# Introduction

This data sheet provides the specified and typical performance of the FieldFox family of portable analyzers. This data sheet should be used in conjunction with the technical overviews and configuration guide, for a complete description of the analyzers.

The specifications for the 32, 44, or 50 GHz analyzers shown in this data sheet apply to the FieldFox analyzers with serial number prefix break  $\geq$  MY/US/SG6125, or with the RF board part number: N9960-63011 <sup>1</sup>. If your FieldFox analyzer (32, 44, or 50 GHz) is with the older RF board (part number of N9960-63001 <sup>1</sup>) and desire to obtain a copy of data sheet that includes specifications reflecting the previous version of hardware, you may contact Keysight technical support by creating a support case via <https://support.keysight.com/s/>.

The specifications and measurement capabilities listed in this document require certain options on the FieldFox analyzer. Refer to the FieldFox Configuration Guide to obtain option information. The configuration guide is the main resource for option/measurement capability information (<https://www.keysight.com/us/en/assets/7018-06515/configuration-guides/5992-3701.pdf>).

## Definitions

### Specification (spec)

Specifications include guard bands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions. Specifications are warranted performance. FieldFox must be within its calibration cycle. No warm-up required for the specifications listed on pages 40 through 98.

### Typical

Describes additional product performance information not covered by the product warranty. It is performance beyond specifications that 80% of the units exhibit with a 90% confidence level over the temperature range of  $23 \pm 5$  °C, unless otherwise noted. Typical performance does not include measurement uncertainty. FieldFox must be within its calibration cycle.

### Nominal

A general, descriptive term or design parameter. It is not tested, and not covered by the product warranty. FieldFox must be within its calibration cycle.

---

<sup>1</sup> To find an analyzer's RF part number, press [System], {Service Diagnostics}, {System Information}. Here, "[ ]" denotes the hard-key, and "{ }" the soft-key.

# Cable and Antenna Analyzer (CAT) and Vector Network Analyzer (VNA)

The performance listed in this section applies to the cable and antenna analyzer (referred to as CAT) and vector network analyzer (VNA) capabilities available in the following models:

| Description                                     | Model number                                                                                                             |
|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| FieldFox RF & microwave (combination) analyzers | N9913B <sup>1</sup> , N9914B <sup>1</sup> , N9915B <sup>1</sup> , N9916B, N9917B, N9918B, N9950B, N9951B, N9952B, N9953B |

NOTE: Combination analyzers = Cable and antenna tester (CAT) + Vector network analyzer (VNA) + Spectrum analyzer (SA)

See [FieldFox Configuration Guide](#) for option information. Many capabilities listed in this Data Sheet require options.

## Frequency specifications

| Series | Model               | Frequency range    |
|--------|---------------------|--------------------|
| N991xB | N9913B <sup>1</sup> | 30 kHz to 4 GHz    |
|        | N9914B <sup>1</sup> | 30 kHz to 6.5 GHz  |
|        | N9915B <sup>1</sup> | 30 kHz to 9 GHz    |
|        | N9916B              | 30 kHz to 14 GHz   |
|        | N9917B              | 30 kHz to 18 GHz   |
|        | N9918B              | 30 kHz to 26.5 GHz |
| N995xB | N9950B              | 300 kHz to 32 GHz  |
|        | N9951B              | 300 kHz to 44 GHz  |
|        | N9952B              | 300 kHz to 50 GHz  |
|        | N9953B              | 300 kHz to 54 GHz  |

### Frequency reference (-10 to 55 °C)

|                                            |                                                         |
|--------------------------------------------|---------------------------------------------------------|
| Accuracy                                   | ±0.9 ppm (spec) + aging                                 |
|                                            | ±0.5 ppm (typical) + aging                              |
| Accuracy, when locked to GPS               | ±0.01 ppm (nominal)                                     |
| Accuracy, when GPS antenna is disconnected | ±0.4 ppm (nominal) <sup>2</sup>                         |
| Aging rate                                 | ±1 ppm/yr for 20 years (spec), will not exceed ±3.5 ppm |

<sup>1</sup> Discontinued and replaced by corresponding Keysight N99xxC Series FieldFox.

<sup>2</sup> The maximum drift expected in the frequency reference applicable when the ambient temperature changes ±5 °C from the temperature when the GPS signal was last connected.

| Frequency resolution      | Specification (Hz) | Model                                |
|---------------------------|--------------------|--------------------------------------|
| 30 kHz to 1.91211 GHz     | 0.67               | N991xB, or N995xB (starting 300 kHz) |
| ≥ 1.91211 to 3.82461 GHz  | 1.34               | N991xB, or N995xB                    |
| ≥ 3.82461 to 7.64961 GHz  | 2.68               | N991xB, or N995xB                    |
| ≥ 7.64961 to 15.29961 GHz | 5.36               | N991xB, or N995xB                    |
| ≥ 15.29961 to 26.5 GHz    | 10.73              | N991xB, or N995xB                    |
| ≥ 26.5 to 45.8 GHz        | 16.09              | N995xB                               |
| ≥ 45.8 to 54 GHz          | 32.19              | N995xB                               |

#### Data points or resolution

101, 201, 401, 601, 801, 1001, 1601, 4001, 10,001  
Arbitrary number of points settable through front panel and SCPI

#### IF bandwidth <sup>1</sup>

3 Hz, 10 Hz, 30 Hz, 100 Hz, 300 Hz, 1 kHz, 3 kHz, 10 kHz, 30 kHz, 100 kHz

#### System impedance

50 Ω (nominal), 75 Ω with appropriate adapter and calibration kit

## Test port output specifications

High power in the N991xB and N995xB refers to the analyzer's target output power level when the Power Setting is High. Examples:

- N991xB: For a 5 to 10 GHz frequency sweep, the analyzer achieves a 7 dBm power level across the band.
- N995xB: For an 18 to 26.5 GHz frequency sweep, the analyzer achieves a 4 dBm power level across the band.

Low power level for N991xB and N995xB analyzers flattens at -50 dBm across the entire frequency band and is the analyzer's output when the Power Setting is Low.

Max leveled power in the N991xB and N995xB refers to the maximum leveled (flattened) power achieved across the designated frequency range. Examples:

- N991xB: For a 1 to 10 GHz frequency sweep with the analyzer configured to measure all four S-parameters, needing both ports 1 and 2, the maximum power the analyzer can be set to is 5 dBm.
- N995xB: For an 18 to 26.5 GHz frequency sweep with the analyzer configured to measure all four S-parameters, needing both ports 1 and 2, the maximum power the analyzer can be set to is 3 dBm.

<sup>1</sup> VNA mode only. Recommend using averaging in CAT mode.

| Test port output power (dBm), high power       | Typical                          | Typical        |
|------------------------------------------------|----------------------------------|----------------|
| <b>N991xB</b>                                  | <b>Port 1</b>                    | <b>Port 2</b>  |
| 30 kHz to 500 kHz                              | -9                               | -7             |
| > 500 kHz to 10 MHz                            | -1                               | -1             |
| > 10 MHz to 1 GHz                              | 9                                | 8              |
| > 1 to 5 GHz                                   | 8                                | 7              |
| > 5 to 10 GHz                                  | 7                                | 7              |
| > 10 to 18 GHz                                 | 6                                | 5              |
| > 18 to 26.5 GHz                               | 3                                | 2              |
| <b>N995xB</b>                                  | <b>Port 1</b>                    | <b>Port 2</b>  |
| 300 kHz to 1 MHz                               | -5                               | -4             |

1 System dynamic range is measured in the factory with loads on the test ports after a thru normalization.

2 For CAT mode, "Insertion loss (2-port)", decrease listed dynamic range specifications by 20 dB, as CAT mode IFBW is fixed at 10 kHz. Can obtain full dynamic range by using S21 measurement in VNA mode with 100 Hz IFBW.

Receiver compression

|        |                     | Typical                     |
|--------|---------------------|-----------------------------|
|        | Frequency           | Port 1 or Port 2            |
| N991xB | 250 kHz to 2 GHz    | +7 dBm, 0.20 dB compression |
|        | > 2 to 5 GHz        | +8 dBm, 0.15 dB compression |
|        | > 5 to 26.5 GHz     | +8 dBm, 0.10 dB compression |
| N995xB | 300 kHz to 7 MHz    | +5 dBm, 0.20 dB compression |
|        | > 7 MHz to 26.5 GHz | +5 dBm, 0.10 dB compression |
|        | > 26.5 to 54 GHz    | +5 dBm, 0.15 dB compression |

Maximum input level

|        |                    | Port 1 or Port 2 |
|--------|--------------------|------------------|
|        | Average CW power   | DC               |
| N991xB | +27 dBm, 0.5 watts | ±50 VDC          |
| N995xB | +25 dBm, 0.3 watts | ±40 VDC          |

Immunity to interfering signals (nominal)

|                               |          | N991xB  | N995xB  |
|-------------------------------|----------|---------|---------|
| On carrier frequency          |          | +10 dBm | +9 dBm  |
| Offset from carrier frequency | > 1 MHz  | +13 dBm | +8 dBm  |
|                               | > 10 MHz | +18 dBm | +12 dBm |

<sup>1</sup> For CAT mode, increase trace noise by a factor of 5.7, as CAT mode IFBW is fixed at 10 kHz. Can use averaging in CAT mode to reduce trace noise or use VNA mode with 300 Hz IFBW.

<sup>2</sup> Excludes multiples of 65 kHz, and 7.792198 MHz, 8.190585 MHz, and 8.954400 MHz.

| Marker types            | Normal, delta, data trace and memory trace markers                                                                                                                                                                                     |
| Marker coupling         | On/Off (coupling between traces)                                                                                                                                                                                                       |
| Frequency blanking      | Security level: none, high. If high, all frequency information is blanked out. An instrument preset is required to re-enable the frequency information.                                                                                |
| Display data            | Display data, memory, data and memory, or data math                                                                                                                                                                                    |
| Trace math              | One memory trace per data trace.                                                                                                                                                                                                       |

## CAT and VNA mode calibrations

FieldFox analyzers offer three tiers of calibrations, thus providing users with different levels of calibration effort and accuracy.

### CalReady

CalReady is the most basic calibration and is sufficient for a quick pass/fail or go/no go verification. Every FieldFox is calibrated at the factory, at test ports 1 and 2, at room temperature. CalReady can be applied either as an “enhanced response CalReady” or a “2-port CalReady.” The default setting is 2-port CalReady, so correction is applied to both ports. A user preference allows user to change the CalReady methodology to enhanced response CalReady.

A 30-minute warm-up period is recommended for a quick test. A 60-minute warm-up is necessary for more stringent test requirements.

If CalReady is the basis for most measurements, the annual cal cycle must be followed, as the CalReady calibration will be updated during the annual cal cycle.

## Standard calibrations

Standard calibrations are the most accurate calibrations offered in FieldFox. FieldFox's calibration engine is based on Keysight's flagship PNA calibration engine, and as such, offers many of the standard calibrations. FieldFox supports both coaxial and waveguide calibrations. The table below lists the commonly used calibrations.

