

FXA-104 Relay 8CH

Eight channel relay board for signal isolation

Overview

The FXA-104 is a relay board to switch signals with 8 SPDT channels. It's eight channels can be switched individually with a low active input. Each channel is equipped with a status led and capable of switching up to 2A. Due to its wide range input it's very flexible to use and it is delivered with an installed DIN rail carrier.

Features

- 8x SPDT relays
- 5V - 24V wide range supply
- Active low switching
- Up to 100V / 2A
- DIN rail carrier included
