | GTHan`, and the start threshold for the range settings `INRange | OORange`.

You can use the lower, middle, or upper reference level. These levels are the reference levels that are defined for measurements.

Suffix:
<e> 1..4

Parameters:
<LevelSelection> UPPer | MIDDle | LOWer
*RST: MIDDle

Example: The slices of the channel 1 signal only contribute to the eye generation if the voltage level of the signal on channel 2 is higher than the upper reference level.

```
EYE:SOURce C1W1
EYE:QUALify:SIGNal:SOURce C2W1
EYE:QUALify:SIGNal:CONDition GTHan
EYE:QUALify:SIGNal:LSELect UPPer
EYE:QUALify:SIGNal ON
```

Usage: Asynchronous command

Manual operation: See "Vertical reference levels" on page 1224

EYE<e>:QUALify:SIGNal:LSLTo <LevelSelectionTo>

Selects the end threshold for `EYE<e>:QUALify:SIGNal:CONDition INRange | OORange`.

You can use the lower, middle, or upper reference level. These levels are the reference levels that are defined for measurements.

Suffix:
<e> 1..4

Parameters:
<LevelSelectionTo> UPPer | MIDDle | LOWer
*RST: UPPer

Usage: Asynchronous command

Manual operation: See "Vertical reference levels" on page 1224

27.24.5 Filter

EYE<e>:FILTer:STATe ... 2968
EYE<e>:FILTer:BPATtern:MODE ... 2968
EYE<e>:FILTer:BPATtern:PREFix<n> ... 2968
EYE<e>:FILTer:BPATtern:CENTer ... 2968
EYE<e>:FILTer:BPATtern:SUFFix<n> ... 2968

EYE<e>:FILTer:PAMN:SEYE ... 2971
EYE<e>:FILTer:PAMN:TLEVel ... 2972

EYE<e>:FILTer:STATe <State>

Applies the filter settings to the data signal.

Suffix:
<e> 1..4

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 1225

EYE<e>:FILTer:BPATtern:MODE <Mode>

Selects which bits contribute to the eye generation.

Suffix:
<e> 1..4

Parameters:
<Mode> ABITs | TBITs | LTRansition | NTBits | CLEVel | BPATtern

ABITs
All bits contribute to the eye diagram, same as `EYE<e>:FILTer:STATe` is OFF.

TBITs=LTRansition
Transition bits, only bits after a signal transition contribute (0 to 1, or 1 to 0).

NTBits =CLEVel
Non-transition bits, only bits without a preceding signal transition contribute (0 to 0, or 1 to 1).

BPATtern
Only available for signals with "PAM order" = "NRZ"
Only bits contribute that match the defined pattern before and after the center eye.

*RST: ABITs

Usage: Asynchronous command

Manual operation: See "Mode" on page 1225

EYE<e>:FILTer:BPATtern:PREFix<n> <Bit>
EYE<e>:FILTer:BPATtern:CENTer <BitValue>
EYE<e>:FILTer:BPATtern:SUFFix<n> <Bit>

Set the values of the indicated prefix, center, and suffix bits.

Suffix:
<e> 1..4

<n> 1..5

Parameters:
<Bit> ONE | ZERO | DC
DC: don't care

Manual operation: See "Pattern" on page 1226

EYE<e>:FILTer:BPATtern:SLEFt

Shifts the pattern one bit to the left.

Suffix:
<e> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Pattern control" on page 1226

EYE<e>:FILTer:BPATtern:SRIGht

Shifts the pattern one bit to the right.

Suffix:
<e> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Pattern control" on page 1226

EYE<e>:FILTer:BPATtern:RESet

Resets the bit sequence filter to the default (DC for all bits).

Suffix:
<e> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Pattern control" on page 1226

EYE<e>:FILTer:DDR:FTYPe <CommTyp>

Sets which frame types contribute to the eye diagram.

Suffix:
<e> 1..4

Parameters:

<CommTyp> ANY | ANYC | READ | WRITe | RDNC | WRNC

ANYC: any consecutive
RDNC: read non-consecutive
WRNC: write non-consecutive

*RST: ANY

Usage: Asynchronous command

Manual operation: See "Frame Type" on page 1227

EYE<e>:FILTer:DDR:LENerror <CommTyp>

If enabled, the length errors contribute to the eye diagram.

Suffix:

<e> 1..4

Parameters:

<CommTyp> OFF | ON

*RST: OFF

Usage: Asynchronous command

Manual operation: See "Length Error" on page 1227

EYE<e>:FILTer:RESet

Resets the current settings of a protocol filter.

Suffix:

<e> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Reset settings" on page 1226

EYE<e>:FILTer:PAMN:BLEVel <BaseLevel>

Selects the base level for the PAM-N signal eye, if `EYE<e>:FILTer:PAMN:EMODe` is set to `SELected`.

Suffix:

<e> 1..4

Parameters:

<BaseLevel> LEVEL0 | LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6

*RST: LEVEL0

Usage: Asynchronous command

Manual operation: See "PAM-N diagram filter mode" on page 1228

EYE<e>:FILTer:PAMN:EMODe <PAMNEyeSel>

Selects the filter mode for PAM-N signals. It defines which part of the signal is used to build the eye.

Suffix:
<e> 1..4

Parameters:
<PAMNEyeSel> WHOLe | SPECific | SELected

WHOLe
Displays all level transitions of the selected source.

SPECific
Displays an explicit eye opening (e.g. for level transition 1-2) with all involved level transitions. You can select the eye with `EYE<e>:FILTer:PAMN:SEYE`.

SELected
Displays an explicit eye opening (e.g. for level transition 1-2) with only its own level transitions. You can select the base level (`EYE<e>:FILTer:PAMN:BLEVel`) and target level (`EYE<e>:FILTer:PAMN:TLEVel`).

*RST: WHOLe

Usage: Asynchronous command

Manual operation: See "PAM-N diagram filter mode" on page 1228

EYE<e>:FILTer:PAMN:SEYE <PAMNSpecificEye>

Selects the specific eye for the PAM-N signal eye, if `EYE<e>:FILTer:PAMN:EMODe` is set to `SPECific`.

Suffix:
<e> 1..4

Parameters:
<PAMNSpecificEye> EYE1 | EYE2 | EYE3 | EYE4 | EYE5 | EYE6 | EYE7

`EYE1`: level transition 0-1
`EYE2`: level transition 1-2
`EYE3`: level transition 2 -3
`EYE4`: level transition 3-4
`EYE5`: level transition 4-5
`EYE6`: level transition 5-6
`EYE7`: level transition 6-7

*RST: EYE1

Usage: Asynchronous command

Manual operation: See "PAM-N diagram filter mode" on page 1228

EYE<e>:FILTer:PAMN:TLEVel <PAMNSelcEyeTargetLev>

Selects the target level for the PAM-N signal eye, if `EYE<e>:FILTer:PAMN:EMODe` is set to `SELected`.

Suffix:
<e> 1..4

Parameters:
<PAMNSelcEyeTargetLev> LEVEL1 | LEVEL2 | LEVEL3 | LEVEL4 | LEVEL5 | LEVEL6 | LEVEL7

*RST: LEVEL1

Usage: Asynchronous command

Manual operation: See "PAM-N diagram filter mode" on page 1228

27.24.6 Results of eye

EYE<e>:RESult:SLICe<n>:COUNt? 2972
EYE<e>:RESult:SLICe<n>:LPOSition? 2972
EYE<e>:RESult:SLICe<n>[:POSition]? 2973
EYE<e>:RESult:TACQs? 2973
EYE<e>:RESult:TSLices? 2973

EYE<e>:RESult:SLICe<n>:COUNt?

Returns the number of filtered bits.

Suffix:
<e> 1..4

<n> *
Not relevant

Return values:
<Count>

Usage: Query only

EYE<e>:RESult:SLICe<n>:LPOSition?

Returns the position of the last slice in the acquistion.

Suffix:
<e> 1..4

<n> *

Return values:
<LastPosition>

Usage: Query only

EYE<e>:RESult:SLICe<n>[:POSition]?

Returns the position of the filtered bit in the acquisition.

Suffix:
<e> 1..4

<n> *

Return values:
<Position> Range: -100 to 100
Increment: 1E-3
*RST: 0
Default unit: s

Usage: Query only
Asynchronous command

EYE<e>:RESult:TACQs?

Returns the total number of acquisitions accumulated into the eye.

Suffix:
<e> 1..4

Return values:
<Acquisitions> Range: 0 to 1E+9
Increment: 1
*RST: 0

Usage: Query only
Asynchronous command

EYE<e>:RESult:TSLices?

Returns the total number of slices accumulated into the eye.

Suffix:
<e> 1..4

Return values:
<Slices> Range: 0 to 1E+9
Increment: 1
*RST: 0

Usage: Query only
Asynchronous command

27.24.7 Results of mask tests on eye diagrams

MTESt:RESult:COUNt:SLICes?....2974
MTESt:RESult:COUNt:FSLices?....2974
MTESt:RESult:VIOLation<m>:COUNt?.... 2974

MTESt:RESult:VIOLation<m>[:SLICe]?....2975
MTESt:RESult:VIOLation<m>:STARt?....2975
MTESt:RESult:VIOLation<m>:STOP?....2975
EYE<e>:ZCOupling....2975
EYE<e>:ZDIagram....2976

MTESt:RESult:COUNt:SLICes? <MaskTestName>

Returns the number of slices that contributed to the eye diagram.

Query parameters:
<MaskTestName> String parameter

Return values:
<SlicesCompleted> Range: 0 to 100E+24
Increment: 1
*RST: 0

Usage: Query only
Asynchronous command

MTESt:RESult:COUNt:FSLices? <MaskTestName>

Returns the number of slices that violated the mask.

Query parameters:
<MaskTestName> String parameter

Return values:
<SliceHits> Range: 0 to 100E+24
Increment: 1
*RST: 0

Usage: Query only
Asynchronous command

MTESt:RESult:VIOLation<m>:COUNt? <MaskTestName>

Suffix:
<m> *
Violation index, corresponds to the number in the "Violation" column of mask test result.

Query parameters:
<MaskTestName> String parameter

Return values:
<Count>

Usage: Query only

MTESt:RESult:VIOLation<m>[:SLICe]? <MaskTestName>

Returns the number of the slices that violated the mask at the given violation index.

Suffix:
<m> *
Violation index, corresponds to the number in the "Violation" column of mask test result.

Query parameters:
<MaskTestName> String parameter

Return values:
<Slice> Range: 0 to 4294967295
Increment: 1
*RST: 0

Usage: Query only
Asynchronous command

MTESt:RESult:VIOLation<m>:STARt? <MaskTestName>
MTESt:RESult:VIOLation<m>:STOP? <MaskTestName>

Return the start and stop time of the slice with the indicated violation.

Suffix:
<m> *
Violation index, corresponds to the number in the "Violation" column of mask test result.

Query parameters:
<MaskTestName>

Return values:
<Time> Range: -100 to 100
Increment: 1E-3
*RST: 0
Default unit: s

Usage: Query only
Asynchronous command

EYE<e>:ZCOupling <ZoomCoupling>

If enabled, the mask eye area is set to the limits of a zoom area.

The zoom diagram is selected using `EYE<e>:ZDIagram`.

Suffix:
<e> 1..4

Parameters:
<ZoomCoupling> OFF | ON
*RST: OFF

Usage: Asynchronous command

EYE<e>:ZDIagram <ZoomDiagram>

Selects the zoom to which the eye mask area is set if `EYE<e>:ZCOupling` is enabled.

Suffix:
<e> 1..4

Parameters:
<ZoomDiagram> String with the name of the diagram on which the zoom is based

Usage: Asynchronous command

27.25 Power analysis (option R&S RTO6-K31)

- General 2976
- Deskew 2977
- Report 2979
- Power quality 2984
- Inrush current 2986
- Current harmonic 2989
- Modulation analysis 2991
- Dynamic ON resistance 2993
- Slew rate 2995
- S.O.A 2998
- Turn on/off 3000
- Switching loss 3002
- Power efficiency 3006
- Ripple 3007
- Transient response 3014
- Spectrum 3017

27.25.1 General

POWer:ENABle 2976
POWer:SOURce:CURRent<m> 2977
POWer:SOURce:VOLTage<m> 2977

POWer:ENABle

Activates the power mode and initializes the power measurements. If the power mode is disabled, the instrument does not accept any `POWer` command.

Use `POWer:ENABle` after each `*RST`.

Example: See Section 27.3.8.1, "Auto deskew", on page 1443

Usage: Setting only
Asynchronous command

POWer:SOURce:CURRent<m> <CurrentSource>

Sets the channel for the current source.

Suffix:
<m> 1..2

Parameters:
<CurrentSource> CHAN1 | CHANnel1 | CHAN2 | CHANnel2 | CHAN3 | CHANnel3 | CHAN4 | CHANnel4

CHAN1 = CHANnel1, CHAN2 = CHANnel2, CHAN3 = CHANnel3, CHAN4 = CHANnel4

*RST: CURRent1: CHAN2, CURRent2: CHAN4,

Usage: Asynchronous command

Manual operation: See "Current Source" on page 1250

POWer:SOURce:VOLTage<m> <VoltageSource>

Sets the channel for the voltage source input.

Suffix:
<m> 1..4

Parameters:
<VoltageSource> CHAN1 | CHANnel1 | CHAN2 | CHANnel2 | CHAN3 | CHANnel3 | CHAN4 | CHANnel4

CHAN1 = CHANnel1, CHAN2 = CHANnel2, CHAN3 = CHANnel3, CHAN4 = CHANnel4

*RST: VOLTage1: CHAN1, VOLTage2: CHAN3, VOLTage3: CHAN3, VOLTage4: CHAN4

Usage: Asynchronous command

Manual operation: See "Voltage Source" on page 1251

27.25.2 Deskew

Programming example: Section 27.3.8.1, "Auto deskew", on page 1443

POWer:DESKew:CURRent....2978
POWer:DESKew:EXECute....2978
POWer:DESKew:RESet....2978
POWer:DESKew:TIME?....2978
POWer:DESKew:UDPReset....2978

POWer:DESKew:CURRent

Applies the result of the auto deskew to the "Skew offset" value.

Usage: Event

Manual operation: See "Auto deskew result" on page 1242

POWer:DESKew:EXECute

Starts the auto deskew.

Usage: Event

Manual operation: See "Auto Deskew" on page 1243

POWer:DESKew:RESet <OverwriteCurrSkew>

Overwrites the present skew setup.

Parameters:
<OverwriteCurrSkew> OFF | ON
*RST: ON

Manual operation: See "Overwrite present skew setup" on page 1242

POWer:DESKew:TIME?

Queries the result of the auto deskew.

Return values:
<AutoDeskewOffs> Range: -100E-9 to 100E-9
*RST: 0
Default unit: s

Usage: Query only

Manual operation: See "Auto deskew result" on page 1242

POWer:DESKew:UDPReset <UsrDefinedPreset>

Activates or deactivates a user defined setup. If ON, the instrument setup including probe setup and the deskew values are written to a user defined preset file (saveset) that can be loaded using `MMEMory:RCL` on page 1860.

The default path is:

`C:\Users\Public\Documents\Rohde-Schwarz\RTO6\SaveSets\`

Parameters:
<UsrDefinedPreset> OFF | ON
*RST: ON

Manual operation: See "Activate user defined preset" on page 1243

27.25.3 Report

POWer:REPort:CONTent:HSETup <ContentHorizSet>
POWer:REPort:CONTent:MSETup <ContentMeasSet>
POWer:REPort:CONTent:MSIGnal <ContentMeasuredSigns>
POWer:REPort:CONTent:RESU <ContentResults>
POWer:REPort:CONTent:SETTings <ContentSett>
POWer:REPort:CONTent:TSETup <ContentTrigSet>
POWer:REPort:CONTent:VSETup <ContentVertSet>

Sets how often the respective content is shown in the final report.

Parameters:

<ContentVertSet> ALWAYS | NEVER | ONCE
*RST: ONCE

Manual operation: See "Vertical Setup" on page 1249

POWer:REPort:CONTent:TITLe <ContentTitle>

Includes the title page in the report.

Parameters:
<ContentTitle> OFF | ON
*RST: ON

Manual operation: See "Title Page" on page 1249

POWer:REPort:DESCription <String>
POWer:REPort:DUT <String>
POWer:REPort:SITE <String>
POWer:REPort:TEMPerature <String>
POWer:REPort:USER <String>

The content of the strings is shown at the title page of a report if the title page is included in the report.

Parameters:
<String>

Manual operation: See "User" on page 1244

POWer:REPort:FONT:COLO <FontColor>

Sets the font color.

Parameters:
<FontColor> Range: 0 to 4294967295
Increment: 1
*RST: 0

Manual operation: See "Color" on page 1248

POWer:REPort:FONT:FAMI <FontFamily>

Selects the font family. You can choose between Arial and Helvetica.

Parameters:
<FontFamily> ARIAL | HELV
*RST: ARIAL

Manual operation: See "Family" on page 1247

POWer:REPort:FONT:SIZE <FontSize>

Sets the font size.

Parameters:

<FontSize> Range: 10 to 30
Increment: 1
*RST: 12

Manual operation: See "Size" on page 1248

POWer:REPort:LOGO <LogoFile>

Selects a path to a logo picture file.

Parameters:

<LogoFile>

Manual operation: See "Logo File" on page 1248

POWer:REPort:PAPersize <PaperSize>

Set the layout of your report.

Parameters:

<PaperSize> A4 | USL
*RST: A4

Manual operation: See "Paper size" on page 1247

POWer:REPort:FILE:NAME <Path>

Defines the path and file name of the report file that is to be created, saved, or deleted.