Keysight recommends a 30-minute warm-up period for standard calibrations. For ultimate in stability and accuracy, a 90-minute warm-up period is necessary.

### Frequency response

|                                                                                                                |                                                                                                                                                                                                                                                                                                                                              |
|----------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Open response<br>Short response<br>Thru response<br>With and without isolation                                 | Simultaneous magnitude and phase correction of frequency response errors for either reflection or transmission measurements. Isolation corrects for crosstalk errors.                                                                                                                                                                        |
| 1-port OSL (Port 1)                                                                                            | Open, short, and load                                                                                                                                                                                                                                                                                                                        |
| 1-port OSL (Port 2)                                                                                            | Traditional 1-port calibration for reflection measurements. Corrects for directivity, source match, and frequency response errors.                                                                                                                                                                                                           |
| SSL (for waveguide)                                                                                            | For waveguide calibrations, depending on the calibration kit definition, this is presented as a short, offset short and load calibration.                                                                                                                                                                                                    |
| Enhanced response (also known as one-path, two-port)<br>Forward enhanced response<br>Reverse enhanced response | Corrects for frequency response and source match. Partial correction for load match for low-loss reciprocal devices.                                                                                                                                                                                                                         |
| QSOLT (2-port)                                                                                                 | QSOLT or Quick short-open-load-thru is FieldFox's default recommended calibration for insertable devices. Full 12-term error correction. Requires fewer connections, compared to traditional SOLT (4 compared to 7). Corrects for directivity, source match, reflection frequency response, load match, and transmission frequency response. |
| Full 2-port (unknown thru calibration)                                                                         | FieldFox's default recommended calibration for non-insertable devices. Full 12-term error correction. Beneficial for characterizing non-insertable devices such as Type-N to 3.5 mm, or female-female devices. Corrects for directivity, source match, reflection frequency response, load match, and transmission frequency response.       |
| TRL                                                                                                            | TRL or thru-reflect-line compensates for directivity, reflection, and transmission frequency response in both the forward and reverse directions.                                                                                                                                                                                            |

Note: FieldFox does not offer the traditional SOLT calibration. Instead, it offers the more accurate Full 2-port (unknown thru), and also QSOLT.

## ECal

FieldFox supports all Keysight USB ECal modules, both standard and value-line ECals.

## FieldFox's guided calibration wizard

FieldFox's calibration wizard recommends a calibration type and calibration kit based on selected parameters and connector types. Alternatively, users can select their own calibration type and calibration kit. FieldFox's calibration wizard ensures a valid calibration selection.

## Interpolation error correction

With any type of accuracy enhancement applied, interpolated mode recalculates the error coefficients when the test frequencies are changed. The number of points can be increased or decreased, and the start/stop frequencies can be changed, but the resulting frequency span must be a subset of the original calibration frequency span.

## Connectors

The FieldFox firmware supports the following connector types by default. Add other connector types with a calibration kit that contains the connector type.

| Coaxial       | Waveguide |        |
|---------------|-----------|--------|
| Type-N 50 ohm | WR-10     | WR-90  |
| Type-N 75 ohm | WR-15     | WR-112 |
| 7/16          | WR-22     | WR-137 |
| TNC           | WR-28     | WR-187 |
| Type-F        | WR-42     | WR-284 |
| 7 mm          | WR-62     | WR-650 |
| 3.5 mm        | WR-75     |        |
| 2.92 mm       |           |        |
| 2.4 mm        |           |        |
| 1.85 mm       |           |        |

## FieldFox S-parameter measurement uncertainties

The configurations listed below include measurement uncertainties based on ISO GUM methodology calculations.

| FieldFox model | Calibration kit       | Calibration type        | DUT connector | Uncertainty |
|----------------|-----------------------|-------------------------|---------------|-------------|
| N991xB, N995xB | 85518A or 85519A      | Full 2-port calibration | Type-N        | Spec        |
| N991xB, N995xB | 85054D                | Full 2-port calibration | Type-N        | Spec        |
| N991xB, N995xB | 85520A or 85521A      | Full 2-port calibration | 3.5 mm        | Spec        |
| N991xB, N995xB | 85052D                | Full 2-port calibration | 3.5 mm        | Spec        |
| N991xB, N995xB | N7554A                | Full 2-port calibration | Type-N        | Spec        |
| N991xB, N995xB | N7555A                | Full 2-port calibration | 3.5 mm        | Spec        |
| N991xB, N995xB | N4690D                | Full 2-port calibration | Type-N        | Spec        |
| N991xB, N995xB | N4691D                | Full 2-port calibration | 3.5 mm        | Spec        |
| N995xB         | 85561A or 85562A      | Full 2-port calibration | 2.92 mm       | Spec        |
| N995xB         | BN 534913 or BN934914 | Full 2-port calibration | 2.92 mm       | Spec        |
| N995xB         | N4692D                | Full 2-port calibration | 2.92 mm       | Spec        |
| N995xB         | 85563A or 85564A      | Full 2-port calibration | 2.4 mm        | Spec        |
| N995xB         | 85056D                | Full 2-port calibration | 2.4 mm        | Spec        |
| N995xB         | N4693D ECal           | Full 2-port calibration | 2.4 mm        | Spec        |
| N995xB         | 85058E                | Full 2-port calibration | 1.85 mm       | Spec        |
| N995xB         | N4694A/D ECal         | Full 2-port calibration | 1.85 mm       | Spec        |

# Corrected Measurement Uncertainty

N9913/4/5/6/7/8B, 85518A or 85519A, full 2-port Cal, DUT: Type-N, spec

Corrected performance table calculated using uncertainties with a coverage factor of 2.

| Corrected performance (dB)         | 0.2 to 500 MHz | 0.5 to 6 GHz | 6 to 9 GHz  | 9 to 18 GHz |
|------------------------------------|----------------|--------------|-------------|-------------|
| Directivity                        | 40             | 39           | 32          | 29          |
| Source match                       | 38             | 31           | 29          | 26          |
| Load match                         | 38             | 33           | 28          | 26          |
| Reflection tracking                | $\pm 0.00011$  | $\pm 0.033$  | $\pm 0.014$ | $\pm 0.043$ |
| Transmission tracking <sup>1</sup> | $\pm 0.062$    | $\pm 0.17$   | $\pm 0.29$  | $\pm 0.32$  |

Uncertainty plots: power level of -15 dBm, 10 Hz IF bandwidth, no averaging, battery saver off, and 60-minutes warm-up time. Includes uncertainties due to drift, noise, compression, and dynamic accuracy. Coverage factor of 1 applied to uncertainties, for ease of comparison with other industry handheld analyzers.

## Transmission uncertainty (S21, S12)

## Reflection uncertainty (S11, S22)

<sup>1</sup> Load match and transmission tracking are typical values

## N9913/4/5/6/7/8B, 85054D, full 2-port Cal, DUT: Type-N, spec

Corrected performance table calculated using uncertainties with a coverage factor of 2.

| Corrected performance (dB)         | 0.2 to 500 MHz | 0.5 to 2 GHz | 2 to 8 GHz | 8 to 18 GHz |
|------------------------------------|----------------|--------------|------------|-------------|
| Directivity                        | 37             | 37           | 33         | 31          |
| Source match                       | 37             | 37           | 33         | 30          |
| Load match <sup>1</sup>            | 37             | 37           | 33         | 30          |
| Reflection tracking                | ±0.00068       | ±0.0019      | ±0.0053    | ±0.026      |
| Transmission tracking <sup>1</sup> | ±0.0057        | ±0.017       | ±0.053     | ±0.12       |

Uncertainty plots: power level of -15 dBm, 10 Hz IF bandwidth, no averaging, battery saver off, and 60-minutes warm-up time. Includes uncertainties due to drift, noise, compression, and dynamic accuracy. Coverage factor of 1 applied to uncertainties, for ease of comparison with other industry handheld analyzers.

### Transmission uncertainty (S21, S12)

### Reflection uncertainty (S11, S22)

<sup>1</sup> Load match and transmission tracking are typical values

## N9913/4/5/6/7/8B, 85520A or 85521A, full 2-port Cal, DUT: 3.5 mm, spec

Corrected performance table calculated using uncertainties with a coverage factor of 2.

| Corrected performance (dB)         | 0.2 to 500 MHz | 0.5 to 5 GHz | 5 to 15 GHz | 15 to 26.5 GHz |

<sup>2</sup> Load match and transmission tracking are typical values

# TDR Cable Measurements (Option 215)

The performance listed in TDR cable measurements, VNA time domain, mixed-mode S-parameters and vector voltmeter sections apply to the capabilities available in the following models:

| Description                                     | Model number                                                                                                             |
|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| FieldFox RF & microwave (combination) analyzers | N9913B <sup>1</sup> , N9914B <sup>1</sup> , N9915B <sup>1</sup> , N9916B, N9917B, N9918B, N9950B, N9951B, N9952B, N9953B |

See [FieldFox Configuration Guide](#) for option information. Many capabilities listed in this Data Sheet require options.

The TDR cable option adds time domain reflectometry (TDR) measurements to FieldFox's CAT mode. FieldFox's TDR measurements are based on an inverse Fourier transform of the frequency-domain data. TDR measurements are useful in not only identifying the location of faults along cables, but also the nature of the fault. Resistive, inductive and capacitive faults will each have a different response. These differences help engineers and technicians' trouble-shoot line faults.

Measurements: TDR (linear rho), TDR (ohm), TDR & DTF

Y-axis: linear (rho) or impedance (ohm)

X-axis: distance (meters or feet)

# VNA Time Domain (Option 010)

In time-domain mode, FieldFox computes the inverse Fourier transform of the frequency-domain data to display reflection or transmission coefficients versus time.

## Setup parameters

|                                                                                                      |                                       |
|------------------------------------------------------------------------------------------------------|---------------------------------------|
| Time                                                                                                 | Start, stop, center, span             |
| Gating                                                                                               | Start, stop, center, span, and on/off |
| Numbers of points, velocity vector, line loss, window shape, independent control for all four traces |                                       |

## Time stimulus modes

|                  |                                                                                                                                                                                                                              |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Low-pass step    | Low-pass step is similar to a traditional time domain reflectometer (TDR) stimulus waveform. It is used to measure low-pass devices. The frequency-domain data should extend from DC (extrapolated value) to a higher value. |
| Low-pass impulse | Low-pass impulse response is used to measure low-pass devices.                                                                                                                                                               |
| Bandpass impulse | The bandpass impulse simulates a pulsed RF signal and is used to measure the time domain response of band-limited devices.                                                                                                   |

<sup>1</sup> Discontinued and replaced by corresponding Keysight N99xxC Series FieldFox.

