SAFETY INSTRUCTIONS

This chapter contains important safety instructions that you must follow when operating the DAQ-9600 and when keeping it in storage. Read the following before any operation to insure your safety and to keep the DAQ-9600 in the best possible condition.

Safety Symbols

These safety symbols may appear in this manual or on the DAQ-9600.

	Warning: Identifies conditions or practices that could result in injury or loss of life.		
	Caution: Identifies conditions or practices that could result in damage to the DAQ-9600 or to other property.		
<u>/</u> f	DANGER High Voltage		
<u>_</u>	Attention Refer to the Manual		
	Protective Conductor Terminal		
<u> </u>	Earth (ground) Terminal		
	Do not dispose electronic equipment as unsorted municipal waste. Please use a separate collection facility or contact the supplier from which this instrument was purchased.		

Safety Guidelines

General Guideline	• Make sure that the measurement voltage input level does not exceed DC600V/AC400V.
CAUTION	 Do not place any heavy object on the instrument. Avoid severe impact or rough handling that can lead to damaging the instrument. Do not discharge static electricity to the instrument. Use only mating connectors, not bare wires, for the terminals. Do not block or obstruct the cooling fan vent opening. Do not perform measurement at the source of a low-voltage installation or at building installations (Note below). Do not disassemble the instrument unless you are qualified as service personnel.
	(Note) EN 61010-2-030 specifies the measurement categories and their requirements as follows.
	 Measurement category IV is for measurement performed at the source of low-voltage installation. Measurement category III is for measurement performed in the building installation. Measurement category II is for measurement performed on the circuits directly connected to the low voltage installation.
	 Do NOT to use the equipment for measurements on MAINS. Do NOT to use the equipment for measurements on circuits which with a TRANSIENT OVERVOLTAGE over 1500 V. Measuring circuits without a MEASUREMENT CATEGORY: Measuring circuits are not intended to be directly connected to the MAINS. Measurement category of the instrument is rated as without a MEASUREMENT CATEGORY.

	than 10%.Connect the protect power cord to an easily power cord to an easily of the power cord to an easily	0	0		
Power Cord Requirement	If the equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired. Do NOT replace the detachable MAINS supply cords by inadequately RATED cords.				
	 Suitable supply cord set for use with the equipment: Mains plug: Shall be national approval Mains connector: C13 type Cable: Length of power supply cord: less than 3 m Cross-section of conductors: at least 0.75 mm2 Cord type shall meet the requirements of IEC 60227 or IEC 60245 (e.g.: H05VV-F, H05RN-F) 				

The transient overvoltage may be present on the measuring circuits. Refer to the table below for the transient overvotlage on general mains circuits.

Fuse	 Fuse type: T0.125A 100/120 VAC T0.125A 220/240 VAC Make sure the correct type of fuse is installed before power up. To avoid risk of fire, replace the fuse only with the specified type and rating. Disconnect the power cord before fuse replacement. Make sure the cause of a fuse blowout is fixed before fuse replacement. 	
Cleaning the Instrument	 Disconnect the power cord before cleaning. Use a soft cloth dampened in a solution of mild detergent and water. Do not spray any liquid into the DAQ-9600. Do not use chemicals or cleaners containing harsh material such as benzene, toluene, xylene, and acetone. 	
Operation Environment	 Location: Indoor, no direct sunlight, dust free, almost non-conductive pollution (Note below) Temperature: Full accuracy for 0°C to 55°C. Humidity: < 30°C: < 80%RH (non-condensing) 30°C~40°C: <70%RH (non-condensing) >40°C: <50%RH (non-condensing) Altitude: <2000m 	
	 (Note) EN 61010-1 specifies the pollution degrees and their requirements as follows. The DAQ-9600 falls under degree 2. Pollution refers to "addition of foreign matter, solid, liquid, or gaseous (ionized gases), that may produce a reduction of dielectric strength or surface resistivity". Pollution degree 1: No pollution or only dry, non-conductive pollution occurs. The pollution has no influence. Pollution degree 2: Normally only non-conductive pollution occurs. Occasionally, however, a temporary conductivity caused by condensation must be expected. Pollution degree 3: Conductive pollution occurs, or dry, non-conductive pollution which is expected. In such conditions, equipment is normally protected against exposure to direct sunlight, precipitation, and full wind pressure, but neither temperature nor humidity is controlled. 	
Storage Environment	 Location: Indoor Temperature: -40°C to 70°C Humidity: <90%RH(non-condensing) 	

Disposal	Do not dispose this instrument as unsorted municipal waste. Please use a separate collection facility or contact the supplier from which this instrument was purchased.
	Please make sure discarded electrical waste is properly recycled to reduce environmental impact.

GETTING STARTED

This chapter describes the DAQ-9600 in a nutshell, including an Overview of its main features and front / rear panel introduction. After going through the Overview, follow the Power-up sequence to properly setup the DAQ-9600.

Please note the information in this manual was correct at the time of printing. However as GW Instek continues to improve its products, changes can occur at any time without notice. Please see the GW Instek website for the latest information and content.

Characteristics

	The DAQ-9600 is a portable, dual-display digital multimeter suitable for a wide range of applications, such as production testing, research, and field verification.
Performance	 The highest DCV accuracy: 35ppm The highest current:2A The highest voltage: 600VDC,400VAC The highest ACV frequency response: 300 kHz The fastest sampling rate: 38.4K Readings /sec Internal memory:100k read memory Data Logging to USB
Features	 3-Slot mainframe with built-in 6½ digit DMM Multi functions: ACV, DCV, ACI, DCI, 2W/4W R, Hz, Temp, Strain, Diode, Period, Capacitance test, REL, dBm, Hold, MX+B, 1/X, REF%, dB, Compare and Statistics. Manual or Auto ranging AC true RMS Up to 3 temerature measurements: RTD, Thermistor and Thermocouples (Built-in Cold-Junction Compensation) Graph Display: BarMeter, TrendChart, Histogram
Interface	 USB device/LAN for remote control / GPIB(factory install) 9-pin Digital I/O port USB device port supports USBCDC and USBTMC USB Host
Software	• DAQ-Data Logger

Standard Accessories	Part number	Description	
	82xx-xxxxxxx	Safety Instruction Sheet	
Optional Accessories	Part number	Description

	GTL-258	Mini GPIB Cable, approx. 1.9m	
	GRA-422	Rack Mount Kit (19" 2U)	
	GRA-436	Rack Mount Kit (19", 2U) for two sets	

Accessories

Front Panel Overview

ltem	Description
1	USB Host Port
2	Power Switch
3	Main Display
4	Function keys (F1 through F6, functions vary per modes)
5	Operation menus keys for measurement
6	Configuration menus keys for parameters (also the numerical keypad functions)
7	Menu key (also the numerical keypad function)
8	Lock key (also the numerical keypad function)
9	Local key (also the numerical keypad function)
Α	Knob key
В	Arrow keys (Speed selection keys)
С	Range keys

USB Host Port	÷	Connects with USB flash drive for data log storage and screenshot hardcopy.	
Power Switch	ON / STBY	Power On/Standby switch with LED lights (green: power on, red: standby). For the power up sequence, see page 23.	
Main Display	The 4.3"TFT LCD shows measurement results and parameters. For display configurations, see page 165.		
Function Keys	The 6 keys h	ave varied functions per different settings.	
Operation menus keys	The 3 operation-related menus keys are well described below.		
Home/ESC key	ESC : Long Push	Single press to escape from current page. Press and hold the ESC key for 2 seconds to return to the Home screen. Refer to page 34 for more details of Home screen.	
Monitor key	Monitor	Single press to activate the Monitor mode in which real-time measured data on a select channel is shown. Refer to the page 38 for details on the Monitor mode. The monitor icon will flash from the status bar when activated.	
Scan key	Scan	Single press to activate Scan mode in which measurements of all available channels will be proceeded to orderly. Press and hold the key for 2 seconds to exit scan mode. Refer to page 48 for details on Scan mode. The scan icon will be shown from the status bar when activated. In addition, it is available to enable monitor mode on a select channel even though the scan mode is activated.	

Configuration menus keys	The 9 config below.	guration-related menus keys are well described
Channel Key	7 Channel	Press to enter the Channel setting menu for each channel. Refer to the page 52 for details of channel configurations. When inputting parameters values, it acts a direct number key – 7.
Interval Key	8 Interval	Press to enter the Interval setting menu for all channels. Refer to the page 92 for details of interval configurations. When inputting parameters values, it acts a direct number key – 8.
Edit Key	9 Edit	Press to enter the Edit setting menu in which user can copy set parameters from channels to channels. Refer to the page 95 for details of edit configurations. When inputting parameters values, it acts a direct number key -9 .
Alarm Key	4 Alarm	Press to enter the Alarm setting menu for each channel. Refer to the page 98 for details of alarm configurations. When inputting parameters values, it acts a direct number key – 4.
View Key	5 View	Press to enter the View menu in which the measurement data from scan mode can be viewed in vairous details. Refer to the page 101 for details of view configurations. When inputting parameters values, it acts a direct number key – 5.
Module Key	6 Module	Press to enter the Module setting menu in which all channels from each module can be set up in general for either Scan mode or Switch mode. Refer to the page 112 for details of scan and switch modes configurations. When inputting parameters values, it acts a direct number key – 6.
Math Key	1 Math	Press to enter the Math setting menu for each channel. Refer to the page 114 for details of math configurations. When inputting parameters values, it acts a direct number key $- 1$.

Average Key	2 Average	Press to enter the Average setting menu for each channel. Refer to the page 129 for details of average configurations. When inputting parameters values, it acts a direct number key – 2.			
Log Key	3 Log	Press to enter the Log setting menu in which user can store measured data from scan mode or capture screenshot to the USB disk. Refer to the page 131 for details of log configurations. When inputting parameters values, it acts a direct number key $- 3$.			
Menu Key	0 Menu	Press to enter the general Menu setting page for DAQ-9600 unit. Refer to the page 145 for details of menu configurations. When inputting parameters values, it acts a direct number key -0 .			
Lock Key	Cock	Press and hold for 1 second to lock all keys on panel. Press and hold again to unlock. The lock icon is shown on the status bar when activated. When inputting parameters values, it acts a direct number key – decimal ".".			
Local Key	Local	Press to return to the local operation from remote control mode. When inputting parameters values, it acts a direct number key – "+" and "-".			
Кпоb Кеу		Scrolls the knob to select parameters in various setting pages. Press the key until click to confirm setting.			
Arrow Keys		Press the left or right arrow keys to move parameter cursor rightward or leftward. Also, it is able to promptly configure Speed setting under Channel menu.			
Range Selection Keys	Auto	Presses the Auto key to activate auto-range setting, whilst clicking "+" or "–" key can increase or decrease range parameter, respectively under Channel menu. Also, it is available to promptly change among channels in Interval, Alarm, Math and Average menus.			

Rear Panel Overview

ltem	Description
1	Slots for Modules Installation
2	Mini GPIB Connector
3	AC Mains Input (Power Cord Socket)
4	AC Mains Line Voltage Selector and Fuse Socket
5	Digital I/O Connector
6	Ethernet (LAN) Connector
7	USB Interface Connector (B Type)

Slots for Modules Installation		DAQ-9600 provides up to 3 slots for plug-in modules installation. Refer to page 25 for details of Modules.
Mini GPIB Port	Mini GPIB	It accepts a mini GPIB cable for remote control. For GPIB details, see page 186.
Power Cord Socket		Accepts the power cord. AC $100/120/220/240V \pm 10\%$, $50Hz / 60Hz \pm 10\%$. For power on sequence, see page 23.
Line Voltage Selector and Fuse Socket		Holds the main fuse: 100/120 VAC: T0.125A 220/240 VAC: T0.125A For fuse replacement details, see page 336.
Digital I/O Port		It accepts a digital I/O cable for the Hi/Lo limit tests; DB-9 pin, female connector. For digital I/O details, see page 134.
LAN Port		It accepts a LAN cable for remote control. For Ethernet remote control details, see page 189.
USB Interface Port	*	It accepts a USB device cable for remote control; Type B, female connector. For USB remote control details, see page 180.

Status Bar

Background	Identify each icon within the top status bar.			
Status Bar Display	1234567890ABC LOC TMC ERR BEX Alam M Home S I I I) T 10:14:32 S120+2CHI Relay MUX S2 20CH Solid MUX S3 NONE STOP Next Sweep :			
ltem	Description

8	Scan mode underway icon			
9	Internal memory overflowed icon			
0	USB disk connection icon			
А	Beep/Key Sound setting icon			
В	Internet connection status icon			
С	Time display			

Local Control	It indicates the unit is under local control mode.
Remote Control	It indicates the unit is under remote control. Refer to page 179 for details.
USB - CDC	It indicates USB - CDC interface is activated. Refer to page 185 for details.
USB - TMC	It indicates USB - TMC interface is activated. Refer to page 185 for details.
LAN	It indicates LAN interface is activated. Refer to page 189 for details.
GPIB GPIB	It indicates GPIB interface is activated. Refer to page 186 for details.
ERROR	It indicates error occurs in commands. To erase the error icon, it is required to read or sweep the error by remote control commands or reboot action. Refer to page 308 for details.
Lock Key	It indicates all panel keys are locked. Press and hold the Lock key for 1 second to unlock and the icon will disappear.
Alarm icon Alarm	It indicates when the set threshold(s) of alarm is triggered. Refer to page 99 for details of alarm configurations. To clear alarm state with icon, go to the Home mode. Refer to page 35 for details.
Monitor mode	It indicates the Monitor mode is ongoing. Press the Monitor key to exit and the icon will disappear. Refer to page 38 for details.
Configuration menu Home identification	It indicates the unit is under one of the configuration menus including Channel, Interval, Edit, Alarm, View, Module, Math, Average and Log. In addtion, the icons of Home screen and Monitor mode are shown here.

Scan mode	S It indicates the Scan mode is ongoing. Press and hold the Scan key for 1 second to exit and the icon will disappear Refer to page 48 for details.
Internal memory overflowed	It indicates the internal memory for scar data has reached 100,000 readings. And therefore the oldest readings will be replaced by the new readings.
Flash Drive – Save Reading	It indicates the USB disk is ready to save log file types including Capture and Scar Data. The "ex" stands for exFat format. The "32" signals fat32 format. and the "16" represents fat16 format.
Flash Drive – Save Log (Capture & Data)	It indicates the unit is saving log including Capture and Scan Data into the USB disk. Refer to the page 131 for details of Capture. And refer to page 132 for details of Scan Data.
Flash Drive – Failure	It indicates something error occurs and thus USB disk fails to connect to unit.
Sound – Beep	It indicates sound of beep is enabled. Refer to page 145 for details.
Sound - Key	It indicates sound of key is enabled. Refer to page 146 for details.
Sound – All	It indicates sounds of beep and key are both enabled.
Sound – Off	It indicates sounds of beep and key are both disabled.
Internet On	It indicates internet connection is established. Refer to page 189 for details
Internet Off	It indicates internet connection is Not well established.
Time Display	36:36 It indicates the time display. For detailed setting, refer to page 148.

Set Up

Horizontal/Tilt/Vertical Applications

Pull out the handle sideways and rotate it clockwise for the applications below.

Tilt

Horizontal

Place the unit horizontally.

Rotate the handle for tilt stand.

Place the handle vertically for hand carry.

Power Up	
Steps	 Ensure the correct line voltage is clearly shown on the fuse socket (240V in the right figure for example). If not, see page 336 to set the proper line voltage and fuse.
	2. Connect the power cord to the AC Voltage input.
Note	Make sure the ground connector on the power cord is connected to a safety ground. This will affect the measurement accuracy.
	3. Push the power button until click to turn on the main power switch on the front panel.
	4. The screen firstly shows the logo brand of GWINSTEK followed by the message "Load the Parameter [Last] is Ok" indicating the previous parameter is loaded in the initial startup. Image: Constraint of the initial startup is the initial

DAQ-904 4 x 8 Two-Wire Matrix Switch	, 31
DAQ-909 8-Channel High Voltage Multiplexer	. 32

Modules List

Background The DAQ-9600 is available for a series of plug-in modules to provide user with measurements, switching as well as control capabilities. Each module owns specific microprocessor, which efficiently shares loading from the processor of mainframe and thus lessens, in order to faster throughput, backplane communications. There are up to 5 dfferent plug-in modules available for DAQ-9600. See the detailed info with spec below.

- DAQ-900 20-Channel Solid-state multiplexer
- DAQ-901 20-Channel Armature multiplexer
- DAQ-903 40-Channel single-ended multiplexer
- DAQ-904 4 x 8 Two-wire matrix switch
- DAQ-909 8-Channel high voltage multiplexer

Model description	Туре	Speed (ch/sec)	Max volts	Max amps	Bandwidth	Thermal offset	Comments
DAQ-900 20 ch Multiplexer	2-wire solid-state (4-wire selectable)	450	120 V		10 MHz	< 4 µV	Built-in cold junction reference
DAQ-901	2-wire	80	300 V	1 A	10 MHz	< 4 µV	Built-in cold junction
20 ch Multiplexer + 2 current channels	armature (4-wire selectable)						reference 2 additional current channels (22 total)
DAQ-903	1-wire	80	300 V		10 MHz	< 1 µV	Built-in cold junction
40 ch Single-Ended Mux	armature (common low)						reference No four-wire measurements
DAQ-904	2-wire		300 V		10 MHz	< 1 µV	
4 x 8 Matrix	armature						
DAQ-909	2-wire	60	DC600 V	2 A	10 MHz	< 4 µV	2 additional current
8 ch HV Multiplexer + 2 current channels			AC400V				channels (10 total)

Module Installation

Background	Follow the steps below for how to connect wire to a module and install it to a slot from the rear panel of DAQ-9600 unit.
Steps	1. Use a Phillips-head screwdriver to loose the screw from the top of a module followed by taking away the upper cover from module.
	2. With help of a Phillips-head screwdriver, connect the wire to the terminal followed by routing the wire to the end port of module.
	3. Restore the upper cover back to the module followed by fastening the screw by a Phillips-head screwdriver.
	4. Insert the module into one of the module slots from the rear panel of DAQ-9600 unit.

Module Uninstallation

Background	Follow the step below for how to uninstall a module out of a slot on rear panel of DAQ-9600 unit.			
Step	1. First push inward the clip at the rear-left corner of a module followed by pulling module out from a slot on rear panel of DAQ-9600 unit.			
Note	To install/uninstall the modules from the slots of rear panel in the midst of power on will reboot the DAQ-9600 unit.			

Modules Introduction

Background	This subchapter introduces each plug-in module with block diagram and schematics available for DAQ-9600 unit.
Note	 DO NOT MEASURE MORE THAN THE RATED VOLTAGE. Maximum voltage as marked on each module is as below:
	1) DAQ-900: 120 Vrms
	2) DAQ-901, DAQ-903, DAQ-904: 300 Vrms
	3) DAQ-909: 600 Vdc/400Vrms
	• Limitations on measurement input terminals of all modules.
	1) Sense LO to Input LO terminals are limited to 2Vpk for

- 1) Sense LO to Input LO terminals are limited to 2Vpk for all modeules. (DAQ-900, DAQ-901, DAQ-903 and DAQ-909)
- 2) Sense HI to Sense LO terminals are limited to 200Vpk for DAQ-901 and DAQ-903. Sense HI to Sense LO terminals are limited to 100Vpk for DAQ-900.
- 3) Input LO to Earth ground are limited to 500Vpk for DAQ-901 and DAQ-903. Input LO to Earth ground are limited to 200Vpk for DAQ-900.

/ Note

DAQ-900 20-Channel Solid-State Multiplexer

Background Partitioned into 2 banks and each bank consists of 10 two- wire channels, this module has up to 20 channels, which switch both Hi and Lo inputs, and it offers fully isolated inputs to an external device or to the internal DMM. Channels of bank A are paired with channels of bank B automatically, in the midst of four-wire resistance measurements, to offer the source and sense connections. In addition, this modeul can minimize errors, which result from thermal gradients when measurement, by the built-in thermocouple reference junction.

- Always utilize only wire which is rated for the highest voltage so as to avoid electrical shock. Prior to removing a cover of module, all power to external devices which are connected to the module should be turned off.
 - It is strongly suggested that when multiplexing multiple sources, in order to prevent multiple signal sources from interconnected one another, the sources are supposed to be connected on separate banks of the identical module or simply on separate modules.
 - When a hazarfous voltage source is connected to any channel of the module, both the unit and DUT (Device Under Test) are supposed to be supervised with conforming to the local EHS (Environment, Health and Safety) practices.

DAQ-901 20-Channel Armature Multiplexer

Background Partitioned into 2 banks and each bank consists of 10 two- wire channels, this module has two additional fused channels to make direct and calibrated AC or DC current measurement with internal DMM. The 22 channels in total, which switch both Hi and Lo inputs, offer fully isolated inputs to an external device or to the internal DMM. Channels of bank A are paired with channels of bank B automatically, in the midst of four-wire resistance measurements, to offer the source and sense connections. In addition, this modeul can minimize errors, which result from thermal gradients when measurement, by the built-in thermocouple reference junction.

🕺 Note

- Because one of the two channels (21 and 22) will be closed when the other one is connected, be sure to connect one of the channels (21 or 22) to the internal DMM or COM at a time.
- Always utilize only wire which is rated for the highest voltage so as to avoid electrical shock. Prior to removing a cover of module, all power to external devices which are connected to the module should be turned off.
- It is strongly suggested that when multiplexing multiple sources, in order to prevent multiple signal sources from interconnected one another, the sources are supposed to be connected on separate banks of the identical module or simply on separate modules.
- When a hazarfous voltage source is connected to any channel of the module, both the unit and DUT (Device Under Test) are supposed to be supervised with conforming to the local EHS (Environment, Health and Safety) practices.

DAQ-903 40-Channel Single-Ended Multiplexer

Background This module is partitioned into 2 banks and each bank consists of 20 channels. The all 40 channels, with a common Lo for the module, switch Hi only. This module is suitable for applications of high-density switching which are in demand of, with a common Lo, single-wire inputs.

- This module is not allowed to measure 4-wire or current measurements directly.
- One channel can be closed at one time only, and shutting a channel will thus open the formerly closed channel.
- Always utilize only wire which is rated for the highest voltage so as to avoid electrical shock. Prior to removing a cover of module, all power to external devices which are connected to the module should be turned off.
- It is strongly suggested that when multiplexing multiple sources, in order to prevent multiple signal sources from interconnected one another, the sources are supposed to be connected on separate banks of the identical module or simply on separate modules.
- When a hazarfous voltage source is connected to any channel of the module, both the unit and DUT (Device Under Test) are supposed to be supervised with conforming to the local EHS (Environment, Health and Safety) practices.

DAQ-904 4 x 8 Two-Wire Matrix Switch

Background Organized in a 8-column by 4-row configuration, this module consists of 32 two-wire crosspoints. By connecting columns and rows between multiple modules, it is available to build larger matrices with up to 96 crosspoints within a mainframe. Also, user can utilize this module to connect to multiple instruments to multiple points or to any hybrid of outputs and inputs on DUT simultaneously. Since this module is not allowed to connect to the internal DMM, each relay of crosspoint owns an unique channel lable which represents the column and row. Take the diagram below for instance, the channels 32 stands for the crosspoint between the row 3 and column 2.

Note

- It is available to close multiple channels on this module simultaneously.
- Always utilize only wire which is rated for the highest voltage so as to avoid electrical shock. Prior to removing a cover of module, all power to external devices which are connected to the module should be turned off.
- It is strongly suggested that when multiplexing multiple sources, in order to prevent multiple signal sources from interconnected one another, the sources are supposed to be connected on separate banks of the identical module or simply on separate modules.
- When a hazarfous voltage source is connected to any channel of the module, both the unit and DUT (Device Under Test) are supposed to be supervised with conforming to the local EHS (Environment, Health and Safety) practices.

DAQ-909 8-Channel High Voltage Multiplexer

Background Partitioned into 2 banks and each bank consists of 4 two- wire channels, this module has two additional fused channels to make direct and calibrated AC or DC current measurement with internal DMM. The 10 channels in total, which switch both Hi and Lo inputs, offer fully isolated inputs to an external device or to the internal DMM. Channels of bank A are paired with channels of bank B automatically, in the midst of four-wire resistance measurements, to offer the source and sense connections.

\land Note

- Because one of the two channels (09 and 10) will be closed when the other one is connected, be sure to connect one of the channels (09 or 10) to the internal DMM or COM at a time.
- It is required to utilize external parallel resistor when executing current measurement from channel 01 to 10.
- Always utilize only wire which is rated for the highest voltage so as to avoid electrical shock. Prior to removing a cover of module, all power to external devices which are connected to the module should be turned off.
- It is strongly suggested that when multiplexing multiple sources, in order to prevent multiple signal sources from interconnected one another, the sources are supposed to be connected on separate banks of the identical module or simply on separate modules.
- When a hazarfous voltage source is connected to any channel of the module, both the unit and DUT (Device Under Test) are supposed to be supervised with conforming to the local EHS (Environment, Health and Safety) practices.

Home Mode

Background	Press and hold the <i>Home</i> key on the front panel for 1 second to enter the Home menu in which several basic settings are displayed. Refer to the diagram below for details.				
Home Menu Diagram	Setting Display	Module Display Image: Start Sta			
	Module Display	It includes module slot number and module name as well as total channels of each module. Up to 3 installed modules can be displayed.			
	Scan Display	The status of Scan mode relevant info. Refer to page 132 for details of the Scan menu.			
	Channel & Alarm Display	The upper indicates current channel number and module name with measure type info. Use <i>knob</i> key or <i>arrow</i> keys to navigate channels. The lower indicates alarm related info in which up to 4 alarms are displayed in red if triggered. And the triggered alarm of Hi and Low limits are shown in half by each (upper half & lower half) for every alarm outputs. Also, the total activated channels number is read below within this section.			
	Setting Display	Few basic settings including "Interval" (page 92) and "Log" (page 131) are displayed here.			
	Function Keys	The operable function keys are available for user to configure several functions. Refer to the following section for more details.			

Home Function Keys Selection	AlarmOut Setup 💙	Auto Gain DMM Digit Strain 60/s TON Off Auto TON Offset T
F1 (AlarmOut) key to set up alarm mode relevant settings	Alarm Mode	Latch: The triggered alarm output is remained unti user clear the alarm manually. Track: The triggered alarm output is automatically cleared when a measured reading is within limits.
	Alarm • Out	Pos: All 4 alarm output lines are configured to indicate alarm at 3.3 V. Neg: All 4 alarm output lines are configured to indicate alarm at 0 V.
	Alarm ■ Clear ■	Alarm1 ~ 4: Clears alarm state of a selected alarm output line. All: Clears alarm states of all 4 alarm output lines.
AlarmOut Selection		AlarmOut AlarmClear Pos Neg Choose

F2 (Auto Gain) key to specify the gain value for Scan mode When executing the Scan mode consisting of groups of dof time, it is suggested to activate the Auto Gain feature in an attempt to regain the relative value of reference voltage, which is way vulnerable to be affected by long-term scan measurement. By activating this feature, the total scan time will be subtly extended depending on the selected speed option due to an additional Auto Gain action performed prior to initiation of each sweep.