Parameters:

<Path> String containing path and file name

Manual operation: See "Report Path" on page 1246

POWer:REPort:FILE:DELete

Deletes the selected report file.

Usage: Setting only

Manual operation: See "Report Path" on page 1246

POWer:REPort:FILE:NEW

Creates a new report file.

Usage: Setting only

Manual operation: See "Report Path" on page 1246

POWer:REPort:FILE:SAVE

Saves the report file.

Usage: Setting only

Manual operation: See "Report Path" on page 1246

POWer:REPort:TEST:ADD <MeasType>
POWer:REPort:TEST:INSert <MeasType>,<Index>
POWer:REPort:TEST:REMove <MeasType>,<Index>

Manage reports.

Setting parameters:

<MeasType> QUAL | RUSH | HARM | MODU | DONR | SLEW | SOA | TURN | SWIT | EFF | RIPP | TRANS | SPEC

QUAL
Power Quality

RUSH
Inrush Current

HARM
Current Harmonic

SPEC
Spectrum

Manual operation: See "Remove selected" on page 1246

POWer:REPort:TEST:DIRectory <MeasType>,<DirectoryPath>
POWer:REPort:TEST:DIRectory? <MeasType>

Selects the directory, in which the reports are saved.

Parameters:

<DirectoryPath>

Parameters for setting and query:
<MeasType> QUAL | RUSH | HARM | MODU | DONR | SLEW | SOA | TURN | SWIT | EFF | RIPP | TRANS | SPEC

Manual operation: See "Directory" on page 1246

POWer:REPort:TEST:COMMent <MeasType>,<Comment>
POWer:REPort:TEST:COMMent? <MeasType>

Sets a comment for the report.

Parameters:
<Comment>

Parameters for setting and query:
<MeasType> QUAL | RUSH | HARM | MODU | DONR | SLEW | SOA | TURN | SWIT | EFF | RIPP | TRANS | SPEC

Manual operation: See "Report Table" on page 1245

POWer:REPort:TEST:COUNt? <MeasType>

Returns the number of results for the specified measurement.

Parameters:
<MeasType> QUAL | RUSH | HARM | MODU | DONR | SLEW | SOA | TURN | SWIT | EFF | RIPP | TRANS | SPEC

Return values:
<Count>

Usage: Query only

Manual operation: See "Report Table" on page 1245

POWer:REPort:TEST:LSENd? <MeasType>

Query parameters:
<MeasType> QUAL | RUSH | HARM | MODU | DONR | SLEW | SOA | TURN | SWIT | EFF | RIPP | TRANS | SPEC

Return values:
<Result> String parameter

Usage: Query only

Manual operation: See "Report Table" on page 1245

27.25.4 Power quality

POWer:QUALity:AUTO....2985
POWer:QUALity:EXECute....2985
POWer:QUALity:FREQ....2985

POWer:QUALity:FCUS....2986
POWer:QUALity:REPort:ADD....2986
POWer:QUALity:RESult:CURRent:CREStfactor?....2986
POWer:QUALity:RESult:CURRent:FREQuency?....2986

POWer:QUALity:RESult:VOLTage:CREStfactor?....2986
POWer:QUALity:RESult:VOLTage:FREQuency?....2986
POWer:QUALity:RESult:VOLTage:PEAK?....2986
POWer:QUALity:RESult:VOLTage:RMS?....2986

POWer:QUALity:AUTO <Autoscale>

Selects the scaling for the display of the results.

Parameters:

<Autoscale> AUTO | MANUAL

*RST: MANUAL

Manual operation: See "Optimize scaling" on page 1258

POWer:QUALity:EXECute

Starts the power quality measurement.

Usage: Event

Manual operation: See "Execute" on page 1258

POWer:QUALity:FREQ <Frequency>

Sets the input frequency of the source signal in Hz.

Parameters:

<Frequency> F50 | F60 | F360 | F400 | F650 | F800 | NFF650 | WFF800 | FCUS

NFF650: 360 to 650 Hz
WFF800: 360 to 800 Hz
FCUS: user-defined frequency to be set using `POWer:QUALity:FCUS`.

*RST: F50

Manual operation: See "Input frequency" on page 1257

POWer:QUALity:FCUS <CustomFreq>

Sets the user-defined frequency if POWer:QUALity:FREQ is set to FCUS.

Parameters:

<CustomFreq>
Range: 1 to 5000
Increment: 1
*RST: 16.666
Default unit: Hz

Firmware/software: Version 2.70

Manual operation: See "Custom frequency" on page 1258

POWer:QUALity:REPort:ADD

Adds the result to the report list.

Usage: Event

POWer:QUALity:RESult:CURRent:CRESt factor?
POWer:QUALity:RESult:CURRent:FREQuency?
POWer:QUALity:RESult:CURRent:PEAK?
POWer:QUALity:RESult:CURRent:RMS?
POWer:QUALity:RESult:POWer:APParent?
POWer:QUALity:RESult:POWer:PFACtor?
POWer:QUALity:RESult:POWer:PHASe?
POWer:QUALity:RESult:POWer:REACtive?
POWer:QUALity:RESult:POWer:REALpower?
POWer:QUALity:RESult:VOLTage:CRESt factor?
POWer:QUALity:RESult:VOLTage:FREQuency?
POWer:QUALity:RESult:VOLTage:PEAK?
POWer:QUALity:RESult:VOLTage:RMS?

Returns the value of the respective result.

Return values:

<Value>
Range: Depends on the measured quantity.
Default unit: Depends on the measured quantity.

Usage: Query only

27.25.5 Inrush current

This measurement is a single shot measurement. To start the measurement, use the RUNS command.

POWer:INRush:ADD 2987
POWer:INRush:INSert 2987
POWer:INRush:REMove 2987
POWer:INRush:COUNt? 2987
POWer:INRush:EXECute 2987

POWer:INRush:GATE<g>:STARt....2988
POWer:INRush:GATE<g>:STOP....2988
POWer:INRush:GATE<g>:VALue....2988
POWer:INRush:MAXCurrent....2988
POWer:INRush:TRIGger....2988
POWer:INRush:REPort:ADD....2989

POWer:INRush:ADD

Adds a gate.

Usage: Setting only

Manual operation: See "Gate Configuration" on page 1261

POWer:INRush:INSert <GateIndex>

Inserts a gate.

Setting parameters:
<GateIndex>

Usage: Setting only

Manual operation: See "Gate Configuration" on page 1261

POWer:INRush:REMove <GateIndex>

Removes a gate

Setting parameters:
<GateIndex>

Usage: Setting only

Manual operation: See "Gate Configuration" on page 1261

POWer:INRush:COUNt?

Queries the number of inrush current gates.

Return values:
<Count>

Usage: Query only

Manual operation: See "Inrush current" on page 1261

POWer:INRush:EXECute

Starts the inrush current measurement.

Usage: Event

Manual operation: See "Execute" on page 1262

POWer:INRush:GATE<g>:STARt <StartTime>
POWer:INRush:GATE<g>:STOP <StopTime>

Sets the measuring time for the selected gate.

Suffix:
<g> *

Parameters:
<StopTime>
Range: 0 to 10
Increment: 0
*RST: 100E-6
Default unit: s

Manual operation: See "Stop time" on page 1262

POWer:INRush:GATE<g>:VALue <Value>

Returns the value of the inrush current.

Suffix:
<g> *

Parameters:
<Value>
Range: -1000 to 1000
Increment: 0
*RST: 0
Default unit: A

POWer:INRush:MAXCurrent <MaxExpCurr>

Sets the maximum expected current for the vertical scale.

Parameters:
<MaxExpCurr>
Range: -1000 to 1000
Increment: 0
*RST: 10
Default unit: A

Manual operation: See "Maximum current" on page 1261

POWer:INRush:TRIGger <CurrentValue>

Sets the current value for the trigger.

Parameters:
<CurrentValue>
Range: -1000 to 1000
Increment: 0
*RST: 1
Default unit: A

Manual operation: See "Trigger current value (T)" on page 1261

POWer:INRush:REPort:ADD

Adds the result to the report list.

Usage: Event

27.25.6 Current harmonic

POWer:HARMonics:AUTO....2989
POWer:HARMonics:DOFR....2989
POWer:HARMonics:ENFR....2989
POWer:HARMonics:MIFR....2990
POWer:HARMonics:EVAL....2990
POWer:HARMonics:EXECute....2990
POWer:HARMonics:REPort:ADD....2990
POWer:HARMonics:RESult<m>:STDinuse?....2990
POWer:HARMonics:RESult<m>:FREQuency<n>:VALue?....2990
POWer:HARMonics:RESult<m>:MAXValue<n>:VALue?....2990
POWer:HARMonics:RESult<m>:STDValue<n>:VALue?....2991
POWer:HARMonics:RESult<m>:VALue<n>:VALue?....2991
POWer:HARMonics:STAN....2991
POWer:HARMonics:VOLT....2991

POWer:HARMonics:AUTO <Autoscale>

Selects the scaling for the display of the results.

Parameters:
<Autoscale> AUTO | MANUAL
*RST: MANUAL

Manual operation: See "Optimize scaling" on page 1266

POWer:HARMonics:DOFR <FrequDOA160>

Selects the frequency of the input signal.

Parameters:
<FrequDOA160> F360 | F400 | F650 | F800
*RST: F400

Manual operation: See "Frequency" on page 1266

POWer:HARMonics:ENFR <FrequEN61000>

Selects the frequency of the input signal.

Parameters:
<FrequEN61000> F50 | F60
*RST: F50

Manual operation: See "Frequency" on page 1266

POWer:HARMonics:MIFR <FrequMIL1399>

Selects the frequency of the input signal.

Parameters:
<FrequMIL1399> F400 | F60
*RST: F400

Manual operation: See "Frequency" on page 1266

POWer:HARMonics:EVAL <AnalysisRevised>

Sets the evaluation of the results for "Standard" > "RTCA DO-160".

Parameters:
<AnalysisRevised> REVISED | NOREVISED
*RST: NOREVISED

Manual operation: See "Revised Current" on page 1266

POWer:HARMonics:EXECute

Starts the current harmonic measurement.

Usage: Event

Manual operation: See "Execute" on page 1266

POWer:HARMonics:REPort:ADD

Adds the result to the report list.

Usage: Event

POWer:HARMonics:RESult<m>:STDinuse?

Returns the used standard.

Suffix:
<m> 1..2

Return values:
<StandardInUse> ENA | ENB | ENC | END | MIL | RTC
*RST: ENA

Usage: Query only

POWer:HARMonics:RESult<m>:FREQuency<n>:VALue?
POWer:HARMonics:RESult<m>:MAXValue<n>:VALue?

POWer:HARMonics:RESult<m>:STDValue<n>:VALue?
POWer:HARMonics:RESult<m>:VALue<n>:VALue?

Returns the value of the queried result.

Suffix:
<m> 1..2

<n> *

Return values:
<Value> Range: according to the measured quantity
Default unit: according to the measured quantity

Usage: Query only

POWer:HARMonics:STAN <StandardInUse>

Sets a standard for the current harmonic measurement.

Parameters:
<StandardInUse> ENA | ENB | ENC | END | MIL | RTC
*RST: ENA

Manual operation: See "Standard in use" on page 1265

POWer:HARMonics:VOLT <DOADisplayResult>

Selects if the voltage results are displayed or not for "Standard" > "RTCA DO-160" and enabled "Evaluation with voltage source and revised current law".

Parameters:
<DOADisplayResult> VOLTDISP | NOVOLTDISP
*RST: NOVOLTDISP

Example:
```
POW:HARM:STAN RTC
POW:HARM:EVAL REVISED
POW:HARM:VOLT NOVOLTDISP
```
Selects an evaluation with the revised current law and no voltage display.

Manual operation: See "Revised Current" on page 1266

27.25.7 Modulation analysis

This measurement is a single shot measurement. To start the measurement, use the `RUNS` command.

POWer:MODulation:AUTO....2992
POWer:MODulation:DHIStogram....2992
POWer:MODulation:EXECute....2992
POWer:MODulation:REPort:ADD....2992
POWer:MODulation:RESult:ACTual?....2992

POWer:MODulation:RESult:AVG? 2992
POWer:MODulation:RESult:EVTCount? 2992
POWer:MODulation:RESult:NPEak? 2992
POWer:MODulation:RESult:PPEak? 2992
POWer:MODulation:RESult:RMS? 2992
POWer:MODulation:RESult:STDDev? 2993
POWer:MODulation:RESult:WFMCount? 2993
POWer:MODulation:SOURce 2993
POWer:MODulation:TYPE 2993

POWer:MODulation:AUTO <Autoscale>

Selects the scaling for the display of the results.

Parameters:
<Autoscale> AUTO | MANUAL
*RST: MANUAL

Manual operation: See "Optimize scaling" on page 1271

POWer:MODulation:DHIStogram <DispHistg>

Activates or deactivates the display of a histogram.

Parameters:
<DispHistg> OFF | ON
*RST: ON

Manual operation: See "Display Histogram" on page 1271

POWer:MODulation:EXECute

Starts the modulation analysis measurement.

Usage: Event
Asynchronous command

Manual operation: See "Execute" on page 1271

POWer:MODulation:REPort:ADD

Adds the result to the report list.

Usage: Event

POWer:MODulation:RESult:ACTual? <MeasType>
POWer:MODulation:RESult:AVG? <MeasType>
POWer:MODulation:RESult:EVTCount? <MeasType>
POWer:MODulation:RESult:NPEak? <MeasType>
POWer:MODulation:RESult:PPEak? <MeasType>
POWer:MODulation:RESult:RMS? <MeasType>

POWer:MODulation:RESult:STDDev? <MeasType>
POWer:MODulation:RESult:WFMCount? <MeasType>

Return the specified statistic result of the specified measurement type.

- [:ACTual]: current measurement result
- AVG: average of the long-term measurement results
- EVTCount: number of measurement results in the long-term measurement
- NPEak: negative peak value of the long-term measurement results
- PPEak: positive peak value of the long-term measurement results
- RMS: RMS value of the long-term measurement results
- STDDev: standard deviation of the long-term measurement results

Query parameters:
<MeasType> FREQ | DUTY

Return values:
<Value> Statistic result

Usage: Query only

POWer:MODulation:SOURce <Source>

Selects the source for the measurement.

Parameters:
<Source> CURRENT | VOLTAGE
*RST: VOLTAGE

Manual operation: See "Source" on page 1270

POWer:MODulation:TYPE <AnalysisType>

Sets the type of measurement.

Parameters:
<AnalysisType> TURNON | CONT
*RST: CONT

Manual operation: See "Type" on page 1270

27.25.8 Dynamic ON resistance

POWer:DONRes:AUTO....2994
POWer:DONRes:AVG....2994
POWer:DONRes:EXECute....2994
POWer:DONRes:GATE<g>:STARt....2994
POWer:DONRes:GATE<g>:STOP....2994
POWer:DONRes:REPort:ADD....2994
POWer:DONRes:RESult:RESistance?....2994

POWer:DONRes:AUTO <Autoscale>

Selects the scaling for the display of the results.

Parameters:
<Autoscale> AUTO | MANUAL
*RST: MANUAL

Manual operation: See "Optimize scaling" on page 1275

POWer:DONRes:AVG <Average>

Enables/disables averaging.

Parameters:
<Average> OFF | ON
*RST: ON

Manual operation: See "Average" on page 1274

POWer:DONRes:EXECute

Starts the dynamic on resistance measurement.

Usage: Event
Asynchronous command

Manual operation: See "Execute" on page 1275

POWer:DONRes:GATE<g>:STARt <Value>
POWer:DONRes:GATE<g>:STOP <Value>

Set the positions of the cursor lines, which define the measurement gate.

Suffix:
<g> 1..2
Cursor index

Parameters:
<Value> Numeric time value

POWer:DONRes:REPort:ADD

Adds the result to the report list.

Usage: Event

POWer:DONRes:RESult:RESistance?

Returns the the dynamic on resistance value.

Return values:

<Resistance> Range: -100E+24 to 100E+24
*RST: 0
Default unit: Ω

Usage: Query only

27.25.9 Slew rate

POWer:SLEWrate:SOURce 2995
POWer:SLEWrate:AUTO 2995
POWer:SLEWrate:AVGDeriv 2996
POWer:SLEWrate:EXECute 2996
ACQuire:ARESet:MODE 2996
ACQuire:ARESet:TIME 2996
ACQuire:ARESet:COUNt 2997
POWer:SLEWrate:GATE:STARt 2997
POWer:SLEWrate:GATE:STOP 2997
POWer:SLEWrate:REPort:ADD 2997
POWer:SLEWrate:RESult:ACTual? 2997
POWer:SLEWrate:RESult:AVG? 2997
POWer:SLEWrate:RESult:EVTCount? 2997
POWer:SLEWrate:RESult:NPEak? 2997
POWer:SLEWrate:RESult:PPEak? 2997
POWer:SLEWrate:RESult:RMS? 2997
POWer:SLEWrate:RESult:STDDev? 2997
POWer:SLEWrate:RESult:WFMCount? 2997

POWer:SLEWrate:SOURce <Source>

Selects the source for the slew rate measurement.

Parameters:

<Source> CURRENT | VOLTAGE
*RST: VOLTAGE

Manual operation: See "Source" on page 1278

POWer:SLEWrate:AUTO <Autoscale>

Selects the scaling for the display of the results.

Parameters:

<Autoscale> AUTO | MANUAL
*RST: MANUAL

Manual operation: See "Optimize scaling" on page 1279

POWer:SLEWrate:AVGDeriv <AvgDerivative>

Activates or deactivates average.

