Product Brochure Version 04.00 NEW: R&S®MXO 5 Series Oscilloscope

ROHDE&SCHWARZ

Make ideas real

# **EVOLVED FOR MORE CHALLENGES**

# GET THE BIG PICTURE AND ALL THE DETAILS

The R&S®MXO 5 Series breakthrough oscilloscope technology speeds up understanding and testing of electronic systems. The R&S®MXO 5 Series specifications stand out among oscilloscopes with impressive four and eight channel models.

8-channel model

Fastest acquisitions with 4.5 million waveforms/s

Highest precision of 12-bit ADC/18-bit HD resolutions

Deep memory capture with 500 million points/channel

Highest sensitivity with advance digital trigger

Increased visibility with 15.6" Full HD touchscreen

# 4-channel model

# WHY ENGINEERS LOVE ROHDE & SCHWARZ OSCILLOSCOPES?

- A trusted, global high-quality company with a long-standing commitment to customers and continuous technological innovation
- ► The newest oscilloscope portfolio from 60 MHz to 16 GHz
- ► In-house ASICs developed for the world's most responsive oscilloscopes
- Frontend technology development for pristine signal integrity
- ▶ 18-bit architecture with HD mode for the highest resolution
- ▶ Digital triggers for the world's most sensitive event isolation
- Superior user interface and front panel that streamlines workflows

# WHY THE R&S®MXO 5 SERIES?

- ► Evolution in speed: Quick acquisitions with multiple channels, math functions and seamless spectrum measurements for minimal blind time with 21 ns rearm
- ► Unleash comprehensive spectrum analysis: Fast and pristine spectrum analysis and ability to run up to four analyses simultaneously
- ► Extensive memory capacity: Benefit from the deepest standard memory and up to 1 million waveform segments
- ► Precise in-event detection: Our digital trigger is flawless at 18-bit HD resolution with adjustable sensitivity for accurate triggering
- ► Uncompromised performance: A low noise floor and the largest vertical offset range of ±5 V at 0.5 mV/div for exceptional signal fidelity
- ► Setting new sensitivity standards: the industry most sensitive trigger down to 0.0001 div
- ► Leading trigger jitter performance: Best-in-class trigger jitter of less than 1 ps

# COMPELLING TECHNOLOGY BLOCKS

# **EVOLVING ACCELERATED INSIGHT**

The R&S®MXO 5 Series oscilloscopes have cutting-edge technology for swift and precise results. Equipped with advanced custom technological and revolutionary features, these oscilloscopes are indispensable for insight into circuit behavior.

# **MXO-EP processing ASIC**

See more of your signals, faster

Every R&S®MXO 5 Series comes with two MXO-EP (extreme performance) Rohde & Schwarz application-specific integrated circuits (ASIC). The MXO-EP ASIC architecture processes 400 Gbit/s for the world's fastest update rate of up to > 4.5 million acquisitions/s and a total of 18 million waveforms/s on multiple channels. See and capture more signals, faster and find rare signal anomalies quickly with the most responsive oscilloscope in the industry.

# 12-bit ADC, 18-bit vertical architecture

Measure your signals accurately.

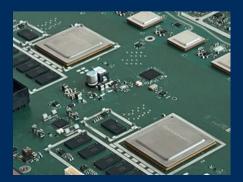

The R&S®MXO 5 Series has an incredibly low-noise signal path, powered by a channel-dedicated 12-bit ADC with no sample rate limitations. High definition mode (HD) enhances the vertical resolution to a remarkable 18 bit, ensuring unwavering accuracy in every measurement. With ultra-low noise and a highly sensitive frontend, the offset voltage can be driven up to ±5 V at the highest sensitivity. Get precise results and greater versatility.

# Responsive deep memory

Capture more of your signals

R&S®MXO 5 Series oscilloscopes come with the industry's deepest standard acquisition memory of 500 Mpoints per channel, for the highest sample rate capture of up to 200 ms of power up or power down sequences on eight channels. Get even longer recordings with the 1 Gpoints memory expansion.

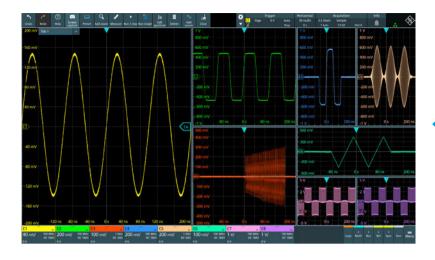

#### Advanced digital triggering system

Easily isolate subtle signal variations

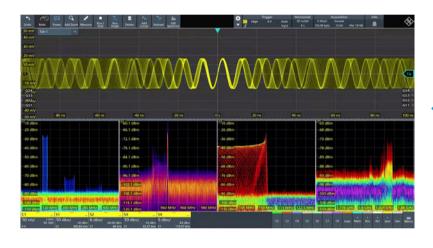

The MXO-EP ASIC incorporates advanced digital triggering to evaluate ADC samples in the acquisition path in real time. Trigger on small events with vertical divisions of less than 0.0001 that no other oscilloscope can isolate. Choose your own trigger hysteresis. Apply digital filters to suppress noise for the most precise triggering available.

# **GET THE BIG PICTURE FASTER**

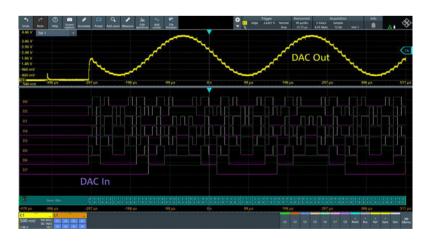

# 8 × time domain

See all traces with 500 Mpoints per channel

# 4 × spectrum domain

45 000 FFT/s to see all spectral events simultaneously

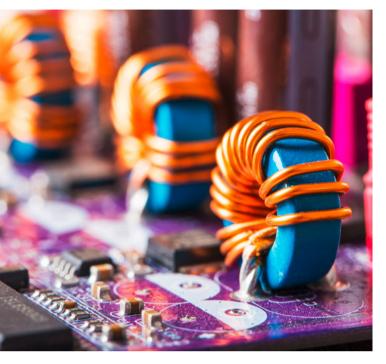

# $4 \times \text{protocol}$ , $16 \times \text{logic channels}$

8 analog and 16 digital channels available for protocol decoding with deep memory to record system behavior for decoding up to 4 protocols simultaneously

# SEE SIGNAL DETAILS INSTANTLY

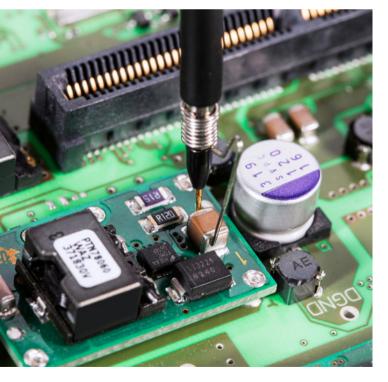

# **R&S®MXO 5 CAPABILITIES**

# **POWER CONVERSION**

Energy and power efficiency are critical to electronics design. Data centers, automotive electrification and renewable energy development are driving the growth of wide bandgap power semiconductors. To meet the next generation power research and development needs, the R&S®MXO 5 offers revolutionary power conversion testing performance and features.

Eight channels provide in-depth visibility of three-phase and six-phase motor drives and inverters. The R&S®MXO 5 supports up to eight active probes including concurrent high voltage differential and current probes. The 18-bit HD mode with digital trigger provides the ultimate resolution for accurate measurement and precise triggering.

# POWER SEQUENCING AND INTEGRITY

All electronic circuits need to be power up and down at the right time with the proper power amplitude. Power sequencing can be complex and iterative. The R&S®MXO 5 can be used to concurrently observe up to eight analog channels and eight reference waveforms.

On top of the channel count, having enough memory is crucial to record over longer time periods and obtaining a large enough sample rate to observe small signal events. The R&S®MXO 5 comes with a standard 500 Mpoints.