Auto Gain	Auto Gain			ESC	:Return 🔊	
Selection	Off	5/s	20/s	60/s	100/s	400/s

· · ·	Basically, DAQ-9600 is equipped with the internal DMM
	function which allows up to 3 modules with several channels
internal DMM	to measure the connected different DUTs. However, in accord
function	with specific applications, user may need to connect with
	external DMM for measurement, while preserving the
	function of multiple modules connectivity with DUTs
	provided by DAQ-9600 simultaneously. In this case, turn Off
	the DMM function and thus DAQ-9600 simply acts as a
	multiple channles switch hub and reroutes signals received
	from connected DUTs to the external DMM for measurment.
	When disabling DMM function, the internal DMM is off and
	therefore the icon "
	the available options for Measure setting of each channel will
	be limited. Refer to the page 85 for details.

Monitor Mode

Background	Press the <i>Monitor</i> key on the front panel to launch the monitor function to see real-time measured reading on a select channel. When the Scan mode is activated with Monitor mode simultaneously, the measured reading on a select channel is updated only when the select channel being scanned by a sweep within a scan course. Press the <i>Monitor</i> key again to exit monitor mode. Refer to the diagram below for details	Monitor
	the diagram below for details.	

Function Keys

Monitor Icon	The status icon along with menu identification indicates the Monitor mode is underway.		
Select Channel	Use <i>knob</i> or <i>arrow</i> keys to navigate channels. The select channel number along with affiliated configurations are displayed here.		
	The real-time measured reading of select channel is shown within this section.		
Function Keys	The operable function keys are available for user to configure several Display modes. Refer to the following subchapters for more details.		

Display - Number

Function Keys in Display – Display Number → ReStart

F1 (Display) key Number to enter Number display The screen shows the Number mode for reading display. And the maximum digits for number display depend on the Digit configuration.

Restart:

Identical to the Restart key in trend chart and histogram, it is particularly available for Number display when STAT of MathDisp is activated. The relevant STAT values will be remeasured once user presses the *Restart* key. Refer to page 114 for details of STAT in Math chapter.

Display – Bar Meter

Function Keys in Display – Bar Meter	Display Bar Meter 💙	Scale Method Low Scale High Scale Manual ᢏ LowHighᢏ -1.0000 ᢏ +1.0000 ᢏ
F1 (Display) key to enter Bar Meter display	Bar Meter	The screen shows Bar Meter display in lower section along with Number display in top for reading display. And the maximum digits for Number display depend on the Digit configuration.
	•	Scale - Normal: It allows the scale of bar meter to be symmetric with the selected range of measurement.
		The set range

Normal for Scale

• Scale - Manual:

It allows the scale of bar meter to be customized in varied range of scale.

LowHigh for Method

When LowHigh is selected, it is available to further determine the exact scales for both the high and low ends on the bar meter display.

Center for Method

When Center is selected, it is available to further determine the exact Center value and the Span Scale for the meter bar display.

Display – Trend Chart

It allows the vertical scale of trend chart to be customized in varied range.

L & H for Manual

After L and H are set up individually, the vertical upper and lower ranges are corresponding to the set values accordingly.

Auto(Once) for Manual

After Auto(Once) is pressed, the vertical upper and lower ranges are automatically defined in accord with the latest 400 counts of measurement from the trend chart.

HScale - Count: The horizontal scale of trend chart is symmetric with the set speed of measurement. For example, setting 50/s results in a faster horizontal trend speed, whilst 1/s leads to a slower horizontal trend speed.

Stop&View - Range:

Press *Stope* View key to stop measurement and view detailed info on the trend chart. Press *Range* key followed by scrolling *Knob* key rightward or leftward to move cursors on different sections.

Green Sect.	The total counts of measurements before entering the Stop&View.		
Yellow Sect.	Press the <i>Knob</i> key to change the maximum counts moving by scrolling <i>knob</i> key per time.		
	1 pixel – 40 pixels – 400 pixels		
Orange Sect.	The lowest value of the selected count with its affiliated serial number and time stamp.		
Blue Sect.	The highest value of the selected count with its affiliated serial number and time stamp.		
White Sect.	The delta between the highest and lowest values of the selected count with its affiliated serial number.		
Purple Sect.	The horizontal scale of measurements displayed is fixed in the 400 counts		
Red Sect.	It indicates the counts of moving range by scrolling <i>Knob</i> key rightward or leftward to differenct section per time. Based on the Yellow Sect., when 400 pixels is defined, scroll the <i>Knob</i> key once, the scale increases or decreases 400 counts per time.		

 Stop&View – Cursor 1 & Cursor 2: Press *Stop&View* key to stop measurement and view the lowest and highest values of each count on the trend chart. Scroll *Knob* key rightward or leftward to move cursors on different sections.

	White Sect.	The total counts of measurements before entering the Stop&View.	
	Green Sect.	Press the <i>Cursor1</i> for checking the lowest value of each count.	
	Blue Sect.	Press the <i>Cursor2</i> for checking the highest value of each count.	
	Red Sect.	The lowest value of the selected count with its affiliated serial number and time stamp.	
	Purple Sect.	The highest value of the selected count with its affiliated serial number and time stamp.	
	Yellow Sect.	Press the <i>Knob</i> key to change the maximum counts moving by scrolling <i>knob</i> key per time.

Green Sect.	It indicates the total measured bins accumulated currently.
Red Sect.	It indicates bins of the highest section of measured values with its affiliated percentage from the total counts of measurements.
Yellow Sect.	The currently measured reading in number mode.
Purple Sect.	The histogram display for the measured bins. Up to the 100 latest bins can be shown concurrently.
Blue Sect.	The maximum bin numbers displayed within the purple section.
Orange Sect.	The range of horizontal scale of histogram display.

Hscale - Auto:

The horizontal scale of histogram is symmetric with the set speed of measurement. For example, setting 50/s results in a faster horizontal histogram speed, whilst 1/s leads to a slower horizontal histogram speed.

• HScale - Manual:

It allows the horizontal scale of histogram to be customized in varied sections.

L & H for Manual

After L and H are set up individually, the horizontal left and right scales are corresponding to the set L and H values accordingly.

Auto(Once) for Manual

After *Auto(Once)* is pressed, the horizontal left and right scales are automatically defined in accord with the latest bins of measurement from the histogram.

Stop&View - Class:

Press *StoperView* key to stop measurement and view detailed info on the histogram. Scroll the *Knob* key rightward or leftward to move cursors on different bins.

	Green Sect.	It indicates the selected bin number. Scroll the <i>knob</i> key right or left to change bin number for checking.
	Yellow Sect.	It indicates the total accumulated counts of measurement.
	Orange Sect.	It indicates the exact percentage of the total counts of measurement from the selected bin number.
	Purple Sect.	It indicates the lowest value being measured within the selected bin number.
	Blue Sect.	It indicates the highest value being measured within the selected bin number.
	White Sect.	It indicates the difference in value between the highest and lowest values.
•	reading in	start: rering the Stop&View, the measured n histogram is suspended. Press the <i>Start</i> start reading in histogram.

Scan Mode

Background	Press the <i>Scan</i> key on the front panel to initiate the scan function. During a scan course, DAQ-9600 scans available channels whose measurement functions are configured previously. Also, the Computer channels (401-420), whose computed formula are configured previously, will be scanned by DAQ-9600 in a scan course as well. Refer to page 88 for details of Computer channels.			
	For those channels whose measurement functions are Not configured previously, the Scan mode will skip them from a scan course. DAQ-9600 scans available channels from slot 1 to slot 3 followed by Computer channels (401-420). A scan course consists of user-defined sweep(s) and a sweep indicates one pass through the available channels.			
	There are up to 100,000 readings data with time stamp stored in memory during a scan course. All readings data from the previous scan course will be cleared automatically in memory once user starts a new scan course.			
	In order to stop a scan course, press and hold the <i>Scan</i> key for 1 second and scan will be halted instantly.			
Scan Mode Diagram	In essence, the Scan mode display is almost identical to that of Home mode. Refer to page 34 for description of Home Mode diagram if necessary. And here we put emphasis on the introduction of relevant info of Scan Display.

F3 (Measure) key to configure measurement Measurement part contains several types of measurements with complicated settings and we will introduce in the following subchapters in details.

DCV/ACV Measurement

Description	The DC and AC voltage measurements configurations.			
F3 (Measure) key to select ACV or DCV	DCV Channel Label Measure Range Speed More 1/2 301 ✓ EDIT ✓ DCV ✓ Auto ✓ 60/s ✓ More 1/2 ACV Channel Label Measure Range Speed More 1/2 302 ✓ EDIT ✓ ACV ✓ Auto ✓ Speed More 1/2			
Voltage source and module terminals connection	H			
F4 (Range) key to select ragne for ACV and DCV	Press the key to enter Range menu and select a target range for ACV and DCV measurements individually. The Auto indicates a range, which is based on the source input, is selected automatically. It is sometimes results in, compared with manual select range, slower measurement. Also, using the <i>Range</i> keys can select range promptly.			
F5 (Speed) key to select speed for ACV and DCV	Press the key to enter Speed menu and select a target speed for ACV and DCV measurements individually. Also, using the <i>Arrow</i> keys can select speed promptly.			
F6 (More 1/2) key to enter next function keys page	Press the key to enter the next page (More $2/2$) of more functions configurations for measurement.			
Function Keys in More 2/2 page	DCV Auto Zero Input R On Off 10M Auto ACV Delay Auto Delay Auto Wore 2/2 Auto More 2/2			

Auto Zero (F1) key to set Auto Zero (DCV only)	By turning On Auto Zero, the most accurate measurements is provided, but it requires extra time to execute the zero measurement. With autozero On, DAQ-9600 internally measures the offset following each measurement. It then subtracts that measurement from the preceding reading. This prevents offset voltages present on the DAQ-9600 input circuitry from affecting measurement accuracy. With autozero Off, DAQ-9600 measures offset once and subtracts the offset from all subsequent measurements.	
Input R (F2) key to to select input resistance (DCV only)	It specifies the measurement terminal input impedance, which is 10 M Ω or Auto. The Auto mode selects high impedance (Hi-Z) for the 100 mV, 1 V and 10 V ranges, and 10 M Ω for the 100 V and 600 V ranges. In most situations, 10 M Ω is high enough to not load most circuits, but low enough to make readings stable for high impedance circuits. It also leads to readings with less noise than the (Hi-Z) option, which is included for situations where the 10 M Ω load is significant.	
Delay (F5) key to to select a delay time	User defines a delay time to be inserted between the actual measurement on each channel from a scan course.	

G≝INSTEK

Background	This table shows the relationship between AC and DC reading in various waveforms.			
Waveform	Peak to Peak	AC (True RMS)	DC	
Sine	2.828	1.000	0.000

Triangle Sawtooth	3.464	1.000	0.000	

Voltage Conversion Table

Crest Factor Table

Background Crest factor is the ratio of the peak signal amplitude to the RMS value of the signal. It determines the accuracy of AC measurement. If the crest factor is less than 3.0, voltage measurement will not result in error due to dynamic range limitations at full scale. If the crest factor is more than 3.0, it usually indicates an abnormal waveform as seen from the below table.

Waveform	Shape	Crest factor
Square wave		1.0
Sine wave	\frown	1.414
Triangle sawtooth	\bigwedge	1.732
Mixed frequencies	$\sim \sim \sim$	1.414 ~ 2.0
SCR output 100% ~ 10%	$\neg \neg \neg$	1.414 ~ 3.0
White noise	wwwwww	3.0 ~ 4.0
AC Coupled pulse train		>3.0
Spike	_/	>9.0

Temperature Measurement

Description	The temperature measurements configurations. Generally, it requires a temperature transducer with the supported probes Thermocouple, Thermistor and Resistance Temperature Detector (RTD).		
Temperature Range	Thermocouple	$-200^{\circ}C \sim +1820^{\circ}C$ (vary by sensor types)	
	RTD	$-200^{\circ}C \sim +630^{\circ}C$	
	Thermistor	$-80^{\circ}\mathrm{C} \sim +150^{\circ}\mathrm{C}$	
🕺 Note	Depending on varied installed modules, some temperature measurements (Thermistor, RTD) may not available.		

Thermocouple Setting

F3 (Measure) key to select TEMP	TEMP Channel Label Measure Probe Speed 201 ¥ EDIT ¥ TEMP ¥ TCouple 60/s ¥ More 1/3		
F4 (Probe) key to select TCouple	TCouple Channel Label Measure Probe Speed More 1/3 201 v EDIT v TEMP v TCouple 60/s v More 1/3		
Thermocouple and module terminals connection			
F5 (Speed) key to select speed	Press the key to enter Speed menu and select a target speed temperature measurements. Also, using the <i>Arrow</i> keys can select speed promptly.		
F6 (More 1/3) key to enter next function keys page	Press the key to enter the next page (More $2/3$) of more functions configurations for measurement.		

Function Keys in More 2/3 page	Auto Zero Unit Type Simulated Fix Value On Off °C ᢏ J ᢏ Fixed ᢏ 24.00 ᢏ More 2/3		
Auto Zero (F1) key to set Auto Zero	By turning On Auto Zero, the most accurate measurements is provided, but it requires extra time to execute the zero measurement. With autozero On, DAQ-9600 internally measures the offset following each measurement. It then subtracts that measurement from the preceding reading. This prevents offset voltages present on the DAQ-9600 input circuitry from affecting measurement accuracy. With autozero Off, DAQ-9600 measures offset once and subtracts the offset from all subsequent measurements.		
Unit (F2) key to set temperature unit	Press the key to enter the Temperature Unit menu followed by setting temperature measurement unit as °C (Celsius), °F (Fahrenheit), or °K.		
Type (F3) key to specify a sensor type	Press the key to enter the sensor Type menu followed by specifying sensor type as J, K, N, R, S, T, B, or E.		
Simulated (F4) key to set up simulated method	Press the key to enter the Simulated Method Setup menu followed by selecting Auto, Fixed or External for the so-called "Reference Junction Temperature".		
Fix Value (F5) key for Fixed of simulated method	When "Fixed" is selected for Simulated, press F5 key to further configure a Fix Value.		
Ref CH (F5) key for External of simulated method	When "External" is selected for Simulated, press F5 key to further select a reference channel from the list.		
F6 (More 2/3) key to enter next function keys page	Press the key to enter the next page (More $3/3$) of more unctions configurations for measurement.		
Function Keys in More 3/3 page	ADJ Open Check Delay +00.00		
ADJ (F1) key to set Auto SIM Offset	When "Auto" is selected for Simulated, press F1 key to further define an Offset value for Auto SIM.		

Open Check (F3) key to set open circuit authentication	In order to authenticate the proper connection of thermocouples for measurements, turn on the Open Check feature. When activated, DAQ-9600 executes a resistance measurement alongside each temperature assessment to detect any open circuits. Should one be identified, the outcome will display as +Overload. Neglecting this verification can lead to a voltage reading close to zero, rendering the temperature reading invalid. The setting is Off by default. And be aware that measurement time will be increased, more or less, due to the Open Check feature activation.
	User defines a delay time to be inserted between the

Delay (F5) key to toUser defines a delay time to be inserted between theselect a delay timeactual measurement on each channel from a scan course.

Thermocouple Sensor Type

Background	The instrument accepts thermocouple inputs and calculates the temperature from the voltage difference of two dissimilar metals. Thermocouple sensor type is one of the main factors to be considered.		
Parameter	Thermocouple Sensor Type	Measurement Range	Resolution
	J	-210 to +1200°C	0.002 °C
	K	-200 to +1372°C	0.002 °C
	Ν	-200 to +1300°C	0.003 °C
	R	-50 to +1768°C	0.01 °C
	S	-50 to +1768°C	0.01 °C
	T	-200 to +400°C	0.002 °C
	В	+250 to +1820°C	0.01 °C
	Е	-200 to +1000°C	0.002 °C

Reference Junction Temperature (SIM Temperature)

Background (Thermocouple only)	When a thermocouple is connected to the DAQ-9600, the temperature difference between the thermocouple lead and the DAQ-9600 input terminal should be taken into account and be cancelled out; otherwise an erroneous temperature might be added. The value of the reference junction temperature should be determined by the user.			
	Туре	Range	Resolution	
	SIM (simulated)	$-20^{\circ}\mathrm{C} \sim +80^{\circ}\mathrm{C}$	0.01°C	
	The terminal temperature is manually defined by user.			
	Default value: Auto

Strain Measurement

Description The strain measurements configurations. Generally, a body deforms when a force is applied to the body. The deformation per unit length is the so-called strain. Strain may be either compressive (-) or tensile (+).

DAQ-9600 supports two types of strain measurements which are Bridge and Direct resistive methods.

After configuring strain measurement function for channels, go to Home menu to get the unstrained offset value, which will be subtracted from strain measurements before the strain conversion is executed. Refer to page 37 for details of how to get unstrained offset value.

2-Wire & 4-Wire Resistance Measurement

DescriptionThe resistance measurements configurations. Generally,
the 2-Wire resistance indicates using the standard Input
HI-LO terminals and it is recommended for measuring
resistances larger than $1k\Omega$. And 4-Wire resistance
indicates compensating the test lead effect using the 4W
compensation terminals, in addition to the standard Input
HI-LO terminals. Recommended for measuring sensitive
resistances smaller than $1k\Omega$.

With autozero On, DAQ-9600 internally measures the offset following each measurement. It then subtracts that measurement from the preceding reading. This prevents offset voltages present on the DAQ-9600 input circuitry from affecting measurement accuracy. With autozero Off, DAQ-9600 measures offset once and subtracts the offset from all subsequent measurements.	
Delay (F5) key to to select a delay time	User defines a delay time to be inserted between the actual measurement on each channel from a scan course.	

Capacitance Measurement

Description	The capacitance measurement configurations.	
F3 (Measure) key to select capacitance	CAP Channel Label Measure Range Speed More 1/2 201 v EDIT v CAP v 1nF v Auto	
Capacitance source and module terminals connection	H	
F4 (Range) key to specify range	Press the key to enter Range menu and select a target range for capacitance measurement. The Auto indicates a range, which is based on the source input, is selected automatically. It is simetimes results in, compared with manual select range, slower measurement. Also, using the <i>Range</i> keys can select range promptly.	
F5 (Speed) key is fixed in Auto	The Speed selection is fixed in Auto for Capacitance measurement.	
F6 (More 1/2) key to enter next function keys page	Press the key to enter the next page (More $2/2$) of more functions configurations for measurement.	
Function Keys in More 2/2 page	Delay Auto 🗸 More 2/2	
Delay (F5) key to to select a delay time	User defines a delay time to be inserted between the actual measurement on each channel from a scan course.	

DCI/ACI Measurement

Description	The DCI and ACI current measurements configurations.	
Note	Both DC and AC current measurements are available on the channels 21 and 22 of DAQ901module only.	
F3 (Measure) key to select either ACI or DCI	DCI Channel Label Measure Range Speed More 1/2 221 EDIT DCI Auto 60/s More 1/2 ACI Channel Label Measure Range Speed More 1/2 221 EDIT ACI Act Speed More 1/2	
Current sources	DCI ACI	
and module terminals connection	$ \begin{array}{c c} H & & + \\ Amps & \\ L & & - \end{array} \end{array} $	
F4 (Range) key to select ragne for ACI and DCI	Press the key to enter Range menu and select a target range for ACI and DCI measurements individually. The Auto indicates a range, which is based on the source input, is selected automatically. It is simetimes results in, compared with manual select range, slower measurement. Also, using the <i>Range</i> keys can select range promptly.	
F5 (Speed) key to select speed for ACI and DCI	Press the key to enter Speed menu and select a target speed for ACI and DCI measurements individually. Also, using the <i>Arrow</i> keys can select speed promptly.	
F6 (More 1/2) key to enter next function keys page	Press the key to enter the next page (More $2/2$) of more functions configurations for measurement.	
Function Keys in	DCI	
More 2/2 page	Auto Zero RangeLow Delay On Off 1μΑ ↓	
	ACI RangeLow Delay More 2/2	
	100µA 😴 👘 Auto 😴 👬 🦂	

Auto Zero (F1) key to set Auto Zero (DCI only)	By turning On Auto Zero, the most accurate measurements is provided, but it requires extra time to execute the zero measurement. With autozero On, DAQ-9600 internally measures the offset following each measurement. It then subtracts that measurement from the preceding reading. This prevents offset voltages present on the DAQ-9600 input circuitry from affecting measurement accuracy. With autozero Off, DAQ-9600 measures offset once and subtracts the offset from all subsequent measurements.
Range Low (F2) key to select rate	The range of current is limited within the select low ranges when Auto range is activated. This function is effective by utilizing low impedance to lessen errors from shunt when current range changes overly.
Delay (F5) key to to select a delay time	User defines a delay time to be inserted between the actual measurement on each channel from a scan course.

Scan 2-Wire & 4-Wire Measurement

Description	The 2-wire and 4-wire connections are available for diversified measurements connected with external DMM unit when internal DMM function is disabled. In accord with varied measurements for different DUTs, select and physically wire the applicable 2W or 4W connections.
Note	Only when DMM function is disactivated can both "Scan 2W" and "Scan 4W" options for Measure be available. Refer to page 36 for details.
F3 (Measure) key to select either Scan 2W or Scan 4W	Scan 2W Channel Label Measure More 1/2 201 Edit Scan 2W More 1/2 Scan 4W Channel Label Measure 201 Edit Scan 4W More 1/2
F6 (More 1/2) key to enter next function keys page	Press the key to enter the next page (More $2/2$) of more functions configurations for measurement.
Function Keys in More 2/2 page	Scan 2W & Scan 4W Delay Auto More 2/2
Delay (F5) key to to select a delay time	User defines a delay time to be inserted between the actual measurement on each channel from a scan course.

Switch Mode for Channels

Background	The Switch mode from multiplexer modules empowers user
	to open and close channels individually. We will instroduc
	how to turn on and configure channels to the Switch mode
	in details.

Note Switch mode is available on the multiplexer DAQ900, DAQ901 and DAQ903 modules only.

Steps

1. From the instance below in the Channel menu, the channel 101 is configured to measure mode STRAIN.

2. Press the *Module* key from the front panel followed by clicking the *ViewMode* key and then *CH List* key.

3. Use the *Knob* key to navigate through pages of a module (Slot 1 in the instance). It is seen that only the channel 101 is turned ON in Scan Status (measurement). Press the *Remove All* (F3) key to OFF all channels on Slot 1 module from Scan Status, which indicates that measurements of all channels on the module can now be configured to the Switch mode.

4. Press the *Channel* key from the front panel. It is seen that the *Measure* is OFF for the channel 101 and the *Switch* key and *JoinBank* key are available for On or Off by user.

- Switch: To enable or disable switch for each channel.
- JoinBank: To enable or disable multiple banks join of a module.
- 5. If user reselects a measurement from the Measure key (TEMP in the instance), the channel 101 will return to Scan Status On and both the *Switch* key and *JoinBank* key are no longer available.

Display

6. The figure below shows both Switch and JoinBank are turned ON for the channel 101 of the Slot 1 module.

Note When enabling JoinBank function on any of the channels, the JoinBank of all channels from the same module will be turned ON simultaneously.

Computer Channels

Background	mathem	atical operat	(401 – 420) can execute various ions from readings of measurement mputer channels.
⚠́ Note	char		nematical operations in computer quired to set up measurement channels

Edit Menu

Background	Edit men measurem	<i>Edit</i> key on the front panel to enter the u in which user is able to copy nent functions, alarm settings and so on nnels to channels with ease.				
Edit Menu Diagram	Source Channel list	LOC TMC Edit III 11:32:21 Source Channel (1) Edit III Dest. Channel 214 Source CH Dest. CH EDIT EDIT FUNCTION Keys				
	Source Channel	The channels selected as source are displayed in detail within the lower list section and the upper section indicates the total number of source channels selected.				
	Dest. Channel	The channels selected as destination are displayed in detail within the lower list section and the upper section indicates the total number of destination channels selected.				
	Function Keys	The function keys here are simple. Press <i>Source CH</i> (F1) key to select source channel(s) and press <i>Dest</i> . <i>CH</i> (F2) key to select destination channel(s) followed by pressing <i>Copy</i> (F6) key to perform the action of channel copying.				
Note		annel(s) must be configured with measurement perforehand.				

Copy Channels

Description Channel(s) copying can be performed in various ways: one-to-one, one-to-many and many-to-many. In this chapter an example of many-to-many channels copying is illustrated.

Steps

1. Press the *Edit* key on the front panel to enter the Edit menu followed by pressing the *Source CH* (F1) key to edit the Source Channel Select list.

Use *knob key* to navigate channels followed by pressing *Select* or *SelectAll* to select source channels. Press *Cancel* or *ClearAll* to deselect channels. Press *OK* to confirm selection. Press *Exit* to leave the page without saving the selection.

DC TMC			Edit	🔲 🕪 🙀 11:52:5
(Source Channel Select	3/3
	SEL	СН	Label	Function
			Relay MUX ChannelD	DC Voltage
			Relay MUX Channel	AC Voltage
	χ			Temperature
				ESC) :Return
	Sel	ect∆ll	ClearAll OK	Cancel Exit

Only the channels with measurement functions are displayed in the Source Channel Select list since source channel(s) must be configured with measurement beforehand.

3. After pressing *OK* key from the previous page, the selected channels are displayed within the left part (201 – 203 for example). Further press the *Dest. CH* (F2) key to edit list of Dest. Channel Select.

4. Use *knob* key to navigate channels followed by pressing *Select* or *SelectAll* to select destination channels. Press *Cancel* or *ClearAll* to deselect channels. Press *OK* to confirm selection. Press *Exit* to leave the page without saving the selection.

Those selected as source channels previously will not displayed here within the Dest. Channel Select list.

5. After pressing *OK* key from the previous page, the selected channels are displayed within the right part (206 – 208 for example). Further press the *Copy* (F6) key to perform channels copying action.

 The configurations of channels 201 – 203 are well copied to the channels 209 through 211. It is seen that the prompt message of "3 channels copied" is shown in display.

The Computer channels (401 - 420) are not available for channels copying operations.

