FastEdge[®]

USB Fast Edge Pulse Generator

Datasheet

About USB FastEdge® Pulse Generator

The „FEDGE®“ is a fast edge signal generator that provides a square ~32 ps pulse in a USB stick size. Single button operation allows selection of different operating modes. The -500mV, 50 Ohm output signal is very square and flat, without overshoot or undershoot making it perfect for verifying instrument and probe rise/ fall times, as well as verifying signal path rise/ fall time and undershoot/ overshoot. PMK also offers an optional 10GHz power splitter that allows the signal generator to be used as reflectometer for measuring PCB coupons, cable and PCB trace impedance, verifying cable crimps, measuring trace and cable lengths, dielectric constant and many other applications.

Key Features

- Step 500 mV / 32 ps, >10 GHz
- System identification
- Bandwidth measurements and tests -probe and oszilloscope
- EMV tests: -radiated, -conducted
- TDR measurements

Default Settings (programs)

Program	Red	Yellow	Green	Default
1	X			Ground
2		X		DC
3	X	X		1 kHz square
4			X	10kHz square
5	X		X	100kHz square
6		X	X	1 MHz square
7	X	X	X	10 MHz square

Environmental Specifications		
Altitude	operating	up to 2000m
	non-operating	up to 15000m
Temperature Range	operating	0 °C to +50 °C
	non-operating	-40 °C to +71 °C
Maximum Relative Humidity	operating	80% relative humidity for temperatures up to +31 °C, decreasing linearly to 40% at +50 °C
	non-operating	95% relative humidity for temperatures up to +40 °C

Scope of Delivery

Order No.	Item	Qty
018-120-018	USB FastEdge® Pulse Generator	1