## Windows

The windowing function can be used to filter the frequency domain data and thereby reduce overshoot and ringing in the time domain response.

|         |                                                                             |
|---------|-----------------------------------------------------------------------------|
| Windows | Minimum, medium and maximum, manual entry of Kaiser Beta and impulse width. |
|---------|-----------------------------------------------------------------------------|

## Gating

The gating function can be used to selectively remove reflection or transmission time domain responses. In converting back to the frequency domain, the effects of the responses outside the gate are removed. The results can be viewed with gating on and off, using two traces.

|             |                                |
|-------------|--------------------------------|
| Gate types  | Notch, bandpass                |
| Gate shapes | Maximum, wide, normal, minimum |

# Mixed-Mode S-Parameters (Option 212)

Mixed-mode S-parameters are also known as balanced measurements.

## Measurements

|                    |                                                  |
|--------------------|--------------------------------------------------|
| Sc <sub>c</sub> 11 | Common mode reflection                           |
| S <sub>d</sub> d11 | Differential mode reflection                     |
| Sc <sub>d</sub> 11 | Differential mode stimulus, common mode response |
| S <sub>d</sub> c11 | Common mode stimulus, differential mode response |

FieldFox's mixed-mode S-parameter measurements require the use of the default factory calibration or a user 2-port calibration. So, the FieldFox analyzer must be equipped with 2-port measurement functionality to measure mixed-mode S-parameters. Mixed-mode S-parameters are an extension of the VNA capabilities.

# Vector Voltmeter (VVM) (Option 308)

With vector voltmeter mode, you can characterize the difference between two measurements easily. The zeroing function allows you to create a reference signal and characterize the difference between two device measurements. The results are shown on a large display in digital format.

| Series | Models              | Frequency range    |
|--------|---------------------|--------------------|
| N991xB | N9913B <sup>1</sup> | 30 kHz to 4 GHz    |
|        | N9914B <sup>1</sup> | 30 kHz to 6.5 GHz  |
|        | N9915B <sup>1</sup> | 30 kHz to 9 GHz    |
|        | N9916B              | 30 kHz to 14 GHz   |
|        | N9917B              | 30 kHz to 18 GHz   |
|        | N9918B              | 30 kHz to 26.5 GHz |
| N995xB | N9950B              | 300 kHz to 32 GHz  |
|        | N9951B              | 300 kHz to 44 GHz  |
|        | N9952B              | 300 kHz to 50 GHz  |
|        | N9953B              | 300 kHz to 54 GHz  |

## Setup parameters

|                       |                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------|
| 1-port cable trimming | Reflection (S11 or S22 measurement), magnitude and phase                                                                    |
| 2-port transmission   | Transmission or S21 measurement, magnitude, and phase                                                                       |
| A/B and B/A           | Ratio of two receivers or channels, magnitude, and phase – Need an external signal generator for the A/B or B/A measurement |
|                       | Frequency (one CW frequency point)                                                                                          |
|                       | IF bandwidth: 10 Hz to 100 kHz or 3 Hz to 30 kHz                                                                            |
|                       | Output power: Low, high, manual                                                                                             |

## Ratio accuracy (A/B and B/A)

Must zero before measuring DUT. Recommend using a high-quality power splitter or 6 dB attenuators to minimize uncertainty due to mismatch.

| Models | Frequency        | Nominal (dB) |
|--------|------------------|--------------|
| N991xB | 100 kHz to 2 GHz | ±0.2         |
| N995xB | 300 kHz to 2 GHz | ±0.2         |

## Total absolute amplitude accuracy (dB) with preamp on (Option 235 required and turned on)

20 dB attenuation, input signal -25 to -15 dBm for N991xB/3xB or -20 dBm for N995xB/6xB, peak detector, 300 Hz RBW, all settings auto-coupled, includes frequency response uncertainties. No warm-up required.

<sup>1</sup> The spec and typical values, with preamp on, are identical to that with preamp off, but the input signal levels are -40 to -20 dBm.

<sup>2</sup> N9938B units with Type-N connectors are tested using a system calibrated in 3.5 mm, with a precision 3.5 mm to Type-N adapter. With this adapter, there are nominally four modes between 18 GHz and 26.5 GHz. The effect of these modes is included within these specifications.

| Resolution bandwidth switching uncertainty | Nominal             |
|--------------------------------------------|---------------------|
| RBW < 5 MHz                                | 0.0 dB              |
| For signals not at center frequency        | 0.7 dB peak-to-peak |

| RF input VSWR                     | Frequency range   | Nominal |
|-----------------------------------|-------------------|---------|
| N991xB, N993xB (0 dB attenuation) | 10 MHz to 2.7 GHz | 1.7 : 1 |
|                                   | > 2.7 to 7.5 GHz  | 1.5 : 1 |
|                                   | > 7.5 to 26.5 GHz | 2.0 : 1 |
| N995xB, N996xB (0 dB attenuation) | 10 MHz to 2.7 GHz | 1.7 : 1 |
|                                   | > 2.7 to 7.5 GHz  | 1.6 : 1 |

## Distortion and noise limited (10 Hz RBW) dynamic range (nominal)

Applies to N991xB and N993xB

## Distortion and noise limited (10 Hz RBW) dynamic range (nominal)

Applies to N995xB and N996xB

## SSB phase noise at 1 GHz center frequency

Phase noise (dBc/Hz)

| SSB phase noise at 1 GHz |                     |                        |                     |                        |
|--------------------------|---------------------|------------------------|---------------------|------------------------|
| Offset                   | N991xB, N993xB      |                        | N995xB, N996xB      |                        |
|                          | Spec (-10 to 55 °C) | Typical (-10 to 55 °C) | Spec (-10 to 55 °C) | Typical (-10 to 55 °C) |
| 10 kHz                   | -111                | -117                   | -109                | -113                   |
| 30 kHz                   | -110                | -115                   | -110                | -114                   |
| 100 kHz                  | -105                | -111                   | -105                | -111                   |
| 1 MHz                    | -119                | -124                   | -119                | -124                   |
| 3 MHz <sup>1</sup>       | -123                | -128                   | -125                | -130                   |
| 5 MHz                    | -124                | -129                   | -126                | -130                   |

## Phase noise at different center frequencies (nominal)

Applies to N991xB and N993xB

<sup>1</sup> Tested at 2.99 MHz.

## Phase noise at different center frequencies (nominal)

Applies to N995xB and N996xB

## Dynamic range versus offset frequency versus RBW (nominal) <sup>1</sup>

Applies to N991xB, N993xB, N995xB and N996xB

<sup>1</sup> For 1 MHz RBW, the sideband observed may degrade the dynamic range to -70 dBc.

# Tracking Generator or Independent Source

The performance listed in this section applies to the tracking generator and independent source capabilities available in the following models:

| Description                                      | Model number                                                                             |
|--------------------------------------------------|------------------------------------------------------------------------------------------|
| FieldFox RF & microwave (combination) analyzers: | N9913B <sup>1</sup> , N9914B <sup>1</sup> , N9915B <sup>1</sup> , N9916B, N9917B, N9918B |
| FieldFox RF & microwave signal analyzers:        | N9933B <sup>1</sup> , N9934B <sup>1</sup> , N9935B <sup>1</sup> , N9936B, N9937B, N9938B |
| FieldFox microwave (combination) analyzers:      | N9950B, N9951B, N9952B, N9953B                                                           |
| FieldFox microwave signal analyzers:             | N9960B, N9961B, N9962B, N9963B                                                           |

See [FieldFox Configuration Guide](#) for option information. Many capabilities listed in this Data Sheet require options.

Note: Traditional tracking generators track the receiver frequency only. In FieldFox analyzers, the tracking generator frequency can be set to either track the receiver frequency, or act as an independent CW source.

1 N991xB power levels are calibrated based on PNA-X's tuned receiver, which means primarily the fundamental is included (for frequencies  $\geq 10$  MHz). For frequencies  $< 10$  MHz, power levels are calibrated in the factory using a broadband power sensor.

2 N995xB power levels are calibrated based on PNA-X's tuned receiver for the entire frequency range

| Dynamic range (dB) | Frequency             | Typical (–10 to 55 °C) |                      |

### Real-time analysis

| Measurements                                                                                | Density spectrum, spectrogram, real-time spectrum |                     |                          |
|---------------------------------------------------------------------------------------------|---------------------------------------------------|---------------------|--------------------------|
| Maximum real-time bandwidth                                                                 | 10 MHz (standard)                                 | 40 MHz (Option B04) | 100/120 MHz (Option B10) |
| Resolution bandwidth (Span dependent, $20 \leq \text{Span/RBW} \leq 280$ )                  | 1 Hz to 500 kHz                                   | 1 Hz to 2 MHz       | 1 Hz to 5 MHz            |
| Minimum signal duration with 100% Probability Of Intercept (POI) at full amplitude accuracy | 9.13 us                                           | 6.13 us             | 5.52 us                  |
| Minimum detectable signal <sup>3</sup>                                                      | 11 ns                                             | 11 ns               | 47 ns                    |
| Min. acquisition time (density spectrum)                                                    | 20 ms                                             | 20 ms               | 20 ms                    |
| Min. acquisition time (spectrogram)                                                         | 500 us/div                                        | 500 us/div          | 500 us/div               |
| Max. acquisition time (density spectrum)                                                    | 540 ms                                            | 337 ms              | 336 ms                   |
| Max. acquisition time (spectrogram)                                                         | 10 s/div                                          | 10 s/div            | 10 s/div                 |
| Spurious-free dynamic range                                                                 | 69 dB                                             | 65 dB               | 63/62 dB                 |
| IF flatness (for carrier frequency $\geq 1$ MHz)                                            | 0.1 dB (typical)                                  | 0.1 dB (typical)    | 0.1 dB (typical)         |
| FFT rate                                                                                    | 190,000 FFT/s                                     |                     |                          |
| Number of display points                                                                    | 821                                               |                     |                          |

### Traces

|                  |                                                                  |
|------------------|------------------------------------------------------------------|
| Number of traces | 4: all four can be active simultaneously and in different states |
| Detectors        | Normal, positive peak, negative peak, sample, average (RMS)      |
| States           | Clear/write, max. hold, min. hold, average, view, blank          |

### Markers

|                   |                                                    |
|-------------------|----------------------------------------------------|
| Number of markers | 6                                                  |
| Type              | Normal, delta, peak                                |
| Mkr →             | Peak, next peak, center frequency, reference level |

### Trigger

|              |                                               |
|--------------|-----------------------------------------------|
| Trigger type | Free run, external, video, RF burst, periodic |
|--------------|-----------------------------------------------|

<sup>1</sup> Performance specified above 1 MHz. Usable down to 5 kHz.

<sup>2</sup> Discontinued and replaced by corresponding Keysight N99xxC Series FieldFox.

<sup>3</sup> Minimum detectable pulse width is the shortest pulse width of a pulsed CW signal that will display a peak amplitude that is no worse than 60 dB below the peak amplitude of a CW signal of the same power level for a defined span and auto-coupled RBW.