To measure power ripple and noise, the R&S®MXO 5 has 5 V offsets with maximum sensitivity of 0.5 mV/div. Even with a 10x passive probe, 50 V range DC signals at 5 mV/div can be observed with high precision. When combined with fast spectrum, the R&S®MXO 5 is ideal for finding EMI issues and revealing spectral components for faster noise source identification.

# **AUTOMOTIVE ANALYSIS**

The efficiency and drive power of electric motors and inverters are constantly evolving. Multiphase topologies require careful gate driver optimization. The eight channels in the R&S®MXO 5 can observe these PWM controlled gates. Tracked measurement functions and spectrum analysis can be visualized for insight into drive behavior.

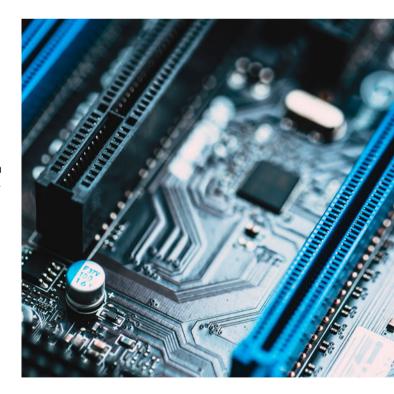

In-vehicle networks in autonomous and smart cars are evolving from electronic control units (ECU) to domain controller networks, where high-speed interconnections are crucial for camera, lidar, radar, sensors and various vehicle controls. The R&S®MXO 5 Series has the ideal bandwidth and analysis depth to assess basic compliance requirements as well as automotive protocol trigger decoding.

# **SIGNAL INTEGRITY AND DEBUGGING**

The R&S®MXO 5 waveform acquisition of rate up to > 4.5 million can be used for signal testing where error detection is critical. The R&S®MXO 5 has nearly no blind time and can detect rare and random events that other oscilloscopes miss. Most importantly, the R&S®MXO 5 can maintain the acquisition rate with up to four channels activated. Basic measurements and math functions are hardware accelerated.

R&S®MXO 5 delivers four hardware-accelerated spectrum channels. With up to 45000 FFT/s per channel, the instrument can perform up to 180 000 FFT/s. Quickly test and debug harmonic, EMI or other applications that require superior spectrum capabilities.

# **ACCELERATED INSIGHTS**

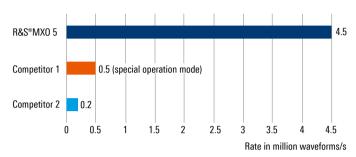

# FIND SIGNAL ANOMALIES QUICKLY

- ▶ World's first 8-channel oscilloscope with over 4.5 million acquisitions/s to instantly reveal infrequent anomalies
- ▶ World's first 8-channel oscilloscope with 18 million waveforms/s across multiple channels
- ▶ Up to 90 % real-time signal capture, signal processing with MXO-EP ASIC and dedicated PC system for responsive analysis

# World's fastest update rate on eight channels

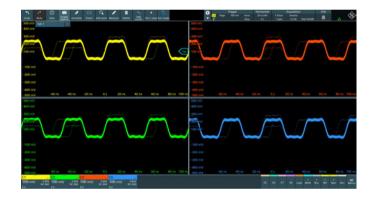

When running multiple channels with > 12-bit vertical resolution, competing oscilloscopes can struggle to keep up and the acquisition rate slows down. The oscilloscope is sluggish and has more blind time where it misses signal activity. All R&S®MXO 5 oscilloscopes processing paths include multiple MXO-EP (extreme performance) ASICs that minimize this effect.

## Real-time acquisition rate

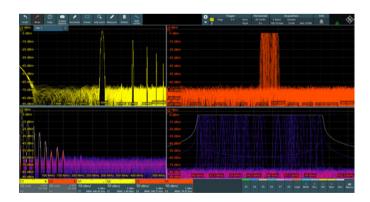

# Quickly and reliably detect sporadic signal faults

The high acquisition rate greatly improves the probability of finding rare and sporadic events that other oscilloscopes cannot. The R&S®MXO 5 can confidently capture all events even when the triggers are seemingly too close. With over 4.5 million waveforms/s, the R&S®MXO 5 Series oscilloscope has the lowest blind time thanks to a trigger rearm of just 21 ns.

# Fast measurements to quickly correlate statistical results, FFTs or cursor measurements on eight channels

Quickly increase statistical confidence in results. High update rates increase the likelihood of detecting and displaying all signal activity, enabling the R&S®MXO 5 to generate trustworthy statistical results based on a high number of waveforms in a short time.

# **CAPTURE EVEN MORE TIME**

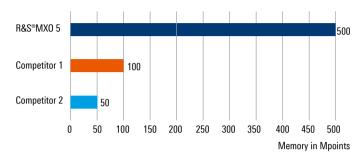

# DEEPEST STANDARD MEMORY ON EIGHT CHANNELS

- Industry's deepest memory of 500 Mpoints per channel (optional 1 Gpoints)
- Standard segmented memory (10 000 segments, optional 1 000 000 segments)
- Standard history mode (10 000 acquisitions, optional 1 000 000 acquisitions)

# More channels need more memory

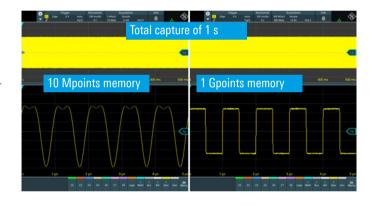

After bandwidth and sample rate, memory depth is one of the most important factors when handling a large range of troubleshooting tasks. More memory lets oscilloscopes retain the maximum sample rate and bandwidth even with slower timebase settings. With 500 Mpoints of acquisition memory standard on all eight channels, the R&S®MXO 5 Series oscilloscope has up to five times the standard memory of other oscilloscopes in this class.

# Standard memory per channel

# Maintain fast sample rates with slow timebase settings

With limited memory, you often run into signal aliasing when capturing slow signals. The deep memory of the R&S®MXO 5 enables longer time to capture at the full sample rate. Even when observing slow events, the instrument retains enough of the sample rate to see the correct waveforms.

# Standard segmented memory

Use the segmented memory to capture signals separated by inactivity. Examples include laser pulses, serial bus activity and RF pulses. The segmented memory of the R&S®MXO 5 Series can capture signals over long observation periods of up to 10000 segments.

# Standard history mode

Press stop and use the history mode to see previously captured acquisitions. The history mode is always on. All measurement and analysis tools are available in the history mode, including serial bus decoding and automatic measurements.

# **Need even more memory?**

Need to capture even longer periods of time? The memory extension option activates 1 Gpoints (channels interleaved) for up to 1000000 segments and acquisitions.

# Standard segmented memory

Protocol based signal with communications pauses

#### Single-shot acquisition

#### Acquisition using segmented memory

#### Analysis of each segment using the history function

Display and analysis of each signal element

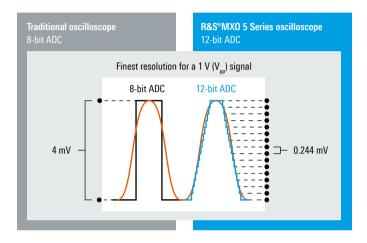

# SEE SIGNALS ACCURATELY

# LOWEST MEASUREMENT NOISE AND HIGHEST VERTICAL RESOLUTION ON EIGHT CHANNELS

- ▶ 12-bit ADC for high vertical resolution at all sample rates with no tradeoffs
- ► 18-bit architecture with HD mode
- ► Low noise of 130 µV at 1 mV/div at full bandwidth of 2 GHz
- ► Vertical scaling down to 500 µV/div at full bandwidth
- ► Industry's highest available offset range of ±5 V at 500 µV/div

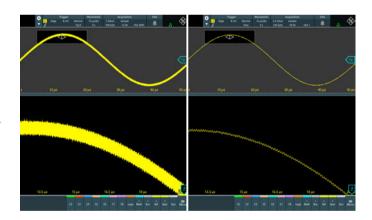

# 12-bit ADC with 18-bit architecture for HD mode

R&S®MXO 5 Series oscilloscopes incorporate a 12-bit A/D converter on all input channels. The 4096 quantization levels deliver precise vertical resolution at all sampling rates for uncompromising capture of signal details. The 18-bit architecture with HD mode also enhances the ADC resolution. The R&S®MXO 5 Series has up to eight channels with 12 bit precision and an uncompromised sampling rate.