Alarm Menu

Background	Press the <i>Alarm</i> key on the front panel to enter the Alarm menu to configure the conditions of triggered alarm for select channels. The screen layout of Alarm menu is almost identical to that of Channel menu and is only different in the function keys.

Pixels options: 1 pixel – 40 pixels – 400 pixels

F4 (Vscale) key to edit scale ranges VScale - Normal:

It allows the vertical scale of trend chart to be symmetric with the set range for channel.

VScale - Manual:

It allows the vertical scale of trend chart to be customized in the following 2 ways.

L & H for Manual

After L and H are set up individually, the vertical upper and lower ranges are corresponding to the set values accordingly.

Auto(Once) for Manual

After Auto(Once) is pressed, the vertical upper and lower ranges are automatically defined in accord with the latest 400 counts of scanned data.

VScale - Manual - Auto(Once)

F5 (KnobMode) Key to view in details KnobMode - Range: It allows user to view detailed info on the trend chart. Press Range key followed by scrolling knob key rightward or leftward to move cursors on different sections.

Green The total counts of scanned measurements. Sect.

Yellow Press the *knob* key to change the maximum Sect. counts moving by scrolling *knob* key per time.

1 pixel – 40 pixels – 400 pixels

Orange The lowest value of the selected count with its Sect. affiliated serial number and time stamp.

Blue The highest value of the selected count with its Sect. affiliated serial number and time stamp.

WhiteThe delta between the highest and lowest values ofSect.the selected count with its affiliated serial number.

Purple The horizontal scale of measurements displayed Sect. is fixed in the 400 counts

Red It indicates the counts of moving range by Sect. scrolling *knob* key rightward or leftward to differenct section per time. Based on the Yellow Sect., when 400 pixels is defined, scroll the *Knob* key once, the scale increases or decreases 400 counts per time. KnobMode – Cursor 1 & Cursor 2: It allows user to view the lowest and highest readings of each count on the trend chart. Press the *Cursor1* (F2) or *Cursor2* (F3) key followed by scrolling *knob* key rightward or leftward to move cursors on different sections.

White The total counts of scanned measurements. Sect.

Green Press the *Cursor1* for checking the lowest valueSect. of each count.Blue Press the *Cursor2* for checking the highest value

- Sect. of each count. Red The lowest value of the selected count with its
- Sect. affiliated serial number and time stamp.

Purple The highest value of the selected count with its Sect. affiliated serial number and time stamp.

Yellow Press the *knob* key to change the maximum Sect. counts moving by scrolling *knob* key per time.

1 pixel - 10 pixels - 20 pixels

Orange The delta between the highest and lowest values of Sect. the selected count with its affiliated serial number.

Histogram Display

Steps

1. Press the *View* (F1) key followed by pressing the *Data* (F1) key. And then press the *Display* (F2) key followed by selecting the *Histogram* (F4) key to enter the page of scanned data in Histogram display.

2. When the "CH" is selected for *ViewMode* (F3) key, scroll the *knob* key to navigate through channels.

3. When the "GRH" is selected for *ViewMode* (F3) key, scroll the *knob* key to navigate through each scanned count.

4. Due to readings are not updated with the live scan in histogram display, press the *Refresh* (F4) key to update live readings when a scan course is ongoing.
Alarm View

Description This section introduces view menu for Alarms. Only when alarm setting is configured beforehand for select channel, the alarm list will display details of channel, limit, reading and time stamp of the latest 40 alarms. Refer to page 98 for details of how to configure alarms. After user reads the Alarm list here, the whole Alarm list will be cleared.

Steps1. Press the View (F1) key followed by pressing the Alarm (F2)
key. And the Alarm list page shows the latest alarms in details.

Module Menu

CH Block

Background	Press the <i>Module</i> key on the front panel to enter the Module menu where user can view circuit diagrams of installed modules, check both scan and switch status of channels from installed modules and proceed to firmware update for installed modules.
Steps	1. After pressing the <i>Module</i> key on the front panel, the circuit diagram of installed module is displayed. Scroll the <i>knob</i> key to navigate through installed modules to select a target module.
	LOC GPIB Module Slot 1 : 20+2CH Relay MUX N: DAQ-901.DAQ000000000000.80 W: DAQ-901.DAQ0000000000000.80 W: DAQ-901.DAQ00000000000000.80 W: DAQ-901.DAQ00000000000000.80 W: DAQ-901.DAQ00000000000000.80 Series Useries Useries Useries Useries Useries Useries Useries Useries

2. Press the *ViewMode* (F1) key followed by pressing the *CH List* (F2) key. And the Scan Status of all channels from select module will be shown. Scroll the *knob* key to navigate through pages of different channels. Press *Remove All* (F3) key to remove the set measurements of all channels at once. Refer to page 52 for details of Switch mode.

3. If any channel is set Switch mode, press the *Status* (F2) key to select SW followed by pressing the *Card Reset* (F3) key to reset the select module. All channels on the module will be opened. Refer to page 86 for details of Switch mode.

4. When user intends to carry out firmware update for installed module, press the *FW Update* (F6) key to perform update process. The prompt message pops up and user can press *Yes* (F1) to carry on the update.

Note Connect an USB disk containing compatible firmware file to the USB host port on front panel of DAQ-9600 before proceeding to FW Update for installed module.

Math Menu

Background	Math menu. Ma mathematical ec	<i>b</i> key on the front panel to enter the Math measurement runs 5 types of equations, dB, dBm, MX+B, 1/X based on the measurement results of			
Math	Equation	Description			
Equation	dBm	10 x log10 (1000 x Vreading2 / Rref)			
	dB	dBm – dBmref			
	MX+B	Multiplies the reading (X) by the factor (M) and adds/subtracts offset (B).			
	1/X	Divides 1 by the reading (X).			
	Percentage	$\frac{\text{(ReadingX - Reference)}}{\text{Reference}} \ge 100\%$			

- User needs to configure channel measurement before setting up the Math equations.
- If the measurement of channel is changed (from ACV to DCV for example), Math function will be Off. Reconfigure Math function after chaning measurement.
- dBm and dB equations are available on channels set in DCV and ACV measurements only.

Average Menu

Background	Press the <i>Average</i> key on the front panel to enter the Average menu. The digital average function averages a specified number of input signal samples to generate one reading. The following diagram demostrates the method of Average using 4 samples per reading.		
	Average	The digital average renews a whole group of samples per reading. This method is recommended when using the optional scanner.	
		1st reading 2nd reading 3rd reading Sample 1 - 4 Sample 5 - 8 Sample 9 - 12	
	Sample #	1 2 3 4 5 6 7 8 9 10 11 12	
F1 (Average) key to turn On/Off Average function		ey to enable or disable the Average function.	
F2 (Count) key to specify sample counts per reading	which define reading. Mo	ey to enter the menu to specify count of average, es the number of samples to be averaged per re samples offer low noise but a long delay. Less er high noise but a short delay.	

F3 (WinMethod) Press the key to enter the Average Window Method menu. Average window defines the threshold for when the digital average data is updated again. When the data falls in the range between TH and TL, the Average keeps processing. When the data falls out of the range between TH and TL, the Average will restart. When measuring unstable signals, appropriately setting the average window can improve the measurement speed.

0.1%

Log Menu

Background	Press the <i>Log</i> key on the front panel to enter the Log menu, which allows user to perform Capture function, which captures screenshot of hardcopy, or to operate ScanData, which saves data log of scanned readings into installed USB disk.	
Note	Before performing Log functions, be aware of the supported USB disk as following:	
	 USB Disk Type: Flash Disk Only FAT Format: Fat16 or Fat32 (Recommended) 	
	 Max memory size: 128GB USB disk which requires card adaptor is Not recommended to be used in this application. 	
Caratura		

Capture

Steps	1.	Press the Log PARA (F1) key to select Capture.
	2.	Press the <i>FileName</i> (F2) key to determine filename of captured screenshots. The "Default" option remains filename in date & time format (e.g., SCREEN_20220909 13-20-25).
	3.	If selecting "Manual" option, press the <i>EditName</i> (F3) key to enter the keyboard page to edit an user-defined filename.
		Log PARA FileName EditName Capture SCREEN00
	4.	Press the Capture (F4) key to perform screenshot capturing. The prompt message pops up after completing capturing.
		LOC TMC Log 目 順約 程量 13:33:16 S1/20+2CH/ Relay MUX S2 20CH Solid MUX S3 NONE STOP Next Sweep

		Total Channels: 000
		Log PARA Capture Default Time

Scan Data Steps 1. Press the Log PARA (F1) key to select ScanData. Log PARA Logging # Rows Separation Severeed SeanDates On Off # Not Severeed 2. Press the Logging (F2) key to activate if scanned readings data will be saved into the inserted USB disk automatically. Selecting "Off" will not automatically save data into the USB disk and instead require manual operation for saving data. From the Home screen, if auto-Logging function is enabled, the Log to USB will be shown "On". Refer to page 34 for details of Home screen.

3. Press the # *Rows* (F3) key to specify the row limit, which indicates the max. number of rows for sweep data, of each data logging file. The "65k" means the limit is 65,536 rows per file. The "1M" indicates the limit is 1,048,576 rows per file and the "Infinite" stands for the limit varies based on the number of bytes permitted by file system itself.

4. Press the *Separation* (F4) key to designate a symbol of separation (Comma, Semicolon or TAB), which is placed between intervals of each count of readings within the export scanned data.

Separation ESC:Return ()

5. Press the *SaveRead* (F6) key to perform data log of scanned readings saving into installed USB disk manually.

DIGITAL I/O

Digital I/O Overview	135
Application: Alarm Output	137
Application: External Trigger	139

Digital I/O Overview

Background The Digital I/O port contains 1 pin for External Trigger Input and 4 pins for Alarm Output.

When external trigger pulse is received by the external trigger input pin, the designated channel will be triggered accordingly.

In terms of the 4 alarm output pins, anyone of the 4 pins can be assigned to anyone of the input channels to trigger external LED light, Relay control or send a TTL-compatible pulse to control system.

Pin1-4	Pin 1-4 are Output TTL-compatible pins, which are selectable for TTL logic Hi or Lo alarm outputs.
	Pins 1-4 output wiring diagram
Pin5	EOM (End Of Measurement) signal Output. Activates when compare measurement is over. It is also available in other measurements.
	EOM +3.3V pulse $V \rightarrow K$ width $V \rightarrow K$ timing $A = 0$ $+3.3V \rightarrow 0$ $V \rightarrow K$
Pin6	about 2μs External Trigger Input. Accepts external trigger signals. For using external signals.
	Pins 6-7 output wiring diagram
Pin7	Digital (chassis) Ground.

Application: Alarm Output

Background	The alarm output pins of Digital I/O port located on the rear panel, which send a TTL-compatible alarm output, can trigger the connected external alarm devices like sirens and LED lights.
	Anyone of the 4 alarm output pins can be assigned to anyone of the input channels to trigger external devices or send a TTL-compatible pulse to control system.
Alarm output	Connect the external alarm output devices to the specific pins

connection of Digital I/O port located on the rear panel.

Connection

Use the knob key to navigate channels to select a target channel (channel 101 for example below).

6. The prompt message indicates the selected parameters is loaded from the connected USB disk to DAQ-9600.

Steps

Calibration Setting

Background This section mainly provides several calibrations for frequency, DC gain and DMM. Note that only the certified technician can operate the calibration procedure. Refer to the qualified personnel for more details when necessary.

> Press the Menu key, the System configuration menu appears. And press the NEXT key repeatedly or scroll the Knob key to move to the Cali&Update - Calibration field.

2. Press the F5 (Enter) key or Knob key to enter the Calibration menu.

OC GPIB		Mei	nu		🔁 16:14:47

Set the USB Protocol

Description The USB device port on the rear panel is used for remote control. The USB port can be configured as either a TMC or CDC interface. Before the DAQ-9600 can be used for remote control utilizing the CDC or TMC USB class, install the appropriate CDC or TMC USB driver included on the User Manual CD. **USBCDC:** The USB port on the DAQ-9600 will appear as a virtual COM port to a connected PC. **USBTMC**: The DAQ-9600 can be controlled using National Instruments NI-Visa software*. NI-Visa supports USB TMC. *To use the TMC interface National Instruments ΝΟΤΕ Measurement and Automation Explorer can be used. This program is available on the NI website, www.ni.com., via a search for the VISA Run-time Engine page, or "downloads" at the following URL, http://www.ni.com/visa/

Remote Terminal Session (Telnet / TCP)

Background	A terminal application can be used to remotely control the DAQ-9600 via the Telnet or TCP protocol.
Operation	1. Establish a connection via the Ethernet port.
	2. Open a terminal program such as Hyper Terminal and enter the IP address and port number of the DAQ-9600.
	 Run this query via the terminal application: *idn?
	The command will return the instrument manufacturer, model number, serial number and firmware version in the following format: >GWInstek,DAQ9600,000000000,M0.69B_S0.25B
	4. See page 210 for more details on remote commands.

Web Control Interface

The web control interface is accessible with the standard Ethernet port. The web control interface allows remote access over LAN using a Java-enabled web browser (Java only applicable to Internet Explorer).

The web control interface allows a web browser to modify parameter settings, remotely operate, control and monitor the DAQ-9600.

Telnet and TCP parameters can also be edited by using the web control interface so that applets such as HyperTerminal or Telnet can be used to monitor measurement readings, control settings and run programs utilizing the same remote control command set used with the RS232 remote control.

Background	Before trying to access the web browser control interface please ensure your browser has JavaScript enabled.				
Step 1 - Connection	 Configure the LAN interface and connect the DAQ-9600 to the LAN 				
	2. Enter the IP address of the DAQ-9600 in the address field of the web browser.				
	3. The web control Welcome Page appears.				
	GUINSTEK Good Will Instrument Co., Ltd. DAQ9600 Data Acqucition System				
	Welcome Page FEATURES © Large 4.3 "TFT color display © 3-slot mainframes with built-in 6 ½ digit DMM @ Basic 0.0035% DCV accuracy				
	Welcome Page FEATURES © Large 4.3 "TFT color display © 3-slot mainframes with built-in 6 ½ digit DMM				

DAQ-9600 Welcome Page

© Standard Interfaces : USB(CDC or TMC), LAN, Digital I/O

Step 2 -Web Control 1. To start web control, click on the Web Control icon.

© Optional Interfaces : GPIB

2. The control panel display, which is identical to that of the physical DAQ-9600, appears.

Step 2-1 -Configuration

- 3. Set the basic operations and monitor measurement readings, and press apply button to enable the control settings when parameters have been changed.
- 4. Proceed to operation settings in the way similar to operations on the physical DAQ-9600.

GUINSTEK Good Will Instrument Co., Ltd.

Step 3 -	The current Ethernet settings can be viewed and
View and Modify	modified from the web control interface.
LAN Configuration	

- To edit or view the current configuration settings, click on the View & Modify Configuration icon.
- 2. The configuration settings appear.

DAQ Reset

DAQ need Reset If Parameter has Change:

Reset

- 3. The View & Modify Configuration page allows you to:
 - View the instrument name, firmware revision of the Ethernet card, IP address and MAC address.
 - Set the IP address to DHCP or static.
 - Configure the module host name and the parameters of TCP & telnet.
 - Modify the web password.
 - Restore the Ethernet to the factory default settings (equivalent to the INIT function).
 - Reset: reboot to make the new setting take effect when any parameter is modified.

Command Syntax

Compatible	IEEE488.2	Partial compatibility				
Standard	SCPI, 1994	Partial compatibility				
Command Structure	commands f Each level of SCPI comm	ard Commands for Programmable Instruments) follow a tree-like structure, organized into nodes. If the command tree is a node. Each keyword in a and represents each node in the command tree. rd (node) of a SCPI command is separated by a				
	For example, the diagram below shows an SCPI sub-structure and a command example.					
		● CONFigure				
	CONFigure:	VOLTage:DC • :VOLTage				
		:DC :AC :DCAC				
Command Types	There are a number of different instrument commands and queries. A command sends instructions or data to the unit and a query receives data or status information from the unit.					
	Command ty	ypes				
	Simple	A single command with/without a parameter				
	Example	CONFigure:VOLTage:DC				
	Query	A query is a simple or compound command followed by a question mark (?). A parameter (data) is returned.				
	Example	CONFigure:RANGe?				
Command Forms	Commands and queries have two different forms, long and short. The command syntax is written with the short form of the command in capitals and the remainder (long form) in lower case.					
	The commands can be written either in capitals or lower-case, just so long as the short or long forms are complete. An incomplete command will not be recognized.					
	Below are examples of correctly written commands.					

	Long form	CONFigure:DIODe		
		CONFIGURE:DIODE		
		Configure:diode		
	Short form	CONF:DIOD conf:diod		
Square Brackets	contents are same with or	ands that contain square brackets indicate that the s are optional. The function of the command is the ith or without the square bracketed items, as shown For example, for the query:		
	[SENSe:]UI	NIT?		
	Both SENSe	:UNIT? and UNIT? are valid for	ms.	
Command Format	CONFigure:\	/OLTage:DC 500		
	1. Command	header 3. Parameter 1		
	2. Space			
Common	Туре	Description	Example	
Input Parameters	<boolean></boolean>	boolean logic	0, 1	
Parameters	<nr1></nr1>	integers	0, 1, 2, 3	
	<nr2></nr2>	decimal numbers	0.1, 3.14, 8.5	
	<nr3></nr3>	floating point with exponent	4.5e-1, 8.25e+1	
	<nrf></nrf>	any of NR1, 2, 3	1, 1.5, 4.5e-1	
	[MIN] (Optional parameter)			
		indicated.		

	[MAX] (Optional parameter)	For commands, this will set the setting to the highest value. This parameter can be used in place of any numerical parameter where indicated.
		For queries, it will return the highest possible value allowed for the particular setting.
	DEF	For commands, this will set the setting to the default value. This parameter can be used in place of any numerical parameter where indicated.
		For queries, it will return the default value allowed for the particular setting.
Automatic parameter range selection	The DAQ-96 the next availa	00 automatically sets the command parameter to ble value.
	Example	conf:volt:dc 3
		This will set the measurement item to DC Voltage and the range to 10V. There is no 3V range so the DMM selects the next available range, 10V.
Message Terminator (EOL)	Remote Command	Marks the end of a command line. The following messages are in accordance with IEEE488.2 standard.
		LF, CR, CR+LF, The most common LF+CR EOL character is CR+LF
Message Separator	EOL or ; (semicolon)	Command Separator

Other Commands

ABORt

Aborts a measurement in progress form a scan, returning the instrument to the trigger idle state.

•If a scan is in progress when the command is received, the scan will not be completed and you cannot resume the scan from where it left off. Note that if you initiate a new scan, all readings are cleared from reading memory.

FETCh?

Waits for measurements to complete and copies all available measurements to the instrument's output buffer. The readings remain in reading memory will not be erased when read with this command.

Example:

```
CONF:VOLT:DC 1, (@103, 105, 109)
TRIG:SOUR EXT
INIT
FETC?
Returns: +4.98748741E-01,+4.35163427E-01,+4.33118686E-01
```

•The FETCh? query does not erase measurements from the reading memory. You can send the query multiple times to retrieve the same data.

•You can save up to 100,000 readings in reading memory and all readings are automatically time stamped. If reading memory overflows, the new readings will overwrite the first (oldest) readings saved; the most recent readings are always preserved. No error is generated, but the Reading Memory Overflow bit (bit 12) is set in the Questionable Data Register's condition register.

•Each time you start a new scan, the instrument clears all readings (including alarm data) saved in reading memory from the previous measurement. Therefore, the contents of reading memory are always from the most recent scan.

INITiate[:IMMediate]

Changes the state of the triggering system from "idle" to "wait-for-trigger", and clears the previous set of measurements from reading memory. Measurements will begin when the specified trigger conditions are satisfied following the receipt of INIT command.

Example:

CONF:VOLT:DC 10, (@101, 107) TRIG:SOUR BUS INIT *TRG FETC? Returns: +4.98748741E-01,+4.35163427E-01

•Storing measurements in reading memory with INITiate is faster than sending measurements to the instrument's output buffer using READ? (provided you do not send FETCh? until done).

•The INITiate command is also an "overlapped" command. This means that after executing INITiate, you can send other commands that do not affect the measurements.

•To retrieve the measurements from the reading memory, use FETCh?. Use DATA:REMove? or R? to read and erase all or part of the available measurements.

•Once you initiate a scan, an error will be generated if you attempt to change any measurement parameters (CONFigure and SENSe commands) or the triggering configuration (TRIGger commands).

•Use ABORt command to return to idle.

```
INSTrument:DMM
```

Enables (On) or disables (Off) the internal DMM.

```
Syntax: INSTrument:DMM {OFF|ON}
Query Syntax: INSTrument:DMM?
```

```
Parameter: 0 | 1 | OFF | ON
Return Parameter: 0 | 1, (0 = OFF, 1 = ON)
```

Example: INST:DMM ON

•When you change the state of the internal DMM, the instrument issues a Factory Reset (*RST command).

G^wINSTEK

R?

Reads and erases measurements from reading memory up to the specified <reading_number>.

The measurements are read and erased from the reading memory starting with the oldest measurement first.

Query Syntax: R? [<reading_number>]

Parameter: <reading_number> (1 ~ 100,000)

Example: R? 4 Returns: #263-1.12816521E-04,-1.13148354E-04,-1.13485152E-04,-1.13365632E-04

The "#2" means that the next 2 digits indicate how many characters are in the returned memory string.

In the above example, the 2 digits are the "63" after the "#2". Therefore, the remaining of the string is 63 digits long.

•If you do not specify a value for <reading_numbe>, all measurements are read and erased.

Example: R? Returns: #231-1.12816521E-04,-1.13148354E-04

•The R? and DATA:REMove? queries can be used during a long series of readings to periodically remove readings from memory that would normally cause the reading memory to overflow. R? does not wait for all readings to complete. It sends the readings that are complete at the time the instrument receives the command.

•Use Read? or Fetch? if you want the instrument to wait until all readings are complete before sending readings.

•No error is generated if the reading memory contains less readings than requested. In this case, all available readings in memory are read and deleted.

READ?

Changes the state of the triggering system from "idle" to "wait-for-trigger". Scanning will begin when the specified trigger conditions are satisfied following the receipt of the READ? command. Readings are then sent to reading memory and the instrument's output buffer.

Example:

CONF:VOLT:DC 10, (@101,102) TRIG:SOUR EXT READ? Returns: -1.13148354E-04,+3.15167734E-04

•The Read query will not return the unit or count number of the reading.

•Sending READ? is similar to sending INITiate followed immediately by FETCh?

TIME:SYNC:SERVer

Sets or returns the server source for time sync.

Syntax: TIME:SYNC:SERVer "<server>" Query Syntax: TIME:SYNC:SERVer?

Parameter: "<server>", max length = 24 characters Return parameter: "<server>"

Example:

TIME:SYNC:SERV "time-nv.nist.gov"

UNIT: TEMPerature

Specifies the units $^{\circ}$ C (Celsius), $^{\circ}$ F (Fahrenheit), or K (Kelvin) to be used for all temperature measurements.

Syntax: UNIT:TEMPerature <unit>[,(@<ch_list>)] Query Syntax: UNIT:TEMPerature? [(@<ch_list>)]

Parameter: <unit> (C | F | K) Return parameter: C | F | K

Example: CONF:TEMP TC,K,(@101,102) UNIT:TEMP C,(@101,102)

•If the corresponding channels are not configured for temperature measurements prior to sending of this command, instrument will dispatch an error message.

•The CONFigure and MEASure? commands automatically select °C.

CALCulate Commands

CALCulate: AVERage: ALL?

Returns all of the statistic calculation values.

Query Syntax: CALCulate:AVERage:ALL? [(@<ch_list>)]

Return parameter: <NRf> (average, standard deviation, minimum, maximum, count)

```
Example:
CALC:AVER:ALL? (@101)
Returns:
-2.96976783E-03,+1.09347159E-04,-3.09208611E-03,-2.78148893E-03,+1.000
00000E+01
```

CALCulate:AVERage:{AVERage|MAXimum|MINimum|PTPeak|SDEViation}? Returns the average, maximum, minimum, peak-to-peak or standard deviation recorded values.

> Query Syntax: CALCulate:AVERage:{AVERage|MAXimum|MINimum|PTPeak|SDEViation}? [(@<ch_list>)]

Return parameter: <NRf>

Example: CALC:AVER:MAX? (@101,102,108) Returns: +4.13148354E+00,+4.15167734E+00,+4.85178821E+00

•In this example, you can replace the MAX node with AVER, MIN, PTP or SDEV.

•If you omit the <ch_list> parameter, it returns the values for all channels in the currently defined scan list

CALCulate:AVERage:CLEar

Clears all of the statistic calculation values for the selected channels. The average, count, maximum, minimum, peak-to-peak and standard deviation values are cleared.

Syntax: CALCulate:AVERage:CLEar [(@<ch_list>)]

Parameter: [None]

Example:

CALC:AVER:CLE (@203:205)

CALCulate: AVERage: COUNt?

Returns the total number of recorded counts on each of the selected channels during the scan.

Query Syntax: CALCulate:AVERage:COUNt? [(@<ch_list>)]

Return parameter: <NRf>

Example:

CALC:AVER:COUN (@201:203) Returns: +1.3000000E+01,+1.2000000E+01,+1.5000000E+01

•If you omit the <ch_list> parameter, it returns the count for all channels in the currently defined scan list.

CALCulate:AVERage:{MAXimum|MINimum}:TIME?

Returns the time that the maximum or minimum reading was taken on the selected channels during the scan (in full time and date format).

Query Syntax: CALCulate:AVERage:{MAXimum|MINimum}:TIME? [(@<ch_list>)]

Return parameter: <time> (yyyy,mm,dd,hh,mm,ss.sss)

Example: CALC:AVER:MIN:TIME? (@101,102) Returns: 2023,03,01,07,26,20.146,2023,03,01,07,26,29.023

•In this example, you can replace the MIN node with MAX.

• For each channel, the query returns the time in the form "yyyy,mm,dd,hh,mm,ss.sss".

CALCulate:LIMit:{LOWer|UPPer}

The instrument has four alarms which you can configure to alert you when a reading exceeds specified limits during a scan.

Syntax: CALCulate:LIMit:{LOWer|UPPer} {<limit>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: CALCulate:LIMit:{LOWer|UPPer}? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <limit> (-1.2E+09 ~ +1.2E+09); DEF: -1 (Lower), +1(Upper) Return parameter: <NRf>

Example: CALC:LIM:LOW -3,(@101,102) CALC:LIM:LOW? (@101,102) Returns: -3.00000000E+00,-3.0000000E+00

•In this example, you can replace the LOW node with UPP.

•The lower limit value must always be less than or equal to the upper limit.