# I/Q Analyzer (IQA) (Option 351)

The specifications in this section apply to the I/Q analyzer capabilities available in the following models:

| Description                                      | Model number                                                                             |
|--------------------------------------------------|------------------------------------------------------------------------------------------|
| FieldFox RF & microwave (combination) analyzers: | N9913B <sup>1</sup> , N9914B <sup>1</sup> , N9915B <sup>1</sup> , N9916B, N9917B, N9918B |
| FieldFox RF & microwave signal analyzers:        | N9933B <sup>1</sup> , N9934B <sup>1</sup> , N9935B <sup>1</sup> , N9936B, N9937B, N9938B |
| FieldFox microwave (combination) analyzers:      | N9950B, N9951B, N9952B, N9953B                                                           |
| FieldFox microwave signal analyzers:             | N9960B, N9961B, N9962B, N9963B                                                           |

See [FieldFox Configuration Guide](#) for option information. Many capabilities listed in this Data Sheet require options.

|                | Models                                    | I/Q analysis frequency range <sup>2</sup> |  |

|-----------------------------|---------------------------------------------------------------------------------------------------|
| Spectrum (frequency domain) | Magnitude spectrum                                                                                |
| Waveform (time domain)      | RF envelope<br>I/Q waveform (Dual simultaneous top and bottom windows: I vs. time and Q vs. time) |

| Display (multi-domain) user defined                                                                                |
|--------------------------------------------------------------------------------------------------------------------|
| Set up and display up to 4 simultaneous and multi-domain measurements with any combination of the following:       |
| • Frequency domain: Magnitude spectrum                                                                             |
| • Time domain: RF envelope, Q vs. I (polar plot), Phase vs. time, Unwrapped phase vs. time, I vs. time, Q vs. time |
| • Time summary table showing I/Q capture settings: I/Q capture time, waveform start/stop, Spectrum FFT time        |

| Measurement setup                   |                                                                                                                                                       |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| I/Q capture parameters              | Capture time, sample rate, sample period, capture samples                                                                                             |
| I/Q streaming (requires option 353) | Provides continuous streaming of IQ data up to 1.25 MSamples/sec (or maximum BW of 1 MHz) over the Ethernet port in either VITA49A or Decodio formats |

<sup>1</sup> Discontinued and replaced by corresponding Keysight N99xxC Series FieldFox.

<sup>2</sup> Performance specified above 1 MHz. Usable down to 5 kHz.

| Number of markers                                                         | 6 normal + delta pairs                                            |         |
| Type                                                                      | Normal, delta, peak, marker table (up to 6 markers)               |         |
| Couple markers                                                            | On/off (couple markers between traces in different windows)       |         |
| Mkr →                                                                     | Peak, next peak, center frequency, reference level                |         |

## Trigger

|               |                                                                                           |
|---------------|-------------------------------------------------------------------------------------------|
| Trigger type  | Free run, external, video, RF burst, periodic                                             |
| Trigger slope | Positive edge, negative edge                                                              |
| Trigger delay | Range: -150 ms to 500 ms<br>Resolution: 100 ns                                            |
| Auto trigger  | Forces a periodic acquisition in the absence of a trigger event<br>Range: 0 (off) to 30 s |

## Data storage

|                             |                                                                         |
|-----------------------------|-------------------------------------------------------------------------|
| Data types                  | Trace, Trace+state, picture (PNG)                                       |
| I/Q capture data file types | CSV, text (TXT), SDF (compatible with 89600 VSA software), Matlab (MAT) |
| I/Q data formats via SCPI   | Raw binary interleaved I/Q data recording, REAL32 (ASCII is default)    |

# Noise Figure (NF) (Option 356)

The specifications in this section apply to the noise figure measurement capabilities available in the following models:

| Description                                      | Model number                                                                             |
|--------------------------------------------------|------------------------------------------------------------------------------------------|
| FieldFox RF & microwave (combination) analyzers: | N9913B <sup>1</sup> , N9914B <sup>1</sup> , N9915B <sup>1</sup> , N9916B, N9917B, N9918B |
| FieldFox RF & microwave signal analyzers:        | N9933B <sup>1</sup> , N9934B <sup>1</sup> , N9935B <sup>1</sup> , N9936B, N9937B, N9938B |
| FieldFox microwave (combination) analyzers:      | N9950B, N9951B, N9952B, N9953B                                                           |
| FieldFox microwave signal analyzers:             | N9960B, N9961B, N9962B, N9963B                                                           |

See [FieldFox Configuration Guide](#) for option information. Many capabilities listed in this Data Sheet require options.

<sup>1</sup> Discontinued and replaced by corresponding Keysight N99xxC Series FieldFox.

No warm-up is required for the instrument specifications.

<sup>1</sup> Noise figure (NF) = DANL - (-173.98 - 2.51) dB

Nominal calculation is based on spectrum analyzer (SA) displayed average noise level (DANL) specification (dBm) stated as input terminated, RMS detection, log averaging, 0 dB input attenuation, reference level of -20 dBm, normalized to 1 Hz RBW. Noise figure (NF) = D - (K - L), where D is the DANL (displayed average noise level) specification, K is kTB (-173.98 dBm in a 1 Hz bandwidth at 290 K), and L is 2.51 dB (the effect of log averaging used in DANL verifications).

<sup>2</sup> U7227/8F maximum frequency is 50 GHz; can be used with N991xB or N993xB up to maximum frequency of 26.5 GHz.

<sup>1</sup> Noise figure (NF) = DANL - (-173.98 - 2.51) dB

Nominal calculation is based on spectrum analyzer (SA) displayed average noise level (DANL) specification (dBm) stated as input terminated, RMS detection, log averaging, 0 dB input attenuation, reference level of -20 dBm, normalized to 1 Hz RBW. Noise figure (NF) = D - (K - L), where D is the DANL (displayed average noise level) specification, K is kTB (-173.98 dBm in a 1 Hz bandwidth at 290 K), and L is 2.51 dB (the effect of log averaging used in DANL verifications).

## External preamplifier

<sup>1</sup> F signifies frequency in GHz

<sup>2</sup> Requires FieldFox firmware rev. A.12.53 or later

## Sweep

|                  |                                                     |
|------------------|-----------------------------------------------------|
| Number of points | 11 (default), 21, 51, 101, 201, 401, 601, 801, 1001 |
| Sweep mode       | Continuous or single                                |

## DUT profiles available (built-in GUI wizard aids DUT measurement setup)

|                       |                                                                                |
|-----------------------|--------------------------------------------------------------------------------|
| Amplifier             | Includes any non-frequency-converting device                                   |
| Downconverter         | Frequency context can be set to RF or IF; sideband can be set to LSB, USB, DSB |
| Upconverter           | Frequency context can be set to RF or IF; sideband can be set to LSB, USB, DSB |
| Multi-stage converter | Frequency context can be set to RF or IF                                       |

## Display formats

|                  |                                                                     |
|------------------|---------------------------------------------------------------------|
| Number of traces | Two traces available                                                |
| Display formats  | Single-trace                                                        |
|                  | Dual-trace overlay (both traces on one graticule)                   |
|                  | Dual-trace split (each trace on separate top and bottom graticules) |
| Display data     | Display data, memory, data and memory                               |
| Trace memory     | One memory trace per data trace, total of 2 memory traces           |
| Limit lines      | Upper and lower for each trace                                      |

## Markers

|                   |                                                                                            |
|-------------------|--------------------------------------------------------------------------------------------|
| Number of markers | 6                                                                                          |
| Type              | Normal, Delta, Marker Table                                                                |
| Marker table      | Display 6 markers                                                                          |
| Mkr →             | Peak, Next Peak, Peak Left, Peak Right, Center Frequency, Reference Level, Minimum, Target |

## Data storage

|            |                                        |
|------------|----------------------------------------|
| Data types | Trace, Trace+State, Picture (PNG), CSV |
|------------|----------------------------------------|

The performance listed in these sections below applies to the spectrum analyzer IF output, preamplifier, interference analyzer and spectrogram, channel scanner and 89600 VSA software capabilities available in the following models:

| Description                                      | Model number                                                                             |
|--------------------------------------------------|------------------------------------------------------------------------------------------|
| FieldFox RF & microwave (combination) analyzers: | N9913B <sup>1</sup> , N9914B <sup>1</sup> , N9915B <sup>1</sup> , N9916B, N9917B, N9918B |
| FieldFox RF & microwave signal analyzers:        | N9933B <sup>1</sup> , N9934B <sup>1</sup> , N9935B <sup>1</sup> , N9936B, N9937B, N9938B |
| FieldFox microwave (combination) analyzers:      | N9950B, N9951B, N9952B, N9953B                                                           |
| FieldFox microwave signal analyzers:             | N9960B, N9961B, N9962B, N9963B                                                           |

See [FieldFox Configuration Guide](#) for option information. Many capabilities listed in this Data Sheet require options.

## Spectrum Analyzer IF Output

Spectrum analyzer mode, zero span, IF output settings <sup>2</sup>

| Bandwidth options            | 10 MHz (standard)     | 40 MHz (Option B04) | 120 MHz (Option B10) |
|------------------------------|-----------------------|---------------------|----------------------|
| IF output mode (narrow)      |                       |                     |                      |
| Center frequency             | 33.75 MHz             | 33.75 MHz           | 33.75 MHz            |

## LTE FDD/TDD Over-the-Air (OTA) measurements <sup>3</sup>

|                   |                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Cell scan results | Frequency<br>PCI (Physical Cell Identifier) (C/S/G)<br>RSRP (Reference Signal Received Power) (dBm)<br>RSRQ (Reference Signal Received Quality) (dB)<br>RSSI (Reference Signal Strength Indicator) (dBm)<br>PSS (Primary Synchronization Signal) (dBm)<br>SSS (Secondary Synchronization Signal) (dBm)<br>SINR (Signal to Interference & Noise Ratio) (dB)<br>Freq Err (Frequency Error) (Hz) |
| Data formats      | User can set up and display 1, 2, 3 or 4 simultaneous measurements of key performance indicators (KPI's) for any component carrier (CC0 through CC4), up to 5 carriers, in any combination of the following:                                                                                                                                                                                  |

<sup>1</sup> Discontinued and replaced by corresponding Keysight N99xxC Series FieldFox.

<sup>2</sup> Performance specified above 1 MHz. Usable down to 5 kHz.

<sup>3</sup> For center frequency signals above 1 GHz, the built-in GPS receiver (Option 307) is highly recommended or locking to any 10 MHz frequency reference. When locked to GPS as the frequency reference, this provides accuracy of  $\pm 0.01$  ppm (spec).

|                      |                                                                                                                                                 |                                                                                                                              |

| Saving data                                        | Save/recall recorded data logs to/from internal memory or external USB or SD card                                                                                                                                   |                                           |

<sup>1</sup> Performance specified above 1 MHz. Usable down to 5 kHz.