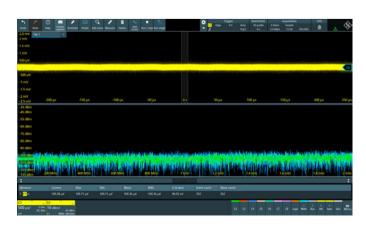

#### HD mode improves noise no impact on sample rate

Vertical resolution enhancement averages adjacent samples and reduces the sample rate, leading to waveform issues such as aliasing. The R&S®MXO 5 HD mode in the hardware uses a moving average filter to remove aliasing. The HD samples are then fed into the triggering system, making high resolution, low noise signals available for precise triggering.

# Low noise with vertical sensitivity down to 500 µV/div

The R&S°MXO 5 Series oscilloscope has outstanding sensitivity down to 500  $\mu\text{V/div}$  without any unexpected reductions in bandwidth. The offset of  $\pm2$  V on 50  $\Omega$  coupling and  $\pm5$  V on 1  $M\Omega$  coupling let you easily place the signal at the center of the screen to examine DC noise and ripple. The oscilloscope must have low noise levels to accurately quantify small signals.

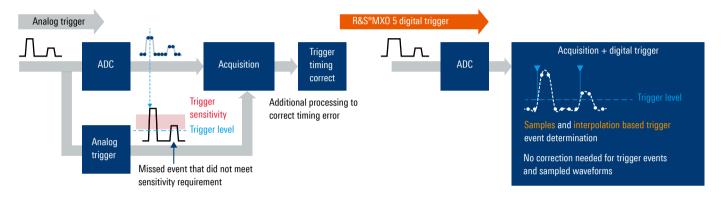

# TRIGGER ON EVERY DETAIL

# HIGH PRECISION DIGITAL TRIGGER

- World's first 8-channel oscilloscope with trigger sensitivity down to 0.0001 vertical division
- World's first 8-channel oscilloscope with user adjustable trigger hysteresis
- World's fastest trigger rearm time of < 21 ns, capturing up to 99 % of waveform
- Best-in-class trigger jitter of just 1 ps

# Modern digital trigger

The MXO-EP ASIC uses the most advanced digital trigger system in the industry, patented by Rohde & Schwarz. Digital triggering implies a common path for the measurement signal and trigger as opposed to a split path for older analog trigger architecture.

#### World's most sensitive and hysteresis-adjustable trigger

The R&S®MXO 5 Series digital trigger is up to 10000 times more sensitive than competing trigger systems. Triggering sensitivity lets you isolate difficult-to-find, small physical layer anomalies in the presence of large signals, speeding up debugging and troubleshooting. You have full control of the trigger hysteresis settings for added flexibility with desired trigger noise suppression.

# Trigger..

#### Adjustable digital trigger filters

The 18-bit HD mode on the trigger reduces measurement system noise. The digital trigger architecture makes it possible to adapt the trigger system cutoff frequency. Conventional oscilloscopes limit triggering on filtered waveforms, on the R&S®MXO 5 the same filter settings can be used for both the trigger signal and the measurement signal. As a result, noise on the trigger signal can be suppressed for more stable capture.

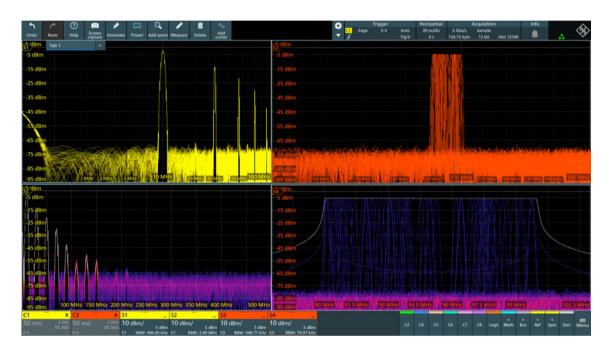

# **MULTISPECTRAL EVOLUTION**

# PRISTINE RF MEASUREMENTS, NOW WITH MORE CAPABILITIES

- ▶ World's first 8-channel oscilloscope with 4 spectra and independent time and frequency control
- ► World's first 8-channel oscilloscope to achieve 45 000 FFT/s
- ▶ RF and time domain views with independent controls
- ► Industry best spectrum capabilities comes standard with each R&S®MXO 5

#### More RF insights into your measurements

Improve overall RF insights with up to four highly capable, simultaneous spectrum displays. The powerful MXO-EP ASIC architecture and additional processing capabilities give the oscilloscopes ultrafast 45 000 FFT/s on up to four simultaneous spectrum displays.

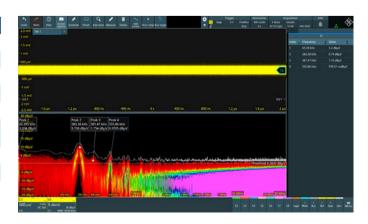

# Spectrum domain done right

The superior RF performance outshines all oscilloscopes in its class. The deep record length and spectral control independent of the time domain waveforms make RF analysis a breeze. The wide frequency range and low noise density generates a truly usable spectral trace for RF insight.

| up to 4                 |
|-------------------------|
| 45 000 waveforms/s      |
| -160 dBm (1 Hz) (meas.) |
| 14 dB (meas.)           |
| 106 dB (meas.)          |
| 65 dBc (meas.)          |
| -60 dBc (meas.)         |
| -59 dBc (meas.)         |
|                         |

# Peak list and max./min. hold traces and log-log scales

As with a spectrum analyzer, spectral traces are easy to configure along with navigation to presentations of various spectral results such as max. and min. hold, or even an average trace to clean up noise. The R&S®MXO 5 also has log-log scale presentations to help observe EMI related spectral events in wide frequency ranges.

# SUPERIOR USER EXPERIENCE

# TOOLBAR, ADVANCED USABILITY AND R&S®SmartGrid

# Quick access to important tools

The toolbar 1 enables quick access to important tools. 28 different tools can be arranged with maximum flexibility. You can access all the settings with the main menu (2). Signal activators on the left of the main menu 3 can be used to activate the desired signals and give guick access to the analog channel, math functions, FFT, signal generator and serial bus setup. Almost all elements in the user interface (UI) are interactive and quickly open menu dialogs.

#### Touch screen enhances usability

The R&S®MXO 5 Series user interface (UI) has a touchscreen. When there are too many elements in a waveform diagram, the oscilloscope's simple touch screen may cause you to select the wrong element. A pop-up selection 4 provides a list of interactive elements to help you select the right item. The large touch field design 5 for all instrument settings has enhanced capabilities. Pressing any part of a box will change a parameter value.