Parameters:
<AvgDerivative> OFF | ON
*RST: ON

Manual operation: See "Average" on page 1279

POWer:SLEWrate:EXECute

Starts the slew rate measurement.

Usage: Event

Manual operation: See "Execute" on page 1279

ACQuire:ARESet:MODE <ArtmRst>

Defines when the envelope and average evaluation restarts.

Parameters:
<ArtmRst> NONE | TIME | WFMS

TIME
Restarts the envelope and average calculation after the time defined with `ACQuire:ARESet:TIME`.

WFMS
Restarts the envelope and average calculation after a number of acquired waveforms defined with `ACQuire:ARESet:COUNt` on page 1502.

*RST: NONE

Usage: Asynchronous command

Manual operation: See "Arithmetic Reset > Mode" on page 131

ACQuire:ARESet:TIME <EnvelopeTimeout>

Defines the time after which the envelope and average evaluation restarts.

The setting is relevant if `ACQuire:ARESet:MODE` is set to `TIME`.

Parameters:
<EnvelopeTimeout> Range: 0.1 to 10000
Increment: 0.01
*RST: 0.1
Default unit: s

Usage: Asynchronous command

Manual operation: See "Arithmetic Reset > Mode" on page 131

ACQuire:ARESet:COUNt <NofWaveforms>

Defines the number of acquired waveforms after which the envelope and average evaluation restarts.

The setting is relevant if `ACQuire:ARESet:MODE` is set to `WFMS`.

Parameters:

<NofWaveforms>	Range:	2 to 16.7772E+6
	Increment:	10
	*RST:	1000

Usage: Asynchronous command

Manual operation: See "Arithmetic Reset > Mode" on page 131

POWer:SLEWrate:GATE:STARt <T0>
POWer:SLEWrate:GATE:STOP <T1>

Sets the value for the cursor.

Parameters:
<T1>

POWer:SLEWrate:REPort:ADD

Adds the result to the report list.

Usage: Event

POWer:SLEWrate:RESult:ACTual? <MeasType>
POWer:SLEWrate:RESult:AVG? <MeasType>
POWer:SLEWrate:RESult:EVTCount? <MeasType>
POWer:SLEWrate:RESult:NPEak? <MeasType>
POWer:SLEWrate:RESult:PPEak? <MeasType>
POWer:SLEWrate:RESult:RMS? <MeasType>
POWer:SLEWrate:RESult:STDDev? <MeasType>
POWer:SLEWrate:RESult:WFMCount? <MeasType>

Return the specified statistic result of the specified measurement type.

- [:ACTual]: current measurement result
- AVG: average of the long-term measurement results
- EVTCount: number of measurement results in the long-term measurement
- NPEak: negative peak value of the long-term measurement results
- PPEak: positive peak value of the long-term measurement results
- RMS: RMS value of the long-term measurement results
- STDDev: standard deviation of the long-term measurement results

Query parameters:

<MeasType>	MIN | MAX

Return values:
<Value> Statistic result

Usage: Query only

27.25.10 S.O.A

POWer:SOA:EXECute....2998
POWer:SOA:LINear:ADD....2998
POWer:SOA:LOGarithmic:ADD....2998
POWer:SOA:LINear:COUNt?....2998
POWer:SOA:LOGarithmic:COUNt?....2998
POWer:SOA:LINear:REMove....2999
POWer:SOA:LOGarithmic:REMove....2999
POWer:SOA:LINear:INSert....2999
POWer:SOA:LOGarithmic:INSert....2999
POWer:SOA:LINear:POINt<m>:CURRent....2999
POWer:SOA:LOGarithmic:POINt<m>:CURRent....2999
POWer:SOA:LINear:POINt<m>:VOLTage....2999
POWer:SOA:LOGarithmic:POINt<m>:VOLTage....2999
POWer:SOA:MASK....3000
POWer:SOA:REPort:ADD....3000
POWer:SOA:SCALe....3000
POWer:SOA:SWITch....3000

POWer:SOA:EXECute

Starts the safe operating area measurement.

Usage: Event

Manual operation: See "Execute" on page 1285

POWer:SOA:LINear:ADD
POWer:SOA:LOGarithmic:ADD

Adds a point.

Usage: Setting only

Manual operation: See "SOA point definition" on page 1284

POWer:SOA:LINear:COUNt?
POWer:SOA:LOGarithmic:COUNt?

Queries the number of points.

Return values:
<Count>

Usage: Query only

Manual operation: See "SOA point definition" on page 1284

POWer:SOA:LINear:REMove <GateIndex>
POWer:SOA:LOGarithmic:REMove <GateIndex>

Removes a point.

Setting parameters:
<GateIndex>

Usage: Setting only

Manual operation: See "SOA point definition" on page 1284

POWer:SOA:LINear:INSert <GateIndex>
POWer:SOA:LOGarithmic:INSert <GateIndex>

Inserts a point.

Setting parameters:
<GateIndex>

Usage: Setting only

Manual operation: See "SOA point definition" on page 1284

POWer:SOA:LINear:POINt<m>:CURRent <Amp>
POWer:SOA:LOGarithmic:POINt<m>:CURRent <Amp>

Sets the current value for the respective point.

Suffix:
<m> *

Parameters:
<Amp>
Range: 0.01 to 1000
Increment: 0
*RST: 0.01
Default unit: A

POWer:SOA:LINear:POINt<m>:VOLTage <Volt>
POWer:SOA:LOGarithmic:POINt<m>:VOLTage <Volt>

Sets the voltage value for the respective point.

Suffix:
<m> *

Parameters:
<Volt>
Range: 1E-3 to 1000
Increment: 0
*RST: 1E-3
Default unit: V

POWer:SOA:MASK <EnableMaskTest>

Activates or deactivates a mask.

Parameters:
<EnableMaskTest> OFF | ON
*RST: OFF

Manual operation: See "Enable mask test" on page 1284

POWer:SOA:REPort:ADD

Adds the result to the report list.

Usage: Event

POWer:SOA:SCALe <Scale>

Sets the scale for the measurement.

Parameters:
<Scale> LOG | LINEAR
*RST: LOG

Manual operation: See "Scale" on page 1284

POWer:SOA:SWITch <Switch>

Switches between linear and logarithmic scale.

Parameters:
<Switch> LOGLINEAR | LINEARLOG
*RST: LOGLINEAR

27.25.11 Turn on/off

This measurement is a single shot measurement. To start the measurement, use the `RUNS` command.

POWer:ONOFf:ATOFf 3001
POWer:ONOFf:ATON 3001
POWer:ONOFf:DTOFf 3001
POWer:ONOFf:DTON 3001
POWer:ONOFf:DSOFf 3001
POWer:ONOFf:DSON 3001
POWer:ONOFf:EXECute 3001
POWer:ONOFf:INPut 3001
POWer:ONOFf:REPort:ADD 3002
POWer:ONOFf:RESult:TOFF? 3002

POWer:ONOFf:RESult:TON?....3002
POWer:ONOFf:TIME....3002
POWer:ONOFf:TYPE....3002

POWer:ONOFf:ATOFf <ACTrigLevOff>
POWer:ONOFf:ATON <ACTrigLevOn>

Triggers the beginning of the measurements at the moment the AC input voltage reaches the set value.

Parameters:

<ACTrigLevOn>
Range: -1E+6 to 1E+6
Increment: 1E-3
*RST: 10
Default unit: V

Manual operation: See "Trigger level on" on page 1290

POWer:ONOFf:DTOFf <ACTrigLevOff>
POWer:ONOFf:DTON <ACTrigLevOn>
POWer:ONOFf:DSOFf <StateLevelOff>
POWer:ONOFf:DSON <StateLevelOn>

Sets the percentage of the steady state level of the DC output that has to be reached.

Parameters:

<StateLevelOn>
Range: 0 to 100
Increment: 1
*RST: 90
Default unit: %

Manual operation: See "Steady state level-Turn on" on page 1289

POWer:ONOFf:EXECute

Starts the turn on/off measurement.

Usage: Event

Manual operation: See "Execute" on page 1290

POWer:ONOFf:INPut <InputType>

Sets the input type.

Parameters:

<InputType>
AC | DC
*RST: AC

Manual operation: See "Input Type" on page 1289

POWer:ONOFf:REPort:ADD

Adds the result to the report list.

Usage: Event

POWer:ONOFf:RESult:TOFF?
POWer:ONOFf:RESult:TON?

Returns the result time.

Return values:
<TurnOnTime> Range: -100E+24 to 100E+24
Increment: 100E-12
*RST: 0
Default unit: s

Usage: Query only

POWer:ONOFf:TIME <Time>

Sets the time, the start of the measurement of the turn off time is delay with, after the trigger point.

Parameters:
<Time> Range: 100E-12 to 10000
Increment: 100E-9
*RST: 0.1
Default unit: s

Manual operation: See "Time" on page 1290

POWer:ONOFf:TYPE <MeasType>

Selects the measurement type.

Parameters:
<MeasType> TON | TOFF

TON - "Turn on" measurement
TOFF - "Turn off" measurement

*RST: TON

Manual operation: See "Measurement Type" on page 1289

27.25.12 Switching loss

POWer:SWITching:RESult:POWer:STDDev?....3005
POWer:SWITching:RESult:POWer:WFMCount?....3005

POWer:SWITching:AUTO <Autoscale>

Selects the scaling for the display of the results.

Parameters:

<Autoscale> AUTO | MANUAL
*RST: MANUAL

Manual operation: See "Optimize scaling" on page 1295

POWer:SWITching:EXECute

Starts the switching loss measurement.

Usage: Event
Asynchronous command

Manual operation: See "Execute" on page 1295

POWer:SWITching:REPort:ADD

Adds the result to the report list.

Usage: Event

POWer:SWITching:SWIFrequency <SwitchingFreq>

Sets the switching frequency.

Parameters:
<SwitchingFreq> Range: 1 to 500E+9
Increment: 1000
*RST: 10E+6
Default unit: Hz

Manual operation: See "Switching frequency > Auto" on page 1294

POWer:SWITching:SWIT <MeasSwitchingFreq>

Activates or deactivates the measurements of the switching frequency.

Parameters:
<MeasSwitchingFreq>OFF | ON
*RST: ON

Manual operation: See "Switching frequency > Auto" on page 1294

POWer:SWITching:COND <MeasureConduction>
POWer:SWITching:NCON <MeasureNonConduction>
POWer:SWITching:TON <MeasureTurnOn>
POWer:SWITching:TOFF <MeasureTurnOff>
POWer:SWITching:TOTal <MeasureTotal>

Enables the measurement during the respective period.

Parameters:
<MeasureTotal> OFF | ON
*RST: ON

Manual operation: See "Total" on page 1295

POWer:SWITching:GATE:COND:STARt <T1>
POWer:SWITching:GATE:COND:STOP <T2>
POWer:SWITching:GATE:NCON:STARt <T3>
POWer:SWITching:GATE:NCON:STOP <T4>
POWer:SWITching:GATE:TOFF:STARt <T2>
POWer:SWITching:GATE:TOFF:STOP <T3>

POWer:SWITching:GATE:TON:STARt <T0>
POWer:SWITching:GATE:TON:STOP <T1>

Sets the value for the respective cursor.

Parameters:
<T1>

POWer:SWITching:RESult:ENERgy:ACTual? <MeasType>
POWer:SWITching:RESult:ENERgy:AVG? <MeasType>
POWer:SWITching:RESult:ENERgy:EVTCount? <MeasType>
POWer:SWITching:RESult:ENERgy:NPEak? <MeasType>
POWer:SWITching:RESult:ENERgy:PPEak? <MeasType>
POWer:SWITching:RESult:ENERgy:RMS? <MeasType>
POWer:SWITching:RESult:ENERgy:STDDev? <MeasType>
POWer:SWITching:RESult:ENERgy:WFMCount? <MeasType>

Return the specified statistic result of the specified measurement type.

- [:ACTual]: current measurement result
- AVG: average of the long-term measurement results
- EVTCount: number of measurement results in the long-term measurement
- NPEak: negative peak value of the long-term measurement results
- PPEak: positive peak value of the long-term measurement results
- RMS: RMS value of the long-term measurement results
- STDDev: standard deviation of the long-term measurement results

Query parameters:

<MeasType>	SWF | TON | TOF | CON | NCO | TOT SWF: Switching frequency TON: Turn on TOF: Turn off CON: conduction NCO: Non conduction TOT: Total

Return values:

<Value>	Statistic result

Usage: Query only

POWer:SWITching:RESult:POWer:ACTual? <MeasType>
POWer:SWITching:RESult:POWer:AVG? <MeasType>
POWer:SWITching:RESult:POWer:EVTCount? <MeasType>

POWer:SWITching:RESult:POWer:STDDev? <MeasType>
POWer:SWITching:RESult:POWer:WFMCount? <MeasType>

Return the specified statistic result of the specified measurement type.

- [:ACTual]: current measurement result
- AVG: average of the long-term measurement results
- EVTCount: number of measurement results in the long-term measurement
- NPEak: negative peak value of the long-term measurement results
- PPEak: positive peak value of the long-term measurement results
- RMS: RMS value of the long-term measurement results
- STDDev: standard deviation of the long-term measurement results

Query parameters:

<MeasType> SWF | TON | TOF | CON | NCO | TOT

SWF: Switching frequency
TON: Turn on
TOF: Turn off
CON: conduction
NCO: Non conduction
TOT: Total

Return values:

<Value> Statistic result

Usage: Query only

27.25.13 Power efficiency

POWer:EFFiciency:AUTO....3006

POWer:RIPPle:AUToscale <Autoscale>

Selects the scaling for the display of the results.

Parameters:

<Autoscale> AUTO | MANUAL

*RST: MANUAL

Manual operation: See "Optimize scaling" on page 1305

POWer:RIPPle:CURRent <TwoChMeas>

Activates or deactivates the input current.

Parameters:

<TwoChMeas> OFF | ON

*RST: ON

POWer:RIPPle:EXECute

Starts the ripple measurement.

Usage: Event

Manual operation: See "Execute" on page 1306

POWer:RIPPle:FREQuency <SmpsFrequency>

Sets the SMPS switching frequency.

Parameters:

<SmpsFrequency> Range: 1 to 100E+9
Increment: 1
*RST: 1E+6
Default unit: Hz

Manual operation: See "Switching frequency" on page 1305

POWer:RIPPle:REPort:ADD

Adds the result to the report list.

Usage: Event

POWer:RIPPle:RESult:FREQuency[:ACTual]? [<VoltageMeasTyp>]
POWer:RIPPle:RESult:FREQuency:AVG? [<VoltageMeasTyp>]
POWer:RIPPle:RESult:FREQuency:EVTCount? [<VoltageMeasTyp>]

POWer:RIPPle:RESult:FREQuency:STDDev? [<VoltageMeasTyp>]
POWer:RIPPle:RESult:FREQuency:WFMCount? [<VoltageMeasTyp>]

Return the specified statistic result of the frequency of the signal. The result is based on the period measurement.

- [:ACTual]: current measurement result
- AVG: average of the long-term measurement results
- EVTCount: number of measurement results in the long-term measurement
- NPEak: negative peak value of the long-term measurement results
- PPEak: positive peak value of the long-term measurement results
- RMS: RMS value of the long-term measurement results
- STDDev: standard deviation of the long-term measurement results

Query parameters:

<VoltageMeasTyp> VOLTage | CURRent
*RST: VOLTage

Return values:

<Value> Statistic result

Usage: Query only

POWer:RIPPle:RESult:MAXimum[:ACTual]? [<VoltageMeasTyp>]
POWer:RIPPle:RESult:MAXimum:AVG? [<VoltageMeasTyp>]
POWer:RIPPle:RESult:MAXimum:EVTCount? [<VoltageMeasTyp>]

POWer:RIPPle:RESult:MAXimum:STDDev? [<VoltageMeasTyp>]
POWer:RIPPle:RESult:MAXimum:WFMCount? [<VoltageMeasTyp>]

Return the specified statistic result for the maximum value of the waveform.

- [:ACTual]: current measurement result
- AVG: average of the long-term measurement results
- EVTCount: number of measurement results in the long-term measurement
- NPEak: negative peak value of the long-term measurement results
- PPEak: positive peak value of the long-term measurement results
- RMS: RMS value of the long-term measurement results
- STDDev: standard deviation of the long-term measurement results

Query parameters:
<VoltageMeasTyp> VOLTage | CURRent
*RST: VOLTage

Return values:
<Value> Statistic result

Usage: Query only

POWer:RIPPle:RESult:MINimum[:ACTual]? [<VoltageMeasTyp>]

POWer:RIPPle:RESult:MINimum:STDDev? [<VoltageMeasTyp>]
POWer:RIPPle:RESult:MINimum:WFMCount? [<VoltageMeasTyp>]

Return the specified statistic result for the minimum value of the waveform.

- [:ACTual]: current measurement result
- AVG: average of the long-term measurement results
- EVTCount: number of measurement results in the long-term measurement
- NPEak: negative peak value of the long-term measurement results
- PPEak: positive peak value of the long-term measurement results
- RMS: RMS value of the long-term measurement results
- STDDev: standard deviation of the long-term measurement results

Query parameters:
<VoltageMeasTyp> VOLTage | CURRent
*RST: VOLTage

Return values:
<Value> Statistic result

Usage: Query only

POWer:RIPPle:RESult:NDCYcle[:ACTual]? [<VoltageMeasTyp>]
POWer:RIPPle:RESult:NDCYcle:AVG? [<VoltageMeasTyp>]
POWer:RIPPle:RESult:NDCYcle:EVTCount? [<VoltageMeasTyp>]
POWer:RIPPle:RESult:NDCYcle:NPEak? [<VoltageMeasTyp>]
POWer:RIPPle:RESult:NDCYcle:PPEak? [<VoltageMeasTyp>]

POWer:RIPPle:RESult:NDCYcle:STDDev? [<VoltageMeasTyp>]
POWer:RIPPle:RESult:NDCYcle:WFMCount? [<VoltageMeasTyp>]

Return the specified statistic result for the negative duty cycle. The measurement requires at least one complete period of a triggered signal.