CALCulate:LIMit:{LOWer|UPPer}:STATe

Enables or disables the lower and upper alarm limits on the specified channels during a scan.

Syntax: CALCulate:LIMit:{LOWer|UPPer}:STATe {OFF|ON}[,(@<ch_list>)] Query Syntax: CALCulate:LIMit:{LOWer|UPPer}:STATe? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0=OFF, 1=ON)

Example:

CALC:LIM:LOW 2(@101,102) CALC:LIM:LOW:STAT ON,(@101,102) CALC:LIM:LOW:STAT? (@101,102) Returns: 1,1

•In this example, you can replace the LOW node with UPP.

CALCulate:MATH

A computed channel performs mathematical operation on the readings from measurement channels, or other computed channels list.

Syntax: CALCulate:MATH <expression>,(@<computed_ch_list>) Query Syntax: CALCulate:MATH? (@<computed_ch_list>)

Mathematical operation	(<expression>)</expression>
Add	(@ch1+@ch2)
Subtract	(@ch1-@ch2)
Multiply	(@ch1*@ch2)
Divide	(@ch1/@ch2)
Power	(power(@ch1,2))
Square root	(sqrt(@ch1))
Reciprocal	(1/(@ch1))
Fifth order	(poly(@ch1, <n5>,</n5>
	<n4>, <n3>, <n2>,</n2></n3></n4>
	<n1>, <n0>))</n0></n1>
	where n = value of
	variable in each order
Min	(min(@ <ch_list>))</ch_list>
Max	(max(@ <ch_list>))</ch_list>
Sum	(sum(@ <ch_list>))</ch_list>
Average	(avg(@ <ch_list>))</ch_list>
Standard deviation	(sdev(@ <ch_list>))</ch_list>
	AddSubtractMultiplyDividePowerSquare rootReciprocalFifth orderMinMaxSumAverage

Return parameter: "<string>"

Example:

```
CALC:MATH (@201-@202),(@402)
CALC:MATH? (@402)
Returns: " (@201-@202) "
```

```
CALC:MATH (sqrt(@201)),(@402)
CALC:MATH? (@402)
Returns: " (sqrt(@201)) "
```

```
CALC:MATH (poly(@201,3,2,1,1,1,0)),(@402)
CALC:MATH? (@402)
Returns:
"(poly(@201,+3.0000000E+00,+2.0000000E+00,+1.0000000E+00,+1.000
00000E+00,+1.00000000E+00,+0.0000000E+00)) "
```

```
CALC:MATH (max(@201:203)),(@402)
CALC:MATH? (@402)
Returns: " (max(@201,202,203)) "
```

•Only supported on computed channels (channels 401 through 420).

CALCulate:SCALe:DB:REFerence

Sets or returns reference value for the dB function.

Syntax: CALCulate:SCALe:DB:REFerence {<reference>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: CALCulate:SCALe:DB:REFerence? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <reference> (-2.0E+02 ~ +2.0E+02); DEF: 0 Return parameter: <NRf>

Example: CALC:SCAL:DB:REF 100 CALC:SCAL:DB:REF? Returns: +1.00000000E+02

CALCulate:SCALe:DBM:REFerence

Sets or returns resistance value for the dBm function.

Syntax: CALCulate:SCALe:DBM:REFerence {<reference>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: CALCulate:SCALe:DBM:REFerence? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <reference> (2, 4, 8, 16, 50, 75, 93, 110, 124, 125, 135, 150, 250, 300, 500, 600, 800, 900, 1000, 1200, 8000); DEF: 600 Return parameter: <NRf>

Example:

CALC:SCAL:DBM:REF DEF CALC:SCAL:DBM:REF? Returns: +6.0000000E+02

CALCulate:SCALe:DECimal:POINt

Under the Math function, the display of measured values vary in accordance with either the fixed range setting (Range) or auto range setting (Auto).

Syntax: CALCulate:SCALe:DECimal:POINt <type>[,(@<ch_list>)] Query Syntax: CALCulate:SCALe:DECimal:POINt? [(@<ch_list>)]

Parameter: <type> (AUTO | RANGe) Return parameter: AUTO | RANG

Example: CALC:SCAL:DEC:POIN RANG CALC:SCAL:DEC:POIN? Returns: RANG

CALCulate:SCALe:FUNCtion

Sets or returns the advanced function.

Syntax: CALCulate:SCALe:FUNCtion <function>[,@<ch_list>] Query Syntax: CALCulate:SCALe:FUNCtion? [@<ch_list>]

Parameter: <function> (OFF | DB | DBM | SCALe | INV | PCT) Return parameter: OFF | DB | DBM | SCAL | INV | PCT

Example:

CALC:SCAL:FUNC DB

•dB scaling function is only available when the measurement function on the specified channels sets to DCV orACV.

CALCulate:SCALe:GAIN

Sets or returns the scale factor M for math measurement.

Syntax: CALCulate:SCALe:GAIN {<gain>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: CALCulate:SCALe:GAIN? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <gain> (-1.2E+09 ~ +1.2E+09); DEF: 1 Return parameter: <NRf>

Example:

CALC:SCAL:FUNC SCAL CALC:SCAL:GAIN 0.5 CALC:SCAL:GAIN? Returns: +0.50000000E+00

CALCulate:SCALe:OFFSet

Sets or returns the offset factor B for math measurement.

Syntax: CALCulate:SCALe:OFFSet {<offset>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: CALCulate:SCALe:OFFSet? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <offset> (-1.2E+09 ~ +1.2E+09); DEF: 0 Return parameter: <NRf>

Example: CALC:SCAL:FUNC SCAL CALC:SCAL:OFFS 0.01 CALC:SCAL:OFFS? Returns: +1.0000000E-02

CALCulate:SCALe:OFFSet:NULL

Makes an immediate null measurement on the specified channels and stores it as the offset (B) for subsequent measurements.

Syntax: CALCulate:SCALe:OFFSet:NULL [(@<ch_list>)]

Parameter: [None]

Example:

CALC:SCAL:FUNC SCAL CALC:SCAL:OFFS:NULL (@101)

CALCulate:SCALe:PERCent

Sets or returns the reference value for the PCT function.

Syntax: CALCulate:SCALe:PERCent {<reference>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: CALCulate:SCALe:PERCent? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <reference> (-1.2E+09 ~ +1.2E+09); DEF: 1 Return parameter: <NRf>

Example: CALC:SCAL:FUNC PCT CALC:SCAL:REF 0.1 CALC:SCAL:REF? Returns: +1.0000000E-01

CALCulate:SCALe:REFerence

Sets or returns the reference value for the PCT function.

Syntax: CALCulate:SCALe:REFerence {<reference>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: CALCulate:SCALe:REFerence? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <reference> (-1.2E+09 ~ +1.2E+09); DEF: 1 Return parameter: <NRf>

Example: CALC:SCAL:FUNC PCT CALC:SCAL:REF 0.1 CALC:SCAL:REF? Returns: +1.0000000E-01

CALCulate:SCALe:REFerence:AUTO

Enables or disables automatic reference selection for the scaling functions.

Syntax: CALCulate:SCALe:REFerence:AUTO {OFF|ON}[,(@<ch_list>)] Query Syntax: CALCulate:SCALe:REFerence:AUTO? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ONReturn parameter: 0 | 1, (0 = OFF, 1 = ON)

ON: the first measurement made is used as the reference for all subsequent measurements, and automatic reference selection is disabled.

OFF:

CALCulate:SCALe:DB:REFerence specifies the reference for DB scaling, CALCulate:SCALe:REFerence specifies the reference for PCT scaling.

Example: CALC:SCAL:REF:AUTO ON

CALCulate:SCALe:REFerence:IMMediate

Makes an immediate reference measurement on PCT (%) and dB scaling functions and save the reference value for subsequent measurements.

Syntax: CALCulate:SCALe:REFerence:IMMediate [(@<ch_list>)]

Parameter: [None]

Example: CALC:SCAL:REF:IMM

•This command performs the reference measurement on both PCT and dB scaling functions simultaneously.

CALCulate:SCALe[:STATe]

Enables or disables the scaling function.

Syntax: CALCulate:SCALe[:STATe] {OFF|ON}[,(@<ch_list>)] Query Syntax: CALCulate:SCALe[:STATe]? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

CALC:SCAL:STAT ON

CALCulate:SCALe:UNIT

To specify the custom unit up to three characters (for example: RPM, PSI, or °C) for scaled measurements.

Syntax: CALCulate:SCALe:UNIT "<string>"[,(@<ch_list>)] Query Syntax:CALCulate:SCALe:UNIT? [(@<ch_list>)]

Parameter: "<string>", max length = 3 characters Return parameter: "<string>"

Example: CALC:SCAL:UNIT "BAR" CALC:SCAL:UNIT? Returns: "BAR"

CALCulate:SCALe:UNIT:STATe

Enables or disables displaying the unit string with measurements on the front panel when the scaling function is enabled.

Syntax: CALCulate:SCALe:UNIT:STATe {OFF|ON}[,(@<ch_list>)] Query Syntax: CALCulate:SCALe:UNIT:STATe? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

CALC:SCAL:UNIT "PSI" CALC:SCAL:UNIT:STAT ON

CONFigure Commands

CONFigure?

Returns the present configurations (function, range, and resolution) on the specified channels with a series of quoted strings.

Query Syntax: CONFigure? [(@<ch_list>)]

Parameter: [None] Return parameter: "<present configurations>"

Example: CONF:VOLT:DC 10,MIN,(@101) CONF? Returns: "VOLT +1.0000000E+01,+1.0000000E-05"

CONFigure:CAPacitance

Configures the channels for Capcitance measurements.

```
Syntax: CONFigure:CAPacitance
[{<range>|AUTO|MIN|MAX|DEF},[{<resolution>|MIN|MAX|DEF},]](@<ch_l
ist>)
```

Parameter: <range> (1nF | 10nF | 100nF | 1μF | 10μF | 100μF); DEF: AUTO

Example:

CONF:CAP 10e-7, (@101)

CONFigure:CURRent:{AC|DC}

Configures the channels for AC and DC current measurements.

Syntax: CONFigure:CURRent:{AC|DC} [{<range>|AUTO|MIN|MAX|DEF},[{<resolution>|MIN|MAX|DEF},]](@<ch_l ist>)

Parameter: <range>: AC: (100μA | 1mA | 10mA | 100mA | 2A); DEF: AUTO DC: (1μA | 10μA | 100μA | 1mA | 10mA | 100mA | 2A); DEF: AUTO

Example:

CONF:CURR:AC 10e-2,(@121) CONF:CURR:DC 10e-3,DEF,(@122)

•Autoranging (AUTO or DEFault), will generate an error if you specify a <resolution> because the instrument cannot accurately resolve the integration time (especially if the input continuously changes). If your application requires autoranging, specify DEFault for the <resolution> or omit the <resolution> altogether.

CONFigure:DIODe

Configures the channels for Diode measurements.

Syntax: CONFigure:DIODe (@<ch_list>)

Example:

CONF:DIOD (@101)

CONFigure: {FREQuency | PERiod}

Configures the channels for frequency and period measurements

Syntax: CONFigure:{FREQuency|PERiod} [{<range>|AUTO|MIN|MAX|DEF},[{<resolution>|MIN|MAX|DEF},]](@<ch_| ist>)

Parameter: <range>: Frequency: 3Hz ~ 300kHz; DEF: 20Hz Period: 3.33µs ~ 333.33ms; DEF: 50ms

Example: CONF:FREQ MAX,(@101) CONF:PER AUTO,DEF,(@101)

CONFigure: {RESistance | FRESistance }

Configures the channels for 2-Wire and 4-Wire resistance measurements.

Syntax: CONFigure:{RESistance|FRESistance} [{<range>|AUTO|MIN|MAX|DEF},[{<resolution>|MIN|MAX|DEF},]](@<ch_l ist>)

Parameter: <range> (100 Ω | 1k Ω | 10k Ω | 100k Ω | 1M Ω | 10M Ω | 100M Ω | 1G Ω); DEF: 1k Ω

Example:

CONF:RES 1e2, (@101) CONF:FRES 1e3, MAX, (@101)

•Autoranging (AUTO or DEFault), will generate an error if you specify a <resolution> because the instrument cannot accurately resolve the integration time (especially if the input continuously changes). If your application requires autoranging, specify DEFault for the <resolution> or omit the <resolution> altogether.

CONFigure:STRain:{DIRect|FDIRect}

Configures the channels for direct 2-Wire and 4-Wire strain gage measurements.

```
Syntax: CONFigure:STRain:{DIRect|FDIRect}
[{<gage_ohms>|MIN|MAX|DEF},[{<gage_factor>|MIN|MAX|DEF},
[{<range>|MIN|MAX|DEF},[{<resolution>|MIN|MAX|DEF},]]]](@<ch_list>)
```

Parameter: <gage_ohms> (80 ~ 1100Ω); DEF: 120Ω <gage_factor> (0.5 ~ 5); DEF: 2 <range> (100Ω | 1kΩ | 10kΩ | 100kΩ | 1MΩ | 10MΩ | 100MΩ | 1GΩ); DEF: 1kΩ

Example:

CONF:STR:DIR 100,1,(@101)

CONFigure:STRain:{FULL|HALF}:BENDing

Configures the channels for full and half bending bridge strain gage measurements.

```
Syntax: CONFigure:STRain:{FULL|HALF}:BENDing
[{<gage_factor>|MIN|MAX|DEF},[{<range>|MIN|MAX|DEF},[{<resolution>|
MIN|MAX|DEF},]]](@<ch_list>)
```

Parameter: <gage_factor> (0.5 ~ 5); DEF: 2 <range> (100mV | 1V | 10V | 100V | 600V); DEF: AUTO

Example:

CONF:STR:FULL:BEND 1,0.1,(@101)

CONFigure:STRain:{FULL|HALF}:POISson

Configures the channels for full and half poisson bridge strain gage measurements.

```
Syntax: CONFigure:STRain:{FULL|HALF}:POISson
[{<gage_factor>|MIN|MAX|DEF},[{<poisson_ratio>|MIN|MAX|DEF},[{<rang
e>|MIN|MAX|DEF},[{<resolution>|MIN|MAX|DEF},]]]](@<ch_list>)
```

```
Parameter:
<gage_factor> (0.5 ~ 5); DEF: 2
<poisson_ratio> (-0.9999 ~ 0.5); DEF: 0.3
<range> (100mV | 1V | 10V | 100V | 600V); DEF: AUTO
```

Example: CONF:STR:FULL:POIS (@101)

CONFigure:STRain:FULL:BENDing:POISson

Configures the channels for full bending poisson bridge strain gage measurements.

Syntax: CONFigure:STRain:{FULL|HALF}:POISson [{<gage_factor>|MIN|MAX|DEF},[{<poisson_ratio>|MIN|MAX|DEF},[{<rang e>|MIN|MAX|DEF},[{<resolution>|MIN|MAX|DEF},]]]](@<ch_list>)

Parameter: <gage_factor> (0.5 ~ 5); DEF: 2 <poisson_ratio> (-0.9999 ~ 0.5); DEF: 0.3 <range> (100mV | 1V | 10V | 100V | 600V); DEF: AUTO

Example:

CONF:STR:FULL:BEND:POIS 0.5,0.1, (@101)

CONFigure:STRain:QUARter

Configures the channels for quarter bridge strain gage measurements.

Syntax: CONFigure:STRain:QUARter {<gage_factor>|MIN|MAX|DEF},[{<range>|MIN|MAX|DEF},[{<resolution>| MIN|MAX|DEF},]](@<ch_list>)

Parameter: <gage_factor> (0.5 ~ 5); DEF: 2 <range> (100mV | 1V | 10V | 100V | 600V); DEF: AUTO

Example:

CONF:STR:QUAR 1, (@101)

CONFigure:TEMPerature

Configures the channels for temperature measurements.

Syntax: CONFigure:TEMPerature <probe_type>,[{<type>|DEF},[{<resolution>|MIN|MAX|DEF},]](@<ch_list>)

Parameter:

<probe type> (TCouple | RTD | FRTD | THERmistor | FTHermistor) <type>:

TCouple: (B | E | J | K | N | R | S | T | USER) ; DEF: J

RTD / FRTD : (PT100 | D100 | F100 | PT385 | PT3916 | USER) ; DEF: PT100 THERmistor / FTHermistor : $(2.2k\Omega| 5k\Omega| 10k\Omega| USER)$; DEF: $5k\Omega$

Example:

CONF:TEMP TC,K,(@101)

CONFigure[:VOLTage]:{AC|DC}

Configures the channels for AC and DC voltage measurements

```
Syntax: CONFigure[:VOLTage]:{AC|DC}
[{<range>|AUTO|MIN|MAX|DEF},[{<resolution>|MIN|MAX|DEF},]](@<ch_l
ist>)
```

Parameter: <range>: AC: (100mV | 1V | 10V | 100V | 400V); DEF:AUTO DC: (100mV | 1V | 10V | 100V | 600V); DEF:AUTO

Example: CONF:VOLT:AC 10e-2,(@201) CONF:VOLT:DC 1,MAX,(@101)

•Autoranging (AUTO or DEFault), will generate an error if you specify a <resolution> because the instrument cannot accurately resolve the integration time (especially if the input continuously changes). If your application requires autoranging, specify DEFault for the <resolution> or omit the <resolution> altogether.

DATA Commands

DATA:LAST?

Returns the most recent reading or readings taken on the selected channel during the scan.

Query Syntax: DATA:LAST? [<num_rdgs>,](@<ch_list>)

Parameter: <num_rdgs> (1 ~ 1000) Return parameter: <NRf>

Example: DATA:LAST? 1,(@101) Returns: +0.15900000E+01

•If no data is available for the specified channel, an error will be generated.

DATA:POINts?

Returns the total number of readings currently saved in reading memory from a scan.

Return parameter: <NR1>

Example: DATA:POIN? Returns: +10

•You can store up to 100,000 measurements in the reading memory.

DATA:POINts:EVENt:THReshold

Sets or returns the threshold for event number of measurement.

Syntax: DATA:POINts:EVENt:THReshold <num_rdgs> Query Syntax: DATA:POINts:EVENt:THReshold?

Parameter: <num_rdgs> (1 ~ 100,000) Return parameter: <NR1>

Example: DATA:POIN:EVEN:THR 20 DATA:POIN:EVEN:THR? Returns: +20

•When measurement numbers reach the set threshold, the Bit9 within the Operater Event Register (STATus:OPERation:EVENt) will be set as 1.

•Once the Memory Threshold bit (bit 9 in the Standard Operation Event register) is set, it remains set until cleared by STATus:OPERation:EVENt? or *CLS.

DATA:REMove?

Reads and erases measurements from reading memory up to the specified <num_rdgs>. The measurements are read and erased from the reading memory starting with the oldest measurement first.

Query Syntax: DATA:REMove? <num_rdgs>,[WAIT]

Parameter: <num_rdgs> (1 ~ 100,000)

Example: DATA:REM? 4 Returns: -1.12816521E-04,-1.13148354E-04,-1.13485152E-04,-1.13365632E-04

•You can use the DATA:POINts? query to determine the total number of readings currently in reading memory.

•If <num_rdgs> is greater than the latest counts of measurement, it will return the error. However, it will return data if <num_rdgs> of counts of measurement reach the set threshold only when WAIT parameter is specified.

•The R? and DATA:REMove? queries can be used during a long series of readings to periodically remove readings from memory that would normally cause the reading memory to overflow. R? does not wait for all readings to complete. It sends the readings that are complete at the time the instrument receives the command.

•If reading memory overflows, the new readings will overwrite the first (oldest) readings saved; the most recent readings are always preserved. No error is generated, but the Reading Memory Overflow bit (bit 12) is set in the Questionable Data Register's condition register.

DIGital INTerface Commands

DIGital:INTerface:MODE

Sets or returns the application mode of digital I/O (Remote Control Only). For details, refer to page 135.

Syntax: DIGital:INTerface:MODE <type> Query Syntax: DIGital:INTerface:MODE?

Parameter: <type> (COPM | 4094 | IO) Return parameter: COPM | 4094 | IO

Example: DIG:INT:MODE IO

DIGital:INTerface:DATA:OUTPut

When the 4094 mode (serial to parallel) is selected for digital I/O, make use of this command to set output status.

Syntax: DIGital:INTerface:DATA:OUTPut <data>,<strobe_pulse>

Parameter: <data> (0 ~ 255); <strobe_pulse> (0 | 1)

Example: DIG:INT:MODE 4094 DIG:INT:DATA:OUPT 10,1

DIGital:INTerface:DATA:SETup

When the IO mode is selected for digital I/O, make use of this command to set output status.

Syntax: DIGital:INTerface:DATA:SETup <boolean>

Parameter: <boolean> (0 | 1), (DIO1, DIO2, DIO3, DIO4)

Example:

DIG:INT:MODE IO DIG:INT:DATA:SET 0,1,0,1 Sets DIO1 to low, DIO2 to high, DIO3 to low, DIO4 to high.

DISPlay Commands

DISPlay

Enables (On) or disables (Off) front panel display. When disabled, the entire front panel display turns black and time stamp is displayed.

Syntax: DISPlay {OFF|ON} Query Syntax: DISPlay?

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: DISP ON

•All keys except "Local" are disabled when the display is OFF.

•To enable the display, send DISPlay ON or press the front panel Shift key(Local).

DISPlay:TEXT

Displays a text on the instrument's front panel display.

Syntax: DISPlay:TEXT "<message>" Query Syntax:DISPlay:TEXT?

Parameter: "<message>", max length = 40 characters Return parameter: "<message>"

Example: DISP:TEXT "testing"

•Sending a text message to the display overrides the display state; this means that you can display a message even if the display is turned off.

DISPlay:TEXT:CLEar

Clears the text message from the display.

•With DISP ON, DISP:TEXT:CLE returns the display to its normal mode.

•With DISP OFF, DISP:TEXT:CLE clears the message and the display remains disabled.

FORMat Commands

FORMat:READing:ALARm

Enables (On) or disables (Off) the inclusion of alarm information in the reading format.

Syntax: FORMat:READing:ALARm {OFF|ON} Query Syntax: FORMat:READing:ALARm?

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: FORM:READ:ALAR ON

FORMat:READing:CHANnel

Enables (On) or disables (Off) the inclusion of channel number information in the reading format.

Syntax: FORMat:READing:CHANnel {OFF|ON} Query Syntax: FORMat:READing:CHANnel?

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: FORM:READ:CHAN ON

FORMat:READing:TIME

Enables (On) or disables (Off) the inclusion of time stamp information in the reading format.

Syntax: FORMat:READing:TIME {OFF|ON} Query Syntax: FORMat:READing:TIME?

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

FORM:READ:TIME ON

FORMat:READing:TIME:TYPE Selects the time format (absolute or relative) for time stamp returned when FORMat:READing:TIME is enabled.
Syntax: FORMat:READing:TIME:TYPE {ABSolute RELative} Query Syntax: FORMat:READing:TIME:TYPE?
Parameter: ABSolute RELative Return parameter: ABS REL
Example: FORM:READ:TIME:TYPE ABS
 Relative format - shows the time since the start of the scan. Ex:+1.12379111E-03 VDC,0000000.659,101,2 1 2 3 4 1. Reading with units(1.124mV) 2. Elapsed time(659ms) 3. Channel number 4. Alarm limit threshold crossed (0 = No alarm, 1 = LO, 2 = HI)
 Absolute format - shows the time of the day with the date. Ex:+1.12379111E-03 VDC,2021,01,28,00,43,39.218,101,0 1 2 3 4 5
 Reading with units(1.124mV) Date(January 28, 2021) Time of day(0:43:39.218 AM) Channel number Alarm limit threshold crossed (0 = No alarm, 1 = LO, 2 = HI)
FORMat:READing:UNIT Enables (On) or disables (Off) the inclusion of measurement units (VAC, VDC, OHM, etc.) in the reading format.
Syntax: FORMat:READing:UNIT {OFF ON} Query Syntax: FORMat:READing:UNIT?
Parameter: 0 1 OFF ON Return parameter: 0 1, (0 = OFF, 1 = ON)

Example:

FORM:READ:UNIT ON

HCOPy Commands

HCOPy:SDUMp:DATA?

Executes TFT LCD screenshot action. Returns the front panel display image ("screen shot"). Returns a count of data streaming by the image file format of BMP.

MEASure Commands

MEASure: CAPacitance?

Configures the channels for capacitance measurements and immediately sweeps through the specified channels one time (independent of the present scan list). The results are sent directly to reading memory and the instrument's output buffer.

Query Syntax: MEASure:CAPacitance?

[{<range>|AUTO|MIN|MAX|DEF},[{<resolution>|MIN|MAX|DEF},]](@<ch_l ist>)

Parameter: <range> (1nF | 10nF | 100nF | 1µF | 10µF | 100µF); DEF: AUTO

Example:

MEAS:CAP? DEF,(@101) Returns: +3.72695852E-11

MEASure:CURRent: {AC|DC}?

Configures the channels for AC and DC current measurements and immediately sweeps through the specified channels one time (independent of the present scan list). The results are sent directly to reading memory and the instrument's output buffer.

Query Syntax: MEASure:CURRent:{AC|DC}? [{<range>|AUTO|MIN|MAX|DEF},[{<resolution>|MIN|MAX|DEF},]](@<ch_ list>)

Parameter: <range>: AC: (100μA | 1mA | 10mA | 100mA | 2A); DEF: AUTO DC: (1μA | 10μA | 100μA | 1mA | 10mA | 100mA | 2A); DEF: AUTO Return parameter: <NRf>

Example: MEAS:CURR:AC 10e-2,(@121,122) Returns: +0.32921419E-01,+0.15224990E-01

•Autoranging (AUTO or DEFault), will generate an error if you specify a <resolution> because the instrument cannot accurately resolve the integration time (especially if the input continuously changes). If your application requires autoranging, specify DEFault for the <resolution> or omit the <resolution> altogether.

MEASure: DIODe?

Configures the channels for Diode current measurements and immediately sweeps through the specified channels one time (independent of the present scan list). The results are sent directly to reading memory and the instrument's output buffer.

Query Syntax: MEASure:DIODe? (@<ch_list>)

Parameter: [None] Return parameter: <NRf>

Example: MEAS:DIOD? (@101) Returns: +0.69324990E+00

•The range and resolution for diode test are fixed at 1 VDC, with a 1 mA current source output.

MEASure: {FREQuency | PERiod }?

Configures the channels for frequency and period measurements and immediately sweeps through the specified channels one time (independent of the present scan list). The results are sent directly to reading memory and the instrument's output buffer.