<sup>2</sup> Requires external mixer to down convert millimeter wave frequency to intermediate frequency (IF)

<sup>3</sup> Discontinued and replaced by corresponding Keysight N99xxC Series FieldFox.

<sup>4</sup> For center frequency signals above 1 GHz, the built-in GPS receiver (Option 307) is highly recommended or locking to any 10 MHz frequency reference. When locked to GPS as the frequency reference, this provides accuracy of  $\pm 0.01$  ppm (spec).

# Over-the-Air (OTA) 5G NR (Option 378)

The performance listed in this section applies to the OTA analyzer capabilities available in the following models:

|                      | PBCH DMRS EVM (Physical Broadcast Channel Demodulation Reference Signal EVM) (%rms)                                                                                                    |
|                      | Composite EVM (%rms)                                                                                                                                                                   |
|                      | SS-RSRP (Synchronization Signal Reference Signal Received Power) (dBm)                                                                                                                 |
|                      | SS-RSRQ (Synchronization Signal Reference Signal Received Quality) (dB)                                                                                                                |
|                      | RSSI (Reference Signal Strength Indicator) (dBm)                                                                                                                                       |
| Signal bandwidth     | Up to 100 MHz (Requires Option B10)                                                                                                                                                    |
|                      |                                                                                                                                                                                        |
| Component carrier    | CC0 to CC7 (5G NR Over-the-Air (OTA) measurements)                                                                                                                                     |
|                      | CC0 to CC4 (5G NR conducted EVM measurements)                                                                                                                                          |
| Data formats         | User can set up and display 1, 2, 3 or 4 simultaneous measurements of key performance indicators (KPI's) for any component carrier, in any combination of the following <sup>1</sup> : |
|                      | Table      Cell scan numeric results (for up to 6 cell sites (ID's))                                                                                                                   |
|                      | Bar chart      Vertical power bar graph of selectable cell scan results for up to 6 cell sites with adjustable color "heat" amplitude scale                                            |
|                      | Spectrum      Magnitude spectrum frequency domain (fixed span)                                                                                                                         |
|                      | Strip chart      Magnitude of selectable cell scan results graphed over time                                                                                                           |
| Window configuration | Any combination of 1, 2, 3, or all 4 windows can be displayed simultaneously: 1, 2 (top & bottom), 3 (one top, two bottom), or 4 (quad display)                                        |

<sup>1</sup> You can also display the results from multiple component carriers on the table, bar chart, and strip chart displays.

## Setup parameters

| 5G NR Over-the-Air (OTA)  |                                                                                                |
|---------------------------|------------------------------------------------------------------------------------------------|
| Frequency error threshold | 0 Hz to 7.5 kHz <sup>1</sup>                                                                   |
| Subcarrier spacing        | 15 kHz, 30 kHz, 120 kHz, 240 kHz                                                               |
| SSB case                  | Auto, A, B, C, D, E                                                                            |
| Lmax                      | Auto, 4, 8, 64                                                                                 |
| Capture length            | 4, 8, 16, 24, 32 or 40 frames                                                                  |
| Drive speed               | Low, medium, high                                                                              |
| SS Meas DMRS              | Off, On                                                                                        |
| Phase compensation        | Off, On                                                                                        |
| EMF Measurement           | Off, On                                                                                        |
| EMF Units                 | dBμV/m, V/m                                                                                    |
| 5G NR Conducted EVM       |                                                                                                |
| Cell ID                   | Auto, Manual                                                                                   |
| Bandwidth                 | FR1: 5, 10, 15, 20, 25, 30, 40, 50, 60, 70, 80, 90, 100 MHz                                    |
|                           | FR2: 50, 100 MHz                                                                               |
| Subcarrier spacing        | 15 kHz, 30 kHz, 120 kHz, 240 kHz                                                               |
| Export results            | Exports SSB center frequency, SSB subcarrier spacing, SSB Case and SSB Lmax to 5G NR OTA setup |
| Trigger                   |                                                                                                |
| Trigger type              | Free run, external, periodic trigger                                                           |
| Record/Playback           |                                                                                                |
| Data logging              | Record, recall and playback data for all component carrier(s)                                  |
| Record settings           | Meas Interval, Interval type (time or distance), time interval, distance interval              |
| Supported file types      | CSV, KML                                                                                       |
| Saving data               | Save/recall recorded data logs to/from internal memory or external USB or SD card              |

<sup>1</sup> The frequency error threshold is dependent on the SCS - freq err threshold = +/- 1/4 \* SCS (e.g. for 15 kHz, freq err threshold = 3.75 kHz).

# Indoor and Outdoor Mapping (Option 352)

The performance listed in this section applies to the indoor and outdoor mapping capabilities available in the following models:

| Description                                      | Model number                                                                             |
|--------------------------------------------------|------------------------------------------------------------------------------------------|
| FieldFox RF & microwave (combination) analyzers: | N9913B <sup>1</sup> , N9914B <sup>1</sup> , N9915B <sup>1</sup> , N9916B, N9917B, N9918B |
| FieldFox RF & microwave signal analyzers:        | N9933B <sup>1</sup> , N9934B <sup>1</sup> , N9935B <sup>1</sup> , N9936B, N9937B, N9938B |
| FieldFox microwave (combination) analyzers:      | N9950B, N9951B, N9952B, N9953B                                                           |
| FieldFox microwave signal analyzers:             | N9960B, N9961B, N9962B, N9963B                                                           |

See [FieldFox Configuration Guide](#) for option information. Many capabilities listed in this Data Sheet require options.

Option 352 adds indoor and outdoor mapping capability to FieldFox analyzers, so that FieldFox can import maps from OpenStreetMap (OSM) for data collection and data plotting to the map directly on the FieldFox instrument display. The FieldFox indoor and outdoor mapping feature resides at the System level and the mapping capability can be enabled within the following modes:

- Channel Scanner (Option 312)
- Phased Array Antenna Support (Option 360)
- Over-the-Air (OTA) LTE FDD/TDD (Option 370/371)
- Over-the-Air (OTA) 5GTF (Option 377)
- Over-the-Air (OTA) 5G NR (Option 378)
- Indoor and outdoor mapping (Option 352) requirements:
- Spectrum analyzer mode (Option 233 on N991xB/N995xB, default mode on N993xB/N996xB)
- GPS receiver (Option 307), required for outdoor mapping
- OSM maps can be saved to the FieldFox internal memory, SD card or USB drive. This can be done via a direct wired LAN connection or OSM maps can be downloaded and saved to FieldFox using the [FieldFox Map Support Tool](#).

|                      | Description                 |
|----------------------|-----------------------------|
| Map coordinates      | Latitude, longitude         |
| Map zoom levels      | 4 to 17                     |
| Map icons            | Flag, point, line           |
| Map labels           | On, Off                     |
| Map panorama         | North, South, East, West    |
| Data logging         | Record, recall and playback |
| Indoor map file type | PNG                         |

Using a direct wired LAN connection, FieldFox will automatically access OSM once location coordinates (latitude and longitude) and zoom levels are entered the Map Explorer menu. If using the FieldFox Map Support Tool, OSM map files can be downloaded to a .zip file and imported to FieldFox internal memory.

<sup>1</sup> Discontinued and replaced by corresponding Keysight N99xxC Series FieldFox.

If the FieldFox GPS receiver is enabled and OSM maps have been previously saved to FieldFox with those GPS coordinates, FieldFox can automatically load the corresponding map to match the GPS coordinates.

## EMF Measurements (Option 358)

| Description                                      | Model number                                                                             |
|--------------------------------------------------|------------------------------------------------------------------------------------------|
| FieldFox RF & microwave (combination) analyzers: | N9913B <sup>1</sup> , N9914B <sup>1</sup> , N9915B <sup>1</sup> , N9916B, N9917B, N9918B |
| FieldFox RF & microwave signal analyzers:        | N9933B <sup>1</sup> , N9934B <sup>1</sup> , N9935B <sup>1</sup> , N9936B, N9937B, N9938B |
| FieldFox microwave (combination) analyzers:      | N9950B, N9951B, N9952B, N9953B                                                           |
| FieldFox microwave signal analyzers:             | N9960B, N9961B, N9962B, N9963B                                                           |

|                                | Description                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| Maximum modulation rate      | 5 kHz, demod sweep time: 50 $\mu$ s to 50 ms                                                                         |
| Frequency deviation          | (Hz), $\pm$ peak deviation (Hz)                                                                                      |
| Maximum deviation            | 5 MHz (nominal)                                                                                                      |
| <b>Audio record/playback</b> |                                                                                                                      |
|                              | Record audio into WAV file with time stamp and geo tag and playback on PC                                            |

## Radio standards

With a radio standard applied, pre-defined frequency bands, channel numbers or uplink / downlink selections can be used instead of manual frequency entry. The pre-defined FieldFox radio standards include bands such as W-CDMA, LTE, and GSM. Alternately, users can create custom standards and import them into FieldFox analyzers.

<sup>1</sup> Discontinued and replaced by corresponding Keysight N99xxC Series FieldFox.

# Spectrum Analyzer Time Gating (Option 238)

With time gating, you can measure the spectrum of a periodic signal during a specified time interval. Pulsed-RF signals are an example of a periodic signal that can be measured with time gating. For example, you can measure the pulse during the on period, not the transition or the off period. Or you can exclude interfering signals such as a periodic transient. Time gating allows you to view spectral components that would otherwise be hidden. FieldFox's time gating method is a Gated FFT.

|                           | Description                               |
|---------------------------|-------------------------------------------|
| Gate method               | Gated FFT                                 |
| Span range                | Any span                                  |
| RBW range                 | 1 Hz to 300 kHz (derived from gate width) |
| Gate delay range          | -150 ms to 10 s                           |
| Gate width (length) range | 6 $\mu$ s to 1.8 s                        |
| Gate sources              | External, RF burst, Video                 |

# Reflection Measurements (RL, VSWR) (Option 320, applicable to SA only models)

The performance listed in this section applies to the reflection measurements capabilities available in the following models:

| Description                                 | Model number                                                                             |
|---------------------------------------------|------------------------------------------------------------------------------------------|

ERTA operation requires two FieldFox units, each one configured with specific options, and certain accessories. See [FieldFox Configuration Guide](#) for option information. Many capabilities listed in this Data Sheet require options.

## System description

ERTA can be used to measure the scalar transmission gain or loss of an RF system. It is useful when measuring long lossy cables where the two ends cannot easily be brought together, such as those bolted in on ships or aircrafts. It is also useful in measuring the insertion loss of waveguide systems, or using the frequency-offset feature, devices such as mixers and converters.

ERTA measurements are based on two FieldFox units; one at each end of the measured DUT. One FieldFox is the source and reference receiver (R), while the other is the measurement receiver (B). The two FieldFox units are synchronized using hardware triggering. By taking advantage of FieldFox's InstAlign technique, ERTA can be used to make accurate gain or loss measurements.

<sup>1</sup> Discontinued and replaced by corresponding Keysight N99xxC Series FieldFox.