- [:ACTual]: current measurement result
- AVG: average of the long-term measurement results

- EVTCount: number of measurement results in the long-term measurement
- NPEak: negative peak value of the long-term measurement results
- PPEak: positive peak value of the long-term measurement results
- RMS: RMS value of the long-term measurement results
- STDDev: standard deviation of the long-term measurement results

Query parameters:

<VoltageMeasTyp> VOLTage | CURRent
*RST: VOLTage

Return values:

<Value> Statistic result

Usage: Query only

POWer:RIPPle:RESult:PDCYcle[:ACTual]? [<VoltageMeasTyp>]
POWer:RIPPle:RESult:PDCYcle:AVG? [<VoltageMeasTyp>]
POWer:RIPPle:RESult:PDCYcle:EVTCount? [<VoltageMeasTyp>]

Usage: Query only

27.25.15 Transient response

This measurement is a single shot measurement. To start the measurement, use the `RUNS` command.

Programgramming example: Section 27.3.8.2, "Transient response measurement", on page 1445

POWer:TRANsient:AUToscale....3015
POWer:TRANsient:EXECute....3015
POWer:TRANsient:FREQuency....3015
POWer:TRANsient:HYSTeresis....3015
POWer:TRANsient:INPut....3015
POWer:TRANsient:REPort:ADD....3016
POWer:TRANsient:RESult[:ACTual]?....3016
POWer:TRANsient:SIGHigh....3016
POWer:TRANsient:SIGLow....3016
POWer:TRANsient:TRGChannel....3016
POWer:TRANsient:TRGLevel....3017
POWer:TRANsient:TRGSlope....3017

POWer:TRANsient:AUToscale <Autoscale>

Selects the scaling for the display of the results.

Parameters:

<Autoscale> AUTO | MANUAL
*RST: MANUAL

Manual operation: See "Optimize scaling" on page 1310

POWer:TRANsient:EXECute

Starts the transient response measurement.

Usage: Event

Manual operation: See "Execute" on page 1310

POWer:TRANsient:FREQuency <SmpsFrequency>

Sets the SMPS switching frequency.

Parameters:

<SmpsFrequency> Range: 1 to 100E+6
Increment: 1
*RST: 1E+6
Default unit: Hz

Manual operation: See "Horizontal SMPS Frequency" on page 1309

POWer:TRANsient:HYSTeresis <ToleranceTube>

Specifies a tolerated error band for the signal level.

Parameters:

<ToleranceTube> Range: 0 to 50
Increment: 1
*RST: 10
Default unit: %

Manual operation: See "Output tube tolerance" on page 1310

POWer:TRANsient:INPut <ThreeChMeas>

Activates or deactivates the input voltage.

Parameters:

<ThreeChMeas> OFF | ON
*RST: OFF

POWer:TRANsient:REPort:ADD

Adds the result to the report list.

Usage: Event

POWer:TRANsient:RESult[:ACTual]? <MeasType>

Returns the results of the transient response measurement.

Query parameters:
<MeasType> OVERshoot | RTIMe | DELay | PEAKtime | SETTling

Return values:
<Value>

Usage: Query only

POWer:TRANsient:SIGHigh <ExpHighOutputSignLev>

Sets the expected signal high voltage value.

Parameters:
<ExpHighOutputSignLev> Range: -1000 to 1000
Increment: 1E-3
*RST: 1
Default unit: V

Manual operation: See "High" on page 1310

POWer:TRANsient:SIGLow <ExpLowOutputSignLev>

Sets the expected signal low voltage value.

Parameters:
<ExpLowOutputSignLev> Range: -1000 to 1000
Increment: 1E-3
*RST: 0
Default unit: V

Manual operation: See "Low" on page 1310

POWer:TRANsient:TRGChannel <TriggerSource>

Sets the source channel of the trigger.

Parameters:

<TriggerSource> CHAN1 | CHANnel1 | CHAN2 | CHANnel2 | CHAN3 | CHANnel3 | CHAN4 | CHANnel4

CHAN1 = CHANnel1, CHAN2 = CHANnel2, CHAN3 = CHANnel3, CHAN4 = CHANnel4
Only the measurement source channels can be used as trigger source.

*RST: CHAN1

Manual operation: See "Source" on page 1309

POWer:TRANsient:TRGLevel <TriggerLevel>

Sets the voltage or current level for the trigger event.

Parameters:

<TriggerLevel> Range: -1000 to 1000
Increment: 1E-3
*RST: 0
Default unit: V

Manual operation: See "Level" on page 1310

POWer:TRANsient:TRGSlope <TriggerSlope>

Sets the edge type for the trigger event.

Parameters:

<TriggerSlope> POSitive | NEGative | EITHer

*RST: POSitive

Manual operation: See "Slope" on page 1309

27.25.16 Spectrum

POWer:SPECtrum:AUToscale....3017
POWer:SPECtrum:EXECute....3018
POWer:SPECtrum:FREQuency....3018
POWer:SPECtrum:REPort:ADD....3018
POWer:SPECtrum:RCOunt?....3018
POWer:SPECtrum:RESult<m>:FREQuency?....3018
POWer:SPECtrum:RESult<m>:LEVel?....3018

POWer:SPECtrum:AUToscale <Autoscale>

Selects the scaling for the display of the results.

Parameters:

<Autoscale> AUTO | MANUAL

*RST: MANUAL

Manual operation: See "Optimize scaling" on page 1314

POWer:SPECtrum:EXECute

Starts the spectrum measurement.

Usage: Event

Manual operation: See "Execute" on page 1314

POWer:SPECtrum:FREQuency <SmpsFrequency>

Sets the SMPS switching frequency.

Parameters:

<SmpsFrequency>
Range: 1 to 100E+6
Increment: 1
*RST: 1E+6
Default unit: Hz

Manual operation: See "Switching frequency" on page 1313

POWer:SPECtrum:REPort:ADD

Adds the result to the report list.

Usage: Event

POWer:SPECtrum:RCOunt?

Returns the total number of harmonics.

Return values:
<ResultCount>

Usage: Query only

POWer:SPECtrum:RESult<m>:FREQuency?

Returns the result frequency of the m-th result value.

Suffix:
<m> 1..*

Return values:
<Frequency>

Usage: Query only

POWer:SPECtrum:RESult<m>:LEVel?

Returns the result level of the m-th result value.

Suffix:
<m> 1..*

Return values:
<Level>

Usage: Query only

27.26 Deembedding (option R&S RTO6-K121)

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

- www.rohde-schwarz.com/rc-via-scpi, section "Command sequence and synchronization"
- Section 27.3, "Programming examples", on page 1425

- Measurement setup 3019
- Save and load the deembedding setup 3022
- Components 3023
- Cascade and response 3033

27.26.1 Measurement setup

DEEMbedding<de>[:STATe] 3019
DEEMbedding<de>:ADD 3020
DEEMbedding<de>:REMove 3020
DEEMbedding<de>:CCOunt? 3021
DEEMbedding<de>:BANDwidth 3021
DEEMbedding<de>:CMPDelay 3021
DEEMbedding<de>:PRESet 3022

DEEMbedding<de>[:STATe] <State>

Activates the deembedding - the correction of parasitic effects of the measurement setup on the measured signal.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 1317

DEEMbedding<de>:ADD <Index>,[<Type>]

Adds a component to the measurement setup.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

Setting parameters:
<Index> Defines the place of the component in the measurement path. The DUT is always the first component (index = 1), the probe or input is the last component.

<Type> PROBe | FIXTure | CABLe | DUT | ADAPter | INPut | OTHer | INTPoser | RTZA10 | RTZA16 | RTZA17 | RTZA50 | RTZA51 | PP | PC

INTPoser
Interposer

RTZA10 | RTZA16 | RTZA17 | RTZA50 | RTZA51
SMA adapters and cable offered by Rohde & Schwarz

PP | PC
Proven probe, proven cable

Example: See Section 27.3.6.1, "Adding cables to the measurement setup", on page 1439.

Usage: Setting only
Asynchronous command

Manual operation: See "Meas setup definition" on page 1317

DEEMbedding<de>:REMove <Index>

Deletes the component with the indicated index from the measurement setup.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

Setting parameters:
<Index> Defines the place of the component in the measurement path. The DUT is always the first component (index = 1), the probe or input is the last component.

Usage: Setting only
Asynchronous command

Manual operation: See "Meas setup definition" on page 1317

DEEMbedding<de>:CCOunt?

Returns the total number of components in the measurement setup, including disabled components.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

Return values:
<Value> Integer value, number of components

Usage: Query only

Manual operation: See "Meas setup definition" on page 1317

DEEMbedding<de>:BANDwidth <Bandwidth>

Sets the maximum bandwidth until which the signal is corrected. This maximum value is the minimum bandwidth value of probe, probe tip and oscilloscope bandwidth, and can not be higher than the highest frequency in a used S-parameter file.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

Parameters:
<Bandwidth> Bandwidth limit for correction.

Range: 1E+9 to 16E+9
Increment: 10
*RST: 4E+9
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Effective bandwidth" on page 1317

DEEMbedding<de>:CMPDelay <DelayCompens>

Enables the compensation for the group delay of the complete measurement setup. If enabled, the calibration time reference point is the start point of the measurement setup. If disabled, the calibration time reference point is the oscilloscope's channel input.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

Parameters:
<DelayCompens> OFF | ON

*RST: ON

Usage: Asynchronous command

Manual operation: See "Delay compensation" on page 1317

DEEMbedding<de>:PRESet

Sets the complete deembedding configuration to the default values. Use this command always before setting up the deembedding, because *RST does not affect the deembedding settings.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

Example: See Section 27.3.6.1, "Adding cables to the measurement setup", on page 1439.

Usage: Event
Asynchronous command

Manual operation: See "Preset Deembedding" on page 1318

27.26.2 Save and load the deembedding setup

DEEMbedding<de>:NAME....3022
DEEMbedding<de>:SAVE....3022
DEEMbedding<de>:OPEN....3023
DEEMbedding<de>:DELete....3023

DEEMbedding<de>:NAME <Path>

Sets the file name, file format and path of the deembedding setup file. The file format is always `.xml`.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

Parameters:
<Path> String with path and file name with extension `.xml`

Usage: Asynchronous command

Manual operation: See "Save / recall deembedding settings" on page 1318

DEEMbedding<de>:SAVE

Saves the deembedding configuration to the file specified with `DEEMbedding<de>:NAME`.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

Usage: Setting only

Manual operation: See "Save / recall deembedding settings" on page 1318

DEEMbedding<de>:OPEN

Opens and loads the deembedding configuration from the file specified with `DEEMbedding<de>:NAME`.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

Usage: Setting only

Manual operation: See "Save / recall deembedding settings" on page 1318

DEEMbedding<de>:DELete

Deletes the deembedding configuration file specified with `DEEMbedding<de>:NAME`.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

Usage: Setting only

Manual operation: See "Save / recall deembedding settings" on page 1318

27.26.3 Components

- General settings....3023
- DUT settings....3025
- R&S RT-ZM probe settings....3026
- Cable, adapter, fixture and custom settings....3028
- Interposer....3031

27.26.3.1 General settings

DEEMbedding<de>:COMPonent<n>[:STATe] <IsEnabled>

Enables or disables the indicated component for deembedding.

The first and the last component are always enabled and cannot be disabled.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

<n> 2..n-1
Index of the component in the measurement setup. The DUT has index 1, the probe has index n.

Parameters:
<IsEnabled> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 1319

DEEMbedding<de>:COMPonent<n>:TYPE <Type>

Sets the type of the indicated component. The first component is always DUT, the last component is PROBe or INPut.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

<n> 1..n
Index of the component in the measurement setup. The DUT has index 1, the probe has index n.

Parameters:
<Type> PROBe | FIXTure | CABLe | DUT | ADAPter | INPut | OTHer | INTPoser | RTZA10 | RTZA16 | RTZA17 | RTZA50 | RTZA51 | PP | PC

RTZA10 | RTZA16 | RTZA17 | RTZA50 | RTZA51
SMA adapters and cable offered by Rohde & Schwarz

PP | PC
Proven probe, proven cable

*RST: CABLe

Usage: Asynchronous command

Manual operation: See "Component" on page 1319

DEEMbedding<de>:COMPonent<n>:NAME <Name>

Sets a name for the indicated component that helps you identifying it.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

<n> 1..n
Index of the component in the measurement setup. The DUT has index 1, the probe has index n.

Parameters:
<Name> String parameter, name of the component

Usage: Asynchronous command

Manual operation: See "Name" on page 1319

DEEMbedding<de>:COMPonent<n>:PCOunt?

Returns the number of all ports of the selected component (input ports and output ports).

The number of ports depends on the attached probe. If a modular probe R&S RT-ZM or differential probe R&S RT-ZD is used, the number of ports is 4. Otherwise, 2 ports are available.

Suffix:

<de> 1..4
Selects the channel that is configured for deembedding.

<n> 1..n
Index of the component in the measurement setup. The DUT has index 1, the probe has index n.

Return values:

<TotalPorts> ONE | TWO | THRee | FOUR | FIVE | SIX
*RST: TWO

Usage: Query only
Asynchronous command

Manual operation: See "Total ports" on page 1319

27.26.3.2 DUT settings

DEEMbedding<de>:COMPonent<n>:MODE 3025
DEEMbedding<de>:COMPonent<n>:LOAD:REMProbeload 3026
DEEMbedding<de>:COMPonent<n>:LOAD:IMPedance? 3026

DEEMbedding<de>:COMPonent<n>:MODE <Mode>

Sets the probing mode.

Suffix:

<de> 1..4
Selects the channel that is configured for deembedding.

<n> 1, only for available DUT

Parameters:

<Mode> PROBing | TERMinating

PROBing
For measurements with a high-ohmic probe and measure on an existing line in parallel to the load.

TERMinating
For measurements if the measuring equipment is the load of the line.

*RST: PROBing

Usage: Asynchronous command

Manual operation: See "Probing, Terminating" on page 160

DEEMbedding<de>:COMPonent<n>:LOAD:REMProbeload <Value>

Removes the loading of the probe if `DEEMbedding<de>:COMPonent<n>:MODE` is set to `PROBing`.

If the probe loading is removed, you see the signal that would be at the measurement point if the probe's input impedance is ideal (infinite impedance).

Without removing the loading, you see the real signal at the measurement point, including the probe loading.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

<n> 1, only for available DUT

Parameters:
<Value> OFF | ON

Usage: Asynchronous command

Manual operation: See "Remove probe load" on page 161

DEEMbedding<de>:COMPonent<n>:LOAD:IMPedance?

Shows the source impedance of the DUT component. If an R&S RT-ZM probe is connected, the value depends on the selected probe mode: common mode, differential, or single-ended measurement.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

<n> 1, only for available DUT

Return values:
<Value> Numeric value

Usage: Query only
Asynchronous command

Manual operation: See "Source impedance" on page 161

27.26.3.3 R&S RT-ZM probe settings

This chapter lists the commands that correspond to the "Deembedding" > "RT-ZMxx" dialog box. More commands are provided in Section 27.8.7.6, "Modular probes, deembedding", on page 1534.

PROBe<ch>:DEEMbedding:TIPModule[:SELect] 3027
PROBe<ch>:DEEMbedding:TIPModule:ZMA<n>:SUBModule 3027
PROBe<ch>:DEEMbedding:BANDwidth 3028

PROBe<ch>:DEEMbedding:TIPModule[:SELect] <ProbeTipZMA>

Selects the tip module that is used for measurement.

Suffix:
<ch> 1..4
Selects the channel to which the probe is connected.

Parameters:
<ProbeTipZMA> NONE | ZMA10 | ZMA12 | ZMA14 | ZMA15 | ZMA30 | ZMA40 | ZMA50 | CUST

ZMA30 | ZMA40
Define additional settings with `PROBe<ch>:DEEMbedding:TIPModule:ZMA<n>:SUBModule`.

CUST
Load the deembedding file with

*RST: ZMA10

Usage: Asynchronous command

Manual operation: See "Probe tip module, Pin spacing, Open" on page 160

PROBe<ch>:DEEMbedding:TIPModule:ZMA<n>:SUBModule <Value>

Defines additional settings for some tip modules:

For the browser module R&S RT-ZMA30, measure the space between the pins, and select the appropriate value.

If R&S RT-ZMA40 is selected, choose the used submodule: semi-rigid cables or none.

Suffix:
<ch> 1..4
Selects the channel to which the probe is connected.

<n> 30 (R&S RT-ZMA30) or 40 (R&S RT-ZMA40)

Parameters:
<Value> D16 | D25 | D45 | D75 | NONE | SRCS

For R&S RT-ZMA30:
D16 = 1.6 mm
D25 = 2.5 mm
D45 = 4.5 mm
D75 = 7.5 mm
For R&S RT-ZMA40:
NONE = no submodule
SRCS = semi-rigid cables

Usage: Asynchronous command

Manual operation: See "Probe tip module, Pin spacing, Open" on page 160

PROBe<ch>:DEEMbedding:BANDwidth <ProbeBandwidth>

Sets the maximum bandwidth until which the signal is corrected. This maximum value is the minimum bandwidth value of probe, probe tip and oscilloscope bandwidth, and can not be higher than the highest frequency in a used S-parameter file. Consider that most tip modules support the full bandwidth of the probe amplifier, but some tip modules have limited bandwidth.