Query Syntax: MEASure:{FREQuency|PERiod}? [{<range>|AUTO|MIN|MAX|DEF},[{<resolution>|MIN|MAX|DEF},]](@<ch_ list>)

Parameter: <range>: AC: 3Hz to 300kHz; DEF: 20Hz DC: 3.33µs to 333.33ms; DEF: 50ms Return parameter: <NRf>

Example:

MEAS:FREQ? MIN,(@101) Returns: +5.98876820E+01

MEASure: {RESistance | FRESistance }?

Configures the channels for 2-Wire and 4-Wire resistance measurements and immediately sweeps through the specified channels one time (independent of the present scan list). The results are sent directly to reading memory and the instrument's output buffer.

Query Syntax: MEASure:{RESistance|FRESistance}? [{<range>|AUTO|MIN|MAX|DEF},[{<resolution>|MIN|MAX|DEF},]](@<ch_ list>)

Parameter: <range> $(100\Omega | 1k\Omega | 10k\Omega | 100k\Omega | 1M\Omega | 10M\Omega | 100M\Omega | 1G\Omega)$; DEF: AUTO Return parameter: <NRf>

Example:

MEAS:RES? 100,(@101) Returns: +3.98776210E+01

•Autoranging (AUTO or DEFault), will generate an error if you specify a <resolution> because the instrument cannot accurately resolve the integration time (especially if the input continuously changes). If your application requires autoranging, specify DEFault for the <resolution> or omit the <resolution> altogether.

MEASure:STRain:{DIRect|FDIRect}?

Configures the channels for direct 2-Wire and 4-Wire strain gage measurements and immediately sweeps through the specified channels one time (independent of the present scan list). The results are sent directly to reading memory and the instrument's output buffer.

```
Query Syntax: MEASure:STRain:{DIRect|FDIRect}?
[{<gage_ohms>|MIN|MAX|DEF},[{<gage_factor>|MIN|MAX|DEF},
[{<range>|MIN|MAX|DEF},[{<resolution>|MIN|MAX|DEF},]]]](@<ch_list>)
```

```
Parameter:

<gage_ohms> (80 ~ 1100\Omega); DEF: 120\Omega

<gage_factor> (0.5 ~ 5); DEF: 2

<range> (100\Omega | 1k\Omega | 10k\Omega | 100k\Omega | 1M\Omega | 10M\Omega | 100M\Omega | 1G\Omega); DEF:

1k\Omega

Return parameter: <NRf>
```

```
Example:
MEAS:STR:DIR 100,1,(@101)
Returns: +7.08176210E+01
```

MEASure:STRain:{FULL|HALF}:BENDing?

Configures the channels for full and half bending bridge strain gage measurements and immediately sweeps through the specified channels one time (independent of the present scan list). The results are sent directly to reading memory and the instrument's output buffer.

Query Syntax: MEASure:STRain:{FULL|HALF}:BENDing? [{<gage_factor>|MIN|MAX|DEF},[{<range>|MIN|MAX|DEF},[{<resolution>| MIN|MAX|DEF},]]](@<ch_list>)

Parameter: <gage_factor> (0.5 ~ 5); DEF: 2 <range> (100mV | 1V | 10V | 100V | 600V); DEF: AUTO Return parameter: <NRf>

Example:

MEAS:STR:FULL:BEND 1,0.1, (@101) Returns: +7.08176210E-01

MEASure:STRain:{FULL|HALF}:POISson?

Configures the channels for full and half poisson bridge strain gage measurements and immediately sweeps through the specified channels one time (independent of the present scan list). The results are sent directly to reading memory and the instrument's output buffer.

Query Syntax: MEASure:STRain:{FULL|HALF}:POISson? [{<gage_factor>|MIN|MAX|DEF},[{<poisson_ratio>|MIN|MAX|DEF},[{<rang e>|MIN|MAX|DEF},[{<resolution>|MIN|MAX|DEF},]]]](@<ch_list>)

Parameter: <gage_factor> (0.5 ~ 5); DEF: 2 <poisson_ratio> (-0.9999 ~ 0.5); DEF: 0.3 <range> (100mV | 1V | 10V | 100V | 600V); DEF: AUTO Return parameter: <NRf>

Example:

MEAS:STR:FULL:POIS (@101) Returns: +1.08176210E+00

MEASure:STRain:FULL:BENDing:POISson?

Configures the channels for full bending poisson bridge strain gage measurements and immediately sweeps through the specified channels one time (independent of the present scan list). The results are sent directly to reading memory and the instrument's output buffer.

Query Syntax: MEASure:STRain:FULL:BENDing:POISson? [{<gage_factor>|MIN|MAX|DEF},[{<poisson_ratio>|MIN|MAX|DEF},[{<rang e>|MIN|MAX|DEF},[{<resolution>|MIN|MAX|DEF},]]]](@<ch_list>)

Parameter: <gage_factor> (0.5 ~ 5); DEF: 2 <poisson_ratio> (-0.9999 ~ 0.5); DEF: 0.3 <range> (100mV | 1V | 10V | 100V | 600V); DEF: AUTO Return parameter: <NRf>

Example: MEAS:STR:FULL:BEND:POIS 0.5,0.1,(@101) Returns: +0.68176210E-01

MEASure:STRain:QUARter?

Configures the channels for quarter bridge strain gage measurements and immediately sweeps through the specified channels one time (independent of the present scan list). The results are sent directly to reading memory and the instrument's output buffer.

Query Syntax: MEASure:STRain:QUARter? {<gage_factor>|MIN|MAX|DEF},[{<range>|MIN|MAX|DEF},[{<resolution>| MIN|MAX|DEF},]](@<ch_list>)

Parameter: <gage_factor> (0.5 ~ 5); DEF: 2 <range> (100mV | 1V | 10V | 100V | 600V); DEF: AUTO Return parameter: <NRf>

Example: MEAS:STR:QUAR 1,(@101) Returns: +0.28176210E+00

MEASure: TEM Perature?

Configures the channels for temperature measurements and immediately sweeps through the specified channels one time (independent of the present scan list). The results are sent directly to reading memory and the instrument's output buffer.

Query Syntax: MEASure:TEMPerature?

<probe_type>,[{<type>|DEF},[{<resolution>|MIN|MAX|DEF},]](@<ch_list>)

Parameter:

<probe type> (TCouple | FRTD | RTD | FTHermistor | THERmistor)
<type>:
TCouple: (B | E | J | K | N | R | S | T | USER) ; DEF: J
RTD / FRTD : (PT100 | D100 | F100 | PT385 | PT3916 | USER) ; DEF: PT100
THERmistor / FTHermistor : (2.2kΩ| 5kΩ| 10kΩ| USER); DEF: 5kΩ

Example:

MEAS:TEMP TC,K,(@101) Returns: +2.51176210E+01

MEASure[:VOLTage]: {AC|DC}?

Configures the channels for AC and DC voltage measurements.

Query Syntax: MEASure[:VOLTage]:{AC|DC}? [{<range>|AUTO|MIN|MAX|DEF},[{<resolution>|MIN|MAX|DEF},]](@<ch_l ist>)

Parameter: <range>: AC: (100mV | 1V | 10V | 100V | 400V); DEF:AUTO DC: (100mV | 1V | 10V | 100V | 600V); DEF:AUTO

Example: MEAS:VOLT:AC 100,(@101) Returns: +3.71176210E+01

•Autoranging (AUTO or DEFault), will generate an error if you specify a <resolution> because the instrument cannot accurately resolve the integration time (especially if the input continuously changes). If your application requires autoranging, specify DEFault for the <resolution> or omit the <resolution> altogether.

MMEMory Commands

MMEMory:FORMat:READing:CHEAder

Specifies the content of each column header to be either the channel number (NUMber) or the channel's user-defined label (LABel).

Syntax: MMEMory:FORMat:READing:CHEAder {NUMber|LABel} Query Syntax: MMEMory:FORMat:READing:CHEAder?

Parameter: NUMber | LABel Return parameter: NUM | LAB

Example: MMEM:FORM:READ:CHEA LAB

• If the value of the column header is set to LABel using the ROUTe:CHANnel:LABel command, any channel without a user-defined label will display its factory-default channel label instead on its column header.

MMEMory:FORMat:READing:CSEParator

Specifies the character to use for separating the information on each row.

Syntax: MMEMory:FORMat:READing:CSEParator {COMMa|SEMicolon|TAB} Query Syntax: MMEMory:FORMat:READing:CSEParator?

Parameter: COMMa | SEMicolon | TAB Return parameter: COMM | SEM | TAB

Example:

MMEM:FORM:READ:CSEP COMM

MMEMory:FORMat:READing:RLIMit

Specifies the row limit (maximum number of rows for sweep data) that will be written to each data logging file by the count set by MMEMory:FORMat:READing:RLIMit:COUNt command.

Syntax: MMEMory:FORMat:READing:RLIMit {OFF|ON} Query Syntax: MMEMory:FORMat:READing:RLIMit?

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

MMEM:FORM:READ:RLIM ON
MMEMory:FORMat:READing:RLIMit:COUNt

Sets the row limits count when MMEMory:FORMat:READing:RLIMit ON is set.

Syntax: MMEMory:FORMat:READing:RLIMit:COUNt {<number>|MIN|MAX|DEF} Query Syntax: MMEMory:FORMat:READing:RLIMit:COUNt? [{MIN|MAX|DEF}]

Parameter: <number> (65536 | 1048576); DEF: 65536 Return parameter: <NR1>

Example:

MMEM:FORM:READ:RLIM:COUN 10000

MMEMory:LOG[:ENABle]

Enables (On) or disables (Off) logging of the scanned memory readings to a USB drive connected to the front panel USB host port.

Syntax: MMEMory:LOG[:ENABle] {OFF|ON} Query Syntax: MMEMory:LOG[:ENABle]?

Parameter: 0 | 1 | OFF | ONReturn parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: MMEM:LOG ON

Output Commands

OUTPut:ALARm:CLEar:ALL

Clears the state of all four alarm output lines.

Parameter: [None]

Example: OUTP:ALAR:CLE

•You can manually clear the output lines at any time (even during a scan) and the alarm data in reading memory is not cleared. However, data is cleared when you initiate a new scan.

$OUTPut:ALARm \{1|2|3|4\}:CLEar$

Clears the state of specified alarm output lines.

Parameter: [None]

Example: OUTP:ALAR3:CLE

•You can manually clear the output lines at any time (even during a scan) and the alarm data in reading memory is not cleared. However, data is cleared when you initiate a new scan.

OUTPut:ALARm {1|2|3|4}:SOURce

Assigns one of four alarm numbers to report any alarm conditions on the specified multiplexer or digital channels.

On the digital modules, you can configure the instrument to generate an alarm when a specific bit pattern or bit pattern change is detected on a digital input channel or when a specific count is reached on a totalizer channel.

Syntax: OUTPut:ALARm{1|2|3|4}:SOURce (@<ch_list>) Query Syntax: OUTPut:ALARm{1|2|3|4}:SOURce?

Parameter: [None]

Example: OUTP:ALAR3:SOUR (@101:104) OUTP:ALAR3:SOUR? Returns: #218(@101,102,103,104)

The "#2" means that the next 2 digits indicate how many characters are in the returned memory string.

In the above example, the 2 digits are the "18" after the "#2". Therefore, the remaining of the string is 18 digits long.

•An empty scan list (with no channels selected) will return "#13(@)".

OUTPut:ALARm:MODE

Clears the state of specified alarm output lines.

Syntax: OUTPut:ALARm:MODE {LATCh|TRACk} Query Syntax: OUTPut:ALARm:MODE?

Parameter: LATCh | TRACk Return parameter: LATC | TRAC

Example:

OUTP:ALAR:MODE LATC

•Latch Mode: The alarm output is asserted when a channel's reading crosses a limit, and remains asserted until you clear it manually, start a new scan, or cycle power.

•Track Mode: The alarm output is asserted when a channel's reading crosses a limit, and remains asserted only while subsequent readings remain outside the limit. When a reading returns within the limits, the output is automatically cleared.

OUTPut:ALARm:SLOPe

Configures the level for all four alarm output lines that indicates an alarm, either falling edge (NEG - 0 V), or rising edge (POS - 3.3 V).

Syntax: OUTPut:ALARm:SLOPe {POSitive|NEGative} Query Syntax: OUTPut:ALARm:SLOPe?

Parameter: POSitive | NEGative Return parameter: POS | NEG

Example:

OUTP:ALAR:SLOP POS

OUTPut:TRIGger:SLOPe

Specifies the rising edge (POS) or falling edge (NEG) as the Channel Closed signal on the rear panel Digital I/O connector. The signal operates differently during internal or external scan.

Syntax: OUTPut:TRIGger:SLOPe {POSitive|NEGative} Query Syntax: OUTPut:TRIGger:SLOPe?

Parameter: POSitive | NEGative Return parameter: POS | NEG

Example: OUTP:TRIG:SLOP POS

• For internal scans (INSTrument:DMM ON command), it is generated at the END of a sweep, not the beginning of a sweep.

•For external scans (INSTrument:DMM OFF command), it is generated when each channel is closed, and can be used to trigger the measurement on the external DMM.

ROUTe Commands

ROUTe:CHANnel:ADVance:SOURce

Selects the source of signal that advances to the next channel in the scan list when scanning with an external DMM (internal DMM disabled). When the channel advance signal is received, the instrument opens the currently selected channel and closes the next channel in the scan list. The instrument will accept a software command (BUS), continuous scan trigger (IMMediate), or external TTL-compatible (EXTernal) trigger pulse.

Syntax: ROUTe:CHANnel:ADVance:SOURce {BUS|IMMediate|EXTernal} Query Syntax: ROUTe:CHANnel:ADVance:SOURce?

Parameter: BUS | IMMediate | EXTeran Return parameter: BUS | IMM | EXT

Example:

ROUT:CHAN:ADV:SOUR IMM

ROUTe:CHANnel:DELay

Adds a delay between channels in the scan list (useful for high-impedance or high-capacitance circuits). The delay is inserted between the relay closure and the actual measurement on each channel, in addition to any delay that will implicitly occur due to relay settling time. The programmed channel delay overrides the default channel delay that the instrument automatically adds to each channel.

Syntax: ROUTe:CHANnel:DELay {<seconds>IMIN|MAX}[,(@<ch_list>)] Query Syntax: ROUTe:CHANnel:DELay? [{(@<ch_list>)|MIN|MAX}]?

Parameter: <seconds> (0 ~ 60s) Return parameter: <NRf>

Example: ROUT:CHAN:DEL 2 ROUT:CHAN:DEL? Returns: +2.00000000E+00

ROUTe: CHANnel: DELay: AUTO

Enables (On) or disables (Off) an automatic channel delay on the specified channels. If enabled, the instrument determines the delay based on function, range, integration time, and AC filter setting.

Syntax: ROUTe:CHANnel:DELay:AUTO {OFF|ON}[,(@<ch_list>)] Query Syntax: ROUTe:CHANnel:DELay:AUTO? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

ROUT:CHAN:DEL:AUTO ON

ROUTe:CHANnel:FWIRe

Configures the specified channels for 4-wire external scanning. When enabled, channel n is paired with channel n+10 (DAQ-900 or DAQ-901) or n+4 (DAQ-909) to provide source and sense connections.

Syntax: ROUTe:CHANnel:FWIRe {OFF|ON}[,(@<ch_list>)] Query Syntax: ROUTe:CHANnel:FWIRe? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: INST:DMM OFF ROUT:CHAN:FWIRe ON,(@101,102)

•When specifying the scan list using ROUTe:SCAN, only specify the lower channel number (n) for paired channels; the upper channel number (n+10 or n+4) is not allowed in the scan list.

ROUTe:CHANnel:LABel

Assigns a user-defined label to the specified channels.

Syntax: ROUTe:CHANnel:LABel "<label>",(@<ch_list>) Query Syntax: ROUTe:CHANnel:LABel? [{USER|FACtory},](@<ch_list>)

Parameter:"<label>", max length = 30 characters Return parameter: "<label>"

USER = Read the user-defined label on the specified channel. FACTory = Read the factory-default label on the specified channel.

Example:

ROUT:CHAN:LAB "test", (@101,103) ROUT:CHAN:LAB? USER, (@101,103) Returns: "test", "test"

•When shipped from the factory, each channel is assigned a unique factory-default label (cannot be overwritten).

•Specifying a null string ("") disables the user-defined message.

ROUTe:CHANnel:LABel:CLEar:MODule

Clears all user-defined labels on all channels in the specified slot, or on all modules installed in the DAQ9600, and restores the factory-default labels.

Syntax: ROUTe:CHANnel:LABel:CLEar:MODule {<slot>|ALL}

Parameter: $\langle slot \rangle (1 \sim 3) | ALL$

Example:

ROUT:CHAN:LAB:CLE:MOD 1

•This command does not clear the factory-default channel labels. The factory-default labels are always preserved.

•The instrument keeps a record of what module types are installed in each slot. If a different module type is detected in a specific slot at power on, all user-defined channel labels for that slot are discarded. If an empty slot is detected at power-on, any previously-defined labels for that slot are preserved and will be restored if the same module type is installed later; however, if a module of a different type is installed in that slot, the previously-defined labels will be discarded.

ROUTe:CLOSe

Closes the specified channels on a multiplexer or switch module. On the multiplexer modules, if any channel on the module is defined to be part of the scan list, attempting to send this command will result in an error.

Syntax: ROUTe:CLOSe (@<ch_list>) Query Syntax: ROUTe:CLOSe? (@<ch_list>)

Parameter: [None] Return parameter: 0 | 1, (0 = open, 1 = close)

Example: ROUT:CLOS (@101,102) ROUT:CLOS? (@101,102) Returns: 1,1

• For the matrix module (DAQ-904), the channel number represents the intersection of the desired row and column. For example, channel 312 represents the intersection of row 1 and column 2 on the module in slot 3 (assumes two-wire mode).

ROUTe:CLOSe:EXCLusive

Opens all channels on a multiplexer or switch module and then closes the specified channels. On the multiplexer modules, if any channel on the module is defined to be part of the scan list, attempting to send this command will result in an error.

```
Syntax: ROUTe:CLOSe:EXCLusive (@<ch_list>)
```

Parameter: [None]

Example: ROUT:CLOS:EXCL (@102) Returns: 1,1

•This command opens all channels first, and then closes the channels in the <ch_list>, one at a time. Before it closes each channel, it opens all previous channels.

ROUTe:DONE?

Returns the status of all relay operations on modules that not involved in the scan and returns a 1 when finished (even during a scan).

Return parameter: 0 | 1, (0 =Unfinished, 1 =finished)

Example: ROUT:DONE? Returns: 1

ROUTe:MONitor

Selects the channel to be displayed on the front panel. Only one channel can be monitored at a time.

Syntax: ROUTe:MONitor (@<channel>) Query Syntax: ROUTe:MONitor?

Parameter: A single channel Return parameter: <channel>

Example: ROUT:MON (@101) ROUT: MON? Returns: #16(@101)

The "#1" means that the next 1 digits indicate how many characters are in the returned memory string.

In the above example, the 1 digits are the "6" after the "#1". Therefore, the remaining of the string is 6 digits long.

ROUTe: MONitor: DATA?

Reads the monitor data from the selected channel. It returns the reading only; the units, time, channel, and alarm information are not returned (the FORMat:READing commands do not apply to monitor readings).

Return parameter: <NRf>

Example: ROUT:MON:STAT OFF ROUT:MON:DATA? Returns: +9.91000000E+37

•If the Monitor mode is not currently enabled, this query returns 9.91E37 (not a number).

•Readings acquired during a Monitor are not stored in reading memory but they are displayed on the front panel; however, all readings from a scan in progress at the same time are stored in reading memory.

ROUTe: MONitor: DATA: FULL?

Reads the monitor data from the selected channel. It returns all the reading with the units, time, channel, and alarm information (all the FORMat:READing enabled commands apply to this monitor readings).

Return parameter: <NRf>

Example:

ROUT:MON:STAT ON ROUT:MON:DATA:FULL? Returns: -1.20901311E-04 VDC,2022,04,17,20,15,08.613,201,0

•If the Monitor mode is not currently enabled, this query returns 9.91E37 (not a number).

•Readings acquired during a Monitor are not stored in reading memory but they are displayed on the front panel; however, all readings from a scan in progress at the same time are stored in reading memory.

ROUTe:MONitor:STATe

Enables (On) or disables (Off) the Monitor mode. The Monitor mode is equivalent to making continuous measurements on a single channel with an infinite scan count. Only one channel can be monitored at a time but you can change the channel being monitored at any time.

Syntax: ROUTe:MONitor:STATe {OFF|ON} Query Syntax: ROUTe:MONitor:STATe?

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

CONF:RES 1000, (@101) ROUT:MON (@101) ROUT:MON:STAT ON

ROUTe:MONitor:VIEW

Selects how measurement data is displayed (numeric, trend chart, histogram, and bar meter format) in monitoring mode.

Syntax: ROUTe:MONitor:VIEW {NUMeric|TCHart|HISTogram|METer} Query Syntax: ROUTe:MONitor:VIEW?

Parameter: NUMeric | TCHart | HISTogram | METer Return parameter: NUM | TCH | HIST | MET

Example:

ROUT:MON:VIEW NUM

ROUTe:OPEN

Opens the specified channels on a multiplexer or switch module. On the multiplexer modules, if any channel on the module is defined to be part of the scan list, attempting to send this command will result in an error.

Syntax: ROUTe:OPEN (@<ch_list>) Query Syntax: ROUTe:OPEN? (@<ch_list>)

```
Return parameter: 0 \mid 1, (0 = close, 1 = open)
```

Example: ROUT:OPEN (@101,102) ROUT:OPEN? (@101,102) Returns: 1,1

• For the matrix module (DAQ-904), the channel number represents the intersection of the desired row and column. For example, channel 312 represents the intersection of row 1 and column 2 on the module in slot 3 (assumes two-wire mode).

ROUTe:SCAN

Selects the channels to be included in the scan list. This command is used in conjunction with the CONFigure commands to set up an automated scan. The specified channels supersede any channels previously defined to be part of the scan list. To start the scan, use the INITiate or READ? command.

Syntax: ROUTe:SCAN (@<ch_list>) Query Syntax: ROUTe:SCAN?

Parameter: [None] Return parameter: <channel>

Example: ROUT:SCAN (@101,102) ROUT:SCAN? Returns: #210(@101,102)

The "#2" means that the next 2 digits indicate how many characters are in the returned memory string.

In the above example, the 2 digits are the "10" after the "#2". Therefore, the remaining of the string is 10 digits long.

•To remove all channels from the present scan list, issue the command ROUT:SCAN (@).

•An empty scan list (with no channels selected) will return "#13(@)".

ROUTe:SCAN:SIZE?

Returns the number of channels in the scan list as defined by the ROUTe:SCAN command.

Return parameter: <NR1>

Example: ROUT:SCAN (@101:105) ROUT:SCAN:SIZE? Returns: +5

•The present scan list is stored in non-volatile memory and will be retained when power is turned off.

SENSe Related Commands

[SENSe:]FUNCtion[:ON]

Selects the measurement function on the selected channels (all function-related measurement attributes areretained).

Syntax: [SENSe:]FUNCtion[:ON] "<function>"[,(@<ch_list>)] Query Syntax: [SENSe:]FUNCtion[:ON]? [(@<ch_list>)]

Parameter:

Return Parameter:

```
"CAP" | "CURR:AC" | "CURR[:DC]" | "DIOD" | "FREQ" | "PER" | "FRES" |
"RES" | "STR:DIR" | "STR:FDIR" | "STR:QUAR" | "STR:HALF:BEND" |
"STR:HALF:POIS" | "STR:FULL:BEND" | "STR:FULL:BEND:POIS" |
"STR:FULL:POIS" | "TEMP[:TC]" | "TEMP:FRTD" | "TEMP:RTD" |
"TEMP:FTH" | "TEMP:THER" | "VOLT:AC" | "VOLT[:DC]"
```

Example:

FUNC "RES"

SENSe AVERage Commands

[SENSe:]AVERage:COUNt

Sets or returns the digital filter count.

Syntax: [SENSe:]AVERage:COUNt {<count>|MIN|MAX}[,(@<ch_list>)] Query Syntax: [SENSe:]AVERage:COUNt? [{(@<ch_list>)|MIN|MAX}]

Parameter: <count> (2 ~ 100) Return parameter: <NRf>

Example: AVER:COUN MIN AVER:COUN? Returns: +0.20000000E+00

[SENSe:]AVERage:STATe

Enable(On) or disable(Off) the digital filter function state.

Syntax: [SENSe:]AVERage:STATe {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]AVERage:STATe? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: AVER:STAT ON

•If NPLC \geq 7.2k/s, the filter function will be disabled.

[SENSe:]AVERage:WINDow

Sets or returns a digital filter window value.

Syntax: [SENSe:]AVERage:WINDow {<percent>|MIN|MAX}[,(@<ch_list>)] Query Syntax: [SENSe:]AVERage:WINDow? [{(@<ch_list>)|MIN|MAX}]

Parameter: <percent> (0.01 | 0.1 | 1 | 10 | NONE) Return parameter: <NRf>

Example: AVER:WIND 0.1

[SENSe:]AVERage:WINDow:METHod

Sets or returns a digital filter window method type.

Syntax: [SENSe:]AVERage:WINDow:METHod <type>[,(@<ch_list>)] Query Syntax: [SENSe:]AVERage:WINDow:METHod? [(@<ch_list>)]

Parameters: <type> (MEASure | RANGe) Return parameter: MEASure | RANGe

Example:

AVER:WIND:METH MEAS

SENSe CAPacitance Commands

[SENSe:]CAPacitance:RANGe

Selects a fixed range for capacitance measurements.

Syntax: [SENSe:]CAPacitance:RANGe {<range>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]CAPacitance:RANGe? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <range> (1nF | 10nF | 100nF | 1μF | 10μF | 100μF); DEF:AUTO Return parameter: <NRf>

Example: CONF:CAP (@101) CAP:RANG 1e-6 CAP:RANG? Returns: +1.00000000E-06

[SENSe:]CAPacitance:RANGe:AUTO

Enables or disables autoranging for capacitance measurements.

Syntax: [SENSe:]CAPacitance:RANGe:AUTO {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]CAPacitance:RANGe:AUTO? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: CONF:CAP (@101) CAP:RANG:AUTO ON

•Autorange thresholds: Down range at: < 10% of range Up range at: > 120% of range

SENSe CURRent Commands

[SENSe:]CURRent:AC:BANDwidth

Sets or returns the ac filter bandwith for AC current measurements.