## Frequency specifications

The ERTA frequency range is limited by each individual analyzer's frequency range.

| Source frequency<br>[Remote] | [Tracking] – FieldFox source tracks the receiver by default. The frequencies are identical.<br>[CW] – FieldFox's source can be set to a CW frequency independent of FieldFox's receiver frequency. FieldFox's source is at a single CW frequency; FieldFox's receiver is swept.<br>[Coupled CW] – FieldFox's source CW frequency is auto-coupled to FieldFox's receiver [Center Frequency] setting. |

### Frequency-offset capability

This feature allows the FieldFox's source frequency to be offset from FieldFox's receiver frequency. The offset frequency can be negative, zero, or positive. The frequency-offset capability is useful when characterizing the scalar transmission response of devices such as mixers and converters.

### Frequency-offset setup parameters

|                              |                                                                                                                                                                                                                                                                                                                                                             |

## Dynamic range and maximum attenuation

Dynamic range is the difference between the maximum output power available from FieldFox's source and the noise floor of the second FieldFox, while ensuring that neither FieldFox's ADC goes into over-range. Dynamic range also accounts for the loss of the power splitter. Dynamic range is applicable when testing devices such as filters, where there is low loss in the passband, and significant loss in the stopband, and both passband and stopband need to be on the display at the same time (same sweep).

Maximum attenuation is the difference between maximum output power available from FieldFox's source and the noise floor of FieldFox. It also accounts for the loss of power splitter. Maximum attenuation is applicable when testing devices such as cables, which have relatively uniform loss over the swept frequency range.

The values shown are based on the recommended minimum RBW of 3 kHz when the frequency references are locked via GPS, and 300 kHz when the frequency references are unlocked. Locking the frequency references to GPS allows for greater frequency accuracy of the FieldFox units and use of a

narrower RBW, which in turn results in a lower DANL, and hence a wider measurement range. When the GPS signals cannot be present at all times, the GPS hold-over mode can be used.

| Dynamic range (dB)            |                                               | Typical                                       |                                            |                                            |

## Absolute power and gain measurement uncertainties

Verified with input level of -10 dBm, peak detector, 10 dB attenuation, preamplifier off, all settings auto-coupled, no warm-up required. Includes frequency response uncertainties. Assumes an ERTA system using a Keysight 11667A, 11667B, or 11667C power splitter.

### Input power (R) measurements uncertainty, 30 kHz RBW (dB)

| N991xB and N993xB | Spec (23 ± 5 °C) | Spec (-10 to 55 °C) | Spec (23 ± 5 °C) | Spec (-10 to 55 °C) |

## Cable correction

Input and output jumper cable losses can be accounted for using ERTA's cable correction wizard.

The performance listed in built-on power meter, external USB power sensor support, pulse measurements, USB power sensor measurements versus frequency sections applies to the capabilities available in the following models:

| Description                                      | Model number                                                                             |
|--------------------------------------------------|------------------------------------------------------------------------------------------|
| FieldFox RF & microwave (combination) analyzers: | N9913B <sup>1</sup> , N9914B <sup>1</sup> , N9915B <sup>1</sup> , N9916B, N9917B, N9918B |

See [FieldFox Configuration Guide](#) for option information. Many capabilities listed in this Data Sheet require options.

## Built-in Power Meter (Option 310)

Using the built-in power meter, FieldFox is able to make very accurate channel power measurements. The channel bandwidth can be set wide to simulate average power meter measurements. This measurement function provides the flexibility to make user definable channel power measurements.

|                  | Description                                                                                            |                   |                 |

## External USB Power Sensor Support (Option 302)

The external USB power sensor option supports various Keysight USB power sensors. For an up-to-date listing of the supported power sensors, visit <http://www.keysight.com/find/fieldfoxsupport>

|                  | Description                                                                                                                           |
|------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| Setup parameters | Frequency                                                                                                                             |
| Functions        | Relative/absolute measurements, offsets, units of dBm or Watts, or dB or %, minimum and maximum limits.                               |
| Internal source  | FieldFox's internal source can be turned on in the USB power sensor mode. CW frequency and nominal power level control are available. |

## Pulse Measurements (Option 330)

FieldFox's pulse measurement option can be used to characterize RF pulses such as those used in radar and electronic warfare systems. Measurements are made using FieldFox and Keysight's USB peak power sensors.

Performance specifications such as frequency, dynamic range and minimum pulse width depend on the peak power sensor. Supported peak power sensors: <http://www.keysight.com/find/fieldfoxsupport>

|                  | Description                                                                             |
|------------------|-----------------------------------------------------------------------------------------|
| Setup parameters | Frequency, time (center), time/division, gating, triggering, video bandwidth, averaging |
|                  | Average power, peak power, and peak to average ratio                                    |
|                  | Analog gauge display and digital display, dBm and Watts                                 |
| Functions        | Relative/absolute measurements, offset, dB or %, minimum and maximum limits             |
|                  | Trace graph for pulse profiling with gating                                             |
|                  | Rise time, fall time, pulse width, pulse period, pulse repetition frequency             |

## USB Power Sensor Measurements versus Frequency (Option 208)

This feature allows FieldFox's source frequency to be set independently from the power sensor (receiver) frequency. With frequency-offset using power sensor (FOPS), the frequency of both the source and receiver are swept, and the two track each other. The offset frequency can be negative, zero, or positive.

FOPS can be used to characterize the scalar transmission response of devices such as mixers and converters. This frequency-offset capability is necessary for conversion loss/gain measurements on frequency-translating devices, since, by definition, the input and output frequencies of the DUT are different. The FieldFox source stimulates the DUT and the power sensor is used as the measurement receiver.

Since power sensors are inherently broadband devices (not frequency-selective), the user should ensure that only the signal of interest is present at the power sensor input and that all other signals are filtered appropriately.

### Setup parameters

|                     |                                                                                      |
|---------------------|--------------------------------------------------------------------------------------|
| Source frequency    | Center/span or start/stop                                                            |
| Receiver frequency  | Range determined by power sensor range                                               |
| Frequency offset    | Positive offset or negative offset                                                   |
| Frequency step size | 30 kHz minimum                                                                       |
| Number of points    | 2 to 1601 (Combination of number of points and frequency step size limited by span.) |
| Dwell time/point    | 0 to 1.0 sec                                                                         |

Source frequency span must be equal to receiver frequency span.

Receiver sweep direction: forward (default setting) or reverse.

For some DUTs, the output frequency may sweep in a reverse direction, as compared to the source frequency. The basic relationships between the source, receiver and offset frequencies are shown in the table below. The FieldFox analyzer includes an offset calculator that ensures a fast measurement setup.

| Src sweep direction           | Rx sweep direction          | Frequency calculations                                                   |
|-------------------------------|-----------------------------|--------------------------------------------------------------------------|
| Forward $f_{2src} > f_{1src}$ | Forward $f_{2rx} > f_{1rx}$ | Receiver frequency = Source frequency $\pm$ Offset                       |
| Forward $f_{2src} > f_{1src}$ | Reverse $f_{2rx} > f_{1rx}$ | Receiver frequency = Offset - Source Frequency Offset > Source frequency |

|               | Description                                                                                                                                                                                                                                |
|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Measurements  | Source power, gain/loss and receiver (Rx) power<br>Gain = Rx power / source power (memory). Source power (memory) is measured during setup.                                                                                                |
| Output power  | Refer to the test port output power typical data on page 5.                                                                                                                                                                                |
| Dynamic range | The dynamic range with FOPS is dependent on FieldFox's output power and the power sensor's dynamic range.<br>Supported USB power sensors: <a href="http://www.keysight.com/find/fieldfoxsupport">www.keysight.com/find/fieldfoxsupport</a> |

The graph below shows a filter measurement using two different power sensors, the U2002A (- 60 to +20 dBm) and the U2021XA (- 45 to +20 dBm). While a filter is not commonly measured using FOPS, it is a useful device for demonstrating dynamic range.

For both measurements, the FieldFox source power was set to - 1 dBm, the maximum available in the selected frequency range of 7.25 to 13.25 GHz. An external amplifier was not used in this case, but one can be added to increase the source power and hence dynamic range.

Figure 1. Example showing typical dynamic range of FOPS

## Built-In GNSS (GPS+) Receiver (Option 307)

|                       | Description                                                                                                                                                  |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GNSS (GPS+) receiver  | The internal GNSS/GPS receiver can be used as a frequency reference. <sup>1</sup>                                                                            |
| Supported systems     | GPS, GLONASS, BeiDou and Galileo                                                                                                                             |
| Modes                 | Off, internal, external                                                                                                                                      |
| Sync clock            | On, off                                                                                                                                                      |
| Functionality         | Geo-location: latitude, longitude, altitude (elevation), time, sync time/date<br>Requires external GNSS/GPS antenna (can use N9910X-825, GPS active antenna) |
| Connector for antenna | SMA (f), 3.3 or 5 V                                                                                                                                          |
| Maximum DC current    | 20 mA                                                                                                                                                        |

## DC Bias Variable-Voltage Source (Option 309)

|                               | Description                                                                                                                                           |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| Connector                     | SMB (m)                                                                                                                                               |
| Voltage                       | +1 to +32 V (nominal)                                                                                                                                 |
| Resolution                    | 0.1 V (nominal)                                                                                                                                       |
| Maximum current               | 0.65 A (nominal)                                                                                                                                      |
| DC current readout resolution | 0.01 (nominal)A                                                                                                                                       |
| Maximum power <sup>2</sup>    | 7 watts (nominal)                                                                                                                                     |
| Display read out              | Voltage, current                                                                                                                                      |
| Overload trip protection      | Automatically engages when voltage source is on.<br>The trip circuit can be reset from front panel without pre-setting or power cycling the analyzer. |

<sup>1</sup> External GPS USB receivers can be used to provide geo-location data. However, they cannot be used for frequency reference locking.

<sup>2</sup> Battery life will be reduced when DC source is used. A trip function turns off the power supply when the rated current or power is exceeded.

## Remote Control Capability (Option 030)

Option 030 adds remote control capability to FieldFox analyzers, so that FieldFox can be controlled via an iOS device, or an Android device. The FieldFox app, running on the iOS/Android device, combined with Option 030 on the FieldFox analyzer provides full control of the instrument from a remote location. The app emulates the front panel of FieldFox, so users can press the FieldFox hard keys or softkeys using their iPhone/iPad, or Android mobile device and make measurements remotely. For example, a tower climber can be on the tower with a FieldFox analyzer, while the technician controls and makes the measurements down below, using an iPad. The iPad and FieldFox communicate via a network connection.

| iOS device requirements               | Android device requirements           |
|---------------------------------------|---------------------------------------|
| iPad, iPhone, or iPod Touch           | Android phone, tablet PC              |
| iOs of 6.1 or higher                  | Android OS of 9.0 or higher           |
| A WiFi or cellular network connection | A WiFi or cellular network connection |

The FieldFox app communicates with FieldFox via a network connection, so both the iOS/Android device and FieldFox need to be on a network where both devices can reach the other. For example, a company intranet or a site installation using a wireless router. FieldFox can directly be connected to a LAN cable, or if wired LAN is not available, a user supplied wireless router can be configured to work with FieldFox. FieldFox does not include a wireless router.