Suffix:
<ch> 1..4
Selects the channel to which the probe is connected.

Parameters:
<ProbeBandwidth> Range: 10000 to 16E+9
Increment: 10
*RST: 4E+9
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Effective bandwidth" on page 161

27.26.3.4 Cable, adapter, fixture and custom settings

DEEMbedding<de>:COMPonent<n>:IDENtical 3028
DEEMbedding<de>:COMPonent<n>:IPONe 3029
DEEMbedding<de>:COMPonent<n>:IPTWo 3029
DEEMbedding<de>:COMPonent<n>:OPONe 3029
DEEMbedding<de>:COMPonent<n>:OPTWo 3029
DEEMbedding<de>:COMPonent<n>:SPFType 3029
DEEMbedding<de>:COMPonent<n>:SPONe 3030
DEEMbedding<de>:COMPonent<n>:SPTWo 3030
DEEMbedding<de>:COMPonent<n>:SPFSelection 3030
DEEMbedding<de>:COMPonent<n>:PSONe 3030
DEEMbedding<de>:COMPonent<n>:PSTWo 3030

DEEMbedding<de>:COMPonent<n>:IDENtical <MatchedPaths>

The setting is relevant if the measurement setup is a 4-port, and the component is a 2- port. Usually, these components are cables and adapters, which are described by *.s2p files. In case of a 4-port setup, 2 cables or 2 adapters are used. If they are identical, for example, when a matched-pair cable is used, they can be described by the same file. In this case, set the command to ON.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

<n> 1..*
Selects the component. The DUT has suffix 1.

Parameters:
<MatchedPaths> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Identical Paths" on page 1331

DEEMbedding<de>:COMPonent<n>:IPONe <InputPort1>
DEEMbedding<de>:COMPonent<n>:IPTWo <InputPort2>
DEEMbedding<de>:COMPonent<n>:OPONe <OutputPort1>
DEEMbedding<de>:COMPonent<n>:OPTWo <OutputPort2>

Assign the ports to the input and output of the component according to the data in the Touchstone file. This information is not directly written in the file. You need background information how the S-parameters were determined, i.e. which port was input and which port was output.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

<n> 1..*
Selects the component. The DUT has suffix 1.

Parameters:
<InputPort1>
<InputPort2>
<OutputPort1>
<OutputPort2>
ONE | TWO | THRee | FOUR | FIVE | SIX
Port number that is assigned to the input or output.
*RST: ONE for input 1, TWO for output 1, THRee for input 2, FOUR for output 4

Usage: Asynchronous command

Manual operation: See "Input 1, Input 2, Output 1, Output 2" on page 1330

DEEMbedding<de>:COMPonent<n>:SPFType <SParamFile1Typ>

Selects the file format of the Touchstone file.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

<n> 1..*
Selects the component. The DUT has suffix 1.

Parameters:
<SParamFile1Typ> S2P | S3P | S4P | S6P
*RST: S2P

Usage: Asynchronous command

Manual operation: See "S-Parameters, File type" on page 1331

DEEMbedding<de>:COMPonent<n>:SPONe <SParamFilePath>
DEEMbedding<de>:COMPonent<n>:SPTWo <SParamFilePath>

Set the file name and path of the S-parameter file, and load the S-parameters.

See also: "S-Parameters, File type" on page 1331.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

<n> 1..*
Selects the component. The DUT has suffix 1.

Parameters:
<SParamFilePath> String with path and file name.

Example: See Section 27.3.6.1, "Adding cables to the measurement setup", on page 1439.

Usage: Asynchronous command

Manual operation: See "S-Parameters, File type" on page 1331

DEEMbedding<de>:COMPonent<n>:SPFSelection <SParamFileSel>

Selects the Touchstone file for response curve display.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

<n> 1..*
Selects the component. The DUT has suffix 1.

Parameters:
<SParamFileSel> SPF1 | SPF2

*RST: SPF1

Usage: Asynchronous command

Manual operation: See "Response curves" on page 1331

DEEMbedding<de>:COMPonent<n>:PSONe <PlotSelect>
DEEMbedding<de>:COMPonent<n>:PSTWo <PlotSelect>

Selects the S-parameter for display of the response curves: magnitude, phase and group delay response.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

<n> 1..*
Selects the component. The DUT has suffix 1.

Parameters:

<PlotSelect> S11 | S12 | S15 | S16 | S21 | S22 | S25 | S26 | S35 | S36 | S45 | S46 | S51 | S52 | S53 | S54 | S55 | S56 | S61 | S62 | S63 | S64 | S65 | S66

*RST: S12

Usage: Asynchronous command

Manual operation: See "Response curves" on page 1331

27.26.3.5 Interposer

DEEMbedding<de>:COMPonent<n>:INTPoser:CPONe 3031
DEEMbedding<de>:COMPonent<n>:INTPoser:CPTWo 3031
DEEMbedding<de>:COMPonent<n>:INTPoser:MPONe 3031
DEEMbedding<de>:COMPonent<n>:INTPoser:MPTWo 3031
DEEMbedding<de>:COMPonent<n>:INTPoser:PPONe 3032
DEEMbedding<de>:COMPonent<n>:INTPoser:PPTWo 3032
DEEMbedding<de>:COMPonent<n>:INTPoser:TERMinate 3032

DEEMbedding<de>:COMPonent<n>:INTPoser:CPONe <ContrPortNumber>
DEEMbedding<de>:COMPonent<n>:INTPoser:CPTWo <ContrPortNumber>

Sets the interposer port number at the controller device.

Suffix:

<de> 1..4
Selects the channel that is configured for deembedding.

<n> 1..*
Selects the component. The DUT has suffix 1.

Parameters:

<ContrPortNumber> ONE | TWO | THRee | FOUR | FIVE | SIX

*RST: ONE for CPONe, TWO for CPTWo

Usage: Asynchronous command

Manual operation: See "Ctrl 1, Ctrl 2" on page 1327

DEEMbedding<de>:COMPonent<n>:INTPoser:MPONe <MemPortNumber>
DEEMbedding<de>:COMPonent<n>:INTPoser:MPTWo <MemPortNumber>

Sets the interposer port number at the memory device.

Suffix:

<de> 1..4
Selects the channel that is configured for deembedding.

<n> 1..*
Selects the component. The DUT has suffix 1.

Parameters:
<MemPortNumber> ONE | TWO | THRee | FOUR | FIVE | SIX
*RST: THRee for MPONe, FOUR for MPTWo

Usage: Asynchronous command

Manual operation: See "Mem 1, Mem 2" on page 1326

DEEMbedding<de>:COMPonent<n>:INTPoser:PPONe <ProbePortNumber>
DEEMbedding<de>:COMPonent<n>:INTPoser:PPTWo <ProbePortNumber>

Sets the interposer port number of the probe point.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

<n> 1..*
Selects the component. The DUT has suffix 1.

Parameters:
<ProbePortNumber> ONE | TWO | THRee | FOUR | FIVE | SIX
*RST: FIVE for PPONe, SIX for PPTWo

Usage: Asynchronous command

Manual operation: See "Probe 1, Probe 2" on page 1327

DEEMbedding<de>:COMPonent<n>:INTPoser:TERMinate <InterposerTerminat>

Sets the port which is terminated at the interposer block: memory or controller port. The other port pair is exposed as input to the next block.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

<n> 1..*
Selects the component. The DUT has suffix 1.

Parameters:
<InterposerTerminat> MEMory | CTRL
*RST: MEMory

Usage: Asynchronous command

Manual operation: See "Terminate" on page 1327

27.26.4 Cascade and response

DEEMbedding<de>:CASCade:PSELection <PlotSelection>

Selects the S-parameter for which the response curves (magnitude, phase, and group delay response) of the setup cascade are shown.

Suffix:
<de> 1..4
Selects the channel that is configured for deembedding.

Parameters:
<PlotSelection> S11 | S12 | S13 | S15 | S16 | S21 | S22 | S23 | S25 | S26 | S31 | S32 | S33 | S35 | S36 | S45 | S46 | S51 | S52 | S53 | S54 | S55 | S56 | S61 | S62 | S63 | S64 | S65 | S66

*RST: S21

Usage: Asynchronous command

Manual operation: See "Port selection" on page 1332

27.27 Embedding and equalization (option R&S RTO6-K126)

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

- www.rohde-schwarz.com/rc-via-scpi, section "Command sequence and synchronization"
- Section 27.3, "Programming examples", on page 1425

27.27.1 Signal lanes

LANE<m>:NAME....3034
LANE<m>:OPEN....3034
LANE<m>:PRESet....3034
LANE<m>:SAVE....3035
LANE<m>:SOURce....3035
LANE<m>:STATe....3035
LANE<m>:SYMRate....3035

LANE<m>:NAME <SaveSetPath>

Sets the file name, file format and path of the lane setup file. The file format is always `.xml`.

Suffix:
<m> 1..4
Selects the lane that is configured.

Parameters:
<SaveSetPath>

Usage: Asynchronous command

Manual operation: See "Save / recall settings" on page 1344

LANE<m>:OPEN

Opens and loads the lane configuration from the file specified with `LANE<m>:SAVE`.

Suffix:
<m> 1..4
Selects the lane that is configured.

Usage: Setting only
Asynchronous command

Manual operation: See "Save / recall settings" on page 1344

LANE<m>:PRESet

Presets the equalization lane.

Suffix:
<m> 1..4
Selects the lane that is configured.

Usage: Event
Asynchronous command

Manual operation: See "Preset" on page 1344

LANE<m>:SAVE

Saves the embedding configuration to the file specified with `LANE<m>:NAME`.

Suffix:
<m> 1..4
Selects the lane that is configured.

Usage: Setting only
Asynchronous command

Manual operation: See "Save / recall settings" on page 1344

LANE<m>:SOURce <MainSource>

Selects the source of the lane.

Suffix:
<m> 1..4
Selects the lane.

Parameters:
<MainSource> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | R1 | R2 | R3 | R4 | DIFF1 | DIFF2 | COMMON1 | COMMON2 | M5 | M6 | M7 | M8

Usage: Asynchronous command

Manual operation: See "Source" on page 1344

LANE<m>:STATe <State>

Activates the lane signal.

Suffix:
<m> 1..4
Selects the lane that is configured.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 1343

LANE<m>:SYMRate <SymbolRate>

Sets a nominal bit rate for the signal.

Suffix:
<m> 1..4
Selects the lane that is configured.

Parameters:

<SymbolRate> Range: 100 to 40E+9
Increment: 10
*RST: 1E+9
Default unit: Baud

Usage: Asynchronous command

Manual operation: See "Nominal bit rate" on page 1344

27.27.2 General

LANE<m>:CMPO 3036
LANE<m>:COMFilter:INCLude:DEEMbedding 3036
LANE<m>:COMFilter:INCLude:EMBedding 3037
LANE<m>:COMFilter:INCLude:TFFE 3037
LANE<m>:EQUalization:NAME 3037
LANE<m>:EQUalization:OPEN 3038
LANE<m>:EQUalization:PRESet 3038
LANE<m>:EQUalization:SAVE 3038
LANE<m>:EQUalization:STATe 3038

LANE<m>:CMPO <OffsCompens>

Enables the DC offset compensation. If enabled, the application estimates the DC offset of the input signal and removes it prior to training and/or applying equalizers to it.

Suffix:

<m> 1..4
Selects the lane that is configured.

Parameters:

<OffsCompens> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "DC offset compensation" on page 1343

LANE<m>:COMFilter:INCLude:DEEMbedding <IncludeDeembedding>

Includes deembedding.

See also Section 27.26, "Deembedding (option R&S RTO6-K121)", on page 3019.

Suffix:

<m> 1..4
Selects the lane that is configured.

Parameters:

<IncludeDeembedding> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Deembedding" on page 1345

LANE<m>:COMFilter:INCLude:EMBedding <IncludeEmbedding>

Includes embedding.

See also Section 27.27.5, "Embedding", on page 3042.

Suffix:
<m> 1..4
Selects the lane that is configured.

Parameters:
<IncludeEmbedding> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Embedding" on page 1345

LANE<m>:COMFilter:INCLude:TFFE <IncludeTxFFE>

Includes the transmitter feed forward equalization.

See also Section 27.27.4, "TxFFE", on page 3040.

Suffix:
<m> 1..4
Selects the lane that is configured.

Parameters:
<IncludeTxFFE> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "TxFFE" on page 1345

LANE<m>:EQUalization:NAME <SaveSetPath>

Sets the file name, file format and path of the equalization setup file. The file format is always `.xml`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<SaveSetPath>

Usage: Asynchronous command

Manual operation: See "Save / open equalization settings" on page 1360

LANE<m>:EQUalization:OPEN

Opens and loads the equalization configuration from the file specified with `LANE<m>:EQUalization:SAVE`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Usage: Setting only
Asynchronous command

Manual operation: See "Save / open equalization settings" on page 1360

LANE<m>:EQUalization:PRESet

Presets the equalization settings to their default values.

Suffix:
<m> 1..4

Usage: Event
Asynchronous command

Manual operation: See "Preset" on page 1360

LANE<m>:EQUalization:SAVE

Saves the equalization configuration to the file specified with `LANE<m>:EQUalization:SAVE`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Usage: Setting only
Asynchronous command

Manual operation: See "Save / open equalization settings" on page 1360

LANE<m>:EQUalization:STATe <State>

Enables the equalization.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 1359

27.27.3 Vertical

LANE<m>:VERTical:COUPle 3039
LANE<m>:VERTical:OFFSet 3039
LANE<m>:VERTical:POSition 3039
LANE<m>:VERTical:SCALe 3040

LANE<m>:VERTical:COUPle <VertCpl>

Determines how the vertical settings are defined.

If enabled, the vertical settings are coupled to the settings of the respective source. If disabled, the vertical settings for embedding and equalization are set in this dialog.

Suffix:
<m> 1..4
Selects the lane that is configured.

Parameters:
<VertCpl> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Couple settings to source" on page 1347

LANE<m>:VERTical:OFFSet <VerticalOffset>

Sets the offset for embedding and equalization.

Suffix:
<m> 1..4
Selects the lane that is configured.

Parameters:
<VerticalOffset> Range: -100E+24 to 100E+24
Increment: 0.01
*RST: 0
Default unit: V

Usage: Asynchronous command

Manual operation: See "Offset" on page 1348

LANE<m>:VERTical:POSition <VertPosi>

Sets the vertical position for embedding and equalization.

Suffix:
<m> 1..4
Selects the lane that is configured.

Parameters:

<VertPosi> Range: -100E+24 to 100E+24
Increment: 0.1
*RST: 0
Default unit: div

Usage: Asynchronous command

Manual operation: See "Position" on page 1348

LANE<m>:VERTical:SCALe <VerticalScale>

Sets the vertical scale for embedding and equalization.

Suffix:

<m> 1..4
Selects the lane that is configured.

Parameters:

<VerticalScale> Range: 1E-12 to 100
Increment: 1E-3
*RST: 0.05
Default unit: V/div

Usage: Asynchronous command

Manual operation: See "Scale" on page 1348

27.27.4 TxFFE

LANE<m>:TFFE:PSELection 3040
LANE<m>:TFFE:SCONfig:LIST? 3041
LANE<m>:TFFE:SCONfig[:SELect] 3041
LANE<m>:TFFE:STATe 3041
LANE<m>:TFFE:TAPS:COUNt 3041
LANE<m>:TFFE:TAPS:TAP<n> 3042

LANE<m>:TFFE:PSELection <PlotSelection>

Selects the plots that is displayed for the selected TxFFE configuration.

Suffix:

<m> 1..4
Selects the lane that is configured.

Parameters:

<PlotSelection> MAGNitude | PHASe | GDELay | STEP | TAPS
*RST: TAPS

Usage: Asynchronous command

Manual operation: See "Plot" on page 1345

LANE<m>:TFFE:SCONfig:LIST?

Returns the list of available presets for the selected standard.

Suffix:
<m> 1..4
Selects the lane that is configured.

Return values:
<List>

Usage: Query only
Asynchronous command

Manual operation: See "Standard configuration" on page 1349

LANE<m>:TFFE:SCONfig[:SELect] <SubConfig>

Selects a preset standard according to the selected serial standard. You can set the serial standard with `SIGNalconfig:SETup:SETTing<m>:SERStandard`.

Suffix:
<m> 1..4
Selects the lane that is configured.

Parameters:
<SubConfig>

Usage: Asynchronous command

Manual operation: See "Standard configuration" on page 1349

LANE<m>:TFFE:STATe <State>

Enables the transmitter feed forward equalization.

Suffix:
<m> 1..4
Selects the lane that is configured.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 1349

LANE<m>:TFFE:TAPS:COUNt <NumItems>

Seletcs the number of taps for the TxFFE.

Suffix:
<m> 1..4
Selects the lane that is configured.

Parameters:

<NumItems> Range: 1 to 40
Increment: 1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Taps" on page 1350

LANE<m>:TFFE:TAPS:TAP<n> <Value>

Sets the value of the tap for the TxFFE.

Suffix:

<m> 1..4
Selects the lane that is configured.

<n> *

Parameters:

<Value> Range: -40E+9 to 40E+9
Increment: 10
*RST: 1

Usage: Asynchronous command

Manual operation: See "Taps" on page 1350

27.27.5 Embedding

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

- www.rohde-schwarz.com/rc-via-scpi, section "Command sequence and synchronization"
- Section 27.3, "Programming examples", on page 1425

LANE<m>:EMBedding:PRESet 3050
LANE<m>:EMBedding:REMove 3050
LANE<m>:EMBedding:SAVE 3050

LANE<m>:EMBedding:STATe <State>

Activates the embedding.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 1353

LANE<m>:EMBedding:ADD <Index>,[<Type>]

Adds a component to the measurement setup.