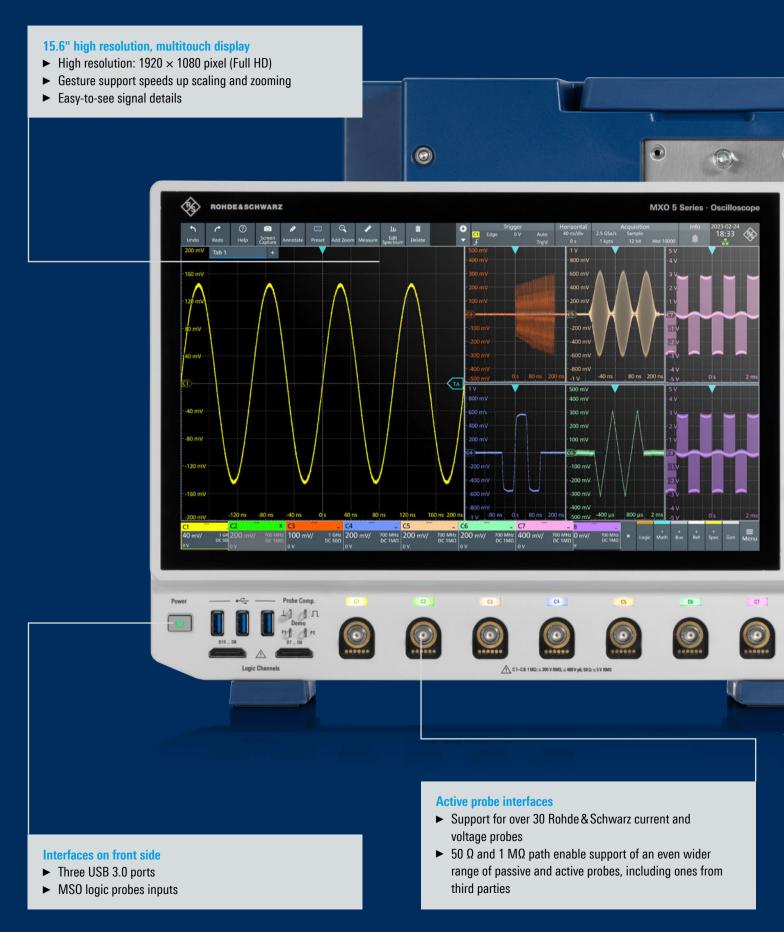

# **Configurable layout**

The R&S®SmartGrid function 6 generates an individualized waveform layout. See the fundamental signal parameters in the signal icon 7. Then drag and drop waveforms and result tables into the desired location to change the waveform layout. Cursor labels can be adjusted to better indicate the measured results on the diagram 8. The tab display 9 also stores user settings and allows fast toggling to different layouts for easy reporting.

# Minimized learning curve

Engineers can very quickly learn and master the R&S®MXO 5 Series UI. Find any oscilloscope function you need by simply typing it into the search menu 10. Press the help button on the toolbar 11 to open the help menu that lists the functions and their SCPI commands.

# R&S®MXO 5 Series AT A GLANCE

# Intuitive front panel increases productivity

- ► Fast, direct access to primary instrument settings
- Quickly adjust settings with knobs and keys
- ► Sectional layout makes finding the right function easy

# Integrated arbitrary waveform generator

- ► Two-channel 100 MHz arbitrary waveform generator
- Wide range of waveforms and modulation types
- Easy configuration of frequency, amplitude, offset and noise

# **Clear orientation with color-coded LEDs**

- Color-coded keys and knobs for fast correlation with signal sources
- Indication of currently selected channel
- ► Simple election between fine/course adjustment

# **Connections pairs**

- ► Five USB 3.0 host ports
- ► USB device port
- ► HDMI<sup>™</sup> DisplayPort<sup>™</sup> video output

# **CONVENIENT ACCESS**

# **EFFICIENT INSTRUMENT INFORMATION**

#### Save results fast

Save waveforms in various file formats or download them via Ethernet or USB for later analysis with MATLAB® or Excel. Continuous acquisition, analysis and transmission to a PC is possible via Ethernet.

# Documentation at the press of a button

Document your measurements quickly:

- ► Screenshots with waveforms and results
- Reports with screenshots and instrument setup
- Clear grid annotations for easy-to-read signal characteristics
- ► Color-coded annotation highlights signal anomalies
- ► Save waveforms and measurement results in binary, XML or CSV format available for signal analysis on a PC

# Remote control access: anytime, anywhere

Remotely control the oscilloscope and view the display on a PC or mobile device. View the same user interface as on the instrument itself. All oscilloscope functions are also available remotely via Ethernet or the USB-TMC interface. LabVIEW, VXI and Python instrument drivers are available.

# Language selection

The R&S®MXO 5 Series user interface supports multiple languages. Just a few seconds are needed to switch languages while the instrument is running. Available languages include English, German, Japanese, Korean, Chinese and Spanish. Searches will also work in different languages.

# WebDAV support

You can easily access instrument data through the web distributed authoring and versioning (WebDAV) protocol to share, copy, move and edit files on the instrument through a web server. A WebDAV client can be a file transfer client or file manager like Dolphin or Nemo in Linux, Finder in Mac OS X and File Explorer in Windows. They are all capable of accessing the device through IP addresses or hostnames of devices.

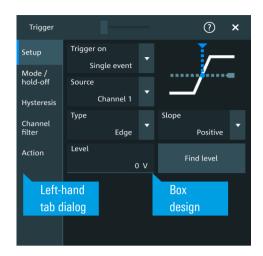

# **INTUITIVE USER INTERFACE**

# PLEASANT USER EXPERIENCE

# **Superior usability**

Extensive user feedback, competitive comparisons and vast amounts of research into the latest user interface concepts outside of the test and measurement field helped in the development of the R&S®MXO 5 user interface:

- ► Navigate to anywhere from the pull-up menu in the lower left corner. Positioned close to the display area, you can minimize hand movement when switching between the two.
- ► Left-hand tab dialogs require small areas, magnifying the waveform view
- ► Anywhere-in-box touch allows you to activate a control by touching a large target area
- ► Signal icons make it easy to turn on/off sources and to adjust the R&S®SmartGrid layout
- ▶ Unique in the industry, the tool bar has quick access productive tools
- ► The toolbar space can be used to modify existing elements such as cursors, measurements and spectrum settings, or to quickly delete elements
- ► Fast one-touch access to trigger, horizontal, acquisition and info settings
- ► Select the Rohde & Schwarz icon to see current instrument details including LAN IP and firmware version
- ► UI consistent with the R&S®MXO 4, R&S®MXO 5, R&S®RTO6 and R&S®RTP oscilloscopes

#### R&S®MXO 4

# R&S®MX05

#### R&S®RT06

#### R&S®RTP

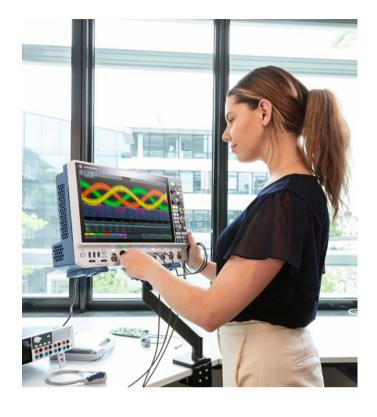

# **ADAPTING TO YOUR WORK STYLE**

# SEAMLESSLY OPTIMIZED TO WORK ALONGSIDE YOU

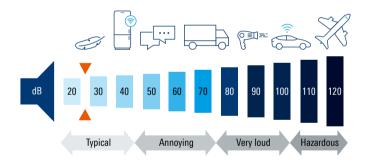

# Free up your bench

Space on lab benches is always tight. The optional R&S®MXO5-Z7 VESA mounting plate uses a commercial-off-the-shelf VESA mount. Float your oscilloscope above the bench to free up space. Weighing only 9 kg, it is the lightest in its class and can be used with standard VESA display monitor mounts.

# **Peace and quiet**

Need a quiet space? Do loud instruments disturb others? Loud equipment? With an operating audible noise level of merely 25 dBA when 1 m from the instrument, the R&S®MXO 5 Series sounds like a soft whisper. You might not even notice that it's turned on.

# Removable M.2 memory

If security is a priority, there is no better method for protecting instrument information than physically storing it in a secure location. The R&S®MXO 5 Series supports removable M.2 memory cards. When working in a secure lab, simply add M.2 drives and secure them as needed.