Syntax: [SENSe:]CURRent:AC:BANDwidth {<freq>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]CURRent:AC:BANDwidth? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <freq> (3 | 20 | 200Hz); DEF: 20Hz Return parameter: <NRf>

Example:

CONF:CURR:AC (@121) CURR:AC:BAND 3 CURR:AC:BAND? Returns: +3.00000000E+00

[SENSe:]CURRent:{AC|DC}:RANGe

Selects a fixed range for AC and DC current measurements.

Syntax: [SENSe:]CURRent:{AC|DC}:RANGe {<range>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]CURRent:{AC|DC}:RANGe? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <range>: AC: (100μA | 1mA | 10mA | 100mA | 2A); DEF:AUTO DC: (1μA | 10μA | 100μA | 1mA | 10mA | 100mA | 2A); DEF:AUTO Return parameter: <NRf>

Example:

CONF:CURR:AC (@121) CURR:AC:RANG 0.1 CURR:AC:RANG? Returns: +1.00000000E-01

[SENSe:]CURRent:{AC|DC}:RANGe:AUTO

Enables or disables autoranging for AC and DC current measurements.

Syntax: [SENSe:]CURRent:{AC|DC}:RANGe:AUTO {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]CURRent:{AC|DC}:RANGe:AUTO? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: CONF:CURR:AC (@101) CURR:AC:RANG:AUTO ON

•Autorange thresholds: Down range at: < 10% of range Up range at: > 120% of range

[SENSe:]CURRent: {AC|DC}:RANGe:LOW

Selects a limit minimum current at autoranging for AC and DC current measurements.

Syntax: [SENSe:]CURRent:{AC|DC}:RANGe:LOW {<range>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]CURRent:{AC|DC}:RANGe:LOW? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <range>: AC: (100μA | 1mA | 10mA | 100mA), DEF: 100uA DC: (1μA | 10μA | 100μA | 1mA | 10mA | 100mA) , DEF: 1uA Return parameter: <NRf>

Example: CONF:CURR:AC (@121) CURR:AC:RANG:LOW 0.01 CURR:AC:RANG:LOW? Returns: +1.00000000E-02

[SENSe:]CURRent[:DC]:APERture

Enables the aperture mode and sets the integration time in seconds (called aperture time) for DC current measurements.

Syntax: [SENSe:]CURRent[:DC]:APERture {<seconds>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]CURRent[:DC]:APERture? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <seconds> (20µs ~ 1s); DEF: 100ms Return parameter: <NRf>

Example: CONF:CURR:DC (@121) CURR:APER 0.1 CURR:APER? Returns: +1.00000000E-01

[SENSe:]CURRent[:DC]:APERture:ENABle

Enables the setting of integration time in seconds (called aperture time) for DC current measurements. If aperture time mode is disabled, the integration time is set in PLC (power-line cycles).

Syntax: [SENSe:]CURRent[:DC]:APERture:ENABle {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]CURRent[:DC]:APERture:ENABle? [{(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

CONF:CURR:DC (@121) CURR:APER:ENAB ON

[SENSe:]CURRent[:DC]:NPLCycles

Sets or returns the integration time in number of power line cycles (PLCs) for DC current measurements. Where one PLC is equal to 16.6 milliseconds.

Syntax: [SENSe:]CURRent[:DC]:NPLCycles {<PLCs>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]CURRent[:DC]:NPLCycles? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <PLCs> (0.0016 | 0.0032 | 0.0042 | 0.0083 | 0.0125 | 0.025 | 0.05 | 0.15 | 0.6 | 1 | 3 | 12); DEF: 1 PLC Return parameter: <NRf>

Example:

CONF:CURR (@121) CURR:NPLC 1 CURR:NPLC? Returns: +1.00000000E+00

[SENSe:]CURRent[:DC]:ZERO:AUTO

Enables or disables the autozero mode for DC current measurements.

Syntax: [SENSe:]CURRent[:DC]:ZERO:AUTO {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]CURRent[:DC]:ZERO:AUTO? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: CONF:CURR (@121) CURR:ZERO:AUTO ON

SENSe DIODe Commands

[SENSe:]DIODe:ZERO:AUTO

Enables or disables the autozero mode for diode measurements.

Syntax: [SENSe:]DIODe:ZERO:AUTO {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]DIODe:ZERO:AUTO? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

CONF:DIOD (@101) DIOD:ZERO:AUTO ON

SENSe FREQuency Commands

[SENSe:]{FREQuency|PERiod}:APERture

Sets or returns the aperture time (gate time) for the frequency and period measurements.

Syntax: [SENSe:]{FREQuency|PERiod}:APERture {<seconds>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]{FREQuency|PERiod}:APERture? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <seconds> (0.001 | 0.01 | 0.1 | 1s); DEF: 0.1s Return parameter: <NRf>

Example: CONF:FREQ (@101) FREQ:APER 0.1 FREQ:APER? Returns: +1.00000000E-01

[SENSe:]{FREQuency|PERiod}:RANGe:LOWer

Sets or returns the ac filter bandwith of frequency and period measurements.

Syntax: [SENSe:]{FREQuency|PERiod}:RANGe:LOWer {<freq>|MIN|MAX|DEF}[,(@<ch_list>) Query Syntax: [SENSe:]{FREQuency|PERiod}:RANGe:LOWer? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <freq> (3 | 20 | 200Hz); DEF: 20Hz Return parameter: <NRf>

Example: CONF:FREQ (@101) FREQ:RANG:LOW 3 FREQ:RANG:LOW? Returns: +3.00000000E+00

[SENSe:]{FREQuency|PERiod}:TIMeout:AUTO

Sets or returns the timeout time for frequency and period measurements.

Syntax: [SENSe:]{FREQuency|PERiod}:TIMeout:AUTO {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]{FREQuency|PERiod}:TIMeout:AUTO? [(@<ch_list>)]

Parameter: 0 | 1 | ON | OFFReturn parameter: 0 | 1, (0:timeout time = 1 second, 1:timeout time is different in according with ac filter bandwith)

Example: CONF:PER PER:TIM:AUTO ON

[SENSe:]{FREQuency|PERiod}:VOLTage:RANGe

Selects a fixed voltage range for frequency and period measurements.

Syntax: [SENSe:]{FREQuency|PERiod}:VOLTage:RANGe {<range>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]{FREQuency|PERiod}:VOLTage:RANGe? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <range> (100mV | 1V | 10V | 100V | 400V); DEF: 10V Return parameter: <NRf>

Example: CONF:FREQ (@101) FREQ:VOLT:RANG 0.1 FREQ:VOLT:RANG? Returns: +1.00000000E-01

[SENSe:]{FREQuency|PERiod}:VOLTage:RANGe:AUTO

Enables or disables voltage autoranging for frequency and period measurements.

Syntax: [SENSe:]{FREQuency|PERiod}:VOLTage:RANGe:AUTO {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]{FREQuency|PERiod}:VOLTage:RANGe:AUTO? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

CONF:FREQ (@101) FREQ:VOLT:RANG:AUTO ON

•Autorange thresholds: Down range at: < 10% of range Up range at: > 120% of range

SENSe RESistance Commands

[SENSe:]{RESistance|FRESistance}:APERture

Enables the aperture mode and sets the integration time in seconds (called aperture time) for 2-wire and 4-wire resistance measurements.

```
Syntax: [SENSe:]{RESistance|FRESistance}:APERture
{<seconds>|MIN|MAX|DEF}[,(@<ch_list>)]
Query Syntax: [SENSe:]{RESistance|FRESistance}:APERture?
[(@<ch_list>)|MIN|MAX|DEF}]
```

Parameter: <seconds> (20μs ~ 1s); DEF: 100ms Return parameter: <NRf>

Example: CONF:RES (@101) RES:APER 0.1 RES:APER? Returns: +1.00000000E-01

[SENSe:]{RESistance|FRESistance}:APERture:ENABle

Enables the setting of integration time in seconds (called aperture time) for 2-wire and 4-wire resistance measurements. If aperture time mode is disabled , the integration time is set in PLC (power-line cycles).

Syntax: [SENSe:]{RESistance|FRESistance}:APERture:ENABle {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]{RESistance|FRESistance}:APERture:ENABle? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ONReturn parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: CONF:RES (@101) RES:APER:ENAB ON

[SENSe:]{RESistance|FRESistance}:NPLCycles

Sets or returns the integration time in number of power line cycles (PLCs) for 2-wire and 4-wire resistance measurements. Where one PLC is equal to 16.6 milliseconds.

```
Syntax: [SENSe:]{RESistance|FRESistance}:NPLCycles
{<PLCs>|MIN|MAX|DEF}[,(@<ch_list>)]
Query Syntax: [SENSe:]{RESistance|FRESistance}:NPLCycles?
[{(@<ch_list>)|MIN|MAX|DEF}]
```

Parameter: <PLCs> (0.0016 | 0.0032 | 0.0042 | 0.0083 | 0.0125 | 0.025 | 0.05 | 0.15 | 0.6 | 1 | 3 | 12); DEF: 1 PLC Return parameter: <NRf>

Example:

CONF:RES (@101) RES:NPLC 1 RES:NPLC? Returns: +1.00000000E+00

[SENSe:]{RESistance|FRESistance}:OCOMpensated

Enables or disables offset compensation for 2-wire and 4-wire resistance measurements.

Syntax: [SENSe:]{RESistance|FRESistance}:OCOMpensated {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]{RESistance|FRESistance}:OCOMpensated? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ONReturn parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: CONF:RES (@101) RES:OCOM ON

•Applies only to resistance measurements on the 100 Ω through 100 k Ω ranges.

[SENSe:]{RESistance|FRESistance}:POWer:LIMit[:STATe] Enables or disables low-power for 2-wire and 4-wire resistance measurements.

> Syntax: [SENSe:]{RESistance|FRESistance}:POWer:LIMit[:STATe] {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]{RESistance|FRESistance}:POWer:LIMit[:STATe]? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: CONF:RES (@101) RES:POW:LIM ON

•Low-power resistance measurements apply to the 100 Ω through 100 k Ω ranges only. The 1 M Ω through 1 G Ω ranges source the same current regardless of the low-power setting.

[SENSe:]{RESistance|FRESistance}:RANGe

Selects a fixed range for 2-wire and 4-wire resistance measurements.

```
Syntax: [SENSe:]{RESistance|FRESistance}:RANGe
{<range>|MIN|MAX|DEF}[,(@<ch_list>)]
Query Syntax: [SENSe:]{RESistance|FRESistance}:RANGe?
[{(@<ch_list>)|MIN|MAX|DEF}]
```

Parameter: <range> (100 Ω | 1k Ω | 10k Ω | 100k Ω | 1M Ω | 10M Ω | 100M Ω | 1G Ω); DEF: 1k Ω Return parameter: <NRf>

Example: CONF:FRES (@101) FRES:RANG 10e3 FRES:RANG? Returns: +1.00000000E+04 [SENSe:]{RESistance|FRESistance}:RANGe:AUTO Enables or disables autoranging for 2-wire and 4-wire resistance measurements.

> Syntax: [SENSe:]{RESistance|FRESistance}:RANGe:AUTO {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]{RESistance|FRESistance}:RANGe:AUTO? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: CONF:FRES (@101) FRES:RANG:AUTO ON

•Autorange thresholds: Down range at: < 10% of range Up range at: > 120% of range

[SENSe:]{RESistance|FRESistance}:ZERO:AUTO

Enables or disables the autozero mode for 2-wire and 4-wire resistance measurements.

Syntax: [SENSe:]{RESistance|FRESistance}:ZERO:AUTO {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]{RESistance|FRESistance}:ZERO:AUTO? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: CONF:FRES (@101) FRES:ZERO:AUTO ON

SENSe STRain Commands

[SENSe:]STRain:APERture

Enables the aperture mode and sets the integration time in seconds (called aperture time) for strain measurements.

Syntax: [SENSe:]STRain:APERture {<seconds>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]STRain:APERture? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <seconds> (20µs ~ 1s); DEF: 100ms Return parameter: <NRf>

Example: CONF:STR:DIR (@101) STR:APER 0.1 STR:APER? Returns: +1.00000000E-01

[SENSe:]STRain:APERture:ENABle

Enables the setting of integration time in seconds (called aperture time) for strain measurements. If aperture time mode is disabled, the integration time is set in PLC (power-line cycles).

Syntax: [SENSe:]STRain:APERture:ENABle {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]STRain:APERture:ENABle? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: CONF:STR:DIR (@101) STR:APER:ENAB ON

[SENSe:]STRain:EXCitation

Specifies the excitation voltage applied to the bridge by an external DC voltage source. This value will be used to convert strain bridge measurements on the specified channel.

Syntax: [SENSe:]STRain:EXCitation {<voltage>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]STRain:EXCitation? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <voltage> (1 ~ 12V); DEF: 5V Return parameter: <NRf>

Example: CONF:STR:DIR (@101) STR:EXC 3 STR:EXC? Returns: +3.00000000E+00

•The external DC voltage reference channel must be the next lowest channel than the subsequent strain channel.

[SENSe:]STRain:EXCitation:TYPE

Strain bridge conversions require the value of the external bridge excitation voltage. For this voltage, you can dedicate a multiplexer channel to measure the excitation voltage, or can specify a known fixed voltage value.

Syntax: [SENSe:]STRain:EXCitation:TYPE {EXTernal|FIXed}[,(@<ch_list>)] Query Syntax: [SENSe:]STRain:EXCitation:TYPE? [(@<ch_list>)]

Parameter: EXTernal | FIXed Return parameter: EXT | FIX

FIXed = the excitation voltage specified by SENSe:STRain:EXCitation will be used for the strain conversion.

EXTernal = the next-lowest channel configured for DCV measurements with reference mode enabled (see SENSe:VOLTage:DC:REFerence command) will be used as the excitation voltage reference in the strain conversion.

Example:

CONF:STR:DIR (@101) STR:EXC:TYPE FIX STR:EXC 3

[SENSe:]STRain:GFACtor

Specifies the gage factor to be used to convert direct strain and strain bridge readings on the specified channel.

Gage factor is defined as the ratio of the fractional change in resistance to the fractional change in length (strain) along the axis of the edge.

Syntax: [SENSe:]STRain:GFACtor {<gage_factor>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]STRain:GFACtor? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <gage_factor> (0.5 ~ 5); DEF: 2 Return parameter: <NRf>

Example: CONF:STR:DIR (@101) STR:GFAC 1 STR:GFAC? Returns: +1.00000000E+00

•Gage factor is a dimensionless quantity. The larger the value, the more sensitive strain gage.

[SENSe:]STRain:NPLCycles

Sets or returns the integration time in number of power line cycles (PLCs) strain measurements. Where one PLC is equal to 16.6 milliseconds.

Syntax: [SENSe:]STRain:NPLCycles {<PLCs>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]STRain:NPLCycles? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <PLCs> (0.0016 | 0.0032 | 0.0042 | 0.0083 | 0.0125 | 0.025 | 0.05 | 0.15 | 0.6 | 1 | 3 | 12); DEF: 1 PLC Return parameter: <NRf>

Example: CONF:STR:DIR (@101) STR:NPLC 1 STR:NPLC? Returns: +1.00000000E+00

[SENSe:]STRain:OCOMpensated

Enables or disables offset compensation for strain measurements.

Syntax: [SENSe:]STRain:OCOMpensated {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]STRain:OCOMpensated? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

CONF:STR:DIR (@101) STR:OCOM ON

•Applies only to resistance measurements on the 100 Ω through 100 k Ω ranges.

[SENSe:]STRain:POISson

This command sets the poisson ratio to be used to convert strain bridge readings on the specified channels.

Poisson ratio is defined as the negative ratio of the strain the transverse direction to the strain the longitudinal direction.

Syntax: [SENSe:]STRain:POISson {<poisson_ratio>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]STRainPOISson? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <poisson_ratio> (-0.9999 ~ 0.5); DEF: 0.3 Return parameter: <NRf>

Example: CONF:STR:DIR (@101) STR:POIS 1 STR:POIS? Returns: +1.00000000E+00

[SENSe:]STRain:RESistance

This command specifies the gage ohm value to be used to convert direct strain measurements on the specified channel.

Syntax: [SENSe:]STRain:RESistance {<gage_ohm>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]STRain:RESistance? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <gage_ohm> (80 ~ 1100Ω); DEF: 120Ω Return parameter: <NRf>

Example: CONF:STR:DIR (@101) STR:RES 100 STR:RES? Returns: +1.00000000E+02

[SENSe:]STRain:UNSTrained

This command specifies the unstrained bridge offset (can be either voltage or resistance) that will be subtracted from the strain bridge measurements before the strain conversion is performed strain bridge measurements.

Syntax: [SENSe:]STRain:UNSTrained {<offset>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]STRain:UNSTrained? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <offset> (-90 ~ 90); DEF: 0 Return parameter: <NRf>

Example: CONF:STR:DIR (@101) STR:UNST 10 STR:UNST? Returns: +1.00000000E+01

[SENSe:]STRain:UNSTrained:IMMediate

This command immediately measures and stores the bridge offset voltages on the specified channel.

Syntax: [SENSe:]STRain:UNSTrained:IMMediate [(@<ch_list>)]

Parameter: [None]

Example: CONF:STR:QUAR (@101) STR:UNST:IMM STR:UNST? Returns: -9.055960E-05

[SENSe:]STRain:VOLTage:RANGe

Selects a fixed range for strain measurements.

Syntax: [SENSe:]STRain:VOLTage:RANGe {<range>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]STRain:VOLTage:RANGe? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <range> (100mV | 1V | 10V | 100V | 600V); DEF: 100mV Return parameter: <NRf>

Example: CONF:STR:QUAR (@101) STR:VOLT:RANG 10 Returns: +1.00000000E+01

[SENSe:]STRain:VOLTage:RANGe:AUTO

Enables or disables autoranging for strain measurements.

Syntax: [SENSe:]STRain:VOLTage:RANGe:AUTO {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]STRain:VOLTage:RANGe:AUTO? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

CONF:STR:QUAR (@101) STR:VOLT:RANG:AUTO ON

•Autorange thresholds: Down range at: < 10% of range Up range at: > 120% of range

[SENSe:]STRain:ZERO:AUTO

Enables or disables the autozero mode for strain measurements.

Syntax: [SENSe:]STRain:ZERO:AUTO {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]STRain:ZERO:AUTO? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

CONF:STR:DIR (@101) STR:ZERO:AUTO ON

SENSe TEMPerature Commands

[SENSe:]TEMPerature:APERture

Enables the aperture mode and sets the integration time in seconds (called aperture time) for temperature measurements.

Syntax: [SENSe:]TEMPerature:APERture {<seconds>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:APERture? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <seconds> (20µs ~ 1s); DEF: 100ms Return parameter: <NRf>

Example: CONF:TEMP TC, (@101) TEMP:APER 0.5 TEMP:APER? Returns: +5.00000000E-01

[SENSe:]TEMPerature:APERture:ENABle

Enables the setting of integration time in seconds (called aperture time) for temperature measurements. If aperture time mode is disabled, the integration time is set in PLC (power-line cycles).

Syntax: [SENSe:]TEMPerature:APERture:ENABle {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:APERture:ENABle? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

CONF:TEMP TC, (@101) TEMP:APER:ENAB ON

[SENSe:]TEMPerature:NPLCycles

Sets or returns the integration time in number of power line cycles (PLCs) temperature measurements. Where one PLC is equal to 16.6 milliseconds.

Syntax: [SENSe:]TEMPerature:NPLCycles {<PLCs>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:NPLCycles? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <PLCs> (0.0016 | 0.0032 | 0.0042 | 0.0083 | 0.0125 | 0.025 | 0.05 | 0.15 | 0.6 | 1 | 3 | 12); DEF: 1 PLC Return parameter: <NRf>

Example: CONF:TEMP TC, (@101) TEMP:NPLC 3 TEMP:NPLC?

Returns: +3.0000000E+00

[SENSe:]TEMPerature:RJUNction?

Returns the internal reference junction temperature on the specified channels in degrees Celsius, regardless of the temperature units currently selected. This is useful only for an internal reference source.

Query Syntax: [SENSe:]TEMPerature:RJUNction? [(@<ch_list>)]

Return parameter: <NRf>

Example: CONF:TEMP TC,(@101) TEMP:RJUN? Returns: +2.76800914E+01

[SENSe:]TEMPerature:RJUNction:SIMulated:AUTO:OFFSet Sets or returns junction reference temperature adjust value of

thermocouple measurement which internal temperature is selected.

Syntax: [SENSe:]TEMPerature:RJUNction:SIMulated:AUTO:OFFSet {<temperature>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:RJUNction:SIMulated:AUTO:OFFSet? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <temperature> (-20.00 ~ 20.00); DEF:0 Return parameter: <NRf>, where unit = °C

Example: CONF:TEMP TC, (@101) TEMP:RJUN:SIM:AUTO:OFFS 10 TEMP:RJUN:SIM:AUTO:OFFS? Returns: +1.00000000E+01

[SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:TYPE Selects the 2-wire and 4-wire RTD sensor type.

> Syntax: [SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:TYPE <sensor_type>[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:TYPE? [(@<ch_list>)]

parameter: <sensor_type> (PT100 | D100 | F100 | PT385 | PT3916 | USER) Return parameter: PT100 | D100 | F100 | PT385 | PT3916 | USER

Example:

TEMP:TRAN:RTD:TYPE PT100

[SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:USER:ALPHa Sets or returns the 2-wire and 4-wire RTD alpha coefficient.

Syntax: [SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:USER:ALPHa {<coefficient>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:USER:ALPHa? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <coefficient> (0.0~9.999999); DEF: 0 Return parameter: <NRf>

Example: TEMP:TRAN:RTD:USER:ALPH 0.00385
[SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:USER:BETA Sets or returns the 2-wire and 4-wire RTD beta coefficient.

> Syntax: [SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:USER:BETA {<coefficient>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:USER:BETA? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <coefficient> (0.0~9.999999); DEF: 0 Return parameter: <NRf>

Example: TEMP:TRAN:RTD:USER:BETA 0.10863

[SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:USER:DELTa Sets or returns the 2-wire and 4-wire RTD delta coefficient.

> Syntax: [SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:USER:DELTa {<coefficient>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:USER:DELTa? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <coefficient> (0.0~9.999999); DEF: 0 Return parameter: <NRf>

Example: TEMP:TRAN:RTD:USER:DELT 1.4999 [SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:OCOMpensated Enables or disables offset compensation for temperature measurements.

> Syntax: [SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:OCOMpensated {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:OCOMpensated? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: CONF:TEMP RTD,(@101) TEMP:TRAN:RTD:OCOM ON

•This command applies only to 2-wire and 4-wire RTD measurements on the 100 Ω , 1 k Ω , and 10 k Ω ranges. Once enabled, offset compensation is applied to both 2-wire and 4-wire RTD measurements on the specified channels.

•Applies only to resistance measurements on the 100 Ω through 100 k Ω ranges.

[SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:POWer:LIMit[:STAT e]

Enables or disables low-power for 2-wire and 4-wire RTD measurements.

Syntax:

[SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:POWer:LIMit[:STATe] {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:POWer:LIMit[:STATe]? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: CONF:TEMP RTD,(@101) TEMP:TRAN:RTD:POW:LIM ON

•Low-power resistance measurements apply to the 100 Ω through 100 k Ω ranges only. The 1 M Ω through 1 G Ω ranges source the same current regardless of the low-power setting.

[SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:REFerence Enables (On) or disables (Off) the specified 2-wire and 4-wire RTD channels to be used as the reference channel for subsequent thermocouple measurements that specify an external reference source.

Syntax: [SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:REFerence {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:REFerence? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

CONF:TEMP RTD, (@101) TEMP:TRAN:RTD:REF ON

[SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:RESistance[:REFere nce]

Selects the nominal resistance (R0) for 2-wire and 4-wire RTD measurements. R0 is the nominal resistance of an RTD at 0 °C.

Syntax:

[SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:RESistance[:REFerence] {<resistance>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:{RTD|FRTD}:RESistance[:REFerence]? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <resistance> (100 ~ 1000 Ω)±20%); DEF: 100 Ω Return parameter: <NRf>

Example:

CONF:TEMP RTD, (@101) TEMP:TRAN:RTD:RES 1000 TEMP:TRAN:RTD:RES? Returns: +1.00000000E+03 [SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:PO Wer:LIMit[:STATe]

Enables or disables low-power for 2-wire and 4-wire thermistor measurements.

Syntax:

[SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:POWer:LIM it[:STATe] {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:POWer:LIM it[:STATe]? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

CONF:TEMP THER, (@101) TEMP:TRAN:THER:POW:LIM ON

•Low-power resistance measurements apply to the 100 Ω through 100 k Ω ranges only. The 1 M Ω through 1 G Ω ranges source the same current regardless of the low-power setting.

[SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:REF erence

Enables (On) or disables (Off) the specified 2-wire and 4-wire thermistor channels to be used as the reference channel for subsequent thermocouple measurements that specify an external reference source.

Syntax:

[SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:REFerence {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:REFerence? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: CONF:TEMP THER,(@101) TEMP:TRAN:THER:REF ON [SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:TYP E

Sets or returns the 2-wire and 4-wire thermistor sensor type.

Syntax:

[SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:TYPE {<sensor_type>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:TYPE? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <sensor_type> (2.2kΩ | 5kΩ | 10kΩ | USER); DEF: 5kΩ Return parameter: +2000 | +5000 | +10000 | USER

Example:

TEMP:TRAN:THER:TYPE 2200

[SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:USE R:AVALue

Sets or returns the 2-wire and 4-wire thermistor a coefficient.

Syntax:

[SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:USER:AVAL ue {<coefficient>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:USER:AVAL ue? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <coefficient> (0.0~9.9999); DEF: 0 Return parameter: <NRf>

Example:

TEMP:TRAN:FTH :USER:AVAL 0.002154

[SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:USE R:BVALue

Sets or returns the 2-wire and 4-wire thermistor b coefficient.

Syntax: [SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:USER:BVAL ue {<coefficient>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:USER:BVAL ue? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <coefficient> (0.0~9.9999); DEF: 0 Return parameter: <NRf>

Example:

TEMP:TRAN:FTH :USER:BVAL 0.003425

[SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:USE R:CVALue

Sets or returns the 2-wire and 4-wire thermistor c coefficient.

Syntax:

[SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:USER:CVAL ue {<coefficient>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:{THERmistor|FTHermistor}:USER:CVAL ue? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <coefficient> (0.0~9.9999); DEF: 0 Return parameter: <NRf>

Example:

TEMP:TRAN:FTH:USER:CVAL 0.006993

[SENSe:]TEMPerature:TRANsducer:TCouple:CHECk

Enables or disables the thermocouple check feature to verify that your thermocouples are properly connected for measurements. When enabled, the instrument measures the resistance after each thermocouple measurement to ensure a proper connection. If an open connection is detected (greater than 5 k Ω on the 10 k Ω range), the instrument reports an overload condition.