Suffix:
<m> 1..4
Selects the channel that is configured for embedding.

Setting parameters:
<Index> Defines the place of the component in the measurement path.

<Type> FIXTure | CABLe | DUT | ADAPter | PC | OTHer

Usage: Setting only

Manual operation: See "Meas setup definition" on page 1354

LANE<m>:EMBedding:BANDwidth <Bandwidth>

Sets the maximum bandwidth until which the signal is corrected. This maximum value is the minimum bandwidth value of probe, probe tip and oscilloscope bandwidth, and can not be higher than the highest frequency in a used S-parameter file.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

Parameters:
<Bandwidth> Range: 1E+9 to 16E+9
Increment: 10
*RST: 4E+9
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Effective bandwidth" on page 1353

LANE<m>:EMBedding:DIFFerential <AllowDiff>

Enables differential mode for math or reference curve sources.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

Parameters:
<AllowDiff> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Differential mode" on page 1354

LANE<m>:EMBedding:CASCade:PSELection <PlotSelection>

Selects the S-parameter for which the response curves (magnitude, phase, and group delay response) of the setup cascade are shown.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

Parameters:
<PlotSelection> S11 | S12 | S13 | S14 | S21 | S22 | S23 | S24 | S31 | S32 | S33 | S34 | S41 | S42 | S43 | S44
*RST: S21

Usage: Asynchronous command

LANE<m>:EMBedding:CCOunt?

Returns the total number of components in the measurement setup, including disabled components.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

Return values:
<Value>

Usage: Query only
Asynchronous command

Manual operation: See "Meas setup definition" on page 1354

LANE<m>:EMBedding:CMPDelay <DlyCompens>

Enables the compensation for the group delay of the complete measurement setup. If enabled, the calibration time reference point is the start point of the measurement setup. If disabled, the calibration time reference point is the oscilloscope's channel input.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

Parameters:
<DlyCompens> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Delay compensation" on page 1353

LANE<m>:EMBedding:COMPonent<n>:IDENtical <MatchedPaths>

The setting is relevant if the measurement setup is a 4-port, and the component is a 2- port. Usually, these components are cables and adapters, which are described by *.s2p files. In case of a 4-port setup, 2 cables or 2 adapters are used. If they are identical, for example, when a matched-pair cable is used, they can be described by the same file. In this case, set the command to ON.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

<n> 1..*
Selects the component.

Parameters:
<MatchedPaths> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Identical paths" on page 1356

LANE<m>:EMBedding:COMPonent<n>:IPONe <InputPort1>
LANE<m>:EMBedding:COMPonent<n>:IPTWo <InputPort2>
LANE<m>:EMBedding:COMPonent<n>:OPONe <OutputPort1>
LANE<m>:EMBedding:COMPonent<n>:OPTWo <OutputPort2>

Assign the ports to the input and output of the component according to the data in the Touchstone file. This information is not directly written in the file. You need background information how the S-parameters were determined, i.e. which port was input and which port was output.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

<n> 1..*
Selects the component.

Parameters:
<OutputPort2> ONE | TWO | THRee | FOUR
*RST: ONE for input 1, TWO for output 1, THRee for input 2, FOUR for output 4

Usage: Asynchronous command

Manual operation: See "Input 1, Input 2, Output 1, Output 2" on page 1356

LANE<m>:EMBedding:COMPonent<n>:NAME <Name>

Sets a name for the indicated component that helps you identifying it.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

<n> 1..n
Index of the component in the measurement setup.

Parameters:
<Name> String parameter, name of the component

Usage: Asynchronous command

Manual operation: See "Name" on page 1355

LANE<m>:EMBedding:COMPonent<n>:PCOunt?

Returns the number of all ports of the selected component (input ports and output ports).

Suffix:
<m> 1..4
Selects the channel that is configured for deembedding.

<n> *
Index of the component in the measurement setup.

Return values:
<TotalCompPorts> TWO | FOUR
*RST: TWO

Usage: Query only
Asynchronous command

Manual operation: See "Total ports" on page 1356

LANE<m>:EMBedding:COMPonent<n>:PSONe <PlotSelect1>

Selects the plot one.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

<n> *

Parameters:
<PlotSelect1> S11 | S12 | S13 | S14 | S21 | S22 | S23 | S24 | S31 | S32 | S33 | S34 | S41 | S42 | S43 | S44
*RST: S21

Usage: Asynchronous command

LANE<m>:EMBedding:COMPonent<n>:PSTWo <PlotSelect2>

Selects the S-parameter for display of the response curves: magnitude, phase and group delay response.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

<n> *

Parameters:
<PlotSelect2> S11 | S12 | S13 | S14 | S21 | S22 | S23 | S24 | S31 | S32 | S33 | S34 | S41 | S42 | S43 | S44
*RST: S12

Usage: Asynchronous command

LANE<m>:EMBedding:COMPonent<n>:SPFSelection <SParamFileSel>

Selects the S-parameter file for response curve display.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

<n> *
Selects the component.

Parameters:
<SParamFileSel> SPF1 | SPF2
*RST: SPF1

Usage: Asynchronous command

LANE<m>:EMBedding:COMPonent<n>:SPFType <SParamFile1Typ>

Selects the file format of the Touchstone file.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

<n> *
Selects the component.

Parameters:
<SParamFile1Typ> S2P | S3P | S4P | S6P
*RST: S2P

Usage: Asynchronous command

LANE<m>:EMBedding:COMPonent<n>:SPONe <SParamFilePath1>
LANE<m>:EMBedding:COMPonent<n>:SPTWo <SParamFilePath2>

Set the file name, file format and path of the S-parameter file, and load the S-parameters.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

<n> 1..*
Selects the component.

Parameters:
<SParamFilePath2> String with path and file name with extension `s2p` (2-port component) or `s4p` (4-port component).

Usage: Asynchronous command

Manual operation: See "S-Parameters, Filetype" on page 1356

LANE<m>:EMBedding:COMPonent<n>:TYPE <Type>

Sets the type of the indicated component.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.
<n> *

Parameters:
<Type> FIXTure | CABLe | ADAPter | PC | OTHer
`PC`: proven cable
*RST: CABLe

Usage: Asynchronous command

Manual operation: See "Component" on page 1355

LANE<m>:EMBedding:COMPonent<n>[:STATe] <IsEnabled>

Enables or disables the indicated component for embedding.

The first and the last component are always enabled and cannot be disabled.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.
<n> *
Index of the component in the measurement setup.

Parameters:
<IsEnabled> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 1355

LANE<m>:EMBedding:NAME <Path>

Sets the file name, file format and path of the embedding setup file. The file format is always `.xml`.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

Parameters:
<Path> String with path and file name with extension `.xml`

Usage: Asynchronous command

Manual operation: See "Save / recall embedding settings" on page 1354

LANE<m>:EMBedding:OPEN

Opens and loads the embedding configuration from the file specified with `LANE<m>:EMBedding:NAME`.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

Usage: Setting only

Manual operation: See "Save / recall embedding settings" on page 1354

LANE<m>:EMBedding:PRESet

Sets the complete embedding configuration to the default values.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

Usage: Event
Asynchronous command

Manual operation: See "Preset Embedding" on page 1354

LANE<m>:EMBedding:REMove <Index>

Deletes the component with the indicated index from the measurement setup.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

Setting parameters:
<Index>

Usage: Setting only

Manual operation: See "Meas setup definition" on page 1354

LANE<m>:EMBedding:SAVE

Saves the embedding configuration to the file specified with `LANE<m>:EMBedding:NAME`.

Suffix:
<m> 1..4
Selects the lane that is configured for embedding.

Usage: Setting only

Manual operation: See "Save / recall embedding settings" on page 1354

27.27.6 CTLE

BUS<b>:CTLE:ACGain....3051
LANE<m>:EQUalization:CTLE:ACGain....3051
LANE<m>:EQUalization:CTLE:DCGain....3052
LANE<m>:EQUalization:CTLE:NAME....3052
LANE<m>:EQUalization:CTLE:OPEN....3052
LANE<m>:EQUalization:CTLE:POLE:COUNt....3052
LANE<m>:EQUalization:CTLE:POLE:FREQuency<n>....3053
LANE<m>:EQUalization:CTLE:PSELection....3053
LANE<m>:EQUalization:CTLE:SAVE....3053
LANE<m>:EQUalization:CTLE:SCONfig:LIST?....3054
LANE<m>:EQUalization:CTLE:SCONfig[:SELect]....3054
LANE<m>:EQUalization:CTLE:STATe....3054
LANE<m>:EQUalization:CTLE:ZERO:COUNt....3055
LANE<m>:EQUalization:CTLE:ZERO:FREQuency<n>....3055

BUS<b>:CTLE:ACGain <ACGain>

Displays an AC gain for the CTLE filter.

Suffix:

<b> 1..4
Selects the lane that is configured for equalization.

Parameters:

<ACGain>
Range: -100 to 100
Increment: 0.01
*RST: 0
Default unit: dB

LANE<m>:EQUalization:CTLE:ACGain <GainAC>

For HDMI serial standard, the command sets or queries an AC gain for the CTLE filter. For other standards, the command is only a query and returns the value.

Suffix:

<m> 1..4
Selects the lane that is configured for equalization.

Parameters:

<GainAC>
Range: -100 to 100
Increment: 0.5
*RST: 0
Default unit: dB

Usage: Asynchronous command

Manual operation: See "AC Gain" on page 1361

LANE<m>:EQUalization:CTLE:DCGain <GainDC>

Sets a DC gain for the CTLE filter. The DC gain determines the level of signal amplification at the low frequency end, thus ensuring that low frequency components are amplified to an adequate level to maintain signal integrity.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<GainDC> Range: -40 to 40
Increment: 0.5
*RST: 0
Default unit: dB

Usage: Asynchronous command

Manual operation: See "DC Gain" on page 1361

LANE<m>:EQUalization:CTLE:NAME <SaveSetPath>

Sets the file name, file format and path of the CTLE equalization setup file. The file format is always `.xml`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<SaveSetPath>

Usage: Asynchronous command

Manual operation: See "Save / recall CTLE settings" on page 1362

LANE<m>:EQUalization:CTLE:OPEN

Opens and loads the equalization CTLE configuration from the file specified with `LANE<m>:EQUalization:CTLE:NAME`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Usage: Setting only
Asynchronous command

Manual operation: See "Save / recall CTLE settings" on page 1362

LANE<m>:EQUalization:CTLE:POLE:COUNt <NumItems>

Selects the number of pole frequencies for CTLE. You can set the individual value for each pole frequency with `LANE<m>:EQUalization:CTLE:POLE:FREQuency<n>`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<NumItems> Range: 1 to 40
Increment: 1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Pole frequencies" on page 1363

LANE<m>:EQUalization:CTLE:POLE:FREQuency<n> <Value>

Set the value of the respective pole frequency.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

<n> *

Parameters:
<Value> Range: -40E+9 to 40E+9
Increment: 10
*RST: 1

Usage: Asynchronous command

Manual operation: See "Pole frequencies" on page 1363

LANE<m>:EQUalization:CTLE:PSELection <PlotSelection>

Selects the plots that is displayed for the current CTLE configuration.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<PlotSelection> MAGNitude | PHASe | GDELay | STEP | TAPS
*RST: TAPS

Usage: Asynchronous command

Manual operation: See "Plot selection" on page 1364

LANE<m>:EQUalization:CTLE:SAVE

Saves the CTLE configuration to the file specified with `LANE<m>:EQUalization:CTLE:NAME`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Usage: Setting only
Asynchronous command

Manual operation: See "Save / recall CTLE settings" on page 1362

LANE<m>:EQUalization:CTLE:SCONfig:LIST?

Returns the list of available presets for the selected standard.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Return values:
<List>

Usage: Query only
Asynchronous command

Manual operation: See "Standard configuration" on page 1362

LANE<m>:EQUalization:CTLE:SCONfig[:SELect] <SubConfig>

Selects a preset standard according to the selected serial standard. You can set the serial standard with `SIGNalconfig:SETup:SETTing<m>:SERStandard`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<SubConfig>

Usage: Asynchronous command

Manual operation: See "Standard configuration" on page 1362

LANE<m>:EQUalization:CTLE:STATe <State>

Enables the continuous time linear equalizer (CTLE).

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 1361

LANE<m>:EQUalization:CTLE:ZERO:COUNt <NumItems>

Selects the number of zero frequencies for CTLE. You can set the individual value for each zero frequency with `LANE<m>:EQUalization:CTLE:ZERO:FREQuency<n>`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<NumItems> Range: 1 to 40
Increment: 1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Zero frequencies" on page 1363

LANE<m>:EQUalization:CTLE:ZERO:FREQuency<n> <Value>

Set the value of the respective zero frequency.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

<n> *

Parameters:
<Value> Range: -40E+9 to 40E+9
Increment: 10
*RST: 1

Usage: Asynchronous command

Manual operation: See "Zero frequencies" on page 1363

27.27.7 FFE

LANE<m>:EQUalization:FFE:NAME 3056
LANE<m>:EQUalization:FFE:OPEN 3056
LANE<m>:EQUalization:FFE:PSELection 3056
LANE<m>:EQUalization:FFE:SAVE 3056
LANE<m>:EQUalization:FFE:STATe 3057
LANE<m>:EQUalization:FFE:TAPS:COUNt 3057
LANE<m>:EQUalization:FFE:TAPS:NORMalize 3057
LANE<m>:EQUalization:FFE:TAPS:PRESet 3058
LANE<m>:EQUalization:FFE:TAPS:SYMMode 3058
LANE<m>:EQUalization:FFE:TAPS:SYMValue 3058
LANE<m>:EQUalization:FFE:TAPS:TAP<n> 3058

LANE<m>:EQUalization:FFE:NAME <SaveSetPath>

Sets the file name, file format and path of the FFE equalization setup file. The file format is always `.xml`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<SaveSetPath>

Usage: Asynchronous command

Manual operation: See "Save / recall FFE settings" on page 1369

LANE<m>:EQUalization:FFE:OPEN

Opens and loads the equalization FFE configuration from the file specified with `LANE<m>:EQUalization:FFE:SAVE`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Usage: Setting only
Asynchronous command

Manual operation: See "Save / recall FFE settings" on page 1369

LANE<m>:EQUalization:FFE:PSELection <PlotSelection>

Selects the plots that is displayed for the selected FFE configuration.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<PlotSelection> MAGNitude | PHASe | GDELay | STEP | TAPS
*RST: TAPS

Usage: Asynchronous command

Manual operation: See "Plot selection" on page 1368

LANE<m>:EQUalization:FFE:SAVE

Saves the FFE configuration to the file specified with `LANE<m>:EQUalization:FFE:SAVE`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Usage: Setting only
Asynchronous command

Manual operation: See "Save / recall FFE settings" on page 1369

LANE<m>:EQUalization:FFE:STATe <State>

Enables the feed-forward equalizer (FFE).

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 1367

LANE<m>:EQUalization:FFE:TAPS:COUNt <NumItems>

Seletcs the number of taps for the FFE. You can set the individual value for each tap with `LANE<m>:EQUalization:FFE:TAPS:TAP<n>`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<NumItems> Range: 1 to 40
Increment: 1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Taps" on page 1368

LANE<m>:EQUalization:FFE:TAPS:NORMalize

Normalizes the taps so that their sum is 1.0.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Usage: Event
Asynchronous command

Manual operation: See "Normalize taps" on page 1369

LANE<m>:EQUalization:FFE:TAPS:PRESet

Presets the FFE taps.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Usage: Event
Asynchronous command

Manual operation: See "Default taps" on page 1369

LANE<m>:EQUalization:FFE:TAPS:SYMMode <TapsPerSymbolMd>

Selects how the taps per symbol are determined, if they track the data rate or manually.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<TapsPerSymbolMd> TDRA | AUTO | MANual
*RST: TDRA

Usage: Asynchronous command

Manual operation: See "Taps per symbol" on page 1369

LANE<m>:EQUalization:FFE:TAPS:SYMValue <TapsPerSymbolVal>

Available, if `LANE<m>:EQUalization:FFE:TAPS:SYMMode` is set to `MANual`.