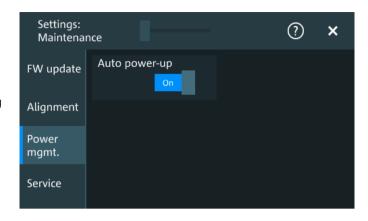

# SUSTAINABLE PERFORMANCE

# **KEEP POWER CONSUMPTION IN CHECK**

# **Reduce power consumption**

Reducing power consumption is important now and in the future. The electrical power used over the lifecycle of an electronic device can make up 90% of its CO<sub>2</sub> footprint. Minimizing power consumption reduces an oscilloscope's environmental impact. Rising energy prices make reducing power consumption essential to long-term affordability.

# Remotely turn on/off your Rohde & Schwarz oscilloscope

When working remotely, keeping the unit powered in the lab 24/7 can waste a lot of energy. While remote IP controlled socket power supplies are possible, most electronic equipment will only power up to a standby state with the main power switched on. The R&S®MXO 5 provides a convenient feature that allows it to be turned on automatically as soon as electric power is switched on. By simply connecting it into a smart socket system, you can enable the option of remotely turning on the device only when you intend to use it, while keeping it powered off at other times.

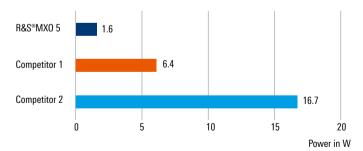

# Maximum performance, minimum consumption

Compared previous oscilloscope generations <sup>1)</sup>, the R&S®MXO 5 reduces standby consumption by a remarkable 40%. More impressive is that despite doubling the number of channels, enlarging the display, and exponentially increasing acquisition performance, typical power consumption remains almost unchanged <sup>2)</sup>.

- 1) Evaluations performed with the R&S®HMC8015 power analyzer.
- 2) Compared with the R&S®RTE1024.

# Standby power consumption

# YOUR GO-TO TOOL

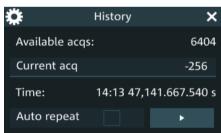

# **READY FOR MANY USES**

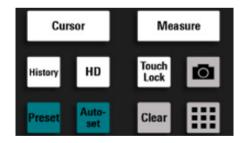

Germans like to say that with the right tools make work easy. The R&S®MXO 5 Series has many tools and features that help you be more productive.

Measure

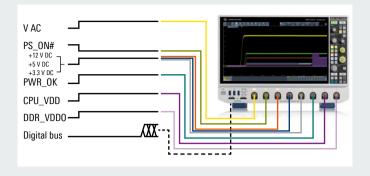

# OPTIMIZING POWER SEQUENCING

# **Unparalleled power rail measurements**

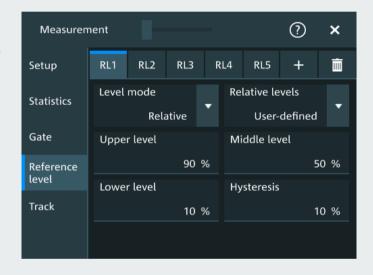

Do you need measure power sequencing for more than four power rails simultaneously? The R&S®MXO 5 Series oscilloscope precisely measures power rail ramp up and ramp down. The oscilloscope's advanced capabilities can be used to correlate power sequencing events with other system activities. An additional 16 logic channels let you include key timing signals for further analysis. The deep memory feature ensures that the oscilloscope maintains sufficient bandwidth throughout sequences that last tens of milliseconds. Moreover, the R&S®SmartGrid function makes the arrangement of power rails easier to interpret and document.

| Sampling rate | Duration (500 Mpoints) | Duration (1 Gpoints) |
|---------------|------------------------|----------------------|
| 5 Gsample/s   | 100 ms                 | 200 ms               |
| 500 Msample/s | 1 s                    | 2 s                  |
| 5 Msample/s   | 100 s                  | 200 s                |
| 8 ksample/s   | 60500 s                | 1 d 10 h 43 s        |

# Flexible measurement setup

In power-related timing scenarios, delving into the specific details of where the measurement begins and ends is crucial. The R&S®MXO 5 incorporates configurable measurement reference levels and flexible gating functions for accurate measurements at the desired points. Such configurability enables precise analysis of bias voltage and gate thresholds and serves as a reliable reference for measurements.

# **DEBUGGING AND VALIDATING POWER RAILS**

# **Accurately measure ripple and PARD**

The R&S®MXO 5 Series excels in precise measurements of power noise and ripple. The low noise capability ensures accurate power integrity measurements, even at the millivolt level. The oscilloscope stands out with a fast update rate and the unique FreeRun triggering feature for quick identification of infrequent and worst-case ripple, as well as periodic and random disturbance (PARD) anomalies. The uncompromised automatic measurements of the R&S®MXO 5 facilitate faster statistic correlation through rapid acquisition. The oscilloscopes also offer high offsets of ±5 V at the highest sensitivity, making them suitable for basic power integrity measurements even with 10x passive probes.

# Power rail characterization with high fidelity probes

The R&S®RT-ZPR probe is an excellent for accurate power rail characterization with high bandwidth, sensitivity, low noise and large offset compensation capabilities. A bandwidth of up to 2 GHz, sensitive down to a 1:1 attenuation ratio and low noise performance make the R&S®RT-ZPR probe ideal for precise ripple measurements. Combined with the probe's advanced frequency analysis capabilities, periodic and random disturbances (PARD) are effectively isolated. Furthermore, the probe has a high-precision, 18-bit DC voltmeter (R&S®ProbeMeter) for instant DC voltage readout, enhancing measurement accuracy.

# Uncover small voltage ripples on DC power rails

The R&S®RT-ZPR power rail probes have impressive  $\pm 60 \text{ V}$  offset compensation to precisely focus on small ripples in power rail DC voltage. Whether zooming in on a 1 V or higher DC level, the probe maintains the necessary offset without compromising vertical resolution. When paired with the R&S®MXO 5 Series oscilloscope, with an exceptionally low noise frontend and 18-bit vertical resolution, this powerful combination enhances your understanding of power integrity in design.

# Identify coupled sources with rapid spectrum analysis

The R&S®MXO 5 Series provides access to the best spectrum analysis features in the industry. By analyzing the spectrum independently of time domain settings, switching characteristics can be quickly identified or quick scans can be made of sources coupled onto the power rail. This advanced spectrum algorithm provides a comprehensive, detailed and instant picture of your power rail. With up to four concurrent spectrum analyses available and the fastest FFT in the industry, R&S®MXO 5 Series is a great tool for sniffing out EMI sources and correlating with the time domain view.

Using spectrum analysis with time gating to effectively find coupled sources that contribute to power rail noise.

# **POWER ANALYSIS MADE EASY**

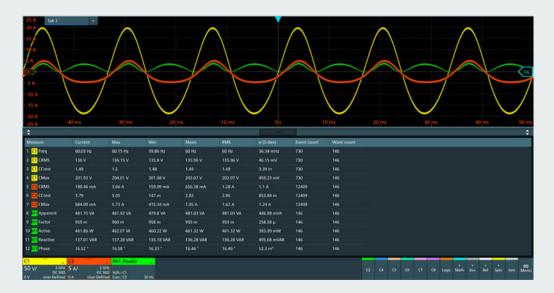

# **Characterizing input power quality**

Measuring AC circuit power quality can be tedious due to the numerous calculations required to determine the real, apparent and reactive power. An oscilloscope is ideal for this work because it provides a clear view of the waveform characteristics between voltage and current, allowing engineers to quickly identify and resolve problems. The R&S®MXO5-K31 enables power quality measurements and provides concurrent analysis of three pairs of voltage and current sources.