## FieldFox app without Option 030

The FieldFox app can be installed on an iOS or an Android device independent of the presence of Option 030 on the analyzer. Without Option 030, users can view the live display screen of their FieldFox remotely but cannot control the instrument. With 030 purchased and installed on their FieldFox, users can both view and control their FieldFox. Control refers to the ability to press hard keys, softkeys, make or change measurements, etc. Option 030 does not include the iOS or the Android device itself. Users must supply their own iOS or Android device. Option 030 is a license on the FieldFox analyzer. Option 030 and the FieldFox app are not applicable to BlackBerry, or Windows phone/tablet devices. FieldFox can be remotely controlled via PC software using a wireless or wired LAN connection. FieldFox Data Link software provides a remote display tool with a virtual keypad that allows remote access to the FieldFox display (Option 030 not required).

## EMI measurements (Option 361)

|                  | Description                                                                                  |
|------------------|----------------------------------------------------------------------------------------------|
| Frequency range  | Same as spectrum analyzer frequency range                                                    |
| Number of traces | 4, each trace can be configured with individual trace mode and detector type                 |
| Trace mode       | Max hold, Min, Clear/Write, View and blank. (Average is implemented as EMI average detector) |
| Detector         | Positive Peak, Quasi-Peak, EMI average                                                       |
| CISPR bandwidth  | 200 Hz, 9 kHz, 120 kHz, 1MHz                                                                 |
| Measurements     | Frequency scan, CISPR 16-1-1 Amplitude probability distribution (APD)                        |

# Pulse Generator (Option 357)

Using the built-in pulse generator, FieldFox is transformed into a handheld signal generator which generates a variety of user-definable pulse sequences and continuous-wave signals with or without analog modulation up to 54 GHz.

| Description                                      | Model number                                                                             |
|--------------------------------------------------|------------------------------------------------------------------------------------------|
| FieldFox RF & microwave (combination) analyzers: | N9913B <sup>1</sup> , N9914B <sup>1</sup> , N9915B <sup>1</sup> , N9916B, N9917B, N9918B |
| FieldFox RF & microwave signal analyzers:        | N9933B <sup>1</sup> , N9934B <sup>1</sup> , N9935B <sup>1</sup> , N9936B, N9937B, N9938B |
| FieldFox microwave (combination) analyzers:      | N9950B, N9951B, N9952B, N9953B                                                           |
| FieldFox microwave signal analyzers:             | N9960B, N9961B, N9962B, N9963B                                                           |

See [FieldFox Configuration Guide](#) for option information. Many capabilities listed in this Data Sheet require options.

|                | Models                                    | Signal source output frequency range <sup>2</sup> |
|----------------|-------------------------------------------|---------------------------------------------------|
| N991xB, N993xB | N9913B <sup>1</sup> , N9933B <sup>1</sup> | 30 kHz to 4 GHz                                   |
|                | N9914B <sup>1</sup> , N9934B <sup>1</sup> | 30 kHz to 6.5 GHz                                 |
|                | N9915B <sup>1</sup> , N9935B <sup>1</sup> | 30 kHz to 9 GHz                                   |
|                | N9916B, N9936B                            | 30 kHz to 14 GHz                                  |
|                | N9917B, N9937B                            | 30 kHz to 18 GHz                                  |
|                | N9918B, N9938B                            | 30 kHz to 26.5 GHz                                |
| N995xB, N996xB | N9950B, N9960B                            | 300 kHz to 32 GHz                                 |
|                | N9951B, N9961B                            | 300 kHz to 44 GHz                                 |
|                | N9952B, N9962B                            | 300 kHz to 50 GHz                                 |
|                | N9953B, N9963B                            | 300 kHz to 54 GHz                                 |

| Output signal formats |                                                                           |
|-----------------------|---------------------------------------------------------------------------|
| Continuous Wave (CW)  | AM: AM triangle, AM sine<br>FM: Sawtooth, FM triangle, FM sine, FSK, BPSK |
| Pulse                 | Standard pulse, FM chirp, FM triangle, AM pulse, User-definable sequences |

| Minimum output frequency                                      |                                |                   |
|---------------------------------------------------------------|--------------------------------|-------------------|
| Output signal formats                                         | Models                         | Minimum frequency |
| CW, AM triangle, AM sine, BPSK, standard pulse, AM pulse      | N991xB, N993xB                 | 30 kHz            |
|                                                               | N995xB, N996xB                 | 300 kHz           |
| FM sawtooth, FM triangle, FM sine, FSK, FM chirp, FM triangle | N991xB, N993xB, N995xB, N996xB | 1.87 MHz          |

<sup>1</sup> Discontinued and replaced by corresponding Keysight N99xxC Series FieldFox.

<sup>2</sup> The starting frequency applies specifically to CW and certain signal formats. Refer to "Minimum output frequency" subsection below for the starting frequency related to other signal formats.

## Frequency resolution

| Frequency range                    | Specification | Models                          |
|------------------------------------|---------------|---------------------------------|
| 30 kHz <sup>1</sup> to 1.91211 GHz | 0.67 Hz       | N991xB/N993xB, or N995xB/N996xB |
| > 1.91211 to 3.82461 GHz           | 1.34 Hz       | N991xB/N993xB, or N995xB/N996xB |
| > 3.82461 to 7.64961 GHz           | 2.68 Hz       | N991xB/N993xB, or N995xB/N996xB |
| > 7.64961 to 15.29961 GHz          | 5.36 Hz       | N991xB/N993xB, or N995xB/N996xB |
| > 15.29961 to 26.5 GHz             | 10.73 Hz      | N991xB/N993xB, or N995xB/N996xB |
| > 26.5 to 45.8 GHz                 | 16.09 Hz      | N995xB/N996xB                   |
| > 45.8 to 54 GHz                   | 32.19 Hz      | N995xB/N996xB                   |

## Frequency reference, -10 to 55 °C

|                                            |                                                         |
|--------------------------------------------|---------------------------------------------------------|
| Accuracy                                   | ±0.9 ppm (spec) + aging                                 |
|                                            | ±0.5 ppm (typical) + aging                              |
| Accuracy, when locked to GPS               | ±0.01 ppm (nominal)                                     |
| Accuracy, when GPS antenna is disconnected | ±0.4 ppm (nominal) <sup>2</sup>                         |
| Aging rate                                 | ±1 ppm/yr for 20 years (spec), will not exceed ±3.5 ppm |

## Maximum output power vs. frequency (nominal) <sup>3</sup>

Nominally equivalent to typical values in the subsection of “Output power (high)” stated in the chapter of “Tracking generator and independent source”.

## Maximum output power <sup>4</sup>

| Frequency range               | Nominal |
|-------------------------------|---------|
| 30 kHz <sup>1</sup> to 54 GHz | +10 dBm |

## Minimum output power <sup>4</sup>

| Output signal format                                     | Frequency range              | Minimum power |
|----------------------------------------------------------|------------------------------|---------------|
| CW, AM triangle, AM sine, BPSK, standard pulse, AM pulse | 30 kHz <sup>1</sup> to 1 MHz | -60 dBm       |
|                                                          | 1 MHz to 54 GHz              | -110 dBm      |
| All other formats                                        | 1.87 MHz up to 54 GHz        | -110 dBm      |
| Output power tuning step                                 | 0.1 dB                       |               |
| Output power accuracy <sup>5</sup>                       | ±1 dB (nominal)              |               |

## Reference out/trigger out

|                  |                                           |
|------------------|-------------------------------------------|
| Connector        | SMB (m), 50 Ω                             |
| Output amplitude | ≥ 0 dBm                                   |
| Frequency        | 10 MHz (1 + frequency reference accuracy) |

## Reference in/trigger in

|                 |                         |
|-----------------|-------------------------|
| Connector       | SMA (f), 50 Ω           |
| Reference input | 10 MHz, -5 to +10 dBm   |
| Trigger in      | Reserved for future use |

<sup>1</sup> 300 kHz for N995xB or N996xB

<sup>2</sup> The maximum drift expected in the frequency reference applicable when the ambient temperature changes ±5°C from the temperature when the GPS signal was last connected.

<sup>3</sup> Output power at port 1 connector

<sup>4</sup> Settable through UI

<sup>5</sup> Calibrate Pulse Generator prior to implementation using two resistor power splitter and load. Accuracy set by SA's total absolute amplitude accuracy for frequencies above 1 MHz.

# General Information

## N991xB, N993xB, N995xB, N996xB

|                       |                                                         |
|-----------------------|---------------------------------------------------------|
| Calibration cycle     | 1 year                                                  |
| Weight                | 3.34 kg or 7.35 lb. including battery (approx.)         |
| Dimensions: H x W x D | 292 x 188 x 82 mm (11.5 in x 7.4 in x 3.2 in) (approx.) |

### Environmental

Samples of this product have been type tested in accordance with the Keysight Environmental Test Manual and verified to be robust against the environmental stresses of Storage, Transportation and End-use; those stresses include but are not limited to temperature, humidity, shock, vibration, altitude and power line conditions. Test Methods are aligned with IEC 60068-2 and levels meet or exceed MIL-PRF-28800F Class 2.

|                             |                                                                                                                                                  |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| Maximum humidity            | Maximum relative humidity (non-condensing): 95% relative humidity up to 40 °C, decreases linearly to 45% relative humidity at 55 °C <sup>1</sup> |
| Altitude – operating        | 9,144 m or 30,000 ft (using battery)                                                                                                             |
| Altitude – non-operating    | 15,240 m or 50,000 ft                                                                                                                            |
| Altitude – AC to DC adapter | 3,000 m or 9,840 ft                                                                                                                              |

### Ingress protection

This product has been type tested to meet the requirements for ingress protection IP53 in accordance with IEC/EN 60529 (IP rating for instrument by itself, with no cover).

### Temperature range

|                                        |                                                                      |
|----------------------------------------|----------------------------------------------------------------------|
| Operating, AC power, spec <sup>2</sup> | -10 to 55 °C (14 to 131 °F) (-10 to 45 °C/14 to 113 °F in RTSA mode) |
| Operating, battery, spec               | -10 to 50 °C (14 to 122 °F)                                          |
| Operating, battery, typical            | -10 to 55 °C (14 to 131 °F)                                          |
| Storage, spec <sup>3, 4</sup>          | -51 to 71 °C (-60 to 160 °F)                                         |

**EMC:** Complies with the essential requirements of the European Radio Equipment Directive as well as current editions of the following standards (dates and editions are cited in the Declaration of Conformity):

IEC/EN 61326-1  
EN 301 489-1, EN 301 489-19  
CISPR Pub 11 Group 1, Class B  
AS/NZS CISPR 11  
ICES/NMB-001(B)

This ISM device complies with Canadian ICES-001  
Cet appareil ISM est conforme a la norme NMB-001 du Canada.