Sets the number of taps per bit are used for the equalization.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<TapsPerSymbolVal> Range: 1 to 4
Increment: 1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Taps per symbol" on page 1369

LANE<m>:EQUalization:FFE:TAPS:TAP<n> <Value>

Sets the value of the tap for the FFE.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

<n> *

Parameters:
<Value> Range: -40E+9 to 40E+9
Increment: 10
*RST: 1

Usage: Asynchronous command

Manual operation: See "Taps" on page 1368

27.27.8 DFE

LANE<m>:EQUalization:DFE:GAIN 3059
LANE<m>:EQUalization:DFE:NAME 3060
LANE<m>:EQUalization:DFE:OPEN 3060
LANE<m>:EQUalization:DFE:SAVE 3060
LANE<m>:EQUalization:DFE:STATe 3060
LANE<m>:EQUalization:DFE:TAPS:COUNt 3061
LANE<m>:EQUalization:DFE:TAPS:NORMalize 3061
LANE<m>:EQUalization:DFE:TAPS:PRESet 3061
LANE<m>:EQUalization:DFE:TAPS:TAP<n> 3062
LANE<m>:EQUalization:DFE:TIMReference:CDR[:SELect] 3062
LANE<m>:EQUalization:DFE:TIMReference:CDR:SOFTware 3062
LANE<m>:EQUalization:DFE:TIMReference:CDR:SOFTware:SAMTime 3063
LANE<m>:EQUalization:DFE:TIMReference:CLOCk:EDGE 3063
LANE<m>:EQUalization:DFE:TIMReference:CLOCk:FACTor 3063
LANE<m>:EQUalization:DFE:TIMReference:CLOCk:FREQuency 3064
LANE<m>:EQUalization:DFE:TIMReference:CLOCk:FREStimation 3064
LANE<m>:EQUalization:DFE:TIMReference:CLOCk:LEVel 3064
LANE<m>:EQUalization:DFE:TIMReference:CLOCk:OFEStimation 3065
LANE<m>:EQUalization:DFE:TIMReference:CLOCk:OFFSet 3065
LANE<m>:EQUalization:DFE:TIMReference:CLOCk:SOURce 3065
LANE<m>:EQUalization:DFE:TIMReference:SOURce 3066

LANE<m>:EQUalization:DFE:GAIN <Gain>

Sets the gain for the DFE filter.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<Gain> Range: 0.01 to 100
Increment: 2
*RST: 1

Usage: Asynchronous command

Manual operation: See "Gain" on page 1374

LANE<m>:EQUalization:DFE:NAME <SaveSetPath>

Sets the file name, file format and path of the DFE equalization setup file. The file format is always `.xml`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<SaveSetPath>

Usage: Asynchronous command

Manual operation: See "Save / recall DFE settings" on page 1374

LANE<m>:EQUalization:DFE:OPEN

Opens and loads the equalization DFE configuration from the file specified with `LANE<m>:EQUalization:DFE:NAME`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Usage: Setting only
Asynchronous command

Manual operation: See "Save / recall DFE settings" on page 1374

LANE<m>:EQUalization:DFE:SAVE

Saves the DFE configuration to the file specified with `LANE<m>:EQUalization:DFE:NAME`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Usage: Setting only
Asynchronous command

Manual operation: See "Save / recall DFE settings" on page 1374

LANE<m>:EQUalization:DFE:STATe <State>

Enables the decision feedback equalization.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<State> OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Enable" on page 1370

LANE<m>:EQUalization:DFE:TAPS:COUNt <NumItems>

Selects the number of zero frequencies for DFE. You can set the individual value for each frequency with `LANE<m>:EQUalization:DFE:TAPS:TAP<n>`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<NumItems> Range: 1 to 40
Increment: 1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Taps" on page 1373

LANE<m>:EQUalization:DFE:TAPS:NORMalize

Normalizes the DFE taps.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Usage: Event
Asynchronous command

Manual operation: See "Normalize taps" on page 1374

LANE<m>:EQUalization:DFE:TAPS:PRESet

Presets to default DFE taps value.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Usage: Event
Asynchronous command

Manual operation: See "Default taps" on page 1374

LANE<m>:EQUalization:DFE:TAPS:TAP<n> <Value>

Set the value of the respective tap.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

<n> *

Parameters:
<Value> Range: -40E+9 to 40E+9
Increment: 10
*RST: 1

Usage: Asynchronous command

Manual operation: See "Taps" on page 1373

LANE<m>:EQUalization:DFE:TIMReference:CDR[:SELect] <CDRType>

Selects hardware or software clock data recovery.

Available, if `LANE<m>:EQUalization:DFE:TIMReference:SOURce` is set to `CDR`.

Suffix:
<m> 1..4

Parameters:
<CDRType> SW | HW
*RST: SW

Usage: Asynchronous command

Manual operation: See "CDR" on page 1371

LANE<m>:EQUalization:DFE:TIMReference:CDR:SOFTware <SoftwareCDRIdx>

Selects the software CDR used for the reference signal for the DFE.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<SoftwareCDRIdx> SW1 | SW2 | SW3 | SW4
*RST: SW1

Usage: Asynchronous command

Manual operation: See "CDR" on page 1371

LANE<m>:EQUalization:DFE:TIMReference:CDR:SOFTware:SAMTime <SamplingTime>

Sets a sampling time for the clock signal, an offset for the clock edge in relation to the bit start.

Available if `LANE<m>:EQUalization:DFE:TIMReference:SOURce` is set to `CDR`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<SamplingTime> Range: 0 to 1
Increment: 0.01
*RST: 0.5
Default unit: UI

Usage: Asynchronous command

Manual operation: See "CDR" on page 1371

LANE<m>:EQUalization:DFE:TIMReference:CLOCk:EDGE <ClockEdge>

The clock edge sets the point in time when the state of the data signal is checked.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<ClockEdge> POSitive | NEGative | EITHer
*RST: EITHer

Usage: Asynchronous command

Manual operation: See "Slope" on page 1373

LANE<m>:EQUalization:DFE:TIMReference:CLOCk:FACTor <RefClkMultiplicator>

Sets a clock multiplier factor.

Available if `LANE<m>:EQUalization:DFE:TIMReference:SOURce` is set to `CLOCk`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<RefClkMultiplicator> Range: 1 to 100
Increment: 1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Multiplier" on page 1372

LANE<m>:EQUalization:DFE:TIMReference:CLOCk:FREQuency <ClockFrequency>

Sets the clock frequency for the clock signal.

Available if `LANE<m>:EQUalization:DFE:TIMReference:SOURce` is set to `CLOCk`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<ClockFrequency> Range: 1000 to 10E+9
Increment: 10
*RST: 500E+6
Default unit: Hz

Usage: Asynchronous command

Manual operation: See "Frequency" on page 1372

LANE<m>:EQUalization:DFE:TIMReference:CLOCk:FREStimation

Executes an estimation of the signal for the clock frequency.

Available if `LANE<m>:EQUalization:DFE:TIMReference:SOURce` is set to `CLOCk`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Usage: Event
Asynchronous command

Manual operation: See "Frequency" on page 1372

LANE<m>:EQUalization:DFE:TIMReference:CLOCk:LEVel <ClkRefLevSel>

Sets the vertical reference level of the timing reference source.

Available if `LANE<m>:EQUalization:DFE:TIMReference:SOURce` is set to `CLOCk`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<ClkRefLevSel> UPPer | MIDDle | LOWer
*RST: MIDDle

Usage: Asynchronous command

Manual operation: See "Vertical reference level" on page 1372

LANE<m>:EQUalization:DFE:TIMReference:CLOCk:OFEStimation

Executes an estimation of the signal for the clock offset.

Available if `LANE<m>:EQUalization:DFE:TIMReference:SOURce` is set to `CLOCk`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Usage: Event
Asynchronous command

Manual operation: See "Offset, Estimate offset" on page 1373

LANE<m>:EQUalization:DFE:TIMReference:CLOCk:OFFSet <ClockOffset>

Sets a clock offset for the explicit clock signal.

Available if `LANE<m>:EQUalization:DFE:TIMReference:SOURce` is set to `CLOCk`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<ClockOffset> Range: -1000 to 1000
Increment: 0.01
*RST: 0
Default unit: UI

Usage: Asynchronous command

Manual operation: See "Offset, Estimate offset" on page 1373

LANE<m>:EQUalization:DFE:TIMReference:CLOCk:SOURce <ClockSource>

Selects the source of the clock channel, if `LANE<m>:EQUalization:DFE:TIMReference:SOURce` is set to `CLOCk`.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:

<ClockSource> C1W1 | C1W2 | C1W3 | C2W1 | C2W2 | C2W3 | C3W1 | C3W2 | C3W3 | C4W1 | C4W2 | C4W3 | M1 | M2 | M3 | M4 | R1 | R2 | R3 | R4 | DIFF1 | DIFF2 | COMMON1 | COMMON2 | M5 | M6 | M7 | M8

Usage: Asynchronous command

Manual operation: See "Source" on page 1372

LANE<m>:EQUalization:DFE:TIMReference:SOURce <RefSrc>

Selects the source of the clock channel, if `LANE<m>:EQUalization:DFE:TIMReference:SOURce` is set to `CLOCk`.

Suffix:

<m> 1..4
Selects the lane that is configured for equalization.

Parameters:

<RefSrc> CLOCk | CDR
*RST: CDR

Usage: Asynchronous command

Manual operation: See "Clock / CDR " on page 1370

27.27.9 Filter training

LANE<m>:EQUalization:TRAining:APPLy....3066
LANE<m>:EQUalization:TRAining:DFE:LIMits:PRESet....3067
LANE<m>:EQUalization:TRAining:DFE:LIMits:TAP<n>:LLIMit....3067

LANE<m>:EQUalization:TRAining:FFE:TAPS:COUNt....3069
LANE<m>:EQUalization:TRAining:FFE:TAPS:PRECursor....3069
LANE<m>:EQUalization:TRAining:FFE:TAPS:SYMMode....3070
LANE<m>:EQUalization:TRAining:FFE:TAPS:SYMValue....3070
LANE<m>:EQUalization:TRAining:FSELection....3070
LANE<m>:EQUalization:TRAining:MODE....3071
LANE<m>:EQUalization:TRAining:NORGain....3071
LANE<m>:EQUalization:TRAining:REFWaveform....3072
LANE<m>:EQUalization:TRAining:STARt....3072
LANE<m>:EQUalization:TRAining:ERRor?....3072

LANE<m>:EQUalization:TRAining:APPLy

Applies the tap values.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Usage: Event
Asynchronous command

Manual operation: See "Apply tap values" on page 1376

LANE<m>:EQUalization:TRAining:DFE:LIMits:PRESet

Sets the DFE taps limits to their default values.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Usage: Event
Asynchronous command

Manual operation: See "Preset limits" on page 1378

LANE<m>:EQUalization:TRAining:DFE:LIMits:TAP<n>:LLIMit <LowerLimit>

Sets the lower limit for the respective tap of the DFE filter. The trained/generated filter tap values are within these given limits.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

<n> *
Selects the index of the tap.

Parameters:
<LowerLimit> Range: -1 to 1
Increment: 10
*RST: -0.2

Usage: Asynchronous command

Manual operation: See "Lower limit, Upper limit" on page 1378

LANE<m>:EQUalization:TRAining:DFE:LIMits:TAP<n>:ULIMit <UpperLimit>

Sets the upper limit for the respective tap of the DFE filter. The trained/generated filter tap values are within these given limits.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

<n> *
Selects the index of the tap.

Parameters:

<UpperLimit>
Range: -1 to 1
Increment: 10
*RST: 0.2

Usage: Asynchronous command

Manual operation: See "Lower limit, Upper limit" on page 1378

LANE<m>:EQUalization:TRAining:DFE:TAPS:COUNt <NumTapsDFE>

Sets the number of taps used for the training of the DFE.

Suffix:

<m>
1..4
Selects the lane that is configured for equalization.

Parameters:

<NumTapsDFE>
Range: 1 to 5
Increment: 1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Taps" on page 1378

LANE<m>:EQUalization:TRAining:DFE:TAPS:LLIMit<n> <LowerLimit>

Sets the lower global limit for the DFE filter. The trained/generated filter tap values are within these given limits.

Suffix:

<m>
1..4
Selects the lane that is configured for equalization.

<n>
0..4
Selects the limit index.

Parameters:

<LowerLimit>
Range: -1 to 1
Increment: 10
*RST: -0.2

Usage: Asynchronous command

Manual operation: See "Lower limit, Upper limit" on page 1378

LANE<m>:EQUalization:TRAining:DFE:TAPS:UGLLimit <UseGlobalLimsDFE>

If enabled, you can define the same lower limit (`LANE<m>:EQUalization:TRAining:DFE:TAPS:LLIMit<n>`) and upper limit (`LANE<m>:EQUalization:TRAining:DFE:TAPS:ULIMit<n>`) for all taps. Else, you can define separate values for each tap.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<UseGlobalLimsDFE>OFF | ON
*RST: OFF

Usage: Asynchronous command

Manual operation: See "Global limits" on page 1378

LANE<m>:EQUalization:TRAining:DFE:TAPS:ULIMit<n> <UpperLimit>

Sets the upper global limit for the DFE filter. The trained/generated filter tap values are within these given limits.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

<n> 0..4
Selects the limit index.

Parameters:
<UpperLimit> Range: -1 to 1
Increment: 10
*RST: 0.2

Usage: Asynchronous command

Manual operation: See "Lower limit, Upper limit" on page 1378

LANE<m>:EQUalization:TRAining:FFE:TAPS:COUNt <NumTapsFFE>

Sets the number of taps used for the training of the FFE. You can select up to 40 taps.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<NumTapsFFE> Range: 1 to 40
Increment: 1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Taps" on page 1376

LANE<m>:EQUalization:TRAining:FFE:TAPS:PRECursor
<NumPrecursorSymbolsFFE>

Sets a value for the number of the precursor symbols that are used.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<NumPrecursorSymbolsFFE> Range: 0 to 39
Increment: 1
*RST: 0

Usage: Asynchronous command

Manual operation: See "Precursor symbols" on page 1377

LANE<m>:EQUalization:TRAining:FFE:TAPS:SYMMode <TapsPerSymbolMdFFE>

Selects how the taps per symbol for the FFE filter training are determined, if they track the data rate or manually.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<TapsPerSymbolMdFFE> TDRA | AUTO | MANual
*RST: TDRA

Usage: Asynchronous command

Manual operation: See "Taps per symbol" on page 1377

LANE<m>:EQUalization:TRAining:FFE:TAPS:SYMValue <TapsPerSymbolValFFE>

Available, if `LANE<m>:EQUalization:TRAining:FFE:TAPS:SYMMode` is set to `MANual`.

Sets the number of taps per bit are used for the FFE filter training.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<TapsPerSymbolValFFE> Range: 1 to 4
Increment: 1
*RST: 1

Usage: Asynchronous command

Manual operation: See "Taps per symbol" on page 1377

LANE<m>:EQUalization:TRAining:FSELection <FilterSel>

Selects the filter for the filter training. You can select between an FFE filter and a combination of FFE and DFE filter (`BOTH`).

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<FilterSel> FFE | BOTH
*RST: BOTH

Usage: Asynchronous command

Manual operation: See "Filter selection" on page 1375

LANE<m>:EQUalization:TRAining:MODE <TrainingMode>

Selects the waveform to be trained. You can select a scope waveform (`SCOPe`) or load a reference waveform (`REFerence`).

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<TrainingMode> REFerence | SCOPe
*RST: SCOPe

Usage: Asynchronous command

Manual operation: See "Training mode" on page 1375

LANE<m>:EQUalization:TRAining:NORGain <NormalizeGain>

Sets ths state of the normalize gain for FFE. The gain of a trained DFE is always 1.

If enabled, the gain of the FFE is normalized to 1, such that the signal has a similar amplitude at the input and output of the equalizer.

If disabled, the equalizer is trained such that the output PAM levels are separated by 1 V (e.g., +/- 0.5 V for NRZ).

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Parameters:
<NormalizeGain> OFF | ON
*RST: ON

Usage: Asynchronous command

Manual operation: See "Normalize gain" on page 1375

LANE<m>:EQUalization:TRAining:REFWaveform <RefWfm>

Selects the reference waveform to be used for the filter training, if `LANE<m>:EQUalization:TRAining:MODE` is set to `REFerence`.

Suffix:
<m> 1..4
Selects the lane that is configured.

Parameters:
<RefWfm> NONE | R1 | R2 | R3 | R4

Usage: Asynchronous command

LANE<m>:EQUalization:TRAining:STARt

Starts the filter training.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Usage: Setting only
Asynchronous command

Manual operation: See "Start training" on page 1376

LANE<m>:EQUalization:TRAining:ERRor?

Returns an error value if an error occurred during filter training.

Suffix:
<m> 1..4
Selects the lane that is configured for equalization.

Return values:
<ErrorValue> Range: -100E+24 to 100E+24
Increment: 1
*RST: 0

Usage: Query only
Asynchronous command

Manual operation: See "Error" on page 1376

27.28 Maintenance

Some of the commands in the following section are asynchronous. An overlapping or asynchronous command does not automatically finish executing before the next command starts executing. If overlapping commands must be executed in a defined order, e.g. to avoid wrong measurement results, they must be serviced sequentially.

To prevent an overlapping execution of commands, one of the commands `*OPC`, `*OPC?` or `*WAI` can be used after the command or a command set.

For more information, see:

- www.rohde-schwarz.com/rc-via-scpi, section "Command sequence and synchronization"
- Section 27.3, "Programming examples", on page 1425

DIAGnostic:SERVice:WFAModel?....3073
DIAGnostic:SERVice:WFASeries?....3073
DIAGnostic:SERVice:WFAType?....3073

DIAGnostic:SERVice:STST:EXECute....3074
DIAGnostic:SERVice:STST:STATe?....3074
DIAGnostic:SERVice:PWD....3075

DIAGnostic:SERVice:WFAModel?

Returns the model name of the oscilloscope.

Return values:

<WFAModel> Product type

Usage: Query only
Asynchronous command

DIAGnostic:SERVice:WFASeries?

Returns the model series of the oscilloscope.

Return values:

<WFASeries> RTO | RTE | RTP

*RST: RTO

Usage: Query only
Asynchronous command

DIAGnostic:SERVice:WFAType?

Returns the instrument family of the oscilloscope.

Return values:

<WFAType> RTO2000 | RTO6 | RTP | RTPB

RTP: part numbers 1320.5007
RTPB: part numbers 1803.7000

*RST: RTO2000

Usage: Query only
Asynchronous command

CALibration:DATE?

Returns the date of the last selfalignment.

Return values:
<Date>

Usage: Query only
Asynchronous command

Manual operation: See "Date / Time / Overall alignment state" on page 101

CALibration:TIME?