# Harmonic current analysis in line with standards

Different standards for limiting the harmonic current must be met in AC power supplies. Identifying distortion from harmonic content is tedious without a proper tool. The R&S®MXO5-K31 includes current harmonic analysis to help test in line with all common standards. You can setup three concurrent harmonic measurements.

| R&S®MX05-K31 power analysis option               |  |
|--|--|
| Power quality                                    | active, apparent and reactive power, crest factor and phase angle  |
| Current harmonics                                | THD RMS and fundamental functions, in line with EN 6100-3-2 classes A, B, C, D, MIL-STD-1399 and RTCA DO-160 |
| More analysis functions will be added in future. |  |

# STREAMLINE YOUR EMI DEBUGGING

# Effortless navigation in the frequency domain

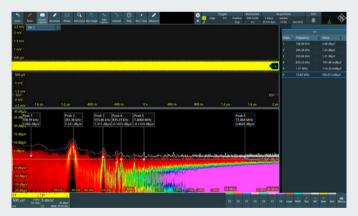

Enjoy the familiar interface of a spectrum analyzer. The spectrum setup dialog provides basic controls such as start and stop frequency and resolution bandwidth, resembling those of a traditional spectrum analyzer. In spectrum mode, the time domain settings of the R&S®MXO 5 remain unaffected, ensuring easy navigation in the frequency domain. The maximum FFT capture bandwidth corresponds to the R&S®MXO 5 Series bandwidth for a quick overview of all emissions from DC to 2 GHz.

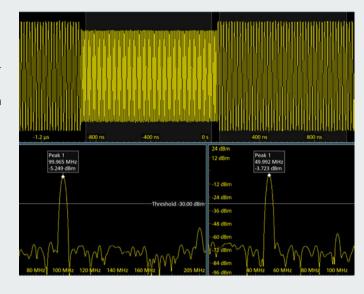

# **Correlated time-frequency analysis with gated spectrum**

With the gated spectrum function, restrict the spectrum analysis to a user-defined region of the captured time-domain signal. Excessive spectral emissions can be correlated to dedicated time periods in a signal. Typical applications include the correlation of unwanted emissions to fast switching edges in switched-mode power supplies or to data transfers on bus interfaces.

# **Ultra-fast spectrum acquisitions for spurious events**

The spectrum analysis is equipped with max. hold, min. hold and average spectrum arithmetic to keep track of spectrum events that occur during the testing. These are important test receivers' functions and now come standard on the R&S®MXO 5 Series.

#### Perfect setup for EMI detection

Use the compact R&S®HZ-15 near-field probe set, designed specifically for EMI debugging of embedded designs. This probe set includes the most compact probe, which enables the capturing of near-field emissions from individual circuit lines. The R&S®HZ-15 covers the frequency range from 30 MHz to 3 GHz, with the ability to be used below 30 MHz, albeit with reduced sensitivity. The optional R&S®HZ-16 preamplifier offers a gain of 20 dB in the frequency range from 100 kHz to 3 GHz, providing higher sensitivity when needed.

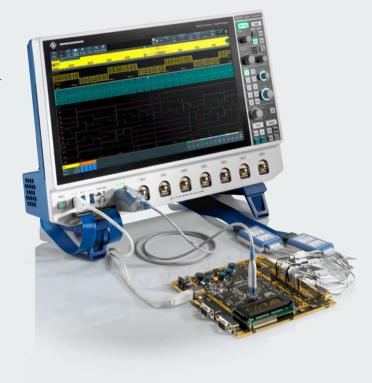

# **LOGIC ANALYSIS**

# **Built-in logic analysis**

Every R&S®MXO 5 Series oscilloscope comes equipped with MSO logic analysis capability. Just add MSO probes to get 16 digital channels. Use the MSO probes across different R&S®MXO 4 or R&S®MXO 5 oscilloscopes without the need for a software license.

The oscilloscope logic channels run at 5 Gsample/s, delivering a high time resolution of 200 ps. With a substantial memory depth of 500 Mpoints per channel, this sampling rate remains consistent over a large range of time base settings Use logic triggering to isolate critical events like narrow glitches and specific pattern combinations

# **Analyze low-speed serial buses**

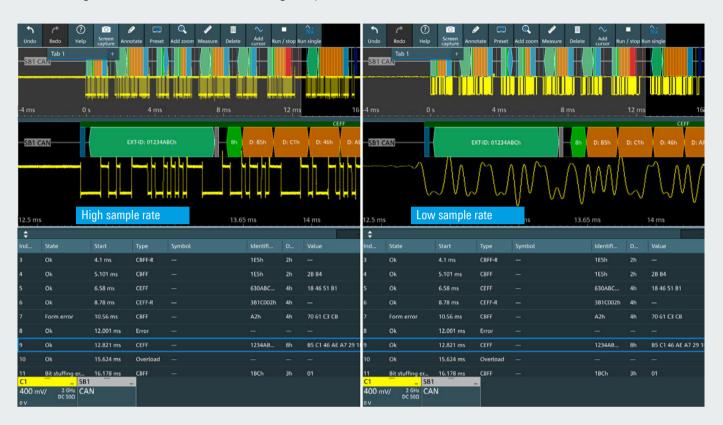

In modern devices, high-speed interfaces often coexist with low-speed control or programming buses. Digital channels, available with the R&S®MXO5-B1 option, are tailored for precisely analyzing low-speed serial protocols such as SPI and I<sup>2</sup>C. Use analog or logic channels as sources for protocol trigger and decode with the serial bus options. By focusing on protocol details like start, address and data, gain deep insights into serial bus events. From built-in logic analysis to highresolution signal capture and low-speed serial bus analysis.

# ANALYZE SERIAL BUSES WITH PROTOCOL INNOVATION

# **Dual-path protocol analysis**

Experience a breakthrough in protocol analysis with the R&S®MXO 5 Series. Unlike conventional oscilloscopes, our dual-path protocol analysis revolutionizes the acquisition and decoding of protocol packets. Dual-path protocol analysis decouples instrument sample rates for the waveform path and automatically uses the required sample rate for the decoding path. Even with very slow sample rates or under-sampled waveforms, the protocol data is correctly decoded for decoding on alias waveforms and even longer capture times.

#### Capture more data packets with deep memory

Our deep memory can capture more packets. A memory depth of up to 1 Gpoints lets the R&S®MXO 5 Series capture extended time periods where cause and effect may be some distance apart. Every signal detail remains time-correlated with packet content for fast and efficient debugging.

# **Customized display**

Condense or expand the decoded layer with the vertical and horizontal control knobs or the intuitive touchscreen. Overlay the decoded bus on the captured signal and/or display it in a separate window for greater flexibility.

Unleash the power of protocol analysis innovation with R&S®MXO 5 Series oscilloscopes. Experience dual-path protocol analysis, capture more packets with deep memory, and customize your display to enhance your analysis workflow. Stay ahead of the curve and optimize your serial bus analysis capabilities today.

# VERSATILE INTEGRATED ARBITRARY WAVEFORM GENERATOR

# Integrated two-channel waveform generator

Get fully the integrated two-channel 100 MHz arbitrary waveform generator with the R&S®MXO5-B6 option. This compact and configurable solution offers exceptional versatility for various applications, from hardware prototyping to classroom usage. With a sampling rate of 625 Msample/s and 16-bit resolution, the generator delivers reliable performance and precise control as a function or modulation generator.

# Wide range of waveforms and modulation types

Stimulate your device under test with a diverse range of waveforms. Choose from sine, square/pulse, ramp, triangle, sine cardinal (sinc), arbitrary and noise waveforms. Easily customize the frequency, amplitude, offset and noise parameters for each waveform, tailoring the stimulus to your specific needs. Get integrated arbitrary waveform generation capabilities. Take advantage of the modulation feature to explore advanced signal variations.

# FREQUENCY RESPONSE ANALYSIS WITH BODE PLOT

# Low-frequency response analysis made easy

Quickly perform low-frequency response analysis with the R&S®MXO5-K36 frequency response analysis (FRA) option. Easily characterize the frequency response of various electronic devices, including passive filters and amplifier circuits. Precisely measure the control loop response (CLR) and power supply rejection ratio (PSRR) in switch mode power supplies.

The FRA option leverages the oscilloscope's built-in waveform generator to create stimulus signals from 10 mHz to 100 MHz. By measuring the stimulus signal to output signal ratio for the device under test at each test frequency, the oscilloscope accurately plots logarithmic gain and phase for valuable insights into your device's behavior.