<sup>1</sup> From 40 °C to 55 °C, the maximum % relative humidity follows the line of constant dew point.

<sup>2</sup> Power supply: 0 to 40 °C at 90 W output rating, derate linearly at 3 watts per degree C, to 45 W at 55 °C, 30 W at -20 °C.

<sup>3</sup> The battery packs should be stored in an environment with low humidity. Extended exposure to temperature above 45 °C could degrade battery performance and life.

<sup>4</sup> Power supply: -40 °C to 85 °C (-40 °F to 185 °F).

## South Korean Class A EMC declaration

This equipment has been conformity assessed for use in business environments. In a residential environment this equipment may cause radio interference.

## Explosive environment

This product has been type tested to meet the requirements for operation in explosive environments in accordance with MIL-STD-810G, Method 511.5, Procedure I.

## Power supply

|                           |                                                                                                                       |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------|
| External DC input         | 15 to 19 VDC, 4 amps maximum when battery charging                                                                    |
| External AC power adapter | Efficiency level VI                                                                                                   |
| Input                     | 100 to 240 VAC, 50 to 60 Hz, 1.5 to 0.75 A                                                                            |
| Output                    | 15 VDC, 6 A                                                                                                           |
| Power consumption         | 16 to 30 watts (typical)<br>Battery consumption depends on battery saver selection, measurement mode and temperature. |

## Battery

|                              |                                                                                                                                                                                              |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Lithium ion                  | 10.8 V, 6.4 A-h, 70 Wh                                                                                                                                                                       |
| Operating time               | 4 hours (typical), mode dependent                                                                                                                                                            |
| Charge time                  | A fully discharged battery takes about 1.5 hours to recharge to 80%. Four hours to 100%.                                                                                                     |
| Discharge temperature limits | -10 to 60 °C, ≤ 85% RH                                                                                                                                                                       |
| Charge temperature limits    | 0 to 45 °C, ≤ 85% RH                                                                                                                                                                         |
| Storage temperature limits   | -20 to 50 °C, ≤ 85 % RH<br>The battery packs should be stored in an environment with low humidity. Extended exposure to temperatures above 45 °C could degrade battery performance and life. |

## Test port connectors

|                 |      |
|-----------------|------|
| Input impedance | 50 Ω |
|-----------------|------|

## Connector type

|                       |                                                                                                                                                                                                                                                      |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ≤ 18 GHz models       | Type-N (f)                                                                                                                                                                                                                                           |
| 26.5 GHz models       | 3.5 mm (m) for FieldFox microwave analyzer, N9918B. On FieldFox SA N9938B, you may choose 3.5 mm (m) by ordering option N9938B-100 or Type-N (f) by default. Type-N (f) port connector is not available for the 26.5 GHz microwave analyzer, N9918B. |
| 32, 44, 50 GHz models | NMD 2.4 mm (m), torque 0.90 Nm or 8 in-lb, use torque wrench N9910X-886                                                                                                                                                                              |
| 54 GHz models         | NMD 1.85 mm (m), torque 0.90 Nm or 8 in-lb, use torque wrench N9910X-886                                                                                                                                                                             |

## Display

|  |                                         |
|--|-----------------------------------------|
|  | 6.5" transfective color LCD-LED backlit |
|--|-----------------------------------------|

## Headphone jack connector

|  |                                        |
|--|----------------------------------------|
|  | 3.5 mm (1/8 inch) miniature audio jack |
|--|----------------------------------------|

## USB-A, 2-ports

|  |                  |
|--|------------------|
|  | Hi-speed USB 2.0 |
|--|------------------|

## Mini USB, 1 port

|  |                                                                   |
|--|-------------------------------------------------------------------|
|  | Hi-speed USB 2.0; used for SCPI programming; USBTMC (USB IEEE488) |
|--|-------------------------------------------------------------------|

## Keyboard

|  |                                                                   |
|--|-------------------------------------------------------------------|
|  | USB keyboards are supported (user must supply their own keyboard) |
|--|-------------------------------------------------------------------|

## LAN

|                                |                                                                                                        |
|--------------------------------|--------------------------------------------------------------------------------------------------------|
| Connector                      | RJ-45<br>Used for programming, data saving, remote control, and connection to DataLink software        |
| N991xB, N993xB, N995xB, N996xB | 1000/100/10 base-T (auto switching)<br>SCPI over LAN using sockets and VX11 (LAN IEEE488); HTTP        |
| Programming                    | SCPI, using the built-in LAN interface, PathWave BenchVue                                              |
| Languages                      | English, Spanish, German, Italian, French, Russian, Japanese, Chinese, Turkish, Korean, and Portuguese |
| Preset                         | User preset for both mode preset and complete system preset                                            |

## Limit lines

The limit line capabilities listed in this section apply to the cable and antenna analyzer, network analyzer and spectrum analyzer modes in all FieldFox analyzers.

- Limit lines can be a combination of horizontal lines, sloping lines, or discrete data points
- Limit types: Fixed or relative
- Each trace can have its own limit line
- Limit lines can be built from a current trace
- Limit segments > 100, limited by memory size
- Max limit line number of points: 10,001
- Beep: Beep off, Beep on fail, Beep on pass
- Pass/fail warning: on/off
- Offset and margin: An increase or decrease in the limit line
- Save/recall limit lines

## Data storage

|            |                                                                                               |
|------------|-----------------------------------------------------------------------------------------------|
| Internal   | Internal Minimum: 4 GB<br>Minimum states and traces: 1000                                     |
| External   | Supports USB 2.0 compatible memory devices and SD/SDHC memory cards with FAT and exFAT format |
| Data types | Trace, trace+state, picture (png), data (csv), S1P, S2P                                       |

## Secure operation

|                    |                                                                                                                                                                                          |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Frequency blanking | For protection of sensitive data all frequency information can be turned off.                                                                                                            |
| Erase user data    | All user data can be erased on a FieldFox analyzer. For more information visit:<br><a href="http://www.keysight.com/find/securefieldfox">http://www.keysight.com/find/securefieldfox</a> |

## Reference OUT/trigger OUT

|                  |                                                                         |
|------------------|-------------------------------------------------------------------------|
| Connector        | SMB (m), 50 $\Omega$                                                    |
| Output amplitude | $\geq 0$ dBm                                                            |
| Frequency        | 10 MHz (1 + frequency reference accuracy)                               |
| Trigger out      | Reserved for future use; currently only used for ERTA 2-box handshaking |

## Reference IN/trigger IN

|                 |                             |
|-----------------|-----------------------------|
| Connector       | SMA (f), 50 $\Omega$        |
| Reference input | 10 MHz, -5 to +10 dBm       |
| Trigger input   | 3.3 or 5 V TTL logic levels |

# FieldFox Physical Dimensions

## FieldFox models with Type-N test port connectors

## FieldFox models with 3.5 mm test port connectors

## FieldFox models with 2.4 mm test port connectors <sup>1</sup>

<sup>1</sup> Physical dimension measures shown in this drawing are also applicable to the FieldFox models with test port connectors of 1.85 mm (N9953B/N9963B).

# Keysight Support Services

Accelerate your learning curve, enhance your test uptime, and confidently guarantee your instrument accuracy with Keysight Support Services. Keysight Services are here to support your test needs with expert technical support, instrument repair and calibration, training, alternative acquisition program options, and more.

A KeysightCare agreement provides dedicated, proactive support through a single point of contact for an extensive group of instruments, software, and solutions to ensure optimal uptime, with fast response times and resolution. Explore the services that are right for you.

## Keysight Services

| Offering                                                                                                 | Benefits                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>KeysightCare</b><br> | KeysightCare provides elevated support for Keysight instruments and software, with access to technical support experts who respond within a specified time and ensure committed repair and calibration turnaround times (TAT). KeysightCare offers multiple service agreement tiers, including KeysightCare Assured, Enhanced, and Application Software Support. See the <a href="#">KeysightCare data sheet</a> for details. |
| KeysightCare Assured                                                                                     | KeysightCare Assured provides a commitment to respond to your engineer's technical needs quickly. When unexpected repairs are necessary, you can count on a committed repair service turnaround time to get you back up and running.                                                                                                                                                                                          |
| KeysightCare Enhanced                                                                                    | KeysightCare Enhanced includes all the benefits of KeysightCare Assured plus Keysight's accurate and reliable <a href="#">Calibration Services</a> , accelerated and committed TAT, and technical response.                                                                                                                                                                                                                   |
| <b>Keysight Support Portal &amp; Knowledge Center</b>                                                    | All KeysightCare tiers include access to the Keysight Support Portal, where you can manage support and service resources related to your assets, such as service requests and status, or browse the Knowledge Center.                                                                                                                                                                                                         |
| <b>Education Services</b>                                                                                | Build confidence and gain new skills to make accurate measurements, with flexible Education Services developed by Keysight experts. Including Start-up Assistance.                                                                                                                                                                                                                                                            |
| <b>Alternative acquisition options</b>                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>KeysightAccess</b>                                                                                    | Reduce budget challenges with a lease-based subscription service that offers low monthly payments, enabling you to get the instruments, software, and technical support you want for your test needs.                                                                                                                                                                                                                         |

## Recommended services

Maximize your instrument uptime and confidently make accurate measurements by securing technical support, repair, and calibration services with committed response and turnaround times. High-performance instruments include 1 year of KeysightCare Assured. Obtain multi-year KeysightCare upfront to eliminate the need for lengthy and tedious paperwork and yearly requests for maintenance budget. Plus, you benefit from secured service for 2, 3, or 5 years.

| Service                       | Function                                                     |
|-------------------------------|--------------------------------------------------------------|
| <b>KeysightCare Enhanced*</b> | <b>Includes tech support, warranty and calibration</b>       |
| R-55B-001-1                   | KeysightCare Enhanced – Upgrade 1 year                       |
| R-55B-001-2                   | KeysightCare Enhanced – Extend to 2 years                    |
| R-55B-001-3                   | KeysightCare Enhanced – Extend to 3 years (Recommended)      |

| PS-S40-01                     | Included – instrument fundamentals and operations starter    |
| PS-S40-04                     | Recommended – instrument fundamentals and operations starter |
| PS-S40-02                     | Optional, technology & measurement science standard learning |

\* Available in select countries. For details, please view the [datasheet](#). R-55B-001-2/3/5 must be ordered with R-55B-001-1.

## Carry Precision with You

Every piece of gear in your field kit had to prove its worth. Measuring up and earning a spot is the driving idea behind Keysight's FieldFox analyzers. They're equipped to handle routine maintenance, in-depth troubleshooting, and anything in between. Better yet, FieldFox delivers precise microwave measurements—wherever you need to go. Add FieldFox to your kit and carry precision with you.

Mess- und Prüftechnik. Die Experten.