Syntax: [SENSe:]TEMPerature:TRANsducer:TCouple:CHECk {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:TCouple:CHECk? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

CONF:TEMP TC, (@101) TEMP:TRAN:TC:CHEC ON

[SENSe:]TEMPerature:TRANsducer:TCouple:RJUNction

Sets the fixed reference junction temperature in degrees Celsius (°C) for thermocouple measurements on the specified channels.

Syntax: [SENSe:]TEMPerature:TRANsducer:TCouple:RJUNction {<temperature>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:TCouple:RJUNction? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <temperature> (-20 ~ +80); DEF: 0 Return parameter: <NRf>

Example: CONF:TEMP TC, (@101) TEMP:TRAN:TC:RJUN 25 Returns: +2.50000000E+01

•For this command, you must always specify the temperature in degrees Celsius regardless of the temperature units currently selected (see UNIT:TEMPerature command).

[SENSe:]TEMPerature:TRANsducer:TCouple:RJUNction:TYPE Selects the reference junction source for thermocouple measurements on

the specified channels. Syntax: [SENSe:]TEMPerature:TRANsducer:TCouple:RJUNction:TYPE <reference>[,(@<ch_list>)] Query Syntax:

[SENSe:]TEMPerature:TRANsducer:TCouple:RJUNction:TYPE? [(@<ch_list>)]

Parameter: <reference> (INTernal | EXTeranl | FIXed) Return parameter: INT | EXT | FIX

Example: CONF :TEMP TC, (@101) TEMP:TRAN:TC:RJUN:TYPE INT

[SENSe:]TEMPerature:TRANsducer:TCouple:TYPE

Sets or returns the thermocouple sensor type.

Syntax: [SENSe:]TEMPerature:TRANsducer:TCouple:TYPE <sensor_type>[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:TCouple:TYPE? [(@<ch_list>)]

 $\begin{array}{l} Parameter: < sensor_type > (J \mid K \mid N \mid R \mid S \mid T \mid B \mid E) \\ Return parameter: J \mid K \mid N \mid R \mid S \mid T \mid B \mid E \end{array}$

Example: TEMP:TRAN:TC:TYPE J

[SENSe:]TEMPerature:TRANsducer:TYPE

Selects the transducer probe type to use for temperature measurements.

Syntax: [SENSe:]TEMPerature:TRANsducer:TYPE <probe_type>[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:TRANsducer:TYPE? [(@<ch_list>)]

Parameter: TCouple | RTD | FRTD | THERmistor | FTHermistor Return parameter: TC | RTD | FRTD | THER | FTH

Example:

TEMP:TRAN:TYPE TC

[SENSe:]TEMPerature:ZERO:AUTO

Enables or disables the autozero mode for temperature measurements.

Syntax: [SENSe:]TEMPerature:ZERO:AUTO {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]TEMPerature:ZERO:AUTO? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

CONF:TEMP TC, (@101) TEMP:ZERO:AUTO ON

SENSe VOLTage Commands

[SENSe:]VOLTage:AC:BANDwidth

Sets or returns the bandwidth for AC voltage measurements.

Syntax: [SENSe:]VOLTage:AC:BANDwidth {<freq>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]VOLTage:AC:BANDwidth? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <freq> (3 | 20 | 200Hz) ; DEF: 20Hz Return parameter: <NRf>

Example: CONF:AC (@101) VOLT:AC:BAND 20 VOLT:AC:BAND? Returns: +2.00000000E+01

[SENSe:]VOLTage:{AC|DC}:RANGe

Selects a fixed range for AC and DC voltage measurements.

Syntax: [SENSe:]VOLTage:{AC|DC}:RANGe {<range>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]VOLTage:{AC|DC}:RANGe? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <range>: AC: (100mV | 1V | 10V | 100V | 400V); DEF: AUTO DC: (100mV | 1V | 10V | 100V | 600V); DEF: AUTO Return parameter: <NRf>

Example:

CONF:AC (@101) VOLT:AC:RANG 100 Returns: +1.00000000E+02

[SENSe:]VOLTage:{AC|DC}:RANGe:AUTO

Enables or disables autoranging for AC and DC voltage measurements.

Syntax: [SENSe:]VOLTage:{AC|DC}:RANGe:AUTO {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]VOLTage:{AC|DC}:RANGe:AUTO? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: CONF:DC (@101) VOLT:DC:RANG:AUTO ON

 Autorange thresholds: Down range at: < 10% of range Up range at: > 120% of range

[SENSe:]VOLTage[:DC]:APERture

Enables the aperture mode and sets the integration time in seconds (called aperture time) for DC voltage measurements.

Syntax: [SENSe:]VOLTage[:DC]:APERture {<seconds>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]VOLTage[:DC]:APERture? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <seconds> (20µs ~ 1s); DEF: 100ms Return parameter: <NRf>

Example: CONF:DC (@101) VOLT:APER 0.1 VOLT:APER ? Returns: +1.00000000E-01

[SENSe:]VOLTage[:DC]:APERture:ENABle

Enables the setting of integration time in seconds (called aperture time) for DC voltage measurements. If aperture time mode is disabled, the integration time is set in PLC (power-line cycles).

Syntax: [SENSe:]VOLTage[:DC]:APERture:ENABle {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]VOLTage[:DC]:APERture:ENABle? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

CONF:DC (@101) VOLT:APER:ENAB ON

[SENSe:]VOLTage[:DC]:IMPedance:AUTO

Enables or disables automatic input impedance mode for DC voltage measurements.

Syntax: [SENSe:]VOLTage[:DC]:IMPedance:AUTO {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]VOLTage[:DC]:IMPedance:AUTO? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

OFF:

The input impedance for DC voltage measurements is fixed at 10 $M\Omega$ for all ranges to minimize noise pickup.

ON:

The input impedance for DC voltage measurements varies by range. It is set to "HI-Z" (>10 G Ω) for the 100 mV, 1 V, and 10 V ranges to reduce the effects of measurement loading errors on these lower ranges. The 100 V and 300 V ranges remain at a 10 M Ω input impedance.

Example:

CONF:DC (@101) VOLT:DC:IMP:AUTO ON

[SENSe:]VOLTage[:DC]:NPLCycles

Sets or returns the integration time in number of power line cycles (PLCs) DC voltage measurements. Where one PLC is equal to 16.6 milliseconds.

Syntax: [SENSe:]VOLTage[:DC]:NPLCycles {<PLCs>|MIN|MAX|DEF}[,(@<ch_list>)] Query Syntax: [SENSe:]VOLTage[:DC]:NPLCycles? [{(@<ch_list>)|MIN|MAX|DEF}]

Parameter: <PLCs> (0.0016 | 0.0032 | 0.0042 | 0.0083 | 0.0125 | 0.025 | 0.05 | 0.15 | 0.6 | 1 | 3 | 12); DEF: 1 PLC Return parameter: <NRf>

Example: CONF:DC (@101) VOLT:NPLC 1 VOLT:NPLC? Returns: +1.00000000E+00

[SENSe:]VOLTage[:DC]:REFerence

Enables (On) or disables (Off) the specified DC voltage channels to be used as the reference channel for subsequent strain bridge measurements that specify an external excitation reference voltage source (see [SENSe:]STRain:EXCitation:TYPE command).

Syntax: [SENSe:]VOLTage[:DC]:REFerence {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]VOLTage[:DC]:REFerence? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: CONF:DC (@101) VOLT:REF ON

•The external DC voltage reference channel must be one channel lower than the subsequent strain channel.

[SENSe:]VOLTage[:DC]:ZERO:AUTO

Enables or disables the autozero mode for DC voltage measurements.

Syntax: [SENSe:]VOLTage[:DC]:ZERO:AUTO {OFF|ON}[,(@<ch_list>)] Query Syntax: [SENSe:]VOLTage[:DC]:ZERO:AUTO? [(@<ch_list>)]

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

CONF:DC (@101) VOLT:ZERO:AUTO ON

STATus Report Commands

STATus: ALARm: CONDition?

Returns the total number of the Alarm Condition register.

Return parameter: <NR1> (0 ~ 32767)

Example: STAT:ALAR:COND? Returns: +16

•A condition register continuously monitors the state of the instrument. Condition register bits are updated in real time; they are neither latched nor buffered.

•This register is read-only; bits are not cleared when read.

STATus:ALARm:ENABle

Sets or returns bits in the Alarm Enable register.

Syntax: STATus:ALARm:ENABle <enable> Query Syntax: STATus:ALARm:ENABle?

Parameter: <enable> (0 ~ 32767) Return parameter: <NR1>

Example: STAT:ALAR:ENAB 7

•The selected bits are then reported to the Status Byte. An enable register defines which bits in the event register will be reported to the Status Byte register group. You can write to or read from an enable register.

STATus:ALARm[:EVENt]?

Returns the total number of the Alarm Event register.

Return parameter: <NR1>

Example: STAT:ALAR:EVEN? Returns: +7

•An event register is a read-only register that latches events from the condition register. While an event bit is set, subsequent events corresponding to that bit are ignored.

•Once a bit is set, it remains set until cleared by reading the event register or by sending *CLS (clear status).This register is read-only; bits are not cleared when read.

STATus: OPERation: CONDition?

Returns the total number of the Operation Condition register.

Return parameter: <NR1> (0 ~ 32767)

Example: STAT:OPER:COND? Returns: +4096

•A condition register continuously monitors the state of the instrument. Condition register bits are updated in real time; they are neither latched nor buffered.

•This register is read-only; bits are not cleared when read.

STATus:OPERation:ENABle

Sets or returns bits in the Operation Enable register.

Syntax: STATus:OPERation:ENABle <enable> Query Syntax: STATus:OPERation:ENABle?

Parameter: <enable> (0 ~ 32767) Return parameter: <NR1>

Example: STAT:OPER:ENAB 10

•The selected bits are then reported to the Status Byte. An enable register defines which bits in the event register will be reported to the Status Byte register group. You can write to or read from an enable register.

STATus:OPERation[:EVENt]?

Returns the total number of the Operation Event register.

Return parameter: <NR1>

Example: STAT:OPER:EVEN? Returns: +786

•An event register is a read-only register that latches events from the condition register. While an event bit is set, subsequent events corresponding to that bit are ignored.

•Once a bit is set, it remains set until cleared by reading the event register or by sending *CLS (clear status).

STATus:PRESet

Clears all enable register bits in Alarm Register, Standard Operation Register, and Questionable Data Register.

Parameter: [None]

Example: STAT:PRES

STATus:QUEStionable:CONDition?

Returns the total number of the Questionable Condition register.

Return parameter: <NR1> (0 ~ 32767)

Example: STAT:QUES:COND? Returns: +2

•A condition register continuously monitors the state of the instrument. Condition register bits are updated in real time; they are neither latched nor buffered.

STATus:QUEStionable:ENABle

Sets or returns bits in the Ouestionable Enable register.

Syntax: STATus:QUEStionable:ENABle <enable> Query Syntax: STATus:QUEStionable:ENABle?

Parameter: <enable> (0 ~ 32767) Return parameter: <NR1>

Example:

STAT: QUES: ENAB 4099

•The selected bits are then reported to the Status Byte. An enable register defines which bits in the event register will be reported to the Status Byte register group. You can write to or read from an enable register.

•The selected bits are then reported to the Status Byte. An enable register defines which bits in the event register will be reported to the Status Byte register group. You can write to or read from an enable register.

•A STATus:PRESet clears all bits in the enable register.

•The *PSC command controls whether the enable register is cleared at power on.

STATus:QUEStionable[:EVENt]?

Returns the total number of the Ouestionable Event register.

Return parameter: <NR1>

Example: STAT:QUES:EVEN? Returns: +6

•An event register is a read-only register that latches events from the condition register. While an event bit is set, subsequent events corresponding to that bit are ignored.

•Once a bit is set, it remains set until cleared by reading the event register or by sending *CLS (clear status).

SYSTem Related Commands

SYSTem:ALARm?

Reads the alarm data from the alarm queue. A record of up to 20 alarms can be stored in the instrument's alarm queues.

Return parameter: <info>

Example: SYST:ALAR? Returns: +1.12379111E-03 VDC,2021,01,28,00,43,39.218,101,0,1

+1.12379111E-03 VDC,2021,01,28,00,43,39.218,101,0,1 2

4 56

- 1. Reading with units (1.124mV)
- 2. Date(January 28, 2021)
- 3. Time of day (0:43:39.218 AM)
- 4. Channel number

1

- 5. Alarm limit threshold crossed (0 = No alarm, 1 = LO, 2 = HI)
- 6. Alarm number (1-4)

• Each time you start a new scan, the instrument clears all readings (including alarm data) stored in reading memory from the previous measurement. Therefore, the contents of memory are always from the most recent scan.

3

SYSTem:BEEPer[:IMMediate]

Makes buzzer beep once.

Parameter: [None]

Example: SYST:BEEP:IMM

• This function is not affected by the state of SYST: BEEP: STAT.

SYSTem:BEEPer:ERRor

Enables (On) or disables (Off) the beeper to sound on an SCPI error.

Syntax: SYSTem:BEEPer:ERRor {OFF|ON} Query Syntax: SYSTem:BEEPer:ERRor?

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: SYST:BEEP:ERR ON

SYSTem:BEEPer:STATe

Enables (On) or disables (Off) the beep heard during measurements, or when an error is generated from the front panel or remote interface.

Syntax: SYSTem:BEEPer:STATe {OFF|ON} Query Syntax: SYSTem:BEEPer:STATe?

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: SYST:BEEP:STAT 0FF

•The key sound of front panel is not affected by the state.

SYSTem:CLICk:STATe

Enables (On) or disables (Off) the click heard when knob is turned or keys are pressed.

Syntax: SYSTem:CLICk:STATe {OFF|ON} Query Syntax:SYSTem:CLICk:STATe?

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: SYST:CLIC:STAT 0FF

SYSTem:CPON

Resets the module in the specified slot to its power-on state (CPON means "card power on"). This opens all channels on the module.

Syntax: SYSTem:CPON {<slot>|ALL}

Parameter: <slot> (1 | 2 | 3) | ALL

Example: SYST:CPON? ALL

•If any channel is configured for a measurement, this command has no effect. If no channel is configured, this command opens all channels.

SYSTem:CTYPe?

Returns the identity of the plug-in modules in the specified slot.

Query Syntax: SYSTem:CTYPe? <slot>

Parameter: <slot> (1 | 2 | 3) Returns parameter: <Company Name>,<Card Model Number>,<Serial Number>,<Firmware Rev>

Example: SYST:CTYP? 1 Returns: GWInstek,DAQ-901,DAQ123456,1.00

SYSTem:DATE

Sets or returns the date for the instrument's real-time clock.

Syntax: SYSTem:DATE <year>,<month>,<day> Query Syntax: SYSTem:DATE?

Parameter: <year> (2000 ~ 2099), <month> (1 ~ 12), <day> (1 ~ 31) Return parameter: <date> (yyyy,mm,dd)

Example: SYST:DATE 2020,1,1 SYST:DATE? Returns: 2020,1,1

SYSTem:ERRor?

Returns the current system error, if any.

SYSTem:LFRequency?

Returns the AC source line freqency.

Return parameter: +50 | +60

SYSTem:LOCal

Enables local control (front panel control) and disables remote control.

SYSTem:REMote

Enables remote control and disables local control (front panel control, all key are disable besides Shift key(return to local control)).

SYSTem: PARameter: LOAD

Load the system parameters from 0 of 3 memory locations.

Syntax: SYSTem:PARameter:LOAD <mem_num> Query Syntax: SYSTem:PARameter:LOAD?

Parameter: <mem_num> $(0 \sim 3)$, $(0 = default settings, 1 \sim 3 = memory number)$ Return parameter: <NR1>, (Last = state before power-off)

Example: SYST:PAR:LOAD 0

SYSTem:PARameter:SAVE

Saves the system parameters into 1 of 3 memory slots.

Syntax: SYSTem:PARameter:SAVE <mem_num>

Parameter: $< mem_num > (1 \sim 3)$

Example: SYST:PAR:SAVE 1

SYSTem:PERSona[:MANufacturer]

Sets the instrument's manufacturer ID string for backward compatibility.

Syntax: SYSTem:PERSona[:MANufacturer] "<string>" Query Syntax: SYSTem:PERSona[:MANufacturer]?

Parameter: "<string>", max length 24 characters Return parameter: "<string>"

Example: SYST:PERS "HEWLETT-PACKARD" SYST:PERS? Returns: "HEWLETT-PACKARD"

SYSTem:PERSona[:MANufacturer]:DEFault

Sets or returns the default manufacturer's ID string.

Syntax: SYSTem:PERSona[:MANufacturer]:DEFault Query Syntax: SYSTem:PERSona[:MANufacturer]:DEFault?

Parameter: [None] Return parameter: "<string>"

Example: SYST:PERS:DEF? Returns: "Keysight Technologies"

SYSTem:PERSona:MODel

Sets the instrument's model number for backward compatibility.

Syntax: SYSTem:PERSona:MODel "<string>" Query Syntax: SYSTem:PERSona:MODel?

Parameter: "<string>", max length 24 characters Return parameter: "<string>"

Example: SYST:PERS "34970A" SYST:PERS? Returns: "34970A"

SYSTem:PERSona:MODel:DEFault

Sets or returns the default instrument's model number.

Syntax: SYSTem:PERSona:MODel:DEFault Query Syntax: SYSTem:PERSona:MODel: DEFault?

Parameter: [None] Return parameter: "<string>"

Example: SYST:PERS:MODE:DEF? Returns: "DAQ970A"

SYSTem:PRESet

Presets the instrument to a known configuration. Readings are cleared, and channels are opened.

SYSTem:RELay:CYCLes?

Reads the cycle count on the specified channels. In addition to the channel relays, you can also query the count on the Analog Bus relays and module relays.

Query Syntax: SYSTem:RELay:CYCLes? (@<ch_list>)

Return parameter: <NR1>

Example: SYST:REL:CYCL? (@101) Returns: +100

SYSTem:RELay:CYCLes:CLEar

Resets the cycle count on the specified channels.

Syntax: SYSTem:RELay:CYCLes:CLEar (@<ch_list>)

Parameter: [None]

Example:

SYST:REL:CYCL:CLE (@101)

SYSTem:RELay:CYCLes:FACTory?

Reads the factory cycle count on the specified channels.

Query Syntax: SYSTem:RELay:CYCLes:FACTory? (@<ch_list>)

Return parameter: <NR1>

Example:

SYST:REL:CYCL:FACT? (@101) Returns: +200

SYSTem:SCPi:MODE

Sets or returns the SCPI mode. The SCPI mode is used to determine whether the *IDN? query returns the "NORmal" or "COMPatible" identification string. See the SYSTem:IDNStr command for details.

Syntax: SYSTem:SCPi:MODE {NORmal|COMPatible} Query Syntax: SYSTem:SCPi:MODE?

Parameter: NORmal | COMPatible, (NOR = Normal, COMP = User-define) Return parameter: NORMAL | COMPATIBLE

Example: SYST:SCP:MODE NOR

•The parameters will not be saved.

SYSTem:SCPi:AUTO:SAVE

Do the setting parameters need to be saved automatically for SCPI command?

Syntax: SYSTem:SCPi:AUTO:SAVE {OFF|ON} Query Syntax: SYSTem:SCPi:AUTO:SAVE?

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

SYST:SCP:AUTO:SAVE ON

• Parameters auto saving generally takes some time. Hence, it is suggested to disable the function when no necessity occurs.

SYSTem:SERial?

Returns the serial number(nine characters/numbers).

Return parameter: <string>

Example: SYST:SER? Returns: DAQ123456

SYSTem:SLOT:LABel

Allows you to add a custom label to the module in the specified slot.

Syntax: SYSTem:SLOT:LABel <slot>,"<string>" Query Syntax: SYSTem:SLOT:LABel? <slot>

Parameter: <slot> (1 | 2 | 3); "<string>", max length 10 characters. Return parameter: "<string>"

Example: SYST:SLOT:LAB 1," BATTERY " SYST:SLOT:LAB? 1 Returns: "BATTERY"

•Specifying a null string ("") disables the slot label message.

SYSTem:TEMPerature?

Returns the internal temperature of machine.

Return parameter: $\langle NRf \rangle$, where unit = $^{\circ}C$

Example: SYST:TEMP? Returns: +3.54375000E+01

SYSTem:TIME

Sets or returns the time for the instrument's real-time clock.

Syntax: SYSTem:TIME <hour>,<minute>,<second> Query Syntax: SYSTem:TIME?

Parameter: <hour> (0 ~ 23); <minute> (0 ~ 59); <second> (0 ~ 59) Return parameter: <time> (hh,mm,ss.sss)

Example:

SYST:TIME 16,20,30 SYST:TIME? Returns: 16:20:40.000

SYSTem:TIME:SCAN?

Returns the time at the start of the scan.

Return parameter: <time> (yyyy,mm,dd,hh,mm,ss.sss)

Example: SYST:TIME:SCAN? Returns: 2021,09,08,20,21,22.001

SYSTem:UPTime?

Returns the amount of time that the instrument has been running since the last power-on.

Return parameter: <time> (dd,hh,mm,ss)

Example: SYST:UPT? Returns: +0,+1,+25,+53

•Typically used to verify that the instrument is warmed up sufficiently before calibration.

SYSTem:VERSion?

Returns the SCPI version.

Return parameter: 1994.0.

SYSTem:WMESsage

Displays a power-on message.

Syntax: SYSTem:WMESsage "<string>" Query Syntax: SYSTem:WMESsage?

Parameter: "<string>", max length 12 characters Return parameter: "<string>"

Example: SYST:WMES "GWINSTEK" SYST:WMES? Returns: "GWINSTEK"

• Specifying a null string ("") disables the power-on message.

SYSTem COMMunication Commands

SYSTem:COMMunicate:GPIB:ADDRess

Sets or returns the GPIB address that is only on GPIB communication bus.

Syntax: SYSTem:COMMunicate:GPIB:ADDRess <address> Query Syntax: SYSTem:COMMunicate:GPIB:ADDRess?

Parameter: <address> (0 ~ 30) Return parameter: <NR1>

Example: SYST:COMM:GPIB:ADDR 15

SYSTem:COMMunicate:LAN:DHCP

Enables (On) or disables (Off) the use of the Dynamic Host Configuration Protocol (DHCP) for the instrument.

Syntax: SYSTem:COMMunicate:LAN:DHCP {OFF|ON} Query Syntax: SYSTem:COMMunicate:LAN:DHCP?

Parameter: 0 | 1 | OFF | ON Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

SYST:COMM:LAN:DHCP ON

SYSTem:COMMunicate:LAN:DNS[X]

Sets or returns the DNS address. which X = 1 indicate DNS1, X = 2 indicate DNS2.

Syntax: SYSTem:COMMunicate:LAN:DNS[X] "<address>" Query Syntax: SYSTem:COMMunicate:LAN:DNS[X]? {CURRent|STATic}

Parameter: "<address>" Return parameter: "xxx.xxx.xxx.xxx"

CURRent : Returns address currently being used by the instrument. STATic : Returns ddreess from non-volatile memory. This address is used if DHCP is disabled or unavailable.

```
Example:
SYST:COMM:LAN:DNS1 "172.16.1.252"
SYST:COMM:LAN:DNS1?
Returns: "172.16.1.252"
```

SYSTem:COMMunicate:LAN:DOMain?

Returns the current network domain name.

Return parameter: "<name>"

Example: SYST:COMM:LAN:DOM? Returns: "abc.com"

•If a domain name has not been assigned, a null string ("") is returned.

SYSTem:COMMunicate:LAN:GATeway

Sets or returns the Gateway address.

Syntax: SYSTem:COMMunicate:LAN:GATeway "<address>" Query Syntax: SYSTem:COMMunicate:LAN:GATeway? {CURRent|STATic}

Parameter: "<address>" Return parameter: "xxx.xxx.xxx.xxx"

CURRent : Returns address currently being used by the instrument. STATic : Returns address from non-volatile memory. This address is used if DHCP is disabled or unavailable.

Example:

SYST:COMM:LAN:GAT "192.168.31.254" SYST:COMM:LAN:GAT? Returns: "172.168.31.254"

SYSTem:COMMunicate:LAN:HOSTname Sets or returns the hostname.

Syntax: SYSTem:COMMunicate:LAN:HOSTname "<string>" Query Syntax: SYSTem:COMMunicate:LAN:HOSTname? {CURRent|STATic}

Parameter: "<string>", max length 12 characters Return parameter: "<string>"

CURRent : Returns hostname currently being used by the instrument. STATic : Returns hostname from non-volatile memory. This address is used if DHCP is disabled or unavailable.

Example:

SYST:COMM:LAN:HOST "DMM"

SYSTem:COMMunicate:LAN:IPADdress

Sets or returns the IP address.

Syntax: SYSTem:COMMunicate:LAN:IPADdress "<address>" Query Syntax: SYSTem:COMMunicate:LAN:IPADdress? {CURRent|STATic}

Parameter: "<address>" Return parameter: "xxx.xxx.xxx.xxx"

CURRent : Returns address currently being used by the instrument. STATic : Returns static address from non-volatile memory. This address is used if DHCP is disabled or unavailable.

Example: SYST:COMM:LAN:IPAD "192.168.31.117" SYST:COMM:LAN:IPAD? Returns: "192.168.31.117"

SYSTem:COMMunicate:LAN:MAC? Returns the MAC number.

Return parameter: 12 Hexadecimal characters

Example: SYST:COMM:LAN:MAC? Returns: "002224000090"

SYSTem:COMMunicate:LAN:SMASk

Sets or returns the subnet mask address.

Syntax: SYSTem:COMMunicate:LAN:SMASk "<address>" Query Syntax: SYSTem:COMMunicate:LAN:SMASk? {CURRent|STATic}

Parameter: "<address>" Return parameter: "xxx.xxx.xxx.xxx"

CURRent : Returns subnet mask currently being used by the instrument. STATic : Returns subnet mask from non-volatile memory. This address is used if DHCP is disabled or unavailable.

Example: SYST:COMM:LAN:SMAS "255.255.255.0" SYST:COMM:LAN:SMAS? Returns: "255.255.255.0" SYSTem:COMMunicate:LAN:TCP:ENABle

Enables (On) or disables (Off) the use of the Transmission Control Protocol (TCP) for the instrument.

Syntax: SYSTem:COMMunicate:LAN:TCP:ENABle {OFF|ON} Query Syntax: SYSTem:COMMunicate:LAN:TCP:ENABle?

Parameter: 0 | 1 | ON | OFF Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

SYST:COMM:LAN:TCP:ENAB ON

SYSTem:COMMunicate:LAN:TCP:PORT

Sets or returns the TCP communication port number.