#### **Enhanced features and functionality**

# Amplitude profile for improved SNR

The R&S®MXO5-K36 has user-configurable profiles of the amplitude output level from the generator. This feature optimizes the signal-to-noise ratio (SNR) at different frequency ranges, ensuring high-quality CLR and PSRR measurements.

# Improved resolution and markers support

Adjust resolution and sweep time to your specific requirements with user-configurable points per decade. Markers on the traces conveniently correlate with table entries, making it easy to determine phase and gain margin with the auto placement function.

# Parallel display of time domain

Gain deeper insights by monitoring the time domain alongside the frequency domain. Identify distortion and errors in measurements caused by the injected signal, which may be difficult to detect with just the Bode plot.

#### Measurement result table

Quickly access comprehensive information about each measured point, including frequency, gain and phase shift with the measurement result table. Save screenshots, table results, or both to a USB device for reporting and efficient documentation.

# **Calibration and setup**

FRA has a calibration capability to help optimize measurement setups for greater accuracy when passive probes are used. The calibration data can be saved for future setup for repetitive measurements.

# Broad probe portfolio for accurate characterization

Choose the right probes for accurate CLR and PSRR characterization. The low-noise R&S®RT-ZP1X 38 MHz bandwidth 1:1 passive probe is recommended for the R&S®MXO 5 Series oscilloscope. The probe minimizes attenuation errors and delivers the best SNR, even at low peak-to-peak amplitudes of  $V_{in}$  and  $V_{out}$ .

| R&S®MX05-K36 frequency response analysis option           |                                    |  |  |
|---|------------------------------------|--|--|
| Note: R&S®MXO5-B6 is a prerequisite for FRA applications. |                                    |  |  |
| Frequency range   | 10 mHz to 100 MHz                  |  |  |
| Amplitude mode  | fixed or amplitude profile         |  |  |
| Amplitude level   | 10 mV to 10 V into high Z          |  |  |
|   | 5 mV to 5 V into 50 $\Omega$       |  |  |
| Test points   | 10 points to 500 points per decade |  |  |

# **EXTENSIVE PROBE PORTFOLIO**

# THE RIGHT PROBE FOR THE YOUR MEASUREMENT

R&S®MXO 5 oscilloscope comes standard with one 700 MHz passive probe for each channel. Choose from a comprehensive portfolio of high-quality passive and active probes from Rohde & Schwarz for other probe needs

# Complete portfolio for power measurements

The portfolio of dedicated probes for power measurements includes active and passive probes for the different voltage and current ranges – from  $\mu A$  to kA and from  $\mu V$  to kV. Dedicated power rail probes detect even small and sporadic distortions on DC power rails. High voltage differential probes allow isolated floating measurements.

#### High-voltage differential probes

The R&S®RT-ZHD series high voltage differential probes provide excellent common mode rejection ratio (CMRR) for a broad frequency with 200 MHz bandwidth and can safely measure up to 6000 V peak voltage. Low noise makes it an ideal probe for switching power analysis with ground reference.

# R&S®ProbeMeter and micro button for easy control

Our active probes feature a micro button, cleverly located on the probe tip, assign various functions to the micro button, such as run/stop, autoset, and adjust offset, enabling direct control of the oscilloscope right from the probe itself.

Most Rohde & Schwarz active probes come with the R&S®ProbeMeter to take precision to a whole new level. The probes impressive accuracy of 0.1% ensures reliable and trustworthy measurements. When Rohde & Schwarz designs a probe, thermal drifts, filters and usability are usually the best overall. Make measurements a breeze and get precise results with confidence.

# Rohde & Schwarz has a comprehensive probe portfolio to meet every probing need.

Passive probes included as standard (38 MHz to 700 MHz)

R&S®RT-ZP11, R&S®RT-ZP1X

Passive probes come standard with every Rohde & Schwarz oscilloscope. They are low cost, general purpose probes for a broad range of applications.

Passive broadband probes (8 GHz) R&S®RT-ZZ80

These are an economical vet powerful alternative to active probes for measuring high speed signals on low impedance lines. They feature extremely low input capacitance, very low noise and high linearity.

Active single-ended broadband probes (1 GHz to 6 GHz)

R&S°RT-ZS10L, R&S°RT-ZS10E, R&S°RT-ZS10, R&S°RT-ZS20, R&S°RT-ZS30, R&S°RT-ZS60

A very high dynamic range and exceptionally low offset and gain errors combined with the right accessories make these probes ideal for Rohde & Schwarz oscilloscopes.

Active differential broadband probes (1 GHz to 4.5 GHz)

R&S°RT-ZD10, R&S°RT-ZD20, R&S°RT-ZD30, R&S®RT-ZD40 and R&S®RT-ZA15 external attenuator

A flat frequency response and high input impedance with low input capacitance permit precise measurements on differential signals while maintaining a low load on the DUT. The CMMR for the entire probe bandwidth has high interference immunity.

Modular broadband probes (1.5 GHz to 16 GHz)

R&S°RT-ZM15, R&S°RT-ZM30, R&S°RT-ZM60, R&S°RT-ZM90, R&S°RT-ZM130, R&S°RT-ZM160 Current probing requirements need a technically sophisticated, yet easyto-handle solution. The various probing solutions meet the demands for high probe bandwidths and dynamic range along with the need for low capacitive load.

Power rail probes (2 GHz and 4 GHz) R&S°RT-ZPR20, R&S°RT-ZPR40 Wide bandwidth, high sensitivity, very low noise and extra-large DC offset make these probes an excellent tool for characterizing power rails. The integrated high-precision DC voltmeter (R&S°ProbeMeter) provides instantaneous DC voltage readout.

High voltage probes (100 MHz to 400 MHz; ±750 V to ±6000 V)

R&S°RT-ZH03, R&S°RT-ZH10, R&S°RT-ZH11, R&S°RT-ZD01, R&S°RT-ZHD07, R&S°RT-ZHD15, R&S°RT-ZHD16, R&S°RT-ZHD60

The Rohde & Schwarz portfolio of high voltage probes includes passive single-ended and active differential probes for voltages up to 6000 V (peak). Different models allow measurements in up to CAT IV environments. Differential probes provide exceptional common mode rejection over a wide bandwidth.

**Current probes** 

(20 kHz to 120 MHz; ±1 mA to ±2000 A) R&S°RT-ZC02, R&S°RT-ZC03, R&S°RT-ZC05B, R&S°RT-ZC10, R&S°RT-ZC10B, R&S°RT-ZC15B, R&S°RT-ZC20, R&S°RT-ZC20B, R&S°RT-ZC30, R&S®RT-ZC31

Rohde & Schwarz current probes enable accurate, non-intrusive measurements of DC and AC currents. Different models are available to measure currents in the range from 1 mA to 2000 A with a bandwidth of up to 120 MHz, Current probes are available with the Rohde & Schwarz probe interface or a BNC connector for an external power supply.

**EMC** near-field probes (30 MHz to 3 GHz) R&S®HZ-15, R&S®HZ-17

Powerful E and H near-field probes for the frequency range from 30 MHz to 3 GHz with an optional preamplifier expand the application range of the R&S®MXO 5 Series oscilloscope to include EMI debugging.

# AND THERE IS SO MUCH MORE ...

# AN OSCILLOSCOPE THAT EVOLVES FOR YOUR NEEDS

# Grows with your needs: easy software based upgrades

The R&S®MXO 5 Series adapts as your needs evolve. Simply install the necessary software licenses, bandwidth upgrade, triggering and decoding of serial protocols, memory expansion or the frequency response analysis option. The waveform generator is built-in, just activate it with a software license. The MSO logic analysis just requires activation of the logic probes. The bandwidth can be upgraded to 2 GHz with a software license for very easy retrofits.