Returns the time of the last selfalignment.

Return values:
<Time>

Usage: Query only
Asynchronous command

Manual operation: See "Date / Time / Overall alignment state" on page 101

CALibration:RESult?

Returns the result of the last selfalignment and the current alignment status. In remote mode, `*CAL?` provides more detailed information.

Return values:
<ResultState> PASSed | FAILed | NOALigndata
*RST: FAILed

Usage: Query only
Asynchronous command

Manual operation: See "Date / Time / Overall alignment state" on page 101

DIAGnostic:SERVice:STST:EXECute

Starts the selftest.

Usage: Event
Asynchronous command

DIAGnostic:SERVice:STST:STATe?

Returns the summary result of the selftest.

Return values:
<State> PSSD | FAILed | UNDefined
*RST: UNDefined

Usage: Query only
Asynchronous command

Manual operation: See "State" on page 103

DIAGnostic:SERVice:PWD <Password>

Sets the password to enter the service mode.

Setting parameters:
<Password> Password string

Usage: Setting only
Asynchronous command

27.29 Status reporting

This chapter describes the remote commands that are used to read the status registers.

For information on structure, hierarchy, and contents of the status registers, see Section 25.5.4, "Remote control - status reporting system", on page 1410.

- STATus:OPERation register....3075
- STATus:QUEStionable registers....3076

27.29.1 STATus:OPERation register

`STATus:OPERation` commands provide information on the activity of the instrument.

See also: "STATus:OPERation register" on page 1413

STATus:OPERation:CONDition?....3075
STATus:OPERation[:EVENt]?....3075
STATus:OPERation:ENABle....3076

STATus:OPERation:CONDition?
STATus:OPERation[:EVENt]?

The CONDition command returns information on actions the instrument is currently executing. The contents of the register is retained.

The EVENt command returns information on actions the instrument has executed since the last reading. Reading the EVENt register deletes its contents.

Bits:

- 0 = ALIGnment
- 2 = AUToset
- 3= WTRIgger (wait for trigger)
- 4= MEASuring

Usage: Query only

STATus:OPERation:ENABle <Enable>

Controls the ENABle part of the STATus:OPERation register. The ENABle defines which events in the EVENt part of the status register are forwarded to the OPERation summary bit (bit 7) of the status byte. The status byte can be used to create a service request.

Parameters:

<Enable> Range: 1 to 65535
Increment: 1

Example: `STATus:OPERation:ENABle 5`
The ALIGnment event (bit 0) and AUToset event (bit 2) are forwarded to the OPERation summary bit of the status byte.

27.29.2 STATus:QUEStionable registers

The commands of the `STATus:QUEStionable` subsystem control the status reporting structures of the STATus:QUEStionable registers.

See also: "STATus:QUEStionable register" on page 1413

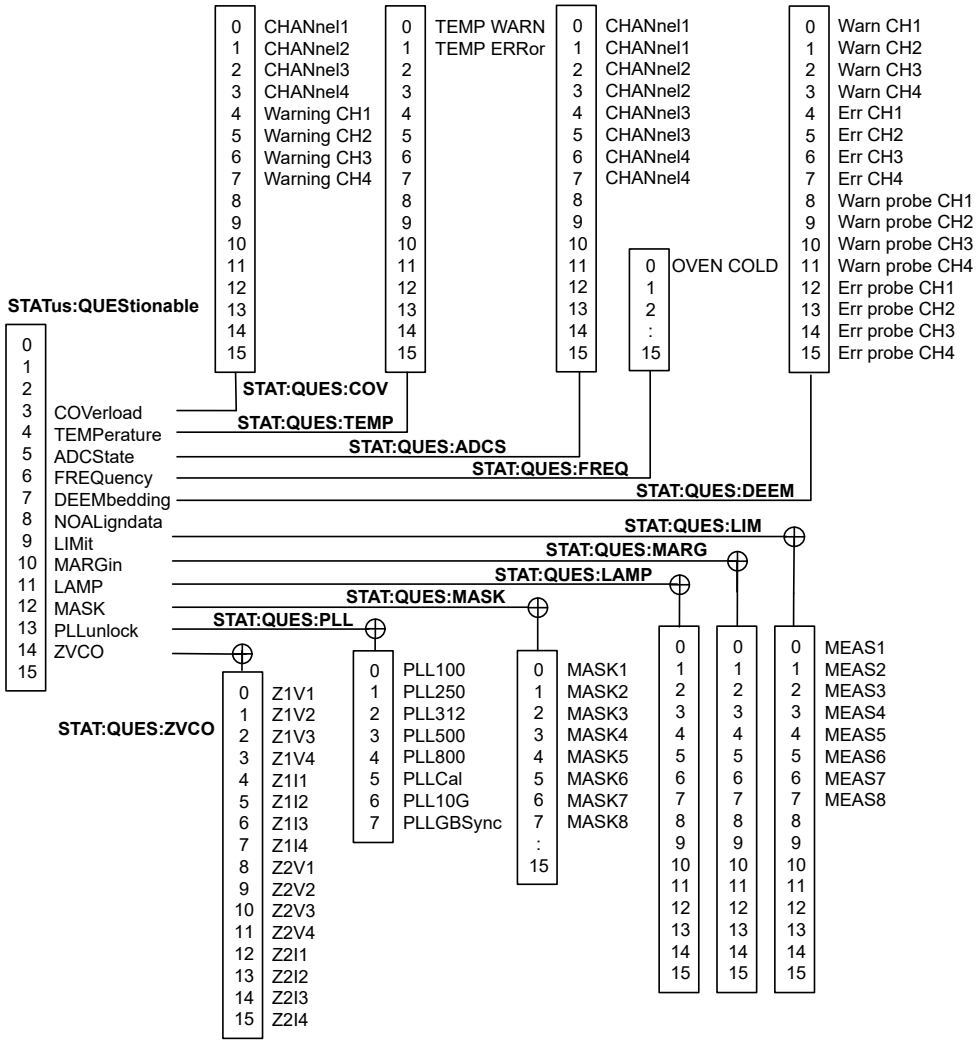

Figure 27-1: Overview of the STATus:QUEStionable register

The following commands are available:

STATus:QUEStionable:COVerload:CONDition? 3078
STATus:QUEStionable:TEMPerature:CONDition? 3078
STATus:QUEStionable:ADCState:CONDition? 3078
STATus:QUEStionable:LIMit:CONDition? 3078
STATus:QUEStionable:MARGin:CONDition? 3078

STATus:QUEStionable:COVerload:CONDition?
STATus:QUEStionable:TEMPerature:CONDition?
STATus:QUEStionable:ADCState:CONDition?
STATus:QUEStionable:LIMit:CONDition?
STATus:QUEStionable:MARGin:CONDition?
STATus:QUEStionable:FREQuency:CONDition?
STATus:QUEStionable:PLL:CONDition?

STATus:QUEStionable:DEEMbedding:CONDition?
STATus:QUEStionable:LAMPlitude:CONDition?
STATus:QUEStionable:ZVCoverload:CONDition?
STATus:QUEStionable:MASK:CONDition?

Returns the contents of the CONDition part of the status register to check for questionable instrument or measurement states. Reading the CONDition registers does not delete the contents.

Return values:
<Value>

Usage: Query only

STATus:QUEStionable:COVerload:ENABle <Value>
STATus:QUEStionable:TEMPerature:ENABle <Value>
STATus:QUEStionable:ADCState:ENABle <Value>
STATus:QUEStionable:LIMit:ENABle <Value>
STATus:QUEStionable:MARGin:ENABle <Value>
STATus:QUEStionable:FREQuency:ENABle <Value>
STATus:QUEStionable:PLL:ENABle <Value>
STATus:QUEStionable:LAMPlitude:ENABle <Value>
STATus:QUEStionable:ZVCoverload:ENABle <Value>
STATus:QUEStionable:MASK:ENABle <Value>

Sets the ENABle part that allows true conditions in the EVENt part to be reported in the summary bit. If a bit is set to 1 in the enable part and its associated event bit transitions to true, a positive transition occurs in the summary bit and is reported to the next higher level.

Parameters:
<Value> Bit mask in decimal representation

Example: `STATus:QUEStionable:MASK:ENABle 24`
Set bits no. 3 and 4 of the STATus:QUEStionable:MASK:ENABle register part: *24 = 8 + 16 =* $2^3 + 2^4$

STATus:QUEStionable:COVerload[:EVENt]?
STATus:QUEStionable:TEMPerature[:EVENt]?
STATus:QUEStionable:ADCState[:EVENt]?
STATus:QUEStionable:LIMit[:EVENt]?
STATus:QUEStionable:MARGin[:EVENt]?
STATus:QUEStionable:FREQuency:EVENt?
STATus:QUEStionable:PLL[:EVENt]?
STATus:QUEStionable:DEEMbedding[:EVENt]?
STATus:QUEStionable:LAMPlitude[:EVENt]?
STATus:QUEStionable:ZVCoverload[:EVENt]?
STATus:QUEStionable:MASK[:EVENt]?

Returns the contents of the EVENt part of the status register to check whether an event has occurred since the last reading. Reading an EVENt register deletes its contents.

Return values:
<Value>

Usage: Query only

STATus:QUEStionable:COVerload:NTRansition <Value>
STATus:QUEStionable:TEMPerature:NTRansition <Value>
STATus:QUEStionable:ADCState:NTRansition <Value>
STATus:QUEStionable:LIMit:NTRansition <Value>
STATus:QUEStionable:MARGin:NTRansition <Value>
STATus:QUEStionable:FREQuency:NTRansition <Value>
STATus:QUEStionable:PLL:NTRansition <Value>
STATus:QUEStionable:DEEMbedding:NTRansition <Value>
STATus:QUEStionable:LAMPlitude:NTRansition <Value>
STATus:QUEStionable:ZVCoverload:NTRansition <Value>
STATus:QUEStionable:MASK:NTRansition <Value>

Sets the negative transition filter. If a bit is set, a 1 to 0 transition in the corresponding bit of the condition register causes a 1 to be written in the corresponding bit of the event register.

Parameters:
<Value> Bit mask in decimal representation

Example: `STATus:QUEStionable:MASK:NTRansition 24`
Set bits no. 3 and 4 of the STATus:QUEStionable:MASK:NTRansition register part: $24 = 8 + 16 = 2^3 + 2^4$

STATus:QUEStionable:COVerload:PTRansition <Value>
STATus:QUEStionable:TEMPerature:PTRansition <Value>
STATus:QUEStionable:ADCState:PTRansition <Value>
STATus:QUEStionable:LIMit:PTRansition <Value>
STATus:QUEStionable:MARGin:PTRansition <Value>
STATus:QUEStionable:FREQuency:PTRansition <Value>
STATus:QUEStionable:PLL:PTRansition <Value>
STATus:QUEStionable:DEEMbedding:PTRansition <Value>
STATus:QUEStionable:LAMPlitude:PTRansition <Value>
STATus:QUEStionable:ZVCoverload:PTRansition <Value>
STATus:QUEStionable:MASK:PTRansition <Value>

Sets the positive transition filter. If a bit is set, a 0 to 1 transition in the corresponding bit of the condition register causes a 1 to be written in the corresponding bit of the event register.

Parameters:
<Value> Bit mask in decimal representation

Example: `STATus:QUEStionable:MASK:PTRansition 24`
Set bits no. 3 and 4 of the STATus:QUEStionable:MASK:PTRansition register part: $24 = 8 + 16 = 2^3 + 2^4$

MTESt:SBITnumber? <MaskTestName>

Returns the number of the status bit that belongs to the indicated mask test in the `STATus:QUEStionable:MASK` register. The status bits are assigned in the order of mask creation.

Query parameters:

<MaskTestName> String with the name of the mask test

Return values:

<StatusBtNo> Bit number, see "STATus:QUEStionable:MASK register" on page 1418.

Range: 0 to 7
Increment: 1
*RST: 0

Example:

```
:MTESt:SBITnumber? 'MT1'
<--0
:MTESt:SBITnumber? 'MT2'
<--1
:MTESt:SBITnumber? 'MT3'
<--2
```

Usage: Query only
Asynchronous command

27.30 Remote trace

The commands in this section configure tracing of the remote control interface and of events. They also configure the display of the SCPI remote trace.

Before you start tracing, configure all settings as desired. Modifying settings while tracing is active may result in loss of already traced data. Useful exception: Selecting a new target file while tracing is allowed. For start mode `EXPLicit` a restart of the instrument resets the settings to the documented default values.

If you want to start tracing already during startup of the instrument, configure all settings (including start mode `AUTO`). Then restart your instrument. Tracing will be started automatically during the restart, using the already configured settings.

If you use an XML file as trace file, ensure that tracing is stopped properly. If tracing is aborted instead of stopped, for example by shutting down the instrument for stop mode `EXPLicit`, the XML file will be invalid, because some tags are not closed.

When the maximum file size is reached (except for stop mode `BUFFerfull`) or if tracing is started with an already existing trace file, a backup of the trace file is created and the file itself is reset and overwritten. When the file is full for the second time or when tracing is started the next time, the first backup file is lost because it is overwritten by the next backup. In order to prevent loss of data, set a sufficient file size, select an appropriate stop mode and archive/copy completed trace files if you want to keep them.

27.30.1 Standard commands

TRACe:REMote:MODE:FILE:NAME 3082
TRACe:REMote:MODE:FILE:FORMat 3082
TRACe:REMote:MODE:FILE:SIZE 3082
TRACe:REMote:MODE:FILE:STARtmode 3082
TRACe:REMote:MODE:FILE:STOPmode 3082
TRACe:REMote:MODE:FILE:ENABle 3083
TRACe:REMote:MODE:FILE:FILTer 3083

TRACe:REMote:MODE:FILE:NAME <FilePath>

Sets the directory and file name where the remote trace file is stored.

Parameters:
<FilePath> String parameter

TRACe:REMote:MODE:FILE:FORMat <Format>

Sets the file format of the remote trace file.

Parameters:
<Format> ASCii | XML

TRACe:REMote:MODE:FILE:SIZE <FileSize>

Sets the maximum size of the remote trace file.

Parameters:
<FileSize> Integer value

TRACe:REMote:MODE:FILE:STARtmode <StartMode>

Defines how the remote trace is started.

Parameters:
<StartMode> AUTO | EXPLicit

AUTO
Starts the remote trace immediately.

EXPLicit
Starts remote trace with `TRACe:REMote:MODE:FILE:ENABle ON`

TRACe:REMote:MODE:FILE:STOPmode <StopMode>

Defines when the remote trace is stopped.

Parameters:
<StopMode> AUTO | EXPLicit | ERRor | BUFFerfull

AUTO
Ends the remote trace on device shutdown.

EXPLicit
Ends remote trace with `TRACe:REMote:MODE:FILE:ENABle OFF`

ERRor
Ends remote trace when a SCPI error occurs.

BUFFerfull
Ends remote trace when the maximum file size is reached.

TRACe:REMote:MODE:FILE:ENABle <Enable>

Enables and disables the remote trace to file.

Parameters:

<Enable> ON | OFF

TRACe:REMote:MODE:FILE:FILTer <Input>, <Output>, <Error>, <Trigger>, <DeviceClear>, <StatusRegister>, <Connection>, <RemoteLocalEvents>, <Locking>

Defines the content of the remote trace file.

Parameters:

<Input> ON | OFF
Input data

<Output> ON | OFF
Output data

<Error> ON | OFF
New SCPI error queue entries

<Trigger> ON | OFF
Trigger events

<DeviceClear> ON | OFF
Device clear events

<StatusRegister> ON | OFF
Status register conditions

<Connection> ON | OFF
Open/close connection events

<RemoteLocalEvents> ON | OFF
Local/remote transition events

<Locking> ON | OFF
Remote locking events

27.30.2 Diagnostic remote trace commands

TRACe:REMote:MODE:FILE:DEXecution:DURation....3084
TRACe:REMote:MODE:FILE:RPC....3084
TRACe:REMote:MODE:FILE:PARSer....3084
TRACe:REMote:MODE:FILE:FUNCtions....3084

TRACe:REMote:MODE:FILE:DEXecution:DURation <Enable>

Traces the device execution time of a command

Parameters:
<Enable> ON | OFF

TRACe:REMote:MODE:FILE:RPC <Enable>

Enables and disables output of rpc calls to remote trace.

Parameters:
<Enable> ON | OFF

TRACe:REMote:MODE:FILE:PARSer <Enable>

Enables and disables output of parser transitions to remote trace.

Parameters:
<Enable> ON | OFF

TRACe:REMote:MODE:FILE:FUNCtions <Enable>

Enables and disables output of function names to remote trace.

Parameters:
<Enable> ON | OFF

27.31 Deprecated commands

The following commands are provided for compatibility to previous oscilloscope versions only. For new remote control programs, use the specified alternative commands.

27.31.1 Base instrument

Legacy command	Replaced by	Comment
CHANnel<m>:FILDesign	CHANnel<ch>:FILDesign[:TYPE] on page 1511	Replaced since FW 5.45
EXPort:RESult:SELect EXPort:RESult:NUMeric EXPort:RESult:NAME EXPort:RESult:SAVE		Functionality is not supported since FW 5.20
REFCurve<m>:RESCale:HORizontal:OFFSet		Functionality is not supported.
TRIGger<m>:OUT:STATe TRIGger<m>:OUT:ACTion	TRIGger<t>:EVENt:TRIGgerout on page 1617	Replaced since FW 5.00 Replaced since FW 5.35
TRIGger<m>:SEQuence:MODE	TRIGger<t>:SEQuence:TYPE on page 1611	Replaced since FW 5.10