Syntax: SYSTem:COMMunicate:LAN:TCP:PORT {<port>|MIN|MAX|DEF} Query Syntax: SYSTem:COMMunicate:LAN:TCP:PORT? [{MIN|MAX|DEF}]

Parameter: <port> (1024 ~ 65535); DEF: 5025 Return parameter: <NR1>

Example: SYST:COMM:LAN:TCP:PORT "5025" SYST:COMM:LAN:TCP:PORT? Returns: 5025

SYSTem:COMMunicate:LAN:TELNet:ECHO

Sets or returns the Telnet communication echo state.

Syntax: SYSTem:COMMunicate:LAN:TELNet:ECHO {OFF|ON} Query Syntax: SYSTem:COMMunicate:LAN:TELNet:ECHO?

Parameter: 0 | 1 | ON | OFF Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example: SYST:COMM:LAN:TELN:ECHO ON

SYSTem:COMMunicate:LAN:TELNet:ENABle

Enables (On) or disables (Off) the use of the Telecommunications Network (TELNET) for the instrument.

Syntax: SYSTem:COMMunicate:LAN:TELNet:ENABle {OFF|ON} Query Syntax: SYSTem:COMMunicate:LAN:TELNet:ENABle?

Parameter: 0 | 1 | ON | OFF Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

SYST:COMM:LAN:TELN:ENAB ON

SYSTem:COMMunicate:LAN:TELNet:TIMeout

Sets or returns the Telnet communication timeout time, where unit = second.

Syntax: SYSTem:COMMunicate:LAN:TELNet:TIMeout <time> Query Syntax: SYSTem:COMMunicate:LAN:TELNet:TIMeout?

Parameter: <time> (0 ~ 60000) Return parameter: <NR1>

Example: SYST:COMM:LAN:TELN:TIM 0

• Since 0 indicates infinite, Telnet communication has no timeout always.

SYSTem:COMMunicate:LAN:TELNet:PORT

Sets or returns the Telnet communication port number.

Syntax: SYSTem:COMMunicate:LAN:TELNet:PORT {<port>|MIN|MAX|DEF} Query Syntax: SYSTem:COMMunicate:LAN:TELNet:PORT? [{MIN|MAX|DEF}]

Parameter: <port> (1024 ~ 65535); DEF: 5024 Return parameter: <NR1>

Example: SYST:COMM:LAN:TELN:PORT "5024" SYST:COMM:LAN:TELN:PORT? Returns: 5024

SYSTem:COMMunicate:LAN:TELNet:PROMpt

Sets or returns the telnet prompt message.

Syntax: SYSTem:COMMunicate:LAN:TELNet:PROMpt "<string>" Query Syntax: SYSTem:COMMunicate:LAN:TELNet:PROMpt?

Parameter: "<string>", max length 15 characters Return parameter: "<string>"

Example:

SYST:COMM:LAN:TELN:PROM "DAQ9600>" SYST:COMM:LAN:TELN:PROM? Returns: DAQ9600>

SYSTem:COMMunicate:LAN:TELNet:WMESsage

Sets or returns the telnet welcome message that telnet communication connect success.

Syntax: SYSTem:COMMunicate:LAN:TELNet:WMESsage "<string>" Query Syntax: SYSTem:COMMunicate:LAN:TELNet:WMESsage?

Parameter: "<string>", max length 63 characters Return parameter: "<string>"

Example:

SYST:COMM:LAN:TELN:WMES "Welcome to DAQ9600 Telnet Server"

SYSTem:COMMunicate:LAN:TIMeout

Sets or returns the TCP communication timeout time, where unit = second.

Syntax: SYSTem:COMMunicate:LAN:TIMeout <time> Query Syntax: SYSTem:COMMunicate:LAN:TIMeout?

Parameter: <time> (1 ~ 60000) Return parameter: <NR1>

Example: SYST:COMM:LAN:TIM 10

SYSTem:COMMunicate:LAN:UPDate

Stores any changes made to the LAN settings into non-volatile memory and restarts the LAN driver with the updated settings.

Parameter: [None]

Example: SYST:COMM:LAN:UPD

•This command must be sent after changing the settings for DHCP, DNS, gateway, hostname, IP address, subnet, mask, or WINS.

SYSTem:COMMunicate:LAN:WEB:ENABle

Enables (On) or disables (Off) the use of the WEB page for the instrument.

Syntax: SYSTem:COMMunicate:LAN:WEB:ENABle {OFF|ON} Query Syntax: SYSTem:COMMunicate:LAN:WEB:ENABle?

Parameter: 0 | 1 | ON | OFF Return parameter: 0 | 1, (0 = OFF, 1 = ON)

Example:

SYST:COMM:LAN:WEB:ENAB ON

SYSTem:COMMunicate:LAN:WINS

Assigns the static IP addresses of the Windows Internet Name System (WINS) servers.

Syntax: SYSTem:COMMunicate:LAN:WINS "<address>" Query Syntax: SYSTem:COMMunicate:LAN:WINS? {CURRent|STATic}

Parameter: "<address>" Return parameter: "xxx.xxx.xxx"

CURRent : Returns address currently being used by the instrument. STATic : Returns ddreess from non-volatile memory. This address is used if DHCP is disabled or unavailable.

Example:

SYST:COMM:LAN:WINS "192.168.31.117" SYST:COMM:LAN:WINS? Returns: "192.168.31.117"

TRIGger Commands

TRIGger:COUNt

Sets or returns the number of trigger counts.

Syntax: TRIGger:COUNt {<count>|MIN|MAX|DEF|INFinity} Query Syntax: TRIGger:COUNt? [{MIN|MAX|DEF}]

Parameter: <count> (1 ~ 1,000,000); DEF: 1 Return parameter: <NRf>

Example:

CONF:VOLT:DC 10(@101,103) ROUT:SCAN (@101,103) TRIG:COUN 2 READ?

• For a continuous trigger (INFinity), the query returns "+9.9000000E+37".

TRIGger:SLOPe

Selects whether the instrument uses the rising edge (POS) or the falling edge (NEG) of the trigger signal on the rear-panel Digital I/O connector when external trigger is selected.

Syntax: TRIGger:SLOPe {POSitive | NEGative} Query Syntax: TRIGger:SLOPe?

Parameter: POSitive | NEGative Return parameter: POS | NEG

Example:

TRIG:SLOP POS

TRIGger:SOURce

Selects or returns current trigger source.

Syntax: TRIGger:SOURce <source> Query Syntax: TRIGger:SOURce?

Parameter: <source> (IMMediate | EXTernal | BUS | TIMer | ALARm{(1|2|3|4)}) Return parameter: IMM | EXT | BUS | TIM | ALAR{(1|2|3|4)}

IMMediate = Continuous scan trigger EXTernal = An external TTL-compatible pulse trigger BUS = Software trigger TIMer = Internally paced timer trigger ALARm = Trigger on alarm 1,2,3, and 4

IMMediate:

The trigger signal is always present. When you place the instrument in the "wait-for-trigger" state, the trigger is issued immediately. Example:

TRIG:SOUR IMM

READ?

EXTeranl:

The instrument accepts hardware triggers applied to the rear-panel Ext Trig input and takes the specified number of measurements, each time a TTL pulse specified by TRIGg:SLOP is received. If the instrument receives an external trigger before it is ready, it buffers one trigger. Example:

TRIG:SOUR EXT INIT <wait external trigger in signal> FETC ?

BUS:

The instrument is triggered by *TRG over the remote interface once the DMM is in the "wait-for-trigger" state.

Example:

```
TRIG:SOUR BUS
INIT
*TRG
FETC ?
```

•After selecting the trigger source, you must place the instrument in the "wait-for-trigger" state using the INITiate or READ? command. A trigger will not be accepted from the selected trigger source until the instrument is in the "wait-for-trigger" state.

TRIGger:TIMer

Sets the trigger-to-trigger interval (in seconds) for measurements on the channels in the present scan list.

Syntax: TRIGger:TIMer {<seconds>|MIN|MAX|DEF} Query Syntax: TRIGger:TIMer? [{MIN|MAX|DEF}]

Parameter: <second> (0 ~ 360,000s); DEF: 10 Return parameter: <NR1>

Example: TRIG:SOUR TIM TRIG:TIM: 3600

•This command defines the time from the start of one trigger to the start of the next trigger, up to the specified trigger count.

•If the scan interval is less than the time required to measure all channels in the scan list, the instrument will scan continuously, as fast as possible (no error is generated).
IEEE 488.2 Common Commands

*CLS

Clears the Event Status register (Output Queue, Operation Event Status, Questionable Event Status, Standard Event Status Register)

*ESE

Sets or returns the ESER (Event Status Enable Register) contents.

Syntax: *ESE <enable> Query Syntax: *ESE?

Parameter: <enable> (0 ~ 255) Return parameter: <NR1>

Example: *ESE 130 *ESE? Returns: 130. ESER=10000010

•The selected bits are then reported to bit 5 of the Status Byte Register. An enable register defines which bits in the event register will be reported to the Status Byte register group. You can write to Or read from an enable register.

*ESR?

Returns SESR (Standard Event Status Register) contents.

```
Return parameter: <NR1>
Example:
*ESR?
Returns: 198. SESR=11000110
```

•An event register is a read-only register that latches events from the condition register. While an event bit is set, subsequent events corresponding to that bit are ignored.

•Once a bit is set, it remains set until cleared by reading the event register or by sending *CLS (clear status).

*IDN?

Returns the manufacturer, model No., serial number and system version number.

Example: *IDN? Returns: GWInstek,DAQ-9600,00000000,M0.93_S0.86

*OPC

Sets operation complete bit (bit0) in SERS (Standard Event Status Register) when all pending operations are completed.

Returns 1 to the output buffer after all pending commands complete. Other commands cannot be executed until this command completes.

Syntax: *OPC Query Syntax: *OPC?

Parameter: [None] Return parameter: 1;(operation completes)

Example:

CONF:VOLT:DC TRIG:COUN 10 INIT *OPC?

•The difference between *OPC and *OPC? is that*OPC sets a status bit when the operation completes, and *OPC? outputs "1" when the operation completes.

G≝INSTEK

*PSC

Clears or returns the Power On status.

Syntax: *PSC {0|1} Query Syntax: *PSC?

Parameter: 0 | 1 Return parameter: 0 | 1; (0= disables, 1= enables)

•Enables (1) or disables (0) the clearing of certain enable registers at power on:

Questionable Data Register (STATus:OPERation:ENABle) Standard Operation Register (STATus:QUEStionable:ENABle) Alarm Register (STATus:ALARm:ENABle) Status Byte Condition Register (*SRE) Standard Event Enable Register (*ESE)

•The *PSC command does not affect the clearing of the condition or event registers, just the enable registers.

*RCL

Load the system parameters from 0 of 3 memory locations.

Syntax: *RCL <mem_num>

Parameter: <mem_num> (0 ~ 3), (0=default settings, 1 ~ 3= memory number)

Example: *RCL 1

*RST

Recalls default panel setup.

•Resets instrument to factory default state. This is similar to SYSTem:PRESet. The difference is that *RST resets the instrument for SCPI operation, and SYSTem:PRESet resets the instrument for front panel operation. As a result, *RST turns the histogram and statistics off, and SYSTem:PRESet turns them on.

*SAV

Save the system parameters to 1 of 3 memory locations.

Syntax: *SAV <mem_num>

Parameter: <mem_num> (1 \sim 3)

Example: *SAV 2

*SRE

Sets or returns the SRER (Service Request Enable Register) contents.

Syntax: *SRE <enable> Query Syntax: *SRE?

Parameter: <enable> (0 ~ 255) Return parameter: <NR1>

Example: *SRE 7 *SRE? Returns: 7. SRE=00000111

•An enable register defines which bits in the event register will be reported to the Status Byte register group. You can write to or read from an enable register.

*STB?

Returns the SBR (Status Byte Register) contents.

```
Return parameter: <NR1>
```

Example: *STB? Returns: 81. SBR=01010001.

•A condition register continuously monitors the state of the instrument. Condition register bits are updated in real time; they are neither latched nor buffered.

•This register is read-only; bits are not cleared when read.

*TRG

Manually triggers the DAQ-9600 if TRIG:SOUR is selected to BUS.

Example: TRIG:SOUR BUS INIT *TRG FETC?

*TST?

Runs a standard self-test which is invoked at power-on. It will take few seconds to complete.

Return parameter: 0 | 1; (0 = pass, 1 = one or more tests failed)

Example: *TST? Returns: +0.

*WAI

Configures the instrument's output buffer to wait for all pending operations to complete before executing any additional commands over the interface.

Status system

The diagram below is a description of the status system

NOTE: The overload bits are set once per INITiate command. If you clear an overload bit, it is not set again until a new INITiate is sent.

Bit	Name	Decimal	Definition	
0	Voltage Overload	1	A voltage measurement overloaded. Event only; condition register will return 0.	
1	Current Overload	2	A current measurement overloaded. Event only; condition register will return 0.	
2	Not Used	4	(Reserved for future use)	
3	Not Used	8	(Reserved for future use)	
4	Not Used	16	(Reserved for future use)	
5	Frequency Overload / Underflow	32	A frequency or period measurement overloaded or timed out due to no signal. Event only; condition register will return 0	
6	Not Used	64	(Reserved for future use)	
7	Capacitance Overload	128	A capacitance measurement overloaded. Event only; condition register will return 0.	
8	Calibration Corrupt	256	At least one calibration constant is corrupt.	
9	Resistance Overload	512	Only reported as event. In Conditon Register this bit always returns 0. Read the Event Register.	
10	Temperature Overload	1024	A temperature measurement overloaded. Event only; condition register will return 0.	
11	Totalizer Overflow	2048	The most recent measurement failed the lower limit test.	
12	Reading Memory Overflow	4096	Reading memory is full. One or more (oldest) measurements have been lost.	
13	Not Used	8192	(Reserved for future use)	
14	Not Used	16384	(Reserved for future use)	
15	Not Used	32768	(Reserved for future use)	

The following table lists the bit definitions for the Questionable Data Register:

The following table lists the bit definitions for the Operation Data Register:

1	Bit	Name	Decimal	Definition	
	0	Calibrating	1	Instrument is performing a calibration.	
	1	Self Test	2	The instrument is doing a self-test.	
	2	Not Used	4	(Reserved for future use)	

3	Not Used	8	(Reserved for future use)	
4	Scanning	16	The instrument is scanning.	
5	Waitig For Trigger	32	Instrument is waiting for a trigger.	
6	Not Used	64	(Reserved for future use)	
7	USB MSD detected	128	A USB mass storage device (USB drive) has been detected.	
8	Configurtion Change	256	The instrument configuration has changed via front panel since the last INIT, READ? or MEASure?.	
9	Reading Memory Threshold	512	The number of readings in memory has exceeded the memory threshold setting (DATA:POINts:EVENt:THReshold command)	
10	Instrument Locked	1024	The instrument is locked (SYSTem:LOCK command)	
11	Settings Changed	2048	The instrument configuration has changed via front panel or SCPI since the last INIT, READ? Or MEASure?. Event only, condition register returns 0.	
12	Not Used	4096	(Reserved for future use)	
13	Global Error	8192	An error is in the global error queue.	
14	Not Used	16384	(Reserved for future use)	
15	Not Used	32768	(Reserved for future use)	

The following table lists the bit definitions for the Alarm Data Register:

Bit	Name	Decimal	Definition	
0	Alarm 1	1	An event has occurred on Alarm 1. Event only; condition register will return 0.	
1	Alarm 2	2	An event has occurred on Alarm 2. Event only; condition register will return 0.	
2	Alarm 3	4	An event has occurred on Alarm 3. Event only; condition register will return 0.	
3	Alarm 4	8	An event has occurred on Alarm 4. Event only; condition register will return 0.	
4	Queue Not Empty	16	The alarm queue is not empty.	
5	Queue Overflow	32	An alarm queue overflowed. Event only; condition register will return 0.	
6	Alarm 1	64	Alarm 1 is triggered.	
7	Alarm 2	128	Alarm 2 is triggered.	
8	Alarm 3	256	Alarm 3 is triggered.	

9	Alarm 4	512	Alarm 4 is triggered.	
10	Not Used	1024	(Reserved for future use)	
11	Not Used	2048	(Reserved for future use).	
12	Lower Limit	4096	A lower limit alarm has occurred.	
13	Upper Limit	8192	An upper limit alarm has occurred.	
14	Not Used	16384	(Reserved for future use)	
15	Not Used	32768	(Reserved for future use)	

The following table describes the Standard Event Register

Bit	Name	Decimal	Definition	
0	Operation Complete	1	All commands prior to and including *OPC have been executed.	
1	Not Used	2	(Reserved for future use)	
2	Query Error	4	The instrument tried to read the output buffer but it was empty. Or, a new command line was received before a previous query has been read. Or, both the input and output buffers are full.	
3	Device Error	8	A device error, including a self-test error or calibration error, occurred (an error in the -300 range or any positive error has been generated).	
4	Execution Error	16	An execution error occurred (an error in the -200 range has been generated).	
5	Command Error	32	A command syntax error occurred (an error in the -100 range has been generated).	
6	Not Used	64	(Reserved for future use)	
7	Power On	128	Power has been cycled since the last time the event register was read or cleared.	

The following table describes the Status Byte Register.

Bit	Name	Decimal	Definition	
0	Not Used	1	(Reserved for future use)	
1	Alarm Data	2	One or more bits are set in the Alarm Enable Register. (bits must be enabled, see STATus:ALARm:ENABle command.)	
2	Error Queue	4	One or more errors have been stored in the Error Queue. Use SYST:ERR? to read and delete errors.	
3	Questionabl	8	One or more bits are set in the Questionable Data	

	e Data		Register (bits must be enabled, see STAT:QUES:ENAB).	
4	Message Available	16	Data is available in the instrument's output buffer.	
5	Standard Event	32	One or more bits are set in the Standard Event Register (bits must be enabled, see *ESE).	
6	Request Service	64	One or more bits are set in the Status Byte Register and may generate a Request for Service(RQS). Bits must be enabled using *SRE.	
7	Operation Data	128	One or more bits are set in the Standard Operation Register (bits must be enabled, see STAT:OPER:ENAB).

Fuse Replacement

Steps	1.	Unplug power cord and place dual flat-blade drivers into the grooves of fuse socket sideways followed by pinching together to pull out the fuse socket.	
	2.	The fuse socket appears. The "240" symbol within the hole on fuse socket indicates the line voltage is positioned as 240V.	Z Z Z Z Z Z Z Z Z Z Z Z Z Z Z Z Z Z Z
	3.	Pull the fuse holder out of the fuse socket gently as the right figure illustrates.	
	4.	Further pull the fuse out of the fuse holder and replace it with a new fuse.	TO DE
	5.	Restore the fuse holder with new fuse back to the fuse socket. Ensure that the correct line voltage shows within the hole of the fuse socket per requirement.	100 Jan
		Type of fuse (time-lag)	Input line voltage
Rating		T0.125A, 250V, 5x20mm	100/120VAC
		T0.125A, 250V, 5x20mm	220/240VAC
Replace Module		DAQ-901 F1.6A, 300V , 5*2	20mm breaking capacity:3KA
Internal Current	Fuse	DAQ-909 F2.5A, 600V , 6*3	30mm breaking capacity:6KA

Battery Replacement

Beforehand	This chapter describes the procedure of battery replacement in the front panel. Before start, it is required to let a certified and trained technician properly aware of potential risks to disassemble instrument case. Some of the electrical connections are dynamic and even available after powering off the instrument. Consequently, Do disconnect all the inputs, cords and cables before disassembling the instrument.
The steps to replace battery	1. Power off properly and disconnect all the cables including power cord and those for external interfaces. Also, uninstall the modules from the slots of the instrument.
	2. Disassemble the instrument case in light of the disassembling instructions.
	 Find the battery (CR2032) on the main board as shown from the figure below.
	4. Gently remove the battery via the end tip of flat-head screwdriver as the following figure shown.

5. Use fingers to take the battery out off the compartment with ease.

- 6. Dispose or recycle the used battery in accord with the applicable local regulations.
- 7. Place a new battery (CR2032) into the compartment and beware of the polarity (+, -).
 Put "+" side upwards. Gently press the battery downwards to click it into place.

8. Connect every cable and cord in need and reassemble the instrument in proper order. The procedure of battery replacement is completed.

✓ It indicates parameters can be saved and loaded from the groups 1 to 5.

X It indicates the independent save zone which is free from impact of reboot.

Specifications

General

This section lists the general characteristics of the instrument.

Note	 All specifications are ensured only under a single display. At least 1 hour of warm-up time is required before applying these specifications. MAX measuring voltage DC600V, AC400V.
Line Power	 Power Supply: 100 / 120 / 220 / 240 VAC ±10% Power Line Frequency: 50 Hz / 60 Hz ±10% Power Consumption: Max. 50 VA
Environment	 Operating Environment: Full accuracy for 0 °C to 55 °C Full accuracy to 80% R.H. at 40 °C Non–condensing Operating Altitude Up to 2,000 m Storage Temperature -40 to 70 °C
Mechanical	 Rack Dimensions: 88mm(H) X 220mm(W) X348.6mm(D) (without bumpers) Bench Dimensions: 107mm(H) X 266.9mm(W) X357.8mm(D) (with bumpers) Weight : 4.5 kg (9.92lbs)
Display	 4.3" color WQVGA (480x272) with LED backlight Supports basic number, bar meter, trend chart and histogram views
Temperature Coefficient	• Increment of one coefficient per one degree celsius when the range is beyond TCAL \pm 5 °C.
Accuracy Specification	• It is relevant to the calibration standard.
Real-Time Clock/Calendar	Set and read, year, month, day, hour, minute, secondsBattery CR-2032 coin-type, replaceable

- [1]. DC Specification: In addition to the availability that requires warm-up of 60 minutes, it must be set in 5/s speed rate, A-Zero on.
- [2]. The entire range of measurement will pass the set range by 20% except the tests of 600 V DC, 2 A DC and diode.
- [3]. This specifications applies to 4-wire ohms function or 2-wire ohms using math null for offset. Without math null, add 2 Ω additional error

in 2-wire ohms function. The 100M and 1G ohm ranges are 2-wire only.

[4]. This specification applies to the voltage measured from input terminal.1 mA test current is the typical value. The change of current source leads to the variation in buck of diode junction.

Operating Characteristics

[1]. AC Specification: It will be available after 60 minutes of warm-up, sine wave as well as 1/s speed rate.

[2]. The entire range of measurement will pass the set range by 20% except the tests of 400 VAC and 2 A AC.

[3]. Specifications are for sinewave input >5% of range. For inputs from 1% to 5% of range and <50 kHz, add 0.1% of range additional error. For 50 kHz to 100 kHz, add 0.13% of range. The measurement range of 400 VAC is limited within the range of 7.5 x 10^{^7} Volt–Hz.

[4]. Three speed settings provided for low-frequency performance: 1/s (3 Hz), 5/s (20 Hz), 20/s (200 Hz). Additional errors will Not occur for the frequency greater than the filter settings.

[5]. Specifications are for sinewave input >5% of range, and is beyond 10 μ A AC. For inputs from 1% to 5% of range, add 0.1% of range additional error.

Frequency Period ^[1]^[2]

Accuracy Specifications: ± % of reading

Measuring Characteristics

Frequency and Period	Measurement Method:	Reciprocal-counting technique. AC-coupled input using the ac voltage measurement function.		
_	Voltage Ranges	100 mVrms full scale to 400 Vrms. Auto or manual ranging.		
Settling Considerations	Errors will occur when attempting to measure the frequency or period of an input following a dc offset voltage change. The input blocking RC time constant must be allowed to fully settle (up to 1 sec) before the most accurate measurements are possible.			
Measurement Considerations	All frequency counters are susceptible to error when measuring low-voltage, low-frequency signals. Shielding inputs from external noise pickup is critical for minimizing measurement errors.			

Operating Characteristics

Function	Gate Time	Digits	
	1 s, 100 ms	6 1⁄2	
Frequency, Period	10 ms	5 1/2	
	1 ms	4 1/2	

[1]. This specification will be available after 60 minutes of warm-up and sine wave input, unless stated otherwise. This specification applies to 1s gate time.

[2]. This specification is available when both sine wave and square wave input \geq 100 mV. For the input of 10 mV to 100 mV, the % of reading error needs to be multiplied by 10 times.

- [3]. The amplitude range is from 10% to 120% and is lower than 400 VAC.
- [4]. The input \geq 60 mV, for 300 k ~ 1 MHz, within 100mV range.

Temperature Characteristics ^[1]

Accuracy Specifications: \pm (% of reading + % of range)

[1]. Specifications are for film Capacitance inputs that are greater than 10% range.

Capacitance

Measurement method: DC recharge & discharge.

Input protection: 500 Vpeak on all ranges.

The capacitor under test (Cx) is charged using a constant current source. The time to charge Cx is recorded. The capacitor is then discharged using a known resistance and the discharge time is recorded. The value of the resistance depends on the capacitance range that is selected. The charge and discharge time is used to calculate the capacitance of Cx if the selected capacitance range is equal to or less than 10 nF. Only the charge time is used to calculate the selected capacitance range is equal to or greater than 100 nF.

As measuring capacitance with the DMM is effectively a DC measurement, the measured capacitance tends to be higher than what is measured by LCR meters.

For best measurement results, first perform a zeroing of the test leads when the cables are "open" to compensate for the test lead capacitance.

Model description	Туре	Speed (ch/sec)	Max volts	Max amps	Bandwidth	Thermal offset	Comments
DAQ-900 20 ch Multiplexer	2-wire solid-state (4-wire selectable)	450	120 V		10 MHz	< 4 µV	Built-in cold junction reference
DAQ-901	2-wire	80	300 V	1 A	10 MHz	< 4 µV	Built-in cold junction
20 ch Multiplexer + 2 current channels	armature (4-wire selectable)						reference 2 additional current channels (22 total)
DAQ-903	1-wire	80	300 V		10 MHz	<1µV	Built-in cold junction
40 ch Single-Ended Mux	armature (common low)					reference No four-wire measurements	
DAQ-904	2-wire		300 V		10 MHz	<1µV	
4 x 8 Matrix	armature						
DAQ-909	2-wire	60	DC600V	2 A	10 MHz	< 4 µV	2 additional current
8 ch HV Multiplexer + 2 current channels			AC400V				channels (10 total)

Declaration of Conformity

We

GOOD WILL INSTRUMENT CO., LTD.

declare that the CE marking mentioned product

satisfies all the technical relations application to the product within the

scope of council:

Directive: EMC; LVD; WEEE; RoHS

The product is in conformity with the following standards or other normative documents:

◎ EMC