# Regular firmware updates

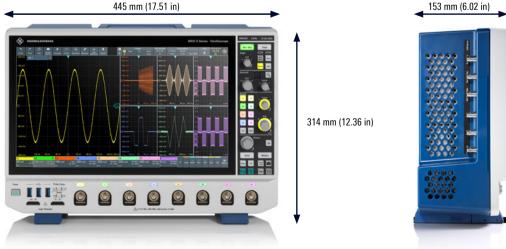

Regular firmware updates add new functionality to the R&S®MXO 5 Series oscilloscopes. Download the latest firmware version at www.rohde-schwarz.com. Use a USB storage device or LAN connection for installation.

# Safe transport and easy rack mounting

An extensive selection of storage and transportation accessories means the R&S®MXO 5 Series oscilloscopes are always fully protected and easy to transport. The rackmount kit allows easy installation of the oscilloscope in integrated environments.

<sup>&</sup>lt;sup>5)</sup> The maximum available memory depth depends on the bit resolution of the acquired data and, therefore, on the acquisition system settings such as decimation mode, use of waveform arithmetics or high definition (HD) mode. Interleave channels of the R&S®MXO 58 are on C1 and C5, C2 and C6, C3 and C7 as well as C4 and C8. For the R&S°MXO 54, all 4 channels run with 5 Gsample/s and maximum bandwidth.

| High definition mode    |   |  |  |
|-------------------------|---|--|--|
| General description     | The high definition mode increases the bit resolution of the waveform signal by using digital filtering, leading to reduced noise. Because of the digital trigger concept of the R&S®MXO 5, signals with increased numeric resolution are used as the input for triggering. |  |  |
| Numeric resolution      | bandwidth, at 5 Gsample/s   | bit resolution   |  |
|                         | 1 kHz to 10 MHz   | 18 bit   |  |

| Spectrum analysis   |   |  |  |  |
|---------------------|---|--|--|--|
| General description | Spectrum analysis allows up to four signal analys   | is in the frequency domain.  |  |  |
| Spectrum            | sources   | channel 1 to channel 8   |  |  |
|                     | setup parameters                                    | center frequency, frequency span, resolution<br>bandwidth (automatic or manual), gate position,<br>gate width, vertical scaling, vertical position |  |  |
|                     | scaling   | dBm, dBV, dBμV, V (RMS)  |  |  |
|                     | span  | 1 Hz to 1.8 GHz <sup>6)</sup>  |  |  |
|                     | resolution bandwidth (RBW)                          | $(span/4) \ge RBW \ge (span/6000)$   |  |  |
|                     | windows   | flat top, Hanning, Hamming, Blackman, rectangular, Kaiser Bessel, Gaussian   |  |  |
|                     | trace types   | normal, max. hold, min. hold, average  |  |  |
|                     | max. real-time waveform acquisition rate            | > 40 000 waveforms/s   |  |  |
| Gate                | delimits the display region used for spectrum ana   | lysis  |  |  |
| Peak list           | The values in the peak list are also shown in the d | The values in the peak list are also shown in the diagram to allow easy correlation.   |  |  |

| RF characteristics                                |   |                         |
|---|---|-------------------------|
| Sensitivity/noise density                         | at 1 GHz<br>(measurement of the power spectral density at<br>1 GHz at input sensitivity<br>2 mV/div, corresponding to –30 dBm input range<br>of the oscilloscope, using spectrum analysis with<br>center frequency 1 GHz, span 500 kHz, RBW 3<br>kHz) | –160 dBm (1 Hz) (meas.) |
| Noise figure                                      | at 1 GHz<br>(calculated based on the noise power density<br>above)  | 14 dB (meas.)           |
| Dynamic range                                     | measured for a 1 GHz input carrier with level  –3 dBm at input of oscilloscope, using spec- trum analysis with center frequency 1 GHz, span 2 MHz, RBW 400 Hz at +20 MHz from center frequency  | 106 dB (meas.)          |
| Absolute amplitude accuracy                       | 0 Hz to 1.2 GHz   | ±1 dB (meas.)           |
| Spurious-free dynamic range (excluding harmonics) | measured for a 250 MHz input carrier with level –3 dBm at input sensitivity 50 mV/div, using spectrum analysis with center frequency 900 MHz, span 1.8 GHz, RBW 300 kHz   | 65 dBc (meas.)          |
| Second harmonic distortion                        | measured for a 250 MHz input carrier with level –3 dBm at input sensitivity 50 mV/div, using spectrum analysis with center frequency 900 MHz, span 1.8 GHz, RBW 300 kHz   | –60 dBc (meas.)         |
| Third harmonic distortion                         | measured for a 250 MHz input carrier with level –3 dBm at input sensitivity 50 mV/div, using spectrum analysis with center frequency 900 MHz, span 1.8 GHz, RBW 300 kHz   | -59 dBc (meas.)         |

 $<sup>^{\</sup>rm 6)}$  The stop frequency depends on the analog bandwidth of the instrument.

| Waveform measurements                   |  |  |  |
|---|--|--|--|
| Automatic measurements                  | measurements on acquired waveforms<br>(input channels), math waveforms, reference<br>waveforms       | amplitude, high, low, maximum, minimum, peak-to-peak, mean, RMS, sigma, positive over shoot, negative overshoot, area, rise time, fall time, positive pulse width, negative pulse width period, frequency, positive duty cycle, negative duty cycle, delay, phase, burst width, pulse count, edge count, pulse train, positive switching, negative switching, cycle area, cycle mean cycle RMS, cycle sigma, setup, hold, setup/hold time, setup/hold ratio, slew rate rising, slew rate falling, delay to trigger |  |
|   | gate   | delimits the display region evaluated for automatic measurements   |  |
|   | reference levels   | user-configurable vertical levels define support structures for automatic measurements   |  |
|   | statistics   | displays maximum, minimum, mean, standard<br>deviation and measurement count for each aut<br>matic measurement   |  |
|   | number of active measurements  | 24   |  |
| Cursor measurements                     | available cursors  | up to four cursor sets on screen, each set with two horizontal and two vertical cursors  |  |
|   | target waveforms   | acquired waveforms (input channels), math waveforms, reference waveforms, XY diagrams  |  |
|   | operating modes  | vertical measurements, horizontal measure-<br>ments, or both;<br>vertical cursors either set manually or locked to<br>waveform   |  |
|   |  |  |  |
| Waveform math                           |  |  |  |
| General features                        | number of math equations   | up to 8  |  |
|   | number of reference waveforms  | up to 8  |  |
|   | sources  | channel 1 to 8, math waveforms 1 to 8, reference waveforms 1 to 8  |  |
| Functions                               | operators  | add, subtract, multiply, divide, absolute value, square, square root, integrate, differentiate, log $\log_e$ , $\log_2$ , reciprocal, invert, lowpass, highpass, rescale (a · x + b)   |  |
|   | filters  | lowpass, highpass  |  |
|   | filter types   | Gaussian, rectangular  |  |
|   | gate   | delimits the display region used for waveform math   |  |
| Digital voltmeter                       |  |  |  |
| Accuracy                                |  | related to channel settings of voltmeter source  |  |
| Measurements                            |  | DC, DC RMS, AC RMS   |  |

| Miscellaneous  |               |   |
|----------------|---------------|---|
| Remote control | web interface | full operation of the instrument's touch interface, keys and multifunction wheel via web browser                                      |
|                | VNC           | control of the instrument through virtual network computing   |
|                | SCPI          | standard instrument programming interface through VISA  |
|                | WebDAV        | support for the web distributed authoring and versioning (WebDAV) protocol, which provides secure access through an application proxy |

<sup>7)</sup> With R&S®MXO5-B110 memory option. The maximum number of segments depends on the number of active channels and the bit resolution of the acquired data and, therefore, on the acquisition system settings such as decimation mode, use of waveform arithmetics or high definition (HD) mode. The maximum number of segments without the R&S®MXO5-B110 memory option is limited to 10 000.
